Manufacturer's Address: Strada del Francese 156, 10156 Torino, Italy.
Date of Introduction: 1991. June.
Ingredients: Water, soybeans.
Wt/Vol., Packaging, Price: 1 liter polyethylene bottles.
How Stored: Refrigerated, 4-5 day shelf life.
Nutrition: Per 100 gm.: Protein 3.8 gm, carbohydrates 1.3 gm, lipids 2.3 gm, calories 41 (kJoules 171).
New Product–Documentation: Spot in SoyaFoods. 1993. Winter. p. 5. "New packaging for Soj Alim." This soya milk has been available since June 1991, however the manufacturers have recently changed the packaging. It is sold in supermarkets.

Label sent by Heather Paine of SoyaFoods in London. 1993. Nov. 11 by 2.75 inches. Red, yellow, black, and green on white. Illustration of soymilk being poured from a plastic bottle into a glass, with a soybean plant, rolling hills, and blue sky in the background.

6129. Rani, Sandiya (Ms.). 1991. Soya milk cottage industry, Hyderabad, India. Phase 2. Andhra Pradesh, India: CHI. 1 p. June 24.
• ***Summary:*** Summary of achievements and results expected: "This project is intended to generate employment and income for women in the lower economic strata in the third world initially in India. The women who will thus benefit require little or no education and only a few days of specific training. The project will also produce a low-cost, culturally acceptable protein diet supplement for children and others in poor urban and rural communities, in the form of neutral-tasting soyamilk and soyamilk products (tofu, yogurt, etc.). The individual soyamilk cottage industry sites will be self sustaining within one year of operation..."

Projected starting date: 1 June 1991. Expected completion date: 31 March 1992.

For Canadian NGO: Cost of project: $18,569. Cost of administration: $5,933. Total: $24,502.

Requested from CIDA: Cost of project: $55,706. Cost of administration: $5,932. Total: $61,638.

Sub-total: Cost of project: $74,275. Cost of administration: $11,865. Total: $86,134.

Schedule of payments.

Note: This woman was the first head of Child Haven's SoyaCow Project in India. But she was unable to travel to visit other SoyaCow centers–a major problem. Address: Child Haven (India), 5-2–658 Chintal Basti, Khairatabad, Hyderabad 500004, Andhra Pradesh, India.

6130. *Times of India* (*The*) (*Bombay*). 1991. Dataline: Gainers and losers of the week (on the Bombay Stock Exchange). July 21. p. 14.
• ***Summary:*** Gainers includes: Noble Soya. Closed at 27.00. Up 22.73%.

6131. Bindl, Ulrike. 1991. Bedeutung von Sojaprotein fuer die Herstellung spezieller Kindernahrungsmittel [Significance of soy protein for the production of special foods for children]. In: F. Meuser and P. Suckow, eds. 1991. Soja in Lebensmitteln: Vortraege 2. Hamburger Soja-Tagung. Berlin: Technische Universitaet Berlin, Institut fuer Lebensmitteltechnologie und Gaerungstechnologie–Getreidetechnologie. 171 p. See p. 83-92. [20 ref. Ger] Address: Milupa AG, Friedrichsdorf/Ts., Germany.

6132. Brighton, W.D. 1991. Food allergy and intolerance reactions with particular regard to the protein content of vegetable food: A review of the present knowledge. In: F. Meuser and P. Suckow, eds. 1991. Soja in Lebensmitteln: Vortraege 2. Hamburger Soja-Tagung. Berlin: Technische Universitaet Berlin, Institut fuer Lebensmitteltechnologie und Gaerungstechnologie–Getreidetechnologie. 171 p. See p. 93-106. [15 ref]
• ***Summary:*** Contents: Introduction. The mechanisms of allergy. The reactions to foods: Intolerances and idiosyncrasies. Diagnosis and its difficulties. The frequency of food allergy reactions (Among plant foods, soy beans [32.0%] and soybean meal [22.0%] have relatively high rates). Presence of IgE antibodies to flours, legumes, and nuts. Benefits obtained from soy protein preparations in children. Treatment of food allergy. Summary. Address: Immunologische Laboratorien Prof. K.P. Ringel, Aachen, Germany.

6133. Central Soya Co. 1991. 1990 annual report. Ft. Wayne, Indiana. 28 p. 28 cm.
• ***Summary:*** "The Company's 1990 financial performance reflects a significant increase over 1989. Net earnings

increased 54% to $23.3 million in 1990 from $15.1 million the previous year." Net sales however decreased to $1,950.2 million in 1990 from $2,318.5 million in 1989.

"The Company's Chemurgy Division, which produced record sales and earnings again in 1990, successfully launched production in March at its new soy protein concentrate plant, the largest expansion project in the Company's history, at the Bellevue, Ohio multipurpose facility... New technology was used to produce a new soy concentrate product named Promoveal, designed as a nutritionally improved high protein milk replacer for use in specialty animal feed formulations... At Chattanooga, Tennessee, the soybean and canola processing plant and the vegetable oil refinery were scheduled to discontinue operations... At Toronto, Ontario, location problems and a lack of accessibility to vegetable oil markets prohibited profitable operation, and production was discontinued in March, 1991...

"Restructuring: The Processing and Refined Soya Products Groups were consolidated into the Oilseed Products Group which, along with the Animal Feed Group, now comprise the two major operating groups of Central Soya. Even more significantly, during 1990 the foundation was put in place for a reorganization of the Company's assets into a holding company–CSY Agri-Processing, Inc... CSY Agri-Processing, Inc. will be the parent company for three primary units, each of which will enjoy greater autonomy. The units include Central Soya Company, Inc.; Provimi Holding B.V... and Innovative Pork Concepts, Inc...

"Effective January 1, 1990, the Ferruzzi-owned European crushing operations were reorganized into a new company, Cereol. The Central Soya Utrecht [Netherlands] facility was sold to this group in early 1990... In May, an agreement was signed with Sojaprotein in Becej, Yugoslavia to manufacture and market soy protein concentrates under the name Central Protein, D.O.O."

Note: This is the earliest document seen (May 2005) that mentions Cereol. Address: P.O. Box 1400, Fort Wayne, Indiana 46801-1400.

6134. Folkers, Doerte. 1991. Verbraucherwissen ueber Soja als Naehrstoffquelle und Lebensmittel [Consumer knowledge of soya as a source of nutrients and a food]. In: F. Meuser and P. Suckow, eds. 1991. Soja in Lebensmitteln: Vortraege 2. Hamburger Soja-Tagung. Berlin: Technische Universitaet Berlin, Institut fuer Lebensmitteltechnologie und Gaerungstechnologie–Getreidetechnologie. 171 p. See p. 9-21. [10 ref. Ger]

• ***Summary:*** Discusses German consumer attitudes toward soya and plant proteins based on surveys using 8 questions with 2,000 people in 1989. When asked which of 9 foods on a list were important sources of protein, those foods receiving the highest percentage of responses were fish (85.3%), meat (72.4%), soybeans (50.3%, up from 39.0% in 1978), and butter (41.0; even though it is mostly fat and contains almost no protein). When asked if people need more or less protein, 39.3% said "about the same as before," 33.6% said "more," and 25.5% said "less."

When asked if people should consumer more plant protein or animal protein, 61.3% said more plant protein and therefore less animal protein, 19.5% said "same as before," 12.9% said that it makes no difference since "protein is protein," and 5.4% said more animal protein and therefore less plant protein.

"One source of plant protein is the soybean. Do you know if the soybean is used as a food or in foods?" 48.3% said they did not know. 37.2% said yes, as a food. 28.0% said yes, in foods.

"Which foods are you aware of in which soya is used?" Soya oil 34.1%, in breads and baking 26.3%, soy sprouts 17.8%, soy sauce 14.6%, in convenience prepared foods (*Fertiggerichten*) 9.7%, in sausages and cold cuts 8.9%, in meat substitutes 7.7%, as soybeans 7.6%, in noodles and pasta 7.0%, tofu and tofu products 6.9%, soybean flour 5.9%, vegetables 5.8%, salads and raw foods 5.4%, soyburgers or patties (Soja-Bratlinge) 4.1%, soymilk 4.0%, other 15.0%.

"I will read you a list of foods in which soya is used. Please tell me if you have heard of it, tried it, or purchased it." (percentage responses): Soy oil 70.5%/24.2%/17.7%. Raw soy sprouts 55.5/24.0/14.4. Soy sauce 54.5/28.1/17.6. In bread 39.5/19.6/14.2. In convenience prepared foods 28.5/10.0/6.5. Soyburgers or patties 21.3/7.3/3.5. Soymilk 19.4/4.0/1.8. Tofu and tofu products 18.6/7.6/4.6. In noodles or pasta 17.6/5.9/3.4. Address: Inst. fuer Ernaehrungsoekonomie und -soziologie der Bundesforschungsanstalt fuer Ernaehrung, Stuttgart, Germany.

6135. Gavin, M.; Wettstein, A. 1991. Verfahrenstechnische Fortschritte in der Entwicklung von Sojaprodukten [Progress in processing techniques in the development of soy products]. In: F. Meuser and P. Suckow, eds. 1991. Soja in Lebensmitteln: Vortraege 2. Hamburger Soja-Tagung. Berlin: Technische Universitaet Berlin, Institut fuer Lebensmitteltechnologie und Gaerungstechnologie–Getreidetechnologie. 171 p. See p. 23-38. [Ger]

• ***Summary:*** A fine-grained soy flour or powder has been developed. It can be used to make salted products (such as soyanaise {*Sojanaise*}, soynut butter {*Sojabutter*}, soy meat {*Sojafleisch*}), sweetened products (soy chocolate{*Sojachokolade*}, soy caramel {*Sojakaramellen*}), ready-to-use mixtures for the production of sweets, pasta or doughs, soymilk or tofu. Note 2. This is the earliest German-language document seen (April 2005) that mentions soynut butter, which it calls *Sojabutter.* Address: Buehler SG, Uzwil, Switzerland.

6136. *INTSOY Newsletter* (*Urbana, Illinois*). 1991. Nelson

receives major award for utilization research. No. 43. p. 2. July.

• ***Summary:*** "Alvin I. Nelson, professor emeritus in the Department of Food Science and senior research adviser for INTSOY, has been selected to receive the 1991 Meritorious Service Award for Utilization Research from the American Soybean Association. The award will be presented on July 29 at the Soybean EXPO 91 convention in Nashville, Tennessee. The award cited Nelson for his dedication in developing new food and feed uses for soybeans...

"In the late 1960s, Nelson began research on the processing of whole soybeans into food. He developed basic concepts and initiated practical processing methods that have set the industry standard. During the 1970s, he applied these processing methods in India and Sri Lanka, where he helped establish innovative new pilot processing facilities.

"In 1983, he was called out of retirement to develop a new soybean processing and utilization program for INTSOY and the Department of Food Science at the University of Illinois. His research team developed numerous innovative soy products from low-cost extrusion cooking.

"More recently, Nelson and his team developed the processing method that combines the extruder with a mechanical expeller to produce partially defatted meal and natural oil. This technique is expected to be widely adopted around the world in the next few years." Address: Univ. of Illinois, Urbana-Champaign, 113 Mumford Hall, 1301 W. Gregory Dr., Urbana, Illinois 61801.

6137. Laurin, Danielle; Jacques, H.; Moorjani, S.; Steinke, F.H.; Gagné, C.; Brun, D.; Lupien, P-J. 1991. Effects of a soy-protein beverage on plasma lipoproteins in children with familial hypercholesterolemia. *American J. of Clinical Nutrition* 54(1):98-103. July. [43 ref]
Address: 2. Département de nutrition humaine et de consommation, Pavillon Paul-Comtois, Université Laval, Québec, Canada.

6138. Lindner, A. 1991. Qualitative and nutritive aspects of different production methods of soymilk. In: F. Meuser and P. Suckow, eds. 1991. Soja in Lebensmitteln: Vortraege 2. Hamburger Soja-Tagung. Berlin: Technische Universitaet Berlin, Institut fuer Lebensmitteltechnologie und Gaerungstechnologie–Getreidetechnologie. 171 p. See p. 39-44. [Eng]

• ***Summary:*** "The processes available for making soymilk cannot simply be categorized as methods A, B, and C, although some such labels exist: Traditional Chinese Method, Cornell Method, Illinois Method, and so on. In reality most processes are a combination of methods for each step of soymilk production, making comparisons very difficult. This paper compares the differences at each step, and discusses their effect on soymilk quality.

Contents: Introduction. Production of soymilk: choice of raw material, screening, cleaning and dehulling, pretreatment and enzyme inactivation, grinding, fibre [okara] separation, deodorisation/deaeration. Standardisation and formulation of soymilk. After-treatment of soymilk (pasteurization or UHT-treatment). Packing. Conclusion. Address: Danish Turnkey Dairies Ltd., Soya Technology Div., Arhus, Denmark.

6139. Messina, Mark; Messina, Virginia. 1991. Increasing use of soyfoods and their potential role in cancer prevention. *J. of the American Dietetic Association* 91(7):836-40. July. [56 ref]

• ***Summary:*** Contents: Abstract. Introduction. Historical perspective. Soybeans and the US food supply: Soy protein products, retail soyfoods sales. Nutrient contribution of soyfoods. Soybeans and cancer risk: Experimental studies (isoflavones, protease inhibitors, epidemiology, breast cancer, colorectal cancer). Conclusions. Implications.

"Soybeans contain, in relatively high concentrations, several compounds with demonstrated anticarcinogenic activity. Two of these compounds–protease inhibitors and phytic acid–have traditionally been viewed as antinutrients... It may not be appropriate to evaluate soybeans on nutrient content alone; dietitians need to know about the nonnutritive dietary compounds, called phytochemicals, which may have anticarcinogenic effects... Overall, the epidemiologic data suggest that soy consumption may lower colorectal cancer risk, whereas there is only moderate support for the role of soy in reducing breast cancer..."

Table 1 (p. 838) gives the "Proximate composition and selected nutrient content of various soyfoods in common serving sizes and in 100-gm edible portions" (based on Haytowitz 1986). The soyfoods are: Miso, natto, okara, roasted soybeans (dry- or oil roasted), soy sauce (tamari), tempeh, firm tofu (raw), regular tofu (raw). Address: 1. Diet and Cancer Branch, Div. of Cancer Prevention and Control, National Cancer Inst., Bethesda, Maryland 20892; 2. Registered Dietitian, private practitioner, Washington, DC.

6140. Meuser, Friedrich; Suckow, Peter. eds. 1991. Soja in Lebensmitteln: Vortraege 2. Hamburger Soja-Tagung [Soya in foods: Proceedings of the Second Hamburg Soy Protein Conference]. Berlin: Technische Universitaet Berlin, Institut fuer Lebensmitteltechnologie und Gaerungstechnologie–Getreidetechnologie. 171 p. Held Oct. 1989 in Hamburg, Germany. No index. 24 cm. Series: Schriftreihe aus dem Fachgebiet Getreidetechnologie No. 9. [Ger]

• ***Summary:*** The first conference was held 4 years earlier. Contains a foreword plus 14 papers by various authors, each cited separately. This conference was sponsored by Edelsoja GmbH (Hamburg, Germany), the American Soybean Association (Hamburg), and Cargill B.V. (Netherlands). Address: Berlin.

6141. Mor, Y. 1991. Application of dried soybean powders as

replacements to dairy products. In: F. Meuser and P. Suckow, eds. 1991. Soja in Lebensmitteln: Vortraege 2. Hamburger Soja-Tagung. Berlin: Technische Universitaet Berlin, Institut fuer Lebensmitteltechnologie und Gaerungstechnologie–Getreidetechnologie. 171 p. See p. 63-70. [4 ref. Eng]
• ***Summary:*** Discusses Nurulat soy flour, made by Edelsoja GmbH, and a dairy-free chocolate spread developed from it. Contents: Introduction. Soy protein (cost relative to whole milk, efficiency of land use for protein production). Analytical data (comparing the nutritional composition of Nurulat and whole dried milk). Soy flour utilization. Product development.

The author's R&D team at the Osem company in Israel was given the assignment to develop chocolate spreads without any milk solids. This was done for religious reasons since orthodox Jews are not allowed to mix meat and dairy products. "Kosher products can be Kosher-Meat (to be eaten without any milk or other dairy products), Kosher-Milk (to be eaten without any meat products) or Kosher parve (to be eaten with dairy or meat products). Ideally the food processor wants to develop, as much as possible, foods which fall in the third category so that the consumer can consume the food at any meal, be it meat or dairy based meals." Address: Osem, Tel-Aviv, Israel.

6142. *Natural Foods Merchandiser.* 1991. Maine legislature grants soymilk exemption. July. p. 4.
• ***Summary:*** "In early June, the Maine Legislature passed and enacted LD #1256, an act to grant an exemption to the Maine Comprehensive Solid Waste Bill for aseptically packaged soymilk. The passage of this bill is a breakthrough for the soymilk industry, as Maine has the most stringent solid waste bill in the nation. Aseptically packaged soymilk will be available for sale in Maine by the end of September 1991."

6143. **Product Name:** Scotty's Sweet Rice Pudding.
Manufacturer's Name: Scotty's Wholesome Foods.
Manufacturer's Address: 666 22nd St. #21, Boulder, CO 80302. Phone: 303-443-3359.
Date of Introduction: 1991. July.
Wt/Vol., Packaging, Price: Plastic deli tub.
How Stored: Refrigerated.
New Product–Documentation: Talk with Scott Silverman. 1994. May 5. He arrived in Colorado on 15 May 1991 and during that summer he did extensive amazake product development in his kitchen. His first product was an amazake pudding, which he introduced in late July 1991. It was sold in a plastic deli tub. Amazake made up just the creamy part of the pudding.

6144. Spaid, Elizabeth Levitan. 1991. Give me a burger–Hold the meat: A widening variety of dishes enliven the plant-based diets of today's vegetarians. *Christian Science Monitor.* Aug. 1. p. 14.
• ***Summary:*** Vegetarian diets are no longer bland or uninteresting (if they ever were). Today's vegetarians enjoy a rich variety of flavors, and sound nutrition. A new generation of vegetarian adults are raising their kids on healthy vegetarian or vegan diets. They also know more about nutrition. And a much wider variety of vegetarian foods and cookbooks are easily available. Almost every supermarket now carries tofu, frozen meat alternatives, all kinds of fruits and vegetables, breakfast cereals, etc. There are now alternatives to almost every meat, dairy, or egg product–from tofu dogs to soy cheese, from eggless mayonnaise to fake bacon made of tempeh–not to mention soy milk and soy ice cream. In short, there are a great many more things to eat in the plant kingdom than in the animal kingdom.

"Many people wince when they hear the word 'vegetarian,' thinking tofu (a cheese-like food made from soybeans) and salad are the staples of such a diet." But vegetarians know this is a myth.

For many people discovering the rich, varied, and delicious flavors is a big discovery, a real and happy surprise. When many people decide to "go green" they also decide to give up meat, which is so destructive to the environment. Others believe it is ethically wrong to kill and eat animals. Still others believe that a vegetarian diet is more healthful.

Tofu can be used in a remarkable number of ways, and made to blend in so one doesn't even know its tofu. Delicious sauces can be made out of "silken tofu and miso," and people think they are eating some type of rich cream sauce.

6145. Chan, Becky. 1991. Re: Chinese people believe that soymilk is too cold for them. Letter (fax) to William Shurtleff at Soyfoods Center, Aug. 5. 1 p.
• ***Summary:*** Becky sells soybean milk in her own shop in Hong Kong. She would like to get some scientific information about soy milk because "Hong Kong people believe that soy milk is too cold for them." Address: Flat B, 1/F., 9C Yung Shue Long, Old Village, North Lamma Island, Hong Kong. Phone: 857-982-0390.

6146. Ashraf, Hea-Ran Lee. 1991. Work with soyfoods in Zambia and Illinois (Interview). *SoyaScan Notes.* Aug. 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Hea-Ran is Korean. After 2 years studying groundnut flour in India at CFTRI on an FAO scholarship, she came to the USA in 1976. At Iowa State Univ., working under Dr. Harry Snyder, she wrote her PhD degree thesis on the flavor of soymilk.

While in Zambia, she worked with home economics extension people, teaching them how to fortify Nshima (pronounced "SHEE-muh; a popular thick non-fermented cornmeal mush that is often eaten with the fingers) with either roasted soy flour, or with okara from soymilk. She

and Ellen Jayawardene from Sri Lanka also taught the local people to make and use soymilk. They did not teach about tofu, since no coagulant was readily available. The Lee Yeast Co., a bread company or bakery owned by Mr. Limbada, uses soy flour in their breads. Several other companies were in the process of buying Wenger- or low-cost extrusion cookers for processing soybeans. People from the University of Illinois were helping them to set up this equipment.

The key man working with soyfoods in Zambia is Fred Javaheri. He has worked in Zambia for about 20 years, initially with the USDA. An Iranian by birth, he and his family have permanent Canadian residence (but not citizenship) status but they live in Zambia. Because his religion is Baha'i, he fled from Iran after the Iranian revolution, when many of his non-Moslem faith were persecuted or killed. The Baha'i faith originated in Iran (Persia) in the 19th century and emphasized the spiritual unity of all human beings.

In 1979 she went to the Univ. of Illinois at Carbondale, where she now does mainly teaching; there is not much time or funds for research. Many of her students have do research on tofu. Address: Asst. Prof., Animal Science, Food & Nutrition, Southern Illinois Univ., Carbondale.

6147. Nordquist, Ted. 1991. New developments with Aros Sojaprodukter AB in Sweden (Interview). *SoyaScan Notes.* Aug. 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Aros plant has been moved from Örsundsbro (just southwest of Uppsala) to Tingsryd in the south of Sweden. Aros is working with Trensums Musteri, a juice company located in Tingsryd, located 20 or 30 minutes miles to the north of the southern seaside city of Karlshamn. Both Tingsryd and Karlshamn are located in Blekinge County. Ted and his family will continue to live in Örsundsbro, but his office and the company administration will be moved to Enköping, about 15 minutes from his home. He will continue to commute to Tingsryd when necessary. The company is now getting ready to sell soymilk equipment to interested buyers.

Nutana in northern Europe is now being sold and Ted's company is trying to buy it. Ted first learned (in Copenhagen, Denmark) that Nutana was going to be sold from Jon? Olsen, the marketing director for Danska Nutana. Only recently did he learn that it could be sold to a company other than Hundedogs? Adventista. Address: CEO, Aros Sojaprodukter, Bergsvagen 1, S-19063 Orsundsbro, Sweden. Phone: 0171-604 56.

6148. **Product Name:** [Tofu, Plain Soymilk, Okara].
Manufacturer's Name: Alfa Bio spol. s r.o.
Manufacturer's Address: Horná 37, Banská Bystrica, Slovakia. Phone: 088/242 35.
Date of Introduction: 1991. August.
New Product–Documentation: Letter from Anna Kubová and Ján Vavrac. 1993. Oct. This company makes tofu in Slovakia. An enclosed 2-page leaflet says: "Tofu = Zdravie, silna, línia" which means "Health, strength, and silhouette [literally "line"]." It describes what tofu is, how it is made, what ingredients it contains, how it can help promote good health, and general ways of using tofu plus six recipes.

Letter and labels (for tofu and okara) sent, and form filled out by Jan Lunter of Alfa Bio. 1994 Jan. 10. This company was founded in early 1991 by Jan Lunter, a devoted vegetarian, with the goal of manufacturing, exporting, importing, distributing, and selling healthy foods. Alfa Bio company is presently owned by Jan Lunter and Radko Petrovic. They were the first company to make tofu or soymilk in Slovakia, and also in the former Czechoslovakia. After the "velvet revolution" in 1989 an opening was created for private enterprises, and the Czech population finally began to realize the negative health effects of the high-cholesterol, high-protein diet to which it had been exposed. Today Alfa Bio makes 15 tons/month of tofu and 2 tons/month of okara. They learned how to make tofu initially from books, including *The Book of Tofu* by Shurtleff and Aoyagi. Additional information came from some Austrian tofu makers as well as some Japanese one (Tokyo Tofu, etc.) during their trip to Japan in the summer of 1993.

Label for tofu. 6.5 by 6 inches. Plastic pouch. Red, black, green, and yellow on clear plastic. 100 gm. 87 calories.

6149. *Child Haven International* (*Newsletter, Maxville, Ontario, Canada*). 1991. SoyaCow update. Summer.

• ***Summary:*** "Child Haven was awarded a second grant from CIDA, this time for $62,000, to be matched by $24,000 [37.5% of CIDA's amount] from Child Haven (Any idea where we can get that kind of money?).

"Tom Schatsky, of CIDA, said the submission was very well written. Orchids to Soya Program Coordinator Hart Jansson, and his helper, Subhash Jumeja, both of whom spent long hours writing. Other SoyaCow committee members include Raj and Rashmi Gupta, and accountants Arjun Patil and Ishting Khan.

"This second phase will enable us to build and deliver six more SoyaCows and get a soya-milk program going in India.

"We very much appreciate the kind help of the India High Commission in Ottawa. His Excellency Mr. Girish Narain Mehra, has not only spoken at our dinner, but has also helped Child Haven in cutting through red tape in dealing with the various levels of Indian officialdom."

A large photo bears this caption: "The SoyaCow unveiled at the Ottawa Dinner on 20 April. Seen here [left to right, rear]: Rashmi Gupta, Co-Inventor, Arjun Patil, Tom Schatzky of CIDA, Bonnie Cappuccino, His Excellency Mr. Girish Narain Mehra. [Front]: Hart Jansson, Soya Project

Coordinator, and Fred Cappuccino. The dinner made over $4,000. Photo by Graham Iddan."

6150. **Product Name:** Indonesian Style Tempeh.
Manufacturer's Name: Culture Foods Ltd.
Manufacturer's Address: 4 All Saints Workspaces, 75 Raleigh St., Nottingham NG7 4DL, England. Phone: (0602) 788963.
Date of Introduction: 1991. August.
Wt/Vol., Packaging, Price: 12 oz (340 gm) aluminum foil container with paperboard sleeve. Retails for £1.89.
How Stored: Frozen.
New Product–Documentation: Label sent by Alison J. Clark of Culture Foods Ltd. 1991. Aug. 23. 5.76 by 4.5 inches. Orange and turquoise blue on white. Heavy paper sleeve. Logo resembling the Vegetarian Society's "V" but with a sunflower growing out of it. "No animal ingredients. Tempeh and vegetables in a coconut milk and fresh coriander sauce. No artificial additives of any kind. Tempeh is a versatile high protein soya product." A letter adds that the company, a worker's co-operative, sold its first order on 8 Aug. 1991.

6151. McSweeney, Daniel. 1991. Consumer survey 1991. *Whole Foods.* Aug. p. 34-36, 39, 41.
• ***Summary:*** This survey was conducted at 18 natural foods stores throughout the USA. Product purchases. Percentage of respondents who purchased a type of product at a natural foods during the past 12 months: Cheese substitute 28%, meat 34%, miso 34%, sea vegetables 33%, soy milk 51%, soy sauce 36%, tamari 52%, tempeh 33%, tofu 57%, yogurt (dairy) 64%.

6152. Pickarski, Ron. 1991. Friendly foods: Gourmet vegetarian cuisine. Berkeley, California: Ten Speed Press. 277 p. Illust. Index. 23 cm. [23 ref]
• ***Summary:*** This is a stylish vegan cookbook, with a wealth of sophisticated and delectable soyfoods recipes. The author recommends only high-quality ingredients. Brother Ron grew up in Michigan and during high school spent time in the restaurant business flipping hamburgers. Later he became a Franciscan monk (OFM). A look at his

own health revealed the need to change his diet. So Brother Ron changed to a natural vegetarian diet and experienced weight loss and renewed energy. Now he considers himself a food missionary–helping people transform their lives through food. Friendly foods are "foods that are friendly to our bodies, our pocket books, our busy schedules, and our environment."

In the section on dairy-like products, the author recommends soy milk and some "tofu ice creams." He recommends use of soy cheeses sparingly since they are high in fats (especially the softer types). He considers nondairy creamers to be a less healthful than their dairy counterparts, since they are high in saturated fats and artificial additives. "Typically, nondairy creamers contain corn syrup solids, partially hydrogenated vegetable oil (including coconut oil, cottonseed oil, palm oil, or palm kernel oil), sodium caseinate, sodium phosphates, mono- and diglycerides, sodium silico aluminate, and artificial color. I do not consider this type of product to be an example of a high-quality food."

Soy-related recipes include: Marinated vegetables with marinated tofu (p. 41). Shish kebabs (with marinated tofu, p. 42). Marinated tofu with scallions (p. 43). Gefilte tofu with horseradish and charoset sauce (p. 49-50). Zucchini bisque (with tofu, p. 66). Tofu wakame salad (p. 82). Tofu cottage cheese (p. 89). Vegan sour cream (with soy milk, p. 90). Soy mayonnaise (with tofu, p. 90). Silken tofu mayonnaise (p. 91). Lemon cream dressing (with tofu, p. 92). Oil-less miso dressing (with soy milk and white miso, p. 96).

In the chapter on entrees, there are detailed descriptions of tofu, tempeh, and seitan. Soysage (with cooked soybeans and soymilk, p. 105). "Meatballs" (with cooked soybeans, p. 107). American loaf (with silken tofu, p. 112-13). Tofu spinach pie (p. 120). Auberge Hanfield pie (with silken tofu, p. 121). Russian vegetable pie (with silken tofu and tofu cottage or ricotta cheese, p. 122). Greek moussaka (with tofu topping, p. 128-9). Sweet and sour tempeh (p. 133). Southern fried tofu (p. 134). Tofu Swiss steak (p. 135). Tempeh stew (p. 136). Thanksgiving day tofu (p. 137). Tofu Jamaican run down stew (p. 138). Tofu paneer (p. 139). Seitan (p. 140-43). Seitan à la Normandie (p. 144). New England boiled dinner (with tofu or seitan, p. 145). Seitan Parmesan (with vegan cheese made with tofu, p. 147-48). San Francisco stir-fry (with seitan or tofu, p. 151). Berner platte (with protein accompaniments made with tofu and Soysage, p. 155-56). Vegan Béarnaise sauce (with silken tofu, p. 161). Miso sauce (p. 164-65). Tahini lemon sauce (with silken tofu, p. 165). Steamed kale with lemon miso sauce (p. 176).

In the dessert section, there is mention to tofu chocolate as an alternative to chocolate. Carob cake (with tofu chocolate, p. 217). Chocolate cream couscous cake (with filling made with silken tofu, p. 220). Silken tofu chocolate "cheesecake" (p. 221). Key lime shamrock torte (with silken tofu, p. 222). Raspberry sabayon sauce (with silken tofu, p. 232). Tofu chocolate "buttercream" icing (p. 234). Tofu chocolate ganache (p. 234-35). Mocha grain coffee (with any grain coffee substitute, cocoa, brown rice syrup, and soy milk, p. 238). Christmas soy nog (with soy milk and lecithin granules, p. 238).

The last section of the book, titled "The Culinary Olympics," gives recipes that Brother Ron prepared while competing in these Olympics, starting in 1978. These Olympics are held every four years at Frankfurt, Germany, by the International Cooks Society. The American Culinary Federation is the U.S. organization that promotes the competition. "In 1978 I won a gold medal in the national competition, which qualified me to compete in the 1980 Culinary Olympics. In 1980 I founded the American natural foods team and, with this team, international competition to gain widespread competition for vegetarian cuisine. In that year, I became the first professional vegetarian chef to compete in the Olympics and win a medal for totally vegetarian foods. I also competed in 1984 and 1988... My team won bronze and silver medals in all three years that we entered the competition." Soy-related recipes dominate this section, and include: Baked tofu pâtés (spinach, tarragon, or carrot, p. 241-42; won a bronze medal in 1984). Tofu and sea vegetable quenelles (beet, spinach, or carrot, p. 243-45; won a silver medal in 1988). New York cima roll (with tofu, p. 248-49; won a silver medal in 1988). Tofu seitan Wellington (p. 250-51; won a bronze medal in 1984). Vegan London broil (with seitan, miso, and tamari, p. 251-52; won a bronze medal in 1984). Southern blackened tempeh with tomato-apricot-ginger coulis (p. 253-54; won a silver medal in 1988). Carrot cream in squash shell (with soy milk and tofu, p. 255-56; won a silver medal in 1988). Chocolate squash confection (with Tofu Chocolate Ganache, p. 259-60; won a silver medal in 1988). Address: O.F.M., St. Anthony's Shrine.

• ***Summary:*** This vegan cookbook contains 500 recipes, including many using tofu, tempeh, miso, and soymilk. Almost all the recipes are uncomplicated, and the directions are short and simple to follow. Many can be prepared quickly. Sales and proceeds benefit Mobilization for Animals. Reviewed by Debra Wasserman in *Vegetarian Times* (May 1992, p. 97).

Note: The author self-published this book for a while, then the Book Publishing Co. in Summertown, Tennessee, became the publisher. Address: Pittsburg, Pennsylvania. Phone: 412-232-5106.

6154. **Product Name:** Vitasoy Light (Non-dairy Soy Drink; Liter Size) [Original, Vanilla, and Cocoa].
Manufacturer's Name: Vitasoy (USA) Inc. (Importer).

Made in Hong Kong.
Manufacturer's Address: 99 Park Lane, Brisbane, CA 94005. Phone: (415) 467-8888.
Date of Introduction: 1991. August.
Ingredients: Creamy Original: Filtered water, organic soybeans, barley malt, pearl barley, sunflower oil, seaweed (Japanese kelp), sea salt.
Wt/Vol., Packaging, Price: 8.4 fluid oz (250 ml), 1 liter Tetra Brik Aseptic carton. $1.89 retail.
How Stored: Shelf stable.
Nutrition: Per 6 fl oz.: Original: Calories 110, protein 7 gm, carbohydrate 10 gm, fat 5 gm. Carob: Calories 150, protein 6 gm, carbohydrate 22 gm, fat 4 gm. Chocolate: Calories 160, protein 6 gm, carbohydrate 24 gm, fat, 4 gm.
New Product–Documentation: Ad (full page, color) in Natural Foods Merchandiser. 1991. Sept. p. 40. "100% satisfaction... with only 1% fat." The three flavors are made with organically grown soybeans and sold in liter Tetra Brik cartons. A color photo shows the Original package. All products contain only 1% fat. Note: Vitasoy still adds oil to this product.

Talk with Hilton Tsui of Vitasoy. These products were first retailed in late Aug. 1991.

Note: This is the earliest commercial soymilk product seen (July 2013) with the word "Light" on the front panel.

6155. Godrej Foods Ltd. 1991. Display ad: Fixed deposit scheme. *Times of India* (*The*) (*Bombay*). Sept. 10. p. 9.
• ***Summary:*** Section F, "Profits and dividends," gives financial figures for three years. For the accounting year ending 31 March 1990 there was a profit before tax of Rs. 86.94 lakhs.

A footnote for this year states: "Combined figures of the operations of Noble Soya House Limited for 12 months and of the erstwhile Vegoils Limited for 3 months."

Note 1. This is the most recent article, ad or stock quote seen (Sept. 2010) in *The Times of India* that contains the term "Noble Soya."

Note 2. Noble Soya and Vegoils were not merged / amalgamated until 8 Feb. 1991, or thereafter. Address: Registered Office: E-7/697, Shahpura, Arera Colony, Bhopal 462 016, Madhya Pradesh.

6156. *SoyaScan Notes.* 1991. The need for a low-fat, low-calorie tofu (Overview). Sept. 11. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Fat and calorie content of this tofu should be at least 30% lower than that made from whole soybeans. Perhaps the easiest way to make this product would be to run soymilk made from whole soybeans through a dairy separator (such as a plate separator or decanting centrifuge, as is used by the dairy industry to make cream or non-fat milk) to remove the desired amount of fat, just like the dairy industry does to make low-fat or non-fat milk. There is a big potential market for such a product since 1% fat milk has now passed low-fat milk (2%) as the best-seller in American supermarkets.

Talk with Ron Roller of American Soy Products. 1992. Feb. 7. In late 1991 American Soy Products began to work with several separator companies (Westphalia and Alfa-Laval) and the dairy department of Michigan State University to try to use dairy separators to reduce the fat content of soymilk. In short, the traditional equipment and processes don't work, apparently because the fat molecules in soymilk are much smaller than those in dairy milk. The separators, which consist of a series of plates to separate heavy from light molecules, end up separating the solids from the liquids, rather than the fat from the non-fat constituents. Alfa-Laval is still trying to solve the problem, at no charge to American Soy Products.

6157. Kessler, Jon. 1991. Twin Oaks Industries buys Virginia Soyworks (Interview). *SoyaScan Notes.* Sept. 13. Conducted by William Shurtleff of Soyfoods Center. Plus a 1-page letter of Sept. 11.
• ***Summary:*** On 1 March 1991 Twin Oaks, a community, bought Virginia Soyworks from Ken Scotton, who used to live at Twin Oaks Community. About two years ago he proposed that the community buy the business from its former owner, but the community decided not to. So Ken left the community and bought the business himself. He ran it for about 1½ years then decided to sell it back to the community. He made good money (about $10/hour) but was working 60-hour weeks, largely by himself. Jon Kessler, a member of the community, re-presented the idea to the community, which decided this time to buy it. The community paid $5,000 for the business plus $10,000 for inventory of soybeans, coagulant, and packaging materials.

Scotton is not presently involved with the Soyworks, but he may re-join the community, at which time he may get involved again. The community owns the business and a crew runs and manages it cooperatively. Jon is actively involved and is a good contact person. Twin Oaks Industries' main source of income is making hammocks. The company has three general managers and their main account is Pier 1 Imports. One reason the community decided to buy the tofu business was to diversify their sources of income. Virginia Soyworks now makes about 1,000 lb/month of tofu, 40 gallons/month of soymilk, and 50 lb/month of tofu spread. The community may change the name of the Virginia Soyworks to Twin Oaks Soyworks in 1992. Address: Route 4, Box 169, Louisa, Virginia 23093. Phone: 703-894-4112.

6158. Rabheru, Neil. 1991. New developments with Unisoy, soymilk, and Haldane Foods in England (Interview). *SoyaScan Notes.* Sept. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Unisoy was acquired by the Haldane Foods

Group on 21 Dec. 1990. This has proved to be a very positive development for Unisoy. It is a great honor and very satisfying for Neil to be part of the same team with Dwayne Andreas and Peter Fitch, because both are very forward looking, energetic, and supportive men. The company now makes only soymilk. Other companies in the Haldane Foods Group now make the other soy products that Unisoy used to make–which is more efficient. For example, Genice Foods Ltd. makes soy margarine, yogurts, and ice creams. Unisoy plans to expand into a larger plant, probably at a new location. That phase, which will begin within 12 months, will involve an investment of £3 to £4 million. He is presently meeting with APV in connection with a new soymilk plant. Unisoy has not launched any new products since mid-1990. Neil has been too busy absorbing the Granose line into his production. Unisoy is now making all the soymilk that Granose used to buy from DE-VAU-GE, to use in continuing the Granose line of products that contain soymilk. Thus the Unisoy/Haldane now makes the profit that DE-VAU-GE used to make.

The acquisition of Granose by the Haldane Foods group was the most brilliant move one can imagine. 90% of the products that Granose was buying from other companies can be manufactured within the Haldane Foods Group. Granose's best products included their margarine, soymilk, ice cream, and yogurt. Peter Fitch deserves the credit for this stroke of genius.

The Haldane Foods Group now sells 4 soymilk brands, all now made by Unisoy: So Good (which used to be purchased from DE-VAU-GE; Sanitarium Foods in Australia only registered their brand in Australia and New Zealand), Granose, Unisoy, and White Wave. Neil believes that Unisoy makes the best-tasting soymilk in Europe today. Recently there was an independent magazine survey of all soymilks on the market and the Granose brand made by Unisoy won first, second, sixth, and ninth places. The UK soymilk market is extremely competitive and the prices are much lower relative to cow's milk than they are in the USA. On average at all retail outlets, cow's milk retails for about £0.50 per liter versus £0.59 to £0.79 per liter for soymilk. Thus soymilk in the UK retails for about 38% more than cow's milk.

Note: In the USA, cow's milk retails for about $0.72/liter and soymilk retails for about $1.86/liter or about 2.6 *times* as much as cow's milk. The current exchange rate is 1.79 U.S. dollars = 1 British pound. Thus U.S. cow's milk would sell for £0.40/liter (20% less than British cow's milk) and soymilk would sell for £1.04/liter (about 45% more than British soymilk).

In the UK most of the soymilk is sold in the multiples (supermarkets) in half liters (500 ml) cartons, and that is where the greatest growth is. There, soymilk is only about 20% more expensive than cow's milk. (Note: In the USA very little soymilk is sold in supermarkets.)

In the UK, Provamel (made by Alpro in Belgium) has about 42% of the total soymilk market. The four brands made by Unisoy have about 35-37%. The remaining 21-23% is divided among Sunrise, Plamil, and a few others. There is very strong soymilk brand loyalty in the UK.

Unisoy increasingly refers to itself as "the soyamilk division of Haldane Foods Group." The "Milk 'n' By-Products Ltd." part of the name will be dropped very shortly.

The last part of the soyfoods market that the Haldane Foods Group will attempt to capture is tofu, since Cauldron Foods has a very big lead on Haldane in this market. The Granose line of dry mixes used to compete directly with the Haldane Food Group's Hera line. Now all these products are made at one location.

The relationship between ADM, British Arkady, and the Haldane Foods Group has changed. The Haldane Foods Group is no longer part of British Arkady; both are now on the same level on the organization chart, and both report directly to ADM's European headquarters (ADM International Ltd. in England; John R. Mahlich, managing director). Peter Fitch used to work for British Arkady before the Haldane Foods Group was formed. Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430 6329.

6159. Rabheru, Neil. 1991. The early days of the soymilk market in England, Soya Health Foods and Michael Cole (Interview). *SoyaScan Notes*. Sept. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Michael Cole deserves full credit for getting soyamilk into supermarkets (multiples) in the UK. Vandemoortele was smart in capitalizing on his work to put themselves in their present strong position. It is sad that Soya Health Foods did not support Michael by investing in better technology to give a better quality product. In the early days, Soya Health Foods had everything in their grasp. If they had played their cards right, Unisoy would not be here today, and Vandemoortele might not even be in the UK. The principal(s) of Soya Health Foods were either too hesitant or not smart enough to take the necessary risks. He was content making money milking the cow (so to speak), never mind when the cow drops dead. Michael left the company out of frustration. Michael is an outstanding salesman.

Neil is absolutely certain that Michael Cole has never been involved with John Holt. Neil thinks that Michael Cole's first involvement with soyfoods in the UK was with Soya Health Foods (Sunrise). Neil spoke with Michael Cole 3 weeks ago; he is back in the UK trying to market some spray-dried organic tofu and soymilk. Neil does not know the source. Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire SK6 2RF, England. Phone: 061-430 6329.

6160. Cohen, Michael. 1991. Early work with soyfoods, The

Farm, Laughing Grasshopper, New England Soy Dairy, and The Tempeh Works (Interview). *SoyaScan Notes.* Sept. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Michael's interest in soyfoods began in about 1971-72 when he became a vegetarian, while living communally with friends in Boston. He was interested in Eastern religions and philosophies, Ram Dass, Be Here Now, Hatha Yoga, etc. He probably tasted a little tofu at this time.

In early 1972, Michael took a trip to California, first met Stephen Gaskin, and got introduced to Stephen's Monday Night Class–a week before Stephen's community left (on 10 Feb. 1971) for Tennessee to buy the land that in Sept. 1971 would become The Farm. Michael returned to Boston and worked for the next 9 months to save money. In 1973 he left the USA for a year to travel on an undirected personal spiritual adventure to India, Israel, and the Middle East. While he was in India, various people in Boston with whom he was living communally got more closely involved with The Farm in Tennessee.

In the summer of 1974 Michael moved from Boston to Amherst, Massachusetts, where he got involved in a vegetarian, natural foods restaurant named Equinox. It was a 4-person partnership founded by Judy Roberts (who later married Tom Timmins); Michael was their first employee. Eventually he became a partner. The main dishes in this small natural foods luncheonette were soups, sandwiches, and salads. They occasionally prepared a soy burger from soybeans or a stir-fry tofu dinner entree. Michael worked there for about a year until there were 6-7 partners, then he and his girlfriend (Shelley Moore, who was also working there and was to become his first wife) decided (as did Judy Roberts) to leave. The restaurant soon moved into very large quarters, took on large debts, and eventually went bankrupt.

Michael and Shelley (who was from Memphis, Tennessee) left for a short tour of the southeastern United States. For most of the next 2 years he lived on The Farm in three different locations. Starting in late 1974 he and Shelley lived for 7 months on the 40-acre Virginia Farm, a satellite of the Tennessee Farm in Louisa, Virginia. During that time Michael and Shelley were married. Soybeans were grown along with vegetables and corn on this farm, and the women made soymilk in the kitchen at least twice a week and (as a treat) tofu and/or soyburgers (from mashed soybeans) every week or two. All meals were strictly vegetarian, with no dairy products or eggs. Soymilk was a staple in the diet.

Then they moved to Brattleboro, Vermont, and lived for 1-2 months with Tom and Judy Timmins in their home. Tom was working for Llama, Toucan & Crow, a worker-owned natural foods distributor. Michael then got a job working for Llama. About 6 months later, Llama (which was not making it financially) sold out to their current owner, Barclay McFadden of Stow Mills. At the time of the sale, Tom left Llama and went into partnership with Ira Leviton and Kathy Whelan in the Laughing Grasshopper Tofu Shop.

By this time Michael and Shelley had become much more interested in tofu; they were eating it frequently, had gotten a copy of *The Book of Tofu* by Shurtleff and Aoyagi, and were thinking / dreaming about starting their own small tofu plant in Brattleboro–40 miles from Laughing Grasshopper in Millers Falls. Tom Timmins convinced Michael to become a partner in Laughing Grasshopper rather than becoming a nearby competitor. So Tom left Llama, made a couple of runs into Boston driving the Laughing Grasshopper van to distribute the tofu and feel out the company, and in Feb. 1977 paid $2,000 to $2,500 to became a partner in Laughing Grasshopper. He did mostly production, but also delivered tofu to Boston and went to stores to try to pick up new accounts. Tom was more the "numbers person" and Ira fancied himself to be "the tofu master." It all worked pretty well. The company had only one product–nigari tofu. Michael does not recall them making or distributing any tofu pies or cheesecakes.

During this period, from early spring until June, Michael and his family lived on a local satellite of The Farm in Montague, Massachusetts, next to Millers Falls.

In Nov. 1977 Laughing Grasshopper moved to Greenfield and changed its name to New England Soy Dairy. At that time Steve Hassell was brought in as a controlling partner; he invested $40,000 in the company–money which the company needed and did not feel it could obtain from a bank. On 20 November 1976 Michael and Shelley had their first child. Ira told Michael, "I just hope you have your child on a Saturday so that it doesn't interfere with work."

Shortly after the move to Greenfield, before the company got back into tofu production, Michael decided to take a temporary leave of absence from the company, in part because he and Shelley decided they wanted to have their second child (soon to be born) on The Farm in Summertown, Tennessee. Michael left in June 1978 and Joshua was born in September. They stayed on The Farm until Nov. 1978. After living in Summertown for several weeks Michael and Shelley (as was the custom) donated all of their savings (about $5,000) to The Farm–permanently.

On The Farm, because of his experience at Laughing Grasshopper, Michael was considered to be a fairly knowledgeable soy person, so he went to work in the soy dairy, where the main product was soymilk (fortified with vitamin B-12 and usually sweetened with sugar); a little tofu was made occasionally. After Michael arrived, the soy dairy started making much more tofu for the 1,850 Farm residents. Typically they now made tofu twice a week, and 500 pounds each time. The people loved it. No single person in the Soy Dairy was particularly knowledgeable in making soyfoods; it was run by a rotating crew. Tempeh was made in a separate building, the Lab, by Cynthia Bates and Alexander Lyon. Michael had first learned of tempeh when he, Ira, and Tom had visited Dr. Keith Steinkraus at Cornell Univ. But at The Farm he first had a chance to taste it ("It knocked my socks

off"); unfortunately, he never had a chance to make tempeh on The Farm. Michael found the experience at The Farm, with its many equipment breakdowns, extreme poverty, and wasted time to be very frustrating; he was used to running a business efficiently.

After 5-6 months, in Nov. 1978, Michael and his family left The Farm–penniless. Returning to live briefly at the Montague Farm and work at New England Soy Dairy, he found that there was no solid position for him, so he was put in a temporary R&D position. But after a month or two, the Soy Dairy no longer felt like the place he wanted to live and work. Fortunately in Jan. 1979, Michael's father offered to lend him $30,000 to start his own business. A year earlier, Bernie Cohen at the Montague Farm had invited Michael to join in starting a tempeh business, but Michael declined saying, "It will never fly." But this time, within a few weeks, Michael decided to establish The Tempeh Works. The Soy Dairy partners were supportive of Michael's leaving, especially since they planned to focus on dairylike products and no longer planned to make tempeh. In March of 1979 Michael rented a space for the business in Greenfield and he made his first batch of tempeh there in July. It was served at the annual Soycrafters Convention in Amherst. The company began regular production in September 1979. The Tempeh Works was America's first Caucasian-run company to make only tempeh in a commercial building. Address: President, Lightlife Foods Inc., P.O. Box 870, Greenfield, Massachusetts 01302. Phone: 413-774-6001.

6161. *SoyaScan Notes.* 1991. The concepts of alkaline (*arukari-sei*) and acidic (*sansei*) foods in Japan (Overview). Sept. 20. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** It is common knowledge among most typical Japanese that foods can generally be classified along a continuum that ranges from alkaline at one end to neutral (*chusei*) in the middle, to acidic at the other end. Alkaline foods (those with an alkaline ash) are generally considered to promote and protect health. It is widely believed that one should try to keep one's blood a little on the alkaline side of neutral. According to E.C. Grey's *The Food of Japan* (League of Nations, 1928) and *Inshoku Jiten* (*Encyclopedia of food and drink;* Motoyama 1958; see arukari) and to discussions with numerous Japanese, well-known alkaline foods are as follows. Each food is followed by an "alkaline value" in parentheses taken from Grey (1928, p. 56-111; the "alkalinity is due to lime and magnesia"): sea vegetables including kombu (88.9), wakame (55.8), nori (35.3); black soybeans (40.2), yellow soybeans (38.1), soyfoods (and Soyfoods Center) including yuba (25.6), kinako roasted soy flour (25.2), Hamana natto (Hamanatto 24.8), natto (19.3), green soybeans (ao-daizu, dry; 17.8), Misozuke (vegetables preserved in miso, 16.3), shoyu (14.3); red miso (11.5), okara (9.0), white miso (8.1), edamamé (green vegetable soybeans, 5.8), aburage deep-fried tofu pouched (6.7), soymilk (3.8), tofu (1.1), shiitake mushrooms (41.0), azuki beans (27.0), umeboshi salt plums (3.1), dried fruits including dried fig (46.8), dried persimmon (21.3), raisins (15.3), cheese (18.0), most fresh fruits including yuzu (citron, 11.7), buckwheat (7.0), fig (6.3), lemon (5.9), banana (4.6), mikan (mandarin orange, 4.0); root vegetables including potatoes (13.9), tororo imo (11.5), daikon radish (5.0); most green vegetables such as komatsuna cabbage (11.3), or daikon leaves (10.9), pickled vegetables such as takuan (14.6). Alkaline beverages or liquids include tea, coffee, dairy milk (2.6), condensed milk (8.0), powdered milk (26.6), grape wines, and vinegar.

Acidic foods, which the Japanese believe should be used in moderation, include: white sugar (0), mizuame [rice syrup] (0), chocolate (3.0) and other sweet foods, eggs (2.8), flesh foods including chicken (5.2), pork (5.2), beef (5.1), fresh fish (avg. 5.3), alcoholic beverages including amazake (0), beer (0), sake (0); animal fats including butter (1.6), margarine (0.9).

Many Japanese find that acidic foods, when consumed in excess, give them acid indigestion. Neutral foods include rice (0.5-2.9), wheat (3.5-6.6), barley (2.7-4.6), and wheat gluten (1.0).

Note that this classification system is unrelated to the yin-yang continuum used by macrobiotics; most Japanese are unaware of macrobiotics. The latter, for example, considers meat to be yang (alkaline), whereas wines, fruits, and milk are yin (acidic).

6162. Archer Daniels Midland Co. 1991. Annual report. P.O. Box 1470, Decatur, IL 62525. 33 p. Sept.
• ***Summary:*** Net sales and other operating income for 1991 (year ended June 30) were $8,468 million, up 9.2% from 1990. Net earnings for 1991 were $466.7 million, down 3.5% from 1990. Shareholders' equity (net worth) is $3,922 million, up 9.8% from 1990.

"Foreign oilseeds operations were strengthened with the acquisition of a major softseed plant in Erith, U.K., and several plants in Canada. Soy protein facilities currently being added to the Europoort plant in The Netherlands should be in operation by year's end and a marketing arrangement to supply Loders Croklaan, B.V., with soy protein concentrate gives the plant a good production base to begin operations."

"ADM now operates 136 U.S. processing plants and owns, or has an ownership interest in, 34 foreign plants in seven countries. The Company 149 terminal, country, and river grain elevators." A 2-page color photo (p. 2-3) shows "ADM's Europoort plant, near Rotterdam, the world's largest soybean processing facility. Construction is underway for the addition of a vegetable oil refinery, soy protein plants and a second cogeneration unit." ADM's "oilseed processing operations operated at lower profit levels. Export margins were reduced due to heavily subsidized South American and European oilseed product sales."

"The protein specialties division expanded its position as the world's largest supplier of value-added soy proteins this year. Construction began on a facility at Europoort to produce soy protein concentrates, isolated soy proteins and the specialized raw material from which these products are formulated. The facility will serve the growing demand in Europe and the USSR for food and animal feed ingredients.

"ADM will produce a line of soy protein concentrates which Loders Croklaan will market to the animal feed industry in Western Europe. The combination of ADM's production technology and Loders Croklaan's leadership position in the animal feed ingredient market will provide a major improvement in efficiency. Products will be supplied from the Europoort facility.

"Consumer acceptance of the all-vegetable protein food item, Midland Harvest's Harvest Burger, has been encouraging and exceeds expectations. This low-fat, cholesterol-free, reduced calorie product is being sold in selected U.S. markets and in several international markets, notably England and other European Community countries, the USSR, Czechoslovakia, Finland, Mexico and Canada.

"Haldane Food Groups acquired two additional companies: Granose Foods Ltd., a pioneer in the health food industry, and Unisoya [on 21 Dec. 1990], a soya milk production company. Additional bottling capacity was installed at Saucemasters Limited when the company moved operations to a larger facility shared with Snackmasters Limited, a newly formed company manufacturing snack meals. These TVP-based products are used with either noodles or rice and are sold through supermarkets and health food stores. Genice Limited added more yogurts and non-dairy ice creams to its product range. Frozen meals from both Vegetarian Cuisine Limited and Vegetarian Feasts Limited increased their market share. Production at the leased Coventry factory was transferred to the Granose factory at Newport Pagnell, where additional land is available for further expansion."

Page 32 lists the many ADM divisions worldwide. In Europe, key soyfoods-related divisions are: The British Arkady Co. Ltd. (William Pringle, Division Director), and ADM International Ltd. (John R. Mahlich, Managing Director). Both are located in the UK. Note: The Haldane Foods Group (Peter Fitch, Managing Director), which is currently under British Arkady, will soon become an independent division. Since 1985 Peter Fitch and John Mahlich have skillfully acquired 11 of England's most important natural-, vegetarian-, and soyfood manufacturing companies to make the Haldane Foods Group unique in the world as a professional, efficient, and innovative group with a very promising future in a rapidly growing market.

Note: In Dec. 1990, ADM started making soy protein concentrates at its plant in Europoort, Netherlands. Address: Decatur, Illinois.

6163. **Product Name:** Grainaissance Amazake Pudding [Almond].
Manufacturer's Name: Grainaissance, Inc.
Manufacturer's Address: 1580 62nd St., Emeryville, CA 94608. Phone: 415-547-7256.
Date of Introduction: 1991. September.
Ingredients: Filtered water, brown rice, almonds, rice koji, modified corn starch, vanilla.
Wt/Vol., Packaging, Price: 7 oz plastic tub.
How Stored: Refrigerated.
New Product–Documentation: Label obtained at World Vegetarian Day, Berkeley, California. 1991. Oct. 6. 3 by 1.25 inches. Self adhesive. Red and green on white. New Label sent by Tony Plotkin of Grainaissance. 1993. Nov. 2. Same size and type. Red and white on blue. The ingredients are now: Filtered water, brown rice, almonds, rice koji, tapioca starch-modified, xanthan gum, vanilla.

6164. Nishimoto, Miyoko. 1991. The now and Zen epicure: Gourmet cuisine for the enlightened palate. Summertown, Tennessee: The Book Publishing Co. 250 p. Color photos. Index. 24 x 21 cm.
• ***Summary:*** This is a gorgeous, delightful vegan cookbook (though it uses honey), loaded with color photos. Most recipes, designed for entertaining, embody an atmosphere of elegance with a sense of fun, capturing the best of traditional European cuisine, offering gourmet recipes with an element of Japanese style, simplicity, and flavor. Each recipe is accompanied by a nutritional analysis, and most are remarkably low in fat.

The author is founder and owner of the Now & Zen Bakery (1838 Golden Gate Ave., San Francisco, CA 94115) which is well known for its tofu cheesecakes and other delights, and which sells dried okara. She is also a jazz vocalist and vegetarian chef. Born in Japan to a Japanese mother and an American father, she moved to Mill Valley, California, with her parents when she was age 7 and became a vegetarian at age 12. A photo on the rear cover shows Miyoko Nishimoto. She shows great virtuosity in the use of soyfoods–and wheat gluten. The section on ingredients contains excellent, detailed information on miso, nut milks and creams (almond milk and cashew milk, which the author prefers for some uses to soymilk), agar, okara, soy milk and soy cream, soy sauce, soy sour cream, soy yogurt, tamari, tempeh, tofu, frozen tofu, and pressed tofu.

Soy-related recipes include: Tofu "cheese" (p. 32). Tofu "boursin" or herb-garlic cheese ball (p. 33). Tofu "feta" cheese (p. 35). Tofu cream cheese spread with herbs (p. 36). Eggplant and tofu pâté (p. 51). Smoked tofu, mushroom, and garlic canapés (p. 53). Tofu "mornay" sauce (p. 65). Tofu aïoli (p. 82). An introduction to quick and tasty tofu cream soups is given on p. 108. Each of the following cream soups contain tofu. Cream of pumpkin soup (p. 109). Cream of corn soup (p. 110). Cream of green pea soup (p. 111).

Mediterranean eggplant and tofu gratin (p. 115). Tofu burgers suprême (p. 118). Creamy tempeh curry (p. 119). Tempeh mexicali (p. 121). Sweet and sour tofu (p. 122-23). Whole cabbage with hearty tempeh stuffing (p. 124-25). Herbed soybean casserole or stew (p. 132). Savory tempeh and vegetable stew (p. 134-35). Tofu bourguignon (p. 138-39). Homemade tofu pasta (p. 142-43). Ginger tempeh with green peppers (p. 145). Homemade gluten, Tempeh and gluten burgers, and the Great gluten turkey with dressing (p. 150-160). Tempura tofu (p. 163). Marinated tofu (p. 164). Smoky marinated tofu (p. 165). Believable bacon (with tofu, p. 166). Beans and "bacon" casserole (with tofu, p. 167). Orange-soy dressing (p. 177). Tofu sour cream (p. 179). Tofu mayonnaise (p. 180). Tofu thousand island dressing (p. 182). Tropical coconut banana ice cream or sauce (with tofu, p. 212). A different pumpkin ice cream (with tofu, p. 213). Italian cheese-less cake (with tofu, p. 216). Cashew cheesecake (with tofu, p. 217). Tofu crème (p. 218).

For a lengthy and very positive review of this book by Carol Flinders, see *Vegetarian Times* Nov. 1991, p. 86-87. Address: San Francisco, California.

6165. Ono, Tomotada; Choi, Myoeng Rak; Ikeda, Ako; Odagiri, Satoshi. 1991. Changes in the composition and size of soymilk protein particles by heating. *Agricultural and Biological Chemistry* 55(9):2291-97. Sept. [11 ref]* Address: Gifu Woman's Univ., 80 Taromaru, Gifu 501-25, Japan.

6166. *Whole Foods.* 1991. Maine exempts aseptic packaging. Sept. p. 32.
• ***Summary:*** "Bar Harbor, Maine–Aseptic juice and soy drink boxes are now allowed to be sold in the state after legislators recently voted to exempt it from the state's stringent solid waste laws... The bill does not, however, include the sale of flavored dairy and soy beverages because the legislature considers them 'pleasure foods' and therefore not considered an important dietary food source."

6167. Leneman, Leah. 1991. Re: Observations on the soyfoods market in Britain and the United States. Letter to William Shurtleff at Soyfoods Center, Oct. 7. 1 p. Typed, with signature.
• ***Summary:*** On a recent trip to the USA, Leah was "greatly puzzled by the seemingly complete absence of Tofutti. Two years ago I was able to get it wherever we went, while this time I saw it nowhere. The only completely non-dairy 'ice cream' in supermarkets was Mocha Mix, a greatly inferior product. Health food stores still had the Farm's non-dairy products and Rice Dream but no Tofutti... I certainly did miss the pleasure of eating one of my all-time favourite products!

"It certainly seems as though Britain–and even the Continent–has forged way ahead of America when it comes to soyfoods, something I would never have believed possible even a couple of years ago. We have a good range of 'ice creams', an ever-increasing range of tofu-based convenience meals etc. etc. Even Safeways has an own-brand soya milk. And in the yogurt field we are even importing divine soya milk yogurts [Sojasun] from France. (There are British ones as well but not nearly as good.)"

The Vegetarian Society of the UK has sold off its magazine, *The Vegetarian.* Note: The magazine was sold to a publisher with no connections to vegetarianism; they which re-issued it under the title *Vegetarian Living.* They went bankrupt and sold the magazine to HHL Publishing Group Ltd. in London. As of late 1993 it was still being published being published by HHL under the title *Vegetarian Living.* Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

6168. **Product Name:** [Soja Biostar Nectar (Raspberry, Exotic Fruit, Passion Fruit)].
Manufacturer's Name: Celia Group.
Manufacturer's Address: B.P. 10, 45550 St.-Denis-de-l'Hôtel, France. Phone: 38 59 02 03.
Date of Introduction: 1991. October.
Wt/Vol., Packaging, Price: 3 x 250 ml Aseptic cartons. Retails for 13.50 French francs (4/91).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Spot in SoyaFoods. 1991. Spring. p. 5. "A first in soya fruit nectars."

6169. DE-VAU-GE Gesundkostwerk GmbH. 1991. Soja-Drinks und -Desserts [Soya drinks and desserts (Leaflet)]. Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. 2 panels each side. Each panel: 20 x 20 cm. Undated. [Ger]
• ***Summary:*** Page 1 of this color leaflet shows three milkshakes surrounded by fruits. "The alternative. Non-dairy. Cholesterol-free. GranoVita–in Harmony with nature." Exclusive Neuform certification symbol. Page 2 describes how GranoVita soya drinks and desserts are made, and lists their benefits. Color photos show a field of soybean plants and a handful of yellow soybeans. Page 3 is titled "Exactly right for high-quality nutrition." Photos show Labels of 8 GranoVita products: Bio-Soja-Drink (unsweetened, or sweetened with apple extract without added sugar), Caroba Drink, Soja-Drink (strawberry flavored), Soja-Dessert (vanilla, or chocolate). Six of these products are different; four bear the Exclusive Neuform certification symbol. Two pairs are the same product, but one bears the Exclusive Neuform certification symbol. Page 4 compares the nutritional value of sweetened GranoVita Soja-Drink with whole cow's milk (3.5% fat), including the fatty acid composition. Recipes are given for Salad marinade, Strawberry muesli, and Cauliflower in sauce. Address: Lueneburg, West Germany.

6170. Kitamura, Keisuke. 1991. Breeding high quality soybeans for food processing in Japan. In: K. Okubo, ed. 1991. Japan part of Proceedings of the International Conference on Soybean Processing and Utilization. 130 p. See p. 81-84. [18 ref]
• ***Summary:*** All soybeans grown in Japan are used to make soybean-based foods in Japan. Progress has been made in breeding soybeans to increase the content of sulfur-containing amino acids, as well as improving the food-processing quality by using mutants lacking or with lowered subunits of 7S and 11S globulins, and eliminating the lipoxygenases which are responsible for the for the generation of objectionable beany flavors using 3 types of mutants lacking the isozymes L-1, L-2, and L-3 respectively.

7S and 11S globulins are the two major proteins which amount to about 70% of the total seed proteins... 11S globulin contains 3 to 4 times more methionine and cysteine per unit protein than that of 7S globulin. Furthermore, it was reported that the two globulins have very different functional properties in soy protein foods: the isolated 11S globulin fraction formed a much harder Tofu-gel. These reports suggest that the genetic reduction of the 7S globulin content in the seeds may improve the nutritional and food-processing qualities of soybean."

"Matsuura *et al.* (1989) reported that Beta-glucosidases in soybeans are responsible for the production of daidzein and genistein from the isoflavone glucosides, daidzine and genistin, respectively during the processing of soy milk manufacturing. Because the isoflavone aglucones have more intense astringent and bitter taste than the isoflavone glucosides (Okubo *et al.* 1983), the increase of daidzein and genistein in soy milk by the action of the Beta-glucosidases causes the objectionable aftertaste of soybean products...

"So, if we could develop a new type of soybeans lacking or lowering the Beta-glucosidases in addition to the complete lack of the seed lipoxygenase isozymes, it would be an ideal soybean type for the manufacture of soy milk and related new soybean foods." Address: National Agricultural Research Center, 3-1 Kannondai, Tsukuba, Ibaraki 305, Japan.

6171. Omura, Yoshimasa; Takechi, Hironori; Hayashi, Katsuo. 1991. Improvement of soymilk flavor for new soymilk products. In: K. Okubo, ed. 1991. Japan part of Proceedings of the International Conference on Soybean Processing and Utilization. 130 p. See p. 41-46. [7 ref]
• ***Summary:*** "The method developed consists of the soaking of soybeans in water (15ºC, 18 hours) and the immersion of the soaked soybeans in hot water (70ºC, 5 minutes) before grinding. The treatment with hot water reduced the n-hexanal content in soymilk to about 1% of that in untreated one. It was shown that the reduction of n-hexanal was due to the inactivation of hydroperoxide lyase, not of lipoxygenase."

New products made from this bland tofu are: Tofu coagulated with citrus juice (*sudachi, yuzu*), tofu noodles containing dietary fiber, and fried fish cake containing tofu. Address: Tokushima Prefectural Food Research Inst., 2-41 Akui-cho, Tokushima 770, Japan.

6172. **Product Name:** Plamil Roasted Hazelnut Chocolate Bar (100% Non-Dairy).
Manufacturer's Name: Plamil Foods Ltd.
Manufacturer's Address: Plamil House, Bowles Well Gardens, Folkestone, Kent CT19 6PQ, England.
Date of Introduction: 1991. October.
Ingredients: Incl. soyamilk.
How Stored: Shelf stable.
New Product–Documentation: Spot in SoyaFoods (ASA, Europe). 1991. 2(2):7. "Non-dairy chocolate bar." This product, recently introduced, is made with the same recipe as the company's Plain Chocolate Bar. Cow's milk is replaced with soyamilk.

6173. *Plenty Bulletin* (*Davis, California*). 1991. Soy to the world. 7(3):1-2. Fall.
• ***Summary:*** "Plenty has just been awarded $29,600 by the Public Welfare Foundation of Washington, DC to help groups who have requested Plenty's assistance in starting up or expanding projects involving the production of foods made from soybeans over the next two years... Plenty representatives have pioneered the introduction and adaptation of soybean foods into the diets of people in developing countries from Central America to Africa over the past thirteen years. During Plenty's first and largest soy project to date, undertaken in Guatemala in 1979 and 1980, more than 1,000 men and women from a total of 74 different villages were taught how to make soy milk and tofu at home...

"The Corozal South Soya Producers Cooperative in Belize is a group of 25 sugar cane farming families who have been growing soybeans on the side over the past five years. Soybeans grown by the Corozal farmers are currently sold to Mennonite poultry growers who process and use the soybeans for poultry feed. The Corozal farmers have requested program design and technical assistance in establishing a soybean processing business that would make soybean foods for human consumption and use the residue for animal feeds.

"Imani House was founded by an African-American couple who have been living in Liberia for the last six years. Imani House is a child-care center and orphanage which is committed to nurturing and feeding abandoned and hungry children in war-torn Liberia. The organization has asked for Plenty's assistance to develop soybean agriculture and small-scale soy foods processing technologies at Imani House and in other parts of Liberia in an effort to create more locally-produced sources of nutritious food." Plenty has agreed to help Imani house with a community agriculture and soy

utilization project.

Plenty has also been asked to provide program design and technical assistance by organizations in Madhya Pradesh (India), Jamaica, Dominica, Barbados, St. Vincent in the Caribbean, and Guyana, as well as by American Indian communities from Pine Ridge, South Dakota, and Round Valley, California.

6174. *SoyaFoods* (*ASA, Europe*). 1991. Soya concentrate plant opened. 2(2):3. Autumn.
• ***Summary:*** The new Sogip plant for making soy protein concentrate was officially opened this summer in Bordeaux (in southwest France). Sogip is a joint venture between ONIDOL (the French oilseeds association) and Societe Francaise Bunge. 20% of the concentrate will be used for human food and 80% for calf milk replacer. The site of the new plant is Avenue Bellerive des Moines, 33530 Bassens, France. Phone: 56 31 62 10.

Note: The company makes 4 products: Provitel for veal calves, Sogipro for pigs, Sogipro P. for fish, and Sogipro T. (texturized) for dogs. The major markets for these products are in France and Italy. For more information contact SOGIP, 73-77 rue de Sèvresm BP 72, 92105 Boulogne Billancourt, France. Phone: 1/46.04.59.59.

6175. *SoyaFoods* (*ASA, Europe*). 1991. Soyafoods in Portugal. 2(2):4-5. Autumn.
• ***Summary:*** Portugal's 10 million people have an average annual income of $US4,000, the second lowest in Europe. A revolutionary coup in 1974 ended a 48-year dictatorship and led to a stable democracy. In 1986 Portugal entered the European Community (EC). The population wishes to consume more and better foods. Portugal imports approximately 800,000 tonnes of soya beans per year, of which 200,000 are used as full fat soya flour. The remaining 600,000 are crushed to produce approximately 405,000 tonnes of soya bean meal used in animal feed and 105,000 tonnes of soya bean oil used in animal feed (30,000) and edible oils (75,000). There are roughly 12 soya bean oil refiners, 3 of which are also crushers.

The country has a Mediterranean-style diet with olive oil and fish. Soyfoods are sold mostly at the small number of small 'dietetic' food stores; they include soymilk (called "vegetable milk"), soya desserts, tofu, meat extenders, and soy protein concentrates. The market is still very small. Portugal has only one tofu manufacturer, Provida (located at Quinta dos Linhais, Cortegaca, 2715 Pero Pinheiro), whose production is 2,000 kg/month. The company, whose executive director is Mr. Alcino de Sousa, also packs textured soy flour (meat extender) and estimates that the market for meat extenders in Portugal is 24 tonnes/year. Mr. Sousa is interested in a joint venture with a European or U.S. producer of tofu or soymilk. All remaining soya products available in Portugal are imported. The largest importer and distributor, Dietimport, "has 5 stores and imports and sells approximately 25 tonnes per year of textured soya protein and 20,000 litres per year of soya milk, soya desserts, and soya yogurts; it also sells 100 kg per day of tofu produced locally."

6176. *SoyaFoods* (*ASA, Europe*). 1991. Profile on Amrit Protein Foods. 2(2):5. Autumn.
• ***Summary:*** A brief description of the company, its history, and present activities. A photo shows a package of Golden Glow natural soymilk. "The company also has plans to introduce other soya milk-based products, such as soya milk powder, tofu, soya cheese, soya yogurt and desserts, into the Indian market."

6177. *SoyaFoods* (*ASA, Europe*). 1991. 'Tonyu' launched in France. 2(2):2. Autumn.
• ***Summary:*** The French soyfoods association, SOJAXA, has decided to use the Japanese term, 'tonyu,' which means soymilk, as their official name for products formerly called soyamilk or soyadrink–because of labeling difficulties in France. SOJAXA held a press conference in Paris to launch the name and promote soyfoods in general.

The group also presented the results of the second half of their consumer survey. In 1991 some 41% of those polled reported a knowledge of at least one soya product, up 6% over 1990. Some 21% of respondents had consumed at least one soya product, but only 6% consumed soya products regularly. Soya drinks and desserts (in a variety of flavors) were the most popular, followed by tofu and other products. SOJAXA is located in Toulouse, France.

6178. *SoyaFoods* (*ASA, Europe*). 1991. Changes for Haldane Foods. 2(2):2. Autumn.
• ***Summary:*** The Haldane Foods Group has acquired Unisoy Milk 'n By Products Ltd. of Stockport, UK, the manufacturers of soymilk, soy yogurts, and Maranellis soy ice cream. Following the Group's other recent acquisition of Granose Foods, the Haldane Group's headquarters have been moved to Granose Foods' premises at Howard Way, Newport Pagnell, Bucks, UK. Phone: 0908 211311. The move integrates the administration, sales, and accounts functions. Production at the Haldane factory is unaffected. Note: The Haldane Foods Group had formerly been located at Barrow Upon Soar, in Leicestershire.

6179. Takai Seisaku-sho. 1991. [Takai corporate guide]. 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 8 panels. Nov. 1. 30 cm. [Jap; eng]
• ***Summary:*** This color brochure, containing 5 color photos, is written in both Japanese and English. It notes that (as of 1 Nov. 1991) Takai has exported its tofu and soymilk equipment to 140 cities of 30 countries, including Bhutan, Bolivia, Brunei, Burkina Faso, Egypt, Finland, India, North

Korea, Mexico, Nepal, Philippines, Spain, Sri Lanka, Sweden, Switzerland, and Thailand.

A chronology of the company states that in July 1917 Kamejiro Takai, a former president, founded Takai & Brothers Co. It was renamed Takai Sesakusho in Jan. 1946. Address: Kanazawa, Ishikawa-ken, Japan. Phone: 0762-48-1355.

6180. *Ottawa Citizen* (*Ontario, Canada*). 1991. Milking a soya cow in order to feed the hungry. Nov. 24. p. E3.
• ***Summary:*** The SoyaCow, invented by Raj Gupta, is a machine that makes palatable, low-cost, high-protein soymilk. One machine is already helping to feed more than 100 poor children at a home run by Child Haven International in Hyderabad, India. "Child Haven, which began the project about two years ago, is now in the midst of building the first dozen machines. A machine costs about $3,000 but the price will fall as greater volumes are produced." A photo shows the compact SoyaCow machine.

Note: This article was reprinted in the *Child Haven International* newsletter of Fall / Winter 1991.

6181. Bloyd-Peshkin, Sharon. 1991. Just soy moo. *Vegetarian Times.* Nov. p. 20.
• ***Summary:*** Every Canadian province has a law prohibiting the manufacture and sale of imitation dairy products, such as soy cheeses, ice creams, milk, etc. "The only exceptions to these laws are margarine, nondairy coffee whiteners, nondairy dessert toppings and infant formula, all of which may be sold."

"Two rationales are behind these laws, which have been on the books as long as 50 years. First, imitation dairy products are considered nutritionally inferior to their dairy counterparts, and fool consumers into thinking they are getting the nutritional benefits of dairy products when they are not... And second, imitation dairy products compete with real dairy products, harming the financial well-being of dairy farmers and processors."

6182. Johnson, Lawrence A. 1991. New uses for crops: Opportunities or hype. Paper presented at Developing Alternative Uses for Crops Meeting. 23 p. Held 13 Nov. 1991 at Highlander Inn, Iowa City, Iowa.
• ***Summary:*** In this narration to a slide show containing 60 slides, the author discusses grain amaranth, crambe, soybeans, corn, soymilk, tofu, the Nichii Company, use of agricultural products to replace petroleum-derived products (such as ethanol, citric acid, lactic acid, lysine, and detergents), degradable plastics, Henry Ford and his plastic automobile parts ("Unfortunately, cheap petroleum caused his effort to be abandoned in the 1950's. Times have changed and many are reexamining this opportunity using modern technologies. Soy plastics may be more environmentally friendly."), biotechnology and soybeans, breeding soybeans with soil similar to canola oil. Address: Professor-in-Charge, Center for Crops Utilization Research, Iowa State Univ., Ames, IA 50011.

6183. PNS (Programa de Nutrición y Soya). 1991. Manual de nutrición y soya: La soya el alimento de hoy y de mañana [Manual of nutrition and soya: Soya, the food of today and of tomorrow]. San Salvador, El Salvador: PNS. 146 p. 23 cm. [8 ref. Spa]
• ***Summary:*** Contents: Introduction. Undernutrition: A sign of ecological deterioration. Our health, diet: What we eat, consequences of malnutrition, causes of malnutrition, what we should eat, soya in our diet, health and diet, the diet of mothers and children, soya in the human diet (how to prepare soymilk and soy cheese [tofu], recipes for soymilk and soy cheese, recipes for soya soup, soya masa, roasted soynuts, roasted soy flour, whole soybeans, soya desserts, soya pastries and cakes, soy sprouts [*retoños de soya*] and how to grow them).

Note. This is the earliest Spanish-language document seen (Jan. 2013) that uses the term *retoños de soya* to refer to soy sprouts.

Appendixes: Biblical passages relating to diet, chemical composition of some daily foods. Cultivation of soybeans (p. 128-45).

The book begins: "This little *Manual of Nutrition and Soya* is the fruit of the effort of a group of Christians, members of parochial [church-related] communities, and of other institutions of Christian inspiration, who are working to seek a solution to the most outstanding problems of our country. One of these is general undernutrition of our population, especially in rural and marginal sub-urban areas. Approximately 73% of Salvadorean children suffer the consequences of undernutrition."

"Six years ago the Program of Nutrition and Soya (*Programa de Nutrición y Soya,* PNS) was founded, made up at that time of the Christians of the Dioceses of Santa Ana, San Salvador and Santiago de María. Actually many institutions of the church, private and governmental, collaborate actively with this program. From the first year we have relied on the financial support of the Catholic Relief Service, which has permitted us to strengthen our activities. Subsequently the Interamerican Foundation (FIA) has offered us its financial support...

"The board of directors of PNS offers this new edition with the aim of joining efforts with those people interested in working for the eradication of undernutrition in our country." Contact PNS, Apartado Postal 2115, San Salvador, El Salvador.

Note: Letter from Kris Duville. 1992. Dec. 13. This is an informal publication, mainly directed at the courses and demonstrations, where they are sold to participants at a low cost. This is the 3rd edition, published in Nov. 1991; 8,000 copies were printed by the editing serves of the Jesuit-run

UCA (University of Central America) in San Salvador. It is sold in a few bookshops, naturist's stores, and in the PNS office. It was written by several volunteers, of whom he knows only Teresa Taris. Address: El Salvador.

6184. **Product Name:** White Almond Beverage.
Manufacturer's Name: Wholesome & Hearty Foods (Product Developer-Marketer).
Manufacturer's Address: 1416 S.E. 8th St., Portland, OR 97214. Phone: 503-238-0109.
Date of Introduction: 1991. November.
Ingredients: Water, almonds.
New Product–Documentation: Ad in *E Magazine.* 1992. Jan/Feb. p. 63. "Take a taste of our Milky Way." "Dairyless. Only 1% fat. No cholesterol. Lecithin enriched. Use like 1% milk. Developed and marketed by Wholesome & Hearty Foods, Inc."

Talk with industry watcher. 1993. April. Wholesome and Hearty terminated their agreement with Earthsave in mid-1992 for $10,000. Before (and after) that they were doing "Green Marketing" by saying that they donated a portion of their earnings to Earthsave.

6185. Bolduc, Bill. 1991. Current work with organic foods and soyfoods (Interview). *SoyaScan Notes.* Dec. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** His company is in the process of developing an organic TVP. It is presently produced in Illinois under contract (on a test basis) and he hopes to have the product ready for sale by early 1992. He is in serious discussion with a major player in the grain industry, who he hopes will become his partner. Bill's company will do the R&D and marketing, not the manufacturing. No name for the product has yet been determined, but he generally refers to it as "Organic TSP" or "Organic Textured Soya Protein." He doesn't like the letters "TSP," which remind many people in the food industry of trisodium phosphate (a crystalline compound used especially in cleaning compositions). (Shurtleff suggests that Bolduc consider licensing the rights to call it "Organic TVP" from ADM via Richard Burket.) He is talking with Health Valley about the product and has a major player in England that will be ready by early 1992. The texture is similar to ADM's mince (granules).

His company is limiting itself to basic processing of the four major grain commodities grown organically in Ohio and neighboring states: soybeans, soft wheat, corn, and oats. OPC which was just incorporated on 19 Sept. 1991, is already active and has products on the market. Before that, Bill was a broker. In Dec. 1990 OPC shipped its first truckload of organic wheat flour to Barbara's bakery–under the Organic Marketing label. He is now supplying Health Valley with all of the flour that is going into their fat-free products. He does not yet have any soy products on the market. But he is also looking at doing something with soymilk in Ohio.

Update: 1992 March 14. The development of organic TVP is coming along nicely. Bill has visited ADM in Decatur, and talked by phone with Roger Kilburn (who is head of Protein Specialties at ADM; a very nice man with a background similar to Bill's). He hopes to license TVP under the name "Organic TVP." They invited him to introduce the Midland Harvest line to the natural foods industry. Bill declined because of problems with ingredients but offered to help ADM improve their ingredients for the natural food market. Address: President, Organic Processing Corp., 3307 Clifton Ave., Cincinnati, Ohio 45220. Phone: 800-647-2326.

6186. Silver, Jimmy. 1991. History of work with natural foods, Erewhon, Pure & Simple, and Pure Sales. Part I (Interview). *SoyaScan Notes.* Dec. 9 and 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jimmy was born on 21 March 1942 in Philadelphia, Pennsylvania. His father was an officer in the Army Medical Corps. After a brief stay in Baltimore, when Jimmy was in 4th grade, the family moved to Manhasset, Long Island, New York. He grew up there and graduated from high school. He graduated from Oberlin College in Ohio, then did graduate work at the University of Illinois in the Inst. of Labor and Industrial Relations. He finished his course work after 18 months, but did not write his thesis, then went to New York as a labor organizer. After receiving a draft notice during the Vietnam War, he enrolled in the University of Michigan at Ann Arbor studying Medical Care Organization. Again he completed his course work for the doctoral program, but facing the doctoral thesis, he dropped out in 1967 or 1968.

He was briefly introduced to natural foods and macrobiotics in 1967 in Ann Arbor by a friend named Earl Rosner. One day, in the midst of the psychedelic counterculture he had a deep inner realization that Americans were destroying their ecosystem, both within and without. He quit using psychedelics and began to eat only natural foods. He read *You are All Sanpaku* and *The Book of Judgment,* early macrobiotic works. He bought the books and "health foods" at an old-line health food store named Zerbo's, run by Harry Zerbo in nearby Livonia, Michigan. At the Kuwahara trading post in downtown Detroit he bought real Japanese food–such as various sea vegetables, soba, and noodles–and Koda Brothers Kokuho Rose brown rice.

At about this time (1967-68) Jimmy got into the music business, and was sort of in business with a poet named John Sinclair, who was a great bear of a man, who the media regarded as the Pharaoh of the Hippies, and who managed a band named the MC-5. Jimmy and John were partners in a production company named Trans-Love Productions–Gets You There on Time. Jimmy managed a rock group named Iggy Pop and the Stooges. After a few months John introduced Jimmy and Susan (his girlfriend of several years

and wife to be) to Jim Semark, another poet who was into macrobiotics, Baha'i, and meditation. In mid-1968 Semark invited Jimmy and Susan to a macrobiotic cooking class taught by Michio Kushi at Semark's home in Detroit; then they soon met Michel Abehsera–who they thought was wonderful and very down to earth.

Jimmy and his wife, Susan, were married on 23 Oct. 1968 in Ann Arbor. He and Susan were in Ann Arbor at the time the food co-op changed into Eden Foods but they were never members of the co-op or the Zen Macrobiotic Supper Club–for reasons that he cannot now recall. He and Susan were loners and membership in such groups wasn't their style. Jimmy's parents still lived on Long Island in New York so when he and Susan visited them, they used to go into the city and buy foods from Arnie Greenberg (who owned Greenberg's, a Jewish deli-grocery store at 125 1st Ave., near Ratner's vegetarian delicatessen, in New York City). Arnie carried foods in bulk and packaged natural foods from suppliers such as Infinity. Infinity Foods was a small food warehouse on the 2nd or 3rd floor run by a bunch of Scientologists (including Howard Rower and Jason Hammond [son of John Hammond Sr. of Columbia Records and brother of the white blues guitarist John Hammond Jr. of John Hammond and the Nighthawks]) who were into macrobiotics and natural foods. Jimmy had their catalog and visited their warehouse. Located in downtown New York at 171 Duane St. on the west side near the commercial produce and meat area, Infinity started in the mid-1960s and was the first company to import macrobiotic foods from Japan–before Erewhon. The Erewhon retail store used to carry Infinity's products. Then Infinity fell on hard times and disappeared. Arnie would also ship him macrobiotic staples by Greyhound bus. He recalls Gloria Dunn, who looked like a gypsy, and he recalls Eden Organic Foods which was on the second floor of a building near downtown Ann Arbor. Shortly after Bill Bolduc started Eden, Jimmy and his wife left for Los Angeles with Iggy Pop.

Their first daughter, Rachel was born on 23 Jan. 1969 in Ann Arbor. He went to Los Angeles with his band in the spring of 1970. He played music at night then during the day would hang out at the Erewhon retail store on Beverly Blvd. in Los Angeles with Bruce Macdonald and Paul Hawken. He thinks that Michio Kushi had sent either Bill Tara, Bruce Macdonald, or Paul Hawken from Boston to open a branch of Erewhon in Los Angeles in about the summer of 1969. Years later when the store became a wholesale company, it was given the name Erewhon West, since it had different ownership from Erewhon in Boston. At the end of the summer of 1970, he and his wife moved to Los Angeles to live with Aveline Kushi, who had a house on Franklin Ave. in Hollywood. He wanted to work with Erewhon, not in the retail store on Beverly Blvd., but in the little warehouse that they were just acquiring kitty-corner to across the street from the retail store. In about 1970 it began wholesaling and distribution business. But when Jimmy returned in the fall, Hawken was gone; he had moved to San Francisco and gone to work with Fred Rohe. Hawken had apparently had a falling out with Michio and Aveline Kushi. So Jimmy worked with Bruce Macdonald ("a wild man then, as ever").

Jimmy and his family then moved to Boston, where they lived and worked from Dec. 1970 to 1976. Jimmy had been asked by Michio Kushi to take over the failing restaurants (Sanae and The Seventh Inn) in Boston. Both were owned by Sanae Corporation. Richard Sandler and Warren Durbin had grandiose plans to expand Sanae, so they opened The Seventh Inn on Boylston St. in Boston. It was an immediate failure and they struggled with it for years afterwards–then they just up and left. Paul Hawken at Erewhon had promised to help Jimmy with Sanae.

Then Jimmy worked in Los Angeles with Erewhon West (owned by John Fountain–John Deming was the financial backer) from 1976 to 1980. John Deming's family controls the Murphy Oil Co. in Louisiana and they are extremely wealthy. Erewhon West had financial troubles trying to compete with Nature's Best and K&L–big, established distributors. In 1980 Deming fired Fountain and was going to liquidate the company–just shut it down. So Jimmy and Jeff Hilgert bought the assets from Deming and in June 1980 they transformed Erewhon West into Pure Sales. The company has done various things over the years. Initially it sold natural food consumer products. John Fogg developed the excellent marketing concept for So Tamari in about 1981. When Erewhon went bankrupt in 1981, they voided their contract with Pure Sales to permit the use of their name for a royalty–so within 90 days Pure Sales eliminated the Erewhon name from all of their products; all of the Japanese products became "So'" products (So' Tamari, So' Ramen, etc.), a name Jimmy coined, which meant nothing but sounded Japanese. Continued. Address: President, Pure Sales, P.O. Box 5116, Irvine, California 92716-5116. Phone: 714-540-5455.

6187. Silver, Jimmy. 1991. History of work with natural foods, Erewhon, Pure & Simple, and Pure Sales. Part II (Interview). *SoyaScan Notes.* Dec. 9 and 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In 1982 Jimmy and Jeff Hilgert sold their business (which was growing very fast), except for the name (Pure Sales), to Fillmore Foods, a supplement company that wanted to expand into natural foods. Fillmore Foods named the new company Pure & Simple–its rebirth. Bruce Macdonald, always one to see an opportunity, started Pure & Simple making natural tortilla chips in San Diego. The chips were reasonably successful. "It's not clear to me whether Bruce coined the name Pure & Simple or whether he found it on the back of a Corn Nuts package."

When Phil Parente / Parenti got involved in raising money to take over New-Age Natural Foods (Fred Rohe's

company), somehow Pure & Simple became part of the package. Bruce Macdonald took the name Pure & Simple, which he controlled, to Parente, offered to trade the name for shares in the company if Parente would continue producing his chips. He also suggested many other product ideas to expand the line. Parente agreed. Then in the early 1970s Parente was sued by the company that makes Corn Nuts because they wanted to use the Pure & Simple name. The two companies fought a legal battle over this name for several years. Parente won. Then Parente began to expand Pure & Simple. An ex-disc jockey named A.J. Celeri got Parente involved in some carrot packing operation that his family had been involved in. Then they got into organic chickens and eggs, and finally opened a big New Age natural foods supermarket in Palo Alto. A good idea that had arrived too early, it was not successful. Soon the whole thing was completely out of hand. In the end, Phil Parente ran the original Pure & Simple into the ground. He had the mafioso from the produce market chasing him, and all the people who had invested money in the company were also after him. Pure & Simple never filed formal bankruptcy papers; it just went down the drain. During this period Pure & Simple and The Well were both located in the same warehouse [at 795 West Hedding St.] in San Jose. Jimmy thinks that Pure & Simple was the name of the whole company, which owned the line of Pure & Simple branded grocery products, such as jams and juices. The Well was simply the fresh produce distribution arm of Pure & Simple.

The Lundberg brothers, producers of organically grown rice in Richvale, California, had a brother-in-law or a cousin named Dick who worked as a salesman for Shade Foods, a maker of yogurt toppings in Belmont, California. Dick went to Bill Shade and recommended that Shade acquire the Pure & Simple name and run the company. So Shade Foods bought Pure & Simple, which at that time was only producing a line of jams and a few other minor products. They were grossing about $4,000 a month and they had about $9,000 a month in expenses. Shade Foods ran Pure & Simple for about a year–into the ground. Roger Hillyard knows this whole story. Roger had a brokerage named Omega and he took Jeffrey Hilgert (who was employed by John Deming at Erewhon–Los Angeles) to Shade Foods in hopes that Jeffrey would take over the marketing of the Pure & Simple products. Jeffrey convinced Shade Foods to sell the company to Deming. Shade agreed to sell. Jimmy later bought Pure & Simple (along with Erewhon–Los Angeles) from Deming. When Jimmy sold his business (Pure Sales) to Fillmore, most of his 100 products or SKUs [SKU = stock keeping unit] were under the Pure & Simple brand. These products went off the market in about 1985-86 when the whole thing, with $5 million in sales, fell apart. Pure Sales is now primarily a supplier of organically grown ingredients to natural food manufacturers.

Of all the original natural food companies based on the Erewhon format, Eden Foods is the only one that has survived and thrived in its original format. But Eden might not be in existence if it hadn't been for soymilk.

Note: Jimmy Silver and his wife and family have long lived in Irvine, California. The physical office of Pure Sales has been in Costa Mesa since 1985. Address: President, Pure Sales, P.O. Box 5116, Irvine, California 92716-5116. Phone: 714-540-5455.

6188. Redmond, Tim. 1991. Early work with Eden Foods and macrobiotics. Part II. 1971 to 1979 (Interview). *SoyaScan Notes.* Dec. 11 and 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In the summer of 1971 Tim and Bill Bolduc first met Mike Potter, who had been managing a macrobiotic natural foods store named Joyous Revival in Birmingham, Michigan. Mike was born in about December 1949. There used to be free concerts on Sundays in the park in Ann Arbor. Mike would buy a 50-lb bag of rice from Eden plus a few odds and ends, take it out to the park, cook the rice, and sell it by the bowl to people in the audience.

The growing wholesale business made such large demands on Tim's time that he and Bill began to look for someone to manage the retail store. In the fall of 1971, they hired Mike Potter as manager. For a while Mike worked for little or no wages. In 1972 Bill and Tim offered Mike an ownership position, and gave him about 13% of the total stock in lieu of his service. Bill and Tim now each owned 43.5% of the company's stock. This ownership structure lasted for about one year. In about Nov. 1972 the retail store was moved from 211 State Street into a much larger location at 330 Maynard St. Potter continued to manage the retail store until about 1974.

When Bill Bolduc left the company in the late summer or fall of 1973, he and his wife Judy sold their shares back to the company. Bill left for a variety of reasons, in part because of a little friction that existed at the time. Tim now ended up owning 51% of the company stock and Michael Potter owned 49%. Tim was the president. This arrangement continued for about a year until about the winter of 1974, when Potter convinced Redmond to give up 1% of his stock for a certain amount of money he knew the company needed at the time. Tim and Mike Potter were now 50-50 partners. Potter became the president shortly thereafter.

In 1974 Tim Redmond made initial contacts with Muso, a leading macrobiotic supplier. Mike Potter now traveled to Japan and developed Eden's contacts with Muso. Eden began importing directly from Japan, but Erewhon had an arrangement with Muso which stated that Muso could only sell products to American natural foods companies under the Erewhon brand. Eventually the growing number of natural foods importers, including Eden, protested this policy. There were meetings in Florida and California. Yuko Okada of Muso and Mr. Kazama of Mitoku came to a meeting that was

held in Florida, and in about 1975 or 1976 Eden began to do business with Mr. Kazama of Mitoku, importing under the Eden brand. This move by Mitoku broke the Erewhon-Muso monopoly. Today Eden again imports all of its Japanese products from Muso.

In 1973, after about 1½ years of operating out of the rudimentary Quonset hut, Eden was ready for a bigger warehouse. So they found an old building near the middle of Ann Arbor, several streets west of Main Street, down by the railroad tracks. They shared this building and their trucking with Midwest Natural Foods which was run by Hank Bednarz and David Rock. During this period of 1½ to 2, Eden and Midwest became competitors. Eden sold only dry bulk and packaged natural foods; Midwest sold packaged health food lines, vitamins, and frozen or refrigerated goods. Though the two companies proved to be philosophically incompatible, they were the first to act as a full-line "super distributor."

Still growing, Eden moved to larger location on Platt Road in the spring of 1974. The previous 50/50 ownership structure continued until the summer 1979, when they took in Cliff Adler as a junior partner. Cliff purchased 10% of the company stock at a favorable price, leaving Mike and Tim with 45% each. Shortly after the disastrous fire occurred in Nov. 1979 at the warehouse on Platt Road, several key employees were encouraged to stay with the company by awarding them shares of stock. Also one outside person purchased some stock from the company; this provided money that the company greatly needed. The retail store and restaurant were made into an independent company (named The Maynard Street Connection, Inc.) from the Eden Foods wholesale operation.

In May 1980 Tim resigned his position with the company, sold most of his stock back to the corporation (he kept only a few shares), and took over management of the retail store and restaurant, which had been the beginning of the company. There were many personal reasons that Tim left. Since the company's future looked uncertain, he received a relatively low price for his stock. He still owns the stock he did not sell at that time. Tim and a friend operated the retail store and restaurant for about 3 years, then they sold it at the end of 1983. In mid-1984 Tim and Mike Potter had lunch and Mike invited Tim to come into the new soymilk venture, American Soy Products (ASP). Tim worked as a consultant for the first 9 months until mid-1985, at which time he became an employee of ASP. Tim is still one of a few people who own shares of stock in Eden Foods; others include Mike Potter and three other people.

Tim is interested in the question: When was Eden Foods founded? He once asked Michael Potter where Michael got that July 1967 date. He recalls that Michael said he had asked the National Bank of Detroit (NBD) in Ann Arbor, which carried Eden's first bank account. It is Tim's guess that the July 1967 date was when Ronnie Teeguarden opened the account for his used clothing store (Teeguarden-Leabu General Store). Tim feels that "Eden Foods did not start in July 1967 by any stretch of the imagination. To say [as a 1991 Eden publication does] that in 1967 'The first checking account was opened for Eden Foods' seems blatantly incorrect." The concept may have started as early as 1967 but the entity and the name did not start until Nov. 1969.

Some people have stated their opinion that the 1979 fire was caused by arson in order to collect insurance money. Tim is sure that these opinions are incorrect. During 1977 and 1978 Eden had been expanding rapidly and had gotten into a tight financial position. Cliff Adler helped the company in this situation. In 1979 they were having the most profitable months they ever had. The business was not in bad financial shape. Moreover the fire cost Eden hundreds of thousands dollars more than they ever recovered from the insurance company. Address: Vice President of Marketing and Sales, American Soy Products, Inc., 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

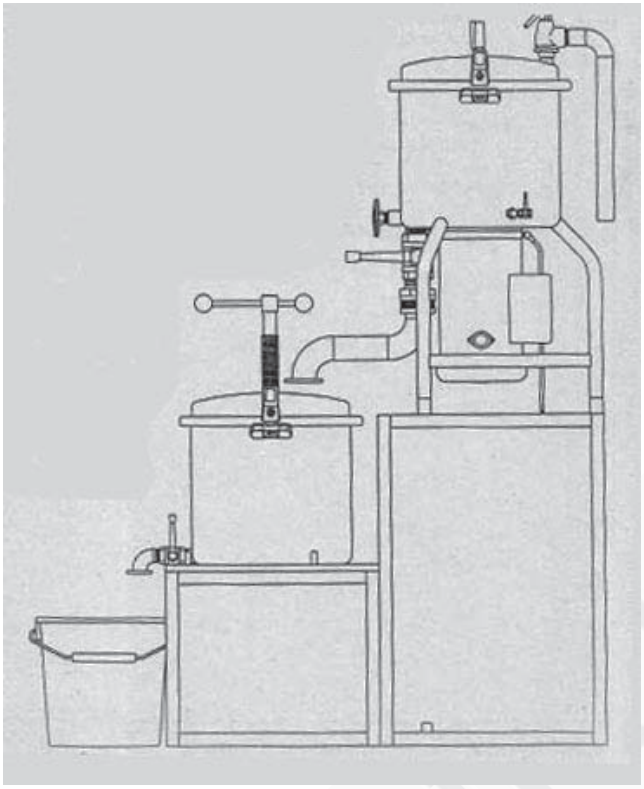
6189. Bolling, David. 1991. A water supply 'recipe' for California. *Headwaters* (*San Francisco, California*) 15(3):2. Oct/Dec.
• ***Summary:*** The main ways to get additional supplies of water in California are: (1) Cotton irrigation water: Install subsurface drip irrigation = 2 million acre feet (MAF) per year. (2) Reclaimed wastewater: More than 2 MAF of treated sewage wastewater washes out to sea each year. More than 860,000 acre feet–more than Los Angeles uses annually–could be reclaimed every year by the turn of the century. (3) Low flush toilets: Installation of ultra-low flush toilets in every home could produce 500,000 acre feet each year. (4) Less alfalfa: "Crops for cows consume more water than people do. The metropolitan Water District is exploring the possibility of buying 300,000 acre feet of water from alfalfa farmers who would then let their fields go dormant."

In addition, water marketing and price reforms could free up huge new supplies. Note: This man seems to have accepted and to be trying to work within the confines of an irrational, indeed insane and destructive, California water system. Address: Executive Director, Friends of the River, 909 12th St., Sacramento, California 95814. Phone: 916-442-3155.

6190. *Child Haven International* (*Newsletter, Maxville, Ontario, Canada*). 1991. SoyaCow. Fall/Winter. p. 3.
• ***Summary:*** On the left half of this page is reprinted an article from the *Ottawa Citizen* (24 Nov. 1991) titled "Milking a Soya Cow in order to feed the hungry."

This article, which is on the right half of the page, states: "The article at left went out on Canadian Press and appeared in many Canadian newspapers (thanks to Frank Daller). The reason the soya milk doesn't need refrigeration is that you make it as you need it. The $3,000 cost is a

projected goal after the machines are being mass-produced. At present they are $5,000. The Soya Committee is having ten machines made, 6 to be sent to India and four for sale. Call us if interested. The SoyaCow pictured below is a later improvement on the one at left in the picture (e.g. top of funnel eliminated). Child Haven is in the midst of its second CIDA program ($62,000 from CICA, $24,000 from Child Haven).



An illustration (line drawing) shows the three main components of the SoyaCow, two on platforms of different heights.

• ***Summary:*** Using bromelain, cheese analogs can be prepared from soybean curd.

Note: Bromelain is a proteolytic enzyme extracted from the pineapple plant or from other plants of the family, *Bromeliaceae.*

6192. Kreith, Marcia. 1991. Water inputs in California food production. Water Education Foundation, 717 K Street, Suite 517, Sacramento, CA 95814. 162 p. *
• ***Summary:*** This report states that a typical 8-ounce boneless beef steak requires over 1,200 gallons of water before it reaches the table, and a 4-ounce hamburger requires over 600 gallons. An 8-ounce portion of chicken requires 165 gallons, while ½ cup of tofu (made from soybeans) needs just 60 gallons. One cup of plain yogurt takes 87.8 gallons, a 2.1-ounce chicken egg takes 62.7 gallons, and 8 fluid ounces of whole milk takes 48.3 gallons. The study, commissioned by the Water Education Foundation, sought to update numbers that originally were calculated by the University of California Cooperative Extension in 1978. The study, conducted with the assistance of an advisory committee, that included members of the California Farm Bureau Federation, takes into account water naturally available and/or applied as irrigation water to grow and process food products. The water inputs were analyzed from the beginning of the planting or growth cycle up to the time of cooking. The study assumes all crops were raised according to average California water, nutrient, and pest management practices, and irrigation efficiency of 70 percent is assumed to be average.

"While a beef steak was determined by the study to be the most water-consumptive, the most water efficient was a cup of lettuce using just under 3 gallons. Other assorted food items and their water usage were: a slice of white bread at 10.6 gallons, a slice of wheat bread at 7.3 gallons, a 2-ounce serving of pasta at 35.9 gallons..." The report costs $40 from the Water Education Foundation. Address: Sacramento, California. Phone: 916-444-6240.

6193. **Product Name:** Soymilk, and Cloth-Wrapped Tofu (Bou Bow Daufu).
Manufacturer's Name: Pak Fok Food Products Inc.
Manufacturer's Address: 2370 Midland Ave., Unit A-26 Winco Business Park, Scarborough, ONT, M1S 5C6, Canada. Phone: 416-299-7952.
Date of Introduction: 1991. December.
New Product–Documentation: Talk with Simon Kwan, owner. 1992. Oct. 8. Followed by a letter dated Oct. 9. He began making these two products in Dec. 1991, first the soymilk and then the tofu–which was the first tofu of its kind in Toronto. The texture of Bou Bow Tofu is very smooth and delicate, but it is very labor intensive to make. Mr. Kwan bought this company (the name has not changed) on 9 Oct. 1990 from Tony Lam, who was the second owner. The company was founded on 1 Jan. 1989 by Mr. Hok Chung Sung at the present address, probably under the name Dragon & Dragon Food Products. Pak Fok distributes its own products in the Toronto area.

6194. *Plenty Bulletin* (*Davis, California*). 1991. Report from Belize. 7(4):4. Winter.
• ***Summary:*** Program Director Chuck Haren has been in Belize since Sept. 6. He is "spending much of his time working with farmers and their families who are expressing boundless enthusiasm for growing and using soybeans for food. He held six soyfood demonstrations attended by a total

of 250 people in six different communities." A photo shows a soy demonstration in the Corozal District, Belize. Four women are squeezing soymilk from a bag into a pot.

6195. **Product Name:** WestSoy Plus (Non Dairy Beverage with Calcium and Vitamins A & D Added) [Plain, Vanilla, or Carob].
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).
Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.
Date of Introduction: 1991. December.
Ingredients: Filtered water, whole organic soybeans*, brown rice syrup (brown rice, water), tricalcium phosphate, expeller pressed organic canola oil*, sea salt, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2). * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 liter (1.06 quart) Tetra Brik Aseptic carton. Retails for $1.89 (7/92, Maryland).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 8 fl. oz.: Calories 150, protein 6 gm, carbohydrate 18 gm, fat 5 gm (percent calories from fat 33, polyunsaturated fat 3 gm, saturated fat 1 gm), cholesterol 0 mg, sodium 140 mg, potassium 265 mg.
New Product–Documentation: Leaflet (glossy color, front and back, 28 cm) inserted into Natural Foods Merchandiser. 1991. Dec. After p. 42. "Westsoy Plus: Calcium rich with vitamins A, D & riboflavin added." "The first soy drink to bring your customers a balance of the important nutrients found in dairy milk!" Main benefits and a list of key nutrients is given.

Product with Label purchased at Fresh Fields, Rockville Pike, Maryland. 1992. July 20. 3.75 by 6.5 by 2.5 inches. Orange, black, and yellow on white. Color photo of soymilk being poured from a pitcher into a glass. "Lactose free. Great tasting. Only 2% fat. No cholesterol." Each glass of Westsoy Plus provides the following percentages of the U.S. Recommended Daily Allowances: Calcium 30%*, vitamin D 25%*, riboflavin (vitamin B-2) 25%*, vitamin A 10%*, protein 10%. * = As much as whole cow's milk.

Ad in Natural Foods Merchandiser. 1993. Sept. p. 23. "Another important first for Westbrae was WestSoy Plus, with calcium, vitamins A, D and riboflavin added. WestSoy Plus was the first soy drink to bring your customers a balance of the important nutrients found in dairy milk. Calcium is added in the form of tricalcium phosphate, naturally occurring in phosphate rock and lime. This is the same calcium that is found in dairy milk... Vitamin A palmitate is used as a vegetarian source of vitamin A." Vitamin D is derived from torula yeast. Riboflavin is formed through a biofermentation process of ribose, which is a simple sugar. WestSoy Plus has only 2% fat.

Westsoy Plus in ½ gallon Combibloc Aseptic carton purchased on 30 April 1999 at Trader Joe's in Concord, California. Retails for $2.19. The front panel states: "Delicious non dairy soy beverage. 7 times more calcium, 10 times more vitamin A, 25 times more vitamin D, 4 times more riboflavin, than Original WestSoy. Contains 33 mg of isoflavones. Made with Organic soy beverage. Lactose free. Plain. A cholesterol-free food." A table on the back compares the amount of the following nutrients in WestSoy Plus, Original WestSoy, and Whole Milk: Calcium, Vitamin A, Vitamin D, and riboflavin (B-2). The levels for WestSoy Plus and Whole Milk are identical for each.

Half gallon vanilla purchased in April 2000 at Trader Joe's in Lafayette, California, for $2.19. Carton copy 1988. Each serving (1 cup) contains 31 mg of isoflavones. By Aug. 2002 the price has increased to $2.39 per half gallon organic vanilla.

6196. **Product Name:** Wonder-Vite Soy Coola.
Manufacturer's Name: Blissquik (Natural) Food Products.
Manufacturer's Address: 37 Hammett St., Townsville, QLD 4812, Australia. Phone: (077) 75 7109.
Date of Introduction: 1991.
Ingredients: Soybeans, carob powder, honey, water added.
Wt/Vol., Packaging, Price: 250 ml.
How Stored: Refrigerated.
New Product–Documentation: Label and letter sent by C.H. Lee. 1992. Jan. 20. 3 by 1.57 inches. Self adhesive. Dark blue and orange on pea green. "No preservative. No artificial colouring, Shake well before use." Note 1. This is apparently a carob soymilk. Note 2. The address shown above is printed on the label and letterhead but typed onto the letterhead is: Reply to: P.O. Box 197, Garbutt 4814. Phone: (077) 253947.

6197. **Product Name:** Vitamite: 2% Fat Non-Dairy Beverage.
Manufacturer's Name: Diehl Specialties International (DSI).
Manufacturer's Address: Defiance, Ohio.
Date of Introduction: 1991.
Ingredients: 1995: Water, corn syrup solids, partially hydrogenated canola oil, potassium caseinate (a milk derivative), isolated soy protein, tricalcium phosphate, dipotassium phosphate, carrageenan, salt, mono- and diglycerides, sodium stearoyl lactylate, guar gum, calcium d-pantothenate, vitamin A palmitate, vitamin D-3, riboflavin, pyridoxine hydrochloride, thiamine mononitrate, annatto (color), vitamin B-12.
Wt/Vol., Packaging, Price: 1 quart gable-top Pure Pak carton.
How Stored: Refrigerated.
New Product–Documentation: Talk with Tom Mekus, Vice President of Sales and Marketing, at DSI toll-free number (1-800-643-3930). 1995. Nov. 13. Vitamite liquid in the quart

size was introduced in 1991.

6198. Eden Foods, Inc. 1991. Eden Foods: Organic quality (Leaflet). Clinton, Michigan. 3 panels each side. Each panel: 21.5 x 9.3 cm. Undated.
• ***Summary:*** Contents: Organic pioneers. Organic integrity from soil to shelf. CropExcel, growers helping each other. What is organic farming? Why is organic farming important to you? ("Organic crowers are the ultimate environmentalists"). What does organic certification mean? Eden organic quality. Quotations from Eden's organic growers. Address: 701 Tecumseh Rd., Clinton, Michigan 49236.

6199. Lambrecht, Hillary S. 1991. Soybean storage and its effect on tofu and soymilk production. MSc thesis, Purdue University, West Lafayette, Indiana. xviii + 224 p. *

6200. **Product Name:** [Natural Soymilk].
Foreign Name: Le Soja Nature.
Manufacturer's Name: Sojalpe.
Manufacturer's Address: Allée Joule, Les Auréats, 26014 Valence, France.
Date of Introduction: 1991.
New Product–Documentation: Manufacturer's brochure sent by Heather Paine from London. 1991. April 23. In French. "Le Soja Nature par Sojalpe. Naturellement." The company logo is a steepled building with 5 soy-shaped leaves growing out of the steeple, set in front of towering mountains. A photo on the front shows a glass of this soymilk next to a muffin and a wooden spoon, all on a wooden table with some small soybeans nearby. "Soya: Free of cholesterol, supplying vegetable proteins, low in calories, rich in vitamins B-1 and minerals. Soy products contain essential fatty acids and lecithin* (*which contributes to the prevention of cardiovascular ailments), benefits the entire bodily balance and allows a light cuisine of quality. Le Soja Nature soymilk: Made from organic soybeans, it bears the Nature et Progres organic certification symbol. Can be consumed with breakfast, cold or hot, with cereals or chocolate. Ideal for use in making flans, creams, sauces, and crepes. At home, at the office, in the countryside, and at all hours of the day."

6201. **Product Name:** Soymilk (in Glass Milk Bottle).
Manufacturer's Name: Soy City Foods.
Manufacturer's Address: 2849 Dundas St. W., Toronto, ONT, M6P 1Y6, Canada.
Date of Introduction: 1991.
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Interview with Jon Cloud of Soy City Foods. 1991. Jan. 28. His company will soon be launching a soymilk sold in recyclable milk bottles. He never went with Tetra Pak because he didn't like their cartons. He will send a label when it comes out.

He is now working closely with the government to develop soybeans that are free of trypsin. He wants to develop better testing procedures. He found that the better the soybean nodulation, the lower the trypsin inhibitor content of the beans.

6202. **Product Name:** Tofu, Fried Soy Protein [Fried Yuba], Soy Milk.
Manufacturer's Name: Wen's Food Inc.
Manufacturer's Address: 9179-Red Branch Road, Columbia, MD 21045. Phone: 410-730-6699.
Date of Introduction: 1991.
New Product–Documentation: U.S. Soyfoods Directory. 1999. p. 45. Talk with Mr. Ting-yi Wen. 1999. May 6. The parent company of this company was started in 1987 in Taiwan. Then Mr. Wen came to Maryland and in 1991 began making the products shown above. Today he makes a host of innovative products. Tofu: Regular Tofu, Soft Tofu, Tofu Curds (*Doufu-Hwa*), Extra Firm Tofu (*Doufu-Gan*), two types of Tofu Noodles (Plain, and Spicy with Soy Sauce), Five-Spice Pressed Tofu Sheets (*Wu-hsiang pai-yeh*), and Seasoned, Rolled, Pressed Tofu Sheets (ssu-chi or suji, made from pai-yeh; season the sheets, then roll and steam).

Yuba: Crispy Soy Chicken (new name for fried yuba), plain fresh yuba (*bai dou-pi*). But he stopped making the yuba last year because: (1) It was too labor intensive; (2) Working in the hot, steam-filled room was so uncomfortable that at the end of each day he felt like a steamed dumpling. Soymilk (plain or sweetened with sugar) in ½ gallons.

Products to be introduced soon: (1) Soymilk in small single-serving cups similar to those in which yogurt is now sold (a unique packaging idea). (2) A line of soy yogurts. (3) A line of Chinese frozen entrees, such as Crispy yuba chicken with black bean sauce.

Business card sent by Ting-Yi Wen. 2001. Wen's Food Inc. makes tofu products and sauces, with Mao Pao, Kung Pao, and BlackBean flavors, plus Soy Chicken, Soy Pudding, Soy Milk, Soygurt, etc. They are still at the address above.

6203. Ali, Nawab. 1991. Final report of Indo-US sub-project on soybean processing and utilization. Bhopal, India: Soybean Processing & Utilization Project, Central Institute of Agricultural Engineering (CIAE). xxiv + 241 p. Illust. 25 cm. No. CIAE / SPU-7 (85-91) /91/140). *
• ***Summary:*** "Under the Soybean Processing and Utilization Project sponsored by the United States Agency for International Development and the Indian Council of Agricultural Research, laboratory scale processes for making fullfat [full-fat] soyflour, soypaneer, soydal, soyflakes, soysnack, soybadi and partially defatted soyflour have been adapted / developed." Address: Soybean Processing and Utilization Project, Central Inst. of Agricultural Engineering, T.T. Nagar, Bhopal–462 003, India.

6204. American Soybean Assoc., Taiwan. 1991. The tofu and soymilk industry in Taiwan. Taipei, Taiwan. 1 p. Unpublished manuscript. [Eng]
• ***Summary:*** There are 1,430 tofu manufacturers in Taiwan. They use a total of 186,072 tonnes of soybeans to make 93,036 tonnes of tofu each year. 500 companies make less than 150 kg of tofu daily; they use a total of 25,200 tonnes/year of soybeans.

490 companies make 151-200 kg of tofu daily; they use a total of 32,928 tonnes/year of soybeans.

200 companies make 201-300 kg of tofu daily; they use a total of 20,160 tonnes/year of soybeans.

143 companies make 301-600 kg of tofu daily; they use a total of 28,848 tonnes/year of soybeans.

50 companies make 601-1,800 kg of tofu daily; they use a total of 30,240 tonnes/year of soybeans.

30 companies make 1,801-2,400 kg of tofu daily; they use a total of 24,192 tonnes/year of soybeans.

12 companies make 2,401-3,600 kg of tofu daily; they use a total of 14,520 tonnes/year of soybeans.

5 companies make 3,601-6,000 kg of tofu daily; they use a total of 10,008 tonnes/year of soybeans.

There are 4,650 soymilk manufacturers in Taiwan who make an average of 30 kg/day of soymilk. They use 139.5 tonnes of soybeans each day or 5,022 tonnes of soybeans each year. Address: Taipei, Taiwan.

6205. Brandon, David L.; Bates, A.H.; Friedman, M. 1991. ELISA analysis of soybean trypsin inhibitors in processed foods. In: M. Friedman, ed. 1991. Nutritional and Toxicological Consequences of Food Processing. New York: Plenum Press. 541 p. See p. 321-37. [44 ref]
• ***Summary:*** "New monoclonal antibody-based immunoassays can measure low levels of the soybean Kunitz trypsin inhibitor (SKI) and the Bowman-Birk trypsin and chymotrypsin inhibitor (BBI) in processed foods. The enzyme-linked immunosorbent assay (ELISA) was used to measure the inhibitor content of soy concentrates, isolates, and flours, both heated and unheated..." Some residual trypsin inhibitor was found to remain after processing the in production of a soy-based infant formula. Address: Food Safety Research Unit, USDA Agricultural Research Service, Western Regional Research Center, 800 Buchanan St., Albanay, California 94710.

6206. Combibloc, Inc. 1991. Shaping your future (Manufacturer's catalog). Columbus, Ohio. 8 p. 30 cm.
• ***Summary:*** Describes the company's packages and filling equipment. "Combibloc, Inc. was launched in 1983 to meet the expanding market for aseptically packaged juices in North America." Address: 4800 Roberts Rd., Columbus, Ohio 43228. Phone: 614-876-3700.

6207. Dieudonne, Marie-Paul; Dieudonne, Pascal; Saulnier, Alain; Ferrenbach, J.P. 1991. Les nouveaux aliments: Soja–algues [The new foods: Soya and sea vegetables]. Editions S.A.E.P., Ingersheim 68000, Colmar, France. 95 p. Color photos. Index of recipes. 22 cm. Series: Delta 2000. [Fre]
• ***Summary:*** Contents: Part I of the book (p. 4-53) is about sea vegetables, by Marie-Paul and Pascal Dieudonne; Part II (p. 54-91) is about soya, by Alain Saulnier and J.P. Ferrenbach. Introduction. Economic aspects: Soybean production (worldwide, USA, France), world production of protein from various sources in million tonnes (FAO 1976; wheat 51, soya 24.9, rice 23.5, corn 23.4, meat 21.9, fish 11.8, cow's milk 6.7), protein yield, nutritional composition of various protein sources. Main nutritional characteristics of soya. Products made from soybeans: Tofu, tempeh, soymilk (*le jus de soja*), soy sprouts, shoyu or soy sauce. The causes of this explosion [of interest in soya]. Recipes: Of the 35 recipes, 33 feature tofu, 1 features tofu and soymilk, and 1 features soy sprouts. A number of the recipes include fish.

At the end is a glossary (p. 92-93) and a recipe index (p. 94-95). This book, which contains many beautiful color photos, is probably published by or in cooperation with Sojinal (formerly Cacoja) of Colmar and Issenheim. Address: Colmar, France.

6208. Fukushima, Danji. 1991. Recent progress of soybean protein foods: Chemistry, technology, and nutrition. *Food Reviews International* 7(3):323-51. [29 ref]
• ***Summary:*** Contents: Abstract. Introduction. Chemistry: Chemical composition of soybeans (Soybean globulins composed of four major components–2S, 7S, 11S, 15S), importance of three-dimensional structures of soybean protein molecules in food processing, influence of biologically active substances in soybeans on food processing. Technology: Traditional soybean protein foods and recent progress in their technology (soy milk {remove the hypocotyl and hull to remove off flavors; Soyasaponin A has the strongest off flavor}, tofu, kori-tofu, yuba), fermented soybean protein foods: Application of bioreactor for soy sauce production, nontraditional soybean protein foods and recent progress on their technology, recent progress on new soybean protein foods in which soybean proteins are the key material (modified abura-age, modified ganmodoki, deep fried texturized soy protein nuggets). Nutrition: Recent progress on nutritive values of soybean proteins (Soybean proteins have an amino acid score of 100 for persons more than 2 years old), physiological function of soybean proteins (they lower cholesterol levels when used to replace animal proteins). Future of soybean protein foods (Kikkoman fermented soy sauce is well on its way to becoming a universal seasoning. Tofu and tempeh also seem to have a bright future).

"The most important chemical reactions during the process of soybean protein foods are the intermolecular

reactions among the residues exposed on the surface of the protein molecules through the denaturation process. In native soybean protein molecules, most amino acid residues responsible for the reactions-such as cysteine (-SH), cystine (S-S), and hydrophobic amino acid residues-are buried in the inside region of the molecule, inaccessible to water. These residues become reactable with each other through the exposure from the inside by heat denaturation during processing. The unique textures of soybean protein foods, such as tofu, kori-tofu, yuba, and texturized products produced by extruder, etc., are the results of both the intermolecular interchange reaction between the exposed -SH and S-S groups and the intermolecular hydrophobic reaction among the exposed hydrophobic amino acid residues. The exposure of amino acid residues is also important for the hydrolysis of soybean proteins by enzymes, through which soy sauce is produced, because the cleavage of the peptide bonds is carried out after binding between the active sites of the enzymes and the enzyme-specific amino acid residues exposed through denaturation." Address: Kikkoman Corp., 1-25 Kanda Nishiki-cho, Chiyoda-ku, Tokyo 101, Japan.

6209. Imagine Foods. 1991. Rice Dream: Non-dairy beverage–Natural recipes. Palo Alto, California: Imagine Foods. 16 p. 22 cm.

• ***Summary:*** A vegan cookbook that uses Rice Dream (rice milk) in every recipe. Contents: Breakfast ideas. Savory soups. Sauces and gravies. Salad dressings. Hearty vegetarian entrees. Dreamy desserts. Dream drinks. Other fine products from Imagine Foods (Rice Dream non-dairy frozen dessert, and Ken & Robert's Veggie Pockets). Address: 350 Cambridge Ave., Suite 350, Palo Alto, California 94306. Phone: 415-327-1444.

6210. Kwan, Choi Wah (Guan, Caihua); et al. 1991. Ying Yue zi dian English-Cantonese dictionary: Cantonese in Yale romanization. Hong Kong: The Chinese University Press. 22 + 579 p. 18 cm. [Eng; Chi]

• ***Summary:*** The Preface begins: "The impetus for compiling this Dictionary came from the interaction of teachers and students at the New Asia–Yale-in-China Chinese Language Center of The Chinese University of Hong Kong." The book is quite compact, portable (almost a pocket book in size) and relatively inexpensive, making it very useful.

"Brief introduction to Cantonese pronunciation (p. 5): In pronouncing a syllable in Cantonese three elements must be taken into account, namely, an initial, a final, and a tone... An initial is the starting-off sound of a word." There are 19 initials in Cantonese; some are aspirated and some are not. Symbols for aspirated (5) and non-aspirated (5) stops are given. "A final is the concluding sound of a word. There are fifty of these" and they can be classified by the starting letter–A, E, I, O, U, or Y. In Cantonese, tones are very important in conveying meaning. "There are seven tones which, in the Yale system are represented by the use of diacritics and by the insertion of H for the three low tones. These seven are: 1. High falling. 2. High rising. 3. Mid level. 4. High level. 5. Low falling. 6. Low rising. 7. Low level. A chart shows the relative differences between the seven tones.

There are four different romanization systems for Cantonese (p. 8-11): Yale, IPA, Sidney Lau, and Mayer Wempe. Each has its own way of dealing with initials, finals, and tones. This helps to explain why the same word or term is written in so many different ways by Cantonese speakers. No Chinese characters appear in this book. However there is a long section of grammatical notes (p. 12-21) which contains many basic concepts not found in English–such as attributives, boundforms, functive verbs, measures, movable adverbs, etc. On page 22 is a list of abbreviations. Now for soy-related words:

Bean (noun) dau, dauh. Bean curd (dauhfuh). Bean sprouts (ngahchoi).

Ketchup: kejap.

Soy (noun). baahkdau; wohngdau * soy sauce (noun). sihyauh (M: jeun; di).

Soybean (noun). baahkdau; wohngdau * soybean milk (noun). dauhjeung (M: wun).

Words not listed include: catsup

6211. Passmore, Jacki. 1991. The encyclopedia of East Asian food and cooking (Document part II). New York, NY: William Morrow. 320 p. [44 ref]

• ***Summary:*** Continued from p. 153: Korean bean paste: See Dhwen jang. Koshi-an (Japan): See Azuki beans (an). Koya tofu (Japan): See Bean curd, freeze-dried [sic].

Kuzu (Japan): See Flours and thickeners. Lentil (*Lens esculenta*)*:* Red lentil, Red mung beans.

Light soy sauce: See Soy sauce.

Lu soy (lo shui, China): See soy sauce.

Maltose: Made by fermenting germinated grains of barley. When used to glaze foods, may have soy sauce and red food coloring added. Also known as: Malt sugar, [barley malt syrup].

"Ma-po" dofu [Mabo-dofu]: See beef.

Mean see jiang [mian shi jiang] (min see jiang, China): See Bean pastes and sauces.

Mein jin pau [mien jin pau] (China): See Gluten.

Mianjin (China): Gluten.

Mien see (mien-si [mian shi], China): See Bean pastes and sauces.

Miso (Japan): (1) Hatcho-miso. (2) Inaka miso or Sendai miso. Also known as Red miso. (3) Shinshu miso. (4) Shiro miso.

Mochi. Monosodium glutamate. Also known as: Mei jing (China); aji-no-moto (Japan); servuk perasa (Malaysia); ve tsin (Vietnam), M.S.G., taste essence, taste powder.

Moyashi (Japan): See Bean sprout.

Mung bean. Also known as moong ke dal (India);

kacang djong, kacang eedjo [hijau, katjang idjo] (Indonesia); kacang hiau (Malaysia); tau ngok (Thailand); dau xanh (Vietnam); green gram.

Nama-age (nah-mah ah-geh, Japan): See Bean curd, deep fried.

Nama fu (Japan): Raw / uncooked wheat gluten.

Natto (Japan). See soybean.

Noodles: (1) Bean curd noodles (China). Also known as Soy noodles, soy vermicelli.

Oils and fats: Soybean oil. (2) Bean curd skin noodles (China) [yuba noodles].

Peanut (with many foreign names and recipes).

Preserved black beans: See Fermented black beans.

Pressed bean curd: See Bean curd (pressed).

Red bean paste, sweet: "An important ingredient in Chinese and Japanese cooking, sweet red bean paste is made by boiling the red azuki bean and mashing it to a paste with lard or oil, then cooking it until it is fairly dry or thick. In Japan, red bean paste is made in two textures: the smooth purée is koshi-an and the chunky version, with the beans only partly crushed, is tsubushi-an. It is a filling for cakes and sweet buns, and is used in several desserts." Also known as hong dow sar (China), an (Japan). Contains a recipe for Sweet red bean paste.

Red rice: See Fermented red rice.

Rice: Many type of glutinous and non-glutinous.

Rolled bean curd: See Bean curd sticks [dried yuba].

Seaweed: Many different types. Seaweed gelatin or Seaweed jelly: See agar agar.

Sendai miso (Japan): See miso.

Sesame seed: Black sesame seed, sesame oil, sesame paste, white sesame seed.

Shinshu miso (Japan). Shui doufu (China): See bean curd (silk). Silk bean curd: See Bean curd (silk).

Soybean (*Glycine max*)*:* (1) Black soybeans. (2) Fresh soybeans [edamame]. (3) Yellow soybeans. Soybean cheese: See Bean curd, fermented [fermented tofu]. Soybean condiment: See Bean pastes and sauces. Soybean milk. Also known as tau cheing, tau ni (China). With homemade soymilk recipe. Soybean noodle: See Noodles, bean curd. Soybean oil: See fats and oils. Soybean paste: See Bean pastes and sauces. Soybean sprout: See bean sprout. Soy flour: See Flours and thickeners.

Soy sauce: "An ancient seasoning, first used in China more than 3,000 years ago. Known in its original form as *shih,* it was a thin salty liquid in which floated fragments of fermented soybeans." "Soy sauce is to Chinese and Japanese cooking what the pungent, salty fish sauce known as nam pla or nuoc mam is to Thailand and Vietnam respectively." (1) Dark soy sauce. Also known as jang yau, see yau (China); koikuchi shoyu, tamari (Japan), kecap pekat (Malaysia); mushroom soy. (2) Light soy sauce: Thinner, saltier, and lighter in color and flavor. It is used in cooking where its light color will not spoil the color of the ingredients. Also known as sang chau, see yau (China), shoyu, usukuchi shoyu (Japan), kecap cair (Malaysia), toyo (Philippines), nam siew (Thailand), xi dau (Vietnam), thin soy sauce. (3) "Lu soy (China) is a 'master sauce' based on soy sauce with sugar, ginger, and five-spice, It is used for simmering poultry and other meats to give a rich flavor and to color the food a deep brown. Also known as lu shui (China)."

Soy sauce, sweet and salty: (1) "Kecap asin (Indonesia) is a thick, salty, dark soy-based sauce used to impart a strong color and flavor. Its sweet counterpart is *kecap manis.* It is similar to, but thicker than, several dark soy sauces used in Chinese cooking." (2) Kecap hitam (Malaysia) is a sweet dark soy sauce. Slightly less spicy than kecap manis. (3) Kecap manis (Indonesia) is a sweet, dark, thick, aromatic soy sauce, especially widely used with satay. "It is similar to, though finer in flavor than, Chinese sweet soy sauce" [tian mian jiang]. Also known as kecap bentang manis (Indonesia); sweet soy sauce. (4) "Sweet soy sauce (China) is a dark, sweet sauce combining soy sauce, sugar, and malt sugar. Its distinctive malt-like taste goes well as a dip for fried snacks, poultry, and seafood." It appears frequently on the table in homes and restaurants in Fukien province, opposite Taiwan on the coast of south-eastern China. For a recipe, see Sweet soy sauce pork (p. 230). Note: This is not generally a commercial product. (5) Tim cheong (Malaysia) is a thick, sweet, black soy sauce, similar to that used in China. In Malaysia it is served with poh pia. Its flavor is closer to that of kecap hitam than to kecap manis.

Sprouts, soybean. See Bean sprout, soybean. Sushi (describes many types, with recipes). Sweet bean paste or Sweet bean sauce: See Bean pastes and sauces.

Taho (Philippine bean curd brains). Tahoe (Indonesia or Malaysia, fermented bean curd). Tahu (Malaysia bean curd). Ta hua (Malaysia bean curd). Tahure (Philippine bean curd).

Tamari (Japan): See soy sauce. Taucheo (Malaysia or Singapore, bean pastes and sauces). Tauge (Indonesia bean sprout). Tauhu kao (Thailand bean curd). Tauhu kuning (Indonesia and Malaysia bean curd pressed). Tauhu leong (Thailand bean curd, pressed). Tauhu tod (Thailand bean curd, fried). Taukwa (Indonesia and Malaysia bean curd pressed). Tau sa (Malaysia bean paste and sauces). Tausi (Philippines, bean curd products [sic, fermented black soybeans], fermented).

Tempe (Indonesia, Malaysia): Fermented soybean cake [tempeh]. Oncom [Ontjom]. Tokwa (Philippine bean curd pressed).

Tosa soy sauce (Japan): The classic sashimi accompaniment. Recipe given.

Tsukemono: Takuan, umeboshi.

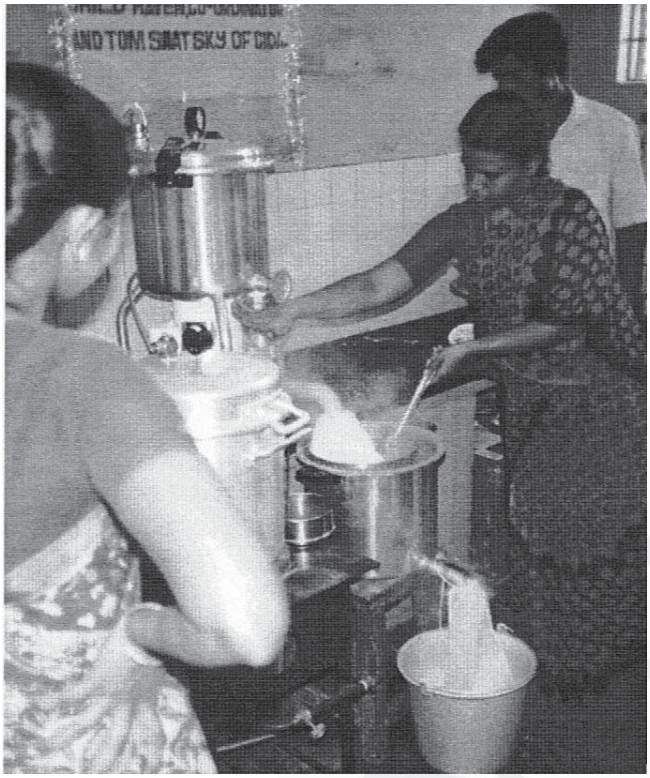
Usu-age (Japan): See Bean curd (fried) purses.

Winged bean. Yuba (Japan).

Brief biography: "For more than twenty years she has been professionally involved with Asian food as a writer, teacher, publicist, researcher, consultant, and, of course,

cook. She has traveled extensively in Asia and lived in Hong Kong for more than ten years, working as a food writer on a number of newspapers and magazines, which led to a career as a food consultant. Her most recent book, *Asia the Beautiful Cookbook* was listed by *Publishers Weekly* as one of the best books of 1987." Address: Author of several books on Asian cuisine.

6212. Photographs of two SoyaCows in operation in India. 1991.



• ***Summary:*** Photos (undated) show: (1) Soyamilk being produced at St.-Thomas Hospital, Madras. A sign, barely visible on the wall, reads: "Thanks to Child Haven and Tom Schatzky of CIDA." Hart Jansson recalls: "I remember being at St. Thomas Hospital; it was the most wonderful reception I've ever received. They were just amazingly friendly. Dr. Sister Mary Rexline was running the hospital and raising funds. They had a SoyaCow in the hospital and they were giving the soymilk to all their patients. They loved it." We could be doing the same thing at hospitals all over the third world.

(2) Soyamilk being made at Ankur Services in Hyderabad.

Note: These two photos were scanned and sent to Soyinfo Center by Hart Jansson of Malnutrition Matters (Ontario, Canada) on 20 Oct. 2010. Hart estimated the date.

6213. Rucker, Chris; Hoffman, Jan. 1991. The Seventh-day diet: How the "healthiest people in America" live better, longer, slimmer–and how you can too. New York, NY: Random House. 232 p. Foreword by John Scharffenberg, M.D. Index. 24 cm. [46 ref]

• ***Summary:*** This book introduces the Seventh-day Adventist low-fat vegetarian diet and health principles without their religious underpinnings but with many quotations to the writings of Ellen G. White, an Adventist pioneer. For example, concerning what is now called atherosclerosis, she wrote in 1896: "Both the blood and the fat of animals are consumed as a luxury. But... these should not be eaten. Why? Because their use would make a diseased current of blood in the human system.

Adventists, whether vegetarian or not, are less likely to get cancers of the breast, ovaries, bladder, prostate and pancreas than the rest of the U.S. population. Male Adventists live an average of 8.9 years longer than non-Adventists, and women 7.5 years longer. And the differences between vegetarian and nonvegetarian Adventists provide some of the best evidence of the health advantages of a vegetarian diet. For example, studies show that whereas nonvegetarian male Adventists get only 56% as much heart disease as the U.S. average, vegetarian Adventists who eat eggs and dairy products get only 39%; and those who avoid all animal products 12%.

Page 105 notes that a major study involving more than 25,000 Adventist adults over a period of 20 years indicated

that an Adventist woman aged 25 will, on average, live to age 88, which 9 years longer than her non-Adventist counterpart, and an Adventist man aged 25 will, on average, live to age 84, which is 12 years longer than his non-Adventist counterpart. Moreover, "It appears that the earlier one embraces the complete Adventist life-style, the greater quality of life and longevity once can expect."

In a section titled "Guide to creating your own meatless roast" (p. 116-17), tofu, shredded soy cheese, and soy flour are listed as protein sources. Soy-related recipes include: Pesto tofu manicotti (p. 121). In the "Natural Foods Shopping Guide" (p. 207) descriptions are given of Soyagen, soy cheese, soy milk, and tofu.

6214. Société Soy. 1991. 100 recettes au tofu & lait de soja [100 recipes for tofu & soymilk]. Saint-Chamond, France. [Fre]*
Address: 1 rue du Crêt de la Perdrix, 42-400 Saint-Chamond, France. Phone: 77 31 23 66.

6215. The Mail Order Catalog. Fall–winter 1991-2. Quality books. Vegetarian food products. 1991. P.O. Box 180, Summertown, TN 38483. Catalog.
• ***Summary:*** The book section of this mail order catalog contains listings for an excellent selection of vegetarian cookbooks, and books on animal rights, diet and nutrition, ecology, and native American cultures.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), soy powder (powdered soymilk), tempeh starter, nutritional yeast, and instant gluten flour. Address: Summertown, Tennessee. Phone: 800-695-2241.

6216. Tremblay, Yvon. 1991. La santé de la terre: le petit guide santé des anées 1990: le soya et ses dérivés (lait de soya, tempeh, miso, etc.) ansi que le sarrasin et le seitan [The health of the earth: the little health guide for 1990: soybeans and soyfoods (soymilk, tempeh, miso, etc.) as well as buckwheat and seitan]. Rosemère, Quebec, Canada: Presses Libre-choix. 157 p. Illust. by Mario Gailloux. 21 cm. [Fre]*
Address: Que.

6217. Vakirtzoglou, Euphrosini. 1991. Nea mayriki-sintayes me soya [Recipes for soya]. Thessaloniki, Greece: Published by the author. 127 p. Illust. Index. 29 cm. [Gre]
• ***Summary:*** This attractive book, the first of its kind ever published in Greek, contains large color photos of its soy-based dishes on almost every page. It features recipes using soy oil, soy sauce, soy margarine, textured soy flour (mince and chunks), soya-based pasta, soymilk, and tofu–but no tempeh. The last 2 pages of the book are full-page color photos of various soya products that are imported to Greece, largely by Mr. George Tselepidis (Andreou Dimitriou 47, Sikies 56625, Thessalonika, Greece. Phone: 625741) who is very interested in new soya products (and perhaps making them), and is the exclusive agent for the soya products used by the author. These products include Provamel Soya Milk, Sunwheel soya sauce and tamari, Meridian soya margarine, soy oil, and ten shelf-stable soy products with Greek labels. Published with technical and material support from Biotrek S.A., Greece's primary dealer in soya products.

The book contains many recipes and ideas for using soyfoods in place of meat and milk during Lent and other religious holidays of the Greek Orthodox Church. The attractive 4-page brochure promoting the book contains colorful photos of many soy-based preparations on a table in front of Greek Orthodox icon paintings.

The author notes in a letter that she hopes to translate the book into English and is now preparing another book on Soya Sweets, Pastry, and Confectionery. Unfortunately, there are presently no companies in Greece making tofu, soymilk, or tempeh, nor are these products available in Greece.

In addition to writing, the author has owned a private kindergarten for the last 3 years, and for more than 1 year she has given cooking and housekeeping lessons in an organization named "Faros Tiflon Elathos," which educates the blind. Address: Lahana 35, GR-546 38 Thessaloniki, Greece. Phone: 031 824 311.

6218. Yamuna Devi. 1991. The best of Lord Krishna's cuisine: Favorite recipes from *The Art of Indian Vegetarian Cooking.* New York, NY: Bala Books. xiv + 242 p. Illust. Index. 24 cm. A Plume Book. Also published in 1992 by New American Library (New York).
• ***Summary:*** Less intimidating than the massive (800 page) *Lord Krishna's cuisine: The art of Indian vegetarian cooking,* from which it is derived, this book offers a good introduction to Indian vegetarian dishes for newcomers. Contains a recipe for Scented Almond Milk Cooler (non-dairy). The book is dedicated Srila Prabhupada (His Divine Grace A.C. Bhaktivedanta Swami, 1896-1977), the Indian spiritual teacher who arrived in America in 1965 at age 70 and the next year founded the International Society of Krishna Consciousness. Pages 227-28 are about his life.
Address: Washington, DC.

6219. **Product Name:** Sungold (Soymilk).
Manufacturer's Name: Dairy Farmers Co-Operative Ltd.
Manufacturer's Address: 433 Victoria St., Wetherill Park, NSW 2164, Australia.
Date of Introduction: 1991?
New Product–Documentation: Letter from C.H. Lee of Blissquik Food Products. 1992. Feb. 17. This company currently makes Sungold brand soymilk. Gives name and address.

6220. **Product Name:** Tofu (Plain), Savoury Baked Tofu,

Soya Milk, Soy Ice Cream, and Soysage.
Manufacturer's Name: Nature Island Foods.
Manufacturer's Address: P.O. Box 501, Roseau, Dominica, West Indies. Phone: 809-448-3602.
Date of Introduction: 1991?
New Product–Documentation: Letter from Yolanda Bryan. 1992. Jan. 8. Lists the soyfoods they presently make.

6221. **Product Name:** Soymilk.
Manufacturer's Name: Queensland Soybean Food Products Pty. Ltd.
Manufacturer's Address: 20 Cronulla Court, Slacks Creek, Brisbane, QLD 4127, Australia.
Date of Introduction: 1991?
New Product–Documentation: Letter from C.H. Lee of Blissquik Food Products. 1992. Feb. 17. This company currently makes soymilk. Gives name and address. The brand name is unknown.

6222. **Product Name:** Soybev, and Soykink (Soymilk).
Manufacturer's Name: Tixana Pty. Ltd.
Manufacturer's Address: 17 Elizabeth St., Campsie, NSW 2194, Australia.
Date of Introduction: 1991?
New Product–Documentation: Letter from Wataru Takai. 1987. Oct. 3. This company, run by John Tan, is located at 53 Sydenham Rd., Marrickville, NSW 2204, Australia. They plan to make tofu, and perhaps soymilk, shortly.

Letter from C.H. Lee of Blissquik Food Products. 1992. Feb. 17. This company currently makes Soybev and Soykink brands of soymilk. Gives name and address.

6223. **Product Name:** Plum Flower Brand Soy Milk.
Manufacturer's Name: Tong's Co.
Manufacturer's Address: 14060 Hempstead Road, Houston, TX 77040.
Date of Introduction: 1991?
Ingredients: Soybeans, water.
Wt/Vol., Packaging, Price: Plastic 1-gallon container.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Walter Lin from Houston, Texas. 1991. Sept. 12. 4 by 2½ inches. Self adhesive. Brown on white. "No preservatives. Date [use by]: Sept. 20. Refrigerated at 35ºF."

6224. Dinh, Daniel. 1992. Present status of soyfoods in Vietnam (Interview). *SoyaScan Notes.* Jan. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Tofu and soymilk are the only two soyfoods that are widely known and used in Vietnam. Daniel's relatives made fish sauce (*nuoc-mam*) in Vietnam. Before 1975 there was a trade association of fish sauce manufacturers in Vietnam and their company was one of only 12 major manufacturers in the association Then in 1975 when the Communists took over, he had to flee the country, and his family decided to destroy their fish sauce factory, lest they face death or prison as capitalists. Now the situation is ripe for his return to Vietnam, and he is interested in learning to make miso and soy sauce, and perhaps starting production in Vietnam. Address: 22821 Sherman Way, West Hills, California 91307. Phone: 818-704-6432.

6225. *SoyaScan Notes.* 1992. Vitasoy soymilk is now sold on a special display stand at Safeway supermarket in Lafayette, California (Overview). Jan. 25. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Four flavors of Vitasoy soymilk (Vanilla Delite, Rich Cocoa, Carob Supreme, and Creamy Original) in two sizes (liter or 250 ml) are now sold at the Safeway supermarket in Lafayette. They are sold on a surprisingly large stand, located about 6 feet from the tofu section of the produce case. The stand, constructed of 4 white plastic shelves (with "Vitasoy" written on the second and top shelves) and 4 vertical red plastic tubes as posts (2-inch diameter), is about 32 inches on a side, and 5 feet high. The Vitasoy Tetra Brik cartons occupy the bottom two shelves on the stand. On the top two shelves is Michelle's Natural Pasta (dry). The price of the liters is $2.29 each, regardless of the flavor. The packs of 3 x 250 ml each retail for $2.19.

A quart of cow's milk (fortified with vitamins A and D) sells for the following prices at Safeway supermarkets: whole $0.67, low-fat (2% fat; protein fortified) $0.66, extra light (1% fat; protein fortified) $0.65, nonfat $0.62.

Note that the price of Vitasoy soymilk at Safeway is about 21% more expensive than it is at a typical large natural food store.

6226. *Health Food Business* (*London*). 1992. GranoVita launches 34 products and signs exclusive six-month deal with Brewhurst. Jan. p. 5.
• ***Summary:*** GranoVita UK will be launching 34 products in its first wave in Dec. 1991. In Jan. or Feb. 1992 they plan to add another dozen or so products to their line. Nigel Phillips, the company's managing director, is putting soya milk products at the forefront of GranoVita's launch. "The majority of the business Granose used to do with Germany was soya milk based. Once this was switched to the UK (after Haldane purchased Unisoy), then GranoVita felt they must compete in the UK." GranoVita has given sole distribution rights to the independent health food trade to Brewhurst for 6 months.

6227. *Health Food Business* (*London*). 1992. Haldane Foods–the giant at the heart of the soya beanstalk. Jan. p. 12.
• ***Summary:*** "The Haldane Foods Group owes its existence to the invention of textured soya protein, which was first extruded in the United States back in the 60's.

"The patent was owned by ADM, and Haldane's present

general manager Peter Fitch was their man in the UK, selling soya protein to British companies.

"'Our biggest customer in those days was Direct Foods, down in Petersfield in Hampshire,' says Peter Fitch. 'When Direct Foods came up for sale in the early '80's, we bought it to develop beyond being just a supplier. We wanted to be part of not just growing the bean, but also developing healthy consumer products with it.'

"This initial purchase led to the acquisition of another company–Vegetable Feasts, who were making ready-made frozen vegetarian convenience foods.

"And then a bigger fish arrived on the market, with Haldane Foods of Loughborough. This had been set up by Brian Welsby to produce concentrated dried ready meals, again soya based.

"In Coventry, Vegetarian Cuisine were bedevilled with low sales but a skilled labour force, so this too was acquired and Vegetarian Feasts incorporated in it, as both companies were producing similar lines.

"Thus was born the Haldane Foods Group, which now had two sites, Coventry supplying frozen foods and Loughborough dry goods.

"When Greg Sams sold Realeat to Haldane, there was still surplus manufacturing capacity, but this quickly became less so, particularly at Coventry.

"With the acquisitions of Genice in North Wales, (producing non-dairy ices) and Kwality Foods in South Wales (producing Sauce and Snack Masters dishes such as pot noodles), Haldane moved into 'wet' food production.

"Shortly after this, Granose Foods, who had moved into a large new factory at Newport Pagnell, were finding trading difficult from their own premises, and so searched for one of their suppliers to acquire the business. Another, even larger, mouthful for Haldane to swallow.

"'Over three-quarters of the Granose products were being made by outside suppliers, much of this abroad. By purchasing Unisoy at the same time as Granose, with a capacity of 5 million litres of soya milk a year, we were able to see that we could manufacture virtually everything ourselves,' said Peter Fitch.

"' We closed Coventry and put it into Granose, and we still bus twelve staff back and forth from there each day. We now were able to concentrate all wet production at Newport Pagnell, and all dry at Loughborough, with 13,000 square feet there and 42,000 square feet at Granose.'"

"Peter Fitch admits taking on Granose caused Haldane's supply problems. 'We reeled for six months, but we are now out of our troubles. Our staff has settled in and our supply problems have been solved.'"

6228. **Product Name:** Tempeh-Lettuce-Tomato Sandwich, Tempeh Burger, Bar-B-Q Tempeh, Tempeh Curry with Coconut Milk (and Rice), Dolphin Safe Tempeh Salad (Mock Tuna Salad).
Manufacturer's Name: Leo Risin' Foods.
Manufacturer's Address: 1525 Rhode Island, Lawrence, KS 66044. Phone: 913-832-1521.
Date of Introduction: 1992. January.
How Stored: Refrigerated.
New Product–Documentation: Letter and Labels sent by Clayton McHenry, founder and owner of Leo Risin' Foods. 1994. Feb. 22. In January 1992 Clayton named his business Leo Risin' Foods and set up a certified and inspected kitchen in his home at 1525 Rhode Island, Lawrence, Kansas 66044. Starting in January 1992 he produced five deli foods with tempeh for the Community Mercantile, and Clearly Nature's Own, a natural food store in Kansas City, Missouri. The weights of and ingredients in these products are as follows (* = organically grown): Tempeh-Lettuce-Tomato Sandwich (6 oz): Wheat bread, tempeh*, lettuce*, tomato, tofu mayo, sesame oil, spices. Tempeh Burger (7 oz): Wheat bun, handmade tempeh*, lettuce*, onion*, tofu mayo, spicy pickle*, mustard, hot sesame oil. Bar-B-Q Tempeh (6 oz): Wheat bun, handmade tempeh*, rice malt sweetened barbecue sauce, red onion*. Tempeh Curry with Coconut Milk (and Rice, 8 oz): Basmati rice, handmade tempeh*, coconut milk, red chili, onion, cashew, green chili, spices, salt. Dolphin Safe Tempeh Salad (Mock Tuna Salad, 8 oz): Tempeh*, Nayonaise, green onion, parsley*, sunflower seeds, spices.

6229. Whitehouse, David; Whitehouse, Harvey. 1992. Delsoy Products, Whitehouse Products, C.J. Christoff & Sons, Chadalee Farms, and Rex Diamond (Interview). *SoyaScan Notes.* Feb. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dave's father, Harvey Whitehouse, and Bob Smith were partners in Delsoy Products. Since Bob Smith was connected with Henry Ford, he was the one to attract the media attention and get the interviews. Neither Dave nor Bob know where the company's early files are now kept. The *Detroit News Times* and *Detroit Free Press* may have run articles on the company. The dairy industry disliked Delsoy, so dairy magazines probably didn't run any articles. Eric R. Swanson brought in Bob Smith (who was working for Henry Ford) for his chemical knowledge. Then in Nov. 1944 Swanson brought in Harvey Whitehouse (who had been production manager at two large dairies in Detroit–Belrose Creamery then Rosebud Creamery) as production manager for the soy milk. David entered the company in about 1961.

They have heard that at one point, when Herbert Marshall Taylor was still with Delsoy Products, Bob Rich wanted to get a franchise to manufacture Delsoy Topping. He never got it, but he was able to get a very similar formula from Rex Diamond who was working at Ford's Carver Laboratory. Rich Products was the first to freeze a soy-based whipped topping. In about 1960, when Bob Smith began to talk about retiring, Harvey went to freezing Presto Whip,

then Delsoy Topping so that he could store these products frozen and ship them nationwide–but they were never advertised as frozen. Most of the sales of Delsoy Topping were to bakers and restaurants–not to consumers.

At some point prior to 1961 the name of their frozen product, Delsoy Topping, was changed to Delwhip Topping, and a new product named Delwhip Topping Base was introduced; it was a concentrate to which one had to add water to reconstitute it. The name of Presto Whip remained unchanged.

Harvey brought out Bob Smith in 1963, and a month or so thereafter David became president of the company. Shortly after the buyout, the company name was changed from Delsoy Products to Whitehouse Products. The brand and logo then became Whitehouse and product names were changed. Delwhip Topping became Whitehouse Whipped Topping, Delwhip Topping Base became Whitehouse Whipped Topping Base, and Presto Whip became Whitehouse Presto Whip. All continued to be made with soy protein.

At about the same time, the company began to private label their products for other companies under other brands. They continued to sell the products under their own brands as well. The company continued to make the two soy-based whipped toppings then in the late 1960s they developed an imitation sour cream; it contained no soy protein but it did contain vegetable oil. They bought the formulation from another company. About the same time they also developed a soy-based non-dairy creamer named Whitehouse Coffee Fresh.

Christoff/Chadalee Farms purchased Whitehouse Products in about 1983. At that time David was president of the company and Harvey was in the process of retiring. Again the product names were changed to Chadalee Farms Whipped Topping and Chadalee Farms Whipped Topping Base. They are now finishing a phaseout of those products, largely because they do not have any other frozen products. David is now the national accounts manager for Chadalee Farms, Inc.

Rex Diamond was never employed full time for Delsoy Products. In the early days he worked at the company for a day or two now and then in the plant doing soybean extraction–not as a consultant, but as a friend of Bob Smith's. Then Rex pulled a fast one. He left, set up his own company named Vegetable Products Corp. in Saline, Michigan (located inside Henry Fords' old soybean extraction plant there), and began to make a soy-based whipped topping named Wonder Whip (non-pressurized in a cone-shaped container), which was designed to be whipped with an egg beater. But he did not know how to run a food plant. One day Bob Smith was visiting one of his chain store accounts when the buyer told Bob that Rex Diamond was telling all the distributors that Delsoy Products had quit making their topping–so that Rex could take over the accounts. Diamond had so many problems with the quality of his product that his company never got off the ground, and in less than a year went out of business. He tried to sell his used equipment to Delsoy.

In the late 1940s and early 1950s Diamond worked for American Maize Co. in Chicago. The company wanted him to develop a dried dairy-free whipped topping. He was granted several patents, then American Maize dropped the project. So Diamond approached Delsoy, asking if they would like to go in with him on a joint venture; after past bad experiences, they declined.

Then in Nov. 1952 Bob Rich of Rich Products hired Rex Diamond and there Diamond was successful in developing a product named Coffee Rich. Bob Rich and Rex Diamond set up a separate corporation named Coffee Rich Inc. just to manufacture and sell the Coffee Rich; it did very well financially. Diamond was in the process of building a large home in Buffalo, New York, but then he was unexpectedly fired by Bob Rich. One of the contingencies of the stock agreement between Rich and Diamond was that if either person was terminated or left the company, he had to sell his stock back to the corporation. Diamond felt he had been fired because the company (and Diamond) had made so much money; Rich had to fire Diamond to get control of the stock. Diamond, who had signed a bad contract, was very upset. The same thing happened to the sales manager for Coffee Rich. Again Diamond approached Delsoy Products, asking if he could manufacture toppings in their plant, but again they declined. Meanwhile Diamond returned to his home town in Detroit, and went to an attorney. The attorney settled with Rich Products for a much smaller sum than Diamond hoped to get. Within a year or two of his termination from Rich Products, Diamond committed suicide in Detroit.

Concerning Mitchell Foods: An East-Coast chemist named Frank S. Mitchell had worked for Rich Products. He left and started his own whipped topping company. Rich Products filed a lawsuit against Mitchell, and Mitchell lost in Sept. 1964 in New York [Civil Action No. 9597 in U.S. District Court for the Western District of New York. Trial 14-18 Dec. 1964.] The company was small and the product never became important. Address: 1100 Hillcrest Dr., Dearborn, Michigan 48124. Phone: 313-562-0242.

6230. Lee, C.H. 1992. Re: Companies presently making soymilk in Australia. Letter to William Shurtleff at Soyfoods Center, Feb. 17–in reply to inquiry. 1 p. Typed, with signature.

• ***Summary:*** Sanitarium Health Food Co. (Wahroonga, NSW) makes So Good. Berrivale Orchards Ltd. in Berri, SA, makes Soypreme. Dairy Farmers Co-OPerative Ltd. in Wetherhill Park, NSW, makes Sungold. Tixana Pty Ltd. in Campsie, NSW, makes Soybev and Soy Kink. Queensland Soybean Food Products Pty. Ltd. in Brisbane, QLD, makes an unknown brand, and Blissquik Food Products in

Townsville, QLD, makes Wonder-Vite Soymilk Drinks (plain or flavoured). Address: Owner, Blissquik Food Products, P.O. Box 197, Garbutt [37 Hammett St.], Townsville, QLD, Australia.

6231. Roller, Ron. 1992. Work with and history of Eden Foods and American Soy Products in Michigan. Part II. After 1980 (Interview). *SoyaScan Notes.* Feb. 25-26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In Feb. 1982 (27 months after the fire) the settlement from the insurance company was paid. Shortly after that, in 1982, Eden bought Schmidt Noodle Co., a supplier to Eden.

In Sept. 1982 Ron went to Japan, where he picked up 25 new items for the Eden import line from the Muso Co. One of these was Edensoy soymilk. He visited the Marusan soymilk plant. Ron recalls how they took him into the room overlooking the aseptic packaging room, where 16 huge machines were busily filling and sealing Tetra Brik Aseptic cartons (most of which were sold in Japan): "It just blew me away. It was like a personal revelation. Here was a unique, non-dairy product, being made on a huge scale, and there was a big need for it in the American market." When he visited the Muso office, Ron noticed very large shipments of this same soymilk being shipped to Spiral Foods (run by James Wilson) a macrobiotic distributor in Melbourne, Australia. This also impressed and surprised him.

Back in America, Eden coined the name Edensoy and developed the artwork for a stand-up foil retort pouch–since the Tetra Brik Aseptic packages had not yet become legal in this country. The product was introduced to America in 1983 at a natural foods trade show in Denver, Colorado. The response was "phenomenal." No previous Eden product had ever attracted as much attention. At the show, they picked up 30 distributors for the soymilk. Edensoy soon became by far the company's most successful product to date. Eventually imported Edensoy accounted for about 40% of Eden Foods' total sales! "It turned into a bigger thing than any of us had anticipated."

Also starting in about 1982 there was a big growth of interest in macrobiotic foods. Because of its large line of macrobiotic foods, Eden was now uniquely well positioned to take advantage of this growth.

Edensoy soymilk opened a lot of doors to new distributors. Inevitably these distributors came to Eden for the soymilk and then almost always ended up carrying the rest of the Eden line. The combined sales growth of Edensoy and the macrobiotic foods led to a big increase in Eden's sales to other distributors. Shortly after that, Eden began to import Edensoy to a public warehouse in Los Angeles to service the West Coast market. Eventually that led to Eden sharing a warehouse with Sierra Natural Foods in San Francisco, and soon the rest of Eden's products were stocked there too.

During the mid-1980s, in large part because of Edensoy, Eden's sales to distributors began to overtake wholesale sales to natural/health food stores. The latter were beginning to drop because of competition from full-line super-distributors. Eventually the latter comprised only 10% of Eden's total sales. At that point, in about 1986 or 1987, Eden stopped wholesaling directly to retail stores and started to sell only to distributors. Eden delivered its products on its own trucks to these distributors, and this extra service also gave them a competitive edge. Discontinuing wholesale distribution to retail stores had a very positive effect on Eden's growth. All the energy that was formerly required to attend to that 10% of the business was now free to be focused on developing new products and the Eden brand.

The period from March 1984 to June 1985 was a difficult one for Edensoy. The problems with the FDA, the Edensoy promotional pamphlet, and the Edensoy recall were described in detail in the *East West Journal* (Dec. 1985).

On 13 April 1988 Cliff Adler and Michael Potter were in a serious car accident. Cliff was killed and Michael was seriously injured. Cliff was a very outgoing person with lots of charisma, and his death had a profound emotional impact on the company; his many close friends felt deep loss. Ron, who was purchasing director and a director of the company, took charge of running the company in this time of confusion. He organized a management team, started daily management meetings, put budgets in place, and severely curtailed spending to start accumulating money for the FDA fine. Within a month, Ron became vice president; Mike was president and CEO.

In about Nov. 1989 Ron became president of Eden Foods and president of Schmidt Noodle Co. Mike remained CEO. Yet despite these problems, in the two years from 1989 to 1991 sales at Eden Foods almost doubled–making them two of the most profitable years in the company's history.

Right after Cliff died, Ron took his place as a director of American Soy Products, Inc. (ASP). In Feb. 1991 he became CEO of ASP. Ron was president of Eden Foods. In mid-June 1991 he was asked to resign from his position at Eden Foods. He chose to leave and go to ASP to work full time. Michael is now chairman of Eden Foods and his sister is president. Ron is now president of ASP, a joint venture company. Ron works for ASP above all because he believes in the company and its products. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6232. Roller, Ron. 1992. The U.S. soymilk market (Interview). *SoyaScan Notes.* Feb. 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** During the past 3-4 years, the U.S. soymilk market seems to be growing at about 10% a year. Sales slowed during and after the Gulf War, but overall the current recession has had little effect on Edensoy, soymilk and on

the natural foods industry as a whole. There has been a proliferation of new products and package sizes. Most of Edensoy's volume is sold in liters. The ASP plant is now nearing capacity. Many people who used to have no interest in soymilk are now showing a strong interest. Concerning the size of the market, American Soy Products does not try to keep statistics, but he doubts that it is any larger than Soyatech says it is.

In terms of market share by volume of soymilk sold, Ron thinks that Edensoy has the largest share, Vitasoy is second (including their sales to the Asian-American market), Westbrae is third, and Pacific Soy is a distant fourth. No other companies have significant sales.

One interesting product is a soy & azuki milk, which Marusan launched in about 1982; Ron is not sure if it is still on the market.

Ron has heard from a fairly reliable source that a company has purchased soymilk equipment (he does not know from whom) to build a soymilk plant somewhere in the United States. It might be Vitasoy. Someone from Dr. Chung's in Korea (makers of Vegemil and Woorean) is planning to come to the USA to look for companies to market their Korean soymilk or for potential co-packers. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6233. O'Connell, Michael. 1992. History of Ploughshares Foods Ltd. in Glastonbury, England (Interview). *SoyaScan Notes.* Feb. 27. Conducted by Anthony Marrese in England.
• ***Summary:*** This company was founded in 1984 in the Essex countryside by Michael O'Connell and Fiona Bruce under the name "The Emperor Liu An's Tofu Palace." Liu An was the legendary inventor of tofu in China. The business was an 8-tonne mobile catering truck and kitchen on wheels which went to open-air shows and festivals; its purpose was to serve vegan organic food (including tofu), demonstrate tofu-making, and promote veganism. They started operating the truck in Aug. 1984. Recipes prepared in the mobile restaurant in 1984/85 included tofu blueberry mock cheesecake, tofu mayo, tofu sweet cream, tofu lasagna, tofu pudding, tofu ice cream, tofu burgers, tofu gulash, and tofu pizza. In 1985/86 they launched okara steam pudding with dates, okara shepherd's pie, and okara burgers.

In Aug. 1986 the company moved to Glastonbury, started a non-mobile restaurant, and changed the company name to Ploughshares Foods Ltd. (after the Old Testament Biblical expression from The Book of the Prophet Isaiah 2:4 "They shall beat their swords into plowshares, and their spears into pruninghooks: nation shall not lift up sword against nation, neither shall they learn/study war any more").

In 1988 the restaurant introduced tofu quiche (onion and mushroom), okara veggie roll, okara tempeh, okara tempeh Bolognese/moussaka, and braised tofu in miso sauce. In 1989 they launched soya cream cheese with chives, and in 1991 okara tempeh with leaf protein added.

In 1991 the company structure changed from a partnership to a cooperative. Other current members of the co-op are Miranda Bruce, Sophie Pullinger, and Lalita Gordon Milverton.

The company was a pioneer in introducing tofu and new ways of using it to vegan restaurants. Uses included burgers, pies, dressings, creams, main dishes, salads, soups, etc. They introduced foods that were free of dairy products, wheat/gluten, and/or sugar, and developed a leaf protein product named Leafu (i.e. tofu from leaves). Their vegan cooking school was the first such school to receive the "City and Guild" qualification to those who graduate from their residential diploma course teaching vegetarian, organic, and special diet foods. The company provides a friendly working environment, as for single working parents, and is involved in the wider issues of improving society.

The main reasons for the company success are a commitment to delicious, aesthetic, nutritious food, customer loyalty, and a commitment to research, development, and innovation.

Anthony Marrese adds: "All of their products are good, and their people are especially nice. I spent about 18 months helping with the tofu production and restaurant in 1987/88." Address: 54 Roman Way, Glastonbury, Somerset, BA6 8AD, England. Phone: 0458-831182 or 835233.

6234. DeBona, Don. 1992. Work with tofu and soymilk in America (Interview). *SoyaScan Notes.* Feb. 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Don has owned a part of Bean Mountain Soyfoods in North Carolina since 2-3 years ago; their biggest competition in the tofu market is Nasoya. Don was on the board of the Soyfoods Association of America, but he dropped it when he saw it was basically a tofu and soymilk association; he was "the token miso maker." Address: General Manager, American Miso Co., Route 3, Box 541, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

6235. **Product Name:** [Soymilk].
Foreign Name: Sojalat–Alimento Derivato dalla Soja.
Manufacturer's Name: Biolab.
Manufacturer's Address: Via dei Grabizio 11, 34170 Gorizia, Italy. Phone: +39 481 533522.
Date of Introduction: 1992. February.
Ingredients: Liquid extract from soybeans (*soja*), sea salt, water.
Wt/Vol., Packaging, Price: 700 ml transparent glass bottle (short neck with with tin cap).
How Stored: Refrigerated.
New Product–Documentation: Talk with Maura Ghiraldini of Biolab. 1998. Nov. 9. Biolab, which started in June 1992, is now the third largest tofu maker in Italy. The founder and

owner is Massimo Santinelli, now age 34; they also make soymilk and various types of tofu.

Label and letter sent by Maura Ghiraldini and Massimo Santinelli. 1998. Dec. 5. This new (Dec. 1998) label (3½ by 6 inches) has many pink spirals on a light pink background. At the upper left and right corners are cartoons of bears. The border is many little boxes, each with a symbol inside. At the bottom center is a cartoon bear holding a spoon and bowl of soymilk and saying: "The soy beverage (*La Bevanda di Soja*). Free of added sugar (saccharose)! (*Senza Zucchero* (*saccarosio*) *Aggiunto!)"* "Organically grown (*prodotti dalla agricoltura biologica*)." Refrigerate at 4ºC. A small symbol shows a person recycling the container.

6236. Fuhrman, Joel. 1992. Osteoporosis: How to get it and how to avoid it. The facts surrounding this disease are shockingly different from what we have been told. *Health Science*. Jan/Feb. p. 8-11.
• ***Summary:*** Osteoporosis shows up as a decrease in the mineral content of the bone caused by a negative calcium balance. It is 7 times more likely that women (rather than men) will develop clinically evident osteoporosis, yet it is not an inevitable development; it is caused by improper diet and lifestyle.

Though it is logical to think that insufficient calcium intake could cause a negative calcium balance, population studies in various countries suggest otherwise. "Countries whose population have extremely high calcium intakes have the highest rates of osteoporosis in the world and countries with low calcium intake often have low rates of osteoporosis." Actually a high protein diet is a major cause of osteoporosis. Other dietary factors include the consumption of large amounts of salt (sodium) and caffeine, phosphoric acid (prevalent in soft drinks), alcohol, and cigarette smoking.

"Older women in high meat eating countries have the highest rates of osteoporosis in the world. Vegetarian populations, even those with low calcium intake, have much lower rates.

"Millions of women have been falsely led to believe through the mass media that there is a correlation between osteoporosis and the inadequate intake of dairy foods." Address: M.D., Hillsborough, New Jersey.

6237. **Product Name:** Grainaissance Amazake Pudding [Lemon, or Cocoa]. The Cocoa was renamed Chocolate in Nov. 1993.
Manufacturer's Name: Grainaissance, Inc.
Manufacturer's Address: 1580 62nd St., Emeryville, CA 94608. Phone: 415-547-7256.
Date of Introduction: 1992. February.
Wt/Vol., Packaging, Price: 6 oz plastic tub.
How Stored: Refrigerated.
New Product–Documentation: Talk with Tony Plotkin, owner of Grainaissance. 1993. Oct. 17. The lemon pudding was launched in about Feb. 1992 and the cocoa in about May or June 1992. He misunderstood the laws about labeling chocolate, believing that a product could not be labeled "chocolate" unless it contained milk. But an attorney corrected him. They will be renaming the product flavor to "chocolate" in about 2 weeks.

New Label for Chocolate sent by Tony Plotkin of Grainaissance. 1993. Nov. 2. Blue and red on white. The subtitle reads: "Naturally Sweet, Low Fat, Non-Dairy." The ingredients are now: Filtered water, organic brown rice*, almonds, rice koji, tapioca starch-modified, unsweetened cocoa, natural flavors, xanthan gum.

6238. Productos Alimenticios Soyavyn. 1992. Productos alimenticios naturales a base de soya: Soyavyn [Natural food products based on soya: Soyavyn (Leaflet)]. Lourdes, Colón, Depto. La Libertad, El Salvador. 1 p. Feb. 19 x 13 cm. [Spa]
• ***Summary:*** The company makes the following products: (1) Fluid flavored soymilk (½ or ¼ liters): Vanilla, strawberry (*fresa*), banana, chocolate, natural (in liter size). (2) Meatless sausages and meats: Sausage (*Salchicha*), Seasoned Sausage (*Chorizo*), Soy burgers (*Tortitas; Hamburguesa*), Soy steak (*Bistek*). (3) Dry products (1 lb packs): Instant soy coffee, Chocolate, Horchata (Local fresh beverage), Whole soy flour, soybeans. (4) Dairylike products: Soy cheese [a cheese alternative], soy cream, soy curds or cottage cheese (*Requesón*). (5) Other products: Galletas de Soya (Soy cookies), Bath soap (*Jabón de Baño*), Recipe booklet (*Manual de Recetas*), Pitcher (*Pichel*), Shirt (*Camisa*), Peaches in syrup (*Duraznos en Almíbar*). "Detail and wholesale, home delivery without re-charge."

Letter from Kris Duville of Productos Alimenticios Soyavyn. 1992. June 2. This leaflet was first printed in Feb. 1992 on the occasion of a village feast at which the company had a stand at the fair. Address: Planta Soyavyn, 2a Calle Poniente No. 2-4, Lourdes, Colón, Depto. La Libertad, El Salvador. Phone: 51-0705 or 23-3554.

6239. *SoyaFoods* (*ASA, Europe*). 1992. French standards for tonyu [soymilk]. 3(1):2. Winter.
• ***Summary:*** Recently the French soyfoods association, SOJAXA, adopted the term 'tonyu' (the Japanese word for "soymilk") because of labeling restrictions in France and Europe. Now, in cooperation with SOJAXA, The French Standards Institute (AFNOR) has decided to develop standards for soymilk in France.

6240. *SoyaFoods* (*ASA, Europe*). 1992. Interest in soyamilk grows. 3(1):3. Winter.
• ***Summary:*** A survey was conducted by the Soya Milk Information Bureau (P.O. Box 169, Banbury, Oxon OX16 9XE, England). A questionnaire was mailed to 1,500 known consumers of soya milk; 35% responded. "The profile of the

soya milk consumer is quite evenly spread across age groups but there is a strong female bias, with 81% of the survey's respondents being female; 29% were married women in the 35-55 age group.

"The reasons given for buying soya milk were: 49% for health reasons, 37% because they were vegetarian or vegan, 31% for milk allergy reasons, 14% because they preferred it to cow's milk. Most respondents (73%) bought their soya milk from health food stores and 51% from supermarkets."

6241. *SoyaFoods* (*ASA, Europe*). 1992. Nestlé–a Bonus for Mexico. 3(1):4. Winter.
• ***Summary:*** In June 1989 Nestlé, the world's largest multi-national food company, launched Bonus is Mexico. Containing 70% nonfat dry milk and 30% powdered soymilk, the final product derives 50% of its protein from the cow's milk and 50% from the soymilk. The soymilk is made by Nestle from whole soybeans. This is an important product because milk is scarce in Mexico and imported milk is expansive. Nestle has chosen to promote the soya component specifically as a benefit instead of using vague slogans like "with added protein" or "with vegetable protein." Nestle developed a generic campaign to educate the Mexican public about the many virtues of soya. In addition, Nestle conducted a massive advertising campaign, which is estimated to have cost $15 million so far. The product, which originally sold for 5% less than the leading brand of powdered cow's milk, now sells for 15% less. In 1990 sales of Bonus totalled 692 tonnes and 1991 sales are projected to be 1,500 tonnes. Nestlé's current goal is to obtain 1 5% share of Mexico's powdered milk market.

"Over the next five years Nestlé will continue its generic soya education campaign and BONUS, itself, will continue to receive the support of a large marketing budget with part of the advertising campaign focusing on promoting the benefits of soya and milk."

6242. **Product Name:** Crêpolette (Organic Pancakes) [Vegetable, Madras Curry, Leek, and Cheese].
Manufacturer's Name: Unisoy Milk 'n' By-Products Ltd. (Distributor).
Manufacturer's Address: Unit 1, Cromwell Trading Estate, Cromwell Rd., Bredbury, Stockport, Cheshire, England. Phone: 061-430 6329.
Date of Introduction: 1992. February.
How Stored: Refrigerated.
New Product–Documentation: SoyaFoods (ASA, Europe). 1990. 1(1):3. These products are scheduled to be launched in May 1990. Talk with Neil Rabheru of Unisoy. 1990. July 2. This product has not yet been launched. It is made by another company located in continental Europe. Unisoy has been appointed sole distributors in the U.K. It contains no Unisoy products and is not really a soya-based product, containing only 2-3% of soyamilk.

Talk with Neil Rabheru of Unisoy. 1991. Sept. 16. This product is scheduled to be launched in Feb. 1992 by the Haldane Foods Group; it is not yet ready and it is not known which brand it will bear. The artwork is ready.

6243. Whiteman-Jones, Michael. 1992. Soyfoods poised for growth: New mass-market interest, product development and consumer interest are driving sales higher than ever. *Natural Foods Merchandiser.* Feb. p. 18-19.
• ***Summary:*** Last year soyfoods were introduced to mass-market consumers by two of America's corporate giants. (1) Archer Daniels Midland Co. (ADM of Decatur, Illinois) introduced the vegeburger to show that a delicious food product could be made from soy. ADM marketing specialist Lee Lensch says the soy burger is doing very well in test markets in Indiana, Illinois, and Minnesota. Versions of the product are being advertised nationally in corporate TV spots and on local TV in test markets. Buyers who gave the products shelf space at chains such as Kroger, SuperValue and Cub Foods now report brisk sales. (2) Protein Technologies International in St. Louis, Missouri, a subsidiary of Ralston Purina, is test marketing a soy-based beverage named First Alternative in Phoenix, Arizona.

Peter Golbitz, president of Soyatech Inc., a consulting company in Bar Harbor, Maine, notes that since the 1980s, Japanese companies (such as Nichii Co.) have invested at least $50 million in soyfoods manufacturing plants in the U.S.

"Retail sales of soyfoods are growing in America by about 5 to 7 percent a year, increasing to about $657 million in 1990, Golbitz says. The most rapid expansion is for soy milk, which is growing at a rate of about 20% a year, and second-generation soyfoods which are growing at a rate of about 15%... Soy milk consumption in Australia, where it is sold in grocery stores like milk, is about 10 times what it is in this country."

Worldwide, consumption of soyfoods now averages about 1.7 kg/person/year, and is expected to rise to 2 kg or more by the year 2000. Taiwan is the world leader with 15.5 kg/capita/year of soy, followed by Japan at 11.1 kg. A world map and table (largely compiled from FAO Food Balance Sheets) shows "Soyfood consumption: Yearly average per capita (Amount of change from 1979 to 1988)." The following countries are listed in descending order of consumption in kg/capita: Korea 17.1 kg (2.4%). Taiwan 13.0 (37.0%). Japan 10.8 (6.7%). Indonesia 6.3 (57.4%). Hong Kong 3.8 (-22.0%). Saudi Arabia 3.6 (342.9%). China 3.4 (-5.6%). Paraguay 2.8 (50.0%). Malaysia 2.3 (102.2%). Thailand 1.6 (162.5%). Zimbabwe 1.6 (22.2%). United States 1.4 (33.3%).

6244. Deck, Cecelia. 1992. '60s roots bear fruit: Ann Arbor's Eden Foods takes checkered path to become an industry leader. *Detroit Free Press.* March 2. p. 10F-11F. Cover story.

• ***Summary:*** One of the few food cooperatives and natural food stores that has survived from the 1960s, Eden Foods "has made it through the wacky '70s and the excessive '80s to the health-conscious '90s when, in a surge of reborn interest in natural foods, it has emerged as a for-profit, $20-million-a-year leader among organic food processors.

"Founded by idealists who cared more about getting their message of healthy eating to the public than about bottom lines... the company has never strayed from its mission: to bring organically grown food to the public." Tim Redmond recalls the early days when Eden operated out of an apartment on East William Street upstairs from Campus Bike and Toy. "During the summer, when all of the co-op members had left town or taken jobs elsewhere, former U-M [University of Michigan] football player Bill Bolduc bought out the company. 'No one really seemed to mind,' Redmond says... By 1970 Eden was running the biggest natural food store in the Midwest."

A competitor for 20 years has been the Cooperative People's Warehouse, which has been losing money for the past few years. After the retail store moved to Maynard Street, the company "opened a restaurant which gained fame for its chapati vegetarian sandwiches on Indian flat bread. A colorful mural painted on the alley wall near the store's entrance is still vibrant, though the store and restaurant had closed by the mid-1980s."

Soon the company "started licensing outside manufacturers to pack Eden-brand products such as canned beans, and began importing packaged food from China and Japan. Eden also started doing its own manufacturing–bottling oils, roasting and grinding sesame seeds."

After a fire in 1979 that caused about $800,000 in damage, Eden regrouped and opened its warehouse and manufacturing in an old factory in Clinton. "In 1982, Eden bought Schmidt Noodle Co., a vintage 1923 noodle maker in Detroit, that had been making Eden's organic pasta for about six years under license.

"The next year Eden began exporting organic soybeans to Japan and then importing Japanese-made Edensoy, a milk-like soy beverage that found an immediate market." Tim Redmond recalls that "Eden had never had a success like this in one product." According to Peter Golbitz, soymilk industry sales "zoomed through the 1980s to reach $52 million at retail last year. Edensoy had about a 40 percent share of the market."

"But importing Japanese soy milk and living at the mercy of the yen wasn't good enough, and Potter believed that the burgeoning soy milk market could justify a U.S. plant. So in 1987, Eden opened a soy milk processing plant in Saline in a joint venture with four Japanese companies. With redesigned aseptic packaging, Edensoy sales grew to 4,500 supermarkets nationwide as well as hundreds of natural food stores."

"Eden has had certification programs for its organically grown products since the early 1970s, but in 1988 the company joined the Organic Crop Improvement Association [OCIA], which strictly monitors crops to show that they are grown in soil that is pesticide free for three years and grown to organic standards. An audit trail can trace a can of beans to the field where the beans were grown."

Color photos show: Timothy Redmond, vice president of marketing at Eden's soy milk processing plant in Saline, standing on the plant floor surrounded by stainless steel equipment. Nancy Potter, on the cover of the tabloid, beside a painting of a huge Eden Foods delivery truck. Address: Free Press business writer.

6245. Bolduc, Bill. 1992. Plans for introducing soymilk and dairylike soy products in the Midwest (Interview). *SoyaScan Notes.* March 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bill's company is gearing up to make a major assault on the East Coast soymilk market. They plan to make the product in Ohio at a cow's milk dairy. Bill is putting together the equipment for the front end of the process using fruit processing equipment, including a Rietz Disintegrator for grinding and a Rietz S-Press. Rietz has its equipment in tofu plants in California. They hope to launch the product in July. The shelf life is 21 days, and the product will be sold in recyclable plastic quarts and half-gallons. His company will also be distributing organic cow's milk. They will deliver it themselves, directly to stores in Boston, New York City, and the Washington, DC / Baltimore area–without using distributors. A major player is really interested in this product now–so he may sell both under his own brand (Ohio Soy) and a private label. Or he may just private label, as for Bread & Circus. They will also be launching a frozen soy yogurt, and a fresh soy yogurt. They key is to have a line of products (both soy and dairy) so the person in charge of the dairy case can place a sizeable order. The organic cow's milk may be under the Hertzler Family Farm label. Other dairy products may include organic dairy yogurt, butter, and cheese. Address: Organic Processing Corp., 1430 Clifton Rd., Xenia, Ohio 45385. Phone: 513-767-9266 or 1-800-647-2326.

6246. *SoyaCow Newsletter.* 1992--1996. Serial/periodical. Ottawa, Canada. The SoyaCow Centre. Vol. 1, No. 1. Jan/March 1992. Editors: Raj Gupta and Grant Wood.

AN ADVANCED SOYA FOODS TECHNOLOGY

The SoyaCow Newsletter

January-March, 1992 Vol. 1 No. 1 Ottawa, Canada

Child Haven Sends Six SoyaCows to India with CIDA's Help

Child Haven International of Maxville, Ontario, has purchased six SoyaCow systems for their Soya Milk Cottage Industry Project in India. The project is supported by the Canadian International Development Agency and chariatable donations from the public. The machines are reported to be running well without problem. Unskilled women with minimum training are able to operate the machines and make soya milk, tofu, soya yogurt, okara, etc., and many delicious and nutritious products.

SoyaCows to Malawi and Guatemala

Ekwendeni Hospital in Malawi (Africa) has ordered a SoyaCow system with electric boiler. Another SoyaCow system has been purchased by ADEEC in Guatemala through Plenty Canada. The machine will be used in a project to establish the feasibility of the SoyaCow concept and to train people in the operation of the machine.

Two Stage Grinder Improves Yield of Alexandria SoyaCow

The SoyaCow system operational for over six months at the Candlestick restaurant in Alexandria, Ontario, has been upgraded to use the same two stage grinder as used in the latest SoyaCow systems. This has resulted in a dramatic increase in the soya milk yield and reduced the soya bean grinding time.

Child Haven's directors, Fred and Bonnie Cappuccino, take delivery of six SoyaCows from ProSoya's president Rashmi Gupta (right).

Natural Products Expo West

Anaheim, 11-13 April

The largest natural products trade show ever is to be held in Anaheim, California, on April 11 to 13, 1992. The Natural Products Expo West will feature natural foods products and services presented in more than 900 booths, including special exhibit pavilions - Organic and Soyafoods. Contact Kay Gazaway, Exhibitor Coordinator (303-939-8440) for further information.

SoyaCow Workshop

ProSoya is offering hands-on training on a SoyaCow system in Ottawa. The workshop will be of interest to those wishing to know about soya foods in general and the SoyaCow concept in particular. The participants will learn to make soya milk, tofu, and many delicious soya foods, drinks, and desserts. The SoyaCow Manual is included in the workshop fee of US$495. SoyaCow training is also provided by Ankur Services in Hyderabad, India.

SoyaCow Displays

The complete SoyaCow-20 system will be on display in several charity and trade events, including:

April 11, 1992: Child Haven Sixth Annual Dinner at Tudor Hall, 3750 Bowesville Rd., Ottawa.

September 10-13, 1992: Natural Foods Expo East at the Convention Center, Baltimore, Md.

October 19-22, 1992: The American Dietetic Association Meeting Exhibition, Washington, DC.

Vegetarian Good Food (*England*). Spring. p. 28-29, 31-32.
• ***Summary:*** An introduction, with many color photos, to soyfoods, including TVP, tofu, soya milk, soya flour, soya oil, soy sauce, miso, tempeh, fresh soya [green vegetable soybeans; "soya beans can be eaten fresh straight from the pod, served green and tender..."], and whole dry soybeans. Contains considerable incorrect information.

6248. Earthsave Foundation. 1992. Our food, our world: The realities of an animal-based diet. 706 Frederick St., Santa Cruz, CA 95062-2205. 24 p. 27 cm. [170 ref]
• ***Summary:*** This outstanding, compact publication is an expanded and improved version of Earthsave's booklet titled Realities. Contents: Resource utilization: Land utilization, grain consumption, energy consumption, water consumption, government subsidies, population issues, distribution of food resources & world hunger. Environment: Soil erosion, desertification, rainforests, global warming, water pollution, pesticides. Health: Physician's training, heart disease, cancer, protein requirements, animal protein and calcium loss (a word on milk), official nutritional guidelines, food contamination (pesticides, food inspection), health of people observing vegetarian diets. The future of the farmers (number of farms in the United States by farm size, roughly each decade from 1900 to 1987). Address: Santa Cruz, California. Phone: 408-423-4069.

6249. Ferrell, John. 1992. Mechanical cows and industrial soybeans: Henry Ford's vision of a sustainable future. 6 p. Unpublished manuscript. [24 footnotes]
• ***Summary:*** Contents: Introduction. Making the cow obsolete. Agricultural alchemy. War on waste. A new generation of prophets. Farms and factories in a sustainable future. "Ford was a contradictory personality. Although he was not a vegetarian, he maintained that meat and milk were unnecessary. He owned a choice herd of dairy cattle, but considered dairy farming inefficient."

Later published in somewhat condensed form under the title "Forgotten legacy: Henry Ford's vision of a sustainable future–An original environmentalist." in EarthSave. 1992. Spring & Summer. p. 15-17. Address: P.O. Box 66336, Washington, DC 20035. Phone: 202-632-1178.

6250. **Product Name:** Rice Dream (Rice Milk in a Tetra Brik Carton) [Original Lite].
Manufacturer's Name: Imagine Foods, Inc. (Marketer-Distributor). Rice milk made by California Natural Products, Manteca, Calif.
Manufacturer's Address: 299 California Ave. #305, Palo Alto, CA 94306. Phone: 415-327-1444.
Date of Introduction: 1992. March.
Ingredients: Filtered water, certified organic brown rice (partially milled)*, expeller pressed high oleic safflower oil, sea salt. * = Organically grown and processed in accordance with Section 26569.11 of the California Health and Safety Code.
Wt/Vol., Packaging, Price: 23 fl oz (946 ml) Tetra Brik Aseptic carton. Retails for $1.59 (11/93 at Trader Joe's, Concord, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Robert Nissenbaum. 1993. Oct. 19. Trader Joe's is now selling this product for $1.49 a quart. As the volume of this product sold has grown the cost to produce each unit has dropped. Imagine Foods has kept its price constant but offered bigger and bigger discounts to large-volume buyers.

Product with Label purchased at Trader Joe's in Concord, California. 1993. Nov. 4. 3.75 by 6.5 by 2.5 inches (1 quart Tetra Brik carton). White and black on sky blue and pink. The lovely package graphics show a blue sky with white clouds here and there, deep blue at the top becoming pink at the bottom. Front panel: "1% fat non dairy beverage. Made from organic brown rice." Back panel: "No cholesterol. 99% fat free. Low in sodium. Rich in complex carbohydrates. Lactose free. Made from certified organic California brown rice. Delicious! Rice Dream is a light, refreshing alternative to soy drinks. Our patented recipe transforms nutritious brown rice into a satisfying beverage. Rich in complex carbohydrates and natural sugars, Rice Dream provides a balanced energy source for your active life." It retails for $1.59. Excellent flavor and color. Feb. 1994. Still retails for $1.59/quart at Trader Joe's.

Talk with Robert Nissenbaum of Imagine Foods. 1994. Nov. 23. This product was introduced in March, 1992. It was probably packed by Real Fresh.

6251. Johnson, Lawrence A.; Myers, D.J.; Burden, D.J. 1992. Early uses of soy protein in the Far East, U.S. *INFORM* (*AOCS*) 3(3):282-88, 290. March. [54 ref]
• ***Summary:*** A nice history of the subject based on a review of the literature. Contents: Early history in East Asia (industrial uses, chiang and miso, natto, tempeh, soymilk, tofu, shoyu). Emergence of U.S. soybeans (early soybean mills, ADM, Glidden). Chemical understanding of soybean protein (major components/fractions). First industrial applications (oil and meal). Soy protein-based plastics (Henry Ford). Chemurgic movement (U.S. Regional Soybean Industrial Products Laboratory, Northern Regional Research Center, Glidden). Soy protein adhesives (I.F. Laucks). Paper coatings and sizings (Glidden). Soy fiber spinning (Ford, Azlon, Drackett). Other industrial uses. Address: Center for Crops Utilization Research, Iowa State Univ., Ames, Iowa 50111.

6252. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. Child Haven sends six SoyaCows to India with CIDA's help. 1(1):1. Jan/March.
• ***Summary:*** "Child Haven International of Maxville,

Ontario, has purchased six SoyaCow systems for their Soya Milk Cottage Industry Project in India. The project is supported by the Canadian International Development Agency and charitable donations from the public. The machines are reported to be running well without problem. Unskilled women with minimum training are able to operate the machines and make soya milk, tofu, soya yogurt, okara, etc., and many delicious and nutritious products."

A photo shows Child Haven's directors, Fred and Bonnie Cappuccino, as they take delivery of six SoyaCows from ProSoya's president, Rashmi Gupta [Raj Gupta's wife]. The SoyaCows are arranged on two handsome stands. Below each is a stainless steel tofu forming box.

Note 1. The order of these six SoyaCows from Child Haven was a defining moment for CIDA; it showed that Raj's original idea was working and that this order would be the first of many.

Note 2. This is the earliest issue of *The Soya Newsletter* that contains the word "ProSoya." The word is used in many articles in this issue to refer to the company that makes the SoyaCow.

Note 3. As of May 1999 Child Haven is located at: R.R. #1, Maxville, Ontario, K0C 1T0, Canada. Phone: 613-527-2829. Attn: Bonnie and Fred Cappuccino.

6257. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. SoyaCow-100 introduced. 1(1):2. Jan/March.
• ***Summary:*** "ProSoya has designed a soya milk plant for those needing systems larger than the SoyaCow-20. Whereas the SoyaSow-20 uses a 20 L [litre] vessel to make soya milk at the rate of 15 L/batch, 3 batches/h [hour], the SoyaCow-100 L pressure vessel with a capacity to make up to 75L/batch. Depending on the capacity of the boiler for steam generation, SoyaCow-100 can process up to 6 batches/h. The price for the basic grinder / cooker unit for a SoyaCow-100 is US$9995. A mechanical press, a steam generator, and tofu forming boxes are also available to complement the grinder / cooker."

6258. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. Technology transfer to India. 1(1):2. Jan/March.
• ***Summary:*** "ProSoya has assigned the task of developing a SoyaCow prototype for India to Ankur Services Pvt. Ltd. of Hyderabad, India. The intent is to eventually manufacture SoyaCow machines for India and the neighbouring countries."

6259. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. SoyaCow manual. 1(1):2. Jan/March.
• ***Summary:*** "Child Haven International, Maxville, Ontario, has published a manual on the SoyaCow. The 100-page manual introduces the reader to soya milk, tofu, okara, soya yogurt, etc. Most everything one needs to know to start and profitably run a small soya dairy operation, especially the SoyaCow-20 is given."

6260. DeBona, Don; Callebert, Mark. 1992. Update on Lima Foods and Euronature (Interview). *SoyaScan Notes*. April 19 and 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The following is based on a talk that Don had in North Carolina with Mark Callebert, general manager of Lima Foods in Belgium, then a direct interview with Mark in Belgium on April 23, followed by a letter from Mark on June 16 with exact dates. Mark has worked with Lima for about 16 years (since 1 Sept. 1975).

The Gevaert family sold Lima in May 1988 to a company named Vibec in Quebec, Canada. Vibec was a construction company (they were not involved with foods) and the owners spoke French. The contact with Vibec was

made via Henry Lucy, a Frenchman who was on the Lima board of directors (and also a shareholder), who was a friend of Michio Kushi (Michio had healed Henry's wife), who had quite a lot of money, and who also had a construction company in Africa. Michio was also on the Lima board for a while. Vibec purchased Lima as a way of getting involved in the new European market without borders which will begin at the end of 1993. However Pierre Gevaert and his son, Daniel (who was production manager at Lima, France), kept their property and mill in the south of France where Lima used to make miso. At that time Lima had a lot of financial problems. Pierre Gevaert owned the majority of the stock in Lima, and his relatives (mostly his brothers and sisters) owned the rest. Mark and Frank Stevens (Pierre Gevaert's son-in-law) played key roles in negotiating the deal, then stayed on to run the company. On 22 April 1989 Lima purchased Jonathan P.V.B.A., which is still a fully owned subsidiary (daughter company) of Lima. But the marriage of Lima (a Belgian natural foods company) and Vibec (a Canadian construction company) was a strange one, and for that reason it didn't last long.

Then in September 1989 Lima was purchased from Vibec by Euronature (pronounced as in French, YU-ro na-TYUR), a large international food company headquartered in Paris, France. Euronature is a holding company that was founded in June 1989; the president of Euronature was able to raise a lot of money from banks and insurance companies to create the holding company. Frank Stevens was killed in an automobile accident in Nov. 1989.

Lima is presently doing well, is financially very solid, and the future looks bright. Lima has sales of about $15 million a year, but the company is not yet profitable. Mark feels that they will become profitable when sales reach about $17 million/year. Their traditional high standards of food quality are completely supported by Euronature. Pierre Gevaert (born 21 July 1928 now in his mid-60s) no longer owns any part of Lima and neither he nor his son have been active with the company since it was purchased by Euronature. Pierre lives in the south of France and works on his organic farm there. Lima is still headquartered at Sint-Martens-Latem in Belgium.

Euronature has 4 major divisions: (1) Natural foods division, including Lima Foods, Lima's bakery and muesli factory, and several natural foods distribution companies; (2) Gourmet division; (3) Seafoods division (Euronature's largest), with branches scattered throughout Europe; (4) French specialty foods division.

Lima's largest product lines are their muesli products (which they make at their own plant), their bakery (located 6 km from Sint-Martens-Latem in Belgium), their sesame division (they make tahini and gomashio, and were one of the first to grow sesame seeds organically), and their tomato canning division (located in the south of France, it makes tomato sauces and ratatouille). Lima's leading soyfood products are tamari, shoyu, organic miso, their soymilk products (including regular and Mocha-Soy soymilk, and Soy Desserts, all made by Alpro in Belgium), fresh tofu salads, and tofu in cans and jars. Imports from Japan are now quite small, representing only about 10% of Lima's total sales. Although Lima no longer makes its own miso, it still sells quite a lot of miso–much of it from past batches made by Jan Kerremans in the south of France. Lima is now looking for other sources, including American Miso Co. in North Carolina. Jan now works part time as a consultant for Alpro in Belgium.

Jonathan's main products are now seitan and tofu (both fresh [pasteurized] and in jars), plus many second-generation products made from seitan and tofu, such as fresh tofu spreads, tofu pates, seitan brochettes, etc. Jonathan makes all of the seitan, tofu, and related products sold by Lima. Address: General Manager, American Miso Co., Route 3, Box 541, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

6261. Duville, Kris. 1992. Re: Work with soyfoods at Productos Alimenticios Soyavyn in El Salvador. Letter to William Shurtleff at Soyfoods Center, April 22. 3 p. Typed, with signature on letterhead. [Eng]

• ***Summary:*** Kris graduated in 1988 as an agricultural Engineer at the Catholic University (KU) of Leuven, Belgium. A scholarship took him to Silsoe, England where he studied for an MSc in tropical crop storage and processing. He was then given a 3-year volunteer contract with a Belgian non-governmental aid organization named ACT to help start a small enterprise for PNS, the Programa de Nutricion y Soya, in El Salvador. PNS is a Salvadorean foundation whose objective is to promote the use of soybeans and soyfoods in the diet of the people of El Salvador. PNS started 7 years ago with courses on the cultivation and processing of soya on the village and home levels. A considerable part of the population has attended the talks and demonstrations, and many cooperative and individual farmers have started growing soybeans for consumption by their families, selling the surplus to PNS, which founded small distribution and processing centers. As soybean production and the demand for soyfoods grew, ACT decided to set up a small processing plant, named Productos Alimenticios Soyavyn, which went into operation about 2 years ago. The period of financial support has now ended, so the company is working hard to make ends meet. The future looks promising. The company's fresh products are flavored soymilk, soy cheese [a fresh cheese analog; queso de soya–perhaps tofu] and soy cream, and meat substitutes. Dry products include roasted soy flour, which serves as the base of several flour-type products. Kris' contract ends in September 1992 but he may continue working in El Salvador. The company is planning new projects for the production of soymilk and for toasted and extruded soy products; it is requesting financial support from

the Belgian and European government, with hopes of starting next year. They also want to organize a seminar on soy processing and consumption for the many interested people in El Salvador. Also the government has shown interest in soyfoods for their health and nutrition programs. Note: This letter is also signed by Nelson Vasquez, Soyavyn plant manager.

Chris encloses a 4-page typed, undated proposal on ACT letterhead titled "Improving the food situation in El Salvador by the processing, promotion and marketing of soybeans in accessible commercial products in Santa Ana and San Miguel–El Salvador. Contents: Summary of the project. NGO data sheet. Information on the action. The proposal was submitted to: Commission of the European Communities, 200 Wetstraat, 1049 Brussels, Belgium.

Follow-up letter from Kris Duville. 1992. Oct. 9. He is now in Santa Ana. "We are going to start a new soyplant for soymeals, cereal-soy blends, and other dry products. It looks like it will be a nice project, again working with PNS." Address: Productos Alimenticios Soyavyn, Planta Soyavyn, 2a Calle Poniente No. 2-4, Lourdes, Colón, Depto. La Libertad, El Salvador. Phone: 51-0705 or 23-3554.

6262. Gabriel, John. 1992. Current work with soya in Nicaragua (Interview). *SoyaScan Notes.* April 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** John (age 55) and his wife Charlotte (who is now a well-known maker of psychedelic tie-dye clothing) used to make tempeh in Houma, Louisiana, in about 1977. Recently John was in Nicaragua and he plans to do work there, starting in several years, with soyfoods such as tempeh, tofu, and soymilk. He is now working with Chuck Haren of Plenty USA, to put together a grant proposal for a project and funding.

The two best known people involved with soya in Nicaragua are Luci Morren and Anne Souter. Luci is a Danish nun who has founded an organization named Asociatión Soya de Nicaragua (popularly known as Soynica, located at Apartado Postal 4451, C-164 Managua, Nicaragua). Now in her 50s, Luci has been involved with soyfoods for at least 8 years, working with a women's collective of about 5 women and promoting their use (especially as a source of nutrients for poor and malnourished children) in the barrios of Managua. The group now makes tofu using rudimentary equipment; they don't even have a press, so they must squeeze out the soymilk by hand. Luci would now like to start a commercial soy processing operation to make soymilk, tofu, and tempeh. She would like to sell these to restaurants, hospitals, schools, small retail outlets, etc., but she needs both technical and financial help. John is in communication with Luci on a regular basis. Luci is known by most development people in Nicaragua. John describes her as a very dedicated, indeed holy woman–like Mother Teresa of India. According to the SoyaScan database, in the mid-1980s, Luci was working in Mexico, teaching the people about Soya; she was with Cargua at San Cristobal Las Casas, 75 Real de Guadelupe, 29230 Chiapas, Mexico.

Anne Souter is now back in Nicaragua working full time with soya in the area of Matagalpa. She has yet to produce a successful crop of soybeans in Nicaragua.

A development group working with soyfoods in Nicaragua is Alianza Para Comunidades en Acción. Based in the USA (contact Richard Schopfer, director, P.O. Box 30154, Bethesda, Maryland 20814. Phone: 301-229-1742), they have an office in Managua run by Richard's son, Don Schopfer (Aptdo. Postal C-144, Managua. Phone: 72022), and a soy project in Rivas, located 2 hours drive south of Managua near the border with Costa Rica. There Sal Piazza is in charge of a soybean utilization project. He works with several women's groups that have community kitchens. Most of Alianza's major projects are in the fields of health, food production, water, and housing.

Shurtleff & Aoyagi first met John and Charlotte Gabriel on 4 Jan. 1977 in Houma, Louisiana. They had constructed a tempeh trailer and were making tempeh for their own use. At that time they planned to start commercial tempeh production, but they never actually did. Rather they took the tempeh trailer back to The Farm in Summertown, Tennessee, and it was used there to make tempeh for members of The Farm.

Update: Talk with John Gabriel. 1993. Oct. 6. John and Charlotte are in the process of moving permanently to Nicaragua where they hope to arrive in about Feb. 1994 to work with the people to make soymilk, tofu, and tempeh. They plan to learn Spanish first in Guatemala. Chuck Haren says that quite a lot of soybeans are grown in the department of León, Nicaragua, but the yields are not very high; the rainy season requires that short-season varieties be cultivated. Leaf protein concentrate (made from cowpea leaves) is now being added successfully to lemonade in Nicaragua. Chuck Haren has married a Nicaraguan lady named Casta Calderon, who managed Luci Morren's office.

Note: Plenty International (Jan. 1994) notes that Soynica (a non-governmental organization or NGO) is now located at: Apartado #RP-05, Managua, Nicaragua. Address: 11668 Blackberry Place, Nevada City, California 95959. Phone: 916-265-5100.

6263. Boysen, Hans-Juergen. 1992. Soja [Soya]. *Schrot & Korn* (*Germany*). April. p. 16-20. [Ger]

• ***Summary:*** An introduction to soybeans and soyfoods, including whole dry soybeans, soy oil, soymilk, soya meat (Sojafleisch, TVP), Whole soy flour, tempeh, and soy sprouts.

Note: This magazine is sold in German natural food stores (Naturkost-Laden).

6264. Child Haven International. 1992. Income [for 3rd phase of SoyaCow project]. Hyderabad, India: CHI. 1 p. April.
• ***Summary:*** Expenses: 277 hours @ $15/hour = $4,155. Child Haven Director (Supervision in India, planning and reporting) 264 hours @ $15/hour = $3,900. Sub-total. $11,215. Total: $115,615.

Income: Canadian NGO: $22,975. Other cash contributions (CIDA): $68,925. Provincial government: $0. Local contributors: $12,500 (local organizations will pay salaries for equipment operators ($3,500) and site managers ($3,000), as well as purchase soya beans, cooking fuel, etc. ($6,000) for 5 of the 8 sites).

Administration: $11,125.

Total: 115,615.

Note: The conversion rate for Indian Rupees is Rs. 21 = $1 Canadian (April 1, 1992). Address: Hyderabad, India.

6265. **Product Name:** Granose Soya Creem: Non-Dairy Cream Alternative.
Manufacturer's Name: Granose Foods Ltd. Div. of Haldane Foods Ltd.
Manufacturer's Address: Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England.
Date of Introduction: 1992. April.
Ingredients: Soya milk, vegetable oils, corn syrup, emulsifiers (vegetable mono-diglycerides), stabilisers (xanthan gum, locust bean gum, guar gum), natural color (beta-carotene).
Wt/Vol., Packaging, Price: 225 gm Combibloc Aseptic carton. Retails for 69 pence (7/92).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Energy 1827 Kjoules / 437 Kcal (calories), protein 3 gm, carbohydrate 12 gm (of which sugar 5 gm), fat 36 gm (of which polyunsaturates 47%, and saturates 23%), sodium 0.1%.

New Product–Documentation: Spot in SoyaFoods. 1992. Spring. p. 4, 5. Ad in Health Food Business (England). 1992. July. p. 5. "Put Creem on top of Granose soya milk sales." A color photo shows the carton and label. The Granose logo now reads: "Granose: A history of good health."

Label (carton) sent by Leah Leneman of Scotland, purchased at Real Foods. 1992. July. 3 by 3 by 1.9 inches. Combibloc carton. Red, dark blue, and light blue on white. Front panel: "High in polyunsaturates. Low in saturates. Cholesterol free." Other panels: V logo. "Suitable for vegetarians and vegans. Enjoy Soya Creem poured over your favorite fruits or desserts... Made without animal fats and milk derivatives. (Not recommended for use in coffee.)" Note: This product is basically identical to So Good Soycreem (1991).

Label sent by Genice Foods Ltd. 1994. Feb. 18. Same product name but in a 225 Tetra Brik Aseptic pack, and the first ingredient is now Organic soya milk.

6266. **Product Name:** Granose Light Soya Milk (Less than 1% Fat).
Manufacturer's Name: Granose Foods Ltd. Div. of Haldane Foods Ltd.
Manufacturer's Address: Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England.
Date of Introduction: 1992. April.
Wt/Vol., Packaging, Price: 1 liter. Retails for 91 pence (5/92).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Spot in SoyaFoods. 1992. Spring. p. 4, 5. "New Low Fat Soya Milk." "With less than half the fat of ordinary soya milk, it has a lower fat content than any other low-fat soya milk. In the UK it is estimated that 48% of all dairy milk sales are low-fat (skimmed or semi-skimmed)." A photo shows the package and label.

6267. **Product Name:** Tofu [Firm, or Regular], Tofu Pudding, Soymilk [Plain, or Sweetened], and Fried Tofu.
Manufacturer's Name: Happy Tofu.
Manufacturer's Address: 5231 S.E. Powell Blvd., Portland, OR 97206. Phone: 503-771-2802.
Date of Introduction: 1992. April.
How Stored: Refrigerated.
New Product–Documentation: Talk with (call from) Ann Uong of Happy Tofu in Portland, Oregon. 1994. Feb. She hopes to start making tofu in April 1992. John Rumler. 1994. This Week (Portland, Oregon). Aug. 17, "Tofu Fo' You." Ann Uong started this tofu company and now has four employees. In 1980 she escaped from Vietnam in a crowded riverboat and was almost killed twice by pirates. Then she and her 6-year-old sister had to spend 18 months in a refugee camp in Thailand; there she met Hoang, an engineer from Saigon, and now her husband. Uong came to the USA in 1982, and Hoang followed a year later. In 1985 they were married.

In 1991 they considered buying a chicken farm. But the unnatural factory-farming methods, with chicken kept in cages so cramped they were unable to walk, being force-fed chemicals to make them grow faster, made the couple so sad they decided to give up the idea–and to become vegetarians. Instead they decided to open a business in southeast Portland (at Southeast 53rd Ave. and Powell Blvd.) making and selling tofu and other soybean staples. At first their products were sold only to Asians, but gradually they found customers of all kinds. Now the company is distributing soybean products across Portland, and as far north as Seattle, and selling to such major accounts as Safeway and Food-4-Less.

Talk with Tom Nguyen. 1994. Nov. 17. Tom is Ann Uong's partner and brother-in-law, married to her sister. He is also Vietnamese. In April 1992 Happy Tofu started making firm and regular tofu, tofu pudding, and soymilk in plain and sweetened flavors. In Oct. 1992 they introduced Fried Tofu (in cubes).

6268. Haren, Chuck. 1992. Further adventures in Belize. *Plenty Bulletin* (*Davis, California*) 8(1):1-4. Spring.
• ***Summary:*** Describes the ongoing work of Plenty, Inc. to introduce soybeans to Belize. A photo shows the Southern Corozal Soy Producers Association, with about 13 members present. The author made tofu and soymilk for 50-60 men and women in the village of San Antonio (Toledo). Locally grow limes were used to coagulate the tofu. Address: Program Director.

6269. Imagine Foods, Inc. 1992. Three out of four would rather be dreaming (Ad). *Natural Health.* March/April. p. 17. Also ran in the May/June issue, p. 49.
• ***Summary:*** This creative full-page color ad for Rice Dream rice beverage shows, across the top third of the page, the backs of three people's heads. Above each head is a "thought bubble" (like those found in comic strips). The three people on the left are regular-looking people and in each of their thought bubbles is white clouds against a blue sky. The person on the right, named Flash, has yellow and purple hair, an unusual haircut, and some jewelry (including a peace symbol) dangling from his left ear. His thought bubble is gray and shaped like a jagged question mark.

Below the ad slogan to the left is a glass and a carton of Rice Dream (non-dairy rice beverage) next to a bowl containing cereal, sliced strawberries, and Rice Dream. To the right are 4 cartons of different types of Rice Dream.

The text states: "In a blind taste test, 300 natural food store shoppers were asked to compare Organic Original Lite Rice Dream with the two best selling soy beverages* (Footnote: * Based on a poll of leading natural food distributors...). The exciting results were 227 out of 300 chose Rice Dream as the best tasting non-dairy beverage.

"Many, like Harold (left), will also be pleased Rice Dream rice dream is 99% fat free with no cholesterol. Janet will like the fact that it's organic and a rich source of carbohydrates. Liz? Well' she's allergic to the others. But they all agree on one thing–good taste. Except Flash, but his friends say he's always been full of beans.

"Rice Dream is available in four scrumptious flavors, and economical quart sizes. It is delicious served hot or cold, great on cereal, delightful in tea or coffee, and a creative addition to puddings, pancakes or muffins. The light refreshing taste comes from our patented recipe which transforms nutritious brown rice into a delicious beverage. Try your own taste test and find out why more and more health conscious people have their heads in the clouds." Address: 299 California Ave. #305, Palo Alto, California 94306. Phone: 415-327-1444.

6270. Johnson, Lawrence A.; Meyers, D.J.; Burden, D.J. 1992. Soy protein's history, prospects in food, feed. *INFORM* (*AOCS*) 3(4):429-30, 432, 434, 437, 438, 440, 442-44. April. [54 ref]
• ***Summary:*** "This is the second part of a review that chronicles the individuals and the historical and economic factors noteworthy in the development of soy protein as food and feed ingredients." Contents: Introduction. Early Western food uses (whole and defatted soy flour, enzyme-modified isolated soy proteins as whipping agents, whipped toppings, cereal-soy blends). Soy flour and grits. Protein concentrates and isolates (Griffith Laboratories, Central Soya Co., Mead Johnson and Co., Central Soya). Dairy analogs (Dr. Harry W. Miller, Loma Linda Foods, Mull-Soy and Borden, Vitasoy, Edensoy, Worthington Foods and Soyamel, Prosobee and Mead Johnson, Rich Products and Chill-Zert, Tofutti). Spun fibers (Robert Boyer and the Ford Motor Co., Temptein, Worthington Foods, Bontrae, Bac*O's, Bac-O-Bits, Miles Laboratories, Morningstar Farms). Textured soy protein and meat analogs (W. Atkinson, ADM and TVP, General Mills and frozen Bontrae, the U.S. School Lunch Program). Nutritional advances in soy products. Today's world soybean and soy protein production (consolidation among manufacturers of modern soy protein ingredients: ADM, Cargill, Central Soya Co., Protein Technologies International, A.E. Staley Mfg. Co.). Future of soy protein products.

Tables show: (1) Soy meal consumption in the USA by type of animal: Poultry 41.1% of total 18.9 million metric tons, swine 27.4%, beef cattle 9.0%, dairy cattle 9.0%, other livestock 9.5%, human food 3.2%, industrial 0.5%. Thus, industrial (nonfood, nonfeed) uses for soybeans presently comprise no more than 0.5% of the protein produced from soybeans grown in the United States. (3) U.S. companies supplying protein in 1948-50 versus 1990 (industrial and edible flours, concentrates, and isolates). 23 companies then vs. 5 in 1990.

Note: Talk with Ed Milligan of EMI by phone. 1992. May 5. This article contains some misleading information.

Three out of four would rather be dreaming.

In a blind taste test, 300 natural food store shoppers were asked to compare Organic Original Lite Rice Dream with the two best selling soy beverages.* The exciting results were 227 out of 300 chose Rice Dream as the best tasting non-dairy beverage.

*Based on a poll of leading natural foods distributors. Write for our free recipe booklet. Imagine Foods, 299 California Ave., Suite 305, Palo Alto, CA 94306. © 1991 Imagine Foods, Inc.

Many, like Harold (left), will also be pleased Rice Dream is 99% fat free, with no cholesterol. Janis will like the fact that it's organic and a rich source of complex carbohydrates. Liz? Well, she's allergic to the others. But they all agree on one thing – good taste. Except Flash, but his friends say he's always been full of beans.

Rice Dream is available in four scrumptious flavors, and economical quart sizes. It is delicious served hot or cold, great on cereal, delightful in tea or coffee, and a creative addition to puddings, pancakes or muffins. The light refreshing flavor comes from our patented recipe which transforms nutritious brown rice into a delicious beverage. Try your own taste test and find out why more and more health conscious people have their heads in the clouds.

Imagine
FOODS

It refers to an article by Ken Becker written in 1971. In 1958-59 USDA developed a laboratory prototype of flash desolventizing. In 1959 they contacted EMI corporation in Des Plaines to commercialize the flash desolventizing system for production of light-colored, edible soybean flakes, for soy flour and grits, with a maximum PDI (protein dispersibility index). At that time Ed Milligan was just a newly hired member EMI, which undertook the project. Ed designed and installed the world's first commercial flash desolventizing system for Honeymead Products Corp. in Mankato, Minnesota, in 1960. Note that this system was used to make food, rather than feed. All but 2 systems have been used exclusively to make foods. All such systems produce a flake with a very light color and controlled PDI, whereas a DT (desolventizer-toaster) produces a golden colored flake. He is leaving for India in a few weeks to commission EMI's 22nd such unit. He has designed, installed, and started every one of the 22. Address: Center for Crops Utilization Research, Iowa State Univ., Ames, Iowa 50111.

6271. Wilson, Lester A.; Murphy, Patricia A.; Gallagher, Paul. 1992. Soyfood product markets in Japan: U.S. Export opportunities. Ames, Iowa: MATRIC (Midwest Agribusiness Trade Research and Information Center). x + 64 p. April.
• ***Summary:*** Contents: Figures. Tables. Acknowledgments. Introduction. I. Soybean processing (by Wilson and Murphy). Food from soybeans: Soybean chemical composition, environmental influences on soybean composition. Soyfood manufacture: Soymilk, tofu, momen tofu, kinugoshi tofu, packed tofu, aseptically-packaged tofu, deep-fried tofu, kori tofu. Tofu-related research: Recent studies at Iowa State University, summary, future research. Other nonfermented soyfoods: Yuba, kinako, texturized soy protein foods. Fermented soyfoods: Miso, shoyu, natto, tempeh. Japanese Agricultural Standards (JAS). Identity preservation and transportation. U.S. soybean quality and the Japanese market: Grain quality, judging quality, potential new markets.

II. Japanese soyfood markets (by Gallagher). Demand and growth prospects: Consumption patterns, demand analysis, forecasts. The U.S. share of the food soybean market: Sources and uses, market share analysis, determinants of relative prices, prospects. Trade and trade barriers: Soybeans, processed products. Summary and recommendations.

Appendixes: A. Excerpts from specifications and standards of food additives, etc.–Manufacturing and storage of tofu. B. Excerpts from standards and certification systems in Japan. C. Additional agricultural standards for soybeans. References.

Table 2.1 shows soybean use for soyfood production in Japan; actual (1986) and projected (2000). Soybeans for tofu are expected to increase from 524,000 to 609,700 tonnes. Soybeans for miso are expected to decrease from 156,000 to 101,600 tonnes. Soybeans for natto are expected to increase from 92,000 to 118,600 tonnes. Figures 2.1 to 2.4 show Japanese per capita consumption of tofu, natto, miso, and soy sauce from 1965 to 1988. Tofu: Japanese annual per capita consumption of tofu has risen since 1965, except that it fell during 1973-1977. In 1965 about 3.6 kg/capita of soybeans were used to make tofu, increasing to 4.4 kg/capita in 1988. If 1 kg of soybeans yields 2.8 kg of tofu, then per capita tofu consumption in 1988 was 12.32 kg or 27.1 lb.

Natto: Japanese annual per capita consumption of natto has risen steadily, from a little less than 0.4 kg in 1965 to 0.6 kg in about 1968, to 0.8 kg in 1988.

Miso: Japanese annual per capita consumption of miso fell from 8 kg in 1965 to about 5.4 kg in 1985, then it began to rise to about 5.7 kg in 1986.

Soy sauce: Japanese annual per capita consumption was about 12 liters in 1965. It fell to 11 liters in 1967, rose to 13 liters in 1973, then fell to 9.8 liters in 1985, after which it rose for 1 year. Address: 1-2. Prof. of Food Science and Human Nutrition; 3. Assoc. Prof. of Economics. All: Iowa State Univ. Phone: 515-294-0160.

6272. Fowler, Veronica. 1992. Studies: Soybeans may fight cancer. *Argus Leader* (*Sioux Falls, South Dakota*). May 5.
• ***Summary:*** Summarizes 4 studies suggesting that soybeans may contain substances (such as isoflavones and protease inhibitors) that prevent cancer. Iowa State University "recently was awarded $416,000 from the National Cancer Institute to investigate what effect isoflavones, a component of soybeans tied up with soy protein, might have in preventing cancer. Iowa State researchers are monitoring blood, urine and fecal samples of 12 student volunteers who drink a breakfast drink made each day with soy milk. This phase of their research will help them determine how readily isoflavones are absorbed into the body."

6273. Demos, Steve. 1992. New developments with the Soyfoods Association of America (Interview). *SoyaScan Notes.* May 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Big changes are taking place in the Soyfoods Association of America (SAA). Steve, who is now president, plans to launch a new membership drive. There will be two categories of membership: Full members and associate members. Two months ago, SAA started again to subscribe to the clipping service, and it now comes free of charge as one of the benefits of membership. The clips will be mailed every 60 days with a newsletter coming in between. SAA is in the process of installing a new executive director. Steve hopes that Virginia Messina will accept their offer for the position, on a part-time basis along with her current work for PCRM (Physicians Committee for Responsible Medicine). The SAA office would be at her present location near Washington, DC. Her husband, Dr. Mark Messina, will probably be leaving the

National Cancer Institute (NCI) soon, and SAA has asked him to work together as a spokesperson concerning cancer-preventing substances in soyfoods. Steve is optimistic that arrangements with the Messinas will work out. It will be excellent to have credentialed and creditable people speaking for the soyfoods industry.

Steve is now developing "products" to attract members. He wants SAA to produce informational pieces on soyfoods to mail to the medical and nutritional communities, to develop school wall posters and weekly meal planners for homemakers, and to work with state soybean programs which have benefited from the SPARC [national soybean checkoff] program. SAA would sell the information pieces to members to generate income. Leslie Harlow will soon no longer be with the organization, and Peter Golbitz will have a more limited role, although he may still be on the board of directors; he is very busy doing the Soya Bluebook.

Mark Messina is leaving NCI largely (Steve thinks) because "he is not being allocated the time and resources to devote to soy the way he wants to. He is very committed to soy, but his supervisors are limiting him to spending 10% of his time on soy-related research, whereas he would like to spend 50%. Also, being at NCI puts constrains on what he can say and do. Leaving NCI will probably cut back on his scientific research. He plans to go into consulting related to diet, cancer, and soya.

Steve feels that rushed 1-hour SAA board meetings at natural food trade shows are not very effective. The board needs more time and a better atmosphere in which to meet. He has called a strategic planning meeting in Boulder about the third week in July. 20% of the people put in 80% of the energy.

Steve is very interested in reviving and finalizing the tofu standards, then getting them accepted/ratified by the board and the industry; new soymilk standards are now being developed. The natural foods industry has established a Natural Foods Quality Council to respond to new FDA regulations. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

6274. Okada, Yuko. 1992. Re: Muso's soymilk factory in the USA. Importing organic soybeans to Japan. Letter (fax) to William Shurtleff at Soyfoods Center, May 21. 1 p. [Eng]
• ***Summary:*** "Did you know that I have a soymilk factory in the U.S.? It has been operating for almost 7 years. It was the first soymilk company in the United States and is growing every year. The company is located in Michigan, where most of the organic soybeans are grown." Note: The author is probably referring to Muso's 15% ownership in American Soy Products, Inc., whose plant at Saline, Michigan, began commercial operation in Nov. 1986.

Muso is also importing organic soybeans into Japan, and has already imported about 300 metric tons this year. The use of organic soybeans in Japan is growing on the part of companies making shoyu, miso, tamari, tofu, etc. for Muso. Address: Muso Co., Ltd., Kosei Bldg. 2nd Floor, Tanimachi 2-5-5, Chuo-ku, Osaka 540, Japan. Phone: 06-942-0341.

6275. Sandler, Matthew; Sandler, Helen. 1992. Early work with natural foods in Boston. Plans to launch a soymilk product named Luppy (Interview). *SoyaScan Notes.* May 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Matthew's brother, Richard Sandler, arrived in the Boston area on 1 Jan. 1968. Matt drove him to 29 University Ave. knowing nothing about macrobiotics except that he ate with Richard once at the Paradox restaurant in New York City. Those were the early days. Nahum Stiskin and Richard Sandler, were already in Boston when Matt arrived in about late 1968. Matt moved to Japan in about 1969; Nahum Stiskin was living in Kyoto, Japan (where he arrived in May 1969), when Matt arrived. Steve Helfer (a student of macrobiotics) had arrived in Japan before Matt. After a while, Matt brought Helen to Japan so they could get married–which they did in about 1971, at the Jewish Community Center. Matt had known Helen when they were in Boston; they lived together a macrobiotic study house.

Helen and a lot of other Americans studying macrobiotics in Japan took cooking classes, taught in Japanese, from Lima Ohsawa in Tokyo at Tokyo C.I. (Centre Ignoramus). Matt and Helen left Japan in about 1971-72, returning first to New York, and then to Boston in about 1973. He finally left Boston in 1984.

While in Boston, Matt started a bakery named Matthew's All Natural, located in Woburn, just outside of Boston. It's first products were sweets such as carrot cakes. The discovery of barley malt, a complex carbohydrate sweetener, was a major breakthrough for the company. Helen Sandler developed a line of English Muffins sweetened with barley malt, and then a line of whole-grain breads which were introduced in 1979. The company soon became quite large and successful, and it is still in operation. The bakery did not use soy in any form in its products.

Evan Root started the original Sanae. Matt's brother, Richard Sandler, who arrived in Boston before Matt, started The Seventh Inn (also called Big Sanae). He rented the space and made it into a restaurant with his own hands; his partner was Warren Durbin (originally a film editor from California who came to Boston to study macrobiotics and who now lives in Vermont). Richard is now a photographer living in Greenwich Village (Phone: 212-777-7138).

Barry Creighton invested a lot of money in his Cable Springs Bakery; it was a good idea, but ahead of its time, so it wasn't that successful. When it went bankrupt, Kathy Bellicchi took it over. Helen Sandler (who had her own company) then shared the bakery with Kathy, and baked cakes there starting in about 1975. Helen does not remember any commercial soy products in Boston, except the Tofu

Cheesecake sold at Sanae (it was a Sanae special) and 1 or 2 other restaurants in the late 1970s. Matt liked the Tofu Cheesecake; Helen didn't. Matt recalls that the Tofu Cheesecake was sold, pre-sliced, at a number of retail stores, including Erewhon. He thinks it was sold in the first tier of products that Erewhon sold out of the cooler. He thinks it was made by an underground business that made only this product. Helen experimented with "Tofu Cream," made by mixing tofu, vanilla, and maple syrup–but it was never commercialized since it had such a short shelf life and the retail stores had no refrigeration.

Another excellent product in Boston was Tan Pups, made by Nik Amartseff and his wife. It was a natural meatless hot dog made of seitan, deep-fried on a stick. Nik was one of the most creative food product developers in Boston at the time. He also developed the formulations for most or all of the Erewhon cereals, granolas, and snacks, as well as their labels and packaging. "He was a real fertile mind."

Matt is planning to launch a soy dessert named Luppy (in 2 flavors), within the next 6 months. The product will be aseptically packaged in tubs. His company is named Luppy Foods. He remembers Luppy soymilk from Japan as a soymilk sweetened with brown sugar and sold in little bottles.

When Yuko Okada first brought soymilk to the USA, he started by trying to make a deal with Knudsen. That didn't work out and for some reason he had a problem with Eden Foods in Michigan at the beginning. So Yuko called Matt, who at that time was still owner of Matthew's All Natural bakery, and asked Matt if he wanted to distribute the soymilk product over his route which extended from Maine to Philadelphia. Matt also distributed foods frozen and refrigerated as far west as Denver. The product Yuko was offering was quite similar to the Luppy soymilk Matt had enjoyed in Japan. Before Matt could say yes, Yuko had made a deal with Eden Foods to import.

Update on Matt's soymilk dessert. 1992. July 15. It will be a pudding-type product, the soymilk will be supplied by American Soy Products in Michigan, and it should be on the market by about Nov. 1992. Address: P.O. Box 10277, Aspen, Colorado 81612. Phone: 802-869-2010.

6276. Tierney, Bev. 1992. Re: Miller Farms Food Company has been reorganized into Solait International, Ltd. Letter to William Shurtleff at Soyfoods Center, May 28. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Included is: (1) A new color leaflet (back to back, 8½ by 11 inches; see next page). (2) A 6-color label (blue, red, orange, yellow, white and black), (2) Business cards for Beverly Tierney and for Elmer Schettler (president). Address: Sales and Distribution, Solait International Ltd.. P.O. Box 885, Carroll, Iowa 51401. Phone: 712-792-9225.

6277. Boysen, Hans-Juergen. 1992. Ist die Lupine die Nahrungs-Entdeckung des Jahrhunderts? [Is the lupine the nutritional discovery of the century?]. *Schrot & Korn* (*Germany*). May. p. 27-30. [Ger]
• ***Summary:*** A comparison of lupins (*Lupinus albus*) and soybeans, and foods made from them. Paul Bremer and Volker Bruhn, who run a company named "Lupino" in Bremerhaven, say that good-tasting and nutritious milk, yogurt, a spread for bread, and quark (like tofu) can be made from lupin seeds. They sell such lupin products.

6278. **Product Name:** [Soja Biostar Crepes Bretonnes, or American Crepes {Soya Crepes & Pancakes}].
Foreign Name: Soja Biostar (Crêpes Bretonnes, Crêpes Americaines).
Manufacturer's Name: Celia Group.
Manufacturer's Address: B.P. 10, 45550 St.-Denis-de-l'Hôtel, France. Phone: 38 599 01 03.
Date of Introduction: 1992. May.
Ingredients: Incl. soymilk.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton. Retails for 14-16 francs (Bretonnes) or 17-19 francs (Americaines).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Spot in SoyaFoods. 1992. Spring. p. 5. "Soya Pancakes from France." These ready-to-prepare liquid pancake mixes are 100% vegetable origin. They can be prepared in 30 minutes.

6279. **Product Name:** [Soja Biostar Blinis Pancake Mixes].
Foreign Name: Soja Biostar Blinis.
Manufacturer's Name: Celia SA.
Manufacturer's Address: B.P. 10, 45550 St.-Denis-de-l'Hôtel, France. Phone: 38 599 01 03.
Date of Introduction: 1992. May.
Ingredients: Soymilk, wheat flour, corn oil, soy protein, wheat protein, soy lecithin, baking powder.
Wt/Vol., Packaging, Price: 750 gm and 900 gm.
How Stored: Shelf stable, 8 month shelf life.
New Product–Documentation: Spot in SoyaFoods. 1993. Winter. p. 5. "Biostar Blinis now available." Blinis are a new addition to the Soja Biostar line of ready to prepare pancake mixes. Just add liquid to the dry mix.

6280. *Child Haven International* (*Newsletter, Maxville, Ontario, Canada*). 1992. SoyaCows. Spring. p. 5.
• ***Summary:*** "Seen here [a photo shows] in India with one of our 6 SoyaCows recently taken to India, is Alok Gupta of Ankur Services, the company we have engaged to manage our SoyaCow program in India. The topmost unit is the grinder-cooker with motor underneath, which makes the unit a big blender. Nearby is the steam unit, heated by gas from the container at the right edge of the photo. The lower

chamber is the filter press. The rectangular perforated metal boxes are for making tofu. The basic unit sells for $3,000 U.S., while the whole 20 liter system is available for $5,000 U.S. (photo by Grant Wood).

"Child Haven has published a 100 page SoyaCow manual, presently in English, to provide comprehensive information on soya nutrition and SoyaCow enterprise and operation. We are looking for volunteers interested in translating the manual into other languages within a reasonable time frame (about six months)."

6281. Paine, Heather. 1992. Conference report. *SoyaFoods* (*ASA, Europe*) 3(2):7-8. Spring.

• ***Summary:*** "The French organisation, CPCIA (Centre de Perfectionnement des Cadres des Industries Agricoles et Alimentaires) held a seminar on 14 and 15 March 1992, in Paris, on the subject of 'Applications of soya foods in the food industry'. The Seminar was attended by over 30 people (including speakers) and was Chaired by Mr. Y. Dacosta, a consultant.

"General aspects of soya were first on the agenda. Mr. Prudon (SOJAXA) stressed the economic aspects and environmental advantages of soya cultivation. World production of soya is about 100 million tonnes and about 30% goes into food production but only 12% into soya foods; the remaining 18% goes to oil production. In Europe, production is about 2 million tonnes, of which nearly 300,000 tonnes is produced in France...

"The second session of the Seminar concentrated on the applications of 'intermediate soya products'...

"The third session covered uses of soya foods in the food industry. Mr. Rizzotti (Sanofi Bio Industrie) gave an excellent presentation of his own company's use of soya milk (or tonyu) in desserts and drinks... Mr. Millot (Gastronomic Valley) gave details of applications in frozen desserts and ices... Reasons for using soya in cooked ready meals and sauces were explained by Mlle. Bagot (Sojinal)... Mr. Preneuf (SOY) gave an interesting slide presentation about tofu and traditional processing methods...

"Last but not least, Mr. Maitre, a consultant for SOJAXA, highlighted the legislative problems on the horizon for soya foods, in particular the claims that may or may not be made. This proved an interesting and lively conference. Most of the papers were surprisingly detailed and the speakers were very open...

"Further information may be obtained from CPCIA, 14-16 rue Claude Bernard, 75005, Paris, France, tel: 47 07 39 00." Address: Editor, SoyaFoods.

6282. **Product Name:** [Biosoja Soja Equilibre, Tonyu Saveur, Vanilla Drink Bar, Coffee Drink Bar {Calcium Enriched Soymilk–Aseptically Packaged}].
Foreign Name: Biosoja Soja Equilibre, Tônyû Saveur, Drink Bar (Boisson Vanille), Drink Bar (Boisson Café) (Enrichi en Calcium).
Manufacturer's Name: Sojinal. Affiliate of Coopérative Agricole de Colmar (CAC) (Marketer).
Manufacturer's Address: 8 rue Merxheim, 68500 Issenheim, France. Phone: 89 74 53 53.
Date of Introduction: 1992. May.
Wt/Vol., Packaging, Price: Tetra Pak Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: SoyaFoods. 1992. Spring. p. 1. "A taste of soyamilk to come: Editorial." A photo shows many different soyfood products in packages, including Tonyu Saveur, Soja Equilibre, Vanilla Drink Bar, and Coffee Drink Bar.

SoyaFoods. 1992. Autumn. p. 7. "A profile of Sojinal." See Table 2. "Biosoja retail food products."

6283. *SoyaFoods* (*ASA, Europe*). 1992. A taste of soyamilk to come: Editorial. 3(2):1. Spring.

• ***Summary:*** Sojinal of Issenheim, France, claims to have invented and perfected a unique physical process to improve the flavor of soymilk by removing at least 60% of the flavor components responsible for the product's strong "beany" taste.

"Sojinal itself is focusing equal attention on soya milk and tofu processing and the company is making changes to more than 50 products. For example Tonyu Saveur is a UHT drink manufactured from de-aromatised soya milk."

A photo shows many different soyfood products in packages, including Tonyu Saveur, Soja Equilibre, Soja Harmoniques (Lasagne au Tofu, Knacks Tofu), etc.

6284. *SoyaFoods* (*ASA, Europe*). 1992. Helfex '92. 3(2):4. Spring.

• ***Summary:*** "The International Health Food Exhibition, Helfex '92, was held at Wembley, London on 26 and 27 April. Over 160 companies concerned with health, diet, fitness and nutrition exhibited and several new soya products were launched.

"The Haldane Foods Group displayed their new range including a new Light Soya Milk, a new Soya Creem, a vegetarian cheese spread, burger and sausage mixes, and 6 new varieties of tinned products. JRJ Trading (The Redwood Company) had an interesting and tasty range of tempeh-based products including dips, spreads, patés and vegetarian rashers. Soya milks and desserts from Granovita, Haldane, Sojasun (Triballat), Vitasoy were also on display. Berrydales' No Cream Ices, made from fresh organic tofu and soya milk, introduced their new 4-pack which will allow consumers to purchase four different ices in one pack. Plamil Foods launched a new non-dairy chocolate bar, *Martello* and Marigold Health Food, manufacturers of canned braised tofu and other delicacies, also had a stand."

6285. *SoyaFoods* (*ASA, Europe*). 1992. Soya desserts gain ground. 3(2):3. Spring.

• ***Summary:*** "Last year over 10 million litres of soya milk were consumed in the UK" and this is helping sales of soya based desserts–according to the UK Soya Milk Information Bureau, which surveyed 2,000 soymilk consumers in 1991, as a follow-up to their 1990 survey reported in *SoyaFoods* 3(1) 1992.

Soya milk trends: 41% said they purchased more soya milk now than a year ago. The main reason for buying soya milk is healthy eating; 78% compared to 49% in 1990 said they try to eat healthy foods. 21% said they like to try new foods. The most popular use of soya milk is on cereals (81%), followed by in tea and coffee (55%) and 55% of those questioned use soya milk in desserts.

"Soya-based desserts: More than 50% of respondents regularly eat soya-based desserts. 77% ate long-life soya dessert, 46% soya yogurt and 39% soya ice cream. The main reason for buying soya-based desserts is as part of a healthy diet. 49% buy because they taste good.

"Although 72% of respondents are still buying their soya milk from health food stores, a growing number are moving towards supermarkets. The majority (86%) buy unsweetened soya milk."

6286. **Product Name:** WestSoy Lite Non Dairy Creamer.
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).
Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.
Date of Introduction: 1992. May.
Ingredients: Filtered water, whole organic soybeans*, brown rice syrup (brown rice, water), expeller pressed corn oil, natural flavor, tricalcium phosphate, sea salt. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 6 fl. oz. foil retort pouch. Retails for $0.98 in California.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per tablespoon: Calories 10, protein less than 1 gm, carbohydrate 2 gm, fat less than 1 gm, cholesterol 0 mg, sodium 10 mg, potassium 20 mg.
New Product–Documentation: Talk with Lynne Minsky, Marketing Manager of Westbrae. 1992. April 28. This innovative product, Westbrae's most recent soy product, was introduced at the Anaheim trade show in April 1992, will be shipped in late April, and should be in stores by May 1992. The product is sold as a liquid, packaged like the Malteds in a foil retort pouch. They would have preferred to put it in a Tetra Pak but the process would not allow them to do it. Vestro is a holding company, and they consider Westbrae to be an independent company. Westbrae moved to this address in Jan. 1992 from Commerce, California. Little Bear (which makes natural food tortilla chips, Bearitos, etc.), also owned by Vestro, moved into the same offices and warehouse with Westbrae. Westbrae's soy beverage line is a major growth category and the company is putting a lot of energy into developing and promoting it.

Product with Label, plus 2 new product leaflets, sent by Lynne Minsky. 1992. April 28. 3.5 by 6 inches. Foil pouch. Red, yellow, white, black, and brown on blue. Illustration of a pitcher pouring the non-dairy creamer into a cup of coffee. "All natural. Half the calories–Half the fat (of half & half). Lactose free. Great taste. No cholesterol. No tropical oils. Made with organic soybeans. For coffee, fruits, cereal, and baking." UPC indicia.

One leaflet claims that the product won't separate in coffee or tea. Soyfoods Center product evaluation. Label design: Excellent. Product quality: Excellent flavor (tastes like cream or condensed soymilk) and consistency. Does not separate in hot coffee.

Note: This is the earliest known commercial nondairy coffee creamer based on soymilk.

6287. *Whole Foods.* 1992. Source book 1992. 15(5):33-294. May. Illust. Index. 28 cm.
• ***Summary:*** Contents: How to use this book (p. 8). Wholesalers/distributors alphabetical listing. Wholesalers/distributors geographical listing. Brokers. Publishers. Associations. Consultants/service companies.

Product directories: A listing of manufacturers/importers/growers by products: Foods (p. 77-111–soy-related categories include: Beans/bean products, cheese substitutes, coffee substitutes, cultures, miso, soy products, soy sauce, soymilk, tamari, tempeh, tofu, tofu entrees), vitamins and supplements, herbs, cosmetics/personal care, miscellaneous products. Brand names. Product index. Manufacturers/importers/growers alphabetical listing.

Note: The listings related to soy products are full of errors. Address: South Plainfield, New Jersey.

6288. Duville, Kris. 1992. Re: Answers to questions about soyfood products produced by Soyavynn. Letter to William Shurtleff at Soyfoods Center, June 2. 4 p. Typed, with signature on letterhead. [Eng]
• ***Summary:*** "I am very pleased with your interest in our products and the activities of Planta Soyavyn. It is very important for us to be in touch with other people working with soyfoods, to exchange ideas, knowledge and experience and also to stimulate and encourage each other. I find my job very challenging and satisfying, but it is not always easy to introduce new foods, even [no matter] how healthy, delicious and economic they might be, so some support from time to time is very welcome."

Most of the letter gives detailed answers to Shurtleff's questions about the company's commercial soy products. Address: Productos Alimenticios Soyavyn, Planta Soyavyn, 2a Calle Poniente No. 2-4, Lourdes, Colón, Depto. La Libertad, El Salvador. Phone: 51-0705 or 23-3554.

6289. Ponseele, Jos van de; Verfaillie, Magda. 1992. Re: History of Jonathan P.V.B.A. in Belgium. Letter (fax) to William Shurtleff at Soyfoods Center, June 6–in reply to inquiry. 2 p.
• ***Summary:*** Jonathan was the first company in Europe to make seitan for sale commercially. Jos van de Ponseele, the founder of Jonathan, first learned about seitan during a 9-month stay [with his wife and family] at the Kushi Institute in Boston, Massachusetts, from March to December 1976. There he tasted the seitan prepared by Aveline Kushi. He thought it would be a good meat substitute for the growing group of vegetarians in Europe. [Note: Jos was a butcher with a large meat processing operation before he became a macrobiotic vegetarian]. In Boston, he learned how to make seitan on a home scale from Tamara Uprichard. Then, at the very end of his stay in Boston, he started up medium-scale production of seitan with two Americans; he no longer remembers the name of the company or the names of his American partners. They sold seitan to macrobiotic study houses in Boston and to the Erewhon retail store.

Returning to Belgium, he founded Jonathan. The name "Jonathan" came from a famous book titled *Jonathan Livingston Seagull* [by Richard Bach, 1970. This is a parable about a seagull who loves to fly and practice flight, high and alone, for the joy of flying, while his fellow gulls are busy eating. He is eventually banished from the flock for daring to violate the earth-bound traditions of gull society. Eventually he is taken to a higher world where other gulls, like him, seek perfection and liberation from all limitations. Finally he returns to earth to tutor other outcast gulls in the art of advanced flight.]

Jos hired a man named Ludo Peeters as his first employee and they set up the business in a garage at Holleweg 53, 2180 Ekeren, near Antwerp, Belgium. The company's first product, made entirely by hand, was plain fresh seitan. It was introduced some time in 1977. The product name on the label was simply Seitan, written in 4 languages (Dutch, French, German, and English). It was packaged in 250, 500, and 1000 gm carton dishes with a transparent plastic film lid. With seitan, the big challenge for Jos was to introduce an entirely new and valuable product to the market. Two months after introducing seitan, Jonathan started making tofu and soymilk. Ludo continued to work at Jonathan for many years, eventually becoming managing director.

On 2 Feb. 1979 Jonathan was officially registered as Jonathan P.V.B.A. (the latter abbreviation means something like "Ltd." i.e. a company in which the owner has limited responsibility). Also that year Jonathan introduced a fresh seitan burger, then in Jan. 1980 the company moved to its present location at Antwerpsesteenweg 336, B-2080 Kapellen, Belgium. At the new location they introduced a number of new seitan products: Seitan Paté (Feb. 1980, sterilized), Seitan Goulash (late 1980, sterilized), and Seitan Schnitzel (1981, fresh). From 1985 on, Jonathan introduced a series of different ready-to-eat meals in which seitan was a major ingredient. Jos sold Jonathan and left on 1 April 1989. Magda started Mycelia P.V.B.A. in 1984 and kept the company small until Jos had sold Jonathan. After that they expanded Mycelia to its present size, producing 5,000 liters of mycelium daily. They are both shareholders in Mycelia. Address: Jean Bethunestraat 9, B-9040 Gent, Belgium. Phone: 91-28-7090.

6290. Chajuss, Daniel. 1992. Re: History of Hayes Ashdod Ltd., Israel. Letter to Drs. L.A. Johnson, D.J. Myers and Daniel J. Burden, Center for Crops Utilization Research, Iowa State University, Ames, Iowa, June 23. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Daniel read with interest the article on titled "Soy protein's history, prospects in food, feed," by Johnson,

Myers and Burden, published in INFORM 3(4):429 (1992). Since the article focused mainly on the production of soy protein concentrates, Chajuss would like to add some information.

In 1963 Chajuss established and owned the first soy protein concentrate factory (Hayes Ashdod Ltd., Ashdod, Israel) which was using a counter current aqueous alcohol extraction system. A system of aqueous alcohol immersion extraction was already in use commercially by Central Soya Company (and is still used by Central Soya in the USA).

In 1966 Hayes Ashdod Ltd. introduced texturized soya protein concentrates under the brand names Hayprotex and Contex.

In 1968 Hayes started producing a special soy protein concentrate, free of trypsin inhibition and free of antigenicity, for use in calf milk replacers as a substitute of milk proteins.

In 1969 Hayes started to produce more functional and soluble soy protein concentrates, by further treatment of the aqueous alcohol extracted soy protein concentrate, for use as substitutes for soy protein isolates and for sodium caseinates in various food systems, especially in the meat processing industries.

In 1973 Chajuss sold know-how and complete engineering designs to Aarhus Oliefabrik A/S, Aarhus, Denmark, to make powdered and textured soy protein concentrates for human consumption, pet foods and calves milk replacers.

All the soy protein concentrate facilities worldwide, which were established since 1973 and which are still in operation today (including ADM {USA}, Bunge-SOGIP {France}, etc., with the exception of Central Soya's USA plants) employ Chajuss' technology and engineering designs, and are mainly based on the know-how and technology developed by Chajuss.

About 90% of the total world production of soy protein concentrates today is made by aqueous alcohol extraction. Most of the protein concentrates are used in the form of powder or grits, some are further texturized, and some are further treated to provide various "functionalities."

"A few years ago we sold Hayes Ashdod Ltd., which was renamed 'Solbar Hatzor Ltd.,' being a joint venture of the German Soya Mainz Company and Kibutz Hatzor of Israel."–Best Regards, Daniel Chajuss. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

6291. *Countryside & Small Stock Journal.* 1992. How to milk a soybean. 76:12. May/June. *
• ***Summary:*** Discusses how to prepare soy substitute for milk.

6292. Jain, Laxmi; Jain, Manoj. 1992. Melody of India cuisine: Tasteful new vegetarian recipes celebrating soy and tofu in traditional Indian foods. Santa Barbara, California: Woodbridge Press. 221p. Illust. 26 cm.
• ***Summary:*** The authors (mother and son) have taken over 100 vegetarian recipes from all over India and prepared them with soymilk, tofu, and soy yogurt in place of all or part of the dairy products. They begin the book with chapters on the dietary benefits of soyfoods and methods of preparing them. All recipes include nutritional breakdowns.

Contents: Introduction. Why tofu and soybeans? Nutritional value of tofu and other soy foods. Preparation of tofu and other soy foods. Soy appetizers (incl. roasted soybeans). Soy with vegetables. Soy breads. Soy salads. Soy raitas & chutney. Soy with rice & lentils. Soy drinks. Soy desserts. Soy ice cream, cookies and cakes. Appendixes: A. Suggested menus. B. Weights, measures, temperatures and times. C. Glossary of Hindi terms. D. Sources of Indian foods. Biographical notes.

"Laxmi Jain, a native of India, has lived in the Boston area for the past 18 years. She works actively to promote the use of soybeans in the American and Indian diet... Her first book on soybean, 'Indian Soy Cuisine,' was published by the American Soybean Association.

"Dr. Manoj Jain is a physician in Internal Medicine at Boston City Hospital and is specializing in International Health and Infectious Diseases at the New England Medical Center. Dr. Jain is a graduate of Boston University School of Engineering, School of Medicine and School of Public Health. He received a Medical Perspectives fellowship to research the uses of soy foods in the Indian diet, and has published his results in the medical literature. Dr. Jain has conducted talk shows and soy demonstrations on national television and radio in India. Currently, Dr. Jain is also a consultant in a five-year rural health and soybean promotion project in India."

On the rear cover, a color photo shows Laxmi and Manoj Jain. Address: 1. Wellesley, Massachusetts; 2. M.D., physician in internal medicine at New England Medical Center (Boston).

6293. McGlasson, Linda. 1992. Soyfoods in the next century: Feeding the world one bean at a time. *Health Foods Business* 38(6):30-34, 36. June. [1 ref]
• ***Summary:*** A table gives estimated retail sales of soyfoods in the USA in 1990, in descending order of sales (million dollars): soy sauce $395.5, tofu $94.1, second generation products (such as dips, dressings, entrees, non-dairy desserts, cheeses, yogurts, and imitation meat products) $81.6, soymilk (not including infant formulas made with isolated soy proteins) $60.0, miso $44.5, soynuts $9.7, tempeh $7.5. Total $657 million. Source: Soyatech in Bar Harbor, Maine. The two fastest growing segments are soymilk (increasing at 20% a year) and second generation products (15-20% a year). "Soyfood sales are expected to grow steadily through

the next decade as health and environmental concerns become increasingly important factors in food purchasing decisions... an estimated 33 to 50% of all adults are reducing their intake of meat, yet they still have the craving.

Protein Technologies International of St. Louis, Missouri, is developing a line of structured proteins, which are look-alike meat components. There are versions that look and feel like ground beef, crab meat, and chicken.

Angelo Morini, founder of Galaxy Foods, began trying substitutes for the real cheese he was using in his pizza business. He left the pizza business in 1968 and began making soy cheese full-time. The company began slowly by selling to food service customers, then they started marketing the cheese nationally in 1984. In 1985 Galaxy started in the health food industry with a new line, Soyco. Following a fire, the company has relocated in a new 55,000 square foot state-of-the-art manufacturing facility in Orlando, Florida. They are now producing soy cheese products and are scheduled to launch 30 new items this year.

One sidebar, titled "Quickie Dictionary of Soyfoods," defines tofu, miso, tempeh, soymilk, and shoyu. Another says "Soyfoods Take Spotlight in New Infomercial." The infomercial is based on Dr. Michael Klaper's education seminars for doctors and other health professionals titled "Let Food Be Your Medicine." Klaper (a noted physician, author, environmentalist and nutritionist [and vegan]) is co-founder and director of the Institute for the Advancement of Nutrition Education and Research. The tentative title for the new infomercial is "The Nutrition for the 90s, a Transition to Health." It will begin airing in July on cable TV. Radio's Top 40's Countdown host Casey Kasem will emcee the show with Dr. Klaper. The show will feature top scientists and doctors, plus testimonial interviews with many celebrities and famous athletes. Address: Managing editor.

6294. **Product Name:** [Solini {Soymilk} (Natural, or Forest Fruits)].
Foreign Name: Solini.
Manufacturer's Name: Nutricia N.V.
Manufacturer's Address: Eerste Stationstraat 186, 2700 Ma Zoetermeer, Netherlands. Phone: 31/79 539 935.
Date of Introduction: 1992. June.
Wt/Vol., Packaging, Price: Natural in 1 liter boxes or Forest Fruits in 200 ml boxes.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Spot in SoyaFoods. 1992. Autumn. p. 5. "New soya drink from Nutricia." The product was launched in early June, 1992 as an alternative to cow's milk containing as much vitamins and minerals and semi (half)- skimmed milk.

6295. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. CIDA funds Child Haven to buy seven more SoyaCows. 1(2):1. April/June.
• ***Summary:*** "Child Haven of Maxville, Ontario, has received funding from the Canadian International Development Agency in support of the IIIrd phase of their soymilk cottage industry project in India.

"... Child Haven have ordered seven complete SoyaCow WS-20S systems to add to their 9 systems purchased earlier. Each system is capable of producing about 15 litres of soymilk every half an hour using 1.5 kg soybeans."

Child Haven's project director for India is Hart Jansson. Phone: (613) 837-2235.

Note: The company name and address on the envelope in which this newsletter was sent is: "ProSoya Foods International Inc., 9 Veery Lane, Ottawa, Canada K1J 8X4."

A handsome brochure, two Bulletins dated March 1992, and several large photos showing the SoyaCow WS-20S system accompany this issue of the newsletter. This system now sells for $6,980.

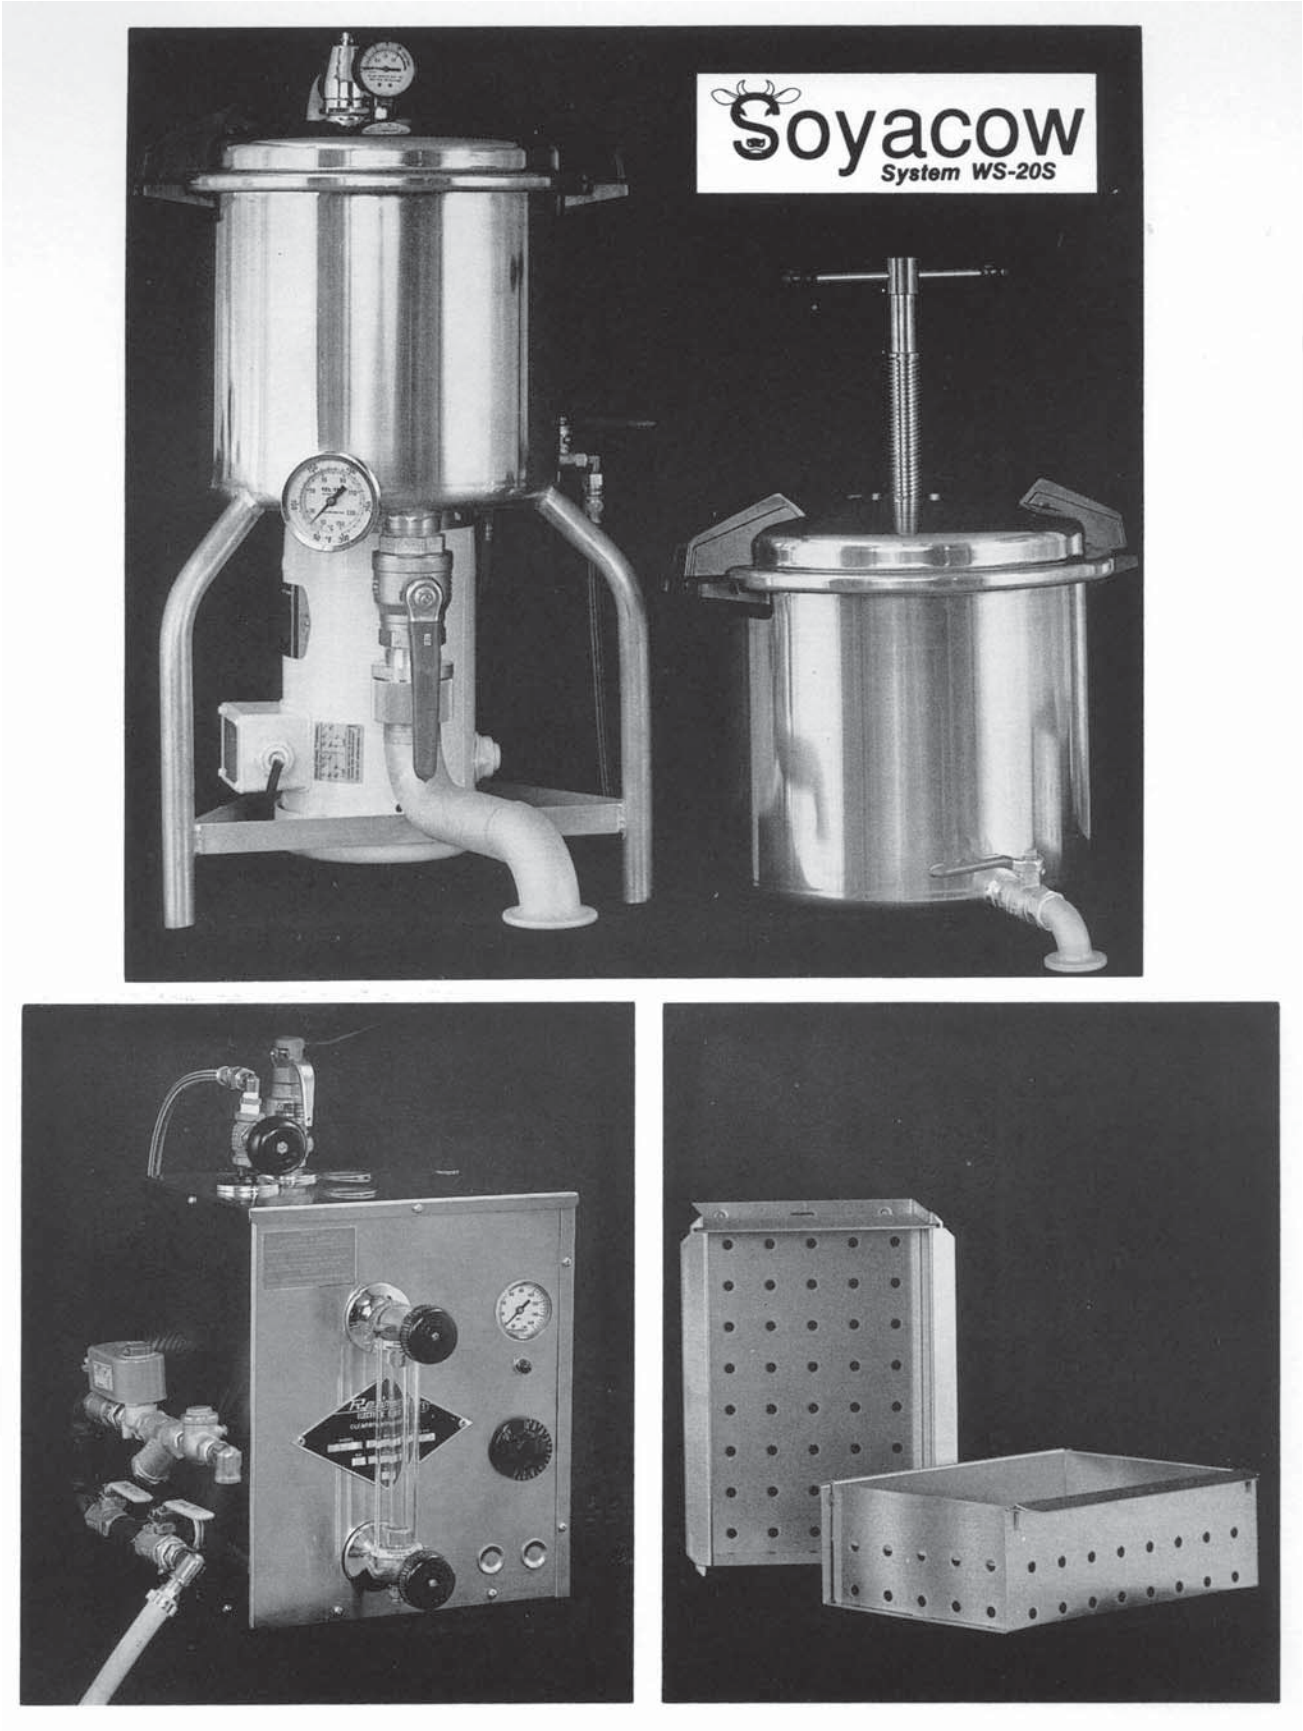
The first 1-page bulletin, "Bulletin: PSF-WS-20S / March, 1992" is titled: "System WS-20S–SoyaCow: A low cost soya foods concept." An illustration (line drawing) shows the three main components of the SoyaCow, two on platforms of different heights.

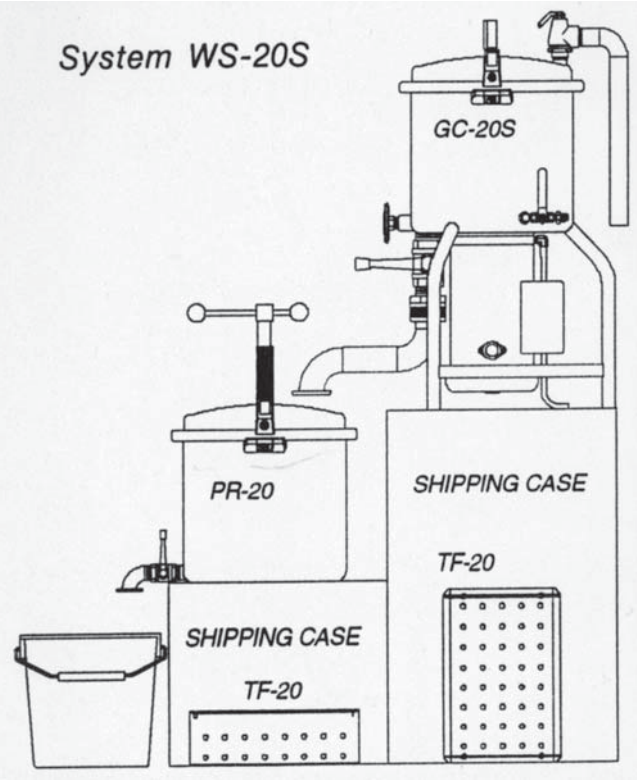
The 2nd 1-page bulletin, "Bulletin: PSF-GC-20S / March, 1992" is titled: "System GC-20S–SoyaCow: Makes quality soya milk at low cost" An illustration (line drawing) shows only the cold grinding and pressure cooking unit. Specifications: Pressure vessel: 20.8 litres Aluminum. Cooked slurry: 18 litres per batch. Soya milk base: 15 litres per batch. Maximum working pressure: 1.5 kg per square cm. Electric power: 1 HP [horsepower], 1 Ph, 50/60 hertz [cycles per second], 208-230/110 Volts, 5/10 Amps. Culinary steam: 10 kg/hour minimum at 2 kg per square cm pressure. Batches per hour: 3.

6296. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. Plenty Canada buys a SoyaCow. 1(2):1. April/June.
• ***Summary:*** "Plenty Canada has ordered a SoyaCow WS-20S system with electric steam generator for installation at their head office in Lanark, Ontario. According to Nancy McDermott, the machine will be used to give demonstrations and provide training to the people visiting Plenty from their projects around the world. The machine will also be accessible to local people for producing soyfoods for consumption and sale."

A black and white photo shows a "SoyaCow System WS20S: Manual Boiler, Grinder / Cooker, and Mechanical Press."

6297. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. Soya deli and fast food pilot project. 1(2):1. April/June.
• ***Summary:*** "Frank Daller is moving from the Toronto area to Ottawa to take the SoyaCow's products to Ottawans. He plans to operate a SoyaCow from a busy market location to produce and sell freshly made tofu, soymilk, soy-yogurt,



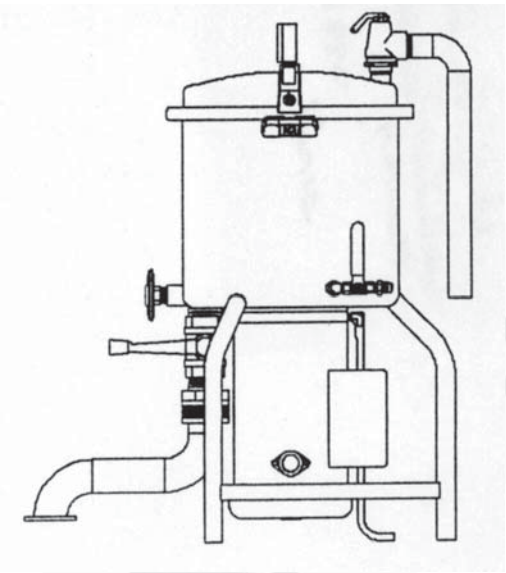


okara, and various value added products made from them. The business will also sell health fast foods including tofu-burgers, pita pocket sandwiches, frozen desserts, and soydrinks and shakes.

"The idea is to prove the concept in Ottawa with the intent of developing it into a franchise."

6298. Starr, Sara M. 1992. Don't have a cow! Milking other alternatives. *Health Foods Business* 38(6):37-38, 69. June.
• ***Summary:*** "Soy milk is the biggest seller in the non-dairy beverage category within the health food industry. About 95% of all soy milk is sold through natural food stores. Several supermarkets are beginning to carry this beverage." In 1983 when Eden Foods introduced its Edensoy, about 283,000 gallons of aseptically packaged soy milk were sold in the natural foods industry [in the USA]. According to Peter Golbitz of Soyatech Inc. in Bar Harbor, Maine, by 1991 that figure had jumped to 6.5 million gallons. Golbitz estimates the market for aseptic soymilk in the USA to be $52 million in retail sales (in natural food stores only) and growing at 15-20% annually. The top 3 soymilk manufacturers in America are American Soy Products [Edensoy], Westbrae, and Vitasoy; together they produce over 95% of the aseptically-packaged soymilk in the U.S. according to Golbitz.

New soymilk products: WestSoy Plus is fortified with vitamins A and D, and calcium to make it nutritionally equivalent to dairy milk. Westbrae also has a new non-dairy creamer. Westbrae uses only rice syrup to sweeten its



soymilks and is looking closely at producing a fresh (non-aseptically packaged) soymilk. Vitasoy has teamed up with The Yogi Tea Company to produce a cappuccino alternative. This delicious blend of soymilk and herb tea can be made in an espresso machine. Protein Technologies International in St. Louis, Missouri, has developed a new technology–stabilized calcium phosphate and soy protein isolates. When added to soymilk it gives a product comparable in protein and calcium content to dairy milk.

Also discusses amazake and White Almond Beverage. A photo shows Sara Starr. Address: President of Starr Track, a business consulting firm for the natural foods and products industries.

6299. Peeters, Ludo. 1992. Early history of Jonathan P.V.B.A. in Belgium (Interview). *SoyaScan Notes.* July 9. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter of July 29. [1 ref]
• ***Summary:*** Ludo started working with Jos van de Ponseele at Jonathan on 28 Aug. 1978. He made seitan with Jos from the very first day; they were Jonathan's only workers at the beginning and they worked in a garage at the company's first location–Holleweg 89, 2070 Ekeren (near Antwerp), Belgium. Ludo thinks Jonathan's first product was seitan, followed by tofu and soymilk. Ludo thinks that the seitan was introduced before Nov. 1978. The original ingredients were water, wheat, soy sauce, soy flour or meal, salt, kombu, and ginger. The soy flour improved the flavor and nutritional value.

In 1978 Mr. Van de Ponseele moved to Holleweg 113, 2070 Ekeren. In January or February of 1980 he moved to the actual plant.

In his letter of 29 July 1992, Ludo encloses several early documents: (1) A letter written in Oct. 1977 (Jonathan was at Holleweg 89) showing that that company was selling

Seitan (a vegetarian steak), Goulash (made with seitan), Tofu (*Sojakaas*), Mochi (made of sweet rice), sea vegetables, vegetable pickles, and peanut butter. (2) A price list for 1978-79 (the company is now at Holleweg 113). (3) An English-language translation of the text of a press conference held in about 1987 when the company started to make prepared meals based on seitan and tofu. Address: Goorbosstraat 20, B-2990 Wuustwezel, Belgium. Phone: +32 3-663-4532.

6300. *SoyaScan Notes.* 1992. The remarkable food-related creativity that took place in Boston from the late 1960s until the late 1970s, especially within the macrobiotic community (Overview). July 13. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** A flowering of original food product development took place in Boston during this period. There were a number of reasons for this (1) The meeting of two food cultures, Japanese and American, together with new ideas related to diet and health, as embodied in the macrobiotic teachings of Michio and Aveline Kushi. Just as the meeting of two ocean currents leads to a region at the boundary of great biological activity and development, so does the meeting of two cultures. Young Americans were introduced to a host of new basic foods which they quickly began to use and process in new ways. These included miso, tofu, seitan, amazake, umeboshi salt plums, sea vegetables, rice syrup, rice cakes, azuki beans, mochi, and many more.

To cite but four examples: (A) Seitan: Japanese had used seitan as a salty condiment or seasoning. By late 1972 Americans had transformed it into a succulent meat substitute. (B) Tofu: It had never occurred to Japanese to put tofu in a blender. By the mid-1970s Americans in Boston were combining it with a sweetener to make delectable dairyless tofu cheesecakes and cream pies, or to make low-fat, cholesterol-free salad dressings, dips, and spreads. (C) Amazake: Japanese serve this as a hot beverage like tea, most in teahouses; The only flavoring used is gingerroot. Americans transformed it into delectable ice creams (free of dairy products and sugar), or thick, sweet drinks resembling milk shakes sold refrigerated in plastic bottles. Americans also used amazake as an all-purpose natural sweetener in place of sugar, honey, or maple syrup. They also learned to make a rice milk resembling amazake using commercial purified enzymes instead of koji; at this point, the line separating amazake and rice syrup became somewhat blurred. (D) Rice Syrup: Japanese use *amé* or *mizuamé,* made from koji, as the basis for taffy-like candies or, in very limited ways, as a sweetener. Americans soon began to make rice syrup using commercial enzymes instead of koji and to use it as an all-purpose natural sweetener in place of sugar, honey, or maple syrup.

(2) The closely-knit, almost communal nature of the macrobiotic community in Boston, was one in which many people, mostly young people (including many women), were working closely together with a common vision. New ideas were shared more than guarded or patented. Joel Wollner notes that it was almost like the art community in Paris during the impressionist era of the late 1800s.

(3) The Erewhon retail store (opened in April 1966) provided a ready testing ground for new local products. Many got their start in one or more of these stores. The Erewhon Trading Co. (which started importing Japanese natural and macrobiotic foods in Aug. 1968), and which began wholesaling and distributing in the spring of 1969, greatly helped to expand the market for good products.

(4) The community was fortunate to have a number of exceptionally talented entrepreneurs in the food business, including Paul Hawken, Bruce Macdonald, Roger Hillyard, Bill Tara, and many others. Many of these individuals later left the area to start their own food companies.

(5) It was during this period that the natural foods, macrobiotic foods, organic foods, and vegetarian movements (all closely related, and often based on similar philosophical, ethical, and spiritual values) began to grow in the United States, in part in reaction to the overly-processed, overly chemicalized, unhealthful foods produced by big food companies, and the highly-chemicalized food growing techniques used by American farmers–and in part because of the leadership and inspiration of the community in Boston.

6301. Okada, Yuko. 1992. How Muso Shokuhin brought soymilk to America (Interview). *SoyaScan Notes.* July 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Muso wanted to introduce Marusan's soymilk in the foil retort pouch to the USA. They began looking for a major American distributor. First they offered the product to Mike Potter of Eden Foods when Mike was in Japan, but he was not interested because he did not think the product would sell in America. Then they offered the product to Jimmy Silver of Pure Sales; he thought it was a weird product. Then they offered it to Knudson, but Knudson was not interested. Then they offered it to Matt Sandler, who also turned it down.

The first place this soymilk really sold outside Japan was in Australia; Jim Wilson, owner of Spiral Foods in Australia started importing this soymilk (which was named Bonsoy) from Muso in about 1979, packaged in a foil retort pouch. Mike Potter met Jim Wilson at a natural foods convention in Anaheim, California; Muso brought Jim Wilson to the convention and arranged this meeting. Wilson told Potter that Bonsoy sold very well in Australia. Potter told Ron Roller to go to Japan to check out this product–which Ron did. Finally the product was launched at the NNFA show in Denver, Colorado, under the name Edensoy by Eden Foods.

The product named Bonsoy was first sold (exported) by Muso to Spiral Foods in Australia in about 1979. Then it was sold to Bean Supreme in New Zealand in about 1981; Bean Supreme had also promoted the Spiral Foods label. Then

it was exported by Muso to Urtekram in Denmark in about 1988, and the it was exported to Mimasa in Spain in about 1990. Address: Muso Co., Ltd., Kosei Bldg., 2nd Floor, Tanimachi 2-5-5, Chuo-ku, Osaka 540, Japan. Phone: 1. 06-942-0341.

6302. Okada, Yuko. 1992. How American Soy Products in Michigan came into being (Interview). *SoyaScan Notes.* July 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Yuko says that he, not Michael Potter, brought together the five companies that formed American Soy Products (ASP), the maker of Edensoy in Michigan. Potter did not speak Japanese and he did not have the connections to pull together this sort of complex joint venture. The idea for the joint was developed jointly from Mike Potter and Yuko Okada as Muso found itself shipping more and more soymilk from Japan to the USA. This soymilk was made from American soybeans and it contained mostly water. After the concept was firm but before the final papers were signed by the five partners, Bruce Macdonald played a role in the process. An employee at a company with which Bruce was involved was a Filipino, who worked for Kawasho in New York. Through this person, Bruce helped bring Kawasho into the deal, and without Kawasho, who was the source of financing, the deal probably would not have happened.

Kawasho was the last of the five partners to enter into the agreement. Marusan and Kawasho would only enter the agreement if Muso did. Kawasho knew nothing about soyfoods or the soyfoods market. They were the company that was least connected with the soyfoods industry and market, but they were also by far the biggest company involved in the venture, with roughly $2,000 million in annual revenues. In short, Muso became the key link in putting the ASP deal together. Address: Muso Co., Ltd., Kosei Bldg., 2nd Floor, Tanimachi 2-5-5, Chuo-ku, Osaka 540, Japan. Phone: 1. 06-942-0341.

6303. Karjalainen, Jukka; Martin, J.M.; Knip, M.; et al. 1992. A bovine albumin peptide as a possible trigger of insulin-dependent diabetes mellitus. *New England J. of Medicine* 327(5):302-07. July 30. [36 ref]
• ***Summary:*** "Background: Cow's milk has been implicated as a possible trigger of the autoimmune response that destroys pancreatic beta cells in genetically susceptible hosts, thus causing diabetes mellitus. Studies in animals have suggested that bovine serum albumin (BSA) is the milk protein responsible, and an albumin peptide containing 17 amino acids (ABBOS) may be the reactive epitope...

"Conclusions: Patients with insulin-dependent diabetes mellitus have immunity to cow's-milk albumin, with antibodies to an albumin peptide that are capable of reacting with a beta-cell-specific surface protein. Such antibodies could participate in the development of islet dysfunction."

An article about this study in *Vegetarian Times* (Dec. 1992, p. 16) notes: "The researchers studied 142 children ages 4 to 12 who had just been diagnosed with Type I diabetes. 'The thing that astounded us was that we found evidence for a link to this [milk] protein in 100 percent of the children,' says Hans-Michael Dosch, M.D., senior researcher for the study." Address: Hospital for Sick Children, Dep. of Pediatrics and Immunology, Univ. of Toronto, Toronto, ONT, Canada.

6304. **Product Name:** Soyess (Soy Beverage) [Honey Vanilla].
Manufacturer's Name: Spring Creek Natural Foods.
Manufacturer's Address: 212-C East Main St., Spencer, WV 25726. Phone: 304-927-1815.
Date of Introduction: 1992. July.
Ingredients: Filtered water, certified organic soybeans, corn/barley malt syrup, orange blossom honey, pure vanilla extract, sea salt.
Wt/Vol., Packaging, Price: 1 pint plastic bottle.
How Stored: Refrigerated.
Nutrition: Per 1 oz.: Calories 24, protein 14 gm, carbohydrates 28 gm, fat 5 gm, sodium 6 mg.
New Product–Documentation: Product with Label purchased at Fresh Fields, Rockville Pike, Maryland. 1992. July. Label is 3 inches square. Orange and green on white. "A fresh natural soy beverage. Not intended for use as an infant formula. For recipes and product information, write us."

6305. **Product Name:** Fried Tofu, Dofu-Gan (Savory Baked Tofu, 2 types), Tofu Chicken, Fresh Soymilk (Plain Unsweetened Traditional Style).
Manufacturer's Name: Tofu International Ltd.
Manufacturer's Address: 738 Airport Blvd., Suite 6, Ann Arbor, MI 48108. Phone: 313-665-2222.
Date of Introduction: 1992. July.
New Product–Documentation: Talk with Tim Redmond of American Soy Products. 1992. May. Bruce Rose has a joint venture with a large Chinese tofu company to make tofu in Michigan.

Talk with Bruce Rose, of Tofu International Ltd. 1992. Sept. 25. All of these products were introduced in July 1992 by Tofu International Ltd., which was formerly named Rosewood Products Inc. Dofu-Gan is extra firm tofu, pressed under hydraulic presses, not water packed. Note: The Soy Plant, the ancestor of Tofu International Ltd. introduced Dofu-Gan in March 1978.

Tofu Chicken is made by cutting a cake of Dofu-Gan into a net or accordion like french fries linked together side by side. After cutting, the net is fried then simmered in a broth. It tastes great in a meatless chicken sandwich and is now sold in some local grocery stores.

6306. Nordquist, Ted A. 1992. Re: Overview and details

on new developments with AB Winner and with Aros in Sweden. Letter to William Shurtleff at Soyfoods Center, Aug. 26–in reply to inquiry. 2 p. Typed, with signature on letterhead.

• ***Summary:*** "I formed Aros Sojaprodukter AB in August of 1990 with Erik Kennhed, a business man from Eskilstuna, Sweden. I was VD or President with 51% to his 49%. Aros AB bought soybase from Trensums Musteri AB and sold it to Winner AB. Winner made Tofuline ice-cream and sold it to Aros AB. Aros AB in turn sold Tofuline to Ingman Foods, Finland, Nutana in Sweden, Nutana in Denmark and Nutana in Norway. Since I designed the soybase plant for Trensums, I had an exclusive contract with them on soybase. I worked with Winner to develop soy-based products, the ice-cream was the first.

"I did not have time for tofu. I sold Aros Sojaprodukter KB to Trensums and moved the Tofu plant to Trensums in July of 1991. Trensums Musteri AB is owned by Blekinge Invest and is situated in Tingsryd, about 30 minutes by car from Karlshamn where Winner is located.

"Then in August of 1991 Nutana in Denmark and Norway went bankrupt. Winner had about 100,000 dollars of ice-cream in stock. Trensums and Winner did not like my powerful position while I, according to the contracts, had no financial liability. I just took the profits. So they started talking to each other about me, or more specifically about Aros Sojaprodukter AB. Blekinge Invest forced Erik to sell his 49% to Blekinge Invest for a song, threatening him with possible losses if both Winner and Trensums decided to drop soya altogether. Once they bought out Erik I was next.

"I reached an agreement with Winner and Blekinge Invest in April of 1992. I sold my shares to Blekinge Invest who now owns 100% of Aros Sojaprodukter AB and KB. I work as a consultant for Winner until the end of this year.

"Aros AB (Trensums) delivers soybase only to Winner. Winner sells Tofuline ice-cream directly to Nutana Sweden and Ingman Foods in Finland. They sell via their own Winner name to England.

"AB Winner, 374 82 Karlshamn, Sweden. Tel: 46-454-82000. Fax: 46-454-11375. International sales contact is Leif Andersson. President is Håkan Johnsson.

"Aros Sojaprodukter AB, Box 112, 36201 Tingsryd, Sweden. Tel: 46-477-11920. Fax: 46-477-18034.

"Aros (Trensums) does not want to actively sell soybase. They are happy to sell only to Winner AB. There is no President, but Jan Hallberg, vice-president of Trensums handles the paper work. Aros Tofu is off the market. Dansk Tofu is now sold in Sweden and Norway.

"Winner is in the process of being sold. The plot thickens!

"Anders Lindner, Erik Kennhed and I look on in interest as all this unfolds."

Note: Attached are photocopies of three Tofuline soy ice cream labels, sold by Nutana in Sweden. Address: President, TAN AB, Eningbölevägen 54, S-740 82 Örsundsbro, Sweden. Phone: +46 171 605 68. Fax: +46 171 604 56.

6307. Solait International Ltd. 1992. Re: Donation/sale of powdered soy beverage for famine relief in Africa (News release). 202 West 7th St., Box 885, Carroll, Iowa 51401. 3 p. Aug. 26.

• ***Summary:*** "Solait International Ltd. announced the donation/sale of 27,000 pounds of powdered soy beverage for distribution for famine relief in northern Kenya and Somalia. 27,000 pounds equates to over 40,000 gallons of reconstituted soymilk. Americares, a private non-profit international relief organization, and the Iowa Soybean Association have arranged for the distribution."

Solait was founded in 1985 in Cedar Falls, Iowa, as Miller Farms Food. The company has a regional office in Statesboro, Georgia. Solait is made from soybeans (raised in Iowa and developed by the Iowa State University specialty soybean project team), rice syrup, corn oil and sea salt. Address: Carroll, Iowa. Phone: 712-792-9225.

6308. Ali, Nawab. 1992. Soybean food potential and its exploitation for Indian situation. *Agricultural Situation in India.* Aug. p. 395-402. *

• ***Summary:*** Commercially available soybean foods in India are: Soymilk, soypaneer [tofu], soysuji / soy-suji (a snack in Central India), soy fortified biscuit (using soyflour). Address: Project Director, Soybean Processing & Utilization, CIAE, Bhopal, India.

6309. Bourne, Malcolm C.; Trecartin, Viginia. 1992. A better way of making soy milk. *Countryside & Small Stock Journal* 76:19. July/Aug. *

6310. Eden Foods, Inc. 1992. A few trade secrets about light soy drinks (Ad). *Whole Foods.* Aug. p. 80.

• ***Summary:*** This full-page, color ad explains that any consumer can make a "light" soy drink by just diluting Edensoy with 33% water. Edensoy prefers not to sell such a product since that would involve shipping 33% more water, using extra packaging, energy, etc.

The ad claims that Edensoy tastes better because it is made from a special soybean variety that has a lower yield than other varieties.

This ad contains one completely incorrect statement: "In 1986, Eden Foods became the first American company to manufacture soy beverages in the U.S." According to the SoyaScan database, at least 184 commercial soymilk products were made in the USA before Edensoy; several of these are still on the market (Soyagen, Soyamel) and are sold nationwide.

Another surprise: By 2002 Eden was making and selling "Edensoy Light."

This ad also appeared in *Health Foods Business* (Aug.

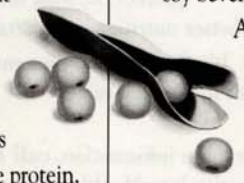
A Few Trade Secrets About Light Soy Drinks

1 *It's So Easy You Can Do it Yourself*

Making a soy beverage is too complicated to do yourself, but making a "light" soy drink couldn't be easier. The secret? Just add water. Why doesn't Edensoy come in a watered down "light" version? Well, even though we want Edensoy to meet your needs, we really don't want to ship water all over the country. It doesn't fit with our commitment to ecological responsibility. Making and shipping watered down soy drinks (33% more water!) would cost ***everybody*** in the form of additional natural resources; water, fuel, power, and paper.

2 *How to do "Light" Edensoy Yourself*

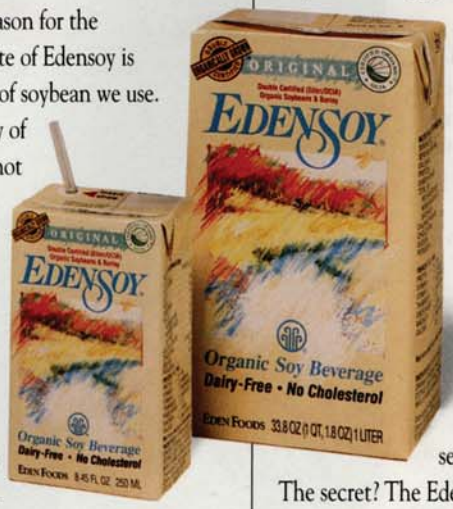
Edensoy is less than 2% fat. But if you want it to be less than 1% fat, just dilute it with 33% water, shake or stir, and you have it: Light Edensoy at no extra cost, no extra impact on our environment. (A point to consider: when a soy drink is diluted to reduce the fat, the protein, vitamins and minerals are diluted too.) 33% water means you add between 11 and 12 ounces to a large Edensoy, about 3 ounces to a small Edensoy.



Don't forget to use filtered or bottled water, you don't want to spoil the world's best-tasting soy beverage with chlorine. (And if you don't believe it makes a difference, taste it both ways.)

3 *The Edensoy Taste*

A major reason for the superior taste of Edensoy is the variety of soybean we use. This variety of soybean is not grown widely because it tends to yield fewer beans per acre than the popular varieties. Even so, we continue to use these soybeans because we've tried them all and ours simply yields a better-tasting soy beverage.



Another reason for Edensoy's superior taste is that we start with ***whole*** soybeans, instead of the flakes used by other producers. (Flakes quickly lose their freshness.) There are a few other reasons why Edensoy is widely acknowledged to be the best-tasting soy beverage, trade secrets we've learned from years of experience. (You don't expect us to tell ***everything***, do you?)

4 *Why Edensoy is Still First, Still the Best*

Eden Foods introduced a soy beverage imported from Japan to the U.S. in 1983. In 1986, Eden Foods became the first American company to manufacture soy beverages in the U.S. Others have followed in our footsteps, but Edensoy is still America's best-selling soy beverage. The secret? The Edensoy commitment to quality:

- OCIA Certified Organically Grown Soybeans
- Sweetened with Malted Grains
- Made with Purified Water But **No** Extra Water

Edensoy - not "light", but still number one... because our quality is no secret!

• ***Summary:*** Growing up in California her entire life, she took tofu and soy products for granted. She has just finished reading *The Book of Tofu,* by Shurtleff and Aoyagi. She would like to order a copy of *Tofu and Soymilk Production.* Address: Colite 23, bajo [or c/o Lite 23, bajo], Pamplona, Navarra, Spain.

6316. Petka, Tom. 1992. The casein industry and market (Interview). *SoyaScan Notes.* Sept. 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Casein became classified as a chemical and a non-dairy product in about 1948-49 by the Federal Trade Commission, at about the same time that price supports for dairy products began. At that time it was used almost exclusively for industrial applications (such as adhesives and sizings) rather than in foods. Today about 80% of the casein in America is used for foods–mainly imitation cheeses, whip toppings, and other imitation dairy products, plus medical and nutritional products prescribed by doctors. The remaining 20% is used for industrial purposes–mainly adhesives and sizings.

There are presently no companies in America that make casein; government price supports for milk price it out of the world market. The last U.S. manufacturer, Land O'Lakes, stopped in the 1970s. All casein used today in America is imported, mainly from New Zealand, Ireland, France and the Netherlands.

Note: If this outdated and misleading classification of casein as a non-dairy product could be changed, it would open up a huge market for soy protein products (isolates, soymilk, tofu), primarily in foods and beverages. Address: American Casein Co., 109 Elbow Lane, Burlington, New Jersey 08016. Phone: 609-387-3130.

6317. Roller, Ron. 1992. Why is the price of soymilk higher than that of cow's milk (Interview). *SoyaScan Notes.* Sept. 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The main factor for the higher cost of soymilk is that vastly larger amount of dairy milk produced; soymilk is not yet able to benefit from these economies of scale.

Second is the distribution network. Cow's milk is a local or regional product. Many dairies deliver milk in their own trucks direct to supermarkets and other retail stores. This means both that distribution costs are relatively low and that there are few if any middleman distributors. By contrast, soymilk is often shipped several thousand miles at the cost of about $0.10 per liter. As the soymilk market grows and soymilk comes to be produced on a more regional basis, distribution costs will drop, making soymilk more

competitive with cow's milk.

The third factor is the aseptic carton used for soymilk, which is much more expensive than the typical Pure Pak carton or plastic jug used for cow's milk. Yet because soymilk must be shipped nationwide, this carton is the least expensive available form of packaging–all things considered. Included in the price of the carton is the cost of the film (the per package price decreases as the number of packs ordered increases, with breaks at 250,000 to 500,000 to 1 million), the cost of the outer case carton, waste cartons, rental on the packaging machines, and the investment in the building in which the filling and packaging takes place. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6318. Rose, Bruce. 1992. The Soy Plant was renamed Tofu International Ltd. in Feb. 1992. Joint venture with Zhenjiang Bean Factory, a Chinese tofu company near Shanghai (Interview). *SoyaScan Notes.* Sept. 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In Nov. 1990 (after 2½ years of negotiations) Bruce Rose (not his company, Rosewood Products Inc.) signed a joint venture agreement with a big Chinese tofu manufacturer named Zhenjiang Bean Factory, located in Zhenjiang, China, about 130 miles west-northwest of Shanghai. The purpose of the company produced by the joint venture was to manufacture fresh (unpasteurized), traditional Chinese-style tofu and tofu products in Ann Arbor, Michigan, to be sold locally. Operating out of the plant at 738 Airport Blvd. in Ann Arbor, formerly owned by The Soy Plant, they started producing small amounts of tofu in February 1992 and at that time they renamed the company Tofu International Ltd. (TIL; It was formerly Rosewood Products Inc.). They formally started tofu production in July 1992. New products, all introduced in July 1992, include fried tofu, dofu-gan (2 types, very firm, not water packed), tofu chicken, and fresh soymilk.

The new company is operating out of the same factory as that formally occupied by The Soy Plant and Rosewood Products Inc., but with different equipment; and the tofu is made in a different way. In 1987 Rosewood Products Inc., a natural foods distributor (founded in 1980 by Bruce Rose, the president) purchased the Soy Plant's assets in bankruptcy court and invested a lot of money in new equipment. Rosewood had been distributing the Soy Plant's tofu for 6 years. For the next 5 years Rosewood was also a tofu manufacturer, making typically 5,000 lb/week (sometimes as much as 6,000 lb/week) of tofu, then production began to decrease as the competition grew more intense and as Bruce found he had too much to do trying to run both a distributing and a tofu manufacturing company. So he began to look for outside help in managing the tofu production operation. Rosewood Products Inc. still exists as the distributor of the tofu manufactured by TIL.

The Chinese are providing a team of skilled tofu production and management and production experts, equipment, and technology for making unique traditional Chinese tofu products. Presently, everyone in the plant is Chinese–they speak little or no English. Bruce does not want to compete with the "Big Boys" that sell aseptic or pasteurized tofu (Morinaga, etc.). Tofu production (especially in second generation products) has increased since the joint venture started and is now at about 3,000 lb/week–but most of this tofu is made into second generation products. Bruce has been to Zhenjiang once and visited their big factory which makes several hundred thousand kg/month of tofu.

In the near future, they plan to start making pressed tofu sheets, and Buddha's Chicken or Duck, which no other company in America is presently making. Address: Founder and President, Rosewood Products, Inc., 738 Airport Blvd., Suite 6, Ann Arbor, Michigan 48108. Phone: 734-665-2222.

6319. Burros, Marian. 1992. Cow's milk and children: A new no-no? *New York Times.* Sept. 30. p. C1, C6.

• ***Summary:*** "The Physicians Committee on Responsible Medicine, whose interests include both preventive medicine and alternatives to animal research, has declared war on that great American icon milk. 'Parents,' the committee said in a statement released in Boston yesterday, 'should be alerted to the potential risks to their children from cow's-milk products.' It added, 'Milk should not be required or recommended in Government guidelines.'

"The committee asserted yesterday that milk is an unhealthful food because it has too much fat, produces iron deficiency in infants, causes diabetes in children with the genetic predisposition to the disease and is responsible for colic, allergies and digestive problems."

"Suzanne Havala, a registered dietician from North Carolina, who was a co-author of the American Dietetic Association's position paper on vegetarian diets, supports the recommendations. 'After weaning, there is no need for milk of any sort in the diet in any species,' she said. Vegetarians get all the calcium they need from leafy vegetables, broccoli, tahini and tofu made with calcium sulfate." Address: Staff writer.

6320. Stiff, David. 1992. Dr. Spock adds clout to warnings about cow's milk: Appearance of the baby expert at infant-diet conference sparks some controversy. *Wall Street Journal.* Sept. 30. p. B2. [1 ref]

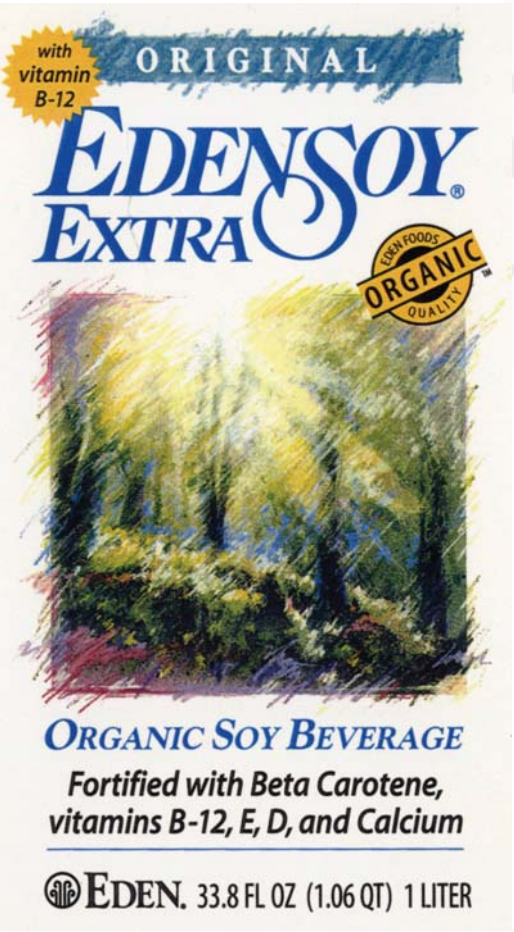
• ***Summary:*** "Benjamin Spock added his voice to a growing chorus of physicians warning of the possible dangers of feeding cow's milk to very young infants."

"Citing evidence that cow's milk can cause iron-deficiency anemia in some infants, the doctors here cautioned against giving milk to babies under a year old and that it may also cause health problems after infancy." The group

that sponsored the news conference, Physicians Committee for Responsible Medicine (based in Washington, DC), also urged that cow's milk not be recommended in government nutritional guidelines.

"Some doctors associated with the group went further, claiming milk and other dairy products pose risk of immune-system malfunction and health hazards to children and adults. They also cited recent studies suggesting milk may trigger severe diabetes in some children with a genetic predisposition to the disease. 'We should all stop drinking milk today,' declared Frank A. Oski, director of pediatrics at Johns Hopkins University School of Medicine. 'It was designed for calves, not humans.'" Address: Staff reporter.

6321. **Product Name:** Edensoy Extra: Dairy-Free Soy Beverage [Original, Vanilla].
Manufacturer's Name: American Soy Products, Inc.
Manufacturer's Address: 1474 N. Woodland Dr., Saline, MI 48176. Phone: 800-248-0301.
Date of Introduction: 1992. September.
Ingredients: Original: Purified water, organic soybeans, malted cereal extract, calcium [calcium carbonate], kombu (seaweed), job's tears, organic barley, sea salt, vitamin E, beta carotene, vitamin D-2. Vanilla: Same but vanilla extract listed before calcium.



Wt/Vol., Packaging, Price: Tetra Brik Aseptic cartons. 250 ml (8.45 fluid oz), or 1 liter (33.8 oz, 1.06 quart).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: This product is marketed by Eden Foods, Inc., 701 Tecumseh Rd., Clinton, Michigan 49236.

Ad in Whole Foods. 1992. Oct. p. 11. "Edensoy Extra. Read all about it." "New. Fortified with beta carotene, vitamins E &D and calcium. A significant source of vitamins, minerals and protein. Ideal for people who are lactose intolerant. Made with OCIA certified organically grown whole soybeans. Low in saturated fats and sodium; no cholesterol... Sea vegetables provide a natural source of beta carotene (for vitamin A) and soybeans provide the base for vitamin E. Both are powerful antioxidants that protect the body from free radical damage. We've also added calcium carbonate from limestone..." A color photo shows the product package. Yellow sunlight drifts down through a forest.

6322. Archer Daniels Midland Co. 1992. Annual report. P.O. Box 1470, Decatur, IL 62525. 41 p. Sept.
• ***Summary:*** Net sales and other operating income for 1992 (year ended June 30) were $9,232 million, up 9.0% from 1991. Net earnings for 1992 were $503.8 million, up 7.9% from 1991. Shareholders' equity (net worth) is $4,492 million, up 14.5% from 1991. Net earnings per common share: $1.54. Number of shareholders: 32,377.

"The last two fiscal year have been years of rapid growth and a broadening of the Company's profit base. During this period investment in plant and equipment amounted to $1.5 billion, consisting of $1 billion of capital expenditures for new plants and equipment, using mostly new technology, and acquisitions of $500 million...

"ADM takes seriously its commitment as the 'supermarket to the world.' With millions of starving people in Asia and Africa, the Company has the technology, through soy milk, Harvest Burger and wheat gluten, to provide an individual with a proper level of healthy protein for as little as 12.5¢ per day."

A 2-page foldout between pages 4 and 5 shows ADM's international corporate structure. In Europe, under ADM International Holdings, are British Arkady Company UK, Haldane Granose Food Group UK, and Arkady Feeds Ireland. Under British Arkady Company UK are S.I.O. France, InaNahrmittel Germany, and Happidog Petfoods UK. Under Haldane Granose Food Group UK are Genice UK, Vegetarian Feasts & Cuisine UK, Snackmasters UK, Direct Foods UK, and Saucemasters UK.

British Arkady Company–England: Manufactures, markets and distributes full fat soya flours, TVP, bakery ingredients, frozen dough products. S.I.O.–France: Manufactures and markets specialty oils and fats for food and pharmaceutical use. Soya flour millers.

Haldane Granose Food Group–England: Factories at

Barrow and Newport Pagnell, manufacture and marketing health foods, dry mixers, TVP mixers, burger mixes, dry mix and frozen vegeburgers, canned vegetarian products, spreads, soya milk. Genice Ltd.–Wales: Manufactures non-dairy ice cream, soya yogurt, yogice soya cream and specialty margarines. Direct Foods Ltd.–England: Protoveg range of TVP mixers, including Sosmix and Burgamix, marketed and distributed by Haldane/Granose. Snackmasters Ltd.–Wales: Manufactures and markets a range of snackmeals. Saucemasters Ltd.–Wales: Manufactures and markets sauces, dips, spreads and relishes packed in glass jars or sachets. Vegetarian Feasts & Vegetarian Cuisine–England: Manufactures and markets frozen vegetarian meals, retailed through food shops and supermarkets.

"Haldane Foods Group is now well established as the leading supplier to the U.K. health food industry. Nineteen products were added to an already extensive sales list. Snackmasters, Ltd. experienced rapid growth in snackmeals and increased efficiency by installing fully automatic process equipment. Two products that capitalized on the growing trend toward good health were the low-fat Granose 'Light' soya milk and the high-polyunsaturate cholesterol-free Granose Soya Cream.

"Vegeburgers remain a market leader and three new relishes were introduced under that brand name. Granose Foods is rapidly building market share with both vegetable and TVP-based vegetarian sausages. Genice Ltd. continued to innovate with the introduction of low-fat yogice." Address: Decatur, Illinois.

6323. **Product Name:** [Albios Lactosan {Soymilk}].
Foreign Name: Albios Lactosan: Bevanda a base di soia buona e delicata.
Manufacturer's Name: Giulianai S.p.A. (Distributor).
Manufacturer's Address: Via P. Palagi 2, 20129 Milan, Italy.
Date of Introduction: 1992. September.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Spot in SoyaFoods. 1993. Winter. p. 5. "New calcium enriched soya milk." This slightly sweetened soya milk, enriched with calcium (140 mg of calcium per 100 gm of product), is distributed to both supermarkets and pharmacies.

Label sent by Heather Paine of SoyaFoods in London. 1993. Nov. 3.

6324. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. Major health food store to open SoyaCow department. 1(3):1. July/Sept.
• ***Summary:*** "Rainbow Foods, the largest health food store in the Ottawa area, is committed to the SoyaCow retail concept. After fifteen years in business, they will move to larger premises in January, reopening with a department devoted to SoyaCow and its related fresh soyfoods.

"The ability to make fresh soymilk and other soyfoods on location will appeal to their existing clients and will also attract new ones. Besides the take-home foods, a small line of take-out products will be featured, including shakes, yogurts, soyburgers, and fresh juice. As the first store anywhere to do this, Rainbow will help promote this as a pilot location in a franchising concept. Other retailers will be invited for demonstrations.

"Rainbow owner Mike Kaplan became a SoyaCow believer after his first taste of its soya milk. He deemed it superior to all other products he sells in Tetra Paks [Tetra Pak cartons]. He also appreciated the freshness and the environmental benefits."

A photo shows a "New SoyaCow Model SC20A."

6325. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. Better tofu using SoyaCow. 1(3):1. July/Sept.
• ***Summary:*** "Indovita Proteins (P) Ltd., Ghaziabad, India, recently received a SoyaCow for testing and installed it in the Delhi area to explore its economic viability for a soya milk cottage industry. They reported that the tofu make using the soya milk from the SoyaCow is superior in flavour and texture to that which they are producing on their Taiwanese equipment.

"Indovita is now in the process of upgrading their existing equipment with SoyaCow technology. This confirms the belief that better quality soya milk makes better quality products–tofu, yogurt, drinks, frozen desserts, etc."

6326. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. New SoyaCow model. 1(3):2. July/Sept.
• ***Summary:*** "The new SoyaCow Model SC20A grinder / cooker, pictured on page 1, has been upgraded with a hopper and butterfly valve to permit charging of the machine without having to open the lid."

6327. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. System installed in school. 1(3):2. July/Sept.
• ***Summary:*** "Children in several schools in Hyderabad (India) are enjoying with their snacks at the mid-school breaks. SoyaCows provided by Child Haven of Maxville, Ontario, make the soya milk, which is sweetened, flavoured with mango flavour, and chilled for serving the next day. The children pay about 5 cents (Rs. 1.00) for 100 ml of soya drink. Both children and staff like the taste. One school, Bharatiya Vidya Bhawan, now runs the machine in its kitchen. Other schools are supplied by Ankur Services. Schools are interested in having their own machines once they become available in India."

6328. Shannon, Dennis A. 1992. Work with soybeans in Zaire (Interview). *SoyaScan Notes.* Oct. 9. Conducted by

William Shurtleff of Soyfoods Center.
• ***Summary:*** Dennis was born in Zaire, the child of missionaries, and speaks French. After working with IITA in Nigeria, he spent 5 years with IITA in Zaire from Sept. 1985, then left 2 years ago. For 4 of those years he was an agronomist and principal advisor to the Zaire government's national Grain Legume Program (Programme National Legumineuse, formed with USAID financing and headquartered in Gandajika), working mostly with soybeans. His first program was to introduce superior soybean varieties developed by IITA in Nigeria. The soybean varieties grown at the time in Zaire had been brought in by INERA (Institut National pour l'Etude et la Recherche Agronomiques) and yielded poorly, shattered badly, had small seeds or various colors, and had weak stems. (INERA, located only in Zaire, inherited the old Belgian agricultural research infrastructure of INEAC, but the name was changed to INERA between 1968 and 1973). Dennis felt that the best way to establish the credibility of the Grain Legume Program was by introducing improved soybean varieties, developed at IITA in Nigeria at the same distance from the equator and under similar agronomic conditions as existed in Gandajika. In on-farm trials in Gandajika, the IITA soybean varieties yielded 30% better than the old Zaire varieties for 5 seasons from 1987-89. Some farmers would save seeds from the trials and grow large plots. But one major problem was that the traditional practice in Zaire was to eat or sell all grain legume seeds at harvest to pay off debts and get food after the dry food-shortage months. Maize and cassava are the staple foods, with legumes being only a minor crop. At planting time, farmers by seeds from the market. Another problem was that farmers like early varieties to get food fast after the lean months, but to get earliness a breeder must (tragically) sacrifice yield. Soon the Grain Legume Program released 2 new soybean varieties with Chiluba names. Dennis left Gandajika in Oct. 1989, then worked in Lubumbashi on maize until Aug. 1990, when he left Zaire to work for Auburn University in a agro-forestry project in Haiti (not related to soybeans).

Father G. Vanneste is a Belgian Catholic priest and agronomist with an Ingineur Agronome degree from Belgium. He set up and was in charge of ETSA (Ecole Technique Secondaire Supérieure d'Agriculture, de Tshibashi), an agricultural technical school. Working in Kananga for many years, he played the key role in promoting cultivation and food use of soybeans. He was named by the president of Zaire as director of the national research institute. Then he got sick and left the country. Now a fairly old man, he has retired and is no longer in Zaire.

Since Zaire is a Catholic country, many Catholic priests and brothers work there. They have set up many fine soybean production and utilization programs all over the country. The work started in Kananga, then spread from there to places like Bukavu or Kivu in eastern Zaire. At a typical flour mill, the Catholics will provide the soybean seeds, buy the soybeans back from local farmers, roast and grind them to make roasted soy flour, then sell this back to the people (as flour or cookies in the local market) at little or no profit. In 1985 there was a big project to supply Kinshasa, the capital, with roasted soy flour and soymilk; he does not know the present status of the project. The Bwamanda Project, run by an activist Catholic priest in the Equator region of northern Zaire, is primarily a project to grow soybeans on a fairly large scale (about 20 ha) using tractors. The soybeans were shipped by barge down to Kinshasa, where the Catholics had a big factory that made them into soy flour. The whole project was very well organized.

Dennis's brother now works in Kananga, Zaire as a medical missionary doctor. Johnny Miller was a Protestant doctor who was treating malnourished children. He strongly encouraged mothers of malnourished children to use soy flour in the family diet.

The system set up by the Catholic fathers was somewhat paternalistic, but in the Gandajika area, where there are not many missionaries, the people grind their soybeans (which they roast in a pot over a home fire) using pre-existing small village mills that had long been used to grind cassava and corn (maize).

Ms. d'Heer (pronounced "deer") worked in Zaire for WHO, the World Health Organization, then later stayed on as a lay sister working with the Catholic mission in Kananga. She played a key role in expanding food uses of soybeans in Kananga. Also a food scientist named Karl Weingartner, working for INTSOY at IITA at the time, visited Zaire. Dennis drove him to Kananga, where they met and interviewed Ms. d'Heer. Weingartner wrote a trip report (not very detailed) that was published in about 1987. The peak year of the soy cookie factory was in about 1979.

In Oct. 1989 soybean utilization was on the increase in Zaire. It is hard to say what is happening now given the current political upheavals in Zaire; in Sept. 1991 all foreigners had to be evacuated–his brother returned in June 1992. But since small farmers grow soybeans locally, they would tend to be relatively unaffected by national problems. Address: Asst. Prof., Dep. of Agronomy and Soils, 202 Funchess Hall, Auburn Univ., Auburn, Alabama 36849-5412. Phone: 205-844-4100.

6329. Haren, Chuck. 1992. Nicaragua. *Plenty Bulletin* (*Davis, California*) 8(3):1-2. Fall.
• ***Summary:*** "Nicaragua is one of several Central American countries from which Plenty has received letters requesting support for people learning how to use soybeans. In August Plenty provided technical support to Soynica, a group of women who are conducting an education, training and feeding program in Managua, the capital. Soynica is a non-profit development organization which was formed by a group of women who have voluntarily been promoting the

use of soybean foods among low-income rural and urban families since 1980.

"Soynica became an officially registered organization in 1990. Women within the barrios of Managua have sought out support from Soynica in helping them to feed their children. Soynica responds by first helping the women organize themselves into working groups which support each other. A staff of 22 educators provide training for 450 pregnant and nursing mothers in the poorest barrios of Managua... Soynica, with the help of 145 volunteers, provides food for 24 'ollas communales' (community pots) which serve one meal five days each week to 450 pregnant and nursing mothers and 2,500 malnourished children. Soybeans are used in 80% of these meals (see photos below). Specifically, Soynica requested Plenty to help improve the processing methods they were using at the ollas communales, and to work with them in designing a funding proposal for a small soybean processing and marketing facility within Managua. From this facility Soynica intends to process and market a variety of soybean foods, then use the profits to help cover the costs of the social assistance programs they are carrying out in the barrios of Managua. While in Nicaragua I was able to demonstrate methods of processing soybeans which improved the milk and tofu yields the women could achieve when preparing meals at the ollas communales. I also worked with the administrators of Soynica programs, Luci Morren and Casta Calderon, in writing a proposal for a Soybean Processing, Marketing and Training Center.

"I wish to thank John and Carlotte Gabriel of Nevada City, California for bringing the commendable work of Soynica to our attention, and for their vital assistance."

A photo shows many people watching as Soynica volunteers prepare soymilk or tofu.

6330. Nsofor, Leslie M.; Maduako, Okwudiri. 1992. Stabilized soymilk for ambient tropical storage: a preliminary report. *International J. of Food Science and Technology* 27(5):573-76. Oct. [16 ref]
• ***Summary:*** Soymilk was made from sprouted-blanched, sprouted-unblanched, and blanched whole soybeans (control). It was sterilized at 121ºC for 15 minutes and its shelf stability was evaluated. Samples were compared for coagulation, pH and loss of starch. The extract from sprouted-blanched soybeans remained uncoagulated for 6 weeks in ambient tropical storage, showed the greatest loss of starch, and had the least total solids content (10%). The sprouted-unblanched soybeans produced an extract which coagulated instantly after sterilization at a pH of 5.6, the lowest pH value of the three. The control contained the highest total solids (25%), showed the least loss of starch, and coagulated after 2 days in ambient tropical storage. Address: School of Food Science & Technology, Imo State Univ., PMB 2000, Okigwe, Nigeria.

6331. Shestakov, Vladimir. 1992. The Ecoville Project in Russia: Interest in ecology, humane sustainable culture, vegetarianism, and soyfoods in St. Petersburg (Interview). *SoyaScan Notes.* Nov. 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Vladimir (nickname "Vlodia"), a Russian biologist who speaks excellent English, phoned during a visit with John Robbins at EarthSave. He is working to start rural based ecological village/community, an education and resource center in St. Petersburg including a vegetarian restaurant and a soy dairy (to make tofu and soymilk) for the first 2 businesses of the project.

Vladimir visited The Farm in Tennessee and was impressed with their soy dairy. While in San Francisco, he is staying at the Center for Citizen Initiatives, run by Sharon Tennison (3268 Sacramento St., San Francisco, California 94115. Phone: 415-346-1875). One of their three main programs is titled "Feed Yourself."

A 1-page leaflet titled "Ecoville Russia: Project Description" sent by the Context Institute (a non-profit, founded in 1979, near Seattle) in Washington state adds: "The Ecoville Project began in Sept. 1991 at an international gathering of specialists in sustainable community development hosted by Gaia Trust, Denmark, and Context Institute, USA. The group decided to support the proposal of the Russian delegate, Vladimir Shestakov, for the creation of an ecological village near St. Petersburg. Such a model could show how Russia and the other republics of the Soviet Union might rebuild their societies in a way that is sustainable and sensitive to the environment...

"Gaia Trust has provided start up funding to assist the project. A western team traveled to St. Petersburg in April 1992 to do a seminar on the above areas and to help the Russians develop team-building skills...

"Diane Gilman, is coordinating the Project from the West...

"Please contact Diane Gilman, the Western Coordinator at Context Institute for more information. Mail: PO Box 11470, Bainbridge Island, WA 98110 USA. Tel: (206) 842-0216."

Follow-up talk with Diane Gilman. 1992. Dec. 6. A new vegetarian society has been active in St. Petersburg since Jan. 1992. She and her husband, Robert, an architect, know Cynthia and Albert Bates at The Farm in Tennessee. Address: Russian Ecoville International Coordinator, P.O. Box 644, St. Petersburg 191180, Russia. Phone: +7 812-113-5896 (Phone and fax).

6332. Willemse, Jan. 1992. Recollections of work with soyfoods and Henry Ford (Interview). *SoyaScan Notes.* Nov. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan, now age 92, has been cooking with soybeans since 1933. His latest project is a book (partially a recipe book) he is writing about Henry Ford and soybeans.

Elinor Eaton is editing it, but he has not yet found a publisher. He hopes it will be published in 1993.

In the early days, when he was developing soybean recipes for Henry Ford and for the 1934 World's Fair in Chicago, Illinois, there were no soybeans recipes available as far as he knew. So he just used his basic skills as a chef. Of the various people involved with soya, Jan worked the most closely with Dr. Edsel Ruddiman, who was quite interested in soymilk. Every recipe that Jan developed was first checked and analyzed by Dr. Ruddiman before it was served to Henry Ford. Jan knew Robert Boyer; he last saw him about a year ago at the Ford residence. Jan liked to use soybeans most in baked goods and soups, and as a low-cost extender for tuna fish. Henry Ford liked his soybean recipes very much, but rarely gave Jan his personal comments on the recipes. Mr. Ford had a display case in his dining room where he kept Jan's latest soybean creations, such as baked goods, and he liked to show these to his friends. Henry Ford ate very little meat, though he often ate modest amounts of chicken.

"The Ford family was very, very good to me." Jan had 3 boys who were basically raised by Henry Ford. The two oldest boys are now retired. Jan says that over the years, hundreds of articles were published about his work with soy, but he has not kept a single one of them. Today Jan says: "I eat soybeans all the time, and I give them credit for my long life." Address: 130 Nightingale, Dearborn, Michigan 48128. Phone: 313-561-4088.

6333. **Product Name:** [Soy Mayo (Plain, with Herbs, Garlic, or Curry)].
Foreign Name: Majo–nach Mayonnaisenart (Feine Sauce, Kraeuter Sauce, Knoblauch Sauce, Curry Sauce).
Manufacturer's Name: Bruno Fischer GmbH.
Manufacturer's Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.
Date of Introduction: 1992. November.
Ingredients: Plain [Feine Sauce]: Water, sunflower oil*, mustard*, spray-dried soymilk*, honey*, vinegar from spirits*, sea salt, starch, spices, guar seed meal as a thickener.
Wt/Vol., Packaging, Price: 250 ml.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Bruno Fischer, who calls from Germany. 1993. Nov. 25. He makes his Soy Mayo using powdered soymilk that he buys from Sojinal in France. In Nov. 1992 he launched two flavors, Plain and Herbs, but because he used mechanically-pressed oil, the products had a short shelf life due to rancidity. His company will re-launch these two products in Jan/Feb. 1994, and at the same time introduce two new flavors that are now under development–Curry and Garlic.

He also uses soybeans in spreads, but they constitute less than 5% of the total ingredients.

Labels sent by Bruno Fischer GmbH. 1994. Jan. 6. 8 by 2.28 inches. One unique color plus black, white, and red on green and yellow. "50% less fat than in mayonnaise." Talk with Bruno Fischer. 1998. May 13. He now makes this product in plain and herb (a recipe like remoulade, with pickles, etc.) flavors, still using soymilk powder. They have discontinued the garlic and curry.

6334. Diaz Carrasco, Humberto; Busto Garcia, I.; Velazquez Diaz, O.; Fernandez Diaz-Silveira, M.; Gonzalez Mauri, J.; Ortega Herrera, J. 1992. El cultivo de la soya para granos y forrajes [The cultivation of the soybean for its seeds and as a forage]. Havana, Cuba: Ministerio de la Agricultura, Instituto de Investigaciones Fundamentales en Agricultura Tropical [INIFAT]. 16 p. Nov. [37 ref. Spa]
• ***Summary:*** Contents: Origin and distribution of the soybean. Importance worldwide. Soya in Cuba. Morphology. Physiological aspects. Favorable attributes of the soybean. Main issues to consider in planting, management, harvest, and benefitting/profiting from the soybean. Rotations with soya.

The section titled "Soya in Cuba" (p. 4-7) states: "The first annual report of the Agricultural Experiment Station at Santiago de las Vegas (*Estación Experimental Agronómica de Santiago de las Vegas*), mentioned the acclimatization of 50 varieties of soya. Today this station is INIFAT (*Instituto de Investigaciones Fundamentales en Agricultura Tropical*) of the Cuban Ministry of Agriculture (MINAG). Note 1. Santiago de las Vegas is a town located 10 miles south of Havana in Habana Province. Note 2. This report, published in June 1906, covers work done during the period 1 April 1904 to 30 June 1905. It contains the earliest date seen for soybeans in Cuba, or the cultivation of soybeans in Cuba (1905; one of three documents).

"During the period 1917 to 1920 Calvino issued information on the study of soybeans in Cuba; he indicated that the variety Biloxi did well in Cuba. At the end of the 1920s, Francisco B. Cruz studied 8 varieties of soybeans. In 1937 the forage characteristics of the variety Otootan were evaluated. In 1952 Calzadilla Cabrales delivered seeds of the variety Improved Pelican to the Agricultural Experiment Station at Santiago de las Vegas; this unique commercial variety was used in Cuba until 1978. In 1955 a pamphlet titled *The cultivation of soybeans* (*El cultivo del frijol soya*) was published by this same station (Muller 1955).

"In 1958 the Cuban Bank for Agricultural and Industrial Promotion (*Banco de Fomento Agrícola e Industrial de Cuba–BANFAIC*), in cooperation with the Agricultural Experiment Station at Santiago de las Vegas, published a bulletin titled *The cultivation of soybeans* (*El cultivo del frijol soya*) (Gonzalez et al. 1958). This bulletin described the areas of soybean extension located in the savannah areas of Santo Domingo (province of Villa Clara), in the estate 'Pablo' (*Ciego de Avila*), and in the rice-growing area of southern Pinar del Rio. Other key documents published from

1968 to 1989 are cited and summarized.

"In 1978 at San Nicolás de Bari, in Havana province, the first Cuban soy sauce (*salsa soya*) factory was started at an investment cost of more than 4 million pesos and with an annual production capacity of 2,000 tonnes/year.

"At the Food Research Institute of the Ministry of Food Industry (*Instituto de investigaciones para la Industria Alimentaria del Ministerio de la Industria Alimenticia* (*MINAL*)), situated in El Guatao, there was installed [in 1984] the so-called "Mechanical Cow" (*vaca mecánica*). This piece of equipment was acquired in Brazil for extracting soymilk; it had a capacity of 200 liters/hour. The Food Research Institute made soymilk (*leche de soya*) in vanilla, chocolate, and strawberry flavors.

"As part of a continuation of previous investigations, during the period 1981-1991, at INIFAT and at the "El Tomeguín" Seed Station (*Estación de Granos*), both part of the Cuban Ministry of Agriculture (MINAG), work was undertaken on genetic improvement and introduction, with the objective of obtaining soybean varieties that could be planted at different seasons of the year to produce seed, forage, or both, that were easy to harvest mechanically, and were less susceptible to the principal diseases and pests which attack this crop.

"As a result of this work, the following varieties are now available for spring planting: Cubasoy-23, 42, Williams, and Duocrop. The varieties IGH-24, R-315, INIFAT-112, INIFAT-V9, Cubasoy-120, and 96 can be planted during the months of July and August, and the varieties INIFAT-382, INIFAT-V9, and Cubasoy-120 can be planted during the months of December and January.

"In parallel to the work described above, within the "Principal State Problem of Beans and Soybeans" (*Problema Principal Estatal de Frijol y Soya*), in various Cuban institutions (National Institute of Agricultural Science {*Instituto Nacional de Ciencia Agrícola, INCA*}, Institute of Animal Science {*Instituto de Ciencia Animal, ICA*}, INIFAT, and others), investigations were conducted that made it possible to maximize the utilization of the new crops. Among these were rotation and intercropping with sugar cane, citrus crops, tobacco, potatoes, and rice, rhizobium biology, mineral nutrition, irrigation, mechanization, incidence and control of pests, diseases, and weeds, uses and storage of the seed, production of elite seed varieties, etc. which permit integral crop management of the soybean under Cuban conditions." Address: Havana, Cuba.

6335. **Product Name:** Soymilk Powder (Regular, or Reduced Fat), Tofu Powder (Regular, or Reduced Fat), Soy/Whey Blend, Textured Soy Flour, Soy Flour (9% fat).
Manufacturer's Name: DMV USA. Div. of DMV, Inc.
Manufacturer's Address: 2340 Enterprise Ave., P.O. Box 1628, La Crosse, WI 54602-1628. Phone: 1-800-359-2345.
Date of Introduction: 1992. November.
Ingredients: Soy flour.
New Product–Documentation: Ad in '92 Soya Bluebook, p. 52. "Quality ingredients from soya. Chemical-free process. Kosher / Parve & organic available." Talk with Craig Albrecht, Technical Sales Manager at DMV USA. 1993. March 19. This company buys soy flour and makes all the above products from it. The line was introduced in the fall of 1992, before Craig arrived at the DMV. DMV is a Dutch-owned dairy cooperative with $4,000 to $5,000 million in sales worldwide. They have had a presence in the USA for about 3 years. DMV USA imports various caseinates and whip toppings, and also makes various dairy products such as nonfat dry milk, buttermilk, whole milk, whey, whey protein concentrate, cheese, imitation cheese, etc. They sell these products to foodservice organizations and the food industry. The soy products are still a minor part of their total business, but growing. Ed Pedrick came from Clofine to work for DMV.

Ad (full-page, black-and-white) in Soya Bluebook. 1993. Oct. "Soymilk Powder & Tofu Powder."

6336. Griffis, Gil; Wiedermann, Lars. 1992. Marketing food-quality soybeans in Japan: A manual on how to profit from the niche market in Japan for value-added soybeans. 5th ed. St. Louis, Missouri: United Soybean Board. 25 p. Nov. 28 cm.
• ***Summary:*** Contents: Introduction. Japan: Desired soybean characteristics, tofu (procedure for making tofu, desired soybean characteristics, color of hilum, seed size {the larger the better, preferably more than 20 grams/100 beans}, color of cotyledons, hull, composition, special notes, American interpretation), miso (same categories of information as tofu), natto (ditto; seed size: The smaller the better, with a maximum of 5.5 mm diameter. Round shape is preferred to oval in order to limit swelling during the soaking and boiling processes), food quality soybean varieties (name or code-name of 42 varieties, maturity zone, release year, used to make what soyfoods), distribution channels, marketing channels, protocol, pricing, organically-grown soybeans.

Taiwan: Introduction, list of 4 major buyers, users, and trade associations. Korea. Southeast Asia. United States.

Appendix I. Distribution systems for soybeans used for food in Japan: Tofu (23,000 tofu shops of which 13,000 are members of the Tofu Association), natto, miso.

Appendix II. Food soybean imports by country of origin, 1984-1991. USA is the largest supplier (845,000 tonnes in 1991), followed by China (279,000), then Canada (28,000). Total imports, which have stayed about constant during this period, were 1,152,000 tonnes in 1991.

Appendix III. Distribution by usage of soybeans used for food–1991, direct use only in tonnes (metric tons). Tofu: 607,000 tonnes total, of which 562,000 come from the USA and Canada, 25,000 from China, and 40,000 from Japan. Up 2% from 1989.

Miso: 171,000 tonnes total, of which 38,000 come from the USA and Canada, 121,000 from China, and 12,000 from Japan. Up 0.5% from 1989.

Natto: 147,000 tonnes total, of which 87,000 come from the USA and Canada, 50,000 from China, and 10,000 from Japan. Up 9% from 1989.

Other: 39,000 tonnes total, of which 20,000 come from the USA and Canada, none from China, and 19,000 from Japan. Total food use of 964,000 tons is up 2% from 1989. Source: Japanese trade newspapers and trade associations. These figures do not include a estimated 492,000 tonnes of soybeans used indirectly (in the form of defatted soybean meal) for soy sauce, 222,000 tonnes used for soy protein, and 20,000 tonnes for other indirect uses.

Appendix IV. Directory of direct importers of food-quality soybeans for each is given: Home office in Japan. Representative office in the U.S.

Appendix V. Traders of food-quality soybeans (3 companies).

Appendix VI. Soy food organizations in Japan (tofu, miso, soymilk, packaged tofu, natto). Appendix VII. Helpful contacts.

Food quality soybean varieties (with maturity group / zone, and year released; table, p. 5): Chico (00, 1983), Grande (0, 1976), Proto (0, 1989), Minnatto (0, 1989), NattoKing [Nattoking] (I, 1988), Disoy (I, 1967), Vinton (I, 1978), Vinton 81 (I, 1981), King Natto (I, 1985), Kato (I, 1989), Magna (II, 1967), Prize (II, 1967), Marion (II, 1976), LS201 (II, 1989), Provar (II, 1969), Beeson (II, 1969), Kanrich (III, 1956), Kim (III, 1956), LS301 (III, 1989), Verde (III, 1967), IL2 (III, 1989; from Illinois), Hawk (III, ?), Emerald (IV, 1975), Vance (V, 1986), Camp (V, 1989), Hartz 936X (VI, 1981), Hartz 914 (VI, 1989), Hartz 922 (VI 1989), Merrimax (?, 1986).

Note: This report was originally published in Sept. 1989, mainly for use by the American Soybean Association office in Tokyo. Address: 1. Division Director for Asia; 2. Country Director for Japan. Both: American Soybean Assoc.

6337. **Product Name:** Skinny Dippers (Spreads and Dips) [Spring Garden, Bretonne, Hawaiian, Aztec, Spicy Greek, or Chinese].
Manufacturer's Name: Redwood Company (The). Div. of JRJ Trading (Marketer-Distributor). Made in America.
Manufacturer's Address: P.O. Box 1298, London, N20 0YT, England. Phone: 81 / 368 2638.
Date of Introduction: 1992. November.
Ingredients: Incl. tempeh, soymilk, miso.
Wt/Vol., Packaging, Price: 120 gm pack retails for £1.20.
How Stored: Refrigerated.
New Product–Documentation: Spot in SoyaFoods. 1992. Autumn. p. 5. "Skinny Dippers spreads and dips." Four flavors are based on tempeh: Spring Garden, Bretonne, Hawaiian, and Aztec. Two are based on soymilk: Spicy Greek, and Chinese. Other soya ingredients used, depending on the flavor, include soya bean sprouts and miso.

6338. **Product Name:** [Vegetable Soja Patés (Plain, with Boletus Mushrooms, or Garlic & Fine Herbs)].
Foreign Name: Pâté Végétal–Harmoniques (Nature pâtés: Nature, aux Cepes, Ail et Fines Herbes).
Manufacturer's Name: Sojinal. Affiliate of Coopérative Agricole de Colmar (CAC) (Marketer).
Manufacturer's Address: 8 rue Merxheim, 68500 Issenheim, France. Phone: 89 74 53 53.
Date of Introduction: 1992. November.
Wt/Vol., Packaging, Price: 3 x 40 gm tubs.
How Stored: Refrigerated.
New Product–Documentation: SoyaFoods. 1992. Autumn. p. 7. "A profile of Sojinal." See Table 2. "Biosoja retail food products." "Vegetable soja patés. Low fat (less than 19%) and cholesterol free."

Label sent by Heather Paine of SoyaFoods in London. 1995. Aug. 8. This is an outer paperboard sleeve for 3 x 40-gm tubs of pâté; no ingredients are listed on the sleeve. *"Specialite a tartiner au soja de l'agriculture biologique."* Under the Harmoniques brand you will find a complete line of delicious vegetable pâtés: Nature, ail et fines herbes, aux cepes [with edible boletus mushrooms]. Made in France by Biosoja, 10 rue Lavoisier, F 68000 Colmar.

6339. *SoyaFoods* (*ASA, Europe*). 1992. Packaging and environment: Editorial. 3(3):1. Autumn.
• ***Summary:*** "Last month the EC announced their packaging and packaging waste proposals... The directive sets targets to be achieved in the next 10 years by which time the EC is to make 90% of all its packaging recoverable and 60% recyclable."

Tetra Pak, suppliers of soya milk and dessert cartons, has recently published a leaflet titled "Tetra Pak and the Environment," which outlines the company's policy of minimizing the effects of food packaging on the environment. The contents is summarized.

6340. *SoyaFoods* (*ASA, Europe*). 1992. Milk and tofu from sunflower seed. 3(3):3. Autumn.
• ***Summary:*** Researchers at the Department of Cereal Science and Food Technology of North Dakota State University have used sunflower seed meal to produce a milk similar to soya milk, from which tofu can be made. They have also developed a sunflower seed protein isolate.

6341. *SoyaFoods* (*ASA, Europe*). 1992. A profile of Sojinal. 3(3):6-7. Autumn.
• ***Summary:*** The author visited the Sojinal factory where she talked with Mr. Rochet (Director General) and Eric Dubs (Export Manager). "Sojinal is based at Issenheim in Alsace (in eastern France near the German border), where much of

France's soyabean crop is grown. Employing just over 20 people (only 6 on the production side) the office, factory and laboratories, which overlook beautiful Alsatian countryside, cover some 5 hectares. Ownership is split between a farming cooperative (65%) and 3 companies (18% Sofiproteol, 9% Unigrain and 8% Lavaur)...

"A recent survey of French consumers showed that 18% know about tonyu but only 1% regularly drink it at least once a week...

"Sojinal processes about 4,000 tonnes of soyabeans per year... Sojinal's product range falls into two areas: ingredients for the food industry and final retail products. Ingredients for the food sector are manufactured at Issenheim, but most of the retail products are produced elsewhere for Sojinal using Sojinal ingredients and recipes.

"Ingredients for the food industry include: hulled soya beans, fibre, tofu, soya pulp (okara), concentrated tofu, tonyu, soyapaste, and spray-dried soya powder [dried soymilk]. Applications are summarized in Table 1.

"A wide variety of products are produced for supermarkets (Ligne S) and health food outlets (Formoja). Sojinal retail food products are sold under the Biosoja name and include soya drinks and desserts, ready meals made from tofu, chocolate bars, vegetable soya patés and sauces and dressings (Table 2)...

"Sojinal's soyamilk is already No. 1 in Spain."

A photo shows the company's plant and offices.

6342. Venkataraman, Pankaja S.; Luhar, H.; Neylan, M.J. 1992. Bone mineral metabolism in full-term infants fed human milk, cow milk-based, and soy-based formulas. *American J. of Diseases of Children* 146(11):1302-05. Nov. [15 ref]

• ***Summary:*** Improving the mineral suspension system in a soy-based infant formula results in bone mineralization in infants fed the formula similar to that in infants fed human milk and cow milk-based formula. Address: Dep. of Pediatrics, Univ. of Oklahoma Health Sciences Center, P.O. Box 26901, Oklahoma City, OK 73190.

6343. McReynolds, Thomas. 1992. Low-fat and defatted tofu, and other new developments at Morinaga (Interview). *SoyaScan Notes.* Dec. 2. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Dr. Kenji Mizoguchi (Manager, Product Development Section, Food R&D Lab.) at Morinaga's central research laboratory in Tokyo, Japan, has been able to remove the fat from soymilk in order to make a 1% tofu (it contains 1% fat by weight) or a non-fat tofu. Tom has recently tasted the 1% fat tofu and thought it was excellent. Morinaga is planning to introduce this product in 1993 and Tom feels it will soon become the company's best-selling product.

Currently Mori-Nu firm silken tofu is the company's best-seller, followed by the extra-firm, with the soft in last place.

Tom is just putting the finishing touches on a new book to be titled *Tofu and You.* It was written by a lady who had a long-term weight problem until she married a Chinese man and started eating tofu. It is not a vegetarian book. It comes with a 28-day diet plan, and the book will accompany cases of Mori-Nu tofu. Morinaga hopes to launch the book together with their new low-fat tofu.

The company will also be publishing a newsletter to be sent to dietitians; Mark Messina is working with Tom on this project. The first edition should be out in Jan. 1993 and will be about 4 pages in length. A tentative title is *Soya Nutrition Update.* Tom would like it to be a professional rather than a commercial publication.

Update. Dec. 10. Morinaga's lab in Tokyo can remove the fat from soymilk using a mechanical process, but the process now involves the addition of isolated soy protein. The plant for doing this must remain in Japan. Address: Marketing Consultant, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 213-728-4325.

6344. Bryan, Ford R. 1992. Personal recollections of soyfoods served at Ford Motor Co. cafeterias and dining rooms, and of Dr. Edsel Ruddiman (Interview). *SoyaScan Notes.* Dec. 3 and 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Mr. Bryan began to work for the Ford Motor Co. in June 1941. He had a roommate who worked for Ford in engineering and Bryan would sometimes have lunch with him in Engineering cafeteria, located in west Dearborn about 5 miles from the Rouge plant. This cafeteria, and the adjoining private dining room where Henry Ford ate, were probably the first to introduce soybean foods. There, in 1941, he recalls eating soybean bread and biscuits, and drinking soybean milk. In the cafeteria, the soymilk was lined up in glasses, and in the dining room it was served at each table. "It had a distinctly different taste–not too bad. And we drank it without question. It was the drink of the day. There was no choice." Mr. Bryan is not sure whether or not he ever tasted soy ice cream in the Ford cafeteria.

Mr. Bryan has recently been talking with a woman who is Edsel Ruddiman's niece. She is age 90, has a good memory, and now resides in Dearborn; she just moved there from Florida. She used to taste-test some of the soy products her uncle was making. She was not paid for this work. Dr. Ruddiman was in charge of the food work for Henry Ford. Ruddiman began his research in what was really Henry Ford's private dining room beside the tractor plant. It was a cute, little bungalow which Henry used to entertain guests. The dining room that later appeared in many photos with executives seated at a round table was in the Engineering Building, which was built in 1923.

Dr. Ruddiman was around Dearborn until at least 1942, at which time Mr. Bryan knew him. "I think the following story is true. Henry Ford had his way of disposing with people. He thought that Edsel Ruddiman was not making good headway on his work with soy. He had Ruddiman and Boyer and even R.H. McCarroll competing with one another to some extent. The man who told me this story, who worked in the village, was told to get rid of Ruddiman's laboratory. He was told 'I want to see sod there the next day.' So Ruddiman's laboratory was wiped out. I don't know what Dr. Ruddiman did after that."

Mr. Bryan is a distant relative of Henry Ford. His grandmother was named Emma Ford and his first name is Ford because of that relationship. His great-great-grandfather and Henry Ford's grandfather were brothers, and they both married women who were sisters. Address: 21800 Morley, Apt. 1203, Dearborn, Michigan 48124.

6345. Diamond, Florence Barbier. 1992. The life and work of Holton W. "Rex" Diamond. Part I. Early life and work to 1942 (Interview). *SoyaScan Notes.* Dec. 3. Conducted by William Shurtleff of Soyfoods Center. Followed by confirmation from a brief chronology of his life and 20 pounds of documents sent by Mrs. Diamond.
• ***Summary:*** Florence is the widow of Rex Diamond. Holton Whittier "Rex" Diamond was born on 15 June 1915 in Lucasville, Scioto county, Ohio, the son of Walter V. Diamond and Ethel Pigg. He was a very bright boy, chosen valedictorian of his Valley High School class and, as valedictorian, he presented "The Seniors' Farewell Message" at the graduation ceremony on 10 May 1932. After entering Wilmington College in Wilmington, Ohio, on a scholarship, the school newspaper noted that he added "to a brilliant scholastic record" by "being the first freshman to make a perfect grade in the state-wide English examination. Diamond also holds national, state, and county scholarship awards in Latin, French, chemistry and English." Another article reported that he was the first entering freshman in the 60 year history of the college to score 100% on the timed entrance exam. Upon graduation from Wilmington in 1936, he was awarded the Chi Beta Pi national honorary fraternity "annual Grand Chapter award [a gold key] for outstanding scholarship, research ability, and service to the school and chapter." While in college, he was president of the college YMCA, and a member of the varsity tennis team, college band, and yearbook staff. After graduating from Wilmington in 1936 (with a BSc and a BSc in Education degree, and a major in chemistry), he worked briefly as a surveyor in Scioto county, then for several years as a chemist for Mead Paper Co. in Chillicothe, Ohio until entering Drew Seminary Graduate School of Theology for the fall 1938–Spring 1939 school year. (This was a term in the Methodist ministry; he had been interested in YMCA and Gospel Team Work in college.) Then he moved to Detroit, lived at the YMCA in 1940, and worked as a chemist in the lab of a steel mill, then as a "soda jerk" in a soda fountain. He also attended the downtown Methodist church and often wrote poetry.

During 1942, while working in Detroit, he enrolled in night school at Wayne State University in Detroit, taking courses in advanced organic and high polymers, dyes, biochemistry, and chemical literature–but obtained no graduate degrees. He pursued these graduate studies until 1945. Continued. Address: 1112 Pawnee Trail #2, Georgetown, Kentucky 40324. Phone: 502-863-5055.

6346. Diamond, Florence Barbier. 1992. The life and work of Holton W. "Rex" Diamond. Part II. Work at Ford Motor Co. and Delsoy Products Inc., 1942-1946 (Interview). *SoyaScan Notes.* Dec. 3. Conducted by William Shurtleff of Soyfoods Center. Followed by confirmation from a brief chronology of his life and 20 pounds of documents sent by Mrs. Diamond.
• ***Summary:*** Continued: In about 1942, through Wayne State University, Rex Diamond obtained a position in the research department of the Ford Motor Company, in the synthetic rubber development department, supervising a project group on butadiene synthesis. More specifically, his work was at Greenfield Village on "dum-dum," a silencing material for cars. When the entire synthetic rubber research program at Ford was abandoned, in about June 1943, he was transferred to the George Washington Carver Laboratory.

He worked under Robert A. "Bob" Smith (the chief chemist and his boss) on soybean milk, cheese, ice cream and tofu, and developed a whipped topping (his first) based on soymilk. Of these products, the found the whipped topping (which was later commercialized by 3 different companies) to be by far the most interesting.

Rex continued to work at the Carver Laboratory throughout World War II–his first research concerned chlorophyll. On 9 May 1945 Diamond and Smith applied (as assignors to the Ford Motor Co.) for a U.S. patent (No. 2,476,358) titled "Soluble compound of chlorophyll and synthesis thereof." The patent was issued on 19 July 1949.

One day in 1945 a man named Herbert Marshall Taylor came into the Carver Laboratory with a soybean product that would whip–but it wasn't very good and you could not rely upon it to whip every time or to whip the same way. Florence is not sure where Mr. Taylor got this product. [Note: Compare this version of events concerning Mr. Taylor and soy-based whip topping with that told by Robert A. Smith in May 1979.] Several days later, Rex analyzed the product and went to work on developing an improved and reliable whipped topping. He recorded the results of his work [starting on 24 March 1945] in his notebooks, which are now at the Henry Ford Museum at Dearborn. Prior to this time, nobody at the Carver Lab. had done research on a whipped topping. Rex discovered at some point, while working at the Carver Lab., that mono- and diglycerides played a critical role in whip toppings. Taylor was using a typical "bakery

shortening" as a key ingredient in his whipped topping. It contained mono- and diglycerides, but their amounts were not carefully controlled, since these levels were not critical in typical baking applications. Later (on 12 June 1955) in a paper titled "Vegetable Fat Whips for Bakery and Household Use," presented to the Institute for Food Technologists, he stated: "The use of special vegetable shortening, which contain not only hydrogenated vegetable oil but also one or more surface active materials quite common in the topping business. It is well to remember in this connection that most of these shortenings are made for some other use, they may introduce variations in the properties of the topping emulsions. A shortening containing mono- and diglycerides may be controlled within tolerances which are adequate for its use in baked goods but not for its use in toppings." Rex felt he had solved Taylor's problem and made an important discovery related to non-dairy whipped toppings.

Florence has the impression that Mr. Taylor was a very outgoing person who inadvertently sometimes got into trouble; he did not have bad intentions, but was sometimes misguided. He was a big spender when he had the money; later he felt he had been cheated by Delsoy Products and the owners of Delsoy felt they had been cheated by him. Florence also recalls that Rex, not Bob Smith, did most of the research and development work on the soy-based whipped topping at the Carver Lab.

A photo shows the 12-member staff of the Carver Laboratory in 1945, including Rex Diamond, Clem Glotzhober, and Florence Barbier. Bob Smith was absent. A caption notes that here "Diamond did the [sic, his] first work in developing a whipped topping."

A W-2 form shows that during 1945 Holton W. Diamond (who lived at 1648 May Ave., Dearborn, Michigan) was employed by "Russell-Taylor Inc., 1951 E. Ferry Ave., Detroit 11, Michigan." [Note: Diamond was working on their whip topping]. His wages totaled $552.13 in 1945. A 1946 form shows he was paid wages $68.25 by Russell-Taylor in the first quarter of 1946.

At about the time World War II was over (Aug. 1945), Florence Barbier, a graduate of Stephens College (Columbia, Missouri) was transferred from the Rouge Chemical Laboratory (where she had worked during the war) to the Carver Laboratory. There she first met Rex–who interviewed her for the job. She ran analyses on the soymilk that they made there frequently, worked on the development of a fermented soymilk cheese (which was never very good), and made some tofu. Soymilk was made at the Carver Lab. in 100 gallon batches approximately 2 to 3 times a week. Alberta Hardy (who now lives in Lansing, Michigan) was one of the people who helped make the soymilk. Some of this soymilk was given to any woman in the Dearborn area (not just Ford employees) who could not tolerate cow's milk and who wanted to stop by and pick some up free of charge. It was also sent to the Henry Ford Hospital and to Henry Ford's Greenfield Village Schools where it was served free of charge at recess each morning and afternoon. It was also served to the students for their noon meal at the Clinton Inn in Greenfield Village. Florence recalls soymilk being served in this way when she was a high school student there in the mid-1930s. The soymilk was poured from a large metal container into glasses, which were placed in the hallways at recess times for anyone who wanted it. "Henry Ford wanted all the experimental work done at the Carver Lab. to be of benefit to the public. Even the inventions were to be made available to anyone who wanted them." Florence's father, A. Roy Barbier, had worked for Henry Ford as advertising manager for the Ford Motor Co. from 1924 to the autumn of 1941. Barbier worked closely with Edsel Ford and considered him an intelligent and very competent person–in fact one of the finest people he ever met. But Edsel was overshadowed by his famous father, Henry Ford. Barbier thought Edsel never received the credit he so richly deserved.

On 21 Feb. 1946 Rex Diamond applied (alone, and not as an assignor to the Ford Motor Co.) for a U.S. patent (No. 2,487,698) titled "Topping for salads, desserts, and similar products." The patent was issued on 8 Nov. 1949. The all-vegetable topping called for the use of about 1.5% soy bean protein, 25-35% hydrogenated soybean oil, etc.

Prior to the formation of Vegetable Products Corporation, Rex made many trips to try to procure a source of shortening (still in short supply after the war) to be used in the manufacture of the whipped topping he planned to make. On 28 Feb. 1946, on a flight to New York City, he wrote to Florence that on the plane he enjoyed "an apricot cobbler topped with what I am almost sure was Delsoy Topping"–a non-dairy whipped topping introduced in late 1943 and made by Bob Smith. (Note: Bob Smith left the Ford Motor Co. in Aug. 1945 to work full time with Delsoy Products.) While Rex was still employed at the Carver Laboratory, he did some part time evening and weekend work as a consultant for Delsoy Products, conducting experiments to try to improve Delsoy. On 13 June 1946, before he left Ford, he obtained a written release from Mr. E.C. McRae, of the Ford Motor Co. patent dept. stating: "Inasmuch as the Ford Motor Company is not in any way interested in the manufacture of soybean food products, we have no objection to your patenting any ideas you may have along this line." Again, Diamond was planning for his whipped topping.

In Aug. 1946 Rex started thinking seriously about and developing a business plan and finding sources of raw materials for starting a "soy bean dairy" to make whip topping, soy ice cream, soy cheese, and chocolate malted. With the help of attorney Arthur M. Smith, he wrote Mr. Adrian Joyce [of The Glidden Co.] on 16 Aug. 1946 to see if Joyce had any interest in his ideas and inventions. Continued. Address: 1112 Pawnee Trail #2, Georgetown, Kentucky 40324. Phone: 502-863-5055.

6347. Diamond, Florence Barbier. 1992. The life and work of Holton W. "Rex" Diamond. Part III. Work at Vegetable Protein Corporation, and American Maize Products Co., 1947-1955 (Interview). *SoyaScan Notes.* Dec. 3. Conducted by William Shurtleff of Soyfoods Center. Followed by confirmation from a brief chronology of his life and 8 pounds of documents sent by Mrs. Diamond.

• ***Summary:*** Continued: Rex left the Ford Motor Co. in about Nov. 1946, shortly before the Carver Laboratory was closed; his wages for 1946 were $3,313.20. On 14 Nov. 1946 he applied to the state of Michigan for unemployment compensation. Note: It appears from the above that the Carver Laboratory closed in late 1946.

After leaving the Ford Motor Co., Rex may have done a little more part-time work with Bob Smith at Delsoy Products. On 6 July 1945 Herbert Marshall Taylor, President of Delsoy Products, Inc., at the suggestion of Mr. Bob Smith, had given Rex 12 shares of their stock and invited him to work for them on a full-time basis. But both Rex and his father-in-law, A. Roy Barbier, felt terms offered by Delsoy for Rex's services were unacceptable. Mr. Barbier felt that Rex would never get a good deal from Bob Smith, and that influenced Rex's decision. Moreover, Rex's dream was to start his own company making the whipped topping that he had pioneered at Ford. So after a short time, he stopped working with Delsoy and began work on starting a company named Vegetable Products Corporation (VPC) to produce a whipped topping named Wonder Whip, which was similar to Delsoy. There were no hard feelings after this parting and Rex remained friends over the years with both Bob Smith and Herbert Marshall Taylor–though Taylor long remained bitter over his own split with Delsoy. Florence and Rex were married on 9 Aug. 1947 in Dearborn, and they lived in Dearborn for the next year.

Rex had plenty of good ideas but no money. With considerable help from Arthur M. Smith, his patent attorney, Rex found investors and on 26 Aug. 1947 he signed an agreement that established Vegetable Products Corporation to raise money in order to get his non-dairy whipped topping on the market. There were about 5 investors, who probably contributed equal amounts of capital, totaling about $10,000 to $20,000–a relatively small amount, leaving the business underfinanced. The investors were John J. Hamel Jr. (a friend of Arthur M. Smith), A. Roy Barbier (Florence's father), Robert Walker, Elmer Hitt, and Joe Higgason. Rex did not invest any capital. The corporation was headquartered in Birmingham, Michigan, which was where John Hamel, the president, had his office and lived. However Hamel didn't participate much in VPC. Rex was formally the corporation's treasurer, though he did almost all of the day-to-day work. It was about 2 months after this agreement was signed that VPC began to manufacture Wonder Whip at Bodker's Dairy in Detroit. [For another view of the events related to Delsoy, see interview with David and Harvey Whitehouse, Feb. 1992.]

VPC started in the fall of 1947 inside of Chris Bodker's Dairy at 25440 Five Mile Road in Detroit, Michigan. The local dairy association did not know that Bodker was allowing a non-dairy product to be made inside his dairy. Florence's father, who was head of the advertising department for the Ford Motor Co., chose the name Wonder Whip and also designed the logo, which contained the words "Wonder Whip" inside a diamond. Chris Bodker wanted to distribute Wonder Whip (using his trucks) to his customers, but he was told by the local dairy association that if he distributed a non-dairy product, he would be "out of business." Shortly after their marriage, and after only 2-3 months of developmental work, VPC began producing Wonder Whip at Bodker's Dairy. It was distributed by Tabor Meat Distributing Co. VPC operated out of Bodker's for only 1-2 months, then Rex moved the business out to Saline, Michigan, and into the second floor of the old Henry Ford soybean extraction plant that had been purchased by the Hamel family's Valley Chemical Company in Oct. 1947 after Henry Ford's death and still had a solvent extraction plant that produced soybean meal and soy oil. As part of a written agreement, John Hamel let VPC use the second floor of the Saline building rent free. That included use of a little laboratory and of some stainless steel equipment that Henry Ford had previously used to make white soy paints using soy protein. Rex and Florence continued to live in Dearborn, driving to work each day in Saline; after several months, they moved to Saline, thus eliminating the long drive. By late 1947 or early 1948 VPC began to make (on the second floor) and continued to sell Wonder Whip, a liquid soy-based whipped topping, packaged in a small ½-pint cardboard container shaped like a truncated cone [the same shape as the containers for Delsoy and Rich's Whipped Topping, which were similar competing products]. They first distributed their product in a jeep and small trailer to the meat distributor in Detroit (owned by Mr. Tabor, a friend of Florence's father) who continued to distribute the product. In 1948 VPC had a booth at the Michigan State Fair, where 55,000 people tasted Wonder Whip. But Rex's company was undercapitalized, had weak distribution, and local competition from 2 other non-dairy whipped toppings which were improved by technical innovations.

One major competing product was Delsoy Super Whip (apparently launched in about 1947, perhaps the first such product in a pressurized can; it was later renamed Presto Whip). The second competing product was frozen Whip Topping, introduced in late 1945 by Bob Rich of Rich Products Corp. in Buffalo, New York. This was the first frozen whip topping. As its distribution expanded into Michigan, it severely hurt sales of Wonder Whip. In April 1949 Rex tried to expand into new non-dairy products with a soy ice cream, made from basically the same ingredients as his Wonder Whip, but VPC didn't have the funds to develop

and launch such a new product, so the it was never sold. Delsoy in the pressurized can was a more serious competitor in the local area, but Rich's frozen Whip Topping was more of a threat in more distant markets and as it expanded into Michigan. VPC could not survive this competition from its weak position. Moreover Rex was not an experienced businessman. So the company was forced to cease operations on 26 March 1949, after less than 2 years in business.

In early April 1949 Bob Smith of Delsoy Products offered Rex a job any time he wanted it. Smith also expressed interest in acquiring Diamond's pending patent applications as well as the name of his company, which he thought was better than his own "Delsoy Products Inc."

In March 1949 Rex wrote several food corporations to see if they might be interested in manufacturing Wonder Whip and paying him a royalty. General Food Corp. in New York said they were not interested. Sadly, Rex was ahead of the market, for about 8 years later General Mills launched Dream Whip, and about 15 years later Whip 'n Chill, both similar products.

American Maize Products Co. in Whiting, Indiana, responded favorably, so Rex went to work as a chemist for them from the fall of 1949 to Nov. 1955, working closely with B.R. Taylor, Manager of Planning and Development. However they wanted a spray-dried product with a long shelf-life since they had no facilities for handling a refrigerated product. For the next 7 years, Rex worked closely with Nichols Engineering Company, but they were unable to successfully spray dry a high-fat vegetable cream in their very small Niro spray dryer. The same type of formulas could be easily spray dried in the next larger Niro unit. After sitting on the shelf for a while, the fat would seep out from each particle in the high-fat product causing the particles to clump together. During the summer of 1951 he studied food technology at Massachusetts Institute of Technology. On 30 March 1950 Rex applied for a patent titled "Powdered Topping and Method of Making Same" (No. 2,619,423) which was issued on 25 Nov. 1952. Then he changed the formula radically, abandoning the use of soy (and of all protein), and made a much better product whose key ingredient was methyl ethyl cellulose, used as a stabilizer. He and Eugene L. Powell applied for a patent (No. 2,863,653) on this product, titled "Salad and Dessert Topping" on 3 Dec. 1954. It was issued on 13 Jan. 1959, after Rex had assigned the rights to Rich Products Corp. upon his employment with that company in the fall of 1955. Rex did no further work with soy. When American Maize decided they were not in a position to exploit the new methyl ethyl cellulose process of making topping, Rex wanted to move on so he could be actively engaged in the commercial exploitation of this new process. Even though American Maize wanted him to sell the patent to a manufacturer and stay on with them, they parted on friendly terms, and American Maize transferred the rights to the patent to Rex before he left. Florence thinks that Rex, at his own suggestion, paid American Maize a small sum to cover the expenses of applying for the patent.

On 12 June 1955 Rex presented a 9-page paper with 9 slides on "Vegetable fats for bakery and household use" at the annual meeting of the Institute of Food Technologists. He noted that in the USA, either soy protein or non-fat milk solids was generally used as the protein dispersant. Continued. Address: 1112 Pawnee Trail #2, Georgetown, Kentucky 40324. Phone: 502-863-5055.

6348. *SoyaScan Notes.* 1992. Soymilk and dairy milk prices in California, December 1992 (Overview). Dec. 10. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** At Berkeley Natural Grocery Co., a large natural food store at 1336 Gilman St. in Berkeley, California, unflavored (plain or original) soymilk made from organically grown soybeans retails for the following prices: Pacific Soy Beverage liter $1.49 (the equivalent of $1.41/quart), Vitasoy liter $1.89 ($1.79/qt), Vitasoy Lite liter $1.99 ($1.88/qt), Edensoy liter $1.99 ($1.88/quart), Westsoy liter (regular or unsweetened) $2.19 ($2.07/qt), Westsoy Lite liter $2.29 ($2.17/qt), Westsoy Plus liter $2.29 ($2.17/qt). By comparison, Rice Dream Low Fat Non-Dairy Beverage (a non-soy rice beverage) retails for $1.99/liter. The average price of the quart equivalents of the 6 soy beverages is $1.92 a quart. This is $0.23 per quart or 13.3% higher than the $1.69 in Dec. 1990.

Cow's milk (fortified with vitamins A and D) sells for the following prices at Safeway supermarkets: (1) Nonfat: $0.69/quart or $1.20/half gallon or $2.22/gallon; (2) Extra light (1% fat; protein fortified): $0.71/quart or $1.25 per half gallon or $2.37 per gallon; (3) Low-fat (2% fat; protein fortified): $0.74/quart or $1.27/half gallon; (4) Whole: $0.93/quart or $1.60/half gallon. The best-seller among these is non-fat in half gallons. Thus in Dec. 1992 soymilk in liter cartons is, on average, 2.78 times as expensive per unit volume as nonfat dairy milk purchased in quarts, 3.2 times as expensive as in half gallons, and 3.46 times as expensive as in gallons. In Dec. 1990 a quart of soymilk was 2.6 times as expensive as a quart of the best-selling cow's milk. So in the last 2 years the price of soymilk has risen relative to that of cow's milk.

In Oct. 1987, after most soymilk brands were available in liter or quart sizes, soymilk was 3.42 times as expensive per unit volume as dairy milk purchased in quarts. So there has been an 18.8% drop in the price of soymilk relative to that of cow's milk in quarts over the last 5 years.

Bob Gerner, the owner of Berkeley Natural Grocery Co., says that most soymilk prices rose significantly last month. The price of Pacific Soy Beverage is artificially low due to a deep discount, and even then it does not sell well. Customers who buy a case of any brand of soymilk at his store receive a 10% discount, even if that brand is on sale. For Gerner,

the 4 best-selling products are Vitasoy regular, Vitasoy Lite, Edensoy regular, and Westsoy plain. Gerner does not carry the new Edensoy Extra because he has too many similar products. He sells 75-90 cases per month of soymilk at this store. Soymilk is one of his best-selling product categories, along with prepared dinners and teas.

6349. Ruddiman, Catherine. 1992. Recollections of work with soyfoods in Dearborn, Michigan (Interview). *SoyaScan Notes.* Dec. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Catherine is Dr. Edsel Ruddiman's niece. She is age 90, has a good memory, and has never married. Her clearest recollection is that in the 1930s (probably after 1934) Dr. Ruddiman would make soy flour by grinding whole soybeans. He would take samples to her home near Dearborn and she would use the flour to bake cookies, muffins, bread, etc. She lived between Dearborn and Detroit; she was not paid for this work. Her "Uncle Ed" would taste the samples she had baked, then take the rest over to the laboratory to work on them further. After several months, when they had more or less perfected the flour and its uses, her involvement stopped. She does not recall whether or not she ever visited his lab. She is quite sure that Dr. Ruddiman worked on soymilk, and probably ice cream. She is sure that bread made with soy flour was served in one or more Ford Motor Co. restaurants or cafeterias.

She does not have any newspaper or magazine articles about her uncle's work with soya. She does not remember when or why Dr. Ruddiman stopped working on this soy project.

She remembers a man named Jan Willemse, who worked with Dr. Ruddiman. She did not know him (though she may have met him at one time), but his name is familiar. Address: 16351 Rotunda #351, Dearborn, Michigan 48120. Phone: 313-441-9148.

6350. *SoyaScan Notes.* 1992. Dr. Edsel Ruddiman's work with soyfoods at the Ford Motor Co. (Overview). Dec. 13. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** The following is compiled mostly from interviews with Robert Boyer, but also from other published sources, as cited.

Henry Ford's three top soybean researchers during the late 1920s and the 1930s were Dr. Edsel Ruddiman (who started his soyfoods research with Ford in about 1928), Robert Allen Boyer (head of the laboratory studying industrial applications, who started his soybean research in 1931), and Bob Smith (who began work under Boyer in about 1931, then headed his own lab at Moir House from 1938-1942).

Dr. Edsel Ruddiman, a close boyhood pal and seat mate of Ford's at Scotch Settlement School, was also Ford's brother-in-law because he married Ford's sister. In 1893 Ford gave Ruddiman's first name, Edsel, to his only child (a son). Formerly dean of the School of Pharmacy at Vanderbilt University and an excellent scientist, he had started working at the Ford Motor Company in 1926. He had one lab in a building not far from Boyer's and another little lab in a building that had formerly been his home, in a beautiful, tranquil setting on one of the Twin Lakes. His primary job was to develop a milk to replace cow's milk. Ruddiman was the man who got Henry Ford interested in soyfoods. Ford soon became deeply interested in the fact that soyfoods had been used for thousands of years as a key source of high-quality, low-cost protein by millions of people in East Asia.

Henry Ford's interest in soyfoods began in the early 1930s and stemmed from the interest and work of Dr. Ruddiman. The two men's earliest soyfoods extravaganzas were the press luncheons and dinners that they developed to publicize the experimentation with soy. The first meatless menu, developed largely by Dr. Ruddiman, was served to 30 wary reporters at the Chicago Century of Progress Fair in Aug. 1934; two others were served prior to 1943. Each of the 15 courses consisted partially or wholly of soy. The following 15 dishes were served: Tomato juice seasoned with soybean sauce. Salted soybeans. Celery stuffed with soybean cheese. Purée of soybean. Soybean crackers. Soybean croquettes with tomato sauce. Buttered green soybeans. Pineapple ring with soybean cheese [tofu] and soybean dressing. Soybean bread with soybean butter. Apple pie (soybean crust). Cocoa with soybean milk. Soybean coffee. Assorted soybean cookies. Soybean cakes. Assorted soybean candy (Simonds 1938, p. 235; *Chicago Herald and Examiner* 1934. Aug. 24. p. 11). At similar luncheons served between Aug. 1934 and July 1935, soy ice cream was also served for dessert (Strother 1961).

Dr. Ruddiman also developed a soybean biscuit, which both Henry Ford and white rats apparently liked, yet one of Ford's secretaries described it with unabashed candor as "the vilest thing ever put into human mouths" (Lewis 1972).

During the 1930s in Greenfield Village, Dr. Ruddiman developed canned green soybeans (Bansei variety) and produced 590 cans in 1935 and 1,000 in 1936 (Simonds 1938).

Out of their work in developing soyfoods banquets during the mid-1930s, Ford and Dr. Ruddiman developed a 19-page soup-to-nuts booklet titled *Recipes for Soy Bean Foods,* one of the first of its kind in America. Published by the Edison Institute, it contained 58 soyfoods recipes including ones for breads, biscuits, cakes, cookies, salads, meat substitutes, soy bean milk, soy bean cheese [tofu], roasted soy beans [oil roasted soynuts], soy bean nut butter [soynut butter], and soy bean butter (made by mixing hydrogenated soy oil with salt, coloring matter and diacetyl to color and taste). Unfortunately this book was not widely distributed.

In August 1940 Ford hosted the annual ASA

convention at Dearborn. Dr. Ruddiman presented a paper on "Possibilities of Soybean Milk." Dr. Ruddiman discontinued his work for the Ford Motor Co. in 1942.

In about 1941, when Dr. Ruddiman was almost 80 years old, his wife wanted him to retire. She spoke with Henry Ford about her wish and Ford responded quickly in a way that seemed to many who knew him to be quite out of character; he essentially destroyed Dr. Ruddiman's laboratory. Ruddiman was very bitter at Ford and at times he even cried. After a short time he quit. The Twin Lakes lab was closed in 1941 (R.A. Smith 1979, p. 25).

6351. Soyfoods Assoc. of America. 1992. Soyfoods 2000: Merchandising soy products into the next century (Ad). *Natural Foods Merchandiser.* Dec. 16-page color special supplement, 8½ by 11 inches, inserted after p. 28.
• ***Summary:*** Contains full color ads by Morinaga Nutritional Foods, Inc. (Mori-Nu Tofu, Firm and Extra Firm), Lightlife Foods, Inc. (5 types of tempeh, Tempeh Burgers [Lemon Grill, American Grill, Barbecue Grill], Tofu Pups, Vegetarian Chili, Sloppy J, Foney Baloney, Fakin Bacon, Lean Links), Worthington Foods, Inc. (Natural Touch Okara Pattie, Garden Pattie, Dinner Entrée, Lentil Rice Loaf), Sovex Natural Foods, Inc. (Better Than Milk, Tofu Ice Cream [Vanilla or Strawberry], Good Shepherd Spelt, Millet-Rice Flakes, For Goodness Flakes!), Vitasoy (U.S.A.) Inc. (Light Vanilla, Original, and Cocoa soy drinks).

Contains black-and-white ads by White Wave, Inc. (Five Grain Tempeh, Meatless Tofu Steaks, Soya A Melt Soy Cheeses [Regular or Fat Free] and Singles, Lemon Broil Tempeh, Amaranth Tempeh, Teriyaki Burgers, Organic Tofu, Dairyless Non-Dairy Yogurts, Tempeh Burgers, Sea Veggie Tempeh, Meatless Healthy Franks, Snack'n Savory Tofu), Cemac Foods Corp. (Unbelievable brand Cheesecake; based on nonfat baker's cheese; contains no soy, no fat, no cholesterol), Solait International Ltd. (Solait Powdered Soy Beverage), Tofutti Brands, Inc. (Lite Lite Tofutti, Tofutti Cuties, Land of the Free [Non-dairy frozen desserts, free of fat and sugar, sweetened with fruit juice], Tofutti Egg Watchers, Better than Cream Cheese, Sour Supreme [Non-dairy sour cream], Premium Tofutti, Tofutti Soft Serve Mix), Sharon's Finest (TofuRella), American Natural Snacks (Soya Kaas), Great Eastern Sun (Miso Master brand misos), The Macrobiotic Wholesale Company, Turtle Island Foods, Inc. (Keep It Simple Stirfry–Diced Marinated Tempeh), Betsy's Tempeh (Tempeh), Quong Hop & Co. (The Soy Deli–9 Tofu Burgers, 3 Savory Baked Tofu, Pacific Tempeh, 3 Tempeh Burgers, 7 fresh water packed and vacuum packed tofu), MYCAL Group (natural dehulled soybean flakes).

Articles and sidebars include: "Welcome to the future: Soyfoods 2000." "Soyfoods Association names new executive director" (Virginia Messina, whose photo is shown). "Soyfoods Association mission statement." "The modern evolution of soyfoods," by Michael Whiteman-Jones and William Shurtleff (Shurtleff's photo is shown). "Unraveling the soyfoods merchandising mystery," by Michael Whiteman-Jones. "Research shows soyfoods may help prevent cancer," by Mark Messina, PhD (whose photo is shown). "Key reasons to buy soy: Environmental, nutritional, economic."

This attractive insert was coordinated by Franke Lampe and edited by Lisa Turner, both of NFM.

6352. Curtis, Austin W., Jr. 1992. His work, his father's work, and George Washington Carver's work with soybeans (Interview). *SoyaScan Notes.* Dec. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Curtis, a close associate of Dr. George Washington Carver, has an honorary doctorate degree. He is now age 81. His father, Austin W. Curtis, became Director of Agriculture at West Virginia State College, a black college, in about the early 1920s. At that time he took a strong interest in soybeans as a way of enriching the soil. Dr. Curtis does not know how his father became interested in soybeans, and he does not think his father ever published anything about soybeans. Much of what his father was trying to teach farmers about soybeans wasn't understood at the time. Gradually that part of West Virginia changed from a farming to an industrial area based on gas and coal. The students gave his father the nickname "Soy Bean Curtis," but they never used it in his presence. Likewise, the students sometimes called him "Little Soy"–in his presence. His father retired from the university in about 1944. A relative of his is now preparing a biography of his father, but it may not be ready for several years.

Dr. Curtis did research twice at the Ford Motor Company in Dearborn, Michigan. In the summer of 1940, when Dr. Carver was still alive, his focus was on soy protein for use as food and spun soy protein fiber. He worked with Robert Boyer. He did not do much work with paints based on soy oil since that research had already been completed by Ford. He did not apply what he learned about soybeans after his return to Tuskegee, but he did apply the principles he learned to peanuts–which was an extension of work they had already done on peanuts. He did not do much work with soy in Alabama because at that time not many varieties of soybeans were well adapted to the climatic conditions of the south; they were primarily a midwestern crop. In 1944 the focus of his research at Dearborn was still on foods, not only with soybeans but also wild plants. His work with soy focused on making soymilk more palatable.

Dr. Carver was most interested in the soybean for its nutritional value and possible use to make low-cost foods. Neither Dr. Curtis nor Dr. Carver did any soybean breeding.

Dr. Curtis' laboratories have focused on products made from peanut oil; they have never made any soy products. Their best selling product is Curtis Rubbing Oil, made from peanut oil, for the relief of pains from arthritis and

rheumatism. It is very effective. Skin care and hair care products also sell well. In the late 1950s the company employed about 40 people including sales people; now they employ less because they use brokers. The company has not grown as much as Dr. Curtis had hoped it would. Address: A.W. Curtis Laboratories, 46 Selden, Detroit, Michigan 48201. Phone: 313-833-6979.

6353. Vaidya, Achutananda. 1992. Re: Pioneering and making tofu and other soyfoods in Nepal. Letter to William Shurtleff at Soyfoods Center, Dec. 26. 9 p.
• ***Summary:*** "I started making tofu in 1974. I did not have any connection with my uncle in starting my tofu company, however I did have a chance to see him make tofu at his residence in Kathmandu, and from that time I got the idea in my mind to make tofu myself. I learned the details of the process in Nepal from Mr. Akifumi Nakamura of Kobe, Japan, a member of the Japan Overseas Cooperation Volunteers (JOCV), who worked at the Central Food Research Laboratory in Kathmandu, which was also my office in 1974. I worked together with him as a counterpart for two years learning how to make tofu. During his stay there I learned wholeheartedly the process of making tofu. I learned from him that this food product called "Bhatmas-ko-paneer" in Nepali is known as "tofu" in Japan. Vita-Tofu is the brand-name of my tofu. This tofu is not packaged. It is sold in the form of rectangular cakes out of water-filled cans or bowls because most of the local vegetable shops do not have refrigerators. Even to this day sale of tofu is difficult during the hot summer months because of lack of refrigeration in food retail stores. At the start, for the first 4-5 years, I delivered my tofu from door to door because even at that time the people of Kathmandu did not know about tofu. They did not want to buy it because they did not know how to cook it.

"From July 1979 to March 1980 I was invited to Japan for 9 months training at the Akita Prefecture Brewing Laboratory. During that time I also learned in detail the processes for making soy sauce, miso, and soyamilk. During that period I also got a chance to read *The Book of Tofu, The Book of Miso, Miso Production,* and *The Book of Tempeh* all of which helped me very much. I still have all those books. In 1985 I was invited by the Rotarians of Akita-Aomori to return to Japan for 1 month (Jan/Feb. 1985) to receive further technical training in making tofu, miso, soy sauce, soyamilk, moyashi (sprouts), koji, fruit fermentations for wine, etc. Today I produce tofu, soy sauce, and miso in my small factory in Kathmandu. I currently have an electric wet grinder imported from Kyoto, Japan, in 1976. My other equipment (a basket pressing machine and tofu presses) were all made in Nepal by Nepalese mechanics."

Accompanying this letter are 27 color photos showing the following: Vita Tofu in Nepal. Making koji with his wife in Nepal. Studying and making tofu, miso, and shoyu in Japan in 1980 and 1985. His business card notes: "Food Technology in Brewing from Japan. Products & Suppliers: Tofu (Vita), Soyamilk (Vitabean milk), Soya Curd, Soya Sauce, & Miso."

His Curriculum Vitae notes that he was born on 28 Dec. 1947, resides at 9/374 Bhedasingh, Kathmandu, and is married. Address: Founder and owner, Nepal Soya Industries, 9/374 Bhedashing, Jamaguthi, Kathmandu, Nepal.

6354. **Product Name:** 'Nnaise: A Soya Based Dressing [Garlic, or Plain].
Manufacturer's Name: Bute Island Foods Ltd.
Manufacturer's Address: 15 Columshill Street, Rothesay, Isle of Bute PA20 0DU, Scotland, UK. Phone: 0700 505117.
Date of Introduction: 1992. December.
Ingredients: Garlic: Soya milk, sunflower oil, cider vinegar, apple juice concentrate, garlic, sea salt, lemon juice, stabiliser (guar & xanthan gums). Note: The Plain flavor contains mustard flour in place of garlic.
Wt/Vol., Packaging, Price: 325 gm glass jar.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter from Haydn Jones. 1995. Sept. 5. "Potted history of Green Dragon Animal Free Foods and Bute Island Foods Ltd." Which see. Soyannaise was first sold in 1987 in several local shops in Wales. Cauldron Foods objected to the name Soyannaise, so in late 1988 or early 1989 the product was renamed 'Nnaise.

Label sent by Haydn Jones. 1995. Sept. 15. 6½ by 2½ inches. Green, black, and yellow on white. The Bute Island logo of a rayed sun rising appears at top center of label. "Free from animal products. No added sugar. Refrigerate after opening. Plain: Bute Island Foods 'Nnaise is a light and creamy dressing that will compliment many foods. It is very versatile and will mix well with other ingredients to make a variety of sauces and dressings, e.g. Seafood Sauce, Tartar Sauce, Coleslaw, Curry, etc. Mixed with mashed fish or Bute Island Foods Scheese, 'Nnaise makes a tasty toast topper."

6355. **Product Name:** Tofu, Soft Tofu, Fried Tofu, Marinated Pressed Tofu, Soybean Milk.
Manufacturer's Name: China Tofu.
Manufacturer's Address: 3222 Whipple Rd., Union City, CA 94587. Phone: 510-489-7288.
Date of Introduction: 1992. December.
How Stored: Refrigerated.
New Product–Documentation: Talk with Helen Raymundo. 1996. May 28. She is a registered nurse who was born and raised in the Philippines, now who lives in Fremont, and saw a television program about this tofu company recently.

Talk with Diana Lin, wife of Bo Ming Lin, one of the two owners of the company. This company started making tofu and the other four products shown above in December 1992. The two owners are brothers, Po Hsiang Lin and

Bo Ming Lin. Their products are sold at supermarkets throughout the San Francisco Bay Area, especially in San Jose, Oakland, and San Francisco. Letter (fax) from Dana Jacobi. 2000. March 13. "The best tofu I discovered on this trip comes from China Tofu in Hayward. It had texture and taste to die for." Talk with Steven Li of China Tofu. 2000. March 13. In Dec. 1999 the company moved to Hayward. The new address is: 1781 Addison Way, Hayward, California 94544. Phone: 510-782-9728.

6356. Cole, Candia Lea. 1992. Not milk... Nutmilks! Savor these creamy drinks that keep you deliciously slim and healthy. *Vegetarian Gourmet* (*Montrose, Pennsylvania*) No. 4. Winter. p. 50-54.
• ***Summary:*** The following nuts and seeds make good non-dairy milks: Nuts: Almonds (the favorite), Brazil nuts, cashews, filberts, peanuts, pecans, pine nuts, pistachio nuts, walnuts. Seeds: Flaxseed, pumpkin seeds, sesame seeds. Contains 10 recipes.

6357. *INTSOY Newsletter* (*Urbana, Illinois*). 1992. Processing course highlights opportunities for entrepreneurs. No. 44. p. 1-2. Dec.
• ***Summary:*** "A total of 15 people from 11 countries attended the recent INTSOY-sponsored processing short course... Major topics were extrusion technology, soy beverage processing, mechanical oil pressing, and soybean protein technology." For the first time, the majority of the participants were from private businesses. "All the participants had experience in established businesses, universities, or government soybean programs." They came from the following countries: Venezuela, USA, South Africa (3), Cameroon, Zimbabwe, Kenya, Uganda, Mozambique, Egypt, Sri Lanka (2), China (2). Address: Univ. of Illinois, Urbana-Champaign, 113 Mumford Hall, 1301 W. Gregory Dr., Urbana, Illinois 61801.

6358. *INTSOY Newsletter* (*Urbana, Illinois*). 1992. INTSOY launches major soybean processing project in Egypt. No. 44. p. 2-3. Dec.
• ***Summary:*** "INTSOY and Egyptian officials have launched a $1.9 million project to boost soybean utilization in North Africa and the Middle East. The objective of this two year program is to introduce Egyptian entrepreneurs to new soybean processing techniques.

"This effort, designated as the Soybean Utilization Technical Assistance Program, concentrates on the development of private sector enterprises by strengthening the new food processing technologies in the country. INTSOY's chief collaborator in the project is the Egyptian Ministry of Agriculture through the Food Technology Research Institute (FTRI) of the Agriculture Research Center, Giza, Egypt. Funding is provided by the National Agriculture Research Project through the U.S. Agency for International Development (USAID) in Cairo.

"Ahmed M. Khorshed and Nabih Ibrahim, who serve as director and deputy director respectively of FTRI, are the lead project directors in Egypt. Karl Weingartner serves as project leader...

"The project will result in the establishment of two model commercial pilot plants, one for the production of soymilk and another for high-protein, low-fat soy meal. FTRI will also establish a test kitchen, taste panel rooms and a classroom for instruction... As part of the project, at least 45 Egyptians will receive training at the University of Illinois...

"Egypt currently produces about 100,000 MT [metric tons] soybeans. Soybeans are grown in the area along the Nile River valley. The land devoted to growing soybeans is unlikely to increase because of the competition from cotton, which is essential to the country's export market. Egypt imports soybeans, soy oil, and soy meal from the United States."

6359. **Product Name:** [Alitey, and Monsoy (Soymilks)].
Foreign Name: Alitey, Monsoy.
Manufacturer's Name: Liquats Vegetals, S.A.
Manufacturer's Address: Ctra. de Vic, Km. 1,230, E-08553 Viladrau (Girona), Spain. Phone: +34-3 884 80 69.
Date of Introduction: 1992. December.
New Product–Documentation: Talk with Michael Makowski of DE-VAU-GE in Germany. 1993. Dec. 8. Active soymilk manufacturers include Liquats Vegetals S.A. in Viladrau (near Girona), Spain. They started about 1 year ago, make their soymilk from whole soybeans, and are a private company. Letter (fax) from Michael Makowski. 1993. Dec. 10. Gives the company address and phone number.

Letter (fax) from Xavier Vilacis of Liquats Vegetals, S.A. 1994. Jan. 27. The company's first two products, both types of soymilk, were introduced in December 1992; Alitey was sold to the general public and Monsoy was sold only to specialty shops that sell vegetarian- and health-food products.

6360. MYCAL Group (Nichii Company of America, Inc.). 1992. If anyone tells you to add water to your soy drink tell them they're all wet (Ad). *Whole Foods.* Dec. p. 13.
• ***Summary:*** "Can you believe it? There are reputable manufacturers going around saying that the best way to make light soy drink is to add water. We don't even want to think about what diluting soy drink with extra water would do to the taste.

"Obviously, they haven't heard about natural dehulled soybean flakes–the most natural way to make light soy drink (and tofu) there is. Without adding any chemicals, preservatives, or anything unnatural, natural dehulled soybean flakes are:

"Made fresh daily. Lower in fats (lipids). Lower in

calories. Lower in percentage of calories derived from fat. Higher in protein. Longer-lasting on your shelf. Better for the environment. Ecologically sound." Address: 23440 Hawthorne Blvd., Suite 140, Torrance, California 90505. Phone: 213-791-0010.

6361. *Natural Foods Merchandiser.* 1992. Key reasons to buy soy: Environmental, nutritional, economic. Dec. Soyfoods 2000 special supplement insert. p. 14.
• ***Summary:*** Economic: "Soy products are the fastest growing protein category in the natural products stores... The number-two selling health food standard keeping unit (SKU) in natural products stores is a soy product–soy milk. More new products in the soy category are introduced each year in natural product stores than in any other category. Many of these new products are convenience oriented–a bonus for customers on the go."

Address: Dep. of Food Science & Human Nutrition, Univ. of Missouri, 318 Clark Hall, Columbia, Missouri 65211.

6363. *SoyaCow Newsletter* (*Ottawa, Canada*). 1992. Child Haven ships more SC-20's to India. 1(4):1. Oct/Dec.
• ***Summary:*** "Six SoyaCows of the latest model were shipped to India by air on November 30, 1992. Child Haven, Maxville, Ontario, a registered charity in Canada, USA and India, is in the third year of CIDA funding for its Soymilk Cottage Industry project in India.

"The machines will be installed at six selected sites by Ankur Services of Hyderabad. They have already installed six Soya-Cow machines sent earlier."

6364. Tu-Bich-Thuy. 1992. The current status of soybean production in South Viet Nam. *Palawija News* (*Bogor, Indonesia*) 9(4):1-7. Dec.
• ***Summary:*** Contents: Soybean producing areas in South Viet Nam: Dong Nai Province (this area in eastern South Viet Nam supplies 25% of the nation's soybeans), Mekong River delta. Technical aspects of soybean production (in each of the two regions mentioned above): Land preparation, fertilizer use, varieties, weeds, pests and diseases, cropping patterns, mixed cropping with maize, soybean before tobacco, economic efficiency. Soybean utilization in Viet Nam: Utilization as food (80% of the crop is used to produce soybean curd, fermented soybean curd, soybean milk, soybean meal and small quantities of soybean oil), utilization for soybean glue, utilization as stock feed, utilization as fertilizer. Policies necessary for the development of soybean production in South Viet Nam: Government's role in soybean production. Production constraints. Research activities conducted to date by U.A.F. Concluding remarks. Future research activities of the U.A.F.

6365. Whiteman-Jones, Michael. 1992. Unraveling the soyfoods merchandising mystery: Selling techniques ultimately depend on store size, location and customer demographics. *Natural Foods Merchandiser.* Dec. Soyfoods 2000 special supplement insert. p. 8-11.
• ***Summary:*** The views of three industry experts–Steve Demos of White Wave, John Paino of Nasoya Foods, and Peter Golbitz of Soyatech–on the best approaches to marketing soyfoods in America.

White Wave boasts gross annual sales of about $5 million, roughly 80% of which come from natural products stores and 20% in conventional supermarkets. Demos wants to position soyfoods as a category. "Rather than integrate soyfoods with similar products–putting tofu dogs with hot dogs, for instance–he believes they should get their own section. Call it a protein case, or a healthy alternatives section, or even tack on a sign that says 'Phony foods sold here.'" Safeway, a mainstream supermarket giant, is experimenting with separate soyfoods sections in some of its stores, but most supermarkets practice integration. Natural products stores often merchandise soyfoods together in a separate section, and one such large store "can easily sell 30 to 50 times as much soyfoods as a supermarket."

Paino, who declined to reveal Nasoya's sales figures, sells soyfoods nationwide in natural products stores, supermarkets, and Asian markets. He favors integration rather than a separate protein section. He focuses on eye-catching labels, point-of-sale merchandising tolls such as shelf talkers, tear-away recipe cards, and in-store demonstrations. "Nasoya built its market by merchandising tofu in the produce section and has enjoyed solid sales and growth as a result."

Golbitz, a leading industry consultant, "has surveyed stores across the country about soyfoods merchandising. His conclusion: Integration works best for some stores, separate sections better for others. The major determining factors are store size, traffic, and demographics." The answer "has to be regionalized, localized, and individualized. Supermarkets and large-format natural products stores, for instance, generally have better luck with integration." Integration helps transitional customers. "Soy milk just doesn't seem as strange when its standing next to a carton of cow's milk, he says, and the marketing power of familiarity can't be underestimated... One thing Golbitz is certain of, however, is that soyfoods sales are going to increase whether the products are merchandised in a separate section or integrated."

6366. **Product Name:** Almond Cheeze (Cheeselike Product with Casein) [Cheddar Style, Mozzarella Style, or Garlic and Herb].

Manufacturer's Name: Wholesome & Hearty Foods (Product Developer-Marketer).
Manufacturer's Address: 1416 S.E. 8th St., Portland, OR 97214. Phone: 503-238-0109.
Date of Introduction: 1992. December.
Ingredients: Garlic & Herb: White Almond Beverage (water, brown rice syrup, almonds, lecithin, barley malt, natural vanilla flavor, sodium citrate, sea salt, carrageenan), casein [a milk protein], canola oil, salt, sodium and calcium phosphates, citric acid, natural flavoring, garlic & herb, carrageenan, vitamin A.
How Stored: Refrigerated.
Nutrition: Per 1 oz.: Calories 45, protein 7 gm, carbohydrates 2 gm, fat (monounsaturated) 1 gm, cholesterol 0 mg, sodium 230 mg potassium 20 mg. 23% calories from fat.
New Product–Documentation: *Statesman Journal* (Salem, Oregon). 1992. Nov. 11. "Almonds are used in non-dairy cheese." The product, which also contains casein and carrageenan, "is a boon for dieters and people who can't eat dairy products. Unlike tofu cheese, it melts [sic], and the Cheddar-flavor cheese actually tastes a lot like American-style cheese. The garlic and herb cheese is nowhere near as convincing.

Product Alert. 1992. Dec. 21. Almond Cheeze is a low-fat cheese that comes in 3 flavors.

Talk with industry observer. 1993. Jan. 28. This product and AlmondRella (marketed by Sharon's Finest in California) were both debuted at the same time, at the Natural Products Expo East in Baltimore, Maryland, in the fall of 1992, but they were developed independently. This product was first shipped in about Dec. 1992. There are many irregularities in the label, which implies the product is completely dairy free, the term "Cheeze" is illegal, the label says "soy free" but the product contains soy lecithin. The garlic and herb flavor contains 2 sweeteners and vanilla flavor. The product contains a very small amount of almonds.

Photocopy of Label. 1992. Feb. 12. 4.25 inches square. "Soy free. Lactose free. No cholesterol. Made with Non Dairy White Almond Beverage." RDI (Reference Daily Intake) figures are given.

6367. **Product Name:** Soya Milk (Made from Soy Protein Isolates) [Liquid, or Powdered].
Manufacturer's Name: Winer Industries.
Manufacturer's Address: P.O. Box 65480, Benmore 2010, Sandton, South Africa. Phone: (011) 802-8585.
Date of Introduction: 1992. December.
New Product–Documentation: Letter (fax) from B. Allan Winer. 1992. Dec. 21. "I have developed a soya milk manufactured from isolated soya protein and vegetable fat. This product tastes identical to cow's milk and has been very well accepted in the South African market... I also produce a powdered soya milk that has been well received in the ice cream industry and for hunger relief." Detailed product specifications are given for a "Liquid Soya Milk."

6368. **Product Name:** Fruit juices & Soja Drink.
Manufacturer's Name: Cebon.
Manufacturer's Address: Abidjan, Ivory Coast.
Date of Introduction: 1992.
Ingredients: Soybeans, water, flavor, sugar.
Wt/Vol., Packaging, Price: 1 liter carton box or 100 & 200 ml PE pouch.
How Stored: Refrigerated.
New Product–Documentation: J.L. Voisin. 1995, Oct. 3-5. Dairy like soyfoods in Africa: Evolution & perspectives. Paper presented at the Third Bi-Annual SoyAfrica Conference. 5 p. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma. Actimonde of Archamps, France, installed an Agrolactor (soymilk processing plant) at this company in 1992. This was the second commercial Agrolactor installed worldwide. This plant had planned to process pineapple juice and soy drinks, but in the end only pineapple juice was commercially successful.

Note: This is the earliest known commercial soy product made in Cote d'Ivoire (Ivory Coast).

6369. Mapendo, Bulangi. 1992. [Conditions for establishing a soymilk factory in Zaire]. Thesis at Bukavu High Institute of Management, Zaire. [Fre]*

6370. **Product Name:** Soy Supreme Spray Dried Soymilk, Premium Fiber Reduced Soymilk, Reduced-Fat Soymilk, 25 Soyamilk.
Manufacturer's Name: Minnesota Waxy (Marketer-Distributor). Made in Minnesota.
Manufacturer's Address: Div. of MWCG Export Co., P.O. Box 128, Hope, MN 56046. Phone: 1-800-342-6976 or 507-451-3316.
Date of Introduction: 1992.
Wt/Vol., Packaging, Price: 50 lb multi-wall kraft paper bag with poly liner.
New Product–Documentation: Ad in Soya Bluebook. 1992, p. 53. A table shows that each of these is a dry product containing 4% moisture.

Talk with Minnesota Waxy. 1993. Jan. 14. The company's main business is exporting waxy corn and soybeans (both regular and organic). Soy Supreme is made in Alexandria, Minnesota.

6371. Peace, R.W.; Sarwar, Ghulam; Touchburn, S.P. 1992. Trypsin inhibitor levels in soy-based infant formulas and commercial soy protein isolates and concentrates. *Food Research International* (*Ottawa, Ontario, Canada*) 25:137-41.
• ***Summary:*** Soy protein concentrates had levels of trypsin inhibitors intermediate to those in the raw soybeans and

soy protein isolates tested. "Infant formulas also varied with ready-to-feed forms generally having higher, and concentrates and powders lower levels of activity. Residual trypsin inhibitor contents of the infant formulas tested ranged from 3 to 28% of the highest levels measured in raw soy samples." Note: This 28% figure is surprisingly high! Address: 1-2. Health and Welfare Canada, Bureau of Nutritional Sciences, Food Directorate, Health Protection Branch, Tunney's Pasture, Ottawa, Ontario, Canada K1A 0L2.

6372. **Product Name:** Energy Balance (Powdered Drink Mix for Athletes) [French Vanilla, or Dutch Chocolate].
Manufacturer's Name: Pharma Chemie.
Manufacturer's Address: Syracuse, Nebraska.
Date of Introduction: 1992.
Ingredients: Incl. soy protein isolate, vitamins, minerals, fructose.
Wt/Vol., Packaging, Price: 45 oz cannister.
How Stored: Shelf stable.
New Product–Documentation: Soybean Quarterly (Lincoln, Nebraska). Vol. 1, No. 1. p. 3. "Home-grown power fuels strength beverage." Pharma Chemie is run by Miak Pieloch. This powdered drink mix contains soy protein isolate (about 36% by weight), vitamins, minerals, and carbohydrates in the form of fructose. The soy protein isolate was purchased from ADM. Pharma Chemie manufactures about 60 different products for human and animal health applications.

6373. **Product Name:** First Alternative (Soy-Based Beverage).
Manufacturer's Name: Protein Technologies International.
Manufacturer's Address: St. Louis, Missouri.
Date of Introduction: 1992.
New Product–Documentation: Michael Whiteman-Jones. 1992. Natural Foods Merchandiser. Feb. p. 19. This product is now being test marketed in Phoenix, Arizona.

6374. **Product Name:** [La Colina {Soymilk}].
Foreign Name: La Colina.
Manufacturer's Name: Protein Technologies International.
Manufacturer's Address: Venezuela.
Date of Introduction: 1992.
New Product–Documentation: Saundra Bottger. 1992. Republican (Wakefield, Nebraska). Sept. 3. "Soy Bits." A new soy milk has been introduced in Venezuela (the country's first) by "Protein Technologies International (PTI) and one of Venezuela's leading edible oil processors." "The goal was to supply a low-cost product for school lunch programs. Each 100 pounds of soy milk produced contains 25 pounds of vegetable fat from soyoil and 25 pounds of soy protein isolate."

6375. **Product Name:** Snow White brand Soymilk.
Manufacturer's Name: Pure Land Co.
Manufacturer's Address: 3456 Depot Rd., Hayward, CA 94545. Phone: 510-670-8621.
Date of Introduction: 1992.
How Stored: Refrigerated.
New Product–Documentation: Talk with Jim Pong, owner of Pure Land Co. 1998. Oct. 21. He delivers this soymilk to Safeway in the Bay Area.

6376. Atlas, Nava. 1992. Soups for all seasons: Bountiful vegetarian soups. New Paltz, NY: Adam Enterprises. 128 p. Illust. by Nava Atlas. Index. 21 x 18 cm.
• ***Summary:*** The witty literary aphorisms, quotations (with sources), and marvelous whimsical drawings that have become the author's trademark appear throughout this vegetarian cookbook. The recipes are arranged by season. The last chapter, accompaniments (p. 107-24) includes bread, muffins, biscuits, scones, croutons, and dumplings.

Soy related: Soymilk is given as an alternative in every recipe that calls for milk or low-fat milk (see p. 20, 28, 31, 34, 92, 123). Likewise, soy cheese is given as an alternative that calls for dairy cheese (see p. 16, 32, 114). "Natural soy sauce" is used to season many recipes (see p. 14, 80, 82, 119). Simple miso broth (with kombu and diced tofu {bean curd}, p. 13). Dashi with miso and vegetables (p. 13). Miso soup with winter vegetables (with wakame {Japanese sea vegetable}, shiitake mushrooms, etc., p. 62). Chinese cabbage and bean curd soup (with "½ pound tofu {bean curd}, cut into ½-inch dice," p. 80). Miso spinach soup with baby corn (with "¼ pound block tofu, cut into ½-inch dice," p. 81). Address: Author and illustrator, New Paltz, New York.

6377. Berk, Zeki. 1992. Technology of production of edible flours and protein products from soybeans. *FAO Agricultural Services Bulletin* No. 97. 178 p. [173 ref]
• ***Summary:*** Contents: Foreword. 1. The soybean: Background, production, marketing, agricultural characteristics, physical characteristics and morphology of the soybean, chemical composition (moisture, proteins, lipids, carbohydrates, minerals). 2. Utilization of soybeans: Utilization options for soybeans, whole bean utilization, the oil mill route (utilization of the oil fraction, utilization of the meal fraction). 3. Oil-mill operations: The expeller (operation principles, advantages and disadvantages of the expeller process, equipment), the solvent extraction process (operation principles, receiving and storage of soybeans, preparation for extraction, solvent extraction, post-extraction operations). 4. Edible soybean flours and grits: Introduction, definitions, composition and quality parameters (definition and classification of edible soy flours and grits, composition, quality standards), full fat soy flour and grits (production processes, utilization), defatted soy flours and grits (production processes, utilization). 5. Soybean protein

concentrates (SPC): Introduction, definition, composition, types, production processes (the aqueous alcohol wash process, the acid-wash process, heat denaturation/water extraction process), utilization (basic considerations, use in bakery products, meat products, other uses). 6. Isolated soybean protein (ISP): Introduction, definition, composition, types, production processes (conventional process, problems in conventional processing, alternative processes), utilization (meat products, seafood products, cereal products, dairy-type products, infant formulas, other uses). 7. Textured soy protein products: Introduction, spun-fibre based texturization, extrusion texturization, steam texturization, utilization (meat extenders, meat analogs, other applications). 8. Soymilk and related products: Introduction, composition and classification, production processes (the traditional process, the Soya Technology System (STS) Process, the INTSOY (Illinois) process, the Buhler Process for soy micro-powder), soymilk related products. 9. Tofu, tempeh, soysauce and miso: Introduction, soy sauce, miso, tempeh, tofu (Introduction, regular and silken tofu, kori-tofu, deep-fried tofu, fermented tofu). Appendixes: I. Standards and specifications. II. Organizations and government agencies. III. Manufacturers and suppliers of soybean processing plants and equipment. IV. Sample budget quotations for complete soy processing or soybean related food manufacturing plants. Address: Technion–Israel Inst. of Technology, Haifa, Israel.

6378. Cardenas, Danilo C.; Legaspi, Benjamin M. 1992. The status of soybean production and utilization in the Philippines. In: Increasing Soybean Production in Asia: Proceedings of a Workshop. 1992. Bogor, Indonesia: CGPRT Centre. 187 p. See p. 119-35. Held 21-24 Aug. 1990 at Phitsanulok, Thailand. [8 ref]

• ***Summary:*** Contents: Introduction. Production situation: Production trends, economics of soybean production, price trends, marketing of soybean. Philippine foreign trade situation: Soybean imports, soybean exports. Soybean utilization. Government policies/programs affecting the industry: Policies, programs. Major problems besetting the local soybean industry. Conclusions.

The soybean, also know locally as "utao," has become an increasingly important economic crop in the Philippines. Yet in 1987 (the latest year for which figures are given) only 5,698 tonnes (metric tons) were harvested from 6,490 hectares, having a value of 45,169,000 pesos. This represented only 0.02% of the total Philippine quantity of agricultural production, and only 0.05% of total farm area and value. Philippine soybean production peaked at 11,466 tonnes in 1982. Most of the country's soybeans are grown in the southern Mindanao region (72.1%), followed by northern Mindanao (10.0%) and central Mindanao (9.4%). Imports of soybeans and products have steadily increased since Philippine farmers do not produce enough soybeans to meet local demands; the value (FOB US$) rising from $61,989,000 in 1980 to $127,981,000 in 1988. The main imports are soybean meal (accounting for 86.87% of total import value), refined soybean oil (5.19%), soybeans (4.18%), and crude soybean oil (223%). Before March 1986 the National Food Authority (NFA) had the sole authority to import soybeans, but with the introduction of the trade liberalization program, importation has reverted to private firms. In 1989 the country's major sources of imported soybeans were China (which supplied 42% of total imports), Brazil (34%), and the USA (15%). Exports, which are negligible, have grown from $136,000 to 1,123,000 during the same period. The main exports are soy sauce (accounting for 91.03% of total value), salted and fermented soybeans [fermented black soybeans] (tausi, 3.34%), and soybeans (2.65%).

Table 7 lists and describes "Soybean-based food products popularly used in the Philippines." Fermented products include soy sauce, salted and fermented soybean (*tausi*), tempe (tempeh), soybean paste (miso), and soybean curd (fermented tofu cubes; a soft cheese-type product with a salty but mild flavor, eaten as a relish or cooked with meat and vegetables). Non-fermented products include soybean sprouts (*toge*), soybean cheese (*tokwa* [tofu]), Geerlings cheese (taho, soymilk curds; a sweet dessert or snack food for children), soybean milk, and roasted soybean (soy coffee).

"In terms of food usage, Filipinos, unlike other Asians, have not developed a taste for soya-based products... Most of the soy products available in the market are either made at home or in family-operated shops.

"It is interesting to note from the report of Co (1987) that small scale food processors engaged in manufacture of taho and tokwa preferred locally grown beans to imported ones. They claimed that local soybeans have a distinctive 'fresh' quality which imparts a finer and smoother texture to their finished products providing a longer shelf life than that produced from imported beans.

"Recently, several developments in the local economy have signaled a revival of interest in the use of soybean as food. In 1980 Nestle Philippines Incorporated began commercial production of powdered soymilk products and later a baby soya-cereal food formulation and a soya-based meat extender which is produced primarily for export to other Asian countries. Today Nestle Philippines, in co-operation with the Land Bank of the Philippines, the Regional Offices of the Department of Agriculture and PCARRD is encouraging local production of soybean and had adopted a no importation policy.

"Some years ago, the use of TVP also gained a permanent foothold in the local processing industry. It is used in the manufacture of ground meat products and as a meat extender. Almost all TVP used in the country is imported except for the locally manufactured full-fat TVP

which is being produced by the Vitarich Corporation, one of the biggest feed millers in the country. The company has built a full-fat soya processing plant capable of utilizing 900 MT [metric tons] of soybean per month. Unfortunately, all its raw soybean requirements are imported from the U.S. and China.

"Soybean flour, protein concentrate and protein isolates are the newest soya-based products and are now used extensively in the country for the formulation of meat emulsion products. All raw materials are imported and there is no local manufacturing capability at present."

"Programmes: As early as the 1970s, the government tried to involve itself to some degree in boosting national soybean output, despite the low priority it accorded to soybean in general. It was an involvement borne out of an urgent need to meet the growing requirements of the local feed milling and livestock industry, rather than of a need to address the high incidence of malnutrition among Filipinos. Accordingly, the government launched a number of programmes to improve soybean production, most of which failed to achieve their goals. At present, only the PCARRD-coordinated Soybean Pilot Production Programme continues to function. This programme was initiated in late 1983." Address: 1. Supervising Science Research Specialist, Philippine Council for Agriculture, Forestry, and Natural Resources Research and Development (PCARRD); 2. Dep. of Agriculture Bureau of Plant Industry, Los Baños National Crop Research and Development Centre. Both: The Philippines.

6379. Chainuvati, Chavalvut. 1992. Soybean production and utilization in Thailand. In: Increasing Soybean Production in Asia: Proceedings of a Workshop. 1992. Bogor, Indonesia: CGPRT Centre. 187 p. See p. 1-15. Held 21-24 Aug. 1990 at Phitsanulok, Thailand. [6 ref]

• ***Summary:*** Contents: Introduction: Importance of agriculture, establishment of the Department of Agricultural Extension, DOAE's functions & responsibilities, soybean production, soybean production area, crop seasons, cultivation practices, harvesting, vegetable soybean. Soybean production and consumption campaign: Previous activities, 1990 activities, new creative work. Conclusion.

Thailand produces about 650,000 tons of soybeans each year. Of this, the first-grade seed is used for either home food industries (150,000 tons) or for next season's seed and other grain use. The remaining 500,000 tons are second grade seed, which are crushed to yield soy oil and soybean meal. The 20% of production used for food is used as follows: Fresh soybeans (*toa rae*) sold in open markets. Home industries: Soymilk, curd (tofu), soy sauce, fermented soybeans (*tao chiew*), soybean sprouts, starch or protein isolate for hot dogs or other sausages, and crisps (*Tao Nao*). Soy milk industries: Instant powdered milk mixed with dairy milk, fresh soymilk in packages, fresh soymilk in open market restaurants. "No soy grain [soybean seeds] is exported, except for a small amount of first-grade soybean to Singapore and Malaysia for making the above mentioned food."

"Vegetable soybean: Vegetable soybean is becoming more popular in agri-business, as many frozen-product companies are showing interest in this new crop. Seed is imported from Japan and Taiwan. Production yield has been impressive in several regions of the country such as Chiangmai, Chachoengsao, Petchburi, etc. Two companies which are close to the extension offices, are Chiangmai Frozen Food Co. and Okada Corporation Ltd.

"The Department of Agricultural Extension plays the role of middleman between private companies and the farmer. Extension officers also transfer new information to the local farmers. Additionally, a national plan on vegetable soybean has been submitted to the policymakers and a future plan includes the promotion of domestic consumption."

"Previous activities: In 1972 the idea of a soybean campaign was first thought of by scientists in the Institute of Food Research and Product Development, Kasetsart University and the Department of Agricultural Extension. The major sponsor and co-creator, was the American Soybean Association. The co-institutes organized a grand dinner to open the campaign. Afterwards, the Department of Agricultural Extension encouraged Bangkok and provincial headquarters to organize exhibitions, field days and local broadcasting or publications on soybean production and processing. The home-economists from various provinces and organizations met for training and a seminar. The Food Institutes of Kasetsart University played a major role through publications, technology transfer, demonstrations and seminars."

"Since the opening of the soybean campaign, we assume that about 50 percent of the total population has received information about soybean. At least 10 percent of the population has started or increased soybean consumption, both industrial and home made products. This evaluation was carried out by the working group using stratified random sampling with a well-designed questionnaire.

"From general observation, soybean has become more popular than in the past. Urban people are now aware of soybean products and do not object to consuming soybean in their regular diet. Rural people, however, have very definite ideas about food and it is difficult to change their traditional food habits. The main target of our campaign was therefore to introduce soybean products into the daily food pattern of rural villagers." Address: Div. of Crops Promotion, Dep. of Agriculture Extension, Bangkok, Thailand.

6380. Cox, Peter. 1992. Why you don't need meat. Revised ed. London: Bloomsbury Publishing Ltd. [ix] + 278 p. Foreword by Linda McCartney. Illust. Index. 24 cm. [373* ref]

• ***Summary:*** A convincing argument against meat after the

advent of Mad Cow Disease in the UK.

Contents: Acknowledgements. Foreword by Linda McCartney. 1. Everything you're not supposed to know. 2. Apocalypse cow! 3. Pigtales. 4. The A to Z of good health. 5. Greener cuisine. 6. Everything you really need to know. 7. The composition of vegetarian foods.

Table of food groups for a vegan diet (p. 171), designed by Dr. Michael Klaper; the section on Legumes in this table mentions "Soy products (milk, tofu, tempeh, Textured Vegetable Protein, etc.). Recipes include: Scrambled tofu (with "1 x 297 gm {10½ oz} carton tofu, drained," p. 189). Tempeh marinade (p. 190). Tofu marinade (p. 191-92).

In Chapter 6, the subsection on beans states that they "are a marvelous source of protein, fibre, iron, the B vitamins and, when sprouted, vitamin C... beans can either look like beans or they can be transformed into one of the many delicious and nutritious bean products which supply the food value but not the same beany experience. Among these are soya milk, tofu, TVP (textured vegetable protein), tempeh, soya yogurt and ice cream, marinated tofu and soya cheeses of every description.

"Second, beans can be a musical vegetable if you don't follow the three golden rules of cooking them:" (1) Let them soak overnight in water. (2) "Don't cook beans in the soaking water, and never cook them without rinsing them." (3) Don't under-cook beans. They should be soft enough to squash against the roof of your mouth using normal pressure from your tongue. Address: First Chief Executive of the Vegetarian Society of the UK, England.

6381. Danjou, Jean-Luc. 1992. Les nouvelles recettes du soja: tonyu, tofu [New soya recipes: Soymilk, tofu]. Ingersheim 68000, Colmar, France: Sojaxa, Editions S.A.E.P. 64 p. Illust. (photos by Philippe Ducos). 22 cm. [Fre]*
• ***Summary:*** This very attractive cookbook contains 50 delicious-looking recipes using soymilk and tofu, developed by the author who is widely regarded as France's top chef. A photo accompanies each recipe. Address: France.

6382. Gregorson, Jon. 1992. The good earth. Vancouver, Toronto, Canada: Whitecap Books. viii + 211 p. Index. 23 cm. [30 ref]
• ***Summary:*** The entry for "Chinese green bean (*Vigna sesquipedalis*) (p. 50-51) states: "Chinese green beans are excellent very lightly steamed and served with oil and chopped garlic. They are also very good in a black bean sauce with rice or millet." The entry for "Soybean (*Glycine max*) (p. 166-67) states: The "importance of soybean products for vegetarians can scarcely be overemphasized. Such products include tofu or bean curd, tempeh, soy "milk," soy flour, and the various soybean sauces and pastes..." Tofu is perhaps the most important soybean product. Address: Eugene, Oregon.

6383. Jacques, Hélène; Laurin, D.; Moorjani, S.; et al. 1992. Influence of diets containing cow's milk or soy protein beverage on plasma lipids in children with familial hypercholesterolemia. *J. of the American College of Nutrition* 11(S):69S-73S. [23 ref]
• ***Summary:*** Soy protein seems to have anti-atherogenic properties. There is also the possibility that reliance on soy-based beverages may be beneficial in preventing coronary heart disease in children with familial hypercholesterolemia. Address: Dep. of Human Nutrition and Consumer Studies, Laval Univ., Lipid Research Unit, Quebec, Canada, and Protein Technologies International, St. Louis, Missouri.

6384. Lark, Susan M. 1992. The menopause self help book: A woman's guide to feeling wonderful for the second half of her life. Berkeley, California: Celestial Arts. 239 p. Illust. Index. 22 x 22 cm. [228* ref]
• ***Summary:*** This is a revised edition (but revised only in very small ways) of the 1990 edition, also published by Celestial Arts. The cover of both books is the same except that the words "Revised & Updated" appear near the top of the cover in the 1992 edition–but not on the title page. The title page and the total number of pages in both editions are the same. Page 234, the index, and the following page about the author are all slightly expanded. The page facing the inside rear cover, advertising various books published by Celestial Arts, has been completely revised. The rear cover has a more recent portrait photo of the author. The text related to soy is identical and on the same pages.

Susan M. Lark, M.D., born in 1945, "is a noted authority on women's health care and preventive medicine. Dr. Lark has been on the clinical faculty of Stanford University Medical School, Division of Family and Community Medicine, where she continues to teach. She has been the director of a number of clinical programs for women and worked with thousands of patients in her nearly twenty years of private practice... Dr. Lark is available for phone consultation at (415) 964-7268." Address: M.D., 101 First St., Suite 441, Los Altos, California 94022. Phone: 415-964-7268.

6385. Leneman, Leah. 1992. The tofu cookbook. Hammersmith, London, England: Thorsons–An imprint of HarperCollins Publishers. 127 p. Illust. Index. 24 cm.
• ***Summary:*** "These no-meat, no-dairy, cruelty-free recipes foster health and a healthy environment by replacing meat and dairy products in traditional recipes with tofu... and soy milk. From bouillabaisse and guacamole to lasagna, curries, and ice cream, here are delicious new takes on your favorite international recipes." The copyright page notes: "Many of these recipes previously appeared in *The International Tofu Cookery Book* and *Soya Foods Cookery.*

Contents: Introduction. Types of tofu. Other soya (soy) foods: Soya milk, soya yogurt, soya mayonnaise, bean

curd sticks or sheets, tempeh, soy sauce, miso, soya cheese (such as Veeze). Notes on recipes. Making tofu at home. 1. Soups and dips. Note: Ingredients for every recipe are given in both Imperial/Metric and American units. 2. Salads. 3. British- and American-style dishes. 4. Mexican-style dishes. 5. Mediterranean-style dishes. 6. Indian-style dishes. 7. Chinese- and other Far Eastern-style dishes. 8. Desserts. Recipe reference chart (for quick and easy recipes, recipes suitable for a single portion, and recipes for a dinner party).

Note: *Webster's Dictionary* defines bouillabaisse (pronounced bu-yuh-BAYZ, a term derived from the French and first used in 1855) as a highly seasoned fish stew made with at least two kinds of fish. See also: Potpourri. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

6386. Margen, Sheldon. 1992. The wellness encyclopedia of food and nutrition: How to buy, store, and prepare every variety of fresh food. New Nork, NY: Rebus. 512 p. Illust. Index. 26 x 21 cm.

• ***Summary:*** Soy-related information appears on the following pages: Soybeans, illustrated and described (p. 60). Sprouts, including soybean and adzuki bean sprouts (p. 158-60). "Soybean sprouts contain small quantities of toxins that can be harmful, if eaten in large quantities" [uncooked, see p. 356]. Legumes (p. 348-58), incl. soybeans, "soy nuts," soy milk. Legumes are "by far the best plant source of protein..." Per half 3½ ounces (½ cup cooked) soybeans contain more calories, fat, protein, iron, and calcium than any other of the 15 legumes listed (p. 351). How to avoid the gas problem. Tofu, miso, and tempeh (p. 357, sidebar). Non-dairy frozen desserts (made from tofu, p. 461). Soy cheese (p. 469). Soybean oil and margarine (p. 497-98).

Concerning vitamin K, see p. 16, 27, 30. The RDA for adults is 45-80 mcg. The body stores this fat-soluble vitamin for a relatively long time. Without this vitamin, blood would fail to clot. Preliminary studies suggest it also plays a role in maintaining strong bones in the elderly. Bacteria in the body's intestines manufacture about 80% of the vitamin K we need, and the rest comes from the diet. Deficiencies are almost unknown, and they are usually caused by an inability to absorb the vitamin, rather than an inadequate intake. Sources: Cabbage, cauliflower, spinach and other leafy vegetables, cereals, soybean oil and other vegetable oils. Address: School of Public Health, Berkeley, California.

6387. PKL–A company of the SIG Group. 1992. Innovations for the world of packaging. Linnich, Germany. 16 p. 30 cm. Manufacturer's catalog. [Eng]

• ***Summary:*** SIG is the Swiss Industrial Group (*Schweizerische Industrie-Gesellschaft* in Neuhausen, Switzerland), which acquired 75.1% of PKL In 1989, and the rest in 1991. PKL owns Combibloc, which makes aseptic packaging. Contents: PKL–an international group of companies. An idea grew into an industry–The combibloc aseptic carton. Combibloc aseptic gains new markets–bit by bit. PKL has a long tradition of concepts that work. PKL offers more than just packaging. PKL products create brand awareness and help rationalisation. PKL products that deliver what they promise. Directory of PKL overseas factories and offices. Address: PKL Verpackungssysteme GmbH, Rurstrasse 58, D-5172 Linnich, Germany. Phone: (24 62) 202-0.

6388. Shurtleff, William; Aoyagi, Akiko. comps. 1992. Marketing soymilk and soymilk products: Labels, ads, posters & other graphics. Lafayette, California: Soyfoods Center. 316 leaves. Illust. No index. 28 cm. Series: Marketing soyfoods.

• ***Summary:*** This book is a collection of black-and-white photocopies of materials ranging in date from 1976 to 1987. The books in this series, each a unique collection of graphic materials, are designed for a number of purposes: (1) To serve as a source of ideas, ingredients, inspiration, legal specifications, and basic guidelines for companies in the process of developing their own products, designing their own graphic materials, and conceiving their own marketing strategies. (2) To document the tremendous diversity of soyfoods products and the way that each is presented and marketed. (3) By arranging the materials in chronological sequence, to help document the development and history of new product categories and soyfood types, and with them the rise of the soyfoods industry and market in the Western World. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

6389. So, Yan-kit. 1992. Classic food of China (Continued–Document part II). London: Macmillan. xii + 387 p. [55 ref]

• ***Summary:*** Continued. The chapter on "Important cookery books" continues where the previous two chapters left off–with a fascinating, in-depth discussion of the history of Chinese cookery, but with more focus on books, including: (1) *Shi Jing* or *The Book of Food,* by Cui Yao who was executed for treason in AD 450. All but the preface has been lost. (2) *Qimin Yaoshu* or *Essential Skills for the Daily Life of the People,* by Jia Xie, written between AD 533 and 544. (3) *Shi Jing* or *Book of Food* by Xie Feng, written around 600 AD. (4) *Shi Pu* or *Book of Recipes* by Wei Juyan, written during the early 8th century. (5) *Zhonggui Lu* or *Records of Home Cooking* by Mrs. Wu, written during the Song dynasty (AD 960-1279). (6) *Shanjia Gongqing* or *The Simple Offerings of a Mountain Hermit* by Lin Hong, written in the 13th century. He is acknowledged as the first person who used the modern term jiangyou for soy sauce. (7) *Yinshan Zhengyao* or *The Principles of Correct Diet* by Hoshoi (or Hu Sihui in Chinese), written in about 1314-1321 (Yuan dynasty). (8) *Yunlin Tang Yinshi Zhidu Ji* or *The Food System of the Yunlin House* by Ni Zan (lived 1301-1374; Yuan dynasty). (9) *Suiyuan Shidan* or *The Cookery Lists of*

Suiyuan by Yuan Mei, published in 1792, five years before his death. A superb biography of Yuan Mei is given, together with a discussion of his influence on Chinese cookery.

The chapter on "Chinese festivals begins: "In 1912, the Republic of China officially adopted the Gregorian calendar used in the West, but the old lunar calendar, calculated more than four thousand years ago, has persisted, and it is according to this system that all the traditional Chinese festivals are celebrated to this day." The food served at each festival and the symbolism are described. The main festivals are: Chinese New Year, Double Fifth Festival (5th day of the 5th lunar month), Mid-Autumn Festival (15th day of the 8th lunar month).

Peking food stalls and hawkers offer "deep-fried bean curd triangles or squares... For breakfast they serve freshly made warm soybean milk, which is naturally sweet, to go with 'youtiao,' the deep-fried twin-strip dough that is mildly savoury, and not unlike an elongated doughnut, only more crispy to the bite and soft inside. Unless you are an early riser, you run the risk of having them been sold out before you get to the street corners where they are sold. Youtiao are arguably the most sought after and adored breakfast street food sold in China, though it is only in the north that they are twinned with soybean milk" (p. 80).

Many of the recipes in this book are based on those of classical Chinese cooks such as Yuan Mei and Su Dongpo. Soy-related recipes: Bean curd salad (p. 124). Bean curd skin rolls [yuba] (p. 140-42). Butterfly prawns in red bean curd cheese [red fermented tofu] (p. 147).

The chapter titled "Vegetarian dishes" (p. 170-90) begins with a history of vegetarianism in China. In the *Qimin Yaoshu* the chapter titled "Vegetarian food" contains China's first vegetarian dishes. Steamed wheat gluten or kaofu is a favorite in Shanghai (p. 176-77). Red-braised bean curd (p. 188-89). Sour and spicy bean curd cubes (p. 190).

The chapter on "Bean curd dishes" (p. 208-22) has recipes for: Homemade soy bean milk. Bean curd with scrambled egg. "Bless the old and the young." Braised bean curd puffs. Sautéed bean curd with spinach. Braised bean curd with bean sauces. Stir-fried bean curd with minced dried shrimp. Mapo doufu. Guotie bean curd. Green egg bean curd. Iced bean curd casserole [with frozen tofu].

Mussels in black bean sauce (p. 257). Steamed grey mullet with puréed black bean sauce (p. 274).

The glossary (p. 364-80) has entries for: Bean curd. Bean curd 'cheese,' red fermented [red fermented tofu]. Bean curd 'cheese,' white fermented. Bean curd puffs [deep-fried tofu puffs]. Bean curd skin [yuba]. Black beans, fermented [fermented black soybeans]. Broadbean paste or soy bean paste, spicy hot. Ground (crushed) yellow bean sauce. Hoisin sauce. Soy bean paste, hot. Soy sauce.

About the author (inside rear dust jacket): Born in her ancestral village of Zhongshan, Guangdong province, she grew up and was educated in Hong Kong, where she graduated from the University with a starred first degree in history. She went on to acquire a DPhil [PhD] at the University of London. She was married twice, first to a Chinese surgeon whom she divorced, and then (in 1962) to the American historian Briton ("Brit") Martin Jr., who was the great love of her life. Their son Hugo (to whom this book is dedicated) was born in 1965, when they were at Syracuse University, New York. The family later went to Poona in India, where Brit was taking up an academic post, but, tragically, he died of a brain tumour in 1967, while still only in his 30s.

Brit's death was a watershed in Yan-kit's life and, for several years, her efforts to pull herself out of the consequent slough of grief had only limited success. Indeed, in 1976 she suffered a breakdown. Her subsequent salvation lay in taking up food studies and cookery, of which she proved to be a brilliant teacher. / Address: England.

6390. Toussaint-Samat, Maguelonne. 1992. A history of food. Translated from the French by Anthea Bell. Malden, Massachusetts, and Oxford, England: Blackwell Publishers Inc. xix + 801 p. Illust. Index. 23 cm. [200* ref]
• ***Summary:*** A fascinating book of vast scope. The author's principal interest is in the medieval and Renaissance culture of Europe, in particular the domestic economy, food, and clothing. Thus the focus of the book is on Europe (especially France) and the Middle East. It also emphasizes the symbolism of foods.

Chapter 2, "The history of gathering," contains a section titled "Soya: the most widely eaten plant in the world" (p. 51-56), which is long on myth and symbol, and short on historical accuracy. It briefly discusses the following: Soya milk, soya flour, miso, jiang, soya sauce, soya oil and meal, bean-sprouts, tofu, dried soya beans.

Interesting chapters include: The history of meat (p. 93+). The history of cereals (p. 125+). The history of oil (p. 205+). The history of bread and cakes (p. 223+). An essential food: The history of salt (p. 457+). Spice at any price (p. 480+, including The great trading companies). The lure of sugar (p. 552). The potato revolution (p. 711+). The assurance of dietetics (p. 755, including an excellent "Chronology of dietary progress" from 2 million B.C. to the present, with detailed information on food developments during the paleolithic, mesolithic, and neolithic periods of the Stone Age). Address: Historian, journalist, writer, France.

6391. Tu, Bich-Thuy. 1992. The current status of soybean production in South Viet Nam. In: Increasing Soybean Production in Asia: Proceedings of a Workshop. 1992. Bogor, Indonesia: CGPRT Centre. 187 p. See p. 151-65. Held 21-24 Aug. 1990 at Phitsanulok, Thailand. [3 ref]
• ***Summary:*** Contents: Soybean producing areas in South Viet Nam. Technical aspects of soybean production. Soybean utilization in Viet Nam. Policies necessary for the

development of soybean production in South Viet Nam. Production constraints. Research activities conducted to date by U.A.F. Concluding remarks. Future research activities of U.A.F. Suggestions for future research.

"Utilization as food: In Viet Nam 80% of the soybean crop is used to produce soybean curd, fermented soybean curd, soybean milk, soybean meal and small quantities of soybean oil. Although many factories in Ho Chi Minh City produce sesame, groundnut and coconut oils, soybean oil remains uncommon." Address: Univ. of Agricultural Forestry of South Viet Nam (UAF), Ho Chi Minh Coty, South Viet Nam.

6392. **Product Name:** [Snack–Crisp Cannoli with Hazelnut Cream Filling].
Foreign Name: Snack–Cuor di Nocciola.
Manufacturer's Name: Valsoia S.p.A.
Manufacturer's Address: Via Iacopo Barozzi 4, 40126 Bologna, Italy. Phone: +39 051-659-9900.
Date of Introduction: 1992. January.
Wt/Vol., Packaging, Price: Two 15 gm snacks in a foil packet.
How Stored: Shelf stable, 9 month shelf life. Refrigerate after opening.
New Product–Documentation: Talk with Dr. Piero Bontempi and Laura of Valsoia. 1995. June 6. This product was introduced in 1992. Color leaflet and product specifications showing labels. 1995. "Valsoia–Bonta' e Salute. Lo Snack 100% Vegetale. Ricco in Fibra di Soia. No al colesterolo." The company uses the word "Soyamilk" as a registered trademark. The leaflet describes the product as "I croccanti cannoli ripiendi di morbida crema."

6393. **Product Name:** [Soymilk with Almonds].
Foreign Name: Soyamilk & Mandorla.
Manufacturer's Name: Valsoia S.p.A.
Manufacturer's Address: Via Iacopo Barozzi 4, 40126 Bologna, Italy. Phone: +39 051-659-9900.
Date of Introduction: 1992. January.
Ingredients: Water, soybeans (18%), raw cane sugar, whole sea salt.
Wt/Vol., Packaging, Price: 3 x 200 ml Tetra Brik cartons.
How Stored: Shelf stable, 9 month shelf life. Refrigerate after opening.
New Product–Documentation: Talk with Dr. Piero Bontempi and Laura of Valsoia. 1995. June 6. This product was introduced in 1992. Color leaflet and product specifications showing labels. 1995. "Valsoia–Bonta' e Salute. Soyamilk & Mandorla. La bevanda 100% vegetale. No al colesterolo." The company uses the word "Soyamilk" as a registered trademark. The leaflet describes the product as "Il latte di soia."

6394. **Product Name:** [Soymilk Pudding (Cocoa, Caramel, Plum Topping)].
Foreign Name: I Budini (Caramello, Ricoperto Prugna, Cacao).
Manufacturer's Name: Valsoia S.p.A.
Manufacturer's Address: Via Iacopo Barozzi 4, 40126 Bologna, Italy. Phone: +39 051-659-9900.
Date of Introduction: 1992. January.
Ingredients: Common to all: Soyamilk, sugar, starch, dextrose, sea salt. Individual: Caramelized sugar, pureed plums, cocoa, spices (*aromi*).
Wt/Vol., Packaging, Price: 2 x 115 gm tubs.
How Stored: Shelf stable, 6 month shelf life. Refrigerate after opening.
New Product–Documentation: Talk with Dr. Piero Bontempi and Laura of Valsoia. 1995. June 6. These products were introduced in 1992. Color leaflet and product specifications showing labels. 1995. "Valsoia–Bonta' e Salute. Il Budino. 100% vegetale. No al colesterolo." The company uses the word "Soyamilk" as a registered trademark. The leaflet describes the product as "I golosi dessert a base di Soyamilk."

6395. Weed, Susun S. 1992. Menopausal years: The wise woman way. Woodstock, New York: Ash Tree Publishing. xxiii + 204 p. Illust. Index. 22 cm. [soy ref]
• ***Summary:*** This book includes a discussion of the ways that tofu (p. 22, 102, 189) and soy milk (p. 24, 29) can be helpful for a woman passing through menopause. All information about soy is presented in a positive way. Address: Laughing Rock Farm.

6396. Yamuna Devi. 1992. Yamuna's table: Healthy vegetarian cuisine inspired by the flavors of India. New York, NY: E.P. Dutton / Penguin Books USA Inc. xv + 335 p. Index. 25 cm.
• ***Summary:*** This book won the 1993 James Beard Award for the best international cookbook. In the "Entrees" chapter, the author uses tofu as an alternative to cheese in a number of recipes. She notes (p. 187): "In recent years, creative restaurant and spa chefs have been redesigning the parameters for tofu use. Inspired by their work, I tried tofu for the first time last year. Today I have devised scores of recipes for it." The recipes include: Cheese cutlets with pineapple-ginger glaze and basmati rice (p. 190). Almond-crusted cheese sticks with lime-horseradish mayonnaise (p. 192-93). Cheese fricadelle with two chutneys (p. 193-95). Vegetable and cheese ramekins with yellow pepper-tomato sauce (p. 196-97). Tex-Mex cheese tostadas with ancho chili-tomato salsa (p. 197-98). Herb cheese galette with cashew crust and papaya-cilantro chutney (and optional soya milk, p. 199-200). Cauliflower and cheese croquettes with horseradish potatoes (p. 200-02). Four-vegetable tart with two pepper sauces (p. 202-05). White cheese-vegetable pipérade (p. 204-05). On page 295 is a recipe for Maple

Cream in which silken tofu can be used in place of low-fat cottage cheese. Address: Washington, DC.

6397. Bean Supreme Ltd. 1992? Soy revolution brings happiness (Leaflet). Penrose, Auckland, New Zealand. 2 p. Undated. 28 cm.
• ***Summary:*** The front of this color, 1-page, 2-sided leaflet shows the company's vacuum packed firm tofu [launched 1984], Nine 'n' Healthy Soy Milk [launched March 1989], Tofu Luncheon [new, launched Nov. 1991], and Lite Licks frozen dessert [launched Oct. 1986]. The company describes itself as "New Zealand's own soy innovator"–a very apt description.

The back side discusses Tofu Luncheon, and gives a nutritional analysis and 2 recipes. Address: P.O. Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. Phone: 09 579 0592.

6398. Imagine Foods. 1992? Rice Dream: Non-Dairy Beverage (Leaflet). Palo Alto, California. 3 panels each side. Each panel: 22 x 9 cm.
Address: 350 Cambridge Ave., Suite 350, Palo Alto, California 94306. Phone: 415-327-1444.

6399. Roller, Ron. 1993. Low-fat soymilk (Interview). *SoyaScan Notes.* Jan. 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Two companies in the USA are making or selling a low-fat spray-dried soymilk: Clofine (Linwood, New Jersey), and Minnesota Waxy (Hope, Minnesota). They run whole soybeans through an extruder to press out the oil, dry and grind the cake, reconstitute the meal with water, make soymilk, then spray dry it. Ron has found that the flavor of these products is not very good, but that could be a result of their being spray dried. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6400. Roller, Ron. 1993. American Soy Products' research on amazake and its use with soymilk (Interview). *SoyaScan Notes.* Jan. 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron is actively working on making amazake. He ordered an updated copy of Soyfoods Center's book on Amazake. He is getting fresh koji from Takara Sake USA Inc. in Berkeley.

Confidential update: 1993 Sept. 4. Eden Foods will be introducing 2 new beverages in one week (Sept. 10-12) at the Natural Products Expo East: Eden Rice (a non-dairy rice milk) and Rice-Soy Milk. Both are superior products using Lundberg organically grown rice, and the Rice-Soy milk is much better nutritionally that Rice Milk on its own. They will be using real traditional rice koji in both but will not be making the koji themselves. To make koji in truck-load quantities weekly takes a lot of skill. There are 10 sake manufacturers in the USA and one of these (located not too close to Eden Food's soymilk factory) will be making Eden's koji. The whole process is just beginning and it has required the sake company to greatly expand their operations. This has been going on for a year and the expansion is completed. Ron can imagine that eventually Eden will make the koji themselves.

Both of the new beverages will be packaged in Tetra Brik cartons. The rice milk has been a very difficult product to develop technically; the solids tend to settle out. Imagine Foods and Grainaissance both use a lot of oil and a whiter (more refined rice). They also centrifuge out the fiber and protein, leaving basically starch and sugars–according to the Imagine Foods patent. Making real koji into a beverage that is stable and consistent is a very significant task. Ron's greatest concern now is how Imagine Foods reacts, since they have patented a process related to making a beverage from rice. They have sent Eden letters threatening a lawsuit; but Imagine Foods does not know anything about how Eden will be making their koji or their beverages. If Imagine Foods continues to pursue the path they are now on, Eden might have to tell Imagine Foods' customers how Imagine Foods makes its product–based on the public information in their patents. Most consumers have little idea how Imagine Foods' beverage is made. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6401. Ochoa, Pamela. 1993. Re: Advertisement in Natural Foods Merchandiser. Letter to William Shurtleff at Soyfoods Center, Jan. 28. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Dear Mr. Shurtleff: Thank you for responding to our advertisement in the December issue of Natural Foods Merchandiser.

"According to research at Iowa State University, Department of Food Science and Human Nutrition, manufacturers of conventional soy milk and tofu can obtain up to a 32% reduction in fat and no loss in protein, when using our natural dehulled organic soybean flakes.

"White Wave Soy Products, Boulder, Co., is introducing the world's first 'Reduced Fat' tofu at the Natural Products Expo, Anaheim, CA, February 18-21. However, you can take delivery in January. Please contact Jill in Customer Service, (303) 443-3470 for more information.

"See us at the Natural Products Expo, Anaheim, CA, February 18–21, Booth #743A, or call us at the above listed number for more information.

"Very best regards, Soy Products Division." Address: Assistant Manager, Nichii Company of America, Inc., 23440 Hawthorne Blvd., Skypark 2, Suite 140, Torrance, California 90505. Phone: 310-791-0010.

6402. **Product Name:** Solait (Powdered Soy Beverage)

[Original flavor].
Manufacturer's Name: Devansoy, Inc. Renamed Devansoy Farms by July 1994.
Manufacturer's Address: 202 West 7th St., P.O. Box 885, Carroll, IA 51401. Phone: 1-800-747-8605.
Date of Introduction: 1993. January.
Ingredients: Aug. 1994: Soybeans, brown rice syrup, sunflower oil, calcium carbonate, sea salt, natural flavor, lecithin.
Wt/Vol., Packaging, Price: 3.8 oz foil pack makes 1 quart. 26 oz can makes 6 quarts. Or 60 lb nitrogen flush bag.
How Stored: Shelf stable.
Nutrition: Per 1 oz. powder or 8 oz. liquid: Calories 135, protein 6 gm, carbohydrates 13 gm, fat 7 gm, sodium 145 mg, calcium 50 mg.
New Product–Documentation: This product was introduced in May 1987 by Miller Farms Food Co. located at 314 Main St., Cedar Falls, IA 50613. The company later changed its name to Solait International Inc. By April 1992 the company name was Solait International Ltd., P.O. Box 885, Carroll, Iowa 51401.

Ad (full-page, black-and-white) for "Solait Powdered Soymilk" in Soya Bluebook. 1993. Sept. p. 58. The company name is now given as Devansoy, Inc. located at 202 West 7th St., P.O. Box 885, Carroll, Iowa 51401. Phone: 1-800-747-8605. Talk with Bev Tierney of Devansoy. The company changed its name from Solait International Inc. to Devansoy, Inc. in Jan. 1993. The president is now Elmer Schettler. They make only one product–Solait Powdered Soy Beverage–however in about June 1992 they started selling soy flour, tofu powder, and textured soy flour made by other companies.

Ad (¼ page, blue, black, and white) in Natural Foods Merchandiser. 1994. July, p. 16 and Aug., p. 12. "New. Delicious, nutritious, and 100% Devansoy." the product advertised is Solait "Milk of the Sun" instant soy beverage, from Devansoy Farms, Carroll, Iowa. For information call 1-800-747-8605.

Product with Label sent by Beverly Tierney of Devansoy Farms. 1994. Aug. 22. Stand-up foil retort pouch containing powdered soymilk. 3.5 by 6.75 inches. Dark blue, light blue, orange, green, and black on white. Logo shows a farmhouse and barn in a field. with the sun rising over a hill. "Solait. 'Milk of the Sun.' Instant soy beverage. Devansoy Farms, Carroll, Iowa. Original flavor. Quick. East. Delicious. Low fat. Cholesterol free. Lactose free. 100% natural. Makes 1 quart."

News release sent by Devansoy Farms. 1994. Aug. 22. "More than a milk substitute, Solait 'Milk of the Sun' is a tasty ingredient for all cooking and baking needs." Elmer Schettler is president of Devansoy Farms.

Recipe booklet titled "Cooking with Solait" sent by Devansoy Farms. 1994. Aug. Contains 8 pages of recipes by various chefs.

6403. **Product Name:** [Alitey (Soymilk with Cereals, or Cocoa), and Monsoy (Soymilk with Calcium, Cereals, or Cocoa)].
Foreign Name: Alitey, Monsoy.
Manufacturer's Name: Liquats Vegetals, S.A.
Manufacturer's Address: Ctra. de Vic, Km. 1,230, E-08553 Viladrau (Girona), Spain. Phone: +34-3 884 80 69.
Date of Introduction: 1993. January.
New Product–Documentation: Talk with Michael Makowski of DE-VAU-GE in Germany. 1993. Dec. 8. Active soymilk manufacturers include Liquats Vegetals S.A. in Viladrau (near Girona), Spain. They started about 1 year ago, make their soymilk from whole soybeans, and are a private company. Letter (fax) from Michael Makowski. 1993. Dec. 10. Gives the company address and phone number.

Letter (fax) from Xavier Vilacis of Liquats Vegetals, S.A. 1994. Jan. 27. The company's first two products, both types of soymilk, were introduced in December 1992; Alitey was sold to the general public and Monsoy was sold only to specialty shops that sell vegetarian- and health-food products. In January 1993 the company introduced Alitey with cereals, and cocoa, and Monsoy with calcium, cereals, and cocoa.

6404. Ono, Tomotada; Katho, Shoji; Mothizuki [Mochizuki], Kazunori. 1993. Influences of calcium and pH on protein solubility in soybean milk. *Bioscience, Biotechnology, and Biochemistry* 57(1):24-28. Jan. [14 ref]*
Address: Gifu Woman's Univ., 80 Taromaru, Gifu 501-25, Japan.

6405. **Product Name:** Tofu, Soymilk, Tortillas with Okara, and Whole Wheat Bread with Okara.
Manufacturer's Name: Soyane.
Manufacturer's Address: Nueva Goverdhana, km. 34 Carretera hacia Antigua, Santa Lucia Milpas Altas, Guatemala. Phone: 030-7179 or 030-7181.
Date of Introduction: 1993. January.
New Product–Documentation: Letter from Lorenz Stuber and Ellen Figueroa de Stuber. 1993. Aug. 20. Please see this letter for details on their work with soya, Soyane, and Comida Para Todos in Guatemala. Their work with soya in Guatemala began in 1985 with a vegetarian restaurant in Panajachel.

Follow-up response to questions from William Shurtleff of Soyfoods Center. 1993. Oct. 9. Since 1985 they have known about the soy dairy (which Plenty Canada had helped to establish) in San Bartolo, Solola, Guatemala. In July 1985 they started buying tofu and soy ice cream from San Bartolo for their vegetarian restaurant in Panajachel. They fried the tofu and sold it at the restaurant. In July 1989 they started to make tofu, soymilk, tortillas with okara, whole wheat bread with okara, and soyaburgers. In January 1993

they established Soyane and started to sell the first four of these foods, which they make at Nueva Goverdhana, km. 34 Carretera hacia Antigua, Santa Lucia Milpas Altas, Guatemala. Phone: 030-7179 / 030-7181. They are still working on developing labels; a sample of a generic label (which can be used on any of their soyfood products) is enclosed. As of October 1993 they sell the following amounts of each soyfood product: Tofu 42 kg/week (sold mostly to Korean people), soymilk 350 liters/week (distributed to 150 school children), tortillas with okara 15 kg/week (distributed to the people at the dump), and whole wheat bread with okara (110 kg of which is distributed to school children).

A Label sent by the Stubers is 3 by 2 inches, green and black on yellow. The largest letters say "Soyane." Across the top and bottom are written: "Comida para todos. Vivir sano es divirtido." A cartoon figure of a soybean is dancing and waving its arms. A soybean plant grows out of a round yin-yang (*t'ai chi*) symbol.

6406. Weiss, Rick. 1993. What's the matter with milk? *Health* (*San Francisco, California*) 7(1):18, 20. Jan/Feb.
• ***Summary:*** Problems include: (1) 71% of milk samples taken from 5 Eastern U.S. states contained significantly too little or too much vitamin D (10% were too high, 61% too low); Too much vitamin D causes calcium to accumulate in the blood and urine, and can eventually lead to kidney failure. (2) Research has shown that milk can cause diabetes in some individuals. (3) "The U.S. Accounting Office released a report concluding that U.S. dairy farmers are routinely treating their herds with dozens of drugs not approved for use in milk-producing cows. Some of these drugs can cause allergies in people; others, like the antibiotic sulfamethazine, may cause cancer. But despite repeated promises to get on the ball, the Food and Drug Administration hadn't even begun to test for these contaminants in milk. No one yet knows if the drugs are causing health problems in milk-drinkers.

"To make matters worse, the revelation rekindled a smoldering controversy over the use of bovine somatotropin (BST), a genetically engineered hormone that makes cows give more milk and is being used experimentally at a few dairies across the country..."

Dr. Benjamin Spock recently proclaimed that "no infant should be fed cow's milk during the first year of life...

"Experts today agree that cow's milk can cause severe iron-deficiency anemia in infants, not only because it's lacking in this critical element but because it can cause iron-depleting intestinal bleeding. According to the American Academy of Pediatrics, the only appropriate beverage for infants up to 12 months of age is breast milk or iron-fortified infant formula" [including soy-based infant formulas].

Among the most outspoken critics of milk is Frank O. Oski, director of pediatrics at Johns Hopkins University School of Medicine in Baltimore, Maryland. "'Cow's milk is for calves,' Oski says flatly, 'not for people.' Oski notes that no other species, with the exception of the domesticated cat, continues to drink milk after tripling its birth weight (about one year for humans). And most people in the world, including a fifth of all Americans, lack the enzyme that breaks down the milk sugar lactose, leaving them gassy and bloated when they drink it.

"'There are three things you need to know about milk,' Oski says. 'Number one, nobody needs milk; there are plenty of other sources for everything that milk provides. Number two, certain people are harmed by milk–by allergies, for example. And number three, most people in the world do not drink milk.'"

A table shows that 1½ oz. of firm tofu provides the same amount of calcium as one glass of milk.

Note: This is the earliest document seen (June 2001) that mentions "BST" or "bovine somatotropin."

6407. Tripp, Debbie. 1993. Re: Soya Milk Cottage Industry Phase III. Enclosed cheque for $18,925. Letter to Mrs. Bonnie Cappuccino, Director and President, Child Haven International, R.R. #1, Maxville, Ontario K0C 1T0, Canada, Feb. 25. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Enclosed please find a cheque for $18,925.00 representing the second payment for the above mentioned project, as stated in the Letter of Agreement (Annex C).

Note: This letter shows that Child Haven got funding for at least three phases of their soymilk project. Address: Senior Program Officer, FIT–Ontario International Development Program, 1262 Don Mills Rd., Suite 200, Don Mills, Ontario M3B 2W7, Canada. Phone: (416) 449-3817.

6408. **Product Name:** [Soia L {Soymilk}].
Foreign Name: Soia L.
Manufacturer's Name: ALICONF srl.
Manufacturer's Address: S/s Cassia km, 46500 Sutri, Viterbo, Italy.
Date of Introduction: 1993. February.
Wt/Vol., Packaging, Price: 1 liter polyethylene bottles.
How Stored: Refrigerated.
New Product–Documentation: Spot in SoyaFoods. 1993. Winter. p. 5. "Soya milk from ALICONF." This lightly sweetened organic soya milk is available in supermarkets.

6409. Badani, Bernard. 1993. Edible soybean mission report, Korea, Indonesia, Taiwan, February 1993. Ottawa, Ontario, Canada: Agriculture and Agri-Food Canada. iii + 14 + 17 p. 28 cm. Spiral bound.
• ***Summary:*** Contents: Foreword. Acknowledgements. Mission members: Tino Breuer, Ron MacDougall, Dr. Gary Ablett, Jim Lowe, Bernard Badani. 1. Visit to Korea: Executive summary, report, conclusions, recommended follow-up. 2. Visit to Indonesia: Executive summary,

report, background, price structure, quality requirements, conclusions, recommended follow-up. 3. Visit to Taiwan: Executive summary, report, background, price structures, conclusions, recommended follow-up. Appendix A. List of contacts (photocopies of business cards of people met on the trip). List of 26 invitees for Canadian soybean seminar in Seoul (15 Feb. 1993), including academic researchers, government, soybean crushers, soysauce association, tofu association, food-related media, soybean milk manufacturers (Kwangja General Foods Co., Namyang Dairy Co., Lotte-Chilsung Beverage Co., Samyuk Foods Co., Dong-A/Otzka Co., Dr. Chung's Foods, See Joo Industry Co.). List of participants for Indonesia and business cards from Indonesia (incl. Primkopti, Sarpindo, Ikapti, Yeo's-P.T. Salim Graha). Business cards from Taiwan. Address: Oilseeds Div., Grain Marketing Bureau, Grains and Oilseeds Branch, Agriculture Canada, Ottawa.

6410. **Product Name:** [Soja Tonus {Soymilk Dessert}].
Foreign Name: Soja Tonus.
Manufacturer's Name: Laiterie Ladhuie.
Manufacturer's Address: Montayral, 47500 Fumel, France. Phone: +33 53 40 91 91.
Date of Introduction: 1993. February.
Ingredients: Soymilk, rice, sugar, maize starch, agar-agar, natural vanilla flavoring.
Wt/Vol., Packaging, Price: 4 x 100 gm pots.
How Stored: Refrigerated, 21 day shelf life.
New Product–Documentation: Spot in SoyaFoods. 1993. Winter. p. 5. "New soya and rice dessert." Should be refrigerated at 6ºC.

6411. Murphy, Patricia A.; Wang, Huei-ju. 1993. Total genistein and daidzein content of soy foods. *FASEB Journal* 7(4, Part II):A742 (Abst. #4283).
• ***Summary:*** "The major soy isoflavones, genistein and daidzein, inhibit tyrosine protein kinase, are weakly estrogenic, have moderate antioxidant activity and may have an anticarcinogenic effect by preventing oxidative damage." Heat processing changes the distribution of glucosides but not the total isoflavone content. Twenty commercial soyfoods and 10 institutionally prepared foods were evaluated for isoflavone content by HPLC photodiode array detection. Total genistein and daidzein ranged from 20 to 1,550 ppm and 0 tot 750 ppm (dry weight basis), respectively. High protein soyfoods, such as whole dry soybeans, textured soy flour (TVP), tempeh, and soymilk yielded total isoflavone contents that may provide an anticarcinogenic dose (0.7 to 2.0 mg per gm of food). Address: Food Science and Human Nutrition, 2312 Food Sciences Building, Iowa State Univ., Ames, Iowa 50011.

6412. **Product Name:** Soy Gourmet (Soy Cheese with Casein) [Cheddar, Mozzarella, Chili Pepper, or Herbs & Garlic]. Previously named Fromage de Soy (Feb. 1992).
Manufacturer's Name: Nutrition Specialties International, Inc.
Manufacturer's Address: 1660 Chicago Ave., Suite P-11, Riverside, CA 92507. Phone: (909) 781-4401.
Date of Introduction: 1993. February.
Ingredients: Soy base (organic soybeans, filtered water), canola oil, casein, sea salt, calcium phosphate, sodium phosphate, natural non-dairy flavors, citric acid, carrageenan.
Wt/Vol., Packaging, Price: 8 oz. or 5 lb.
How Stored: Refrigerated.
Nutrition: Per 1 oz.: Calories 50, protein 5 gm, carbohydrates 5 gm, fat 1 gm, cholesterol 0 mg, sodium 198 mg, potassium 15 mg, calcium 170 mg.
New Product–Documentation: Two-page leaflet from Natural Products Expo West. 1993. Feb. "New update effective January 1993." The company's president, Patrick Cochran, has over 23 years experience in the specialty foods industry. Note: According to one industry observer, this product is made by Phil Leisac & Sons of Portland, Oregon.

Leaflet (8½ by 11 inch, brown and black on beige) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 1994. March 10-13. "Soy Gourmet. Simply the best! The gourmet quality non-dairy cheese alternative made from organically grown soybeans... Less than one ounce of fat per serving." "We do not use spray-dried or modified tofu products as many of our competitors do." The company address has changed to Suite P-13 from Suite P-11. The ingredients have also changed–more casein is used than canola oil: Soy base (organic soybeans, filtered water), casein [dairy milk protein], canola oil, sea salt, calcium phosphate, sodium phosphate, natural non-dairy flavors, citric acid, carrageenan. A new size is 20 lb. Note: This brochure claims that the product is non-dairy even though it uses casein as a major ingredient.

Talk with Patrick Cochran, owner of NSI. 1994. April 19. This product line was launched in March 1993 at the Natural Products Expo West in Anaheim. It no longer claims to be non-dairy. It is sold refrigerated. Patrick was formerly with Loma Linda Foods. This is still the company's only product line. The source of the company's soymilk is confidential.

Talk with Kevin Cross of Stonecrest Natural Foods. 1998. Nov. 13. Kevin now owns this Soy Gourmet product line. He bought the company–a small L.A. firm that just didn't have the finances to get the product going. They were about to go under, so Kevin's company basically just bought the inventory and the label/brand. They had it in some supermarkets in the Los Angeles area. It has always been sold mostly in the Los Angeles area, in Ralph's, Whole Foods, Wild Oats, Pavilions, etc., and at Andronico's in northern California. It has an upscale-looking label with gold foil around it. He plans to introduce a "Rice Gourmet" line of cheese alternatives next month.

6413. Perez, Oswaldo. 1993. Helado de soya [Soy ice cream]. *La Era Agricola* (*Merida, Venezuela*). Jan/Feb. No. 15. [Spa]
• ***Summary:*** Describes how to make soy cream at home–5 recipes. Cites: Tofutti and other soy ice creams. Vol. 2 by William Shurtleff and Akiko Aoyagi, The Soyfoods Center. Address: Granja Tierra Nueva, Aldea San Luis, La Azulita, C.P. 5102, Estado Merida, Venezuela.

6414. Tetra Laval Food. 1993. We helped you process it–Alfa-Laval Fats & Oils. Now we can help you package it–Tetra Pak. In short, the total supplier–Tetra Laval Food. *Oils & Fats International* No. 1. Back cover.
• ***Summary:*** Effective 1 Jan. 1993 Tetra Pak and Alfa-Laval merged to form the Tetra Laval Group. The Group, which contains four industrial groups, has sales of about $8.5 billion, with some 35,000 employees worldwide. One of these four groups is Tetra Laval Food, and under it is Alfa-Laval Fats & Oils (based at Tumba, Sweden), formerly named Alfa-Laval Fats & Oils Systems.

6415. Kanazawa, Takemichi; Tanaka, Makoto; Uemura, Tsugumichi; Osanai, T.; Onodera, K.; Okubo, K.; Metoki, H.; Oike, Y. 1993. Anti-atherogenicity of soybean protein. *Annals of the New York Academy of Sciences* 676:202-14. March 15. [18 ref]
• ***Summary:*** "Numerous papers have been published (Sirtori et al. 1977; Descovich et al. 1980) indicating that the proteins isolated from soybeans are effective in preventing the risks of atherosclerosis" [Note: Atherosclerosis is a condition in which fatty material collects along the walls of arteries. This fatty material thickens, hardens (forms calcium deposits), and may eventually block the arteries. Atherosclerosis is a type of arteriosclerosis. The two terms are often used to mean the same thing].

Because the taste of extracts made from *raw* soybeans is unpleasant, it has been difficult to make soy protein drinks without sugar, "which is very injurious to the arterial wall" (Kanazawa et al. 1984; Bunag et al. 1983).

Okubo et al. (1992) and Kudou et al. (1990) have devised a method for removing the undesirable taste from the extracts of raw soybeans.

Soycream was found to reduce the size of low density lipoprotein (LDL) particles and soymilk protected LDL from peroxidation.

Note: This paper is from: The Third International Conference on Nutrition in Cardio-Cerebrovascular Diseases, edited by Kyu Taik-Lee, Yasaburo Oike, and Takemichi Kanazawa. Address: 1-5. Second Dep. of Internal Medicine, Hirosaki Univ. School of Medicine, 5 Zaifu-cho, Hirosaki city, Aomori prefecture, Japan 036.

6416. Chen, Zinie. 1993. At Twin Oaks commune, soybeans turn a profit. *Daily Progress* (*Charlottesville, Virginia*). March 22.
• ***Summary:*** Twin Oaks commune in the hills of Central Virginia is turning organically grown soybeans into tofu–and profits. About 15 of Twin Oaks residents work making tofu part time. Jon Kessler, marketing director for the tofu operations, says that they started out making 700 pounds of tofu a week; now they are making 2,300 lb/week. In 1992 the tofu business had sales of $65,000 with profits of $27,000. Gross sales have almost doubled since 1990.

Twin Oaks buys its soybeans from an organic grower in Arkansas, and sells most of its products through two distributors. The University of Virginia buys tofu for its cafeterias. In addition to cakes of plain tofu, Twin Oaks also makes bean dips, burritos, tofu salad, soy milk, and herb-seasoned tofu. A photo shows "July" of Twin Oaks taking freshly made tofu out of a cooling bath. Address: Associated Press.

6417. Jain, Manoj. 1993. New developments with soyfoods in India (Interview). *SoyaScan Notes.* March 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In June 1992 the book that he and his mother wrote, *Melody of India Cuisine,* was published in the USA. Since that time they have been doing many soyfoods demonstrations and promoting their book in the Boston area. In about 1985-86 he did field research and wrote up his results in the *Food and Nutrition Bulletin* (United Nations University). He and his mother are still doing a lot of work with soyfoods in India. He plans to travel to India next week. He has been involved with Plenty USA via Charles Haren and with a very large Indian women's organization named BGMS (Bharatiya Grahmeen Mahila Sangh; Indian Rural Women's Organization) In April 1992 USAID gave BGMS funding of $300,000 for a 3-part nutrition project in India: (1) Basic health care needs in 50 villages; (2) Training other voluntary organizations to do health-related work; and (3) Introduce soyafoods into the area by doing demonstrations and by developing a small-scale commercial industry to make soyfoods such as tofu, soymilk, biscuits, etc. 3-4 people will work together to make enough foods for 8-10 nearby villages.

An industrialist whose last name is also Jain, N.N. Jain of Prestige Foods in Indore, is a very close friend of Manoj and his mother, and he has made a lot of money from soya. His company is now multinational. Prestige Foods is giving technical assistance to the project and is trying to obtain a SoyaCow ($3,000–$4,000, made by ProSoya of Ottawa, Canada) for the project. Prestige Foods presently makes biscuits containing soya flour which are sold at a small markup to schools. Indore is the site of the USAID project, of Indore Foods, and of Manoj's home town. Manoj is trying to convince USAID to allow the project to buy a SoyaCow to make soymilk. Address: 83 Fullerbrook Rd., Wellsley,

Massachusetts 02181. Phone: 617-237-5997.

6418. Bates, Dorothy R.; Wingate, Colby. 1993. Cooking with gluten and seitan. Summertown, Tennessee: The Book Publishing Co. 128 p. March. Illust. by Barbara McNew and Thomas Johns. Index. 22 cm.
• ***Summary:*** This is vegan cookbook. Seitan is gluten cooked in a soy sauce broth. This book calls vital wheat gluten "instant gluten flour." It has already had the starch and bran removed and needs only to be mixed with seasoning and liquid. Miso is used as a seasoning in several recipes, and "tamari" in many seitan seasoning sauces.

Contents: Introduction. A word on nutrition. Making gluten. Making seitan. Ingredients. Recipes (a nutritional analysis is given for each recipe): Appetizers, soups, salads, American, Asian, Continental, Mexican, Italian. Sources for ingredients. Address: Summertown, Tennessee.

6419. **Product Name:** [Biosoja Delisoja {Calcium Enriched Soymilk Dessert–Aseptically Packaged} (Vanilla, Chocolate, Caramel)].
Foreign Name: Biosoja Delisoja.
Manufacturer's Name: Sojinal. Affiliate of Coopérative Agricole de Colmar (CAC) (Marketer).
Manufacturer's Address: 8 rue Merxheim, 68500 Issenheim, France. Phone: 89 74 53 53.
Date of Introduction: 1993. March.
Wt/Vol., Packaging, Price: Tetra Pak Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Spot in SoyaFoods. 1992. Spring. p. 1. "A taste of soyamilk to come: Editorial." A photo shows many different soyfood products in packages, including Tonyu Saveur, Soja Equilibre, Vanilla Drink Bar, and Coffee Drink Bar.

SoyaFoods. 1992. Autumn. p. 7. "A profile of Sojinal." See Table 2. "Biosoja retail food products." "Desserts (calcium enriched) packed in Tetra Pak."

6420. **Product Name:** [Biosoja Sojatine {Calcium Enriched Chocolate Bars} (Plain Chocolate Covered with Flavored Soya Paste, or Fruit and Fiber Sojatine)].
Foreign Name: Biosoja Sojatine.
Manufacturer's Name: Sojinal. Affiliate of Coopérative Agricole de Colmar (CAC) (Marketer).
Manufacturer's Address: 8 rue Merxheim, 68500 Issenheim, France. Phone: 89 74 53 53.
Date of Introduction: 1993. March.
New Product–Documentation: SoyaFoods. 1992. Autumn. p. 7. "A profile of Sojinal." See Table 2. "Biosoja retail food products." "Sojatine chocolate bars (calcium enriched)."

6421. **Product Name:** [Biosoja Italian Sauce {Based on Soymilk}].
Foreign Name: Biosoja Sauce Italienne.
Manufacturer's Name: Sojinal. Affiliate of Coopérative Agricole de Colmar (CAC) (Marketer).
Manufacturer's Address: 8 rue Merxheim, 68500 Issenheim, France. Phone: 89 74 53 53.
Date of Introduction: 1993. March.
New Product–Documentation: SoyaFoods. 1992. Autumn. p. 7. "A profile of Sojinal." See Table 2. "Biosoja retail food products." "Sauces based on tonyu. Sauc'annaise, Sauce Italienne."

6422. *SoyaCow Newsletter* (*Ottawa, Canada*). 1993. SoyaCow SC-20 "mooves" west to Saskatoon. 2(1):1. Jan/March.
• ***Summary:*** "The Sweet Carrot Cafe, the top vegetarian restaurant in the province of Saskatchewan, is setting up its 'micro-soydairy' and will offer fresh soymilk as well as other soy-based foods. This will not only augment their existing menu at the restaurant, but will also form the heart of their new 'SoyaCow–Health Bar Deli' slated to open along side the restaurant. This will be the second Canadian retail project in a developing franchise system. Other locations are due to open in Ontario in the fall."

Note: The Sweet Carrot Cafe is owned by George and Wendy Conquergood. The SC-20 has a cooker capacity of 20 liters. It can make 3 batches of soymilk per hour, or about 40 liters/hour. Talk with George Conquergood of IPC in Vancouver, BC, Canada. 1999. May 10. His Sweet Carrot Cafe in Saskatoon had their SoyaCow SC-20 in operation in early 1993, before Rainbow Foods in Ottawa. So Sweet Carrot Cafe was the first company to make commercial products using a SoyaCow. When George first went to Ottawa to meet Raj, Rainbow was in the process of expanding the store into new location, and building their kitchen in the health food store. But George already had a restaurant, a kitchen, and a coffee bar–named Caps Coffee Bar. Rainbow did open their little Health Bar Deli within the health food store. Rainbow didn't understand the importance of sanitation when dealing with the protein in a milk alternative. Cleaning the glass bottles properly was a horrendous job, but one that has to be done meticulously–lest bacterial spoilage occur when the bottle is refilled. Rainbow was unable to maintain consistent quality in their operation, so they had to shut down after a short time. Sweet Carrot and Rainbow used the same glass bottles, with the SoyaCow logo painted on the bottles. When they first ordered the bottles, they shared the order. Since George has his SoyaCow working before Rainbow, he did some consulting with Rainbow, through Frank Daller, to help Rainbow get started. George also developed the formulas that both companies used. He used to be on the phone with Frank on almost a daily basis. George was conceptualizing this Health Bar Deli concept as a potential franchise operation.

6423. *SoyaCow Newsletter* (*Ottawa, Canada*). 1993. New

SoyaCow logo. 2(1):1. Jan/March.

• ***Summary:*** A new version of the SoyaCow logo has been designed, and is shown here. It is a vertical oval, with the face of a cow superimposed on the large letter "S." Across the bottom, in all uppercase letters, is written "SoyaCow." The original logo was useful mostly in a wide, horizontal orientation. "The new logo is already in use on returnable glass bottles."

6424. *SoyaCow Newsletter* (*Ottawa, Canada*). 1993. 2,000 L/H soymilk system planned. 2(1):1. Jan/March.
• ***Summary:*** "An industrial, continuous-process version of the SoyaCow is on the drawing boards and slated for development in 1994." The SC 2000 will be designed to produce up to 2,000 liters of soymilk per hour. "The project is currently under consideration by companies in North America and Europe" [such as APV-Crepaco].

6425. *SoyaFoods* (*ASA, Europe*). 1993. Profile of Haldane Foods. 4(1):6-7. Winter.
• ***Summary:*** "The Haldane Foods Group is the largest specialist health food manufacturer in the UK and Europe... with 12 companies in the Group... Seven years ago, ADM's British arm, British Arkady bought its biggest customer, Direct Foods of Petersfield, Hampshire, known for its Protoveg brand." Among its other acquisitions was The Dietburger Company.

"The company's headquarters is now in Newport Pagnell the site of Granose Foods, but there are five factories in all. The site at Leicester continues to produce dry goods, soya milk is produced at Stockport [by Unisoy], vegetarian margarines, ices and yogurts are produced at Wrexham, North Wales, snack meals and sauces in Newport, South Wales, and frozen and canned products at the Granose Factory in Newport Pagnell.

"However, it was the acquisition of Granose Foods which had a major impact on the business... A total of 200 people work for Haldane. All the factories are animal free and many products are Vegetarian Society approved. The company has recently attained BS 5750, the British Standards Institution Certificate of Quality Assurance (ISO 9000).

"As a result of its acquisitions Haldane's product range is extensive with over 200 products. But the core of the business is vegetarian with soya products featuring high on the list... Last year Haldane launched over 50 new products."

6426. **Product Name:** Soymilk (Natural, Original, Maple, Vanilla, Chocolate, or Nog), Soybé Soy Ice Cream (many flavors, constantly changing), Soy Yogurt (Natural or Vanilla Flavors) tofu, and Soyanaise (soy mayonnaise).
Manufacturer's Name: Sweet Carrot Café–Health Bar & Deli.
Manufacturer's Address: 702 14th St. East, Saskatoon, SK, S7N 0P7 Canada.
Date of Introduction: 1993. March.
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: *SoyaCow Newsletter* (Ottawa, Canada). 1993. Jan/March. p. 1. "SoyaCow SC-20 "mooves" west to Saskatoon." "The Sweet Carrot Cafe, the top vegetarian restaurant in the province of Saskatchewan, is setting up its 'micro-soydairy' and will offer fresh soymilk as well as other soy-based foods. This will not only augment their existing menu at the restaurant, but will also form the heart of their new 'SoyaCow–Health Bar Deli' slated to open along side the restaurant. This will be the second Canadian retail project in a developing franchise system."

SoyaCow Newsletter (Ottawa, Canada). 1993. April/June. p. 1-2. "SC-20 complements fine vegetarian restaurant and top natural foods store." The Sweet Carrot Cafe in Saskatoon uses a SoyaCow SC-20 to produce fresh non-beany soymilk for direct sale and formulation into value-added products. They also feature returnable glass bottles of the soymilk in several flavours. The Sweet Carrot Cafe is a fine [vegetarian] restaurant, featuring a grand piano, tablecloths, and wine. Owners George and Wendy Conquergood have added a Health Bar & Deli, made possible by a new SoyaCow. A photo shows George Conquergood with his SC-20 at the Sweet Carrot Cafe.

Talk with George Conquergood of International ProSoya Corporation (IPC) in Vancouver, BC, Canada. 1999. April 21. George started this gourmet vegetarian restaurant in 1992. In early 1993 he bought a SoyaCow SC-20 and started the Soya Cow Health Bar Deli, where (by about March 1993) he sold at least five soy products, both as part of the menu and for takeout. The soymilk for takeout was always sold in 1-liter glass bottles, with a SoyaCow logo stamped into the glass. Only the soy ice creams were sold under a brand, Soybé. The Soy Nog (soymilk flavor; which was not a brand) was introduced in December 1993, but people liked it so much that George continued to make it thereafter all year long. The soy ice cream was sold in 500 ml round

hardpack plastic tubs. There were no fixed flavors; every day was a new surprise–such as Blueberry-Mint, Strawberry-Banana-Peach, and one like a Butter Pecan with nuts, etc. George is a very creative person and he likes to try new things with foods. In the garage of his home in Saskatoon he has an archival file box containing all of the recipes and notes from his restaurant days. After March 1994 George also sold Gelato Fresco, a soy ice cream made by Hart Melvin of Toronto using a SoyaCow SC-20. The soy yogurt was fermented; the two flavors were sold in 250 ml yogurt tubs. The tofu was sold pre-cut into 500 gm bricks, wrapped with plastic wrap (not packed in water), and refrigerated. The Soyanaise (soy mayonnaise) was sold in a 250 ml see-through plastic tub. Each product had a label, printed by a computer. George's dates are a little earlier than those published in *The SoyaCow Newsletter* since it typically published at least several months after the events it reported.

6427. *SoyaScan Notes.* 1993. NLEA requirements for nondairy products (Overview). April 28. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** NLEA is the FDA's Nutrition, Labeling and Education Act of 1990. This act unfortunately does not make it illegal to characterize on the label as "nondairy" a product which contains casein or caseinate. But it does deal with this problem as follows (21 CFR Ch. 1(4-1-93 Edition), p. 21). 101.4 (d) "When foods characterized on the label as 'nondairy' contain a caseinate ingredient, the caseinate ingredient shall be followed by a parenthetical statement identifying its source. For example, if the manufacturer uses the term 'nondairy' on a creamer that contains sodium caseinate, it shall include a parenthetical term such as 'milk derivative' after the listing of sodium caseinate in the ingredient list."

6428. Bryan, Ford R. 1993. Robert Allen Boyer (Document part). In: Ford R. Bryan. 1993. Henry's Lieutenants. Detroit, Michigan: Wayne State University Press. 321 p. See p. 44-51. Great Lakes Series. April. [10 ref]
• ***Summary:*** This biographical sketch of Boyer (1909-1989), Henry Ford's top soybean man, is well researched and full of original material. Robert Boyer was born on Sept. 30, 1909 in Toledo, Ohio. In 1916 he moved with his parents to Royal Oak, Michigan, where he attended grade school while his father worked in the accounting department of the Ford Motor Co. in nearby Highland Park. When Henry Ford bought the Wayside Inn in Massachusetts in 1923, Frank Campsall suggested to Ford that Earl Boyer would be an appropriate business manager for the Inn. So the Boyers, including young Robert and his three sisters, moved into a Ford-owned house near the Inn. Robert then attended high school at Framingham, Massachusetts, where he graduated in 1927. Robert met Henry Ford while skating at the Inn. Ford suggested that he come to Dearborn for some work experience before going to college at Dartmouth as planned. So in Sept. 1927 Robert arrived in Dearborn where he was enrolled in the Henry Ford Trade School at the Rouge plant.

"Henry Ford had taken recent trips to Europe and had been impressed with the agricultural prosperity in some of those countries. Returning to Dearborn, Ford wanted to set up an experimental agricultural chemical factory to determine what products could be obtained from plants. The experimental chemical factory became a one-quarter size model of Ford's mammoth wood distillation plant at Iron Mountain, Michigan. The model was constructed at Iron Mountain and moved to Greenfield Village in late 1928. About then Ford asked, 'Bob, how would you like to supervise this model plant–to stay another year or two and live at the Sarah Jordan Boarding House in Greenfield Village.'

"Boyer had had little formal training in chemistry, but he was provided with tutors from the University of Michigan, and from 1929 to 1933 attended the Edison Institute of Technology, a school founded by Henry Ford and Thomas Edison as a school for inventors... Ford's purpose was to find industrial uses for farm crops. A farm depression was imminent. During the depression year of 1931, Robert Boyer married Elizabeth Szabo of Detroit. During the next few years they had three children...

"In 1931, soybeans became one of the plants investigated at the Chemical Laboratory... Usually the beans were pressed to obtain the oil, and the remaining 'cake' was fed to animals. The Boyer group, however, developed a solvent extraction procedure whereby soy protein as well as oil could be produced...

"By this time Henry Ford was growing rather old, approaching seventy. Design of the V-8 Ford in 1931 seems to have been his final great interest in automobile mechanics. His Edison Institute Schools, Greenfield Village, and soybean research now largely occupied his time. In 1932 he began to plant hundreds of acres of soybeans on his Dearborn farm lands and began procuring thousands more acres in Southeastern Michigan. Several additional processing plants were located in outlying towns where he promised to buy even more soybeans from local farmers to use in automotive paints and plastics. Boyer was largely responsible for Ford's advancement in soybean technology.

"Henry's vegetarian eating habits led him to hire his old gradeschool friend, Dr. Edsel Ruddiman, an organic chemist, to devise tasty dishes containing soybean ingredients for the dining room. And Ford's executives, including Boyer, were coaxed by Ford to try them–soybean milk, soups, bread, croquets, simulated meats, butter and ice cream. Most were not very palatable, however, because of the tendency of the soy oil to be slightly rancid."

Boyer was in charge of the "Industrialized American Barn" demonstration at the 1934 Chicago World's Fair. And in May 1935 when the first chemurgy conference was held

at the Dearborn Inn, Boyer was in charge of arrangements. During the second chemurgy conference in Dearborn, Boyer led the groups of participants through his Soybean Laboratory at Greenfield Village. At about this time Boyer developed soy protein fibers which were blended with wool (35% soy and 65% wool) and woven into cloth. The resulting cloth was given to Ford's own tailor, and suits of soy fiber were worn by Ford on occasion–and highly publicized. "Boyer admits that the tensile strength of soy fiber was only 85% of wool, however, behooving the wearer to avoid strenuous movements, bending down for example very cautiously.

"Boyer's fiber was ideal for felt hats, however. All of the fiber Boyer could produce was wanted by the Hat Corporation of America. The soy fiber blended well with rabbit fur, was less expensive and much cleaner to work with. To produce fiber in larger amounts and to develop fiber of higher tensile strength, a modern air-conditioned laboratory was built on Village Road in Dearborn. In this plant not only fiber producing equipment was installed but complete weaving equipment as well."

Between 1939 and 1941 Boyer worked on Ford's "plastic car" made from soybean plastic. It also drew widespread media publicity. "Boyer drove the car a few weeks before it was abandoned. (People are still wondering what became of that plastic car.) A major defect never corrected, according to Boyer, was the strong odor reminiscent of a mortuary...

"The soy protein fiber facility was operating nicely when in 1943 the U.S. Air Force demanded the air-conditioned building for precision measurement of aircraft engine parts. When his building was thus usurped, Boyer was out of a job involving soybeans. He then transferred to Ford's Willow Run Bomber Plant at Ypsilanti, Michigan, where, because of his knowledge of plastics, he was given responsibility for protecting the plastic windshields on the B-24s during assembly of the planes."

In 1943 Drackett Products Co. in Cincinnati, Ohio, purchased the Ford fiber processing equipment and Boyer went to work for Drackett in Cincinnati–he was never again in direct contact with Henry Ford. Boyer wanted to develop edible soy protein fibers. When H.R. Drackett died in 1949, Boyer left The Drackett Co. so he could pursue his goal of receiving a pioneer patent for texturizing vegetable (soy) protein. He was granted this patent in 1949. As many as 30 corollary patents were subsequently obtained.

"Boyer had developed methods for producing soy fiber that was thoroughly washed and tasteless. In 1951 he became a consultant to several food processors who were licensed to use his patents in their operations. These firms included Worthington Foods, Swift & Company, Ralston Purina, Unilever Company of England, National Biscuit Company [Nabisco], General Foods, and General Mills. Dozens of high-volume foods were, and still are, produced using Boyer's procedures... Robert Boyer worked full time for Ralston Purina in St. Louis, Missouri, from 1962 until 1971.

"In February 1963, Elizabeth Szabo Boyer died, and in April 1965, Boyer married Nancy Ann Miller, a recent widow living in St. Louis. Boyer retired from general consulting work in 1971 after his patents had expired in 1966, but continued consulting with Worthington Foods until 1977. In 1973, Nancy and Robert retired to downtown Dunedin, Florida.

"The Boyers did considerable traveling. But in the early 1980s Robert's eyes began to fail, and then his chief hobby became baking, an occupation he had always enjoyed. In 1985 he dictated his oral reminiscences [8 hours on tape with David R. Crippen] as requested by the Henry Ford Archives. Boyer died in Dunedin on November 11, 1989. The body was cremated and the ashes scattered over the Gulf of Mexico."

Photos show: A portrait of Boyer in his later years (Ford Archives photo ID No. P.0.19429). The Chemical Laboratory building at Greenfield Village at Dearborn (No. 0.6213) in 1930. Henry Ford discussing soybean work with Boyer in the Chemical Laboratory on Ford's birthday, July 30, 1937 (No. 188.21320. Ford is seated on a stool by a lab. bench reading and Boyer has one elbow on the bench behind him.) Boyer and Ford with the "plastic car" at Dearborn in 1941 (No. 189.16352).

Talk with Ford Bryan. 1992. Nov. 12. He is now working to get Robert Boyer's soybean research laboratory, the Chemical Plant of the Edison Institute, restored at Greenfield Village and interpreted as to its history and significance. The building is in fairly good shape; the exterior is in good shape but all the equipment has been removed from the interior. Address: 21800 Morley, Apt. 1203, Dearborn, Michigan 48124.

6429. Gupta, Rajendra P.; Gupta, R.R.; Wood, G.W. 1993. The SoyaCow resource book. Maxville, Ontario, Canada: Child Haven International. 131 p. 28 cm. [1 ref]

• ***Summary:*** Contents: Preface. 1. Introduction: Soya beans, soya milk, okara, tofu. 2. SoyaCow–Knowing it: Advantages of the SoyaCow, SoyaCow components, SoyaCow inputs, SoyaCow outputs, who needs SoyaCow, SoyaCow's economics, business plan, larger than SoyaCow machines, smaller than SoyaCow machines. 3. SoyaCow–Getting it: Preparations, ordering, receiving and unpacking, assembly, installation and testing. 4. SoyaCow–Using it: Preparation, making soya milk base, making tofu, soya yogurt (dahi), soya cream cheese, soya cottage cheese, finishing. 5. Formulations and recipes: Soya milk (dairy like, pistachio flavour, almond flavour, banana flavour, chocolate, malt, maple) tofu (tofu salad, tofu rice salad, tofu cheese squares, tofu fried rice, tofu uttapam, tofu snack sticks), soya yogurt (lassi, other sweet drinks, salted drink, raita). Figures (21 figures). Appendices: A comparison of basic soya milk

processes, a sample SoyaCow cost-benefit analysis: USA/Canada, a sample SoyaCow cost-benefit analysis: India, consultants, organizations, SoyaCow training, suppliers, some SoyaCow installations, SoyaCow order form, service centres, assembly, trouble shooting guide for grinder/cooker, weekly log, periodic maintenance and repair, the SoyaCow newsletters. Address: [Ottawa, Ontario, Canada].

6430. Haren, Chuck. 1993. Soy happenings in Central America. *Plenty Bulletin* (*Davis, California*) 9(1):1-2. Spring.
• ***Summary:*** During the past 6 months, the author has been working to introduce soybeans and soyfoods to Belize and Nicaragua. In Jan. and Feb. he worked with groups in Belize "who are making efforts at not only utilizing soybeans for themselves but also teaching methods of preparing soybeans at home.

"Together with Casta Calderon, a representative from SOYNICA (a women's development organization in Nicaragua), I provided technical assistance in Belize for the Santa Familia Farmers and Women's Group, the Corozal South Soybean Producers Cooperative, The Caledonia Grain Cooperative, Maya Mopan Cooperative, Toledo South Beekeepers and Farmers Cooperative and the Hopkins Farmers Cooperative. We gave them very practical advice on the growing and use of soybeans. We conducted workshops to teach women about the nutritional qualities as well as methods of cooking soybeans, making soybean cheese (tofu) and milk, then using the by-product (okara) in baked goods, tamales, tortilla fillings and stir-fried dishes. We also helped some of these groups to evaluate their needs (material, labor and marketing costs) for small business projects they wanted to start.

"Small-scale soybean producer and processing groups and cooperatives are being established throughout Central America... In April and May we will be responding to requests for technical assistance in Guatemala, El Salvador and again in Nicaragua."

Photos show: (1) Members of the Toledo South Beekeepers and Farmers Cooperative making soymilk. (2) Members of the Cooperative standing with Chuck Haren. The caption states: "A small grant from the Inter-American Foundation enabled us to purchase some tools like the wheel-seeder displayed by members of the" Cooperative. Address: Program Director.

6431. **Product Name:** Dream Pudding [Butterscotch, Lemon, Chocolate, Carob, Coconut, Banana, or Almond].
Manufacturer's Name: Imagine Foods, Inc. (Marketer/Distributor).
Manufacturer's Address: 299 California Ave. #305, Palo Alto, CA 94306. Phone: 415-327-1444.
Date of Introduction: 1993. April.
Wt/Vol., Packaging, Price: 4 x 4 oz tubs. Retails for $2.79 (2/93, San Francisco).
How Stored: Refrigerated.
New Product–Documentation: Talk with Bob Gerner, who saw these at the Natural Products Expo West, Anaheim. 1993. Feb. 22.

Letter from Robert Nissenbaum, president of Imagine Foods. 1993. Dec. 8. This product was launched in April 1993.

Talk with David Nickerson of Imagine Foods. 1995. Jan. 25. Dream Pudding has been discontinued, but Imagine Foods plans to introduce a new version of it in April 1995. There were many problems with the consistency of the original product due to manufacturing difficulties. The new product will be pretty much the same as the first one with the same flavors, but it will be made on better equipment. Most of the flavors will be fat-free, non-dairy, with no refined sugars.

6432. Leneman, Leah. 1993. 365 plus one vegan recipes: Delicious meals and ideas for every day of the year. Hammersmith, London, England: Thorsons–An imprint of HarperCollins Publishers. 144 p. April. Index. 24 cm.
• ***Summary:*** Chapter 1 of this book, titled "The Vegan Dairy," gives recipes for homemade soya milk, mock cream (from soya milk), soya flour cheese, yogurt cheese (from soya yogurt). There are also recipes for cashew or almond milk, cashew cream, and cashew cottage cheese.

Chapter 11 (p. 85-100), titled "Tofu and other Soya Foods," contains a long introduction plus the following recipes: Home-made tofu. Tofu and onions. Sweet and sour tofu and vegetables. Sea-flavored crisp tofu slices. Mushroom stroganoff. Tofu kebabs. Tofu casserole. Warming winter stew (with tofu). Korean-style kebabs (with tofu and miso). Tofu and green pea bhajia. Tofu 'scrambled eggs.' Scrambled tofu and mushrooms. Tofu piperade. Spicy tofu scramble with red pepper and tomato. Tofu knishes. Tofu and pea curry. Tofu burgers. Swiss steak (with frozen tofu). Savoury tofu 'mince' (with frozen tofu). Crispy fried sea-flavoured frozen tofu. Tofu goulash. Smoked tofu stew. Smoked tofu, courgette and sweetcorn risotto. Smokey duvec (with smoked tofu). Pease pudding and smoked tofu bake. Smoked tofu pasties. Steamed savoury smoked tofu pudding. Smoked tofu charlotte. Lek and smoked tofu au gratin. Smoked tofu and mashed potato cakes. Tempeh croquettes with mushroom sauce. Tempeh hash with potatoes. Indonesian-style tempeh. Tempeh stroganoff. Japanese-style tempeh kabobs. Tempeh burgers. Tempeh chilli. Mock 'ham' (with dried bean milk sheets [yuba]). Mock 'chicken' (with yuba). Mock chicken cooked Indonesian style.

Chapter 13 is entirely about sea vegetables, and a number of the recipes contain tofu, tempeh, miso, or soya milk. A number of other recipes throughout the book also use soyfoods as an ingredient. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

6433. *High Plains Journal* (*Dodge City, Kansas*). 1993. Lower fat doughnut made with soymilk. May 10.
• ***Summary:*** "Iowa State University researchers say they have developed a version of the doughnut that has significantly lower levels of fat, without sacrificing texture or flavor."

"Doughnuts made with soybean flour, had a coarse, beany flavor, Lester A. Wilson, ISU professor of food science and human nutrition, said. The new recipe calls for dry soymilk to replace non-fat powdered milk found in many commercial doughnut recipes."

"Wilson said soymilk absorbs less oil during the deep-fat frying process than non-fat milk used in conventional recipes. As an added bonus, the soy-milk doughnuts seem to stay fresh longer than conventional pastries. The research was funded by the Iowa Soybean Promotion Board."

6434. *SoyaScan Notes.* 1993. Triballat, located in France, has sold a lot of their soymilk and yogurt technology to China and other countries (Overview). May 16. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Talk with Lon Stromnes of White Wave. 1993. Feb. 9. Steve Demos has visited the Triballat plant in France where Sojasun is made, he knows all about it, and he knows that Sojasun is opening a plant in China.

A Chinese-American businessman, who wishes to remain unnamed, states that Triballat has sold a lot of their soymilk and yogurt technology to China. They have sold 6 plants to China, one to Saudi Arabia, and one to some country in South America. He is certain that this information is correct.

This was confirmed again in Nov. 1993 by a German who knows Triballat well.

6435. Ogbugwo, Joseph O. 1993. Re: History of Odeigai & Company in Nigeria. Letter to William Shurtleff at Soyfoods Center, May 24–in reply to inquiry. 3 p. Handwritten.
• ***Summary:*** Odeigai & Company, located at P.O. Box 100, Ibusa, Delta State, Nigeria, is owned by Joseph O. Ogbugwo, Mrs. E. Ogbugwo, and Mr. Bolaji Iriah (partner). The company was founded in March 1985 by Joseph Ogbugwo to grow soybeans and process them into food–especially soymilk. In July 1985 the company started to produce soyfoods for commercial sale; the first product was soy flour. At that time the company was named Odeiga & Company; it later changed its name to the current spelling. The company has always been at the same address.

The company's ownership structure changed when Mr. Bolaji Iriah joined the company before it was incorporated in 1987. The present ownership is: Joseph Ogbugwo 80%, Elizabeth Ogbugwo 15%, and Bolaji Iriah 5%. Sales last year were 1,080,000 naira, and the net worth of the business is 1.5 million naira. Note: The naira is the Nigerian unit of currency.

Milestones in the company's history were: 1984–The decision to quit the Nigerian civil service and concentrate on soyabeans. In May of that year the government introduced soyabeans to his state of origin. 1985–Introduction of soymilk in Bendel and Anambra states. 1987–Incorporation of the company. The company has been the first in Nigeria to develop, make and market a line of Nigerian-style soy-based foods. Reasons for the company's success: Patience and perseverance, determination, good knowledge of the soybean crop to be able to create awareness in the masses, encouragement from my teacher and friend Professor J.Y. Lu of Tuskegee University, Tuskegee, Alabama 36088.

Major products and amount produced each week: Soy-Flour (2,000 kg). Soy-Beverage (200 kg). Soy-Bouillon (200 kg). Supplementary Food (100 kg). The company now employees 15 people including 2 managers, 10 production workers, 2 office workers, and 1 other. The company's average sales growth rate over the past 3 years has been 10%, 25%, and 40%. The company's building now consists of a rented apartment of 6 main rooms and 2 seating rooms. The main rooms are each 4 by 5 meters and the seating rooms are 5 by 6 meters. Two rooms are used as offices and the others are used for production. Land is now ready for a new factory and offices.

Current projects: "We are researching local technology for the production of powdered Soy-Milk which is not sold in any Nigerian market but which is in very high demand now. Also, 3 new products are in the pipeline undergoing taste panel acceptability trials."

Biographical sketch of Joseph O. Ogbugwo: He is an Igbo, married with 5 children and self employed. Education: BSc and MSc (horticulture major and food science minor), PhD candidate in food science–all at University of Benin, Nigeria, 1977-1979. He got interested in soyfoods through working with Prof. John Lu (1977-1979). Soya was used in preparing Chips in the USA in 1978. They were a big success but he could not make them in Nigeria because of lack of startup capital. He then planted soybean on an experimental basis to determine the right time of planting and adaptability to Southern Nigeria. The results were successful. In 1984/85 he made recommendations to the Bendel State Ministry of Agriculture and supplied them with the first batch of seeds, which they distributed to farmers. Then he began research on using soybeans as food based on local culture, tastes, and habits. Joseph Ogbugwo "is very research inclined and has spent over 15 years doing research on the soybean and its uses. He is making it a lifetime vocation in spite of limitations... *The Book of Tofu* was quite inspiring and gave impetus to our work." Address: P.O. Box 100, Ibusa, Delta State, Nigeria. Phone: +234 46 000 0172.

6436. Brink, Susan. 1993. Can tofu stop cancer? As its uses multiply, the soybean looks more like a magic bullet. *U.S.*

News and World Report 114:77. May 31.
• ***Summary:*** The magic bullet in soybeans could be genistein, a crystalline substance with almost no nutritive value, which is found almost exclusively in soybeans. "More than 200 scientific papers on genistein's possible role in cancer prevention have been published since 1987. Among the most intriguing is a German study in the April 1993 *Proceedings of the National Academy of Sciences,* which found that, in the test tube, genistein blocks angiogenesis, the process in which new blood vessels grow–and which is needed to nourish malignant tumors.

"The German research feeds speculation that genistein may be one dietary substance that explains the difference in some cancer rates between the United States and Asia. The American breast-cancer rate, for example, is 22.4 per 100,000, almost four times Japan's rate of 6 per 100,000. The American prostate-cancer rate is 15.7 per 100,000, also roughly four times the Japanese rate of 3.5 per 100,000. A high-fat diet has long been suspected as a cancer-causing culprit. That could be true. But while Americans eat more fat, they also eat fewer plant foods, including soy...

"In the meantime, try making this summer's fruit shakes with soy milk–and see if anyone notices."

Note: This is the earliest document seen (June 1999), with "soy" in the title, and which suggests that soy might reduce one's risk of prostate cancer.

6437. Center for Crops Utilization Research. 1993. Center for Crops Utilization Research. Ames, Iowa: Iowa State University, Utilization Center for Agricultural Products. 16 p. Undated. 24 cm.
• ***Summary:*** This color booklet describes the Center's many interesting and pioneering projects. Lawrence A. Johnson is in charge of the Center. "Approximately 30 CCUR scientists from 12 departments are involved in 60 basic and applied research projects in areas ranging from new food products to applied biotechnology." Some projects are focused on developing industrial (non-food, non-feed) products from soybeans, but others involve improved soyfoods. "Center researchers are working to improve water extraction methods for preparing soymilk and dried soy products. The group's rapid hydration hydrothermal cooking (RHHTC) process is an innovative means by which antinutritional factors and the oxidative enzymes responsible for off-tastes are deactivated. Concurrently, product yields are increased; the new process can recover 90% of the bean solids–only 60% is recovered by traditional manufacturing methods.

"Another group is evaluating new and improved lines of soybeans having enhanced soyfood processing characteristics. Rapid screening methods for measuring the potential end-use performance of soybean lots are also being developed."

Talk with Larry Johnson, Professor-in-Charge. 1993. Sept. 27. This booklet was published in about May 1993 to discuss the Center's programs and projects. Address: Ames, Iowa. Phone: 515-294-0160.

6438. Eden Foods. 1993. Edensoy Extra–High performance food. Edensoy + antioxidants + vitamins + minerals = Edensoy Extra. Healthy, delicious vegetable kingdom food. Look good and feel great (Ad). *Natural Foods Merchandiser.* May. p. 10-11.
• ***Summary:*** "America's favorite liquid soy food is now fortified with beta carotene vitamin A, vegetable origin vitamins E & D2, and twice as much calcium [in the form of calcium carbonate]... Beta carotene A and vitamin E are potent antioxidants that protect us from 'free radicals' which lack an electron. Antioxidants donate electrons and neutralize their harmful effect. Pollution, too much sun, toxins in food, and high oxygen intake tend to create them. 'Free radical' molecules can destroy a cell, enzyme, protein, alter DNA or harm cells so strength is weakened."

Made from whole soybeans, Edensoy is OCIA certified organically grown and processed. Address: 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 1-800-248-0320.

• ***Summary:*** For the basic idea, words and LC call numbers see the 12th edition (1989). Address: Washington, DC.

6440. Shurtleff, William; Aoyagi, Akiko. comps. 1993. Henry Ford and his researchers' work with soybeans, soyfoods, and chemurgy–Bibliography and sourcebook, 1921 to 1993: Detailed information on 439 published documents (extensively annotated bibliography), 79 unpublished archival documents, 71 original interviews (many full text) and overviews, 13 commercial soy products. Lafayette, California: Soyfoods Center. 249 p. Subject/geographical index. Author/company index. Language index. Printed May 19. 28 cm. [567 ref]
• ***Summary:*** This is the most comprehensive book ever published about the work of Henry Ford and his researchers with soybeans and soyfoods. It has been compiled, one record at a time over a period of 18 years, in an attempt to document the history of this subject. It is also the single most current and useful source of information on this subject, since 96% of all records contain a summary/abstract averaging 286 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 30 different document types, both published and unpublished; every known publication on the subject in every language;

66 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding this subject from its earliest beginnings to the present.

The bibliographic records in this book include 439 published documents and 79 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 13 commercial soy products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

6441. Weiner, Michael. 1993. New developments with Amano and Yamashita (Interview). *SoyaScan Notes.* June 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Michael works as a consultant for Peter Joe of Sunrise Market Ltd. and with Amano Foods. He used to consult with Mandarin Enterprises in British Columbia. Now his main work is as a broker, representing various U.S. companies such as Vitasoy, Knudsen, Santa Cruz, etc. Amano still makes all of Westbrae's organic miso. Amano is trying to construct a 60,000 square foot plant. They had a joint venture with Yamashita but it fell apart. Now Yamashita is constructing their own 60,000 square foot soy sauce plant in Oregon. The ground breaking will take place in a couple of weeks. Michael does not feel that this will be much of a threat to Amano, which plans to sell a lot of Amano products in supermarkets. The market is big and growing rapidly. Soyfoods now are given large amounts of shelf space (8-16 linear feet) in the produce section of all supermarkets in western Canada (British Columbia, Alberta, and Manitoba). A major reason for this is that Mandarin and Sunrise have an excellent relationship with the people in charge of the produce section in western Canadian supermarkets. Initially Michael helped to establish some of these relationships; these companies got a few facings for their tofu. Then Mandarin added their tofu burgers. Then Sunrise added Yves Wieners and soy cheese. The products sold, which is proof that exposure will work. Michael was involved in trying to make the same thing happen in Ontario with the Loblaws chain, and in Quebec, but they were never allowed to give the program a try–not even in 1-2 stores.

Safeway supermarkets are so sold on soyfoods that they have developed special open-front, vertical, refrigerated "Tofu Products" cases that are placed adjacent to the produce case, but have a lower temperature. They are quite large and contain everything from soy drinks to tofu, soy cheese to meatless hot dogs. Soyfoods are very widely available on Vancouver Island.

Sunrise and Michael jointly import Mori-Nu tofu into Canada from Japan. Also Sunrise distributes some juice products for which Michael is the broker. Mori-Nu does not sell well in supermarkets because it's retail price is too high. Address: President, New Age Marketing, P.O. Box 39590, White Rock, BC, V4A 9P3, Canada. Phone: 604-538-0127.

6442. Foundation on Economic Trends. 1993. Amended petition requesting the Food and Drug Administration to halt the feeding of ruminant animal protein to ruminants. 1130 17th St., NW, Suite 630, Washington, DC 20036. 11 p. Unpublished typescript. 28 cm. [21 footnotes]
• ***Summary:*** This petition was submitted to Dr. David Kessler, Commissioner of the U.S. Food and Drug Administration (FDA), with a copy to Hon. Michael Espy, Secretary, U.S. Department of Agriculture (USDA). The president of the Foundation is Jeremy Rifkin.

"The petitioners request that the FDA and USDA take the following action to prevent the potential spread of a severe health threat to both animals and humans: (1) order a permanent halt to all feeding of ruminant animal protein to ruminants, especially cows and sheep; (2) develop a significant epidemiological investigation to determine the incidence of transmissible spongiform encephalopathies (TSE), such as scrapie-like diseases in sheep and bovine spongiform encephalopathy-like diseases in cattle, among ruminant animals in the United States; (3) develop a separate, significant epidemiological study to determine the incidence of TSEs in 'downer' cattle; (4) establish a bovine brain bank for the ongoing study of TSEs; (5) develop a significant epidemiological investigation to determine the incidence of TSEs among the human population of the United States, and (6) develop an ongoing national monitoring and registry program utilizing autopsy examinations to determine any changes in the incidence of CJD-like diseases among the human population of the United States"

Notes: Downer cows are cows that look healthy but drop dead prematurely for unknown reasons. In humans TSE is commonly referred to as Creutzfeldt-Jakob Disease (CJD) or Gerstman-Straussler Syndrome (in Germany). In Europe, bovine spongiform encephalopathy or BSE is called 'Mad Cow Disease'.

"I. Statement of facts: The health and safety of ruminant animals, primarily cows and sheep, are at grave risk because of the relatively recent and increasing practice of feeding ruminant animal protein–the otherwise unmarketable remains of rendered cows and sheep–to cows and other ruminants in the form of commercial animal feed products.

"Currently, end products from rendering are being used to feed ruminant animals throughout the United States. The rendering industry utilizes packinghouse offal, meat processing waste and animal tissues from other sources including animals that have died otherwise than by slaughter."

In Europe, many cattle have died from "Mad Cow Disease" or BSE. Since the discovery of the BSE outbreak, more than 80,000 cattle thought to be infected with the disease have been destroyed throughout the United Kingdom. "In the U.S. virtually every 'downer' cow is sent to slaughterhouse where they are readied for human consumption and/or made into high protein animal feed... As a result of CJD's close physical relationship to TSEs, there is a significant concern that the consumption of TSE-infected cattle or sheep, or cattle and sheep fed TSE-infected ruminant protein, could have a direct impact on human health by promoting the onset of CJD. In fact, there already are several indications that incidences of CJD in the United States are on the rise. There is much overlap in symptomatology between Alzheimer's Disease (AD) and CJD. Studies indicate a typical 25% error rate in the clinical diagnoses of dementia.* Up to 4 million Americans currently are thought to be afflicted with Alzheimer's Disease, the leading dementia disease. The specific causes of AD are unknown at this time, but hypotheses include head trauma, prion infections, aluminum toxicity, and immunologic disorders." (Footnote: *Marks, W.A., et al. "Cerebral degenerations producing dementia: importance of neuropathologic confirmation of clinical diagnoses." *Journal of Geriatrics-Psychology-Neurology.* 1988 Oct/Dec; 1(4):187-98.)

"If an increasing number of people are developing CJD, their deaths could be hidden by the high number of Alzheimer's cases, since direct post-mortem evaluation of brain tissue is the only positive method of determining whether a patient has Alzheimer's Disease or CJD. Researchers have recommended that direct neuropathological examination at autopsy be undertaken in all demented patients to determine the actual incidence of the various dementia diseases, including CJD, but only a small number of dementia victims are now autopsied.

"Often CJD is confused with other forms of dementia. When doctors at the Veterans Administration Medical Center in Pittsburgh, Pennsylvania, consecutively autopsied 54 demented patients, they discovered that three (5.5%) had died of CJD disease, a rate of CJD occurrence that is about one thousand times higher than expected."* (Footnote: *Boller, Francis, et al. "Diagnosis of dementia: clinicopathologic correlations." *Neurology.* 1989 Jan; 39(1):76-79). Address: Washington, DC. Phone: (202) 466-2823.

6443. *Health Food Business.* 1993. Edensoy added to flight meals. June. p. 55.

• ***Summary:*** "Edensoy, a soymilk manufactured by Eden Foods of Clinton, Michigan, has been chosen to be served with in-flight vegetarian meals in First and Business Class seating on Continental and American West Airlines. Eden's president Nancy Potter said that this is the first time a soymilk is being offered by a domestic airline."

6444. Kushi, Michio; Kushi, Aveline; Jack, Alex. 1993. Macrobiotic diet: Revised and enlarged edition. Tokyo and New York: Japan Publications. 400 p. June, Illust. Index. 21 cm. [67 ref]

• ***Summary:*** Edited by Alex Jack, this is the revision of a book with the same title first printed in 1985. The table of contents of this edition is identical to that of the 1985 edition. However, this edition has been "expanded to include information on natural foods that have recently become available; the latest research on cancer and diet; AIDS and diet; the U.S. government's landmark report on Diet and Health, and the China Study; as well as a wealth of information on the impact of our dietary choices on the earth's environment" (from the rear cover).

Since the physical dimensions (21.2 cm tall) are smaller, the text is on different pages. For example, Japanese black beans (see below).

The chapter on "Beans and bean products" has the following contents: Daily use. History. Quality. Varieties: Azuki beans, black-eyed peas (sometimes known as yard-long beans), black turtle beans, broad beans, chick-peas, great northern beans, kidney beans, lima beans, lentils, mung beans, navy beans, peas, pinto beans, soybeans (p. 195-99) (introduction, miso, natto, okara, soy flour, soy grits, soy milk, soy oil, shoyu, tempeh, tofu {incl. nigari, fresh tofu, soft tofu, firm tofu, deep-fried tofu, pickled tofu, fermented tofu, frozen tofu, dried tofu}), viilia, soy yogurt, yuba.

For information on cooking soy, see p. 204-07. Note: Natto is not usually made with koji (p. 207). For "Health benefits" and for "Soy foods and cancer research" (p. 208-09).

Black soybeans (also known as "Japanese black beans") are mentioned as follows: "The smaller varieties of azuki beans, lentils, chick-peas, and black soybeans contain less fat and oil and are preferred for daily use" (p. 60). "Bean rice: Besides azuki beans, other beans and legumes such as lentils, chick peas, yellow or black soybeans, and [common] black beans can be cooked together with brown rice in a proportion of 10 to 15 percent beans and 85 to 90 percent rice" (p. 121). The chapter titled "Beans and bean products" (p. 189)

begins: "In the standard macrobiotic diet, whole dried beans and bean products are usually eaten daily or several times per week and comprise about 5 to 10 percent of the volume of total food consumed. Beans that are more northerly in origin, smaller in size, and contain less fat and oil than other varieties, such as azuki beans, lentils, chick peas, and black soybeans are eaten most frequently." In the same chapter, the section on "Cooking methods" (p. 200). "In general, chick peas, black soybeans, and other hard beans should be soaked 6 to 8 hours or, preferably overnight, if boiled, and a minimum of 2 hours if pressure cooked." "In order to allow the inside and outside of the beans to cook evenly, beans are usually seasoned toward the end of cooking... In the Far East, a small strip of kombu is traditionally added to the bottom of a pot of beans. The mineral-rich sea vegetable adds flavor to the beans... and improves their digestibility." "Shocking is a traditional method of preparing beans in the Far East." It is described in detail (p. 201). In the section titled "Soybeans" (p. 204) black soybeans are also discussed.

"Natto is a fermented soybean product that resembles baked beans connected by long sticky strands. Its strong odor takes some adjusting to but once appreciated natto is enjoyed regularly as a small side dish or condiment" (p. 196). Address: 1-2. Brookline and Becket, Massachusetts.

6445. Messina, Mark. 1993. Welcome to *The Soy Connection. Soy Connection* (*The*) (*Chesterfield, Missouri–United Soybean Board*) 1(1):1-2. [7 ref]
• ***Summary:*** Discusses the growing interest in soyfoods (such as tofu, tempeh, soymilk, and miso) in America. They are becoming more mainstream. An estimated 2/3 of all tofu is sold in traditional supermarkets. Tofu consumption in America has doubled during the past 10 years.

6446. *Newsletter of the Soyfoods Association of America* (*Libertytown, Maryland*). 1993. Thank you to the American Soybean Association. 4(2):2.
• ***Summary:*** "The American Soybean Association has awarded the SAA [Soyfoods Association of America] a grant for $27,625.00 to develop and distribute educational materials on soyfoods and to produce periodic press releases. The grant will be used to produce a 4-color brochure on soyfoods and eight individual, camera-ready fact sheets on tofu, soymilk, tempeh, miso, texturized vegetable protein, soy flour, soy-based meat analogs, and soy oil. Materials will be made available to state soybean boards for distribution to consumers and volunteer soy promoters, to state level cooperative extension nutritionists for distribution to consumers through county home economics offices, and to health professionals for use in health and nutrition education programs. The first two fact sheets–on tofu and soymilk–will be available this month. All of the materials will be completed by Fall, 1993."

6447. **Product Name:** Soya Beverage, and Tofu.
Manufacturer's Name: Palaami Food Products India (P) Ltd.
Manufacturer's Address: I 1/C Sidco Industrial Estate, K. Pudur, Madurai, Tamil Nadu–625 007, India.
Date of Introduction: 1993. June.
New Product–Documentation: List of new tofu manufacturers in countries where tofu is not well known, sent by Yoshinori Ito of Takai Seisakusho. 1994. Nov. 15. The owner of this new tofu company is Mr. Prem Palanivel.

Letter (fax) from Mr. D. Prem Palanivel. 1995. March 24. He started making Soya Beverage and tofu in June 1993. He now makes about 5,000 liters/month of Soya Beverage and 50-75 kg/month of tofu. Madurai [Madura] is located in southern India.

Letter (fax) from Mr. D. Prem Palanivel. 1995. May 22. He is presently packing his products in HM HD pouches. By June 1995 he plans to introduce his soya beverage in Tetra Brik cartons and to reach a capacity of 10,000 200 ml pouches per day. "Our machinery and basic know-how was imported from Takai of Japan. After extensive research, we have developed our product so it is suitable to the Indian taste, and we have branded our product Pep 'n' Bounce." He would like to establish a branch of the International Soyfoods Center Network in India.

6448. *SoyaCow Newsletter* (*Ottawa, Canada*). 1993. European patent helps ProSoya's new partners. 2(2):1. April/June.
• ***Summary:*** "With the successful process patent for non-beany soymilk, ProSoya has now initiated development of the European market with the help of TAN AB of Sweden and UPDATE GmbH of Germany.

"Ted Nordquist of TAN AB, is an internationally known soyfoods production expert who is specializing in the worldwide development of the SC-2000, the 2000 L/H–continuous-process, industrial system offered by ProSoya. UPDATE GmbH is a Frankfurt-based marketing and communication company headed by Horst Daller and Rainer Wilkens. It specializes in ethical and progressive products and will develop European territories for the retail SC-20 and wholesale SC-100 systems and franchises."

Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. May 10. Horst Daller is the older brother of Frank Daller, who worked for ProSoya in Ottawa, Canada.

6449. *SoyaCow Newsletter* (*Ottawa, Canada*). 1993. Wholesale soymilk and ice cream production with SC-100. 2(2):1-2. April/June.
• ***Summary:*** "Using the economical 400 litre/hour SC-100 batch system, Moulins aux Abenakis of Ste. Clair, Quebec, was the first company to make 'SoyaCow' non-beany soymilk for wholesale distribution. Now, ProSoya has begun

a new development with Gelato Fresco, a top quality, natural ice cream company in Toronto, Canada, and Milan, Italy. The first shipment of 'SoyaCow' non-dairy ice cream has already been make, thanks to the smaller SC-20 installed as a pilot system."

6450. *SoyaCow Newsletter* (*Ottawa, Canada*). 1993. SC-20 complements fine vegetarian restaurant and top natural foods store. 2(2):1-2. April/June.
• ***Summary:*** "The Sweet Carrot Cafe in Saskatoon and Rainbow Foods in Ottawa are the first Canadian retail sites for the SoyaCow SC-20... Both locations produce fresh non-beany soymilk for direct sale and formulation into value-added products like shakes, yogurt, pudding, okara baked goods, tofu, etc. They also feature returnable glass bottles of the soymilk in several flavours." The Sweet Carrot Cafe is a fine [vegetarian] restaurant, featuring a grand piano, tablecloths, and wine. Owners George and Wendy Conquergood have added a Health Bar & Deli, made possible by a new SoyaCow.

"The newly-enlarged 5,700 square foot Rainbow Foods in Ottawa is the largest health and natural products store between Toronto and Montreal. Owners Janet and Mike Kaplan see the production of high-quality fresh soymilk as a major feature of their full-service operation... Their "Healthy Deli" with the SoyaCow comprises over 1,000 square feet of the total business, and customers can see the micro-soydairy operation from the fast-food counter."

Photos show: (1) George Conquergood with his SC-20 at the Sweet Carrot Cafe. (2) The SoyaCow SC-20 at Rainbow Foods, owned by Janet and Mike Kaplan. Note: The SC-20 at Sweet Carrot Cafe was in operation before the one at Rainbow Foods. The soymilk made at Sweet Carrot Cafe was the first commercial soymilk made by any model of SoyaCow.

6451. Roller, Ron. 1993. How much soymilk was sold in the USA in 1992? (Interview). *SoyaScan Notes.* July 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron recently conducted a little market survey, then cross-checked and confirmed his figures with Westbrae, Soyatech, etc. In 1992 the estimated retail value of soymilk (not including infant formulas), sold in the United States was about $75,000,000. Note that soymilk now retails for a little less than $2.00/liter. The market is estimated to be growing at the rate of about 12% a year. Approximately 80% of the soymilk is sold in liter or quart sizes and the remaining 20% is sold in smaller (250 or 200 ml) sizes. Almost all is packaged in aseptic cartons. Soymilk is one of the most popular products in natural- and health food stores nationwide. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6452. Rich, Robert. 1993. More on Rich Products Corporation's work with soy-based dairy analogs (Interview). *SoyaScan Notes.* July 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Rich Products does not have any documents in its archives on the various small companies (such as Delsoy Products) that were the first to make soy-based whip toppings starting in about 1944-45. However Bob remembers them well and what they did. Delsoy started with a filled cream named Devonshire Topping which they sold mostly in Detroit, Michigan. Then they came out with a soybean cream that was not frozen. The majority of their early sales were in the filled cream. Delsoy was never sold in Buffalo, New York, and thus was not a competitor to Rich's Whip Topping. Even after Whip Topping was frozen, Delsoy was never much of a competitor. Bob is not sure when Delsoy was launched, but he has the feeling that it was on the market only several months before his Whip Topping.

Concerning the article by F. Olmsted in the 16 April 1945 issue of the *Detroit News,* Bob (who worked for the War Food Administration or WFA) never heard of the WFA issuing an order placing a 19% limit on all fats used in any dairy product. This information was probably supplied to Olmsted by Herbert Marshall Taylor, who Bob remembers as "a wild man." Bob conjectures that maybe the reason Taylor switched to a soy-based topping was to allow him to ship the product across state lines. In those times a company could not sell a filled cream product (which was what he had) across state lines, and there were only 7 states in which filled milk products could be made and sold within the state. In fact the Milnot Company had a plant near Litchfield, Illinois, situated exactly on the state line between Illinois and Indiana. They had a filled milk processing room on each side of the line, i.e. in each state. They never made a soy-based product. At one time, Milnot started shipping its filled milk across a state line either to test the law or because they thought they could get away with it. The government seized their product and took the president to court. He was judged guilty and had to spend the weekend in jail until he could get a bail bond. He was sentenced to a year in jail but he never served time because president Franklin Roosevelt gave him a presidential pardon.

Rich Products was involved in about 40 lawsuits with various states involving its non-dairy products–and the company won them all. But if the lawsuits had taken place a few years earlier, Bob thinks Rich Products could have been beaten. The climate was changing, led by more favorable attitudes toward legalization of margarine–which replaced a dairy product. The first lawsuit against Rich Products took place in California in 1949. The charge was that Whip Topping was an imitation dairy product, and hence illegal. Arguing that the product was a replacement, not an imitation, the company won the case.

Most of the subsequent cases were against Coffee Rich

(a non-dairy coffee whitener) starting in 1961. Whip Topping was not much of a threat to the dairy industry. Most milk routes used to take out 6 half pints of heavy cream (38-40% fat; housewives would use it to make whipped cream) in the morning and maybe bring back 8 in the afternoon–due to souring, etc. So heavy cream was not of much interest to milk dealers. But Coffee Rich was a real threat because much more light cream (19-20% fat; for use in coffee) and medium cream (28-30% fat; for use on cereal) was than heavy cream.

Last Wednesday (July 7) Bob celebrated his 80th birthday. He is still chairman of the board of Rich Products Corp., his son Robert Jr. is president, and Herb Kusche is executive vice president. Last year his company did $940 million is sales. Next year, which will be the company's 50th anniversary, they expect to go over $1,000 million. The company has a research department in Buffalo with 75 researchers, plus 6,000 employees and 26 plants worldwide. They have 7 people in their London office, 5 in the Hong Kong office, 6 in Mexico City, 2 in Singapore, 2 in Brisbane (Australia), and 2 in Tokyo–all their own people.

The Freeze Flo process has become very successful, especially in frozen fruits and in their great-tasting product named Bettercreme–which was launched in April 1977 and which keeps fresh without bacterial growth or spoilage at room temperature without preservatives. It is sold as such to foodservice organizations and bakeries, which keep it frozen, then whip it for use on cakes and pies; the latter will go stale before the Better Cream! It is also used as the filling in Rich's Frozen Chocolate Eclair. Though the company spent a lot of money hoping to find medical applications for the Freeze Flo Process, nothing has yet been commercialized.

Rich Products does not have a good archives with documents from the early years of the company. "In those days we didn't save things, although we have nice displays in our memorabilia room here in our 250,000 square foot building which is called Rich Renaissance Niagara. Our offices and research center are in that building–but it houses no manufacturing operations."

Bob has heard that Edsel Ford died of either ungulate fever or cancer of the intestine. If it were ungulate fever, that could be one more reason why Henry Ford was so interested in promoting the use of soymilk–as at the Henry Ford Hospital. Bob thinks they also served a soy coffee cream (soymilk thickened with propylene glycol) at the hospital.

Note from Ford Bryan, researcher at the Ford Archives, in response to an inquiry from William Shurtleff. 1993. Aug. 9. "I'm fairly certain Henry Ford disliked cows as a boy–long before Edsel's illness. We do not seem to have a copy of Edsel Ford's death certificate. As far as we know, the cause of Edsel's death was cancer of the stomach, perhaps complicated by ungulate fever."

Talk with Herb Kusche, executive vice-president of Rich Products. 1993. July 14. "Bob Rich has a memory like an elephant; its superb." Address: Chairman of the Board, Rich Products Corp., P.O. Box 245 (1150 Niagara St.), Buffalo, New York. Phone: 716-878-8000.

6453. Sharma, Ratan. 1993. Utilization and evaluation of soymilk as a partial substitute for cow / buffalo milk in the manufacture of rasogolla. PhD thesis, Dep. of Animal Husbandry and Dairying, Inst. of Agricultural Sciences, Banaras Hindu University, Varanasi–221 005, Uttar Pradesh, India. 192 leaves. [116 ref]*

• ***Summary:*** Note 1. Rasogolla (also widely known as Rasgulla) is a very popular cheese-based syrupy sweet dish, originally from Orissa. Popular throughout India and South Asia, the dish is made from balls of chhena (the word for "paneer" used in the eastern parts of India) and semolina dough, cooked in sugar syrup.

Note 2. This thesis was forwarded and submitted on May 13, 1993 and was accepted and awarded by the panel of experts on July 29, 1993.

Note 3. Ratan Sharma's masters thesis was titled "Preservation of Eggs at Room Temperature." Soy was not mentioned in this master's thesis. Address: Varanasi, India.

6454. Demos, Steve. 1993. New developments with soyfoods in America (Interview). *SoyaScan Notes.* July 31. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Vitasoy purchased Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in May or June 1993 for an estimated $4-$5 million. Azumaya did not sell their building or the land on which their plant is situated. So now Vitasoy owns two large tofu manufacturers on both coasts of the USA: Nasoya in Massachusetts, and Azumaya in California.

Mr. Yamauchi sold the rest of his ownership in House Foods & Yamauchi, Inc. to House Foods of Japan. [Note: Another industry observer states that the sale took place in about April 1993 for about $2 million].

Bill Bolduc is now running a soymilk plant in the Midwest; he now makes Westbrae's soymilk. Steve sees the future of soymilk as being packaged in the new extended shelf life (ESL) gable-top carton and sold as a commodity for a lower price like cow's milk rather than as a specialty flavored beverage.

Anders Lindner told Steve in March that DE-VAU-GE wanted to sell their soymilk plant. He offered to sell the used plant to Steve for a good price in German marks. Steve never responded.

White Wave now makes about 100,000 lb/week of tofu (of all kinds). The company's reduced fat tofu is selling very well. Quong Hop is stating on two red-on-white stickers on their package that (1) their tofu is "The original reduced fat tofu;" and (2) "The original reduced fat–High protein tofu: Serving size 4 oz., Fat per serving 3 gm. Protein per serving 14 gm." Lab tests run by more than one company indicate that Quong Hop's tofu actually contains far more fat.

Steve bought Veggie Life from Leonardo Laudisio much more for the name than for the product (meatless burger) or its formula.

Update: 1993. Nov. 24. Talk with Leonardo Laudisio. On about November 8-10 White Wave secured preferred vendor status from Whole Foods Markets. They now are installing their cold-storage "set" in the individual stores; one is now in the Berkeley store. At the top in large letters is written "White Wave Vegetarian Cuisine" with the oval White Wave logo is bas relief. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

6455. Haren, Chuck. 1993. Maya soy Guatemala. *Plenty Bulletin* (*Davis, California*) 9(2):1-2. Summer.
• ***Summary:*** "I spent two mornings at Alimentos San Bartolo (ASB), the Mayan owned and operated soy dairy near Solola that Plenty helped to create in 1979-1980. Alimentos San Bartolo is a business that is owned by the community of San Bartolo. A board of eight directors, who are the Community Development Directors for the village, watch over the operations. Our old friends Elena and Augustine continue to work there. ASB has a total staff of eight people.

"They sell about 2,000 frozen ice creams and fruit flavored milk bars every month during the six-month dry season. Also, each month they sell 700-800 lbs. of tofu and 60-80 lbs. of tempeh to stores in Antigua (Guatemala), Panajachel and Guatemala City. Some packaged soybeans and soy flour are sold and a small amount of milk is delivered to individual homes that like it. The prices of all these products are slightly lower than comparable foods on the market. The business is just making enough now to cover the small wages they are receiving and the other basic operating costs. They are not making enough to repair major equipment failures or to replace equipment when needed. All the equipment has been very well-maintained by the staff and the sanitation standards are very high.

"One thing that was obvious was the need to establish a small restaurant outlet in Solola if the ASB is going to develop a wider market for soybean foods among the Mayan people. They need a place near the center of Solola. They need an opportunity to show people the variety of delicious ways soybeans can be included into traditional foods at a very low cost and also educate the populace about the nutritional value of soybean foods. Now the local people only buy the frozen milk/fruit bars, ice cream and a small amount of milk. Why?–because they are not expensive and are sold in forms that are similar to foods they are accustomed to. Almost all of the tofu and tempeh is sold to stores catering to tourists... Now virtually all of the okara is used as compost to fertilize the gardens... Soybeans used at ASB are grown near the coast. They are purchased in Guatemala city. Inappropriate varieties, technical methods and lack of infrastructure used earlier limited soybeans from becoming a cash crop among farmers at the altitude of Solola (6,000-7,000 ft). Some people say soybeans cannot be established as a crop in this area because of the costs of fertilizer, fungus [fungicides] and insecticides needed, and the lack of sunlight during the rainy season."

"Fundadase is a Mayan NGO with a paid staff of about 25 people that supports community development work in areas surrounding Chichicastenango and Chimaltenango. They receive the majority of their funding from a Danish NGO."

In March of this year Haren participated in a successful 9-hour soybean workshop in Chichicastenango attended by more than 100 men and women from surrounding villages. "This group is very well organized." A meal was served which included soy harina drinks, okara stir-fried with vegetables and potatoes, and soymilk with vanilla. Then a practical demonstration of soybean processing was conducted. Finally several hundred pounds of soybean were sold to interested attendees in one and two pound packets. Of the 9 million people living in Guatemala, about 6 million are indigenous Maya. A 1991 United Nations study found that 6.5 million Guatemalans are living in extreme poverty. Photos show: A Mayan woman straining soymilk to make tofu at Alimentos San Bartolo. Two women preparing corn and soya tamales for the FUNDADASE demo. Address: Program Director.

6456. Imagine Foods, Inc. 1993. Three out of four would rather be dreaming (Ad). *Vegetarian Times.* July. p. 33. Also run in the Oct. issue, p. 39.
• ***Summary:*** This attractive 1/3 page color ad shows a glass and a carton of Rice Dream (Organic Original Lite 1% fat non-dairy rice beverage) next to a bowl containing cereal, sliced strawberries, and Rice Dream. The text states: "In a blind taste test, 300 natural food store shoppers were asked to compare Organic Original Lite Rice Dream with the two best selling soy beverages* (Footnote: * Based on a poll of leading natural food distributors). The exciting results were 227 out of 300 chose rice dream as the best tasting non-dairy beverage. 99% fat free with no cholesterol, Rice Dream is available in four scrumptious flavors. The light refreshing taste comes from our patented recipe which transforms nutritious brown rice into a delicious beverage rich in complex carbohydrates..." Address: 299 California Ave. #305, Palo Alto, California 94306. Phone: 415-327-1444.

6457. Osho, S.M. 1993. Developed soybean technologies for small-scale and industrial levels. Nigeria: IDRC Canada / IITA Soybean Utilization Project, Phase II. 67 p. July. Illust. 25 cm. [7 ref]
• ***Summary:*** On front cover and bottom of title page: "For a National Workshop on Small-Scale and Industrial Level Processing of Soybeans (27-29 July 1993). Contents: 1. Introduction. 2. Chemical composition and nutritive value

of soybeans. 3. A concept for preparation of whole soybeans for use in human food: Reduce the long cooking time required to tenderize the beans using a blanch of sodium bicarbonate or a local tenderizer. Soybean can be processed into soyflour and soybean paste to facilitate processing. Elimination of anti-nutritional factors (by use of moist or dry heat). Ensuring high protein yield at the end of processing. Taste 4. The use of soybean at household / village level processing. 5. Processing of soybeans as an income generating activity: Soybean tofu processing (soywara or soycheese). Extrusion cooking: IITA concept. Defatted cake processing and soybean oil extrusion using mechanical screw press technology: IITA concept. Flow charts: 1. For making raw soy flour, partially processed soy flour, roasted soyflour. 2. Four methods for processing soy ogi. 3. Soybean gari. 4. Soybean iru. 5. Processing of plantain / banana products. 6. Soy vita / Soyvita processing. 7. Soybean milk processing (hot extraction, cold extraction, from soy flour). 8. Processing soybean milk and milk residue (okara). 9. Soy cheese from whole soybean. 10. Making soy yogurt.

6. Achievements and impact of soybean utilization. How to grow soybeans (starting with a small area). Fabricators / suppliers of soybean processing equipment (32 companies listed). Fig. 2. Instapro 600 extruder: Configuration for whole soybean extrusion. Fig. 3. Instapro 600 extruder: Configuration for corn/soy extrusion. References / suggested reading.

Note: On the white cover are the logos of IRDC/ IITA Soybean Utilization Project, International Institute of Tropical Agriculture (IITA) and Libran Trusts Limited.

Figures show: (1) Products derived from soybeans (full page). (5) Soybean processing by extrusion / expelling.

Tables show: (1) Chemical composition of whole soybeans. (2) Comparative cost of commodity and protein in selected food sources in Nigeria 1993 (The most expensive is milk powder at 556 Naira/kg. The least expensive is soybean at 167 Naira/kg). (3) Amino acid profile of soybean protein: Grams of gram Amino acid per 16 grams of nitrogen. Source: FAO 1985. (4) Specification of time, temperature and treatment for the complete inactivation of the soybean trypsin inhibitor at the household level (ranges from 4 minutes for puffing whole soybeans in sand to 30 minutes for boiling whole soybean at 100ºC.). (7) Yield and quality of soyoil as affected by processing temperature. (8) Physico-chemical characteristics of crude, partially and fully refined oil. (9) The percentage of farmers / households producing and utilizing soybeans in IRDC Project Sites (1991 vs. 1992). (10) Some soybean products that are being processed and marketed by companies in Nigeria (Feb. 1992). Shows 32 commercial products. For each product is given the company name, location (state), Product, and % soybean used in the product. Here are the details for each product.

1. Betamarks, Lagos, Soybean flours, 30%.
2. DLOB, Oyo, Soy oil / high protein cake, 100%.
3. Farina, Lagos, Soybeverages, 100%.
4. Kofa Agric. Ventures, Kwara, Soy oil / high protein cake, 100%.
5. Milkman, Oyo, Soymilk, 100%.
6. Oja Farms, Oyo, Soy oil / high protein cake, 100%, Casasoy, 30%.
7. Taraku Oil Mills, Benue, Soy oil / high protein flake, 100%.
8. Uncle Segun Food Proc. & Preserv. Co., Oyo, Soy powder, 100%.
9. Jomartex, Oyo, Soymilk, 100%.
10. Lisabi Foods, Lagos, Soy custard, 30%.
11. Smallette, Sogi, 30%.
12. Funtua Oil Mills, Kaduna, Soy oil / high protein cake, 100%.
13. Glaxo Nigeria, Lagos, 'Babeena' baby food, 30%.
14. Nestle Foods, Lagos, 'Nutrend' baby food / 'Golden Morn' breakfast food, 30%.
15. Imo Health Foods, Imo, Soybeverages, 100%.
16. Cadbury Nigeria, Lagos, 'Das' candies, 10%.
17. Tuns Oil, Osun, Soy oil / high protein cake extruded products, 100%.
18. Marrison Ltd., Lagos, Extruded products, 100%.
19. Akiibiti Farms, Ondo, Extruded products, 100%. 20. Deagbo Industries, Oyo, Soyvita (beverages), 100%.
21. Tella Food Industries, Oyo, Soymilk, 100%.
22. Goodings Health Foods, Lagos, Texturized vegetable protein (Nutrela), 100%.
23. Niger Dock, Lagos, Soymilk, 100%.
24. Jof Ideal Family Farm, Ondo, Vegetable oil, 100%.
25. Temitope Biscuit Indus. Ltd., Ogun, Soybiscuit, 10%, Baby food, 30%.
26. Orman Industries Comp. Ltd., Oyo, Extruded soy full-fat defatted soycake, 100%.
27. Al-Bahamas, Lagos, Baba ogi, 30%.
28. Odichie Bakery, Lagos, soybread, 10%.
29. Morgan, Oyo, Soyflour, 100%.
30. Pfizer Nigeria Ltd., Lagos, Livestock feed, 30%.
31. Buckingham Ltd., Lagos, Mama Joy baby food, 30%.
32. Alphatec, Oyo, Soyoil / livestock feed, 100%.
33. Cocoa Industries, Lagos, Chocolate bar, 10%.

6458. Bolduc, Bill. 1993. Current work with soymilk and organically-grown soybeans (Interview). *SoyaScan Notes.* Aug. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Bill Shurtleff tells Bill Bolduc that he has heard that Bolduc's company is now making soymilk for Westbrae Natural Foods. Bolduc admits that this is correct. Shurtleff says that he cannot imagine how Bolduc is doing this, since

a modern soymilk plant typically costs about $1.5 million. Bolduc answers that he purchased the soymilk plant owned by Grove Country Foods in an auction on 4 April 1993. This plant used the University of Illinois process for making soymilk.

Note: Grove Country Foods, USA, is located at 720 S. Main St., Columbus Grove, Ohio. Phone: 419-659-5636 (office) or -2920 (plant). The two main people involved in the company were Dr. Carl Hastings and Prof. Alvin I. Nelson, both food scientists from the University of Illinois. The basic idea of the company was to commercialize new soy products and processes (such as soynuts, soy yogurt, soy ice cream, and soymilk) developed at the University of Illinois. By December 1988 they were in test production of several products but were in need of funds for commercial production and marketing. In early 1989 Grove Country Foods Canada Inc. (located in Ridgetown, Ontario, Canada) introduced Astronuts, a type of soynuts apparently made by some other company, but the company went bankrupt after 1-2 years.

Bill has modified the Illinois process for making soymilk extensively. For example, he removes the okara from the soymilk. Completing these modifications has taken several months, and his company is "now in a start-up mode making soymilk." Their refrigeration was under-sized so they lost several loads of product to spoilage. This week they are installing another compressor, etc. The system now works very well if they go slowly, but they need to be able to produce twice as much soymilk as they presently can before he will be satisfied. Now it takes several days to produce a tanker full of soymilk. Westbrae is being patient and supportive even though the process is "a bit bumpy."

Bill is only making Westbrae's regular soymilks–not their Malteds, which he thinks are still made by Hinoichi in Los Angeles. The only soymilk Bill makes is Westbrae's. He ships this soymilk in a tanker to a separate facility nearby in the Midwest that packages the soymilk in Tetra Brik Aseptic cartons for Westbrae. Westbrae now has their regular soymilk (the same product sold under the same brand) made by two companies (Pacific Foods of Oregon and Bill's Organic Processing Corp.) using two different processes. Bill started because Pacific ran out of capacity. Westbrae likes the flavor of Bill's soymilk as well as they like Pacific's–even though Pacific's technology is much more expensive than Bill's. Bill has dramatically altered the Illinois process but he has decided not to try to patent his altered process.

Within about 2 months Bill expects to have a new soymilk product on the market with another partner (similar to Westbrae, but whose name is confidential) in a new package [perhaps an extended shelf-life (ESL) gable top carton]. After that, Bill hopes to diversify his customer base and his product mix. To do that he hopes to start by making a fresh, UHT Processed, refrigerated soy-based frozen dessert mix (for soft-serve soy ice cream) packaged at another facility, located very nearby, in 2-gallon bags with a 60-day shelf life.

Bill sees the future of soymilk packaging as being in the relatively new extended shelf life gable top carton that is sold refrigerated. This package, which is made by Tetra Pak and Evergreen, is significantly less expensive than the traditional Tetra Brik carton. It is now becoming quite popular in the Midwest and the East Coast because of its lower cost. It can cut at least $1.00 off the wholesale price of a case (12 quarts) of soymilk, which leads to even bigger savings at the retail level. And the product has a shelf life of 60-90 days refrigerated. Co-packers nearby own the new gable-top packaging equipment. Most of America's major soymilk companies are looking carefully at this package, it requires a whole new distribution system–refrigerated trucks. Bill knows that there will be a soymilk product on the market in the extended shelf life gable top package by this fall. Bill will make it for another company. The rest is confidential. He just ran the first test batch last Thursday, and now he is doing shelf-life tests. His smaller company has several advantages over the bigger soymilk companies; his company is very lean and can move very quickly. He is not controlled by any multinational corporations.

Bill has a separate company named Organic Marketing that exports organically grown soybeans to Europe; he started Organic Marketing in about 1989 and it was the precursor to Organic Processing. Bill was acting as marketing coordinator for the Ohio Ecological Food and Farm Association (the organic growers of Ohio). First he sold a lot of organically grown soybeans to Dan Burke of Pacific Soybean & Grain, then he started exporting. He met Jerry Fowler, a British-born man who has a company named Manna International in Ontario, Canada. Bill likes very much to do business with Jerry because he has a very good overview of the market, is cooperative with the growers, and pays good money to the growers for organic soybeans. Bill exports his organic soybeans via Montreal to England, where they are used by the Haldane Foods Group (which is owned by ADM).

Update: Talk with Ron Roller, CEO of American Soy Products (ASP). 1993. Sept. 4. Bill Bolduc is making plain soymilk and shipping it up to Grand Rapids, Michigan, for formulation and Tetra Brik packaging for Westbrae. ASP negotiated with Westbrae for a long time, but Westbrae finally went with Pacific Foods and Bolduc; there were many reasons for this but they are mostly political. Address: President, Organic Processing Corp., 305 N. Walnut St., Yellow Springs, Ohio 45387. Phone: 800-647-2326 OF.

6459. Bolduc, Bill. 1993. Plans for a making a rice beverage (Interview). *SoyaScan Notes.* Aug. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Bill is planning to make a rice beverage using organically grown rice, to be sold under the Organic

Processing label. He has been working with some excellent professionals who know a great deal about converting carbohydrates to sugars. He has copies of the patents owned by California Natural Products in Manteca, California. He plans to run the beverage through his soymilk plant–but it will be very different than what anyone else is doing. If he is able to get the right flavor (which is the key), he will do a nutritional analysis to see how much conversion has taken place after different time periods. He feels there is a major market opportunity. He has considered making a product using a mixture of rice beverage and soymilk, and some time ago he has heard that American Soy Products (Eden Foods) in Michigan is working on such a product–but his tendency now is to make a rice beverage (more a rice milk than an amazake) without soy that will compete head to head with Rice Dream but in a different package–an extended shelf life (ESL) gable top carton that is sold refrigerated. This new package is significantly less expensive than the traditional Tetra Brik carton. Tetra Pak and Evergreen make this new package, which is now becoming quite popular in the Midwest and the East Coast because of its lower cost. It can cut at least $1.00 off the wholesale price of a case (12 quarts) of soymilk, which leads to even bigger savings at the retail level. And the product has a shelf life of 60-90 days refrigerated. Co-packers nearby own the new gable-top packaging equipment. Address: President, Organic Processing Corp., 305 N. Walnut St., Yellow Springs, Ohio 45387. Phone: 800-647-2326 OF.

6460. *Wall Street Journal.* 1993. Small food producers win a big concession on labeling. Aug. 18.
• ***Summary:*** "Congress this month modified the Nutrition Labeling and Education Act [NLEA] to give small companies more time to comply–and to exempt more of them altogether.

"The law requires most food concerns to use labels listing the nutritional content of a product's ingredients by next May. Originally, it exempted only companies with under $500,000 in annual sales. But few food concerns are in that category. So, after heavy lobbying from the Retail Confectioners International and the National Association for the Specialty Food Trade, Congress relaxed the rules.

"Under the amended law, companies that have under 300 workers are exempt in the first year from labeling products that sell fewer than 600,000 units and in the second year from labeling products that sell fewer than 400,000 units. Firms that have under 200 workers are exempt in the first three years from labeling products that sell fewer than 200,000 units. And companies that have under 100 workers are permanently exempt from labeling products that sell fewer than 100,000 units annually."

Talk with John Belleme. 1993. Aug. 29. If a company has less than 100 employees and sells less than 100,000 units of any particular product per year, and does not make any nutritional claims about its product, it need not switch to the new labeling regulations. However if it does make nutritional claims, it must use the new label format. In the past, if a product made no nutritional claims about its product, it did not need a panel showing the nutritional composition. The new nutritional panel requires information on 11 nutrients, whereas the old panel suggested only 7. Most of the food industry did not like the new labeling requirements. It would have cost food companies billions of dollars, and the FDA would have had to greatly increase their staff just to enforce it. Now, if a company makes a nutritional statement, it must use the new panel format–regardless of the company size and sales. The only time the new labeling regulations would not apply would be to the product that makes no nutritional claims, and whose manufacturer has less than 100 employees, and sells less than 100,000 units of the product per year. For example, Westbrae has 300 products since they purchased Little Bear, yet they only have above 3 products that sell more than 100,000 units per year: Several soymilk products and 1-2 flavors of ramen.

6461. Stuber, Lorenz; Stuber, Ellen Figueroa de. 1993. Re: Work with soya, Soyane, and Comida Para Todos in Guatemala. Letter to William Shurtleff at Soyfoods Center, Aug. 20. 3 p. Handwritten. [Eng]
• ***Summary:*** "We would like to thank you for all of the information and inspiration that we got from your book *The Book of Tofu.* We are vegetarians and for years we have been making and eating tofu.

"In 1985 we started a little project to help the poor people in Guatemala. We had a little vegetarian restaurant in Panajachel and we distributed the daily leftovers to people that need food. At the same time we started a little project of food distribution at the garbage dump in Guatemala City. We helped to fund our project by selling Guatemalan hand crafts in Switzerland. There we met some people who were interest in our work and with their financial help we were able to expand our project (Comida Para Todos–Food for Mankind).

"We presently go 4 times each week to the garbage dump and to Peronia (a slum outside Guatemala City). Each day we take a hot meal made with rice, vegetables, beans, and tortillas (containing some okara) plus a fruit drink to about 150 children and poor people.

"This year we started a program in 2 little schools in the countryside, where we take whole wheat bread (containing some okara), marmalade, and fruit-flavored soya drink (soya milk) daily to 150 children. We distribute the food at our own cost. We have a little piece of land 30 km from the city where we built a big kitchen for this project and also for our own income. We would like to sell soy products on a large scale at inexpensive prices which could help relieve the malnutrition of so many Guatemalan people.

"We have done some tests in making soya milk (natural, fruit flavored, and chocolate), which we store in plastic

bottles and refrigerate. But it usually spoils within 3-4 days, and sometimes even gels and spoils the day after it was made. "We got a cheap vacuum packaging machine for packing natural tofu, fried tofu, and soyaburgers, and now we have started experiments to see how long these products will stay fresh under refrigeration." They order a copy of *Tofu & Soymilk Production* and ask for advice in solving their problems.

A color photo shows a little Guatemalan boy pouring soymilk from a large teapot into two 1-liter plastic bottles held by little girls. Other kids are standing around drinking soymilk out of cups.

Follow-up response to questions from William Shurtleff of Soyfoods Center. 1993. Oct. 9. Since 1985 they have known about the soy dairy (which Plenty Canada had helped to establish) in San Bartolo, Solola, Guatemala. In July 1985 they started buying tofu and soy ice cream from San Bartolo for their vegetarian restaurant in Panajachel. They fried the tofu and sold it at the restaurant. In July 1989 they started to make tofu, soymilk, tortillas with okara, whole wheat bread with okara, and soyaburgers. In January 1993 they established Soyane and started to sell the first four of these foods, which they make at Nueva Goverdhana, km. 34 Carretera hacia Antigua, Santa Lucia Milpas Altas, Guatemala. Phone: 030-7179 / 030-7181. They are still working on developing labels; a sample of a generic label (which can be used on any of their soyfood products) is enclosed. As of October 1993 they sell the following amounts of each soyfood product: Tofu 42 kg/week (sold mostly to Korean people), soymilk 350 liters/week (distributed to 150 school children), tortillas with okara 15 kg/week (distributed to the people at the dump), and whole wheat bread with okara (110 kg of which is distributed to school children). Address: Soyane, Comida Para Todos, Apdo. Post. 2812, Guatemala City, Guatemala. Phone: 030-7179 or 030-7181.

6462. **Product Name:** [Nordlac (Soymilk)].
Foreign Name: Nordlac.
Manufacturer's Name: Alimentos Alfa Ltda. Productos Nordland.
Manufacturer's Address: Carretera a Sacaba Km. 7½, Cochabamba, Bolivia. Phone: (042) 70094.
Date of Introduction: 1993. August.
Wt/Vol., Packaging, Price: 200 cc, 300 cc, and 1 liter plastic pouches.
How Stored: Refrigerated.
New Product–Documentation: Letter from Rene Mouton-Bluys. 1990. Oct. They plan to make Nordland soy yogurt and maybe ice cream in the summer of 1992.

Call from Rene Mouton, President, from Bolivia. 1995. March 24. This product was launched in Aug. 1993. It is sold in plastic pouches. He uses an enzyme, α-galactosidase, to hydrolyze and get rid of the oligosaccharides in his soymilk. His equipment and technology comes from a mixture of sources: Bean Machines, with ideas from the University of Illinois, and a Bolivian research center. His company now makes 5,000 liters/day of soymilk.

6463. Kradjian, Robert M. 1993. The milk letter: A message to my patients. Hillsborough, California: Published by the author. 21 p. 28 cm. [7 ref]
• ***Summary:*** Contents: Introduction. What is milk? Is all milk the same? (cow's milk compared with mother's milk). Well, at least cow's milk is pure. Or is it? It gets worse. Other problems. Leukemia? Lymphoma? This may be the worst–Brace yourself (Bovine leukemia virus). Other cancers–Does it get worse? Well, what are the benefits? Is that all of the trouble? Low fat. Summary. Address: Chief, Div. of General Surgery, Seton Medical Center, 1800 Sullivan Ave., Suite 302, Daly City, California 94015.

• ***Summary:*** A good introduction to soyfoods including whole dry soybeans, fresh green soybeans, soy flour and grits, soy sauce, soy oil, textured vegetable protein, soymilk, okara, soy yogurt and cheese, tofu, tempeh, and miso. Address: Contributing editor, Vegetarian Times.

6465. Soyfoods Association of America. 1993. Soymilk facts (Leaflet). Libertytown, Maryland. 2 p. 28 cm.
• ***Summary:*** The funding for this simple sheet (black ink on white paper) was provided by the United Soybean Board. Contents: Soymilk (what it is). Nutritional value of soymilk. Buying and storing soymilk. Types of soymilk. Tips for using soymilk. Soymilk recipes (4). Address: P.O. Box 65, Libertytown, Maryland 21762.

6466. Roller, Ron. 1993. Extended shelf life (ESL) gable-top cartons (Interview). *SoyaScan Notes.* Sept. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron has looked at the Tetra Rex ESL program. He feels it is worth considering if you can find a nearby co-packer. He has been talking with a man in Detroit who has one of the ESL packaging machines. He would not want to obtain a packaging machine until there is an established market for the product.

This new ESL package does not offer much cost savings; the key to saving money is distribution. It can be more expensive to distribute refrigerated foods unless you go with a dairy that ships right into stores–which can reduce your distribution costs, since they are already going there. Increasingly dairies are willing to distribute competing products. Cow's milk is a commodity that is very hard to make money on. So these distributors are diversifying in the items they carry.

Note. This is the earliest English-language document seen (Aug. 2013) that contains the abbreviation "ESL" which stands for "Extended Shelf Life" in connection with gable-top cartons or soymilk packaging. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

• ***Summary:*** This evaluation of the Child Haven International (Maxville, Ontario, Canada) SoyaCow program in India was strongly negative and stopped any more funding from CIDA. For another perspective, see Oct. 2010 interview with Bonnie and Fred Cappuccino, founder of Child Haven.

Interview with Hart Jansson. 2010. Oct. 28. Hart believes that at the time of this report, other things were taking place in the background. Either CIDA's priorities had shifted or their budget got smaller or both. Address: PhD, Consultant, 7 Admiral Rd., Toronto, ONT M5R 2L4, Canada.

6468. Archer Daniels Midland Co. 1993. Annual report. P.O. Box 1470, Decatur, IL 62525. 42 p. Sept.
• ***Summary:*** Net sales and other operating income for 1993 (year ended June 30) were $9,811 million, up 6.2% from 1992. Net earnings for 1993 were $567.5 million, up 12.7% from 1992. Shareholders' equity (net worth) is $4,883 million, up 8.7% from 1992. Net earnings per common share: $1.66, up 12.9% from 1992. Number of shareholders: 33,654.

New ADM products from soybeans include Soy Milk (dry mix) and Harvest Burgers (also named Veggie Burgers). Opposite a full-page color photo of soy milk being poured from a pitcher into a glass, we read: "A new line of soy-based milk products was introduced that are nutritionally equivalent to milk but less expensive to produce, allowing countries to expand their supply of needed protein at minimal cost.

"The all-vegetable protein food, Harvest Burger, is being actively marketed in the U.S. where 12% of the stores frozen food sections stock the product.

"Haldane Food Group continues to develop as the leading U.K. supplier to the health food industry. From a well-established domestic base and with an ever increasing product range the Group's commercial thrust is extending to Continental Europe. Of the many new products introduced during the year 'Vegemince' commands attention as a direct TVP/wheat gluten non-meat alternative to ground beef. The prototype plant is fully committed to production and line extension is in progress.

"'Vegeburger' continues as a market leader with other burger products being added to the range. The realized growth and market potential for convenience foods has brought about the relocation of Snackmasters Limited to a new factory at Sileby adjacent to the Haldane site. The automated production line is currently at 60 % capacity and the introduction of new products should fill the plant within twelve months.

"Genice Limited continues to pioneer the growth of non-dairy soya based ice cream and yogurts with an increasing market share in Continental Europe... Soya milk sales remain stable and we hope to excite the market by introducing a bottled soya milk that will complement the existing Tetra pack products."

"Currently operating at 80% capacity, ADM can produce 350,000,000 Harvest Burgers a year. ADM introduced the product in 1989, and soon will be selling as many burgers as some fast food chains" (p. 19). Address: Decatur, Illinois.

6469. August, Amanda. 1993. Soya far, soya good. *Vegetarian Living.* Sept. p. 37-38.
• ***Summary:*** "For many vegetarians the decision to drop dairy products from their diet is a natural progression– whether it be for ethical or health reasons... The dairy cow has been described as the most hard-worked of all farm animals. Normally, she would only produce 5 to 7 litres of milk a day for her calf but intensive farming means that the quantity can now be anything from 25 to 40 litres. To keep the milk flowing, the cow is subjected to yearly pregnancies, each lasting 9 months. After giving birth she will be milked for 10 months, but in the third month she will be put in calf [inseminated] again. So for 6 to 7 months of each year the cow is milked whilst pregnant.

"Calves are taken away from their mothers after 2 to 3 days, causing much distress to both mother and baby. Some calves are kept for dairy herd replacement (25%), some are exported to Continental veal crates, and the rest are fattened up to produce beef. Although cows have a lifespan of around 20 years, most are worn out after only 5 years. At this stage they are killed for meat."

"Soya milk is a wonderful alternative to cow's milk... Many brands are fortified with calcium (some containing more than dairy milk) and the vitamins B-12 and D... Soya milk doesn't taste like dairy milk. If trying it for the first time it's worth knowing that its an acquired taste. You may find it to be quite floury, with a strange after-taste and a strong aroma. But there are many who swear by it and whose altered palates find dairy milk cloying, fatty and oversweet.

"The first soya milk came onto the market in 1965, prior to which there had been no alternative to cow's milk. It was launched by one of today's leading producers, Plamil. Other companies began to follow suit in the 1970s.

"The market is still growing. In 1991 soya milk manufacturers produced 10.5 million litres and it's estimated that by the year 2000 Britain will be consuming over 20 million litres per year. Supermarkets even have their own

brands now. The Soya Milk Information Bureau's 1991 annual poll found that 39% of respondents were buying more soya milk than in 1990."

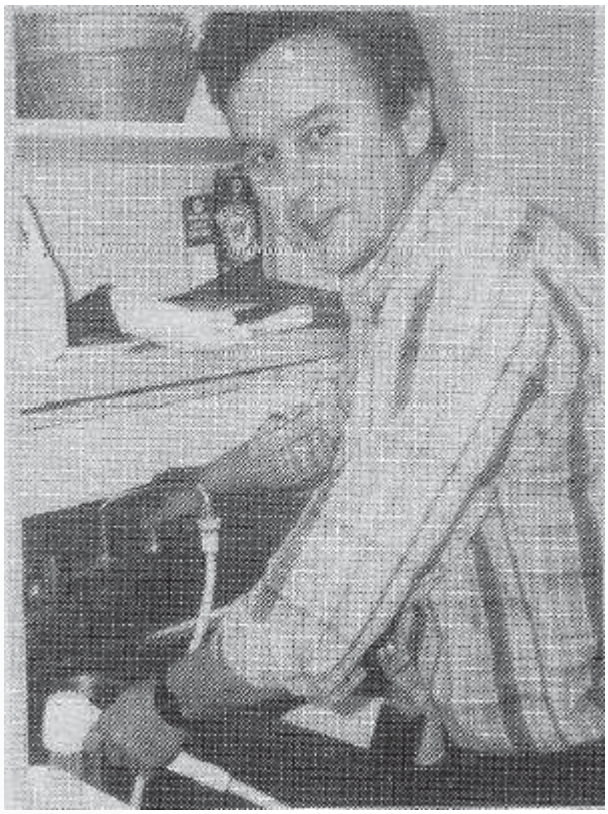
Color photos (p. 38) show 3 brands (Granose liter plastic bottles, Plamil 500 ml can, Provamel aseptic cartons), each with the words "Soya Milk" appearing as the product name on the front panel. The following brands are now available: Sainsbury, Safeway, Tesco, Waitrose, Co-op, Granovita, Granose, Sunrise, Plamil, Holland and Barrett, Unisoy, and Provamel [made by Alpro in Belgium]. Address: England.

6470. *Child Haven International* (*Newsletter, Maxville, Ontario, Canada*). 1993. Ottawa SoyaCow Group. Sept.
• ***Summary:*** "Our own Grant W. Wood received the Canada 125 Medal for his work on the soyacow. In cooperation with inventor Raj Gupta, Grant fabricated the first prototype of the SoyaCow. The citation was for 'providing a food source for children of the Third World,' and mentioned Child Haven. He is sporting a special cap with a SoyaCow logo designed by Kate Daller. Congratulations, Grant!"

A small portrait photo shows Grant Wood dressed in a white lab coat, with a beard and white cap.

An illustration shows the SoyaCow logo in an oval, elongated vertically.

6471. *Child Haven International* (*Newsletter, Maxville, Ontario, Canada*). 1993. Frank Daller... Sept.
• ***Summary:*** "... in addition to having a talented wife [Kate], is to be commended for getting the SoyaCow retail program going in Canada, beginning with a system placed at Rainbow Foods in Ottawa. Child Haven will soon receive its first monthly royalty: $100 from the sale of soymilk at the store. A SoyaCow is also producing is Saskatoon [in central Saskatchewan, Canada] at the Sweet Carrot Cafe, and two more at locations in Toronto and Ottawa are committed."

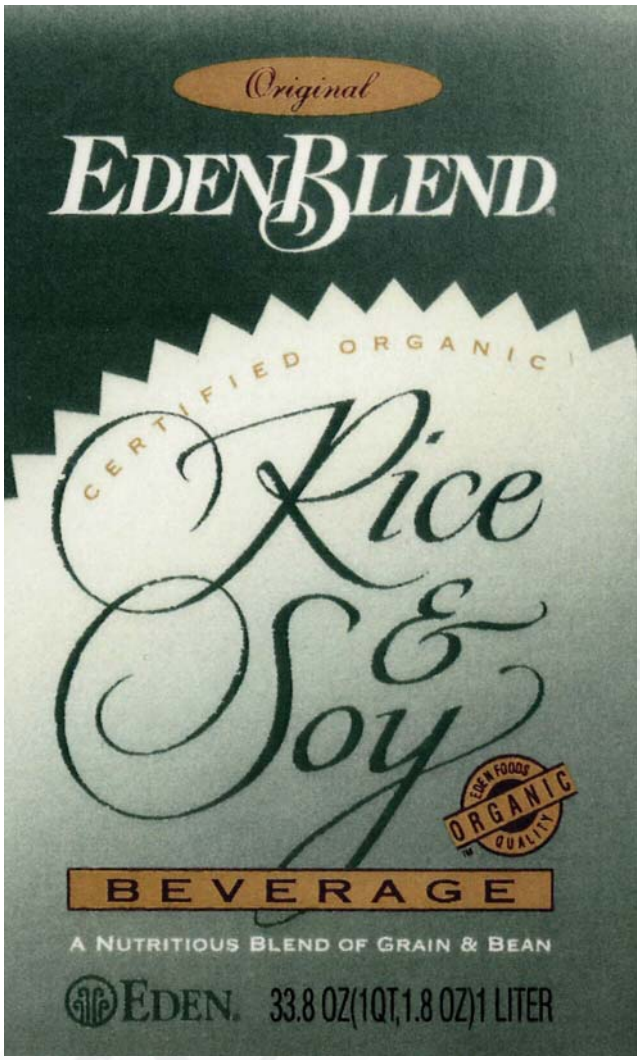


A photo shows Frank Daller at work.

6472. **Product Name:** Co-Op Soya Milk [Sweetened, or Unsweetened].
Manufacturer's Name: Co-Op (Marketer-Distributor).
Manufacturer's Address: England.
Date of Introduction: 1993. September.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton. Retails for 42p (sweetened or unsweetened) (9/93).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Amanda August. 1993. Vegetarian Living. Sept. p. 38. "Soya Far, Soya Good." Note: Co-Op is a major British supermarket chain. These products are private labeled for them.

6473. **Product Name:** EdenBlend Rice & Soy Beverage (Amazake & Soymilk) [Original].
Manufacturer's Name: Eden Foods, Inc. (Distributor). Made in Saline, Michigan, by American Soy Products, Inc.
Manufacturer's Address: 701 Tecumseh Road, Clinton, MI 49236.
Date of Introduction: 1993. September.
Ingredients: Purified water, organic brown rice, organic soybeans, kombu (seaweed), carrageenan, Lima sea salt,

calcium carbonate.
Wt/Vol., Packaging, Price: 1 liter (33.8 oz) Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 8 fl oz.: Calories 120, calories from fat 30, total fat 3 gm (4% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 85 mg (4%), potassium 270 mg, total carbohydrate 16 gm (5%), protein 7 gm (10%), calcium 2%, iron 6%. Percent daily values are based on a 2,000 calorie diet.



New Product–Documentation: Talk with Ron Roller, President of American Soy Products (ASP). 1993. Two new beverages, Rice Blend and Rice Soy, were introduced at the Natural Products Expo East, Sept. 9-12, in Baltimore, Maryland. They are both made from real, traditional rice koji. The EdenBlend (made of amazake and soymilk) tastes better than soymilk. These are really good products that took a great deal of time and innovation to develop; they should be on the shelves of natural foods stores in about mid-October.

Talk with Ron Roller. 1993. Oct. 19. These new products are now expected to be in stores by December. Originally they were going to be named Rice Blend and Rice-Soy, but now the names have been finalized to EdenRice, and EdenBlend. The packages are now being printed; it takes 5-6 weeks to print the film.

Talk with Ron Roller. 1994. Jan. 15. They have started making EdenBlend commercially; a little may be in the stores by now. Production of EdenRice will start tomorrow; it may not be in retail stores until February.

Label sent by Ron Roller. 1994. Jan. 16. Tetra Brik carton. White and black on light and dark green. "A delicious blend of rice and soy. Grains and beans are the primary foods of the human family. Combined they offer a whole spectrum of nutritional building blocks. Many cultures have intuitively combined grains & beans for balanced nutrition–rice and soybeans in Asia, maize and beans in the Americas, rice and peas in Africa. Grains and beans provide premium nourishment. EdenBlend marries two healthy foods–certified organic Lundberg Brown Rice (the best in the world) and organic soy (the same as Edensoy)... EdenBlend is certified organically grown and processed by OCIA (Organic Crop Improvement Association)."

Spot in Soyafoods (ASA, Europe). 1994. Autumn. p. 5. "Eden Foods launches rice and soya drink." A photo shows the package of EdenBlend Rice & Soy.

6474. **Product Name:** Grainaissance Amazake Pudding [Chocolate, or Almond Cinnamon].
Manufacturer's Name: Grainaissance, Inc.
Manufacturer's Address: 1580 62nd St., Emeryville, CA 94608. Phone: 415-547-7256.
Date of Introduction: 1993. September.
Ingredients: Chocolate: Filtered water, organic brown rice*, almonds, rice koji, tapioca starch-modified, unsweetened cocoa, natural flavors, xanthan gum. * = Organically grown and processed in accordance with the California Organic Food Act of 1990.
Wt/Vol., Packaging, Price: 6 oz plastic tub.
How Stored: Refrigerated.
New Product–Documentation: Talk with Tony Plotkin, owner of Grainaissance. 1993. Oct. 17. The lemon pudding was launched in about Feb. 1992 and the cocoa in about May or June 1992. He misunderstood the laws about labeling chocolate, believing that a product could not be labeled "chocolate" unless it contained milk. But an attorney corrected him. They will be renaming the product flavor to "chocolate" in about 2 weeks.

New Label for Chocolate sent by Tony Plotkin of Grainaissance. 1993. Nov. 2. Blue and red on white. The subtitle reads: "Naturally Sweet, Low Fat, Non-Dairy." Almond Cinnamon was launched in Sept. 1993. The label is red and white on tan. In the ingredients, cinnamon replaces unsweetened cocoa.

6475. *Heath Foods Business.* 1993. Milk substitute patent purchased. Sept. p. 80.
• ***Summary:*** "Imagine Foods, Inc. and California Natural Products, Inc., have entered into an agreement with Grainaissance, Inc. whereby Grainaissance has elected to take a license on U.S. patents owned by Imagine Foods and California Natural Products. These U.S. patents cover rice-based milk substitute products."

6476. **Product Name:** Holland & Barrett Soya Milk [With Calcium, or Unsweetened].
Manufacturer's Name: Holland & Barrett (Marketer-Distributor).
Manufacturer's Address: Healthways House, West Byfleet, Surrey, KT14 6NE, England.
Date of Introduction: 1993. September.
Wt/Vol., Packaging, Price: 1 litre Tetra Brik Aseptic carton. Retails for 75p (with calcium) or 69p (unsweetened) (9/93).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Amanda August. 1993. Vegetarian Living. Sept. p. 38. "Soya Far, Soya Good." Note: Holland & Barrett is one of the largest health food chains in the UK. These products are private labeled for them.

6477. **Product Name:** Safeway Soya Milk [Sweetened, or Unsweetened].
Manufacturer's Name: Safeway (Marketer-Distributor).
Manufacturer's Address: England.
Date of Introduction: 1993. September.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton. Retails for 49p (sweetened) or 42p (unsweetened) (9/93).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Amanda August. 1993. Vegetarian Living. Sept. p. 38. "Soya Far, Soya Good." Note: Safeway is a major British supermarket chain. These products are private labeled for them.

6478. **Product Name:** Sainsbury Soya Milk [With Calcium, or Unsweetened].
Manufacturer's Name: Sainsbury (Marketer-Distributor).
Manufacturer's Address: England.
Date of Introduction: 1993. September.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton. Retails for 49p (with calcium) or 42p (unsweetened) (9/93).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Amanda August. 1993. Vegetarian Living. Sept. p. 38. "Soya Far, Soya Good." Note: Sainsbury is a major British supermarket chain. These products are private labeled for them.

6479. *SoyaCow Newsletter* (*Ottawa, Canada*). 1993. El Salvador Project for Plenty Canada. 2(3):2. July/Sept.
• ***Summary:*** "Two more SoyaCows were recently ordered by the Canadian branch of Plenty. This organization, known worldwide for its humanitarian agricultural reform programs, is installing the SC-20 systems in San Salvador. A local El Salvador program manager has been brought to Ottawa for hands-on system training."

6480. *SoyaCow Newsletter* (*Ottawa, Canada*). 1993. Child Haven hires a Ph.D. for SoyaCow project in India. 2(3):1-2. July/Sept.
• ***Summary:*** Child Haven International, charitable organization based in Maxville, Ontario, Canada, has hired Ratan Sharma, a PhD in [soy and] dairy science, "to look after the 17 SoyaCows in India which were acquired with the help of the Canadian International Development Agency over the past several years. Dr. Sharma will be responsible for setting up The SoyaCow Centre in India." He will ensure that all the SoyaCows in India "function profitably to provide employment to women by selling protein-rich foods at affordable prices.

"Dr. Sharma has specialized in the development of soymilk-based Indian foods, especially sweets. The Centre will assist the Indian SoyaCow manufacturer in marketing the machine. In addition, it will provide operator training, public education, product development and marketing assistance, and SoyaCow servicing. The Centre's location is yet to be decided."

6481. *SoyaCow Newsletter* (*Ottawa, Canada*). 1993. Myanmar (Burma) soya food project. 2(3):2. July/Sept.
• ***Summary:*** "At the initiative of the California-based firm, Zin International, a SoyaCow SC-20 system has been sent to Rangoon for a pilot soyfood project. Zin International is headed by Thet Zin, a former United Nations Official in the Food and Agriculture Organization (FAO). He and his son and partner, Adalbert, are spearheading a grassroots agricultural reform initiative in Myanmar which they hope will eventually spread into other countries in Indochina."

6482. *SoyaCow Newsletter* (*Ottawa, Canada*). 1993. $20 billion soymilk market potential worldwide. 2(3):1. July/Sept.
• ***Summary:*** In Canada alone the potential for soymilk sales is over $400 million. In Canada, the per capita consumption of fluid dairy milk (not including ice cream, yogurt, cheese, etc.) is about 100 litres a year. Since 5 million Canadians have lactose intolerance (according to McNeil Consumer Products, Guelph, Ontario), these people could potentially be consuming soymilk at the same rate that others consume dairy milk, amounting to 500 million litres worth about $400 million. This translates into a $4 billion potential in the USA, and conservatively $10 billion worldwide. Soymilk

consumption in the form of non-dairy desserts, yogurt, and cheese could easily double this estimate.

"Why then is the current annual consumption of soymilk a meager 0.13 litre, or 0.65 litre for the lactose tolerant population?

"The answer to this question is related to the quality and cost of the soymilk available currently in the market." The soymilk sold in Canada by Eden Foods, Vitasoy, and Westbrae is expensive–$2.00 to $3.00 per litre compared with $1.25 for fresh dairy milk.

6483. Soyfoods Association of America, Standards Committee. 1993. Soymilk standards: First draft (Seventh revision). Bar Harbor, Maine. 22 p. Sept. Unpublished manuscript. 28 cm. [19 footnotes]
• ***Summary:*** Contents: Purpose of standards. General definition of "soymilk." Classification of "soymilk." Definitions. Labeling and advertising of "soymilk" products. Microbiological guidelines for "soymilk." Endorsement; "Seal of Soymilk Integrity." Soymilk Standards Committee; Adoption and amendment of standards.

Page 3 states: "In the United States in 1991, no fewer than 35 processors or marketers of soymilk distributed approximately 9.8 million gallons of soymilk and consumption was estimated to be growing at around 15% a year (Source: Peter Golbitz. Soyatech, Inc., 1991; estimates based on industry survey conducted in 1991)."

Note: During 1983, total U.S. consumption of soymilk was 2,683,000 gallons, according to *Soymilk Industry and Market* (published in Feb. 1984 by Soyfoods Center). These figures indicate that U.S. soymilk consumption has more than tripled (increased by a factor of 3.65) in only 8 years. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207/288-4969.

6484. **Product Name:** Tesco Soya Milk [Sweetened with Calcium (1 litre), or Unsweetened (500 ml)].
Manufacturer's Name: Tesco Stores Ltd. (Marketer-Distributor).
Manufacturer's Address: Cheshunt EN8 9SL, England.
Date of Introduction: 1993. September.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton. Retails for 93p (sweetened with calcium) or 42p (unsweetened) (9/93).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Amanda August. 1993. Vegetarian Living. Sept. p. 38. "Soya Far, Soya Good." Note: Tesco is a major British supermarket chain. These products are private labeled for them.

6485. **Product Name:** Provamel Soya Dream: A Non-Dairy Alternative to Single Cream.
Manufacturer's Name: Vandemoortele (UK) Ltd. (Marketer-Distributor). Made in Belgium by Alpro.
Manufacturer's Address: Ashley House, High Street, Hounslow, Middlesex TW3 1NH, England.
Date of Introduction: 1993. September.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad (full page, color) in *Vegetarian Living.* 1993. Sept. p. 39. "Its the soya cream topping she's been dreaming about." A large color photo shows a black and white cat looking curiously at a carton of Soya Dream, which "is delicious as a topping for all your favorite desserts. Soya Dream tastes, looks and pours just like the real thing. And, unlike most cream alternatives, it is high in polyunsaturates and low in saturated fats." The front of the carton shows a hand pouring Soya Dream from a cup over a dessert on a plate. The text below the illustration reads: "A delicious dessert topping made with pure Soya Oil and Soya Beans."

Note: This is the earliest document seen (Jan. 1999) that uses the term "cream alternatives" (or "cream alternative").

6486. **Product Name:** Waitrose Soya Milk [Unsweetened].
Manufacturer's Name: Waitrose (Marketer-Distributor).
Manufacturer's Address: England.
Date of Introduction: 1993. September.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton. Retails for 42p (9/93).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Amanda August. 1993. Vegetarian Living. Sept. p. 38. "Soya Far, Soya Good." Note: Waitrose is a major British supermarket chain. These products are private labeled for them.

6487. **Product Name:** Lite Malteds.
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).
Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.
Date of Introduction: 1993. September.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1993. Sept. p. 23. "Another exclusive first for Westbrae is Malteds [launched Oct. 1984]–a truly non-dairy delight! Thick and rich, in five delicious flavors... Vanilla, Almond, Cocoa-Mint, Carob, and caffeine-free Java... For an 'almost sinless' treat new Light Malteds have less than half the fat and 1/3 fewer calories than original malteds. Like original Malteds they're sweetened with brown rice syrup, a more balanced sweetener, high in complex carbohydrates, with a smooth, mellow sweetness and no sugar 'rush.' And new Creamy Banana flavor is a hit with kids of all ages. Health-conscious consumers can enjoy Lite Malteds guilt free. Both original Malteds and Lite Malteds now come with a convenient flex-straw that says 'pick me up and enjoy me now!'"

6488. Westbrae Natural Foods. 1993. WestSoy–First and foremost: Westbrae information series no. 1 (Ad). *Natural Foods Merchandiser.* Sept. p. 23.
• ***Summary:*** "As the industry leader in soy beverages, Westbrae Natural Foods has a history of product innovation. Beginning with the introduction of 100% Organic WestSoy [in 1984], the first and only organic soy drink on the market... Westbrae is proud to have introduced the first 1% low-fat soy drink line–WestSoy Lite [in April 1990]... And when asked us for a soy beverage without added sweetener for soups, sauces and gravies, we introduced 100% Organic Unsweetened Westsoy [in Nov. 1989]."

"Another exclusive first for Westbrae is Malteds [launched Oct. 1984]–a truly non-dairy delight! Thick and rich, in five delicious flavors... Vanilla, Almond, Cocoa-Mint, Carob, and caffeine-free Java... For an 'almost sinless' treat new Light Malteds have less than half the fat and 1/3 fewer calories than original malteds. Like original Malteds they're sweetened with brown rice syrup, a more balanced sweetener, high in complex carbohydrates, with a smooth, mellow sweetness and no sugar 'rush.' And new Creamy Banana flavor is a hit with kids of all ages. Health-conscious consumers can enjoy Lite Malteds guilt free. Both original Malteds and Lite Malteds now come with a convenient flex-straw that says 'pick me up and enjoy me now!'"

"Another important first for Westbrae was WestSoy Plus, with calcium, vitamins A, D and riboflavin added. WestSoy Plus was the first soy drink to bring your customers a balance of the important nutrients found in dairy milk. Calcium is added in the form of tricalcium phosphate, naturally occurring in phosphate rock and lime. This is the same calcium that is found in dairy milk... Vitamin A palmitate is used as a vegetarian source of vitamin A." Vitamin D is derived from torula yeast. Riboflavin is formed through a biofermentation process of ribose, which is a simple sugar. WestSoy Plus has only 2% fat.

"Behind the careful development of the great tasting new WestSoy products is an experienced Product Development and Quality Control team, headed by Dr. Myron Cooper, PhD. Dr. Cooper is Vice Chairman of the California Organic Advisory Board and Chairman of the Processor Subcommittee. He also serves on the Board of Directors of the Soyfoods Association of America and their Soymilk Standards Subcommittee." Address: P.O. Box 48006, Gardena, California 90248.

6489. Lowe, Frederick H. 1993. Business can breathe easier. *Sun-Times* (*Chicago, Illinois*). Oct. 6.
• ***Summary:*** Boris Yeltsin's defeat of Russian hard-line opponents will help Midwest companies doing business in Russia. Decatur-based Archer Daniels Midland Co. sells soybean-based food products to Russia and the Ukraine. These include vegetarian burgers and soy-based milk products, according to company executive Howard Buffett, assistant to ADM Chairman and CEO Dwayne O. Andreas. "We sell 5,000 vegetarian patties a day to a restaurant we jointly operate in Moscow. The burgers are also sold throughout Moscow at Kiosks."

6490. Poninski, Piotr. 1993. Re: Tofu in Poland. Letter to William Shurtleff at Soyfoods Center, Oct. 10. 2 p. Typed, with signature on letterhead.
• ***Summary:*** After giving details about the tofu made by his company, Piotr notes: "We think that second generation products are absolutely the best way to popularize this kind of new food. We will soon be working on tofu with various spices and other additions such as vegetables, grains, nuts etc. as well as on dressings and spreads.

"As far as other soyfoods are concerned, both soymilk and TVP are available on the Polish market but in a rather modest way. If you want to find them you can, but since they are all imported from Western Europe, or from Hungary (TVP) and not generally known, they are not widely available. Our plan is to import and popularize TVP. You can also get some retail packaged soybeans and soy meal.

"I think we are the first company to make and sell tofu in the Warsaw area, but I know a little about other companies which make or are planning to make tofu in Poland: (1) Vietnamese immigrants make firm tofu (*Dau Phu*), probably coagulated with vinegar, and sell it only to other Vietnamese people. Their general opinion is that Poles will not eat it and it is not worthwhile to try to popularize it; (2) A 'district dairy cooperative' in Szczytno (Northeastern Poland) makes tofu and tries to sell it somewhere in Warsaw. A professor from the department of food technology at the Main School of Agriculture in Warsaw is involved in this project and probably has set up the whole technical process. We contacted with him but he refused to cooperate with us. I have not had a chance to eat their tofu but one of our customers who tried it says it has a taste inferior to ours; (3) A Polish-Chinese enterprise which presently sells soybean sprouts is planning to manufacture and sell tofu in the Warsaw area." Address: Founder and owner, Polsoja, ul. Hetmanska 61, 05-120 Legionowo (near Warsaw), Poland. Phone: (48 22) 18 21 11.

6491. Richardson, Al. 1993. Companies using Nichii Soy Flakes, and new developments (Interview). *SoyaScan Notes.* Oct. 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The main American user of Nichii's soy flakes is White Wave of Boulder, Colorado, which uses the flakes in only one product–its reduced fat tofu. White Wave also makes a private label reduced fat tofu for Tree of Life in Florida. Other users are: Ashland Soy Works (Ashland, Oregon), which will be introducing a reduced fat tofu, made from 100% soy flakes, this month; Sacramento Tofu uses soy flakes only in their firm-style tofu; Calco of Dallas, Texas, uses flakes in their firm-style tofu. They buy a truckload

about every 5 months. They also use whole soybeans; Dorothy Hwang, a PhD chemist, of Michigan Soy Products Co., Inc. (in Royal Oak, Michigan) uses both soy flakes and soybeans. Dr. Les Wilson made the very valuable discovery that soy flakes can be used to make reduced fat tofu.

Quong Hop recently put a sticker on their Nigari Firm Tofu that says "The original reduced fat tofu," which is in violation of FDA regulations. At the new Whole Foods store in Palo Alto, Al recently saw Wildwood's firm tofu with a little sticker on the front that said "Low fat," also a violation. The real problem is that Wildwood's tofu retails for $0.99, Quong Hop's is $1.29, and White Wave's tofu, the only real reduced fat tofu is $1.49.

Nichii has just landed a big agreement with Korea and is now shipping them about 60 tons/month of soy flakes from the plant in Iowa. They are expected to be buying 100 tons/month at the end of this year. Those flakes are being used entirely to make tofu and soymilk. They are buying it for the convenience in dealing with rush orders, and the water and space savings–not for the reduced fat properties.

Nichii's plant in Iowa is now producing a little less than 1,000 tons/month. 95% of this is non-organic soybeans and 5% is organic. There is an increase in demand from Japan for organic flakes. The plant runs a little less than 4 days a week, 10 hours a day.

95% of all soy flakes make in this plant are sold outside America, mainly to Japan and Korea. Al visited Japan earlier this year. All of the flakes in Japan are used for making tofu; none is used in meat products. Nichii/Mycal has about 250 retail stores but just a few of them make fresh tofu in the store using Mr. Chikaarashi's tofu-making machine; yet that number is increasing. 90% of the tofu sold is purchased from outside tofu manufacturers, many of them very large. Nichii sells three types of tofu, each clearly labeled: That made soybeans, that made from a mixture of soybeans and Nichii soy flakes, and that made entirely from Nichii soy flakes. Nichii says "We'll buy your tofu if you use our flakes." None of tofu sold in Japan and made from flakes is promoted for its low fat content. Address: Nichii Company of America, Inc., 23440 Hawthorne Blvd., Skypark 2, Suite 140, Torrance, California 90505. Phone: 310-791-0010.

6492. Lukoskie, Luke. 1993. Some history of and update on activities at Island Spring (Interview). *SoyaScan Notes.* Oct. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** David Sucher was one of the original investors in Island Spring. He has been a close friend of Luke's for 20 years, and it was his investment that got the company going at its original location.

Luke now works half time with Island Spring; he and his wife, Suni, literally make tofu. Suni manages the people and products. Yvonne Kuperberg is still there. He lets other people run the business side of things. The company has a solid base of consumers in the northwest who support its products. Though sales are still strong, Island Spring is not yet out of the hole on the debts it incurred when the principals at Pacific Soy said "either give us complete control of the company or we're going to leave." At that time, Luke had accounts payable of $485,000, and he lost $300,000 in extracting the company from the position it had been in. He had raised $110,000 before the fire with the help of Harold Hopkins, who knows a lot about capital in the Pacific Northwest.

He soon realized that the only way to get out of the $300,000 hole was to tighten the belt at Island Spring. He cut his and Suni's salary to zero for 3 years. They got personal income from personal investments, such as 4 housing units that they rent. They have worked the debt down to $60,000 and they are now starting to pay themselves. In one more year they will be competitive again.

Their competition is Azumaya, Nasoya (from time to time), White Wave, Ohta Tofu, Sea Asia, Boohan (of Tacoma), and Tacoma Tofu. Island Spring's main products are now tofu burgers, soymilk in quarts and half gallons, traditional firm tofu (Korean-style, water pack), and extra firm tofu (vacuum pack).

Talk with David Sucher. 1993. Oct. 20. One day Luke called David from Los Angeles, California, to ask if he could borrow (or exchange for stock) about $1,000 to $1,500 to buy a grinder/mill for making tofu. At the time Luke's company was in its original small building near the ocean and had not yet started commercial tofu production. At a later date Luke asked David to invest in the company, which he did; he now owns about 5% of the company's stock. Address: P.O. Box 747, Vashon, Washington 98070. Phone: 206-622-6448.

6493. Plotkin, Tony. 1993. The rice beverage and amazake industry and market in America, and its relationship to the soymilk market (Interview). *SoyaScan Notes.* Oct. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Grainaissance became a corporation on 26 April 1982, and they moved to their present location in 1986. His company's main competition is Imagine Foods, which is "such a talented, smart company. They set their own rules, and tend not to copy." Cedarlane (in Southern California) has either greatly narrowed its scope or has gotten out of the amazake market entirely. Creative Kitchens (in Florida) has either narrowed its scope or discontinued production. Scotty's Wholesome Foods in Boulder makes a nice amazake in a 12 oz plastic bottle; it is sold mostly in Colorado. Kendall Foods, Grainwaves, and The Bridge are still in business. Kimoto has closed.

Tony has not yet been as successful with his Tetra Brik Aseptic carton as he had hoped–in part because of competition from Imagine Foods. His product has had a slow start, but Imagine Foods has been very successful with their Rice Dream in an aseptic carton. "This carton has really put

rice drinks on the map. The quart carton will expand it even further." One key is to get the product as light as possible, since consumers will not pay more than $0.69 for an 8-ounce pack. It costs Tony a lot of money to ship tankers full of amazake to the packer and then shipping the packed products back. He is working on shipping truckloads of packed products directly from the packer to distributors.

Aseptically-packed products (especially quarts and liters) are much more widespread in the natural foods market than in supermarkets–where the package is used mostly for kids juice drinks.

Imagine Foods immediately realized that their competition was soymilk, so their ads, in effect, say "Hippies and punks (with long hair and earrings) drink soymilk and normal people drink Rice Dream." In the ad they showed packages of soymilk products. It was a very aggressive ad; Tony did a similar ad and Imagine Foods made them discontinue it. Imagine Foods now has its products packaged by Pacific Foods of Oregon; they used to be packaged by Real Fresh (which packs Tony's products).

The market for rice beverages (which was about 5,700 gallons/week in 1988) has grown a dramatically during the last 5 years, and especially during the last 12-18 months since Rice Dream became so popular. In some natural-foods stores Rice Dream is the best-selling non-dairy beverage. There are only two big rice beverage manufacturers in America: Imagine Foods and Grainaissance; Scotty's may be #3. Tony would estimate that Imagine Foods sells about 9-10 times as much rice beverage by volume as Grainaissance. In 1984 Grainaissance was making about 1,200 gallons/week; today they make a little over 2,000 gallons/week and have 15 employees. Imagine Foods might be doing a little less 20,000 gallons/week. Tony would guess that the gallon volume of Rice Dream rice beverage sold is about the same as the volume of Vitasoy or Westsoy soymilk.

There are several reasons for the rapid growth of the rice beverage market: (1) The advent of Tetra Brik Aseptic packaging; (2) The very effective product development and marketing done by Imagine Foods. The product is delicious and their ads have been well designed and widely seen; (3) They have positioned Rice Dream as a delicious non-dairy beverage and new product which they invented–rather than as a type of amazake. In fact, they have made as little connection as possible between amazake and Rice Dream–in part because the enzyme-hydrolyzed rice drink that they make is not really amazake. When Tony launched his first aseptic amazake in 1989 he thought seriously about discontinuing the term amazake, but he couldn't think of a good replacement. Its hard to sell a product with a name that people can't pronounce and that sounds foreign. (3) They have benefited from the rapid growth of the larger market for non-dairy beverages.

At the trade show in Baltimore, Eden Foods showed its two new koji-based amazake products–Eden Rice and Rice Blend (with soymilk) Rice Dream. Tony strongly feels Eden is entering the rice beverage market because of the stiff competition they are feeling from Rice Dream–which is causing growth of their soymilk sales to slow. He liked their flavors, but he disliked the fact that Eden adds a sweetener. Eden may promote their product by describing how Imagine Foods uses commercial enzymes rather than koji to make Rice Dream. Eden's price will probably be the most expensive. Tony has heard that another large company will soon be making a rice beverage–perhaps Westbrae. Tony promotes his products by emphasizing two points: (1) No oil is added; and (2) They are made from organic, whole-grain brown rice as you would buy it in the store. When Tony introduced his Almond Lite in Tetra Pak he changed from commercial rice to organic. Address: Founder and owner, Grainaissance, Inc., 1580 62nd Street, Emeryville, California 94608. Phone: 510-547-7256.

6494. Roller, Ron. 1993. The soymilk and rice beverage markets in the USA and Canada (Interview). *SoyaScan Notes.* Oct. 19. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ron has some new very accurate and reliable numbers which show in 1992, in the USA and Canada, about 8.1 million gallons of soymilk and 1.4 million gallons of rice milk were sold. In 1993 about 9.8 million gallons of soymilk and 2.3 million gallons of rice milk were sold. The total amount sold in Canada is quite small compared to that sold in the USA.

When people who have never tried a non-dairy beverage before are served both rice milk and soymilk, they tend to prefer the rice milk–because it is sweeter and it's not soy.

In 1992 the amount of rice milk (rice beverage, including amazake) sold in the USA and Canada was 14-15% of the amount of soymilk sold by volume (gallons). The percentage has increased by an estimated 4-5 percentage points since then. The overall market for both soy- and rice drinks in 1992 was about 9.5 million gallons–a slight decrease from 1991. For the first 6 months of 1993, volume is up about 27% over the same period in 1992, and the total market is projected to be about 12.1 million gallons in 1993.

Looking at the individual soymilk manufacturers, Eden's soymilk production is experiencing strong growth. In the natural foods market, Ron thinks that Westbrae is ahead of Vitasoy. If you include the Oriental market, Vitasoy may be ahead of Westbrae. Vestro (which owns Westbrae) is a publicly owned corporation, so their financial data is available to the public. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6495. Paine, Heather. 1993. Re: Use of the term "soya milk" on product labels in the United Kingdom. Letter (fax) to William Shurtleff at Soyfoods Center, Oct. 20. 1 p.

• ***Summary:*** "I should clarify the situation on labeling in the UK. In my opinion, the term 'soya milk' is not permitted in the UK, although it is still used. The UK authorities, in this instance, seem to have a relaxed approach, but under EC Regulation No. 1898/87, the term 'soya milk' is not permitted anywhere in the European Community. I believe Ireland is also in breach of the Regulation and that the matter has been raised in the European Court of Justice.

"ASA [American Soybean Association] have just renewed my contract for another year so *SoyaFoods* is safe for 1994!" Address: Editor, SoyaFoods, 27a Santos Rd., London, SW18 1NT, England. Phone: 081-874-5059.

6496. Redmond, Tim. 1993. New developments at the Soyfoods Association of America (SAA) (Interview). *SoyaScan Notes.* Oct. 29. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Tim has been very active in shepherding SAA during the past year. He is the vice president, on the executive committee, and a director. The original $30,000 grant to SAA from the American Soybean Association increased to about $40,000. SAA will soon be sending 3,000 packets to the media and 5,000 packets to health professionals. Each packet contains fact sheets, a soyfoods brochure, and a brochure announcing the "First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease," which is scheduled to be held on 20-23 Feb. 1994 in Mesa, Arizona. In addition, Tim is now drafting a letter to new and prospective members, including San-J (which has never joined), Worthington Foods, Kikkoman, Ralston Purina, etc. SAA needs more money to promote soyfoods on a broad basis.

Michelle Edwards, Dan Burke's long-time secretary, is now the Executive Director of SAA.

Tetra Pak Inc. has donated $50,000 to SAA over a period of 3 years, primarily to aid in the development of soymilk standards. Note: This is the largest single grant ever received by the Soyfoods Association. As of Jan. 1995, according to Dan Burke (Treasurer of SAA) the funds are being used mainly to pay for legal advice (from Hyman, Phelps & McNamara in Washington, DC) on the standards and to promote soyfoods. Peter Golbitz, who has spent a great deal of time in compiling the standards, has not received any payment for his time. Address: Vice President of Marketing and Sales, American Soy Products, Inc., 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6497. Potter, Michael. 1993. History of Eden Foods. Part II (Interview). *SoyaScan Notes.* Oct. 31. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Upon Cliff Adler's death, Michael immediately and automatically acquired Cliff's 34% share in the company–because Eden Foods Inc. and Michael and Cliff, jointly and severally, had a buy-sell contract that came into effect in the event that either Cliff or Michael should die. The value of Cliff's stock, which was reviewed by the Ann Arbor office of Platt-Moran (one of the big eight accounting firms), was $500,000. Michael paid this amount from his personal funds for the stock. Life insurance paid Cliff's widow an additional substantial sum. It's all a matter of public record.

In August 1992 Michael was released from jail and returned to work at Eden Foods. He was originally sentenced to 8 to 15 years, but he was let out early because he won an aspect of his appeal that his sentence was illegal. He was resentenced and his sentence was changed to 60 months probation.

On 31 Dec. 1992 Michael purchased Tim Redmond's remaining 1,000 shares of stock.

Royce "Roy" Seeger, who lives in Manchester, Michigan, was an early employee at Eden Foods. He ran the mill and was once a stockholder but was deprived of his stock in a way that he does not feel good about. He now serves as Michael's driver (he was hired by the board of directors to drive Michael to and from work) and as a driver for Eden Foods doing various jobs. Michael also lives in Manchester.

What were some of Michael's main contributions to Eden? Building the company into a major natural foods company before the fire. Extricating Eden from its pathetic relationship with Midwest Natural Foods ("It was difficult to get consensus that the situation was not in Eden Foods' best interest and in fact was a very negative reflection on the company.") Saving the company from disaster after the fire. Putting together the American Natural Foods agreement and introducing Edensoy to America.

Shurtleff's summary comments: (1) Eden was a pioneer in many areas, including the development and promotion of organically grown foods, soymilk, and soyfoods in general. Eden has kept a high level of product quality and integrity over the years, based on their philosophy of food and agriculture. Address: Chairman, Eden Foods, Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 517-456-7424.

6498. Seeger, Royce. 1993. Recollections of work with Eden Foods (Interview). *SoyaScan Notes.* Oct. 31. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** At age 18 Royce was introduced to macrobiotics by Jimmy Silver. He was never involved with the food buying co-op before Eden Foods started. He started working for Eden Foods in about the fall of 1970 at the store on State Street. He was married with a child, he needed a job, and he was interested in macrobiotics, so the job was a natural. At the time he started work, Bill Bolduc, Mark Retzloff, and Tim Redmond were working at that store. After he had worked there about a year, Michael Potter arrived. Initially he ran the cash register, stocked the shelves, and ran the 8-inch stone flour mill grinding wheat, corn, rye, rice,

etc. into flour. Shortly after he started work, he also began to mill soy flour. Tom Vreeland grew the soybeans organically. Royce toasted the soybeans lightly, about half way, so that the flour could be milled more easily and was still yellow. The roasting got rid of the heavy raw taste, but some raw soy flour taste still remained. Initially the soy flour was sold in paper bags, but the bags became very oily, so they switched to packing it in 3 sizes of cello bags which we heat sealed. The bags were considered biodegradable. Eden couldn't buy too large a supply since they became brittle after a while. A printed label was affixed by hand to each cello bag. The flour was also sold in big 25 lb paper flour bags, which were stamped with a rubber stamp to indicate the contents.

Eden also made Kokoh, a macrobiotic baby cereal, which contained roasted soy flour and was also packed in the small cello bags. All the ingredients were roasted together and then ground; soy was one of the ingredients. The soy was roasted longer than it was for the flour.

Eden was also importing miso in kegs from Japan. Employees would pack the miso into 1- and 2-lb bags. Eden still imports its miso in bulk kegs.

In those days the store wasn't making much money; it had just come from being a co-op, so often the only pay employees got was to have their bills paid–such as rent, so they didn't get evicted. They didn't really get a pay check. In about 1973 Royce quit work at Eden to do some construction work for a friend, and then moved to Arizona to be with his wife's parents. After about 10 months he returned to Ann Arbor and went back to work for Eden Foods. This time he stayed until 1978, running the mill and doing packaging. Then he left for a second time; he needed to make more money.

In 1982 Royce returned to work for Eden for a third time. He started working in production at a small bottling line where Eden bottled soy sauces (imported in 55 gallon drums from Japan), vegetable oils, and vinegar. Eden still bottles its soy sauce this way. One person runs the filler, which fills 6 bottles at a time; he slides in 6 bottles, pulls down the lever which fills them, then he puts them on a conveyorized line. The next person on the line puts on caps. Finally, at a labeling machine, one person labels one bottle at a time. Then he went back into running the mill, grinding flours. Royce has been working at Eden, more or less, since 1982. However in 1987 he developed testicular cancer, which had spread throughout his lymph system. His weight dropped to 155 lb and parts of his spine had to be removed. The cancer is now in remission and he feels like he is getting stronger. Royce now serves as Michael Potter's driver, since Michael is not allowed to drive at all by himself. Royce likes working at Eden Foods, even though he is not an official employee, since he is receiving disability payments. Address: 133 S. Clinton, Manchester, Michigan 48158. Phone: 313-428-0973.

6499. Shi, Yanguo; Ren, Li. 1993. Dadou zhipin gongyi-xue [The technical arts of soybean products]. Beijing, China: Zhongguo Qinggong Yechu Banshe [Chinese Ministry of Light Industry]. xii + 484 p. Illust. No index. 18 cm. [34 ref. Chi]

• ***Summary:*** Wade-Giles reference: *Ta-tou chih p'in kung-i hsüeh,* by Shi, Yen Kuo; Jên, Li. Contents: Preface. 1. Introduction to soyfoods: Terminology and classification, origin and development, future prospects. 2. Soybeans: Production, seed structure and components. 3. Chemical composition of soybeans: Soybean lipids, carbohydrates, minor components. 4. Soy proteins: Overview, molecular weight and classification, water solubility, denaturation, functionality, soy enzymes and antinutritional factors.

5. Soy oil extraction: Oil extraction from soybeans, solvent extraction principles and process outline, pre-extraction preparation, extraction process, other extraction technology, supercritical CO_2 extraction. 6. Chinese traditional soyfoods: Principles and ingredients, soybean soaking and cleaning, soymilk preparation for tofu processing, coagulation and molding, lactone tofu, yuba, meat alternatives. 7. Fermented tofu: Varieties (total 14 discussed), ingredients, microorganisms, mucor fermented tofu & process, top 8 products. 8. Fermented black soybeans and fermented soy paste (miso): Fermented black soybeans, fermented soy paste.

9. Soymilk (soy beverages): Production principle and outline, beany flavors and reduction, several commercial production lines, fermented soymilk, dry soymilk products. 10. Products from defatted meal: Defatted soy flour, soy protein concentrates (*dadou fenli danbai*), soy protein isolates (*dadou nongsuo danbai*), structured soy protein products, soy emulsifiers, applications of soy protein products. 11. Soy by-products utilization: Okara and its uses, soy whey and its uses. 12. Biological and chemical assay methodology: Assay for protein solubility, soy protein isolation, soy protein molecular weight measurement, gas chromatographic analysis of soy oligosaccharides, HPLC analysis of soy oligosaccharides, phytic acid assay, assay for hexanal Ä the major beany flavor component, trypsin inhibitor assay, lectin assay, urease assay, lipoxygenase assay, soybean cell biology: thin sample preparation technology, soybean cell biology: ultra thin sample preparation technology.

Concerning fermented tofu (Chapter 7): Fermented tofu may be named after the region where it is made. Some famous products in China include: (1) Shaoxing furu. Famous for its rice wine, Shaoxing is a city in northeastern Zhejiang, a coastal province in central eastern China. (2) Guilin furu. Guilin is a city in the northeast of the Guangxi Zhuang Autonomous Region of far southern China. (3) Kedong furu. Kedong is a county in Heilongjiang province in northeastern China. (4) Jiajiang furu. Jiajiang is a county in Sichuan Province, southwest China. (5) Tangchang doufu-ru.

Tangchang is a town in Sichuan province.

Note: Talk with KeShun Liu. 2001. July 9. Green vegetable soybeans (*maodou*) are not mentioned in this book. Address: China.

6500. *SoyaFoods* (*ASA, Europe*). 1993. Dried soyamilk and tofu as bakery and meat ingredients. 4(3):2. Autumn.
• ***Summary:*** "Researchers at Iowa State University have been studying dried soya milk and tofu as food ingredients in doughnuts, hot dogs and pork sausages to find out how they affected food quality. Doughnuts made with 7% soya milk cut fat by 15%. The meat products made with 1-3% dried soya milk and tofu reduced fat by up to 25%. In taste tests, foods made with the soya bean products compared favourably with commercial products. The project has interested several food companies."

6501. Soyfoods Association of America; American Soybean Association. 1993. Good news about soyfoods. San Francisco, California. 16 p. 19 cm.
• ***Summary:*** This attractive booklet, containing 6 color photos, introduces soyfoods. Produced jointly by the Soyfoods Association of America and the American Soybean Association, it represents a first in cooperation between these two organizations. Contents: Soyfoods–A healthy choice: Soyfoods lower blood cholesterol, and fight cancer. Adding soyfoods to your menu: It's easy! The soyfoods family: Soybeans and edamame or fresh green soybeans, soy flour, texturized soy protein (TSP), soymilk, tofu, tempeh, miso, meat analogs, soy oil (a brief description is given of each). Soy recipes: Miso soup. Tofu chocolate cream pie. Creamsicle spritzer (with soymilk). Banana pancakes (with soy flour, soymilk, and soy oil). Sloppy joes with texturized soy protein. Barbecued tempeh. Nutritional value: Gives the composition of tofu (soft, silken, firm), meat analogs, soy oil, miso, texturized soy protein, tempeh, soymilk (regular or lite), and soy flour (full fat or defatted). Address: 1. One Sutter St., Suite 300, San Francisco, California 94104; 2. American Soybean Assoc., 540 Maryville Centre Drive, Suite 390, St. Louis, Missouri 63141-9200. Phone: 1. (415) 393-9697; 2. 1-800-Talk-Soy.

6502. **Product Name:** Low Fat WestSoy Soy Drink (Non-Dairy Beverage with Calcium and Vitamin D Added) [Plain, or Vanilla].
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).
Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.
Date of Introduction: 1993. October.
Ingredients: Vanilla: Filtered water, whole organic soybeans*, malted cereal extract, natural vanilla flavor with other natural flavors, tricalcium phosphate, sea salt, vitamin D-2. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 liter (1.06 quart) Tetra Brik Aseptic carton. Retails for $1.39 (11/93, Trader Joe's, Concord, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 8 fl. oz.: Calories 100, protein 4 gm, carbohydrate 16 gm, fat 2.5 gm (percent calories from fat 18, polyunsaturated fat 2.0 gm, saturated fat 0.5 gm), cholesterol 0 mg, sodium 140 mg, potassium 170 mg.
New Product–Documentation: Products (plain and vanilla) with Labels purchased at Trader Joe's in Concord, California. 1993. Nov. 4. 3.75 by 6.5 by 2.5 inches. Orange or red, dark blue, white, and black on light blue. Color photo of soymilk being poured from a pitcher into a bowl of flaked breakfast cereal with a glass of soymilk behind the bowl. "All natural. No cholesterol. Lactose & dairy free. Great tasting." Each 8-oz. serving of Low Fat Westsoy provides the following percentages of the U.S. Recommended Daily Allowances: Vitamin D 25%, calcium 25%. "Not for use as an infant formula."

Ad in Natural Foods Merchandiser. 1993. Nov. p. 27. "We know the importance of customer satisfaction." "Westsoy Soy Drink–The first value-added enriched soy drink."

6503. **Product Name:** WestSoy Lunchbox Plus (Non Dairy Beverage) [Plain, or Vanilla].
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).
Manufacturer's Address: 1065 East Walnut St., Carson, CA 90746. Phone: 310-886-8200.
Date of Introduction: 1993. October.
Ingredients: Filtered water, whole organic soybeans*, brown rice syrup (brown rice, water), vanilla flavor with other natural flavors, tricalcium phosphate, expeller pressed organic canola oil*, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin (vitamin B-2).
Wt/Vol., Packaging, Price: 6 oz. Tetra Brik Aseptic carton. Retails for $1.39 (11/93, Trader Joe's, Concord, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1993. Nov. p. 27. "We know the importance of customer satisfaction." "Westsoy Lunchbox Plus–The first convenient 6 ounce size enriched soy drink."

Product with Label brought by Cheryl Ishida in her kids' lunch. 1996. April 23. 2 by 4.5 by 1.5 inches (tall and slender, petite, handy size for a kid's lunch). Aseptic carton. Red, black, and tan on white. The word "Lunchbox" is written with many fun colors: Red, yellow, blue, orange, green. Below the product name on the front panel is written: "6 times more Calcium, 10 times more Vitamin A, 20 times more vitamin D, 5 times more Riboflavin, than Original WestSoy. 2% fat." A logo states: "Made with Organic soybeans." The product now comes in Plain, Vanilla, and

Cocoa [pronounced KO-ko] flavors.

6504. *SoyaScan Notes.* 1993. Chronology of the American Soybean Association's growing interest in promoting soyfoods in America. Nov. 5. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1992 Jan.–Keith Smith of ASA calls Mark Messina PhD, at the National Cancer Institute and asks what Mark knows about possible cancer-preventing substances in soybeans. ASA was getting a lot of enquiries on the subject, which was Mark's specialty at NCI.

1992 Dec.–ASA decides to allocate a large portion of their 1993 research funds for health-related research. The 1993 budget contains $1,200,000 in funding for three 2-year projects which each received $400,000 over the 2 years. One project by Stephen Barnes involves soy and prostate and breast cancer, one by Maurice Bennink of Michigan State involves soybeans and colon cancer, and a third by William Wong involves cholesterol metabolism in soy.

1993 March–ASA allocates $27,625 for the Soyfoods Association of America (mainly Ginny and Mark Messina) to develop and distribute educational materials on soyfoods and to produce periodic press releases. The grant will be used to produce a 4-color brochure on soyfoods and eight individual fact sheets on tofu, soymilk, tempeh, miso, texturized vegetable protein, soy flour, soy-based meat analogs, and soy oil. These materials will be made available to state soybean boards.

1993 June–*The Soy Connection,* a quarterly newsletter on the nutritional benefits of soyfoods, starts to be mailed to 70,000 registered dieticians across the U.S. This high-quality publication, edited by Mark Messina, contains articles by experts in their fields, plus some good recipes.

1993 Oct.–Dr. Mark Messina is officially hired by ASA as a consultant. He gave about 12 public speeches on soy, diet, and chronic disease prevention in 1993, and has 15 more planned for 1994. Messina also coordinates nutrition research for a group named the North Central Soybean Research Program. As part of this, Steve Sonka of the University of Illinois is conducting a $43,000 economic impact analysis to determine the market potential for soyfoods and its effect on soybean consumption. The report is expected out in Dec. 1993. USB only has 3 paid employees and 60-65 volunteers, so they hire the ASA to do projects using money from USB and everything that ASA does is approved by David Thomas.

1993 Oct.–USB has a booth (probably its first) at the annual 3-day conference of the American Dietetic Assoc. attended by roughly 10,000 people. ASA and Dr. Messina were there. Evans Food Group, ASA's big food-related public relations firm in Seattle, Washington, was also there. The booth was geared mostly toward soy oil, but most of the interest from dietitians was in soyfoods. Fact Sheets on soyfoods and a brochure prepared by the Soyfoods Association and Evans Group were distributed. Soynuts were served but they ran out in the first 2 hours. Messina encouraged USB to have enough good soy-based snacks to last for 3 days for next year's show.

1993 Nov.–*Good News About Soyfoods,* an attractive 16-page booklet, prepared jointly by the Soyfoods Association of America (Ginny Messina) and USB, featuring information about and recipes for soyfoods is mailed to about 3,000 to 5,000 key media contacts.

1994 Feb.–The First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease is held in Mesa, Arizona, organized by Dr. Mark Messina and sponsored by the United Soybean Board as well as soybean growers from Nebraska and Indiana.

1995–The United Soybean Board (USB) begins to sponsor dietitian seminars on the health benefits of soy in 26 cities across the USA. The budget for each seminar is $8,000. Manufacturers can exhibit products at seminars for a fee of $75 per table.

1996 Jan.–The Indiana Soybean Development Board introduces *Soyfoods USA,* the world's first e-mail newsletter on soyfoods. It is sent monthly to e-mail addresses free of charge. By Feb. 1997 there are 1,200 subscribers.

1996–USB creates and develops the theme "Soybeans–Designed for Life." When someone phones one of the state soybean associations or boards, music with these words plays in the background while he or she is on hold.

1996 Sept.–The Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease is held in Brussels, Belgium, again organized by Dr. Mark Messina. Sponsors contributing more than $15,000 include: American Soybean Association, Nebraska Soybean Board, United Soybean Board, Ohio Soybean Board, Indiana Soybean Development Council. Other sponsors: Illinois Soybean Association and Illinois Soybean Program Operating Board, Soyfoods Association of America, Minnesota Soybean Research and Promotion Council, Iowa Soybean Promotion Board, and Michigan Soybean Promotion Committee.

1997 Jan.–USB announces 11 more Soy Connection Dietitian Seminars that will be held in major cities across America during 1997, from April 4 to Sept. 12.

1997 Feb. 25–The Illinois Soybean Assoc. (ISA) mails a form letter to all known soyfoods manufacturers in the USA, stating that it has recently teamed up with a number of industry leaders and researchers to examine the feasibility of a cholesterol health claim for soy protein products. The letter asks that each manufacturer send ISA (by March 5) nutritional labels for each soyfood product that it makes or distributes.

6505. Barnum, Alex. 1993. Milk production hormone gets FDA approval: Bioengineered gene can raise cow's output by 25 percent. *San Francisco Chronicle.* Nov. 6. p. 1, A15.

Address: Chronicle staff writer.

6506. Schneider, Keith. 1993. U.S. approves use of drug to raise milk production: Gain for biotechnology. Genetically changed hormone wins backing of F.D.A., but critics plan to protest. *New York Times.* Nov. 6. p. 1, 7.
• ***Summary:*** The FDA approved the sale of Bovine Growth Hormone (BGH), a genetically engineered hormone used to increase milk production in cows. It also ruled that no labeling was required on milk from cows treated with the hormone. The decision ends a 9-year controversy over the drug. The maker of the hormone is Monsanto.

Note: This is the earliest document seen (July 2013) that contains the abbreviation "BGH."

6507. Kashama, Johnny. 1993. Re: Work with soybeans and soyfoods in Rwanda and Zaire. Letter to William Shurtleff at Soyfoods Center, Nov. 9. And 25 May 1994. 2 p. Handwritten. [Eng]
• ***Summary:*** "In Rwanda there is a mini-industry which makes tofu and other products from tofu like crackers (from okara) and fritters and other kind of cakes called in French 'croquettes.'" Johnny would like to take the methods used by Tofu-Rwanda to his home country of Zaire, beginning in Kisangani (where he will defend his treatise at the university), and the finally in Bukavu where he lives with his parents. He is preparing a treatise (*memoire;* equivalent to 5-year bachelor degree) to present at the end of his studies in Zaire at the *Institut Facultaire des Sciences Agronomiques* (*IFA*). It was originally to be titled *"Essai de valorisation de la technologie du soja: Methodes et techniques de production de lait de soja pour une unité artisonale"* ("Evaluation of Soybean Technology: Methods and Techniques for the Production of Soymilk and Derivatives for Small-Scale Processing in Bukavu"). But as of June 1994 the title has changed to *"Effet du depelliculage, du temps de trempage de graines de soja ainsi que de deux methodes d'extraction de lait de soja"* ("Effect of dehulling and of the time of soaking the soybeans as well as two methods of extraction on soymilk"). He hopes to start a small soyfoods company in Bukavu, but presently he has no money. He hopes that completion of this treatise will lead to financial support from some NGO (non-governmental organization) in Bukavu or abroad, or he many ask CIDR (*Centre International de Développement et de Recherche;* the International Center for Development and Research) to widen the project beyond the borders of Zaire.

In Bukavu, Zaire, where many children die of hunger and suffer from kwashiorkor, there is an NGO (non-governmental organization) which is at work, but kwashiorkor is still persisting. There is a little factory that makes soy crackers using maize, sorghum, and soya. The blend the three ingredients and make what they call "Masoso." The name is taken from the first two letters of each ingredient. The way it is done is different from what they do in Tofu-Rwanda, where he is working as an apprentice.

Note: On 22 Feb. 1994 Soyfoods Center received a letter (fax) from Johnny Kashama in Kigali, Rwanda. On 4 April 1994 a terrible ethnic and genocidal civil war broke out in Rwanda, centered in Kigali. The Hutu (comprising 90% of the nation's population) tried to eliminate the Tutsi (very tall people; 9% of the population). An estimated 500,000 people were killed and millions fled into neighboring Tanzania and Zaire. As of 15 May 1994 the fate of Mr. Kashama is unknown. Address: Tofu-Rwanda, P.O. Box 1906, Kigali, Rwanda.

6508. Olson, Paul. 1993. Update on Bountiful Bean Soyfoods (Interview). *SoyaScan Notes.* Nov. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Paul created a corporation named Vermont West Inc. which purchased Bountiful Bean Soyfoods from Richard Kraemer and Elizabeth Hanson on 3 Sept. 1993. Richard and Elizabeth will continue working at the company until Feb. 1994, then Richard plans to go back into the ministry.

A follow-up letter (19 Nov. 1993) and leaflet (titled "About Bountiful Bean Soyfoods Products") shows that the company now makes tofu, herb tofu, tasty tofu (marinated and baked herb tofu), tempeh, soymilk, hummus, and taboolie [tabbouleh].

Paul also encloses "Bountiful Bean Soyfoods Newsletter." Issue 1. Nov/Dec. 1993. 4 pages. It includes articles titled "New ownership of Bountiful Bean Soyfoods Announced" (The company currently employs 8 people.) "Who is Paul Olson and what is Vermont West?" (Paul has had 9 years prior experience working in the computer industry with Apple Computer. He is 27 years old and lives near the family farm where he grew up). Address: 620 Main St., P.O. Box 329, Ridgeway, Wisconsin 53582-0329. Phone: 608-924-1703.

6509. Wilson, Don. 1993. The pioneering work of Aqua Agra in Florida with sprouts and soyfoods. Part II (Interview). *SoyaScan Notes.* Nov. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** "When we started talking about making tofu, it became very evident to me that we would need a bigger space, so in about March or April of 1977 we moved over to 100 Highline Dr., Longwood, Florida 32750. We went from 4,000 square feet of floor space to 50,000 square feet. We outgrew our plant on Seminola Blvd. in about 4-5 months." In June 1977 Don's first child, a son, was born. On Highline Drive, Don built rooms to grow the various sprouts and also diversified the company into chopping and packing huge amounts of fresh vegetables; there was a separate packet of sauce (such as teriyaki) in each bag for making stir-fries. All that was needed was some tofu to complete the stir-fry.

Don bought his tofu equipment used from Robert and Mary Brooks, whose company Swan Foods in Miami had gone out of business. The purchase became a mess because Robert had failed to inform Don about the liens that were against his equipment due to Robert's unpaid bills. So Don started to make tofu in 1978. He sold it chiefly to the chain stores–first to Albertson's (the smallest group), then to Publix, and then to Winn Dixie (the biggest chain). He did not deal with restaurants or health food stores. At the height of production, Aqua Agra was making at least 25,000 to 30,000 lb/week of tofu. He was the first person to introduce tofu to supermarkets in Florida.

In the summer of 1979 Don attended the second annual Soycrafters Conference at Amherst College in Massachusetts. "I will never forget that as long as I live. Some of the major U.S. food companies, such as General Mills and a few others, sent representatives in 3-piece suits. I was standing in the back of the auditorium where these guys were and I'll never forget listening to their comments as they talked about what a bunch of dingdongs they had been sent to observe, and how this had absolutely no place in the American food chain whatsoever. I can remember walking away from that conference thinking to myself, 'I sure am glad these big guys think this way because all it would take is one big corporation to get involved in this and a lot of small businesses would soon go down the drain.'"

Aqua Agra grew rapidly. Many of his employees were Asian-Americans and they were wonderful workers. the copycats that tried to compete with him couldn't. About 2 years after Aqua Agra started making tofu, the *Sentinel Star* newspaper did a rather nice story on the company in 1980.

In early 1981 Don started making soymilk, which he sold in bulk to the nearby Seventh-day Adventist Florida Hospital–but not to any of the chain stores. He sold about 300 gallons a week.

At about the same time he started making soy yogurt in individual unprinted cups with a pressure sensitive label. Most of his sales were of plain yogurt, but he also sold strawberry, peach, and blueberry flavors. The yogurt was sold to local health food stores, to Del Champs in Alabama, and to a broker in New York named Marty Grossman, who sold a lot.

In late 1981 Aqua Agra began to make soy tempeh. They sold less than 100 lb/week, and only to a few health food stores in Orlando who had asked for it.

Don and his wife had to close the company in about mid-1982, after 6 years in business. At that time they were making about 75 products. He and his wife were each working 100 hours a week. "The doctor gave me a choice. He said, 'You can either get rid of that business and live, or you can keep it and die! But you're gonna do one of the two.'" Don was so sick and tired of everything at that time that he decided not to even sell the company–just to shut it down and walk away.

Don feels that he was a little bit before his time. "People found it amusing that a sergeant in the United States Marine Corps. was involved in making hippie food." Address: 2321 Virginia Dr., Altamonte Springs, Florida 32714.

6510. Drosihn, Bernd. 1993. Re: New developments with soyfoods in Germany. Letter to William Shurtleff at Soyfoods Center, Nov. 29. 2 p. Typed, with signature on letterhead.

• ***Summary:*** Viana has done a lot of work to improve the design of its labels and packaging. In Germany the soyfoods market is not growing at present, but neither is there a big recession. Germany's biggest soyfoods manufacturer, DE-VAU-GE, stopped production of tofu in early 1993 and now buys its tofu products from Heuschen-Schrouff B.V. in the Netherlands. That should make Heuschen-Schrouff one of the largest tofu manufacturers in the world. DE-VAU-GE plans to stop soymilk production in early 1994.

Some newer, small soyfoods manufacturers have recently started in Germany: Tofuhaus Eisenreich (Steinmetzstrasse 4, 93049 Regensburg, Germany. Owner: Mrs. Eisenreich. Phone: 0941/27 01 27), and Topas GmbH (Bollbergsr. 41, 72116 Moessingen [near Tuebingen], Germany. Owner: Klaus Gaiser. Phone: 07473/25515). Our old friend Klaus Gaiser, once the largest tofu manufacturer in Germany, is trying to make a comeback.

The market for soyfoods in Eastern Europe is developing very quickly. Bernd has had contact with a Polish company named Polsoja. Yesterday a person from Slovenia visited Viana. He wants to make tempeh there and he told Bernd that there are some soyfoods manufacturers in the former Yugoslavia. In Slovenia, which is relatively untouched by the war, there is one existing tofu company and more than 30 natural food stores.

Albert Hess (owner of Das Tofuhaus in Lautersheim) and Bernd are in the process of founding a new company, named Sojarella, which will start to make and sell soy cheeses in early 1994. The address will be the same as Viana. They have developed a method for making soy cheese products that contain no casein. Address: Founder and president, Viana Naturkost GmbH, Willi Graf Str. 88, 33881 Euskirchen-Kuchenheim, Germany. Phone: 02251-56076.

6511. Reis, Ademar. 1993. History of his work with soyfoods, seitan, and gluten (Interview). *SoyaScan Notes.* Nov. 29. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ademar, age 46, was born on 2 May 1947 in Santos, Sao Paulo, in Brazil. In the early 1950s when Brazil started growing more soybeans. His mother was a very well educated person and she liked to read; she also had many children and the family was rather poor, so they could not afford to buy meat, milk, or other animal products. Not far from their home was an agricultural department. His

mother would send him there, and they would give him free soybeans, which he and his mother would cook or use to make soymilk.

He entered law school in Brazil in the early 1970s, but upon graduation he became an actor and had a theater group. At the time, life in Brazil was very hard and repressive due to the military government. He went against the government and he had to flee the country in June 1973. Since he had several Brazilian friends living in Los Angeles, he went to live with them there. One day while shopping at Erewhon on Beverly Blvd. in Los Angeles he learned about the East West Center.

He moved into the East West Center, a macrobiotic commune on [7357] Franklin Ave. in Hollywood, California 90028. At that point his girlfriend, Iseti, joined him from Brazil; they were married in America in Oct. 1975. First he started working as Roy Steevensz' assistant making foods. Then in late 1973 or early 1974 he started a company named East West Cookery, where he made Soy Burgers, which he sold to many health food stores in and around Los Angeles, including the Erewhon retail store. To make the burgers he would soak whole soybeans, pressure cook them until soft, then cool and mash them for use as a binding agent. He would mix the mashed soybeans with cooked brown rice and fresh onions, parsley, and carrots. He would shape the mixture into patties, which he baked in an oven. He made the burgers in the kitchen of the big East West Center. In terms of logistics, he would wake up at 4:00 in the morning, cook the soybeans and let them cool. Later, after others had finished breakfast in the kitchen, he would shape and bake the burgers. He would put these between buns, with lettuce, tomatoes, etc. and distribute them to stores.

After several years he decided that he wanted to move to Boston to be close to Michio Kushi. He and his wife, Iseti, went to live at the Kushi macrobiotic study house in Newton, Massachusetts. In Newton he tried to support his wife (who was pregnant) and himself by doing some translation of articles from a Brazilian newspaper. After a few months, they realized they could not make a living doing translation, so Ademar decided to move to Somerville, re-activate East West Cookery, and start making Soya Burgers again–just about the same time his son was born (in October). After making the down payment on the apartment, they found themselves out of money. So they went to see Aveline Kushi (who he met when she lectured in California) at her home in Brookline. She gave him $500 to get his business started and she put only one condition on the gift: "Don't put too much garlic in the food." He has kept in touch with her over the years.

The Seventh Inn made the bread for Ademar's burgers' buns. First he made the burgers out of his home in Somerville, Massachusetts, but he was caught by the Board of Health, so he had to move to a commercial kitchen.

One day a young man named David came from San Diego (where he had been a lifeguard), tasted Ademar's product, and ended up working with the company for a year. Tom was also an artist, and before he left, he drew a logo, wrote "Season's Harvest" in it, and gave it to Ademar as a present. In 1977 decided to rename his company Season's Harvest. Between the late 1970s and the early 1990s Ademar developed a line of about 20 different types of sandwiches (including Solar Burger sandwiches [with Wheatmeat made from Seitan], in 1976), many different burritos (including and a Tofu and Brown Rice Burrito, in about 1978), 20 different types of salads, and carrot juice. In about 1980 Season's Harvest introduced Tuna Salad and Chicken Salad, each containing textured soy protein concentrate; these are the only two products in his line that are not vegetarian.

Until 1987 Season's Harvest did its own distribution throughout the area (Massachusetts, Connecticut, New York, Philadelphia [Pennsylvania], etc.). Then from 1987 to 1990 the company turned over part of its distribution to a natural foods distributor named Country Barn. In 1990 Country Barn went out of business, with large unpaid debts to Season's Harvest. Ademar picked up two distributors in New York: Craig Coester and Ed Wolf.

Looking for a bigger market, in the winter of 1991 Ademar contacted a little company in Massachusetts named Idyllwild Farms, which prepares food and puts food together for major airlines. He made a presentation but nothing developed. One day Continental Airlines contacted Idyllwild saying, "Look, we're having a lot of requests for vegetarian meals, what can you come up with?" Idyllwild spent a great deal of time trying to find meals that were acceptable to Continental's headquarters in Texas, but to no avail. As a last resort, in about December 1992, they went to Ademar. He set to work modifying the Dream Burger. It was an instant hit at Continental–so they asked for more vegetarian products and a dish with mushrooms and onions. Ademar designed the Vegetable Patty. Then they wanted something for breakfast, so he made the Veggie Breakfast Sausage. The first order from Idyllwild arrived in March 1993–the last arrived on 29 July 1993. Idyllwild declared bankruptcy, and Ademar lost $12,000 that Idyllwild owed his company. It was a small disaster. Fortunately, Ademar was able (by great good fortune) to reestablish his contact with Continental and today they are still ordering from him. Idyllwild had hidden the names of its suppliers. Subsequent soy- or gluten-related products included: Dream Burger (1991, June, to be renamed Dreamburger in 1994), Vegetarian Meatball, and Vegetarian Bacon Bits (1992, Feb.), Seitan (1992, June), Cajun Burrito (1992, Nov.), Vegetable Patty (1993, March), and Veggie Breakfast Sausage (1993, March).

Ademar is now looking for a plant or company to make his Veggie Breakfast Sausage. He met Ernie Mucke, who is a fourth-generation sausage maker and who owns a traditional sausage company named Mucke's. Ernie, who is in his late 30s, grew up working in the plant and knows every detail of

the machinery. His 4-year-old son has many allergies so his wife started cooking vegetarian meals, which Ernie likes, so now he is very open to vegetarianism. Ernie's wife's brother, who had spiritual powers and lived in Arizona, was Ernie's spiritual guide. Just before he died, this spiritual guide told Ernie that someone would come into his (Ernie's) life and his sausage plant would be transformed, and he would end up making vegetarian foods. Ademar and Ernie are now working out plans together.

In about mid-1992 Sysco, America's largest food distributor, began to carry Ademar's products; he is with their Hallsmith Sysco division. About 6 months ago he also got into J.P. Food Services (Monarch); Harvard University buys his products. The last few months, in working with Protein Technologies International, ADM, and Central Soya, Ademar has learned many new things about food technology and product formulation. So now he is reformulating many of his products. Currently his best-selling products are Bean & Cheese Burrito, Hoomus [Hummus], Tabouleh [Tabbouleh], and Dream Burger–in that order. He now owns the largest natural-food sandwich company in New England–followed by New World.

Ademar has kept good records of his years of pioneering work with natural foods; his files may be able to add more detail and accurate dates and names to this story. He still uses macrobiotic principles in formulating his recipes to balance yin and yang, but he is not as strict as he used to be; he now eats tomatoes and eggplants. Address: Founder and owner, Season's Harvest, 52 Broadway, Somerville, Massachusetts 02145. Phone: 617-628-1182.

6512. Coward, Lori; Barnes, N.C.; Setchell, K.D.R.; Barnes, S. 1993. Genistein, daidzein and their beta-glycoside conjugates: Antitumor isoflavones in soybean foods from American and Asian diets. *J. of Agricultural and Food Chemistry* 41(11):1961-67. Nov. [31 ref]

• ***Summary:*** This is a very important article. Isoflavones were first extracted with alcohol (80% aqueous methanol) and then the fat was removed from the extract with hexane solvent. Details of the isolation process are given. The results showed that most Asian and American soy products, with the exception of soy sauce, alcohol-extracted soy protein concentrate, and soy protein isolate, have total isoflavone concentrations similar to those in whole soybeans. Asian fermented soyfoods contain mainly isoflavone aglucones, whereas in nonfermented soyfoods of both Asian and American origin isoflavones are present mainly as beta-glycoside conjugates. The estimated daily intake of these isoflavones by Asians is similar on a body weight basis to the isoflavones in soy-containing diets which inhibit mammary tumorigenesis in animal models of breast cancer. Therefore, it is possible that dietary isoflavones are an important factor accounting for the lower incidence and mortality from breast cancer in Asian women.

"The concept of reducing cancer risk by chemoprevention has become an important aspect of current cancer research. It has been suggested that two so-called phytoestrogens, lignans and isoflavones, may play a role in the prevention of estrogen-dependent breast cancer and colon cancer.

Three tables show the isoflavone concentrations in various types of soyfoods. For each food, the content of the following is given: Conjugated genistin, conjugated daidzin, genistein aglucone, daidzein aglucone, total isoflavones, D/G ratio, percentage of genistein aglucones, and percentage of daidzein aglucones. After each food listed below we will show the total concentration "as is" and then (if given) on a dry weight basis.

Table 1 shows isoflavone concentrations (in mg per gram) in basic nonfermented Asian soyfoods: Soymilk (0.252 / 3.256), Tree of Life tofu (0.417 / 2.031), Mori-Nu tofu (0.494 / 3.827), soy flour (1.338), soy powder (1.748), and soy nuts (2.363).

Table 2 shows isoflavone concentrations (in mg per gram) in fermented Asian soyfoods: Tempeh (0.430 / 1.130), miso (0.920 / 1.379), rice miso (0.404 / 0.721), barley miso (0.721 / 1.195), Shiromiso soup mix (0.708), Akamiso soup mix (0.882).

Table 3 shows isoflavone concentrations (in mg per gram) in other soyfoods: Soy sauce (0.023 / 0.090), soy cheese (0.050 / 0.105), Tofutti soy ice cream (0.032 / 0.092), Ice Bean soy ice cream (0.117 / 0.360).

Although flavonoids are found in many plants, vegetables, and flowers, isoflavones such as genistein and daidzein are found in just a few botanical families. This is because of the limited distribution of the enzyme chalcone isomerase largely to tropical legumes. Partly for this reason, isoflavones are a very minor part of American or British diets. Address: Depts. of Pharmacology and Biochemistry and Comprehensive Cancer Center, Univ. of Alabama at Birmingham, Birmingham, Alabama 35294, Mass Spectrometry Lab., Children's Hospital Medical Center, Cincinnati, Ohio 45229.

6513. Havala, Suzanne; Dwyer, Johanna. 1993. Position of the American Dietetic Association: Vegetarian diets. *J. of the American Dietetic Association* 93(11):1317-21. Nov. [24 ref]

• ***Summary:*** Contents: Introduction. Position statement. Vegetarianism in perspective. Implications for health promotion. Nutrition considerations vegetarians. Groups with special needs. Meal planning.

Introduction: "A considerable body of scientific data suggests positive relationships between vegetarian diets and risk reduction for several chronic degenerative diseases and conditions, including obesity, coronary artery disease, hypertension, diabetes mellitus, and some types of cancer.

"Position statement: It is the position of the American Dietetic Association vegetarian diets are healthful and

nutritionally adequate when appropriately planned."

A half-page table titled "Daily food guide for vegetarians" (p. 1318) suggests that 2-3 servings per day come from the "Legumes and other meat substitutes" food group. Serving sizes: 4 oz tofu or tempeh, 8 oz soy milk. Address: 1. MSc, RD; 2. DSc, RD.

6514. **Product Name:** [Alitey (Soymilk with Hazelnuts), and Monsoy (Soymilk with Hazelnuts)].
Foreign Name: Alitey, Monsoy.
Manufacturer's Name: Liquats Vegetals, S.A.
Manufacturer's Address: Ctra. de Vic, Km. 1,230, E-08553 Viladrau (Girona), Spain. Phone: +34-3 884 80 69.
Date of Introduction: 1993. November.
New Product–Documentation: Talk with Michael Makowski of DE-VAU-GE in Germany. 1993. Dec. 8. Active soymilk manufacturers include Liquats Vegetals S.A. in Viladrau (near Girona), Spain. They started about 1 year ago, make their soymilk from whole soybeans, and are a private company. Letter (fax) from Michael Makowski. 1993. Dec. 10. Gives the company address and phone number.

Letter (fax) from Xavier Vilacis of Liquats Vegetals, S.A. 1994. Jan. 27. The company's first two products, both types of soymilk, were introduced in December 1992; Alitey was sold to the general public and Monsoy was sold only to specialty shops that sell vegetarian- and health-food products. In January 1993 the company introduced Alitey with cereals, and cocoa, and Monsoy with calcium, cereals, and cocoa. In November 1993 it launched Alitey with hazelnuts and Monsoy with hazelnuts.

6515. Mangels, Reed. 1993. Vegetarian Journal's guide to cheese alternatives and non-dairy yogurt. *Vegetarian Journal* (*Baltimore, Maryland*). Nov/Dec. p. 25-27.
• ***Summary:*** The cheeses are called cheese alternatives because many of them contain casein or calcium caseinate. Casein is a protein derived from cow's milk. It is added to most cheese alternatives to make them stretchy when melted. Though most cheese alternatives are not acceptable to vegans, two products on the market appear to be free of casein: Soymage and Soymage Cheddar, made by Galaxy Foods. One brand of cream cheese alternative (Tofutti Better Than Cream Cheese) also contains no casein. "It is hard to tell just whom these cheese alternatives were developed for." The main market seems to be consumers who want to avoid cholesterol and lactose. A table shows the following three types of products, each with the number of calories, and amount of fat and sodium per serving. Those followed by an asterisk contain no casein.

Mozzarella-style (1 ounce): Almond Rella, Lite'n' Free, Lite'n' Less, Soya Kaas, Soymage*, White Wave Soya A Melt, White Wave Fat Free, Cow's Milk Mozzarella, Part Skim Cow's Milk Mozzarella.

American/Cheddar-Style (1 ounce): Lite'n' Free Cheddar, Lite'n' Less American, Nu Tofu Low Sodium Cheddar, Nu Tofu Cheddar, Soya Kaas Mild American Cheddar, Soymage Cheddar*, White Wave Cheddar Soya A Melt, White Wave Fat Free Cheddar, Zero-Fat Rella California Cheddar, Cow's Milk Cheddar, Low Fat Cow's Milk American.

Cream Cheese (2 tablespoons): Lite'n' Less, Nu Tofu, Tofutti Better Than Cream Cheese*, Cow's Milk Cream Cheese, Low Fat Cow's Milk Cream Cheese.

The only non-dairy yogurt found in Baltimore, Maryland, was White Wave's Dairyless Soy Yogurt. It is available in raspberry, strawberry, blueberry, peach, vanilla, lemon-kiwi, and apricot-mango flavors and is available plain in quarts. All the flavored dairyless soy yogurts are similar in fat content to low-fat yogurt. The plain soy yogurt is closer to regular yogurt in fat content. The soy yogurts are not very goos sources of calcium (only 40 mg per 6-ounce serving). "I think their taste is quite acceptable."

As this magazine goes to press, Sharon's Finest (of Santa Rosa, California), after 7 years of research, has just released a new vegan cheese named Vegan Rella. "We had an opportunity to taste the cheese and found it to be a big improvement over Soymage." Vegan Rella contains organic Brazil-nut milk, tapioca, rice, oats, canola oil, Irish moss, garlic, spices, basil, sun-dried tomatoes, citric acid, and salt. It is available in hard cheese form (in Mexican and Italian flavors) and in cream cheese form (in either plain, or onion and dill flavor). Address: PhD, R.D.

6516. Westbrae Natural Foods. 1993. WestSoy–We know the importance of customer satisfaction (Ad). *Natural Foods Merchandiser.* Nov. p. 27.
• ***Summary:*** This full-page color ad states: "Westsoy is the most complete line of premium soy drinks on the market. Our focus is on innovative, quality products that meet your customer's needs." Also lists the many Westbrae "firsts."

Color photos show packages of: Westsoy Lite, Westsoy Low Fat Soy Drink, Westsoy Plus, Westsoy Lunchbox Plus, Lite Malted, Westsoy Original, Westsoy Lite Nondairy Creamer. Address: P.O. Box 48006, Gardena, California 90248.

6517. Willemse, Jan; Eaton, Eleanor. 1993. Cooking for Henry: The memories and recipes of Chef Jan Willemse, former pastry chef at Dearborn Inn and personal party chef for Henry Ford. Virginia Beach, Virginia: The Donning Company / Publishers. 160 p. Illust. Recipe index. 26 cm. Autographed by Willemse and Eaton.
• ***Summary:*** Contents: Foreword. 1. I'm discovered by Edsel Ford: Bread, pastries. 1. Henry Ford introduces me to the soybean: Soybean recipes. 3. I help open the Clinton Inn Restaurant to the public: Soups, salads, finger food. How you can be as healthy as Mr. Ford: Entrees, sauces, vegetables.

Mr. Willemse selected and downscaled his recipes while

Mrs. Eaton wrote the biographical text and selected the photos. The book was published just after Mr. Willemse's 93rd birthday. A photo on the cover shows Fair Lane, the last and most famous home of Henry and Clara Ford, located on the banks of the Rouge River in Dearborn, Michigan. Completed in 1915, the mansion has 56 rooms and is situated on 1,346 acres. After Mr. Ford's death, Fair Lane was given to the University of Michigan at Dearborn by the Ford Motor Co.

In the Preface, Jan's three children write: "The qualities our father and we admired most in Henry Ford were his simple manner, his genuine interest in his employees and their families, and his many kindnesses to them."

Born in Holland, Jan's training as a cook began at age 12 in his home town of Hilversum. He came to America in 1919 settling in Boston where he met and married his wife Annie. He first came in contact with the Ford family in 1931 when he was cooking at the Nautilus Hotel in Miami Beach. Florida. He took food to Edsel Ford and the crew of his yacht, which was moored at the marina. Edsel thought Jan was a good cook. Henry Ford had just opened the Dearborn Inn in Dearborn, Michigan, and Edsel thought Jan would be a good executive chef. Henry Ford wrote Jan asking if he's come to Dearborn and take the job of head chef. After a while, Jan accepted. Mr. Ford didn't want any alcohol served at the inn and he was very much against smoking. Jan soon met Edsel Ruddiman, Henry Ford's chemist. Jan never cooked at Fair Lane, the Ford's home and mansion, while the Fords lived there.

In 1934, at Mr. Ford's request, Jan started experimenting with soybeans. Dr. Ruddiman had the miller send him samples of soybean flour. He started by making soft rolls, and then began experimenting with many different foods. Whatever Jan made had to be approved by Dr. Ruddiman before he could send it to the Ford family. However, it could be served at the Dearborn Inn without his approval. He made many recipes in the next 5 or 6 months, and as far as he knows no other soy recipes were around.

While Jan researched food recipes with soybeans, Dr. Ruddiman and chemist Bob Smith experimented with making a substitute for milk and ice cream from the beans. The first products were served at the Dearborn Inn, but weren't well liked. Several other soybean researchers Jan remembers were R.H. McCarroll and Harold Joyce.

Jan worked as pastry chef at the Dearborn Inn until 1932. Then he went into Dr. Ruddiman's laboratory in Greenfield Village. "This soybean experiment was a sideline, you might say. It started small but grew to be very important to Mr. Ford. He wanted more and more food made with the soybean. Clara Ford was not as interested in the soybean as her husband, but she especially liked some soybean food such as cookies made with white chocolate chips, and soy bread. She wanted the bread sent to the mansion every day. A favorite of Mr. Ford's was a soybean cracker that he named the Model T..." A recipe for "Model T. Crackers" is given.

The section titled "Soybean Recipes" (p. 51-72) contains 42 such recipes. The main soy ingredients used in these recipes are soybean flour (used in 18 recipes), soybean margarine (in 17 recipes), soybean milk (10), whole soybeans (cooked, 9), soybean oil (8), roasted soybeans [soy nuts] (5), soy sprouts (1), TVP (textured soy flour, 1), and canned green soybeans (1). There are also two recipes for making soybean milk (one from soybean flour and 1 from whole soybeans), and one recipe each for making roasted soybeans (salted and baked) and homemade soybean coffee.

A photo (p. 66, supplied by Willemse) shows the "Menu of Dinner Served at Ford Exhibit, Century of Progress, August 17, 1934." The names of 17 dishes, each containing soya, are listed. The text on the facing page states: "I planned this menu of all soybean food..." served at The Ford Exhibit in Chicago, Illinois.

When Henry Ford ceased to be active in the Ford Motor Co., Jan left the company and started a catering business on his own. The Clinton Inn (pictured) was the first building Henry Ford acquired for Greenfield Village in 1927. Jan helped to open it to the public. Of the various friends of Henry Ford that Jan met, the one who impressed him most was George Washington Carver. "Of all the people I met, the prince of them all was Henry Ford. He was a wonderful man. He was so interested in everything and everybody. He loved children. He helped them, and the poor too, whenever he could." Jan also thought a lot of Dr. Ruddiman, who told him many times that "you are what you eat... Well, I've eaten soybean foods ever since I started experimenting with them."

"It used to be everyone thought soybeans were just food for animals. Mr. Ford helped people realize that they are perfect food for human beings. He once said that, next to the Model T, he considered his soybean research to be his greatest work."

This book contains many fine old photos including the following: The Carver Laboratory in 1942 (p. 50). Henry Ford standing by George Washington Carver (p. 65). Austin W. Curtis Jr., Jan Willemse, and Bob Smith sampling soybean foods that Jan served at a soybean brunch at the Henry Ford Estate–Fair Lane in 1988 (p. 138). Two giant pressurized cans of Presto Whip which attracted the attention of passers-by on Telegraph Road, south of Michigan Ave. in Dearborn for many years. Stored inside the structures were soybean oil and sugar used to make the soy-based non-dairy whip topping developed by Robert Smith, food chemist, at the request of Henry Ford (p. 144). Photos on the last page, titled "About the Authors" (autobiographical) show both Willemse and Eaton. Jan still bakes soybean cookies (recipe p. 61). Address: Willsemse: 130 Nightingale, Dearborn, Michigan 48128. Phone: 313-561-4088.

6518. Cole, Sidney J. 1993. Changes at DE-VAU-GE (Interview). *SoyaScan Notes*. Dec. 6. Conducted by William

Shurtleff of Soyfoods Center.
• ***Summary:*** DE-VAU-GE (DVG) has stopped making soymilk [actually they plan to stop in early 1994] and therefore also tofu. It was an economic decision. When the Adventist church sold Granose Foods in England, that cost DVG about 40-50% of their soymilk market. DVG still sells and distributes both soymilk and tofu under their GranoVita brand, but they buy the products from other manufacturers. The soymilk may be made by Alpro in Belgium. DVG still manufactures many other soyfoods, such as the soy protein foods, the canned meatlike products, etc.

DVG is still a strong company that is growing rapidly and Michael Makowski is still the general manager. He calculated that he can do better financially by using his factory space to make Corn Flakes rather than soymilk. If DVG keeps up their current growth rate, they may soon pass Australia's Sanitarium Foods as the leading Seventh-day Adventist food company in terms of sales. The church has no plans to sell DVG, and in fact the church is looking to support its food industries quite strongly now.

The decision to sell Granose was made at the local division level, not at the General Conference level. Sidney personally would have preferred that the church not sell Granose, but at least they did sell it at the right time and to a good buyer–the Haldane Foods Group. The products, the company, and the philosophy are all in good hands.

Eric Fehlberg retired about 2 years ago as director of the Seventh-day Adventist International Health Food Assoc. Dr. Cole took his place, and he has also kept his job in Miami at the Inter-American Division. Address: Director, International Health Food Assoc., P.O. Box 140760, Miami, Florida 33114-0760. Phone: 305-443-7471.

6519. Makowski, Michael. 1993. Soymilk at DE-VAU-GE and in Europe (Interview). *SoyaScan Notes.* Dec. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** DE-VAU-GE (DVG) has not yet stopped making soymilk; they had planned to stop during late 1993 and they hope to definitely stop during 1994. They stopped making tofu and Tofu Cream 2 months ago, but they continue to sell tofu; they now buy it from another company [Heuschen-Schrouff in the Netherlands]. DGV decided to stop soymilk production because of the large drop in demand after Granose was sold.

Their problem is to find a partner to produce soymilk for them. This other company must make a good quality product at a reasonable price, must have a large enough capacity to supply their needs (they plan to continue to sell the same soymilk products they are selling now), and must be willing to buy their used soymilk equipment at a reasonable price (this is the main sticking point).

There are not many large soymilk manufacturers in Europe. Alpro in Belgium makes and sells about 32 million liters/year in all the different sizes and flavors. Sojinal in France makes about 5½ million liters/year, and DE-VA-GE makes about 4 million liters/year. Other active soymilk manufacturers include Liquats Vegetal S.A. in Viladrau (near Girona), Spain (which started about 1 year ago and makes their soymilk from whole soybeans; they are a private company), several small manufacturers in England (but their quality is not acceptable), and Soyana in Switzerland. In Michael's opinion, the quality of the soymilk made by Alpro and DVG are more or less the same.

The British market for soymilk is by far the biggest in Europe, comprising about 50-60% of the total European market. Belgium, France, and Germany come next and are all about the same size. Then come Italy and Spain.

In Europe, 80% of all soymilk is sold plain–unsweetened and unflavored; it contains only soybeans and water. Then there are the sweetened types, which are sweetened with sugar, honey, or grape juice. The main flavored types are chocolate, vanilla, or strawberry. Then there are three flavors of dessert puddings: Chocolate, vanilla, and strawberry. That's all. Address: General Manager, DE-VAU-GE Gesundkostwerk GmbH, Postfach 1660, Luener Rennbahn 18, D-2120 Lueneburg. Phone: (04131)-303-145.

6520. Kashama, Johnny. 1993. Re: Tofu-Rwanda s.a.r.l. Questions answered on Soyfoods Center questionnaire and returned to SC on 22 Dec. 1993. 3 p. Handwritten, without signature. [Eng]
• ***Summary:*** The following is based on a interview with Mr. Jean-Pierre Cadran, technical assistant in charge of the Tofu-Rwanda project (*Projet Valorisation et Transformation du Soja*). This company was founded in Feb. 1990 for the improvement of the diet of the people of Rwanda by the introduction of a new product of high nutritive value. A private society of limited liability (s.a.r.l.), 51% the shares are owned by 3 Rwandese men (Mr. O. Murenzi, Mr. L. Gahamanyi, and Mr. F. Gasengayire) and 49% by a French non-governmental organization (NGO) named CIDR (*Centre International de Développement et de Recherche;* the International Center for Development and Research). In July 1991 the company started to make and sell soyfoods, starting with tofu.

The soybean was introduced to Rwanda in 1927 (see Lejeune 1938). In 1980 in Rwanda soybeans were processed only by one company into flour and oil, and this company failed because of bad management. A new type of processing was introduced in 1984 when CIDR began studies on tofu. Tofu-Rwanda was the first company to make tofu in Rwanda. The company has been moderately successful (but has not grown) because tofu is a new product, yet it is easy to use, and most of the people living in cities can afford it. Their main business problem has been the devaluation of the Rwandese franc by 120% over the last 2 years. The company presently makes five soy products: Tofu, Tofu Croquettes (triangles), Tofu Fritters (balls 2 inches in diameter), Okara

Crackers, and Soymilk (which is sold only to people who come to the shop with their own container). Of these, tofu is the best seller. A number of the products have no labels. he tofu is sold directly from the factory. None of the products are sold refrigerated.

The company employs 6 people; 1 manager, 2 production workers, and 3 office and other workers. Their plant contains 146 square meters of production space and 41 square meters of office space. Net sales last year were 1,600,000 Rwandese francs (=US$11,000). The net worth of the business is 2,700,000 Rwandese francs (=US$18,600).

There is also another company in Kigali, Rwanda named Duhamic-Adri that makes a product named *Imvange-Sosoma* containing soybeans, sorghum, and maize. Address: c/o Tofu–Rwanda, P.O. Box 1906, Kigali, Rwanda. Phone: 758-82607.

6521. *SoyaCow Newsletter* (*Ottawa, Canada*). 1993. Russian Soybean Association launches soyfoods initiative. 2(4):1. Oct/Dec.

• ***Summary:*** In December, Krasnodar, a city in southern Russia, hosted a warm reception for the first SoyaCow ever to penetrate the former Soviet Union. Krasnodar is the center of a major agricultural "breadbasket" for Russia and soybeans are a leading local crop–which has traditionally been grown mostly for animal feed and oil extraction.

The Russian Soybean Association, ASSOY, had arranged for a SoyaCow demonstration, attended by local staff, VIPs, and the media. "The line-ups for samples of fresh soymilk and tofu proved that an entire new food category could be embraced spontaneously by one of the world's major cultures." A photo shows Frank Daller demonstrating SoyaCow to Alexander Podobedov, director of ASSOY.

Note: Talk with Frank Daller of The SoyaCow Centre. 1994. Aug. 22. Mr. Podobedov (pronounced po-DOE-buh-doff) can be contacted at ASSOY, Ul. Mirra 28, 350063 Krasnodar, Russia. Phone: (7) 8612-525614; Fax (7) 8612-540081.

Krasnodar is in southern Russia at about 45º N latitude (about the same latitude St. Paul, Minnesota), just east of the Black Sea. It is the capital of the Krasnodar Krai, a Territory of the Russian S.F.S.R.

6522. **Product Name:** Soymilk Powder.
Manufacturer's Name: Agronico, Inc. of Minnesota.
Manufacturer's Address: 95 S. Park Ave., P.O. Box 55, R.R. #1, Le Center, MN 56057. Phone: 612-357-4474.
Date of Introduction: 1993.
How Stored: Refrigerated preferably.
New Product–Documentation: Talk with Mike Vincent, president of Agronico. 1995. Sept. 30. This product, finely ground soy flour, was introduced in about 1993 and is sold in 50 lb sacks.

Sample (product with handwritten Label) sent by Mike Vincent, owner of Agronico. 1995. Dec. 7. Soymilk powder.

6523. **Product Name:** [Le Naturalezze Pearl of the Fields Soymilk].
Foreign Name: Le Naturalezze Perle di Campo Soia L.
Manufacturer's Name: Aliconf srl. (Distributor).
Manufacturer's Address: S/s Cassia km 46,500 Sutri (VT), Italy.
Date of Introduction: 1993.
Ingredients: Extracted liquid of the soybean*. Organically grown.
Wt/Vol., Packaging, Price: 1 liter.
How Stored: Refrigerated.
New Product–Documentation: Label sent by Heather Paine of SoyaFoods in London. 1990. Nov. 10.5 by 2.75 inches. Blue, red, yellow, green and brown on white. Paper label wraps all around the container. "Contains no sugar. Alimento vegetal. Contains no animal fats or preservatives."

6524. **Product Name:** Soybean Milk, Hard Tofu Cake, Square Tofu (not pressed), Deep-Fried Triangle Tofu, Tofu Pudding.
Manufacturer's Name: Binh Minh Tofu Manufacturing.
Manufacturer's Address: 1180 Tully Rd., Unit B., San Jose, CA 95122. Phone: 408-279-3655.
Date of Introduction: 1993.
How Stored: Refrigerated.
New Product–Documentation: Talk with Binh Tran, owner and founder. 1996. May 28. He is a Vietnamese-American. Tran is his family name. He started this company in May 1991. His is now the largest tofu maker in San Jose. These products were introduced after the company started. They are all Vietnamese soy products and the labels are entirely in Vietnamese, with no English.

6525. **Product Name:** [Line "S" Drink Bar {Aseptically Packaged Calcium-Enriched Soymilk} (Vanilla)].
Foreign Name: Ligne "S" Drink Bar (Boisson Vanille).
Manufacturer's Name: Biosoja [Sojinal].
Manufacturer's Address: 10, rue Lavoisier, 68000 Colmar, France.
Date of Introduction: 1993.
Ingredients: Water, dehulled soybeans (10%), cane sugar, natural vanilla flavor, calcium salt.
Wt/Vol., Packaging, Price: 500 ml Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label (see next page) sent by Heather Paine of SoyaFoods in London. 1993. Nov. 3 by 5.75 by 1.75 inches aseptic carton. Red, green, and white on yellow. "Soya enriched with Calcium. Rich in protein. 100% from plants. No lactose. No colorings. No preservatives."

6526. Crnivec, Vesna. 1993. Od soje do tofuja [From soya to tofu]. *Bio Novice* (*Bio News, Ljubljana, Slovenia*) No. 5/6. p. 40-44. [1 ref. Slv]
• ***Summary:*** The subtitle reads: "Basic recipes for making traditional fermented and nonfermented foods, and for preparing foods using tofu." Excerpts from *The Book of Tofu* by Shurtleff and Aoyagi. Describes how to make tofu at home (with 6 illustrations {line drawings} by Akiko Aoyagi), and discusses soy puree, soymilk, and okara. Address: Slovenia.

6527. **Product Name:** Soymilk.
Manufacturer's Name: Deli France Refreshment Services.
Manufacturer's Address: 79 Blue Spruce St., Brampton, ON L6R 1C3, Canada. Phone: (905) 799-0197.
Date of Introduction: 1993.
New Product–Documentation: Letter (fax) from Jimmy Chong, followed by a phone call. 1993. Nov. 8. He and Michelle Cheng (both of whom are natives of Singapore) currently make soymilk which they sell to catering services.

6528. **Product Name:** [Bjorg Tofu Quenelles with Basmati Rice and Curry Sauce].
Foreign Name: Bjórg Tofunelles au Riz Basmati Sauce Curry.
Manufacturer's Name: Distriborg.
Manufacturer's Address: 217 chemin du Grand-Revoyet, 69230 Saint-Genis-Laval, France.
Date of Introduction: 1993.
Ingredients: Tofu quenelles 25% (Concentrated soymilk* 40%, egg white, non-hydrogenated palm oil, flour, salt, seasonings), basmati rice* 25%, water, modified starch, soymilk*, salt, onions, sugar, seasonings, curry 0.5%. * = Organically grown.
Wt/Vol., Packaging, Price: 280 gm.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label sent by Heather Paine of SoyaFoods in London. 1993. Nov. 3. If you have any questions, contact Distriborg, 217 chemin du Grand-Revoyet, 69230 Saint-Genis-Laval.

6529. **Product Name:** Unfried Tofu (Extra Firm), Soft Tofu, Soymilk [Chocolate, or Strawberry].
Manufacturer's Name: Happy Tofu.
Manufacturer's Address: 5231 S.E. Powell Blvd., Portland, OR 97206. Phone: 503-771-2802.
Date of Introduction: 1993.
How Stored: Refrigerated.
New Product–Documentation: Talk with Tom Nguyen. 1994. Nov. 17. Tom is Ann Uong's partner and brother-in-law, married to her sister. He is also Vietnamese. In 1993 Happy Tofu introduced Unfried Tofu (which is extra firm tofu–doufu-gan–in 4-inch squares), Soft Tofu, and soymilk in chocolate and strawberry flavors.

6530. Harcan Kingsoya Co. Ltd. 1993. Veg-A-King (Brochure). Ontario, Canada. 4 p.
• ***Summary:*** This is a portfolio-style leaflet with one insert describing Veg-A-King soy sauce. "Harcan Kingsoya Co. Ltd. is a Chinese/Canadian joint venture company set up to bring you authentic soyfoods and exotic sauces. Our Chinese partner is a leading food manufacturer and exporter in Heilongjiang Province, China." The company has established a manufacturing plant in Scarborough, Ontario, Canada. The brand name is Veg-A-King.

"Veg-A-King soy sauce is our flagship product. We use a traditional recipe which has a long history in China. Brewed naturally from premium soybeans, wheat and bran, it contains no artificial colours or added flavourings."

The company also makes an impressive line of 17 meatlike soyfoods products such as Vege-Beef, Vege-Chicken, and Vege-Shrimp. Pressed tofu is the basic ingredient of these foods. "Through further processing it can be shredded, formed, steamed, deep-fried or smoked to make different delicious foods" for vegetarians. Premium quality Canadian soybeans are used in manufacturing soymilk, tofu, and dried bean curd.

Two photos show foods being made in the factory. Address: 33 Casebridge Court, Units 5&6, Scarborough, ONT M1B 3J5, Canada. Phone: (416) 283-8328.

6531. **Product Name:** Soja Drink.

Manufacturer's Name: Mission de Mutoyi / Vispe.
Manufacturer's Address: Bujimbura, Burundi.
Date of Introduction: 1993.
Ingredients: Soybeans, water, flavor, sugar.
Wt/Vol., Packaging, Price: 60 ml PE pouches.
How Stored: Refrigerated.
New Product–Documentation: J.L. Voisin. 1995, Oct. 3-5. Dairy like soyfoods in Africa: Evolution & perspectives. Paper presented at the Third Bi-Annual SoyAfrica Conference. 5 p. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma. Actimonde of Archamps, France, installed an Agrolactor (soymilk processing plant) at this company in 1993. This Italian NGO is still working in Bujumbura, producing soy milk and baked goods.

Note: This is the earliest known commercial soy product made in Burundi.

6532. **Product Name:** [Nestlé Spray-dried Soymilk].
Manufacturer's Name: Nestle, S.A. de C.V.
Manufacturer's Address: Ejercito Nacional Mexicano No. 453, Mexico D.F. 11520, Mexico. Phone: +52 915-250-9944.
Date of Introduction: 1993.
How Stored: Shelf stable.
New Product–Documentation: Soya Bluebook. 1993. Aug. p. 88.

6533. **Product Name:** Soymilk [Plain].
Manufacturer's Name: Tofu-Rwanda.
Manufacturer's Address: P.O. Box 1906, Kigali, Republic of Rwanda.
Date of Introduction: 1993.
How Stored: Unrefrigerated and perishable.
New Product–Documentation: Form filled out by Johnny Kashama of Tofu-Rwanda, based on a interview with Mr. Jean-Pierre Cadran of Tofu-Rwanda. 1993. Dec. 21. The company presently makes five soy products, including soymilk, which is not packaged. It is sold only to people who come to the shop with their own tins or bottles. It is natural in flavor (unflavored).

6534. Bhatnagar, P.S.; Ali, Nawab. 1993. Country Report 4–India. In: N. Chomchalow & P. Narong, eds. 1993. Soybean in Asia: Proceedings of the Planning Workshop for the Establishment of the Asian Component of a Global Network on Tropical and Subtropical Soybeans. Bangkok, Thailand: FAO Regional Office for Asia and the Pacific. viii + 218 p. See p. 34-49. RAPA Publication (FAO), No. 1993/6.
• ***Summary:*** Contents: (1) Introduction. (2) Processing, utilization, and marketing: Soybean oil, soybean meal export, soyfood technologies ready for commercialisation, future scenario, soy-based food products. (3) Constraints for soybean production: Constraints during the 1970s, constraints during the 1980s, current constraints. (4) Research undertaken to resolve the constraints. (5) Constraints on a priority basis. (6) Resources available. (7) Training needs: Soybean production research, processing and utilization. (8) On-going research projects. (9) Constraints in promoting soy-based foods. (10) Efforts undertaken to resolve the constraints. (11) Seed production and distribution system. (12) Information required: Production/improvement, processing and utilization. (13) Collection of germplasm. (14) Major soybean growing seasons and cropping systems. (15) Information relevant for a strategy plan.

Tables: (0) Average prices in Nov. 1991 of yellow soybean, black soybean, soy oil in bulk, soymeal (soybean meal from solvent extraction), retail price of soy oil, texturised soy protein (TSP), soy beverages. (1) Area, production, and productivity of soybean in India from 1970-71 to 1989-90. (2) Area, production, and productivity of soybean in India during 1988-89 by state. 83.5% of India's soybeans are produced in Madhya Pradesh, followed by Rajasthan (8.20%), and Maharashtra (3.75%). (3) Soybean processing plants in India by state. 58% of India's soybean processing capacity is in Madhya Pradesh, followed by Maharashtra (16.00%), Gujarat (9.00%), and Andhra Pradesh (8.50%). (4) Production and processing of soybean and export of soybean extraction/meal by India during last five years. (5) Small scale soybean processing equipment. (6) Production of fullfat soyflour with financial viability of different plant sizes. (7) Production of soy *paneer* with financial viability of different plant sizes. (8) Production of soy-fortified biscuits with financial viability of different plant sizes.

Today, 85% of soybean production in India is used for oil (and meal, a by-product), 10% for seed, and 5% for food.

Table 1: Soybean area has increased steadily from 32,000 ha in 1970-71 to 1,900,000 ha in 1990-91. Soybean production has increased dramatically from 14,000 tonnes (metric tons) in 1970-71 to 2,000,000 tonnes in 1990-91. Productivity [yield] has increased steadily from 438 kg/ha ha in 1970-71 to 1,053 kg/ha in 1990-91. Source: Agricultural Situation in India. Address: 1. Director, National Research Centre for Soybean, Indore, India; 2. Project Director, Soybean Processing & Utilization, CIAE, Bhopal, India.

6535. Boots, Gypsy; Arthur, Mike; Hopkins, Jerry. 1993. The Gypsy in me! How to look younger and have more energy as you grow older. Camarillo, California: Golden Boots Co. vi + 102 p. Illust. No index. 22 cm.
• ***Summary:*** Contents: Dedication and thanks. Introduction, by Charlie Fox. 1. Natural beginnings. 2. Living in nature. 3. Love and marriage. 4. Hollywood meets health nut. 5. Semi-stardom with Steve Allen. 6. Never too late to rejuvenate. 7. Exercise is a way to live. 8. Vital foods. 9. Eat and drink to your health. 10. Recipes for a healthier you. 11. Traveling through life.

In Chapter 8, titled "Vital foods," the section on

legumes includes soy milk, tofu, tempeh, and texturized vegetable protein. Here Gypsy notes that he has always been a vegetarian. Eggs and dairy products once formed a major part of his diet, but now he rarely eats those foods.

Chapter 10, titled "Recipes for a healthier you," contains the following soy-related recipes: Scrambled tofu. Baked soy bean casserole. Tofu mushroom loaf. Tofu burgers. Soy burgers. Soya-rice flour coffee cake (with soy flour). Shakes (with seed, nut, rice, or soy milk). Many other recipes are seasoned with soy sauce. The Gypsy Boots smoothie (p. 93) calls for: 1 cup fresh apple or orange juice. 1 ripe banana. 1 tablespoon Kyo-Green. 1 date or a few raisins.

Contains many photos, both in black-and-white and color of Gypsy Boots, alone, or with family (p. iii, 19), friends, and celebrities. On the cover is a color photo of Gypsy in short pants standing barefoot on rocks in a stream. Eight unnumbered pages of color photos of Gypsy and friends on glossy paper follow page 70. This book has an unusually commercial tone. Throughout the book, Gypsy discusses the benefits of garlic supplements, wears Wakunaga's Kyolic T-shirts in photos, and plugs Kyolic garlic quite a bit. Address: Camarillo, California.

6536. Chomchalow, Narong; Kueneman, E.A.; Hicks, P.A. 1993. Institutional report 3–FAO. In: N. Chomchalow & P. Narong, eds. 1993. Soybean in Asia: Proceedings of the Planning Workshop for the Establishment of the Asian Component of a Global Network on Tropical and Subtropical Soybeans. Bangkok, Thailand: FAO Regional Office for Asia and the Pacific. viii + 218 p. See p. 164-172. RAPA Publication (FAO), No. 1993/6.

• ***Summary:*** Contents: (1) Introduction. (2) FAO's involvement in soybean research and development in Asia. (3) The FAO-executed projects: National projects (Sri Lanka, Vietnam, Philippines), regional projects. (4) Other FAO-supported activities: Networking (Global Soybean Research Network, Asian Soybean Network), evaluation (Buhler's Full-fat soybean processing technology, Plenty's soymilk production in Sri Lanka, Danish Turnkey Dairies soymilk plant).

Tables: (1) Soybean production, area harvested, and yield in developing and developed countries in Asia: Developing countries: Bhutan, Cambodia, China, DPR Korea (north), India, Indonesia, Iran, Laos, Malaysia, Myanmar, Nepal, Pakistan, Papua New Guinea, Philippines, Rep. of Korea (south), Sri Lanka, Thailand, Vietnam. Developed countries: Australia, Japan, New Zealand. (2) Activities involving soybean sponsored by RAS/82/002 (1983-89). (3) Activities involving soybean sponsored by RAS/89/040 (1990-93).

Regional projects RAS/82/002: "During the period of 1983-89, an FAO-executed and UNDP-funded project, RAS/82/002, entitled "Research and development of Food Legumes and Coarse Grains {FLCG} in the Tropics and Sub-Tropics of Asia" was operated. This project involved Bangladesh, Indonesia, Lao PDR, Nepal, Pakistan, the Philippines, Republic of Korea, Sri Lanka, Thailand, and Vietnam. The project was planned in two phases; the duration of Phase I was 2 years, and activities began in September 1983. The proposed UNDP contribution for this phase was US $450,000 and the actual expenditure was US $454,394. Phase II was approved in August 1985 but implemented in July 1987 and concluded in June 1989. Total UNDP contribution for both phases was US $1,331,453.

"The long-term objective of the project was to increase production of FLCG in the participating countries in order to bridge the gap between the demand for protein-rich food for domestic needs and export markets and the actual production. One of the main goals of the project was to establish a network of national institutions, linked with international institutions capable of advancing the relevant development objective of participating countries through coordinated research and extension activities."

RAS/89/040: "A follow-up project of RAS/82/002, entitled 'Regional Cooperative Programme for the Improvement of Food Legumes and Coarse Grains in Asia', funded by UNDP, is being executed by FAO. It became operational in April 1990 and has a termination date of December 1993. Four more countries (China, India, Myanmar, and Malaysia) joined the network in this follow-up phase. The Government of Indonesia continues to provide the Secretariat."

Table 1: Bhutan: Soybean production increased from 900 tonnes (metric tons) in 1981 to 1,300 tonnes in 1991.

Cambodia: Soybean production increased from 1,100 tonnes in 1981 to 16,000 tonnes in 1991–growing at 28.0% a year on average.

North Korea: Soybean production increased from 350,000 tonnes in 1981 to 460,000 tonnes in 1991–growing at 2.5% a year.

Iran: Soybean production increased from 62,000 tonnes in 1981 to 105,000 tonnes in 1991–growing at 0.8% a year.

Laos: Soybean production increased from 3,900 tonnes in 1981 to 4,200 tonnes in 1991–growing at 1.3% a year.

Papua New Guinea: Either had no soybean production or no information was available.

New Zealand: Soybean production decreased from 300 tonnes in 1981 to 100 tonnes in 1991–decreasing at -11.0% a year. Address: 1. Regional Plant Production Officer (Industrial Crops), 2. Regional Agricultural Engineering and Agro-Industries Officer: Both: FAO/RAPA, Bangkok, Thailand; 3. Senior Officer, Plant Production and Protection Div., FAO, Rome, Italy.

6537. Escano, Crisanto R.; Gaddi, Virgilio Q. 1993. Country report 11–Philippines. In: N. Chomchalow & P. Narong, eds. 1993. Soybean in Asia: Proceedings of the Planning Workshop for the Establishment of the Asian Component

of a Global Network on Tropical and Subtropical Soybeans. Bangkok, Thailand: FAO Regional Office for Asia and the Pacific. viii + 218 p. See p. 92-108. RAPA Publication (FAO), No. 1993/6. [12 ref]
• ***Summary:*** Contents: (1) Introduction. (2) Production: Status, major growing seasons and cropping systems, constraints, resolving constraints. (3) Processing, utilization and marketing: Status, supply and demand, exportation of soybean products, constraints, resolving constraints.

Figures: (1) Trend in soybean production, Philippines, 1980-90. (2) Soybean area harvested, Philippines, 1980-90. (3) Trend in the soybean yield, Philippines, 1980-90. (4) Regional shares of total production, Philippines, 1990. (5) Soybean and soybean product shares in importation, Philippines, 1990. (6) Country of origin, soybean meal import, Philippines, 1990. (7) Country of destination, soysauce export, Philippines, 1990.

Tables: (1) List of soybean-based food products popularly used in the Philippines. (2) Volume and value of soybean imports, 1980-90.

Soybean production increased from about 9,800 tonnes (metric tons) in 1980 to a peak of 11,466 tonnes in 1982, then decreased to 5,614 tonnes in 1990. Area planted to soybeans increased from about 10,000 ha in 1980 to a peak of about 11,00 ha in 1982, then decreased to about 7,000 ha in 1990. The average yield for the period 1980-1990 was 920 kg/ha, but has generally been falling since 1983. Southern Mindanao has been the single most important soybean producing region in the Philippines for more than a decade, accounting for about 67% of total Philippine soybean production in 1990; Central Mindanao comes next with about 23%.

A brief history of soybean production in the Philippines from 1983 to 1990 appears on pages 99-10. Popular soyfoods products in the Philippines include: A. Fermented products: Soy sauce (toyo), fermented soybean curd (tausi [sic, fermented black soybeans]), tempeh (tempe), soybean paste (miso), soft fermented soybean curd (tahuri). B. Non-fermented products: Soybean sprouts (toge, tauge), soybean cheese [tofu] (tokwa), Geerlings cheese (taho [soft curds]), soybean milk (soymilk), and roasted soybean powder (soy coffee).

Philippine imports of soybeans and soybean products have increased rapidly since 1980, yet 93% of these imports in 1990 were soybean meal, of which 38% comes from India, 33% comes from the USA, 22% from China, and 7% from others.

In April 1991 the General Milling Corporation's soybean solvent extraction plant began operation in Tabango, Batangas. It is expected to reduce the country's imports of soybean meal but increase the imports of raw soybeans. Address: 1. Scientist III; 2. Subject Matter Specialist. All: PCARRD, Los Baños, Laguna, Philippines.

Soybean in Asia: Proceedings of the Planning Workshop for the Establishment of the Asian Component of a Global Network on Tropical and Subtropical Soybeans. Bangkok, Thailand: FAO Regional Office for Asia and the Pacific. viii + 218 p. See p. 79-86. RAPA Publication (FAO), No. 1993/6.
• ***Summary:*** (1) Introduction. (2) Production. (3) Observation trials. (4) Grain legume crops improvement: Collection and maintenance of germplasm, breeding and varietal improvement, varieties for different ecological regions. (5) Agronomic investigation. (6) Pathological investigation. (7) Entomological investigation. (8) Processing: Tofu, kinema, soy drink (and soy yogurt / dahi). (9) Marketing. (10) Recommendations.

Tables: (1) Germplasm collection of pulses in Nepal. (2) Area, production and productivity of soybean in Nepal. (3) Chemical composition of *kinema* (on dry-weight basis).

Figures: (1) Traditional process of *kinema.* (2) Preparation of *kinema* starter. (3) Preparation of *kinema* using selected strains. (4) Marketing channel of soybean.

Table 2 shows: Area planted to soybeans grew from 18,400 ha in 1983 to 20,700 ha in 1989. Soybean production grew from 10,100 tonnes (metric tons) in 1983 to 12,800 tonnes in 1989. Soybean yield grew from 548 kg/ha in 1983 to 611 kg/ha in 1989.

"Traditionally, soybean is consumed in various forms. Green pods are popularly eaten as a snack food. The green beans are consumed as a delicious vegetable curry along with other leafy vegetables or with potato slices. The dried soybean is roasted, dehusked and split to prepare a popular snack item. The dried beans are soaked overnight and deep-fried in vegetable oil, salted and spiced and consumed as another popular snack item. These recipes are developed over a long period of time and constitute the integral component of Nepalese food preparations." Address: Chief, Food Research Office, CFRL, Kathmandu, Nepal.

thermal nature of food and people. 5. Exterior/interior: Building immunity. 6. Excess and deficiency.

Part II: Essentials of nutrition. 7. Dietary transition. 8. Water. 9. Protein and vitamin B-12.

10. Oils and fats. 11. Sweeteners. 12. Salt. 23. Condiments, caffeine, and spices. 14. Vitamins and supplements. 15. Calcium. 16. Green food products. 17. Survival simplified. 18. Enjoyment of food. 19. Food combinations.

20. Fasting and purification. 21. Food and children.

Part III: The five element and organ system. 22. Five elements: Seasonal attunement and the organs in harmony and disease. 23. Therapeutic use of the five flavors. 24. Wood element. 25. Fire element. 26. Earth element. 27. Metal element. 28. Water element.

Part IV: Diseases and their dietary treatment. 29. Blood sugar imbalance [diabetes]. 30. The stomach and intestines. 31. Blood disorders. 32. Cancer and regeneration diets. 33. Other degenerative disorders.

Part V: Recipes and properties of vegetal foods. 34. Vibrational cooking. 35. Grains. 36. Breads. 37. Legumes–Peas, beans, and lentils: Healing properties of legumes, improving the digestibility of legumes, techniques for cooking legumes, miso, tempeh, tofu. 38. Nuts and seeds. 39. Vegetables.

40. Sprouts. 41. Salads. 42. Seaweeds: Agar-agar, dulse, hijiki and arame, kombu and kelp, nori, wakame, Irish moss and Corsican (*Alsidium helminthocorton;* it is sold as a tea and discharges worms. 43. Soups. 44. Sauces. 45. Condiments: Chutneys and relishes. 46. Spreads and patés. 47. Pickles. 48. Grain and seed milks (incl. sesame seed milk, almond milk, almond milk shake, sprouted grain milk {oats, rice, millet, barley}, cooked grain milk). 49. Rejuvelac and yogurt.

50. Fruit. 51. Desserts. Appendixes: Recipe locator. Bibliography (180 references, mostly alternative; Oriental philosophy. Chinese medicine: Theory and foundations. Chinese dietary therapy. Ayurvedic and Tibetan medicine. Western approach to nutrition. Healing the spirit and mind. Chinese herbology. Western herbology. Healing with food. Green foods. Amaranth. Seaweeds. Vegetarian, macrobiotic, vegan. Children. Ecology, politics, and ethics of food. Degenerative diseases and immunity. Toxins and radiation. Cookbooks. Food catalogs, guides, and references. Sources of data for tables, charts, and nutritional statistics). References and notes (356 refs, mostly scientific). Resources index (Incl. Soyfoods Center).

The following are listed in the index (f = most important pages): Acid-forming foods (p. 235f, 240). Aduki [azuki] beans (p. 26, 34, 50, 60, 68, 77, 178, 273, 305, 307, 319, 362, 467f). Amaranth (lots, 419-20f). Amasake (p. 98, 152-53, 155, 160, 163, 275, 287, 592f). Animal products (lots). Aspergillus oryzae (p. 592). Ayurveda (lots). Black sesame seed (lots, 492f). Black soybean (60, 68, 288, 317, 324, 327, 468). Bran (p. 332) and its role in relieving constipation (345-46). Buckwheat (lots, 422f). Buddha. Calcium (lots). Cancer. Cheese (but no soy cheese). Cholesterol. Cigarette smoking. Coldness, bodily. Dampness, bodily. Deficiency. Digestibility (Improving the digestibility of legumes, p. 471-73). Five elements system. Free radicals. Gerson, Max and cancer therapy (p. 41, 126, 162, 365-66, 381). Goiter. Gomasio (sic, gomashio; sesame salt, p. 272, 566f). Heart / Heart/mind. Heat (lots). Hijiki. Ice cream (p. 291, 305). Job's tears (p. 381, 383). Kasha (buckwheat, p. 422). Kelp. Kloss, Jethro (p. 366, 381). Koji (p. 479). Kudzu (p. 22, 25, 29, 60, 289, 299, 309, 317, 414f). Lecithin (lots, p. 127, 470, 414f). Legumes (lots, p. 466-471, 473f). Macrobiotics (p. 3-4). Marijuana (lots). Menopause (p. 181-82, 362-364f, 441, 468, 497). Microwave cooking (p. 20). Milk). Mind, Chinese Zen concept of. Miso (p. 33-34, 60, 72-74, 78, 81, 90, 92, 98, 101, 105-06, 150, 159, 164, 195, 221-22, 272, 275, 315, 376, 479-82f; natto miso p. 482). Mochi (p. 436-37f). Mother's milk–to increase. Mucus. Nails, dry and brittle (p. 285). Oils (incl. soy oil, p. 138-41) Omega-3 fatty acids. Nori. Protein (lots). Qi [chi, p. 16-17]. Quinoa. Rice syrup. Schweitzer, Albert (365). Sea palm (p. 541). Seaweed (lots, p. 540-55f–see also Agar, alaria, arame, bladderwrack, Corsican, dulse, hijiki, Irish moss, kelp, kombu, nori, ocean ribbon, sea lettuce, sea palm, wakame). Seitan (p. 446-47). Sesame butter (p. 81, 492). Sesame seed (lots, 492f). Soybean (p. 52, 56, 60, 105, 124, 161, 178, 232, 235n, 250, 300, 466, 470f; children and soy products 253-54; soy sprouts p. 22, 34, 122, 291, 470f; see also miso, soy sauce, tempeh, tofu).

The section titled "Soybean" (p. 470) begins: "Cooling thermal nature; sweet flavor; strengthens the spleen-pancreas; influences the colon; moistens conditions of *dryness;* supplements the kidneys; cleanses the blood vessels and heart, improving circulation; helps restore pancreatic functioning (especially in diabetic conditions); promotes clear vision; diuretic; lowers fever; highly alkalizing and eliminates toxins from the body; boosts milk secretion in nursing mothers. Also used as a remedy for dizziness, childhood malnourishment (especially in the form of tempeh and soy milk), skin eruptions, constipation, edema, excessive fluid retention and toxemia during pregnancy, and food poisoning. For the imbalances during pregnancy and for food poisoning, drink soybean juice (prepare as 'aduki juice' above). Soybeans are a natural source of lecithin–a brain food.

"Unless well-cooked, soybeans inhibit the digestive enzyme trypsin, making them [sic] difficult to digest. The fermentation process, such as used in tempeh, tofu, miso, and soy sauce, also eliminates the beans' trypsin-inhibiting effect.

"Soybean sprouts are cooling with a sweet flavor. They are diuretic and used to treat spasms, arthritis, food stagnation, *heat*-type coughs and other heat conditions marked by one or more signs such as yellow tongue coating, yellow mucus, and scanty, dark yellow urine."

Soy sauce (p. 34, 78, 81, 98, 105-06, 150, 159, 164, 195, 222, 272, 277, 315, 414f, 480). Spirulina. Sprouting (p. 232-33). Sprouts (lots, p. 528-30f). Steiner, Rudolf (p. 19-20, 504). Stomach (beneficial foods, stomach/duodenal heat and, strengthening food). Stress. Sugar (lots). Superoxide dismutase (SOD). Sweating–night sweats (p. 24, 117, 441). Sweeteners. Sweet rice (p. 433f). Tahini (sesame, p. 106, 225, 493). Tempeh (p. 22, 34, 56, 60, 96, 99, 105, 124, 216, 221, 242, 250, 290, 307, 310, 482-86f; vitamin B-12 and p. 98). Thirst. Tobacco. Tofu (p. 22, 25, 34, 55-56, 60, 68, 81, 105, 124, 242, 250, 290-91, 300, 303, 307, 310, 317, 327, 486-89f). Tomato. Tongue coating and digestion (p. 399). Umeboshi plums (p. 78, 159, 222, 272, 307, 414, 583f). Umeboshi vinegar (p. 414). Urinary incontinence and deficiency of kidney qi (p. 318-19). Urination, frequent, from kidney qi and yang deficiencies (p. 318). Valerian root. Vegan (p. 5, 95, 137, 261, 389, 502). Vegetarianism (p. 81-82, 95). Vitamin B-12. Vitamin E. Vitamin K. Wakame. Warming foods (p. 18-20, 26-27). Warts. Watermelon. Wind, bodily (foods which quell, 286-89; incl. black soybean, p. 468). Yang. Yin.

Talk with Heartwood Institute. 1997. Nov. 12. This is basically a massage school that also offers retreats. Paul's background is in the martial arts and massage. He graduated from a college after 4 years but the name of the college is not available. He also did 2 years of graduate work at an institution whose name is not available. The Institute sent their catalog/brochure. Address: Director, Heartwood Inst. Wellness Clinic and Oriental Healing Arts Program, 220 Harmony Lane, Garberville, California 95542. Phone: 707-923-5000.

6541. Rosas, Juan Carlos; Young, Roberto A. 1993. El cultivo de la soya [The cultivation of soya]. Tegucigalpa, Honduras: Escuela Agrícola Panamericana, Departamento de Agronomía. 60 p. Illust. 27 cm. [Spa]*
• ***Summary:*** Contents: 1. Overview: Economic importance, chemical composition, history, taxonomy. 2. Morphology of the soybean plant. 3. Physiology of the growth and development of the soybean plant: Stages of development. 4. Environmental factors that affect the cultivation of soya: Soil, water, irrigation, light / photoperiod, temperature, period of growth. 5. Practical cultivation: Preparation of the soil, time of planting, density of planting, quantity of seeds, systems of cultivation, control of weeds (methods of weed control, chemical control). 6. Mineral nutrition of soybeans (and inoculation). 7. Diseases that affect the cultivation of soybeans and their management: Bacterial, fungal, viral, other, seed treatment. 7. Insects that attack soybeans. 8. Harvest and storing. 10. Improvement of soybeans. 11. Processing and utilization: Industrial processing (extraction of oil, soy flours, soy protein concentrates {*concentrados proteícos de soya*}, soybean cake). Direct consumption: In the Far East, the soybean is consumed in the form of fermented and non-fermented foods. Fermented foods include shoyu, miso, mato [sic, natto], and tempeh, while non-fermented foods include soymilk (*la leche de soya*), tofu, yuba (*juba*), and kinako. 12. The cultivation of soya in Honduras (history).

In 1972, the Ministry of Natural Resources (*Ministerio de Recursos Naturales*) reported the initiation of commercial soybean production on a small scale in various departments of the country (Olancho, El Paraíso and Comayagua). Three varieties were used at that time: Biloxi, Hardee and Jupiter. However, before these reports were made, at the Panamerican Agricultural School (*la Escuela Agrícola Panamerican* (*EAP*)), some hectares had already been planted with the varieties Jupiter and Pelican. Discusses additional developments in 1974, 1982, 1986, 1987, and 1988. Address: 1. PhD; 2. PhD.

6542. Saks, Anne; Stone, Faith. 1993. The Shoshoni cookbook: vegetarian recipes from the Shoshoni Yoga Spa. Summertown, Tennessee: The Book Publishing Co. 208 p. Illust. Index. 24 x 21 cm.
• ***Summary:*** This is a vegan cookbook written by the cooks of the Shoshoni Yoga Retreat, founded in 1987 and situated in Rollinsville above Boulder, Colorado, on 110 acres of colorful high country in the Rockies. This book is dedicated to their teacher, Swami Shambhavananda Yogi. "The magic ingredient put into every dish is Shakti or Divine Energy. Food is treated as God, because it contains the essence of life, a conscious energy that nourishes the same energy in you. It is not a native American cookbook. A color photo on the back cover shows Anne Saks and Faith Stone. "In 1975, Faith stone and Swami Shambhavananda opened Rudi's Restaurant in Boulder to serve tasty, fresh, wholesome foods prepared with grace and love. Today Rudi's is a Boulder landmark.

The book begins with a glossary which includes: Miso. Nutritional yeast. Quinoa. Rice milk. Sesame oil. Silken tofu. Soymilk ("A non-dairy alternative to milk"). Tahini. Tamari. Tempeh. Tofu.

Soy-related recipes: Scrambled tofu (with "1 pound firm tofu," p. 28). Hot 'n sour miso soup (with "½ pound firm tofu, cubed" and "3-4 tablespoons red miso," p. 52). Tibetan barley soup (with "2 tablespoons red miso," p. 56). Tempeh almond salad (with "1 pound tempeh, thawed if frozen, cut in ½-inch cubes" and "¼ cup tamari" and "½ pound soft tofu" p. 74). Ginger-tamari sauce (p. 79). Cooling soy yogurt raita (with "2 cups soy yogurt," p. 90). Tamari-orange dressing (p. 104).

The chapter on "Healthful alternatives" (p. 105-110) offers meat alternatives, many of them based on tofu–"the most versatile food on the planet." Baked marinated tofu (with "1 pound firm tofu, sliced ¼ inch thick," p. 106). Tofu feta. Tofu ricotta. Tofu sour cream. Soy yogurt (soymilk fermented with plain yogurt).

Entrees (p. 110-145). Empress tofu. Mandarin tofu. Royal tofu roulade. Tempeh tandoori. Tofu lasagne. Tofu in a pocket.

Baklava (with "½ pound soy margarine," p. 190). Fresh strawberry tofu pie (p. 196). Address: Rollinsville, Colorado.

6543. *SoyaScan Notes.* 1993. Terms related to tofu: Library of Congress subject headings and call numbers (Overview). Compiled by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** The 16th edition (LCSH 16) of the *Library of Congress Subject Headings* (published in 1993) lists the following subject headings and call numbers related to tofu.

Tofu (May Subd Geog) [TP438.S36 (Manufacture)]. [TX401.2.S69 (Nutrition)]. [TX558.T57 (Composition)]. UF Bean curd [Former heading]; Curd, Bean; Curd, Soybean; Curds and whey, Soymilk; Soybean curd; Soymilk curds and whey; Whey, Soymilk curds and. BT Nonfermented soyfoods. RT Cookery (Tofu). NT Dried tofu.–Advertising USE Advertising–Tofu. Tofu, Dried USE Dried tofu. Tofu ice cream USE Soy ice cream. Tofu industry (May Subd Geog) [HD9330.T68-HD9330.T683]. BT Nonfermented soyfoods industry.

Abbreviations: [ ] = Call number. UF = Use for. BT = Broader terms. RT = Related terms. NT = Narrower terms. May Subd Geog = May subdivide geographically.

6544. Tran, Van Lai. 1993. Country report 15–Vietnam. In: N. Chomchalow & P. Narong, eds. 1993. Soybean in Asia: Proceedings of the Planning Workshop for the Establishment of the Asian Component of a Global Network on Tropical and Subtropical Soybeans. Bangkok, Thailand: FAO Regional Office for Asia and the Pacific. viii + 218 p. See p. 143-150. RAPA Publication (FAO), No. 1993/6.
• ***Summary:*** Contents: (1) Introduction. (2) Production: trend, major growing seasons and cropping systems, constraints, resolving the constraints, future research. (3) Processing, utilization and marketing: Consumption, processing, marketing, constraints, resolving the constraints. (4) Resources: Personnel, seeds. (5) On-going research projects. (6) Information required. (7) Conclusion.

Tables: (1) Area, yield, and production of soybean in Vietnam, 1970-90. (2) Soybean production constraints in Vietnam. (3) Several research findings on soybean breeding and farming patterns. (4) Identified constraints for soybean production in Vietnam. (5) National requirement for food and production of soybean. (6) Methods of soybean processing of Vietnam. (7) Constraints to soybean processing, utilization, and marketing. (8) Future research priority for soybean in Vietnam. (9) Number of scientists working on soybean research. (10) Training needs on a priority basis. (11) Soybean varieties of high yield potential.

Introduction: "Soybean has been cultivated in Vietnam for a long time. Le Quy Don, in his book "Van Dai Loai Ngu", written in 1773, mentioned about soybean cultivation. It is the second most important legume in Vietnam. All soybean products are used as human foods and animal feed because of its high food value (40-50% of protein and 20-25% of oil).

"The Government of Vietnam, which is conscious of the importance of soybean and its role of human food and animal feed, and the possibility to increase its production, has listed soybean as the number two most important crop after groundnut in her agricultural development policy."

Table 1: Area planted to soybeans in Vietnam grew from 17,078 ha in 1970 to 149,000 ha in 1990, projected to grow to 300,000 ha in the year 2000.

Production of soybeans in Vietnam increased from 5,277 tonnes (metric tons) in 1970 to 146,020 tonnes in 1990, projected to grow to 420,000 tonnes in the year 2000.

Yield of soybeans in Vietnam grew from 309 kg/ha in 1970 to 980 kg/ha in 1990, projected to grow to 1,400 kg ha in the year 2000.

"Most of the soybean produced in Vietnam is consumed as human food prepared by traditional methods, which include fermented products such as soysauce, soypaste (miso), soycurd (fermented tofu), and soycheese, and non-fermented products such as soymilk, soycurd (tofu) and soybean oil.

Note: This is the earliest English-language document seen (March 2009) that uses the term "soypaste" to refer to miso.

Concerning the Vietnamese names of these foods, Huong Quan Nguyen (Zomore Quan) writes, in reply to a question from Soyinfo Center. 2008. Aug. 17. Soy sauce = "xi dau" (the Vietnamese "d" written without the bar across the vertical stroke is pronounced "Z").

Soy paste = "tuong dau nanh" or "tuong Cu Da." "Tuong" is a generic term meaning "sauce." As you know, Cu Da is the name of the village famous for its soy paste. "Tuong Cu Da" literally means "sauce made in Cu Da Village." Soy paste is made in many villages in North Vietnam, not just in Cu Da. I have heard that Tuong Ban and Tuong Pho Thoi are just as good as Tuong Cu Da.

Soy curd = "dau hu" (which is unfermented. Once the soy curd is fermented, it is referred to as "chao").

Soy cheese = "chao" (this word has no diacritical mark).

Note: Zomore asked six Vietnamese people who are knowledgeable about soyfoods and all are aware of only one kind of fermented tofu in Vietnam; therefore they cannot imagine what fermented "soycheese" is. Address: Legumes Research and Development Centre, INSA, Dong Da, Hanoi, Vietnam.

6545. **Product Name:** [Hazelnut Cream Spread with Soymilk and Cocoa].
Foreign Name: La Crema.
Manufacturer's Name: Valsoia S.p.A.
Manufacturer's Address: Via Iacopo Barozzi 4, 40126

Bologna, Italy. Phone: +39 051-659-9900.
Date of Introduction: 1993. January.
Ingredients: Sugar, vegetable oil, hazelnuts (14%), powdered soymilk, low-fat cocoa, soy fiber (5%).
Wt/Vol., Packaging, Price: 200 gm or 400 gm glass jar.
How Stored: Shelf stable, 12 month shelf life. Refrigerate after opening.
New Product–Documentation: Talk with Dr. Piero Bontempi and Laura of Valsoia. 1995. June 6. This product was introduced in 1993. Color leaflet and product specifications showing labels. 1995. "Valsoia–Bonta' e Salute. La Crema 100% Vegetale. Arricchita in Fibra di Soia." No al colesterolo." The company uses the word "Soyamilk" as a registered trademark. The leaflet describes the product as "La delizia spalmabile a base di soyamilk nocciole e cacao.

6546. **Product Name:** [Snack–Crisp Cannoli with White Almond Filling].
Foreign Name: Snack–Cuore Bianco.
Manufacturer's Name: Valsoia S.p.A.
Manufacturer's Address: Via Iacopo Barozzi 4, 40126 Bologna, Italy. Phone: +39 051-659-9900.
Date of Introduction: 1993. January.
Wt/Vol., Packaging, Price: Two 15 gm snacks in a foil packet.
How Stored: Shelf stable, 9 month shelf life. Refrigerate after opening.
New Product–Documentation: Talk with Dr. Piero Bontempi and Laura of Valsoia. 1995. June 6. This product was introduced in 1993. Color leaflet and product specifications showing labels. 1995. "Valsoia–Bonta' e Salute. Lo Snack 100% Vegetale. Ricco in Fibra di Soia. No al colesterolo." The company uses the word "Soyamilk" as a registered trademark. The leaflet describes the product as "I croccanti cannoli ripiendi di morbida crema."

6547. **Product Name:** Soymilk.
Manufacturer's Name: EarthStar.
Manufacturer's Address: 5 Kay Street (P.O. Box 654), Mullumbimby 2484, Australia. Phone: (066) 72 5931.
Date of Introduction: 1993?
New Product–Documentation: Letter from Greg Nance-Kivell, consultant. 1993. Aug. 12. The company letterhead and business card now read: "EarthStar–Manufacturers of Quality Wholefoods, P.O. Box 654,..." They have ordered 2 copies of *Tofu & Soymilk Production, and note:* "We are a non-profit organisation with the aim of giving work opportunities to people with disabilities. We produce organic products based on soybeans, chickpeas, wheat, etc. We produce under three brands and products include tofu, soymilk, hommus [hummus], felafel, vegi sausages, and we will market soy yoghurt desserts in the future. We took over Chinese Farmhouse some 3 years ago."

6548. **Product Name:** Soymilk, and Taho (soymilk curd).
Manufacturer's Name: Kimsun International.
Manufacturer's Address: 35 Simoun St., Quezon City, Philippines. Phone: +63 2 47 2330.
Date of Introduction: 1993?
New Product–Documentation: Talk with Johnny Lee of Kimsun Intl. 1995. Aug. 11. He calls from the Philippines. He has been making soymilk and taho (soymilk curd) for several years. Philsoy is still made in small quantities, but is sold only around the university at Los Baños.

6550. Rojo, Oscar. 1994. Canadian firm supplies soybean process to Russia. *Toronto Star* (*Ontario, Canada*). Jan. 10. p. B3.
• ***Summary:*** Last month the first pilot SoyaCow system was installed in the Russian city of Krasnodar. Eventually, a technology transfer agreement will allow SoyaCow systems to be produced under license in a former Russian military plant. "Consulting work performed by Dr. F. Warren of the Canadian Executive Service Organization is credited with helping ProSoya break into the Russian market."

6551. Rusnell, Charles. 1994. Local firm milks Russian deal:

Company to ship 100 machines to produce soymilk. *Ottawa Citizen* (*Ontario, Canada*). Jan. 13. p. D6.
• ***Summary:*** ProSoya Inc., and Ottawa (Canada) firm has signed a major deal to provide a Russian official, Alexander Podobedov of ASSOY (the Russian Soybean Processing Association), with 100 of its SoyaCow soymilk machines. The six-year deal will earn the young company about $1 million during the first year alone. A photo Frank Daller of SoyaCow and Alexander Podobedov standing by a SoyaCow system.

6552. Howard, Robert B. 1994. Archer Daniels Midland Company. *Positive Patterns* (*Rogersville, Missouri*) No. 23. p. 1, 5-6. Jan. 29.
• ***Summary:*** This is an analysis of ADM stock and its potential based on earnings and charts. The author sees a very bright future for the company. He believes that "ADM will deliver superior returns to shareholders." Mr. Andreas is a big-vision person who has a long range plan. Key products are lysine, tryptophan, and threonine for animal feeds, soy milk and Harvest Burgers (ADM Predicts these two products are likely to be the most important for ADM over the next 10 years), biological insecticides (ADM is the world's largest producer), xanthan gums, and ethanol. ADM is an excellent cash generator. Every year they wisely acquire other companies, and they have an acquisition team that is second to none. They have made dozens of acquisitions during the past decade. Their balance sheet sparkles and is very straight forward and honest. ADM takes the long view. Address: Route 2, Box 248, Rogersville, Missouri 65742. Phone: 417-887-4486.

6553. DeBona, Don. 1994. Early work with natural foods, macrobiotics, and soyfoods in America (Interview). *SoyaScan Notes.* Jan. 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Don was born in Eagle Pass, Texas, in 1955. He had "hung around natural food stores since high school." While in high school, he worked as produce clerk at a natural foods store named The Powerhouse in his home town on Towson, Maryland. It was the town's first natural foods store. They bought foods from Erewhon.

In 1977 Don graduated from a small Catholic college named Mount St. Mary's College in Emmitsburg, Maryland. He got interested in macrobiotics through books (such as *Zen Macrobiotic Cooking* by Michel Abehsera) that same year several months after he graduated; he had been a vegetarian for about 6 months. His first job after college was in Virginia at Appalachian Outfitters, a store which outfitted people going on camping or river trips.

Don worked for Laurelbrook Foods in Maryland for about a year, starting in 1981. He left shortly after the company filed for Chapter 11 bankruptcy protection on 15 Feb. 1982, then he went to work on a Permaculture farm named Watkins Farm on the Maryland/Virginia border. Run by a man named Law Watkins, it was testing no-till agriculture, growing organic winter wheat, barley, soybeans and summer produce according to the principles set forth in Masanobu Fukuoka's classic, *The One Straw Revolution...* After working there for a year and a half, in December 1983 he went to Great Eastern Sun (GES, which had started business in March 1982). GES was just starting to get involved with soymilk (Ah Soy) when Don arrived; taking charge of the soymilk was his first project at GES. Barry Evans hired Don and was actively running GES at the time. Marty Roth had just left for Westbrae when Don arrived; Don took his place as general manager/sales manager. John Belleme was still at American Miso Co. John Fogg designed the package for Ah Soy; Don invented the phrase "Nondairy Soy Beverage" which is now widely used on other soy beverages. After working at GES for about a year plus several months, Don and his wife went down to the American Miso Company in Feb. 1985 to take over from John Belleme. Bob Ballard took Don's place at GES, but Don was the general manager of GES until Nov. 1993, when he hired John Swann. Don still owns part of GES (as well as part of American Miso Co., along with Barry Evans) and is paid by them, even though American Miso Co. is a separate corporation. Bean Mountain Soyfoods in North Carolina was shut down about 2 years ago; John Swann used to be in charge of Bean Mountain. John Fogg worked with John Troy for a while; they started a company named American Natural Foods. Then John Fogg did consulting for Arrowhead Mills, but 2-3 years ago he left the natural foods business and was writing books on motivation. Address: General Manager, American Miso Co., Route 3, Box 541, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

6554. Vilacís, Xavier. 1994. Re: A brief history of Liquats Vegetals, S.A., of Viladrau, Spain. Letter (fax) to William Shurtleff at Soyfoods Center, Jan. 27. 2 p. Typed, with signature on letterhead. [Eng]
• ***Summary:*** Mr. Josep Ma Erra had the idea to establish Liquats Vegetals, S.A., because all of the soy products consumed in Spain are made out of the country. The three owners of the factory are Mr. Josep Ma Erra, Mr. Josep Serra, and Mr. Josep Vilacís. The company's first two products, both types of soymilk, were introduced in December 1992; Alitey was sold to the general public and Monsoy was sold only to specialty shops that sell vegetarian- and health-food products.

In January 1993 the company introduced Alitey with cereals, and cocoa, and Monsoy with calcium, cereals, and cocoa. In November 1993 it launched Alitey with hazelnuts and Monsoy with hazelnuts. The company presently makes only soymilk in these different flavors. Address: Liquats Vegetals, S.A., Ctra. de Vic, Km. 1,230, 08553 Viladrau (Girona), Spain.

6555. *Bluebook Update* (*Bar Harbor, Maine*). 1994. Study explores soyfoods in space. 1(1):2. Jan/March.
• ***Summary:*** Food and AgroSystems, Inc. (FASI), a food process engineering firm located in Sunnyvale, California, spent 2 years researching crops that could be grown in outer space under zero-gravity conditions. The four best crops it found were soybeans, sweet potatoes, wheat, and white potatoes. In July 1993 the company presented a final draft of its findings to the National Aeronautics and Space Administration (NASA).

For the soy-related research, FASI contracted with Soyatech, Inc. of Bar Harbor, Maine, which recommended the use of extrusion and screw pressing technologies with modifications to process soy oil, soy flour, and soymilk.

6556. Haren, Chuck. 1994. The programs: Looking ahead to 1994. Soybean utilization technical assistance. *Plenty Bulletin* (*Davis, California*) 9(4):1-2. Winter.
• ***Summary:*** The 1994 budget for these programs is $45,000. "Over the past two years, with funding from the Public Welfare and Threshold Foundations and individual Plenty donors, we have worked extensively with 30 groups in Liberia, Guatemala, Nicaragua, Belize, Dominica, St. Vincent, Jamaica, and on two Native American reservations... We currently have requests for assistance with soy programs from other grassroots organizations in India, Guyana, Uganda, Tanzania, Bolivia, El Salvador, Philippines, and Sri Lanka, and we would like to be able to assist them." Photos show: (1) Two women cooking soymilk over an outdoor fire in Belize. Children with soymilk and tortillas.

6557. **Product Name:** Soy-Um (Soymilk) [Plain, Vanilla].
Manufacturer's Name: J&G Inc. (Distributor). Made in Oregon by Pacific Foods.
Manufacturer's Address: 60 East Elm, Chicago, IL 60611. Phone: 312-787-5157.
Date of Introduction: 1994. January.
Ingredients: Plain: Filtered water, whole organic soybeans*, brown rice syrup (brown rice, water), expeller pressed canola oil, sea salt, carrageenan. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 32 fluid oz. (1 quart) 946 ml Tetra Brik Aseptic carton. Retails for $1.39 (2/94).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per cup (8 fl. oz): Calories 100, calories from fat 25, total fat 3 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 115 mg (5%), total carbohydrate 14 gm (5%; dietary fiber 0 gm), protein 4 gm, calcium 4%, iron 10%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Concord, California. 1994. Feb. 2. This is a delicious product at a great price in a beautiful

package! 3.75 by 6.5 2.5 inches. Pastel colors. At the center of the front panel, a photo shows soymilk being poured onto flaked cereal. On the left and right borders are pastel vines with flowers. Above is the sun rising behind fields and a farmhouse. Below are purple flowers. Note: The manufacturer of this soymilk is not given on the package. The price is about $0.20/quart less than other soymilks at Trader Joe's.

Talk with Ron Roller of American Soy Products. 1994. Jan. 3. Soy-Um is made by Pacific Foods in Oregon. It is sold to a man named Kim Jenkins in Chicago who used to be with Hormel Foods and who has a lot of connections in the grocery industry. J&G stands for Jenkins and Gournoe. They are "marketeers." There was some talk that Trader Joe's was going to introduce a soymilk under their own label, but somehow they hooked up with J&G. Ron believes that Jenkins wants to sell this as low-cost, grocery brand style soymilk for food chains and the mass market. They are going after the low end of the market, and they have gained some shelf space because of their low price. The product is not for the natural foods market. Their products (in terms of flavor and ingredients) are styled after the Westbrae soymilk products.

Soyfoods Center Taste Test. 1994. Feb. 12. We find the flavor, consistency, and appearance of this product to be excellent. These qualities, combined with its very low price,

make this one of the best, if not the best, soymilk buys in America today.

Talk with Michael Gournoe's secretary. 1994. March 4. Michael is located in Chicago, Illinois, and Kim Jenkins (who has a background with Hormel) is located in Minneapolis, Minnesota.

Talk with Kim Jenkins of J&G. 1994. March 11. Which see. As of June 1995 1 quart of Soy-Um retails for $1.39 at Trader Joe's in California.

6558. **Product Name:** Pacific Lite: Non Dairy Beverage–Only 1% Fat (Soymilk) [Vanilla].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1994. January.
Ingredients: Vanilla: Filtered water, whole organic soybeans*, brown rice syrup (brown rice, water), natural vanilla flavor with other natural flavors, tricalcium phosphate, sea salt, carrageenan, vitamin A palmitate, riboflavin (B-2), vitamin D-2. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retails for $1.79 (8/94, Berkeley, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 8 fl. oz. (240 ml): Calories 110, calories from fat 20, total fat 2 gm (3% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 115 mg (5%), total carbohydrates 18 gm (dietary fiber 0 gm, sugars 9 gm), protein 4 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, vitamin C 0%, iron 15%, riboflavin 30%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Berkeley Natural Grocery Co. 1994. Feb. 3. Pacific Foods has three new types of soymilk. They started carrying the products about 1 month ago.

Product with Label purchased at Berkeley Natural Grocery Co. 1994. Aug. 20. "A refreshing non-dairy alternative. No cholesterol. No lactose. Calcium and vitamin A & D added." \

6559. **Product Name:** Pacific Select: Non Dairy Beverage–Lowfat (Soymilk) [Vanilla, Plain].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1994. January.
Ingredients: Vanilla: Filtered water, whole organic soybeans*, brown rice syrup (brown rice, water), natural vanilla flavor with other natural flavors, expeller pressed canola oil, sea salt, carrageenan. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retails for $1.39 (8/94, Berkeley, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 8 fl. oz. (240 ml): Calories 120, calories from fat 25, total fat 3 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 115 mg (5%), total carbohydrates 17 gm (dietary fiber 0 gm, sugars 9 gm), protein 4 gm. Vitamin A 0%, calcium 4%, vitamin C 0%, iron 10%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Berkeley Natural Grocery Co. 1994. Feb. 3. Pacific Foods has three new types of soymilk. They started carrying the products about 1 month ago.

Product with Label purchased at Berkeley Natural Grocery Co. 1994. Aug. 20. Purple, green, pink, and yellow on white. On the front panel are wavy pastel lines, as from four crayons, in purple, pink, yellow, and green. "A refreshing non-dairy alternative. No cholesterol. No lactose."

Product with Label purchased at Trader Joe's in Concord, California. 1996. Dec. A quart of lowfat plain now retails for $0.99, down from $1.39 two years ago. This may be a different product since 1 cup contains only 100 calories instead of the 120 calories in the 1994 product.

Product with Label purchased at Trader Joe's in Lafayette, California. 2001. Nov. 4. New package design. "Pacific Soy Select Vanilla: Organic. Non GMO. All natural non-dairy drink." Purple, yellow, light green, and orange. A photo shows soymilk being poured from a blue pitcher in the upper left into a glass in the lower right. Contains 100 calories and 5 gm of protein per cup. 1 quart retails for $1.69. The word "lowfat" no longer appears on the front panel, but "low fat" does appear in small letters at the bottom of the back panel.

6560. **Product Name:** Pacific Ultra: Non Dairy Beverage–Calcium and Vitamin A&D Added, Plus L. acidophilus Cultured Product Added (Soymilk) [Vanilla, or Plain].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1994. January.
Ingredients: Plain: Filtered water, whole organic soybeans*, brown rice syrup (brown rice, water), expeller pressed canola oil, tricalcium phosphate, *Lactobacillus acidophilus* and *L. bifidus* cultured product added, sea salt, carrageenan, vitamin A palmitate, riboflavin (B-2), vitamin D-2. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retails for $1.79 (8/94, Berkeley, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 8 fl. oz. (240 ml): Calories 160, calories from fat 45, total fat 5 gm (7% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 120 mg (5%), total carbohydrates

22 gm (dietary fiber 0 gm, sugars 11 gm), protein 6 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, vitamin C 0%, iron 15%, riboflavin 30%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Talk with Berkeley Natural Grocery Co. 1994. Feb. 3. Pacific Foods has three new types of soymilk. They started carrying the products about 1 month ago.

Product with Label purchased at Berkeley Natural Grocery Co. 1994. Aug. 20. "A refreshing non-dairy alternative. No cholesterol. No lactose. Only 2% fat." On front and left side of package is a splash of pastel colors: Pink, purple, green, and yellow.

Soyfoods Center product evaluation. 1994. Aug. 4. Taste: Excellent, slightly sweet, no beany flavor. Consistency: The top 2/3 of the carton is very nice, somewhat creamy, but the bottom is somewhat lumpy, even when shaken well before serving. Package design: Mediocre.

6561. Plenty International. 1994. A guide to growing and using soybeans for food. Davis, California. 37 p. Jan. Illust. 22 cm.

• ***Summary:*** Contents: Foreword. Introduction. Growing soybeans: Planning, land preparation, planting, plant growth, field sanitation, insect and disease control, harvest, threshing, storage, vacuum packing for seed storage, calculating growing costs. Home preparation of soybeans: Cooking soybeans, soy flour, soy coffee and nuts, ingredients for making soy milk, tofu and tokara, kitchen tools, soy milk, tokara (tofu with the okara still in it), tofu, tempeh, storing soybean foods, costs of processing soybeans for market, expected yields of primary soybean foods, recipes. Nutritional information. Resources and contacts. Acknowledgments.

Note. This is the earliest English-language document seen (June 2013) that contains term "tokara," which refers to tofu with the okara still in it.

Businesses Plenty has worked with that make fresh soyfoods and are listed on pages 30-32 include: Alimentos San Bartolo (San Bartolo, Guatemala). Survival Foods and Nature Island Foods (Roseau, Dominica, West Indies). Natural Cafe and Health Plaza (Castries, St. Lucia, West Indies). Kay Cuisine (Kingstown, St. Vincent, West Indies). Country Farmhouse Soy Products (Kingston, Jamaica). Deagbo Industries (Ibadan, Nigeria). Address: P.O. Box 2306, Davis, California 95617. Phone: (916) 753-0731.

6562. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Soymilk and soymilk products–Bibliography and sourcebook, 1500 to 1993: Detailed information on 3,120 published documents (extensively annotated bibliography), 968 commercial soymilk products, 506 original interviews (many full text) and overviews, 462 unpublished archival documents. Lafayette, California: Soyfoods Center. 1,105 p. Subject/geographical index. Author/company index. Printed 3 Nov. 1993. Published Jan. 1994. 28 cm. [5528 ref]

• ***Summary:*** This is the most comprehensive book ever published about soymilk and soymilk products. It has been compiled, one record at a time over a period of 18 years, in an attempt to document the history of this subject. Its scope includes all known information about soymilk and soymilk products (including soy-based infant formulas, fermented soymilk, and soy-based calf milk replacers) worldwide, from 1500 to the present.

This book is also the single most current and useful source of information on soymilk, since 83.5% of all records contain a summary/abstract averaging 170 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 40 different document types, both published and unpublished; every known publication on the subject in every language–including 296 in French, 270 in Japanese, 190 in German, 105 in Spanish, etc.; 466 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of soymilk and related products from their earliest beginnings to the present.

The bibliographic records in this book include 3,120 published documents and 462 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 968 commercial soymilk products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

6563. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Soyfoods industry and market–Bibliography and sourcebook, 1985 to 1993. Lafayette, California: Soyfoods Center. 361 p. Subject/geographical index. Author/company index.

Language index. Printed 11 Jan. 1994. Published Jan. 1995. 28 cm. [985 ref]
• ***Summary:*** This is the second of the two most comprehensive books ever published on the soyfoods industry and market worldwide.

In May 1982 the first study of the burgeoning soyfoods industry in the Western world was compiled by Shurtleff and Aoyagi, and published by Soyfoods Center. In April 1985 the fifth edition of that book, titled *Soyfoods Industry and Market: Directory and Databook* (220 pages), was published. It contained statistics through 1984, the market size and growth rate for each soyfood type, rankings of leading soyfoods manufacturers of each soyfood type and the amount each produced, analyses, trends, and projections. This book is published to update the 1985 market study.

In the decade since 1984 the soyfoods market has continued to grow at a very healthy rate, with some soyfood types (such as soymilk) growing at a truly astonishing sustained rate–in both the USA and western Europe–as the statistics in this book show so vividly. In 1975 only 75 new commercial soyfood products were introduced in the USA, yet that number skyrocketed to 217 in 1979, reaching an amazing 422 new products in 1987.

During the decade from 1984 to 1994, Soyfoods Center has invested most of its time and resources in the production of SoyaScan, the world's largest computerized database on soyfoods, which contains more than 44,500 records as of Jan. 1994. This database also includes a wealth of carefully researched statistics and analyses of the soyfoods market; those from the start of 1985 to the end of 1993 are contained in this book. Its scope includes all known information on this subject, worldwide. Its focus, however, is statistics, analyses, and trends concerning the soyfoods industry and market in the United States and Europe.

In May 1990 Soyfoods Center conducted an in-depth study of the tofu market in Europe (137 pages), and in July 1990 of the soymilk market in Europe (261 pages). All original interviews and published records from both of these market studies, plus a summary of each study, are included in the present book.

The SoyaScan database is composed of individual records. One record might be an original interview with the head of the largest soymilk company in Europe, on the size and growth of the soymilk market in Europe, and new trends in that market, conducted by William Shurtleff of Soyfoods Center. Another might be a published article or an unpublished document concerning the growth of the market for soy yogurts or soy sauce in America.

This book documents the growth of each product category in every country worldwide. The book contains three extensive and easy-to-use indexes: A subject/geographical index, an author/company index, and a language index. These allow you to find the exact information you need on the soyfoods industry and market quickly and easily. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

6564. Soyfoods Association of America. 1994. Income and expenses for 1992 and 1993, and proposed for 1994. Balance sheet. San Francisco, California: SAA. 3 p. Unpublished manuscript. 28 cm.
• ***Summary:*** In 1992 income was $27,102 (incl. $21,615 from membership dues), and expenses were $32,262 (incl. $11,739 management fee). Balance in bank account on 31 Dec. 1992: minus $648.

In 1993 income was $50,060 (incl. $20,192 from the American Soybean Association (ASA) Project, $18,539 from membership dues, and $8,500 from Tetra Pak for soymilk standards), and expenses were $39,694 (incl. $20,191 ASA Project and $9,022 management fee). Balance in bank account on 31 Dec. 1993: $9,717.

In 1994 proposed income was $41,150 (incl. $16,000 from membership dues and $19,000 from Tetra Pak for soymilk standards), and expenses were $41,800 (incl. $10,000 management fee and $11,000 for soymilk standards–mostly for attorneys fees to Stephen McNamara). Projected balance in bank account: $9,007. Address: One Sutter Street, Suite 300, San Francisco, California 94104. Phone: 415-433-9494.

6565. United Soybean Board; Nebraska Soybean Program. 1994. Designed for life: A closer look at the versatile soybean's contribution to human health (Brochure). Lincoln, Nebraska. 12 panels. 23 x 10 cm each. [1 ref]
• ***Summary:*** Contents: Soybean fiber. Soybean protein (in soy flour, isolates, concentrates). Soybeans: The newest and oldest of designer foods. Finding and using soybeans: Miso, tofu, natto, tempeh, full fat flour, soymilk, soynuts, soy sauce. Soybean oil: 85% unsaturated fat, no cholesterol, high in polyunsaturates, hydrogenation and *trans* fatty acids. Once upon a time ("circa 1500 BC, Yu Xi-ong and Gong Gang-shi, who were either bandits or warlords depending on your perspective..." discovered the soybean. Note: This story has no basis in historical fact). The soybean: Health insurance in a pod.

Photos show: Two hands holding up a large Chinese bowl of miso soup containing squares of tofu. A table set with dishes of various East Asian soyfoods. Charts: Bar charts showing percentage of saturated, monounsaturated, and polyunsaturated fatty acids in soybean oil and other oils and fats. Nutritional analysis of 1 cup of cooked soybeans.

Note: This brochure was developed for the United Soybean Board (USB) by the Evans Group in Seattle, Washington. It was mailed mostly to food manufacturers. Address: Lincoln, Nebraska.

6566. United Soybean Board. 1994. Soybeans: Unlocking the secret to good nutrition. Healthcare guide. St. Louis,

Missouri. 8 p. 28 cm. [5 ref]
• ***Summary:*** Contents: A critical food source from the dawn of history. The only vegetable that contains complete protein. World soybean production (1992/93, bar chart). The most versatile food on earth. Health benefits of soy foods (discusses only soybean oil!). Nutritional analysis of soybeans, kidney beans, and peanuts. Bar chart showing the fatty acid composition of soybean oil and other oils and fats (soybean oil is "the balanced oil"). Hydrogenation and health. Cis and *trans* fatty acids. Soybean oil's place in the diet. Whole soybean foods: Tofu, tempeh, miso, natto, soy sauce, full fat soy flour, soy "nuts" and soymilk. Soybean fiber (the outer hull). Soy protein products: Defatted soy flours, soy isolates, soy concentrates. Isoflavones (incl. Genistein). Soybeans, the "All American" legume. For more information call 1-800-Talk-Soy.

Note: This brochure was developed for USB by the Evans Group in Seattle, Washington. It was mailed mostly to dietitians, nutritionists, and members of the food industry. It focused more on soy oil than on soy protein. Address: St. Louis, Missouri.

6567. McReynolds, Thomas. 1994. Morinaga's new interest in soymilk (Interview). *SoyaScan Notes.* Feb. 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Morinaga has been looking seriously at manufacturing soymilk in America for the last 6 months, and very seriously for the last 4 months. The major reason is the value of the Japanese yen, which has fallen steadily against the dollar over the years. From 1964 to 1971 the yen was steady at about 360 yen per dollar. In 1972 it fell below 300, in 1978 it fell below 200, and recently it dipped briefly below 100 yen per dollar; it is now at about 108-109. This makes it expensive to import products from Japan. A second reason is that Morinaga would like to build its own plant in America. But they are looking for a partner in the venture to help minimize the risk. There are two pieces to the formula. The partner must join Morinaga in manufacturing costs, and land and factory development. The partner must also be a potential buyer of the soymilk with an established market, provided the product is made to their quality, volume, and price specifications. Address: Marketing Consultant, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 213-728-4325.

6568. Roller, Ron. 1994. New developments with soymilk in America (Interview). *SoyaScan Notes.* Feb. 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Pacific Foods in Oregon has reintroduced and updated its own line under the brand Pacific Foods in three types: Ultra, Lite, and Select. One is fortified, one is light, and one is plain. They are selling these directly to distributors. Soy-Um is sold to a man named Jenkins in Chicago, Illinois, who used to be with Hormel Foods and who has a lot of connections in the grocery industry. J&G stands for Jenkins and Gournoe. They are "marketeers." There was some talk that Trader Joe's was going to introduce a soymilk under their own label, but somehow they hooked up with J&G. Ron believes that Jenkins wants to sell this as low-cost, grocery brand style soymilk for food chains and the mass market. They are going after the low end of the market, and they have gained some shelf space because of their low price. The product is not for the natural foods market. Their products (in terms of flavor and ingredients) are styled after the Westbrae soymilk products.

But the biggest story is the impending entry of Morinaga into the U.S. soymilk market. Remember that Morinaga is basically a milk company and a very conservative one. It looks like they plant to build a plant to make tofu and soymilk in America and they are looking for a partner in the venture–in part because they don't know the market that well, in part to reduce their risks, and in part to get extra volume to cover their overhead. But they want the controlling interest in the venture. They are talking with all the major U.S. soymilk manufacturers–especially Westbrae (which is looking for a partner, in part because their soymilk has been made in so many different places) and Pacific Foods. 90% of their tofu sales are in the mass market, and very little is sold to the natural foods industry. So they will probably also try to sell their soymilk to the mass market.

Bill Bolduc in Ohio makes plain, unpasteurized/unsterilized soymilk, then sends it up to Parmalat Foods (5252 Clay Ave., Wyoming, Michigan 49548. Phone: 616-538-3822). Parmalat is a huge and very significant Italian food company that is the biggest user of Tetra Pak Aseptic packaging in the world. They specialize in tomato products, milk, and pasta, and they are an expert at Aseptic packing. That have advertised their dairy milk in an aseptic carton via full-page ads in the *Wall Street Journal.* [Their corporate headquarters is: Parmalat USA, 500 Rt. 17 South, Hasbrouck Heights, New Jersey 07604.] In 1993 Parmalat bought White Knight Packing, which is a Tetra Pak co-packing operation. This was their entree to the American market–except that they previously had some distribution for their tomato products in America. Westbrae was a co-pack customer of White Knight. Parmalat then bought two dairies–one in Pennsylvania and one in Louisiana. They move very quickly and are very aggressive.

Note: Parmalat S.p.a. in Italy (43044 Collechio, Parma, Italy) was interested in soymilk as early as May 1987. The two contact people at that time were Mr. Barilla and Dr. Alberto Rota. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

and 16. Conducted by William Shurtleff of Soyfoods Center. Followed by a an 8-page fax on 7 Feb. 1994.
• ***Summary:*** From 1979 to 1982 Ray, a native of Wales, was general manager of Pendeltons Ice Cream. In March 1982, at age 41, he started a company named Classic Ices, which was primarily a dairy ice cream company. Located in Rhydymwyn (pronounced REED-uh-MOO-un), Clwyd (pronounced KLU-ud) County, Wales, the company began trading (making and selling products) in July 1982. In early 1984 Ray sold all but 10% of his shares in Classic Ices to the Hillsdown Holdings Group but continued to work at the company. Then in May 1984 Irene Barclay joined Classic Ices as technical manager. In April 1985 Ray saw an article in *The Grocer* (April 6, p. 23) stating that Michael Cole of Soya Health Foods Ltd. had started making soya milk and was planning to make related non-dairy products–such as soya ice cream. Ray called Michael Cole and asked if Classic Ices could develop and make a soy ice cream for him. Michael was interested, he came to visit Ray at Classic Ices, and that is how Ray's interest in soya ice creams began. Irene Barclay of Classic Ices worked closely with Michael Cole to developed the product. In about July 1985 Classic Ices started making Sunrise Ice Dream and selling it to Cole, who marketed it very successfully. Before this, Classic Ices had never made any non-dairy products. But Classic Ices was not particularly interested in non-dairy products, so Ray and Irene Barclay decided to leave Classic Ices in 1985 and start their own small company in Clwyd, Wales, about 10 miles from Classic Ices, at the same location they now occupy. The two business partners believed they saw a new market with great potential. Moreover, Irene was lactose intolerant so she could not consume dairy products. So Ray sold his remaining shares (10%) in Classic Ices to Hillsdown Holdings, then he and Irene established their company to develop and manufacture non-dairy dessert specialties–starting with soya ice cream.

They named the company Genice Foods Ltd. (short for "Genuine Ice Cream" and pronounced JEN-ais), but today many people pronounce the name jen-EES, which has come to be preferred by the company. In late 1985 Genice Foods moved into a brand new, small custom-designed, purpose-built factory unit in the Llay Industrial Estate. The unit was 5,000 square feet in size, but initially Genice used only half of that space–for manufacturing, cold storage/warehousing, and offices. In early April 1986 Genice was officially established and registered as a company and that same month, about two weeks later, they began trading. Today Ray's title is Director General Manager and Irene is the Technical Director. Genice's first product, launched in April 1986, was Genice Ice Delight, a non-dairy frozen dessert in 5 flavors (vanilla, strawberry, raspberry ripple, hazelnut, and pistachio & almond). Initially the main soy ingredient was powdered soymilk obtained from Michael Cole of Soya Health Foods, which probably imported it. But soon Genice switched to using soy protein isolates because they were less expensive and seemed to give a better product. At that time Genice bought the isolates from Macauley-Edwards (in Peterborough, eastern England), which later somehow became Purina Protein; today Genice buys most of its isolates from ADM (SP6, imported from the USA), but a little from Protein Technologies International for "old time's sake." Genice developed this product largely because they needed an actual product to show potential customers, but they never put much effort into marketing the product because they had already decided that Genice wanted to be a product development and manufacturing company and leave sales and marketing to other companies. Later in 1986 the manufacture of Sunrise Ice Dream was transferred to Genice from Classic Ices. It was now sold in four flavors–vanilla, wildberry, hazelnut, and carob. Genice worked out an agreement with Cole that they would not compete by entering markets where Cole's product was established.

In 1986 Dayville Ltd. asked Genice if they could make a non-dairy frozen dessert intended to appeal more to the general grocery sector of the market than health food stores where Ice Delight and Ice Dream were sold. The product N'ice Day, was launched for Dayville in July 1986, sold in 3/4 litre packs in four flavors–vanilla, hazelnut, strawberry, and pistachio & almond. The soy ingredient was soy protein isolates. Continued. Address: Founder, Genice Foods Ltd., Pinfold Lane, Llay Industrial Estate, Llay near Wrexham, Clwyd, LL12 OPX, Wales/Cymru, UK. Phone: 0978-853-787.

6570. Pierce, Ray. 1994. A brief history of Genice Foods Ltd. and their work with soy ice creams, yogurts, creams, and margarine. Part II (Interview). *SoyaScan Notes*. Feb. 4, 8, 10 and 16. Conducted by William Shurtleff of Soyfoods Center. Followed by a an 8-page fax on 7 Feb. 1994.
• ***Summary:*** Continued: At this time, Genice Foods was the only company in Europe manufacturing non-dairy frozen desserts, but the market in Europe was not expanding as rapidly as the market in the USA. Possibly the main reason for this was a greater perceived differentiation in the U.S. between dairy ice creams, containing up to 15% butter, and healthier non-dairy, lower-fat frozen desserts such as Tofutti and McQueens. By contrast, ice creams in the UK generally contained palm oil instead of butter and at a much lower level–around 6-8%. Other reasons for the rapid growth of the U.S. market could be: Greater awareness of lactose intolerance, a larger number of vegetarians, larger ethnic communities, and cost consciousness. With Genice being the only manufacturer of non-dairy frozen desserts, it was difficult to satisfy existing and potential customers without some duplication of products in the market place. However Genice was also attempting to help these companies avoid competing directly with one another by suggesting different package sizes, flavors, package shapes, etc. Hence in 1987

Maranellis Ice Supreme was launched for Unisoy (before Unisoy was acquired by Haldane), in a ½-liter format, sweetened with fruit juice, in 3 flavors–raspberry ripple, vanilla, and chocolate. The product was made from fresh soya milk, delivered to Genice by Unisoy. Another non-dairy frozen dessert launched in 1987 was Sunrise Carob Ice, a frozen soya vanilla-flavored bar covered with a carob coating, made for Soya Health Foods Ltd., Michael Cole's former company; the product sold extremely well.

In March 1989, the Haldane Foods Group Ltd., part of the Archer Daniels Midland Co. (ADM), acquired a 70% interest in Genice. Genice Foods approached the Haldane Group since Genice needed both cash and access to bigger markets in order to develop properly. Peter Fitch, head of the Haldane Group, has told Ray many times he didn't really want to acquire Genice; Ray had to court him for 9 months before he agreed to acquire Genice. Haldane was an ideal partner, being one of the biggest health food manufacturers in Europe (they made mostly vegetarian main courses), but having no dessert products. Genice made mostly non-dairy frozen and chilled desserts. Also the cash backing from ADM was equally important in creating and developing new markets. ADM and the Haldane Group gave Genice the freedom to continue to develop and make products for companies (such as Soya Health Foods and Dayville Ltd.) outside the Haldane Group.

In April 1989 Sweet Sensation, another non-dairy frozen dessert, was launched for Granose Foods in a 3/4 liter pack composed of a rectangular plastic tub in a cardboard sleeve, in 4 flavors–tutti fruitti, black cherry, raspberry ripple, and vanilla. Genice made this product for Granose before and after Granose was acquired by the Haldane Group. Another non-dairy frozen dessert products launched in 1989 was Vegedine Mousse a frozen mousse dessert in two flavors–carob & walnut, and strawberry. Vegedine was a very small company in Bournemouth, sales to health food shops were small, and the company soon went out of business.

Following the acquisition by Haldane, the pace of development speeded up at Genice. Previously, products had been produced from either powdered soya milk and soy protein isolates, or soya milk imported from Unisoy. In late 1989 a small soya milk plant was installed at Genice with the ability to produce limited quantities of tofu also. With the new availability of tofu, two new non-dairy frozen products were launched: (1) So Good Tofu Dessert for the Haldane Group, a 3/4 litre pack in a round cardboard tub flavored as a strawberry/vanilla split, or as wild blackberry; and (2) So Good Strawberry Bombes for the Haldane Group, a 100 ml vanilla flavored base with a strawberry puree center, coated with carob couverture, and sold in retail packs of four. Because of Haldane's extensive contacts throughout Europe, Genice products are now sold in 7 European countries. The company also made a brief foray into the kosher market in America, when they sold some So Good Strawberry Bombes to a distributor named Quality Foods in Long Island, New York, but Genice had a bad experience and ended up with an unpaid debt on their first shipment. About 4 years ago Ray exhibited some of his soya products for 2 years in a row at one of the New York Kosher Fests. There he met David Mintz of Tofutti fame. Ray would like to try to enter the New York market again some day; its a big market.

Genice uses fresh soymilk (produced by Unisoy) to make the majority of its total volume of soy ice cream, and isolated soy protein to make rest. Powdered soymilk is not used because it is very expensive and too hard to obtain. Ray now feels that fresh soymilk gives a better soy ice cream. Genice is now producing a range of development samples for Dayville Ltd., which is going to re-launch their soy ice creams this year and they have picked the one made with soymilk as being the best. From the production viewpoint, isolates are much easier to use, but product taste and overall quality is the key point. Moreover, organic soymilk can be used to make an organic soy ice cream, but there are no organic soy isolates.

Genice is still the only manufacturer of soya frozen desserts in the UK. However two strong, competing products are now being imported: Winner's Swedish Glace from Sweden and Tofutti from the USA. Three years ago Genice made more than 90% of the soy ice creams sold in the UK, but today that figure has dropped to an estimated 50%, with Winner in second place, followed by Tofutti. Ray is concerned that Winner could overtake Genice in soy ice creams this year. During 1994 Genice plans to rationalize and reformulate its soy ice cream product line in order to concentrate its marketing efforts more on its best products, to eliminate or merge its own brands of the same type that compete with one another, and to put more effort into sales of soy ice creams. Continued. Address: Founder, Genice Foods Ltd., Pinfold Lane, Llay Industrial Estate, Llay near Wrexham, Clwyd, LL12 OPX, Wales/Cymru, UK. Phone: 0978-853-787.

6571. Pierce, Ray. 1994. A brief history of Genice Foods Ltd. and their work with soy ice creams, yogurts, creams, and margarine. Part IV (Interview). *SoyaScan Notes.* Feb. 4, 8, 10, and 16. Conducted by William Shurtleff of Soyfoods Center. Followed by a an 8-page fax on 7 Feb. 1994.
• ***Summary:*** Ray feels that these soy yogurts are excellent products. Consumers must have the same opinion since the market is growing very rapidly. "In retail terms, this soya yoghurt market is now worth around £2 million sterling ($3 million), whereas it was worth only about £30,000 sterling in 1985." The market was almost totally created in the last four years–since Genice started making soy yogurt using its unique process that gives a shelf-stable product.

Today Genice now sells about ten times as much soy yogurt as soy ice cream. Moreover, sales of soy ice cream are fairly static, while sales of soy yogurt are leaping ahead.

Genice makes at least 90% of the soy yogurts sold in the UK. In short, Genice started as a non-dairy ice cream company, which has in fact turned into a non-dairy yogurt company! "The soy yogurts really sold themselves. It was amazing how they took off so well." There are about 1,500 health food shops in the UK, and no more than half of those have a freezer, so they cannot sell ice cream. Even those with a freezer, usually have very limited frozen storage capacity and the competition for that small space (as from dairy ice creams) is intense. Almost all of those with no freezer also have no refrigerated storage; they sell mainly "pills and potions" etc." So a refrigerated or frozen product can be sold in less than half of all health food stores. This gives shelf-stable products, such as Genice's soy yogurts, a big advantage. Genice is moving its soy yogurts into Italy and Portugal in a bigger way, and is launching two new yogurts for Spain this year (competing soy yogurts are sold on a small scale in Spain). Other concepts and flavours will be introduced into the yoghurt area in 1994, together with the quest for other export markets continuing both in Europe and the rest of the world.

Genice uses fresh soymilk (produced by Unisoy) to make about 50% of its total volume of soy yogurt, and isolated soy proteins to make the other 50%. Powdered soymilk is not used because it is very expensive and too hard to obtain. Isolates are more convenient to use but Ray now feels that fresh soymilk gives a slightly better product–though this is very subjective and different people have different opinions. Isolates also give an excellent soy yogurt.

One of the markets that Genice has not yet entered–and would like to–is Germany, where there are large sales of soymilk and twice as many health shops (Reform Houses) as in the UK. Since most of the Reform Houses do not have chilled or frozen cabinets, Genice's shelf-stable products would fit perfectly; they could be sold on the shelf next to the Muesli. In the smaller health food shops in the UK, Genice's shelf-stable soy products are usually sold unchilled, but in the bigger shops, like Holland & Barrett, they sold chilled, since they taste better after being chilled.

Other dairylike non-dairy products that Genice has made are as follows: In 1990 chilled So Good Soycreem was launched as a non-dairy alternative to dairy double cream, but low in cholesterol, high in polyunsaturates, and low in saturates. It was made for Haldane in a little beige plastic pot with a green foil lid, packed at the Genice plant. It contains a trace of cholesterol because law requires that it contain 36% oil, including some palm oil. In 1991 a shelf-stable UHT version (completely sterilized, with a 9-month shelf life), now named Granose Soya Creem, was launched in a 225 ml Combibloc pack, made for Genice by a large dairy in Ireland which had Combibloc packaging equipment. The chilled So Good Soycreem was discontinued. In 1992 Genice installed a vegetarian margarine plant, which also makes Granose Soya Margarine that is sold chilled. This margarine was developed in Germany, so they took over the business and reformulated the product.

Genice is doing very well. The plant has expanded to 15,000 square feet from its original 2,500–a 6-fold increase. Their turnover (gross sales) has doubled virtually every year since they have been in business. Being owned by ADM has been of great benefit to Genice because ADM has been extremely generous in providing the money that Genice needs for its ongoing expansion and implementation of new ideas. Genice would eventually like to enter the U.S. market (starting in New York) with its shelf-stable non-dairy yogurt products, since there are no such products in America.

When yogurt is pasteurized, the beneficial effects of the yogurt bacteria are nullified. But Ray was just told by Dr. Glen Gibson that oligofructose, a sugar, has the effect of promoting the growth of the small quantities of Bifidobacteria in the human digestive system. Thus a pasteurized soy yogurt could be made into an even healthier product if it were sweetened by oligofructose.

Ray is a native of Wales and his wife is a teacher who often teaches in Welsh. Both are happy to see the revival of the Welsh language. Ray is not a vegetarian, but he has a good feeling and high regard for vegetarianism, he likes vegetarian food, and he has some vegetarian ideals but they go beyond the food to more ethical issues. He finds that many of the people in other companies that he deals with are more ethical people. He would estimate that 85-90% of the consumers who buy products made by Genice are vegetarians or vegans. Address: Founder, Genice Foods Ltd., Pinfold Lane, Llay Industrial Estate, Llay near Wrexham, Clwyd, LL12 OPX, Wales/Cymru, UK. Phone: 0978-853-787.

6572. Schneider, Keith. 1994. F.D.A. warns the dairy industry not to label milk hormone-free. *New York Times.* Feb. 8. p. 1, A10 (Natl).
• ***Summary:*** All cow's milk contains trace amounts of natural bovine growth hormone. As of last Friday it became legal to inject a new genetically engineered growth hormone [made by Monsanto], named bovine somatotrophin, into milk cows to make them produce about 10% more milk. "The drug is the first important product of biotechnology to be used to produce food, and its introduction was met by protests in New York, Washington [DC], Atlanta, Seattle, and other cities."

The FDA said that any effort by manufacturers to label their dairy products as free of the hormone could be false and misleading, and illegal under Federal law.

6573. Roller, Ron. 1994. J&G, Inc., Soy-Um, and the price of soymilk in America (Interview). *SoyaScan Notes.* Feb. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This low-cost soymilk product and efficient way it is distributed will probably usher in a new era of less

expensive soymilk, create growth in the low-price soymilk market, and introduce soymilk to many non-traditional mainstream outlets outside its home base in the health-food market.

Ron has talked with the people at Jenkins and Gournoe who sell Soy-Um. They are able to sell soymilk so inexpensively [$1.39 per quart at Trader Joe's] because of their simple, efficient distribution system and the fact that they are a broker, which means they never own the product and they probably have no warehousing expenses; they may not even own delivery trucks. They probably just ship the soymilk directly from Pacific Foods. But whose truck stops at Pacific Foods? Maybe Trader Joe's or a common carrier. The truck probably takes the soymilk directly to Trader Joe's warehouse, then Trader Joe's probably distributes the soymilk to their 40-50 retail outlets.

American Soy Products now sells Edensoy to Eden Foods (a master distributor), which sells it to many distributors. Large or regional distributors usually make a deal with the bigger retail outlets or chains (such as Whole Foods) to sell products to the retail stores or chains on a cost plus basis. For example the distributor would take the cost at which they buy the product and add a flat 8% to determine the price at which they sell to those retailers. Then the manufacturer, or the master distributor, or the distributor, or the retail outlet could offer a discount to make the product even less expensive to the retail customer.

Westbrae has the same distribution structure as Eden Foods since both are master distributors. At some future point, both Westbrae and Eden Foods will have to look for ways to become competitive with products like Soy-Um–perhaps by reducing margins or becoming more efficient. Pacific Foods does not have to sell through a master distributor,–so they eliminate one link in the distribution chain–which puts them at an advantage in terms of price. It seems unusual that they would sell to J&G–unless J&G can reach new markets that Pacific Foods cannot reach. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6574. *Agri-Book Magazine* (*Exeter, ONT, Canada*). 1994. Far East market can double. 20(5):29. Feb.
• ***Summary:*** Canada is selling more and more soybeans for food uses to East Asia. Thailand is the only country in the region that is self-sufficient in soybean production. Japan (population 123 million) imports more than 1 million tonnes per year, Taiwan imports 250,000 tonnes, Indonesia 150,000 tonnes, Korea 120,000 tonnes, and Malaysia 100,000 tonnes. Singapore and Hong Kong import all the soybeans they use.

In 1993 Ontario produced a record 1.7 million tonnes. Only 500,000 tonnes of this (29.4%) was exported, and only a fraction of that was suitable for making soyfoods such as tofu, natto, soymilk, Taiwanese fermented tofu (*foo yee*), etc. A large color photo shows ladies in Taiwan packing fermented tofu in jars.

Ontario has captured 56% of the Hong Kong market, and about 14% of the Malaysian market. But the Asian market is becoming more competitive because exporters from the USA are beginning to offer soybeans in bags as well as bulk shipments. Michael Loh, the OSGMB coordinator for export development, thinks Canada can achieve its goal of doubling soybean exports by the year 2000.

6575. Asbridge, David D. 1994. Agricultural importance of soybeans. In: Mark Messina, ed. 1994. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease: Abstracts. Chesterfield, Missouri: United Soybean Board. 27 p. See p. 6. Held 20-23 Feb. 1994 at Mesa, Arizona.
• ***Summary:*** "Soybeans are omnipresent in American life... Last year, the average American consumed only four pounds of soyfoods in the form of soy protein products, tofu, soymilk, tempeh, miso, soy sauce, and soynuts. They consumed over 40 pounds of soybean oil in the form of margarine, salad dressings, cooking oils, and shortening. They consumed 204 pounds of meat, poultry, and eggs. Soybean meal, the most widely used processed feed ingredient in the U.S., is the leading source of protein for meat and poultry animals. To meet this huge demand for soybeans, vast resources are needed. In 1992, 440,000 U.S. farmers planted 59 million acres of soybeans. That's enough to nearly cover the entire state of Arizona. The farm value of the 2.2 billion bushel crop was more that $12 billion dollars. Once farmers sold the 1992 crop, the majority of the soybeans were either crushed into meal and oil, or exported. The meal and oil were valued at $6 billion and $3 billion, respectively. Exports, which historically make up one-third of the U.S. soybean crop, directly reduced the U.S. trade deficit by almost $4.5 billion dollars and indirectly employed 126,600 people. It has been estimated that since 1975, the value of the soybean crop has been about $275 billion in nominal terms. The multiplier affect brings the total impact to the US economy of soybean production to $800 billion." Address: American Soybean Assoc., 540 Maryville Centre Drive, Suite 390, P.O. Box 27300, St. Louis, Missouri 63141-1700.

6576. Badani, Bernard. 1994. Edible soybean mission report, Indonesia, Taiwan, Korea, February 1994. Ottawa, Ontario, Canada: Agriculture and Agri-Food Canada. 23 p. 28 cm. Spiral bound.
• ***Summary:*** Contents: Foreword: Mission objective, countries visited, main goals, conclusion. Acknowledgments. Names of the 8 mission members. Visit to Indonesia (Jakarta): Background, visits (Nestle soymilk plant in Surabaya, BULOG), conclusions, market potential (short, medium, and long term). Visit to Taiwan (Taipei, Taichung, Tainan, Kaohsiung): Background (the pro-American soybean

lobby), visits (Taiwan Tofu Manufacturers Assoc., Tet Union Corp., Great Wall Enterprises, Herng Yih), conclusions, market potential (short and medium term). Visit to Korea (Seoul): Background, visits (Hyosung Corp., AFMC, Korean and Seoul Tofu Manufacturing Co-operatives, conclusions, market potential (short and medium term). List of contacts by country (photocopies of business cards). Note: Mr. Badanai works for this federal organization in Ottawa.

This mission, whose coordinator was Michael Loh, took place between Feb. 25 and March 10, 1994; it was organized by OSGMB with assistance from the Canadian Embassies in Jakarta and Seoul, and the Canadian Trade Office in Taipei. The overall objective of the mission was to open these 3 markets to the sale of Special Quality White Hilum (SQWH) soybeans from Canada for use by their soy food industries.

Indonesia imports about 700,000 tonnes of soybeans each year, mostly grade #1 from the USA, to supplement its local production of about 1.3 million tonnes. About 250,000 tonnes of the imports are used to make soyfoods such as tempeh (which accounts for about 80% of the total), tofu, taucho (Indonesian miso), and soybean milk. The majority of their domestically grown soybeans are also used to make soyfoods. All Indonesian soybean imports are handled by BULOG, a government agency which determines yearly requirements and allocates the resulting imports to various companies under a complex price structure formula apparently designed to maintain the competitiveness and full utilization of the domestic crop whose internal prices are very high by international standards. Sarpindo is the largest Indonesian soybean crusher. Nestle operates a soymilk plant in Surabaya that makes 12,000 tonnes/year and is completing a second one of 20,000 tonnes capacity in Jakarta. Much of Nestle's production, especially for the new Jakarta plant, is oriented toward the export market, with the Philippines as their top priority.

Taiwan grows only 12,000 tonnes of soybeans domestically, but they import 2,400,000 tonnes per year. Their main suppliers are the USA (1,938,000 tonnes, 80.8% of the total), China, 297,000 tonnes), and Argentina (6,000 tonnes). Imports are handled mostly by a small number of major crushers, which then select a portion of the #2 soybeans imported, bag them, and sell them to Taiwanese soyfood manufacturers. About 8% of the total imports (200,000 tonnes) are handled in this way. Tofu is by far the most important soyfood in Taiwan, with consumption of 49.79 kg/capita/year. Most tofu is made by very small companies. The main problem facing Canadian exporters is the almost total control that the pro-American soybean lobby has shown so far in Taiwan. This lobby includes the main local crushers/importers of U.S. soybeans (which have a strong interest in maintaining the present import and distribution systems that make local tofu manufacturers dependant on them), and the American Soybean Association (ASA) office (with a staff of 15) in Taipei. Tet (Ttet) Union Corp. in Tainan is the largest crusher in Taiwan. Fwusow (Fwu Sow) is a large edible oil company. Taiwan's largest tofu manufacturer is Herng Yih Food Industrial Co. of Kaohsiung. The 13 year old company has two plants, 14 minutes drive apart.

Korea imports between 1 and 1.1 million tonnes of soybeans a year to supplement domestic production of about 200,000 tonnes. Approximately 200,000 tonnes of the total imports and 20,000 tonnes of domestically grown soybeans are used to make soyfoods, mostly tofu. All soybeans destined for this purpose are purchased by AFMC, the Agricultural and Fisheries Marketing Corporation, a state-owned corporation and government monopoly under the Ministry of Agriculture. that resells soybeans to food processors according to their needs, charging a very high markup over the import purchase price. This markup, in turn, allows AFMC to subsidize purchases of domestic soybeans which it buys at prices close to 5 times the international price but which it resells to tofu manufacturers at the same price as the imported soybeans. It is expected that AFMC will loose its importing monopoly on food grade soybeans by 1997 due to the GATT agreement. An immediate market potential for Canadian soybeans seems to exist for sprouting soybeans, of which Korea purchases about 6,000 tonnes a year. Address: Grains and Oilseeds Div., International Markets Bureau, Agriculture and Agri-Food Canada, Ottawa.

6577. *Child Haven International* (*Newsletter, Maxville, Ontario, Canada*). 1994. Dr. Ratan Sharma... Feb.
• ***Summary:*** "Dr. Ratan Sharma, Child Haven's Soya Expert in India, with Mrs Mukerjee and Bonnie inaugurating the placement of a SoyaCow at Gram Niyojan Kendra a woman's organization headed by Mrs. Mukerjee in Ghaziabad near New Delhi (Bayne photos)."

"Ratan at Child Haven's new SoyaCow Centre in Ghaziabad [in Uttar Pradesh, northern India]. He has a PhD in soya development, and will promote the use of soya products, as well as see to the maintenance of the machines and training of SoyaCow workers. Photo No. 2 shows Ratan standing in front of a flat-topped white building behind a large sign that reads: "SoyaCow Centre (India)."To the left is the oval SoyaCow logo.

"Volunteer Steven Bayne, Ottawa, below, on his fourth Child Haven trip to India, using most of his time helping Ratan establish the new SoyaCow Centre in Ghaziabad.

A photo shows Steven standing to the right of a SoyaCow atop a platform.

"Child Haven now has fifteen SoyaCows in India. One is in our Hyderabad Home, another at Kaliyampoondi [near Madras, in Tamil Nadu state of southwestern India]. The rest are mostly at social centres, schools, and women's organizations."

6578. *Child Haven International* (*Newsletter, Maxville, Ontario, Canada*). 1994. Soyamilk machines are now being produced in India. Feb.
• ***Summary:*** "With help from CIDA (Canadian International Development Agency) the technology was successfully transferred by Child Haven to India. The new model makes use of the first stainless steel pressure cooker in the world that we know of. Known as the SoyaCow, it is being produced in India by India Noble Electric Co. At left is Mr. P.H. Rajani, a partner with Noble Electric, with his nephew Vijay and a worker."

A photo shows two shining stainless steel SoyaCows on a white table with the three men.

"India SoyaCows sell for about 2,000 U.S. dollars. They produce in 25 minutes about 15 litres of soyamilk equivalent to the daily production of an average Indian cow. Theoretically they could run 24 hours [a day], and would produce as much milk as a large herd of cattle. Soyamilk has many advantages over cow's milk. It can be produced for one-third the cost. It requires only one-eighth of the farmland. It has no cholesterol. In many developing countries a majority of the people are lactose intolerant. Also many millions of people are vegetarian and soyamilk and soya products are a high protein food.

Note: Vegetarians are not prohibited from consuming milk and dairy products.

6579. **Product Name:** Altima HP-20 Nutritious Beverage Powder [Plain, Chocolate, or Strawberry], and Altima FA-8 Nutritious Beverage Powder [Plain, Chocolate, Almond]. The Altima brand was changed to Take Care in about Nov. 1994.
Manufacturer's Name: Nutritious Foods, Inc. Wholly owned subsidiary of Protein Technologies International, Inc.
Manufacturer's Address: 4600 Chippewa, #281, St. Louis, Missouri 63116. Phone: 1-800-445-3350.
Date of Introduction: 1994. February.
Ingredients: Incl. Isolated soy protein, genistein.
How Stored: Shelf stable.
New Product–Documentation: Note: These are the world's first two commercial food products to contain genistein added as an ingredient.

Mail order catalog in the form of two leaflets distributed at the First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease held at Mesa, Arizona. 1994. Feb. "Altima HP-20 provides 20 gm of protein and 20 mg of genistein* per 8-ounce serving, with as few as 100 calories. (Footnote: * Genistein is a naturally occurring isoflavone, or plant tissue compound, found in soy. It is believed to have antioxidant and other anti-cancer properties). Altima HP-20 Nutritious Beverage Powder contains Supro brand Isolated Soy Protein..." made by Protein Technologies International, Inc. of St. Louis, Missouri. "For everyday use, simply stir one serving of Altima HP-20 into 8 ounces (1 cup) of water. Or mix with your favorite juices such as orange and grape; add to your favorite hot chocolate drink or hot coffee. Or use a blender to Altima HP-20 with bananas, strawberries, raspberries, blueberries, sliced peaches or pineapple."

"Altima FA-8 offers all of the essential nutrients of milk but with some significant things missing–cholesterol, lactose, and almost all of the fat. A source of high-quality protein, Altima FA-8 provides 8 grams of protein per 8-ounce serving... and only 90 calories. FA-8 also provides 8 mg of genistein* per 8-ounce serving."

Talk with Nutritious Foods Inc. 1994. March 4. This product was introduced at the conference in Mesa, Arizona, in Feb. 1994. Samples of HP-20 plain were offered to participants. It was never sold before that time. It is currently sold only by mail order. Nutritious Foods Inc. is a wholly owned subsidiary of PTI, established in Feb. 1994 to market its products (such as Supro) to consumers. PTI has not previously sold retail products to consumers. FA-8, which is basically a milk substitute, has less protein and genistein per serving than HP-20.

6580. Nutritious Foods, Inc. 1994. Altima (Mail order catalog). St. Louis, Missouri. 2 p.
• ***Summary:*** This mail order catalog, in the form of two leaflets, was distributed at the First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease held at Mesa, Arizona. Products listed: Altima HP-20 and Altima FA-8, each a nutritious beverage powder, available in plain, strawberry, or chocolate flavors. Address: 4600 Chippewa, #281, St. Louis, Missouri 63116. Phone: 1-800-445-3350.

6581. Vitasoy (U.S.A.) Inc. 1994. Vitalizing versatile victorious Vitasoy (Ad). *Natural Foods Merchandiser.* Feb. p. 8.
• ***Summary:*** This 8½ by 11 inch color ad (red and black on a

pale blue background) shows a lady in a red leotard skating rapidly on in-line roller skates. Behind her are two large liter cartons of Vitasoy: Light Original (1% fat) and Creamy Original. Address: 99 Park Lane, Brisbane, California 94005. Phone: 1-800-VITASOY.

6582. Mahlich, John. 1994. History and development of the Haldane Foods Group Ltd. Part II (Interview). *SoyaScan Notes.* March 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: Next, in Feb. 1989, the Haldane Foods Group purchased a company named Kwality Foods. They made sauces, spreads, and dips. John liked the management, their products, and the price at which they offered to sell the company, which had a financial problem–they had run out of money. The Group subsequently changed the name of Kwality Foods into Saucemasters Ltd.

While owning Saucemasters, the Group started another company named Snackmasters Ltd., which was wholly owned by Saucemasters. Then in 1993 the Group sold Saucemasters, but retained ownership of Snackmasters, which they relocated in a new factory adjacent to the Haldane factory. It basically makes noodle- or rice-based vegetarian snack meals that contain textured protein and dried vegetables with a sauce sachet in each plastic cup. You pour hot water into the cup, leave for 4 minutes, and you have a very convenient and nutritious meal. This type of product is a big business in England; one company, Golden Wonder, dominates the market. But Snackmasters has carved out a niche by making ethnic vegetarian meals (Chinese, Indian, etc.), and using their sauce company to make the sachet of sauce. They have taken the product up-market by some ingenious developments and the company is thriving.

A month after buying Kwality Foods, the Haldane Group purchased Genice (pronounced JEN-ais) Foods, which makes non-dairy ice creams, yogurts, and margarines. "By this time we were deeply into the healthy food, health food, vegetarian business." Though this was the Group's first company to make non-dairy products, it fit well because their products were basically made from soya–either soyamilk or soya protein isolates. "Not only were we developing a group of interesting companies that can make some profit, but we were also signalling to a very large audience that maybe others (such as the many food manufactures who have been hesitant to use soya) should get into the soya business. And ADM likes that, because the more it is obvious that soya is here to stay and that it has multitudinous uses, the more Dwayne Andreas's dream will come true. Truthfully, we do not fear competition; the more that are in the business, the merrier. If you can get companies like Unilever to start using soya, then you get good publicity on a global basis.

"Genice is doing a very good job, but I have to say truthfully that selling non-dairy ice cream is missionary work. You need converts, and if you don't get them you're not a happy missionary. Its just a fact that most people want products with more and more cream. But at Genice we were going in the opposite direction–but successfully, though with slow growth. That's a tough number but we are hanging in and more and more will be sold. The non-dairy yogurts, incidentally, are going exceedingly well. That's good business."

ADM is a very acquisitive organization. For this reason, John and Peter Fitch were always looking for promising companies to add to the group. In the 20 years that John has worked for them, he has bought more than companies–with many outside the Haldane Group. Dwayne Andreas was aware of each of the Haldane Group's purchases as they took place. "He was totally aware of what we were doing and obviously was approving as we went. "You have to remember that Dwayne Andreas is very much committed to the evolution of the soyabean. He certainly has shown the keenest of interest in everything that we have done. I report directly to ADM and I could not buy a business without the approval of Dwayne Andreas (or Jim Randall) and finally the ADM board of directors, which meets quarterly... Yet ADM is a very fast-moving animal, and you can't contain its dynamism by quarterly meetings. The whole thing is designed to move with speed. So some acquisitions have been made before the board meeting; the contract simply reads 'Subject to board approval.'"

In those days John used to go to the USA quite a lot because he was running the ADM-Arkady business there for ADM; it was a manufacturing business in Chicago, Illinois–it's now in Kansas.

In December 1990 the Haldane Group purchased Unisoy, a small soya company which was for sale and which made soymilk. In the early 1990s a situation developed where the Haldane Foods Group had a sales director who had been a previous employee of Granose Foods. He suggested that the Group might be able to buy the Granose Foods company. "He had a key to open that particular door. It was with his basic introduction that we approached Granose, and subsequently we bought all of Granose. Granose had built a brand new and beautiful factory which was about 40 miles north of London, and that fit it very well to the growth and pattern that we were following." So the Haldane Group moved the center of their operations out of the Haldane factory and into the Granose factory, where it now is. The group still usually calls itself the Haldane Foods Group Ltd., but under some circumstances other names may also be used–such as the Granose Foods Group.

Granose was selling soyamilk that was being imported from a German manufacturer [DE-VAU-GE]. The Haldane Group decided to discontinue these imports, and now Unisoy is making all of the soyamilk for Granose that used to be imported from Germany. The quality of Unisoy's soyamilk is definitely as good as the German-made product, and now Granose has added many new soyamilk products to its range,

with vitamin enrichment, etc. However, it seems like the total soyamilk market in the UK is no longer growing. Continued. Address: The British Arkady Co. Ltd., Skerton Road, Old Trafford, Manchester M16 0NJ, England, UK. Phone: 061-872-7161. Fax: 61-873-8083.

6583. Mahlich, John. 1994. History and development of the Haldane Foods Group Ltd. Part III (Interview). *SoyaScan Notes.* March 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: Perhaps the key concept that governed the formation of the Haldane Group was adding value to soya–even though that policy was never clearly spelled out. In one sense, each company was acquired, one by one, without any overarching plan, on its own merits. Yet all companies in the group (except Saucemasters) make value-added foods from soya. The Group is fundamentally a "healthy foods" company that makes only vegetarian foods (i.e. those which contain no meat, fish, or poultry). Most of the foods are also vegan in that they contain no animal products.

The Group has bought about 13 companies and each had its own niche, name and reputation. Each company had its own brands, each of which had a reputation, and the Group has tried to keep these and promote them.

The Haldane Group could not have developed without the very strong health food market in the UK, where there are more than 2,000 health food retail shops. Equally important is the strong interest in vegetarian foods in the UK. When British Arkady bought Direct Foods in 1985, supermarkets in the UK had no space at all for healthier foods or vegetarian foods. Now they all have a separate health food section and that section is steadily growing.

Companies like Birds Eye (owned by Unilever) stand like a praying mantis and wait until the Haldane Group has built the market for Vegeburgers to such a size that they can enter the market with their own vege burger backed by all of their marketing clout; they will try to push out competing products and steal your market. "They come into the supermarkets with their overriding discounts and they say 'We're already selling you £20 million. Put this product in and then you get another million pounds, plus you get a preferential discount, etc." This is a real concern as the Haldane Group becomes more of a force in the UK market. Fortunately there are 350 million people in the entire European Community. Moreover the Haldane Group has a bright future because they are "extremely inventive" and they have many loyal customers. They are leaders and other companies are following.

"Most all of these companies that we bought were started by devotees of healthier foods or vegetarians." They all started small but most did not realize what a big, expensive step it is to get into food processing. So many of the companies were founded on good ideas but were crippled because their founders lacked business experience and were undercapitalized.

The various products sold by the companies in the Haldane Group are being made in five factories: the Unisoy factory (soyamilk), the Genice factory (non-dairy yogurts, ice creams, and margarine), the Haldane factory (which makes all dry mixes), and the Granose factory (which makes frozen burgers and many other non-dry products).

The Group now sells a large amount of frozen vegetarian sausages. If you make a conventional skinless sausage, you must first make it in the skin, then case harden it, then finally remove the skin. But removing the skin costs you money. So the Group has gotten a unique machine (they were the first to get it, but there are now a few others in other companies) that makes skinless sausages from the start. The machine was invented by another British company of which John used to be a director. These skinless sausages have become a big business and the product is of excellent quality. The Group plans to introduce this sausage product in new forms, such as sausage roles in pastry.

The Haldane Group is also doing a lot of private labeling for supermarket chains. The big food companies in the UK spend many millions of pounds on advertising, and they can slip in a vegetarian product under a known brand name. An example is ADM's Harvest Burger sold under the Green Giant label in the USA, which led to a big increase Harvest Burger sales. The Haldane Group cannot afford to spend huge sums of money advertising its own brands. So they are finding that it is in their own interest to develop their own brands but at the same time to go to some of the supermarket chains and offer to make products under the supermarket's brand. This is one way the Haldane Group can find new growth. Continued. Address: The British Arkady Co. Ltd., Skerton Road, Old Trafford, Manchester M16 0NJ, England, UK. Phone: 061-872-7161. Fax: 61-873-8083.

6584. Adamson, Bob. 1994. The Combibloc aseptic packaging system (Interview). *SoyaScan Notes.* March 9. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter of March 10.

• ***Summary:*** Combibloc, which makes aseptic packaging systems, has recently developed a new package named "Pour 'n Seal," which is the first reclosable aseptic carton. The company is very excited about the potential of the 1 liter Pour 'n Seal carton in the soy beverage category–which is low acid. "The plastic reclosable combiTop fitment represents a significant improvement over the current aseptic carton opening feature. It makes the package easy to open and re-close." As we speak, Combibloc is installing and completing FDA filing for the company's first 1-liter consumer combiTop [Parmalat milk, Michigan]; the first products should be on the shelves in April. Similar Combibloc products have on the shelves in Europe for 6-9 months. Combibloc's 46 oz (1.36 liters) high-acid combiTop

is on the USA market now but sold only to foodservice.

The key differences between Combibloc and Tetra Pak aseptic systems are: (1) The Combibloc system is sleeve fed: This gives extra flexibility over the Tetra system which is web fed. Tetra packaging comes in large rolls to the packing location, whereas Combibloc packaging arrives as pre-formed sleeves (many individual unformed flat blanks which will become formed into individual packages) with the back seam already sealed; they come in a box, not a roll. That allows Combibloc to offer multi-size flexibility. For example, their 700 series filler can fill up to 5 different package sizes (150 ml, 200 ml, 250 ml, 300 ml, and 350 ml) on the same piece of equipment. The footprint of each package is the same but the fill height would be different for each size. Combibloc has four different series of fillers, each with a different size footprint. With Tetra, you need a different piece of equipment for each package size. (2) Combibloc can fill larger cartons: The largest Combibloc carton is 2 liters (67.5 oz), whereas the largest Tetra carton is 1 liter. The Combibloc 400 series of filler can produce packages from 1 liter up to 2 liters. (3) Combibloc's sleeve-fed system fills above the product, and then it's sealed: That allows them to handle products with lots of pulp and particulates. Such products are hard for Tetra to handle since Tetra seals "through" the product as the tube is formed; any pulp would interfere with the seal. (4) Combibloc now offers combiTop, described above–but only for 1 liter, 46 oz, or 64 oz cartons. (5) Combibloc and Tetra packages cost food manufacturers about the same price. Combibloc is very flexible in the way users of its equipment pay for it; they may lease it, pay on a per carton filled basis, etc. Tetra only leases its equipment.

The Combibloc carton was first used to package a commercial product in the USA in about 1983–shortly after FDA approved hydrogen peroxide as an acceptable sterilant. Prior to that, the company was competing with Tetra in Europe. Only within the last year has Combibloc placed a priority on low-acid products [such as soymilk]; previously Tetra has owned that segment. They hope that their new reclosable package will allow them to penetrate the soymilk market. Address: Market Development Manager, Combibloc Inc., 4800 Roberts Rd., Columbus, Ohio 43228. Phone: 614-876-0661.

6585. Jenkins, Kim. 1994. How J&G markets Soy-Um soymilk: The importance of flavor, price, and packaging (Interview). *SoyaScan Notes.* March 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** J&G, which was started in 1989, is a marketing company with headquarters in Chicago, Illinois. Kim's partner, Michael Gournoe, runs the Chicago office. Kim (age 44), who works out of Minneapolis, Minnesota, runs the business, finance, and marketing side of the business, and Michael does the creative design work. They are venture people, who do both active and passive investments, mostly in the food industry. Kim's background was with Hormel (the meat packer; Dick Nolton, the president, was Kim's mentor) and Michael now is quite well known for his creative design work in the food field. He and Michael only get involved with food or beverage products that they believe in–those which are healthy, good for people, and ones with a definite niche. They want all their products made with only natural ingredients and absolutely no artificial ingredients. That is they key for making products taste good. They look for high quality, excellent consumer value, and excellent flavor–but the flavor is most important. They know how to position products. They do work with some meat products; they also market a smoked salmon from the Pacific northwest to the retail trade. They have more than 25 products. "We are a business company which exists for the purpose of forming strategic alliances with existing companies and entrepreneurial ventures. Our main objective is to identify market potential and achieve the maximum value for all the parties involved. We want to achieve unique positioning with a product and service. We are product strategists. Life is an open book test. Its marketing 101–getting back to the basics."

The soymilk category is a very interesting one because it is healthy and non-dairy. Kim can't drink milk due to a bronchial problem. Kim and Michael worked with Trader Joe's [which has 50-55 retail stores in its chain] to create Soy-Um. Trader Joe's has taken a deep interest in retailing soymilk. No other retail chain sells as much soymilk on a per store basis as Trader Joe's. J&G wanted to develop a soymilk that tasted good to mainstream palates. He has found that most Americans do not like the flavor of most brands of soymilk. Three things keep most Americans from buying soymilk: Poor taste, high price, and poorly designed label. The price of many soymilks is too high because too many people touch/handle the product as it moves from the factory to the retail store. Soymilk is surprisingly inexpensive to make but most companies sell it for too high a price–except Pacific Foods, which undersells J&G by a significant amount (a fact that doesn't bother Kim at all). J&G wanted to develop a good-tasting product in an attractive package (whose design communicates the product clearly to mainstream consumers) at a great price. With soymilk, J&G is not a broker; they take possession of the product and own the label. J&G hopes to sell soymilk in supermarkets (very soon) and in natural and health food stores. How does J&G deliver soymilk to Trader Joe's so inexpensively? First, they buy the soymilk packaged from the manufacturer [Pacific Foods in Oregon], then they ship most of it to a warehouse (owned by some other company), rent space, and inventory it. They do not own any of their own delivery trucks or warehouses; they just ship the product FOB. They are merchants; they don't want to own "brick and mortar." They want soymilk to "mellow out" for at least 14 days in the package before it is sold; it tastes better after that time. It is

not possible to bypass the warehousing step because of the size of the production run and the need for "mellowing out." Trader Joe's determines the price of the product, but they buy in huge quantities which entitles them to volume discounts.

Kim has heard that American Soy Products is making a large addition to their plant.

Update. Talk with SunRich customer support. 2004. March 19. Kim Jenkins now works as a manager for SunRich in their Minnetonka, Minnesota, office. Phone: 952-939-3958. Address: Minneapolis, Minnesota.

6586. Lai, Renee. 1994. Vitasoy looks forward to better results. *South China Morning Post* (*Hong Kong*). March 15. Business section. p. 3. [Eng]
• ***Summary:*** During the past 2 years, Vitasoy International has enjoyed pre-tax profit margins of 10-12% on a steady increase in earnings. Vitasoy plans to construct two manufacturing facilities in China, though this market accounted for only 2% of its sales last year. One plant will be in Shenzhen, producing distilled water. The other will be a joint venture in Shanghai or Beijing to produce a full range of beverage products.

Vitasoy International will issue 127,200,000 shares at $2.28 each, priced at 8.7 times earnings of the year ending in March on a weighted average basis, or 10.7 times on a fully diluted basis. The company forecasts full-year profit of $101 million for 1994, and 18% increase over the $85.76 million in 1993. Profits were $76.12 million in 1992 and $39.13 million in 1991. Sales have grown steadily from HK$794 million in 1991 to HK$996 million in 1993. A photo shows Vitasoy chairman Winston Lo standing by a Vita Juice production line.

Note: Shenzhen is inside China, just across the border from Hong Kong. This is the earliest document seen that mentions Shenzhen in connection with Vitasoy or with soybeans.

6587. AP-Dow Jones News Service. 1994. Stock prices in region end mostly lower: Asian-Pacific stocks. *Asian Wall Street Journal.* March 31. [Eng]
• ***Summary:*** Vitasoy International Holdings Ltd. finished its first trading session on the Hong Kong Stock Exchange 18% above its opening public offer price. Vitasoy's shares opened at HK$2.28 and closed at HK$2.70. The company, which is Hong Kong's leading manufacturer of non-alcoholic beverages, has sold 127.2 million shares, raising HK$290 million earlier this month. "The offering was 50 times subscribed." Note: That means that they could have sold 50 times as many shares as were available, based on the number of orders for the shares placed with dealers. Thus, the initial public offering (IPO) was greatly "oversubscribed"–a good sign indicating strong interest in the company.

6588. Lai, Renee. 1994. Vitasoy in 18 percent gain on first day trading. *South China Morning Post* (*Hong Kong*). March 31. Business section. p. 15. [Eng]
• ***Summary:*** Shares of Vitasoy closed at HK$2.70, up 18% from the company's new issue price of $2.28. Shareholders cheered. Vitasoy's gain was attributed to potential growth in China, which could be the company's fastest growing market for its non-carbonated drinks. Vitasoy pocketed an aggregate of HK$290 million from the issue of 172.2 million shares. The bulk of the new money will be used for expanding and constructing manufacturing facilities and a distribution network in China. The company plans to make a full range of drinks in northern China, including Vitasoy soyabean milk.

"The company's share offer was 50 times subscribed, which was considered encouraging in view of investors becoming cautious about new issues. Fragile market sentiment has claimed a total of five debut failures this year."

6589. **Product Name:** WMR4 (lactose free, all vegetable, nutritional powder product) and NutriBev (Dry Soy-Based Milk Alternative).
Manufacturer's Name: Archer Daniels Midland Co.
Manufacturer's Address: 4666 Faries Parkway, Box 1470, Decatur, IL 62525. Phone: 800-637-5850.
Date of Introduction: 1994. March.
Ingredients: WMR4: Corn syrup solids, isolated soy protein, partially hydrogenated soybean oil, sugar, tricalcium phosphate, maltodextrin, sodium hexametaphosphate, salt, artificial flavors, mono and diglycerides, sodium stearoyl lactylate, magnesium sulfate, vitamin C (ascorbic acid), vitamin A (palmitate), iron (ferric orthophosphate), vitamin D, zinc oxide, calcium pantothenate, vitamin B-2 (riboflavin), niacinamide, vitamin B-6 (pyridoxine hydrochloride), vitamin B-12, vitamin B-1 (thiamine mononitrate), folic acid.
Wt/Vol., Packaging, Price: 25 kg or 144 gm.
How Stored: Shelf stable.
New Product–Documentation: Kahn, E.J., Jr. 1987. "Profiles: The absolute beginning" [Dwayne Orville Andreas and ADM]. *New Yorker* 62:41-68. Feb. 16. See p. 41. A soy-based milk substitute called Nutri-Bev is a food supplement for Third World children. Nutri-Bev isn't sold. It comes in six flavors and its given away. ADM has been doing research on it for 25 years, and now they are improving it even more with fructose, which is thought to improve its mouth feel. It costs only 1/10th as much as cow's milk and its nutritionally better. After all, says Dwayne Andreas, "'some millions of people can't tolerate cows' milk. We've been frustrated every time we've tried to push this product. Do you realize that for a mere twenty-five billion dollars you could give a quart of this drink every day of the year to five hundred million people, and–presto!–you'd have the end of hunger? And there are enough soybeans in United States government storage right now to do the job. This is the most exciting long-range product we have. It's to milk what margarine

turned out to be to butter. I draw some comfort from reminding myself that it took margarine twenty-five years to get off the ground.'"

ADM annual report. 1994. p. 14. NutriBev is a new milk alternative made largely from soy protein isolates and concentrates; it has the same nutritional value as milk but can be produced free of lactose.

Talk with Phil Fass, product manager. 1994. Oct. 4 and 14. WMR4 was launched in March 1994; it is one and the same with NutriBev. WMR4 was not a stand-alone product before the NutriBev program was conceived. At present, there is no product on the market with a NutriBev label. Some people are looking at test marketing various products. WMR4 has been sold commercially to make a milklike product that has no name in Third World feeding programs. So NutriBev is still a concept that is waiting to happen. The registered trademark for NutriBev has no hyphen.

Brochure titled "Nutri-Bev & WMR4 as Presented by ADM," sent by Phil Fass of ADM. 1994. Oct. 10. WMR4 [whole milk replacer] is a lactose free, all vegetable, nutritional powder product. It is a free-flowing white powder that has been specially processed to dissolve very quickly in water. Using water at 45ºC (warm) will facilitate mixing. The resulting product has the appearance and mouthfeel of normal whole milk. WMR4 can generally be substituted on a one for one basis for whole milk liquid or powder. Mix 130 gm WMR4 powder with 900 gm water to make 1 liter of finished product. It contains protein, fat, carbohydrates, calories, minerals, and vitamins equal to whole milk. It contains no lactose or cholesterol, making it a healthy alternative beverage. WMR4 can be used to make milklike products, hot chocolate drink, frozen desserts, yogurt, soft cheese (Ricotta, Quark, Queso Fresco, Farmers Cheese, etc.)

The Nutri-Bev Program is an exciting marketing program specifically developed for foreign countries interested in marketing a liquid, soy-based, flavored children's drink. ADM will license the Nutri-Bev label for a nominal fee [or an organization can use its own brand name and label]. ADM supplies the base product, WMR4, in a powdered, stable form. The base will be used in conjunction with a sweetener, flavor, and stabilizer to make a finished liquid product. Technical assistance will be supplied by ADM as needed. WMR4 does not contain any dairy fat and therefore will not develop the rancid off-flavors which are commonly associated with products containing dairy fat (whole milk powder). It has much better flavor stability than whole milk powder; the latter declines very rapidly at 50ºC.

Technical Data. 1994. Jan/Feb. Gives nutritional analyses of Nutri-Bev drink and Chocolate drink. Gives formulas for using WMR4 to make: Frozen dessert. Fudge chocolate pudding. Cooked custard. Cultured yogurt (Swiss-style with fruit on top, or fruit on bottom).

Spot in Soyafoods (ASA, Europe). 1995. Spring. p. 4. "ADM launches lactose free and low cholesterol whole milk replacer." WMR4 is available in the UK from ADM Ingredients Ltd., Church Manorway, Erith [on the River Thames just east of London], Kent DA8 1DL, England. Phone: +44 1322 443000.

Dixie Diner's Club Official Newsletter and Catalog. 1996. Jan. Vol. 2, issue 1, p. 3. "NutriBev Soy Beverage: Delicious and satisfying–a drink that is soy-based and offers all the goodness of a quart of *whole milk* without cholesterol and lactose... and 30% of your daily calcium in a prepared cup." The 5 oz package (makes about 1 quart of liquid soy beverage) sells for $1.98 plus at least $4.99 postage. 12 packages are $1.79 each. A color photo shows the package. The name of the manufacturer is not given.

6590. **Product Name:** [Soya Based Drink (Vanilla)].
Foreign Name: Soja Drink–Vanille.
Manufacturer's Name: Bruno Fischer GmbH (Importer-Distributor). Made in France.
Manufacturer's Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.
Date of Introduction: 1994. March.
Ingredients: Water, soya beans* (9%), maize malt extract*, dried sugar cane juice*, sea salt, natural vanilla extract. * = Organically grown and controlled.
Wt/Vol., Packaging, Price: 1 liter glass bottle.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label sent by Bruno Fischer. 1998. April 15. Ingredients and nutritional value are given in five languages, each with the flag of that country by the product name: German, English, Italian, French, and Dutch. Talk with Bruno Fischer. 1998. May 13. This product was launched in March 1994.

6591. **Product Name:** Rice Dream (Rice Milk in a Tetra Brik Carton) [Enriched in Original, Vanilla, or Chocolate flavors].
Manufacturer's Name: Imagine Foods, Inc. (Marketer-Distributor). Rice milk made by California Natural Products, Manteca, Calif.
Manufacturer's Address: 350 Cambridge Ave., Suite 350, Palo Alto, CA 94306. Phone: 415-327-1444.
Date of Introduction: 1994. March.
Ingredients: Filtered water, certified organic brown rice (partially milled), expeller pressed high oleic safflower oil, sea salt.
Wt/Vol., Packaging, Price: 32 fl oz (946 ml) Tetra Brik Aseptic carton. Retails for $1.79 (12/94, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per cup (240 ml): Calories 130, calories from fat 20, total fat 2 gm (3% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 90 mg (4%), total carbohydrate 28 gm (dietary fiber 0 gm, sugars 12 gm), protein 1 gm. Vitamin A 10%, calcium 30%, vitamin D 25%, vitamin C 0%, iron 0%, phosphorus 15%. Percent daily values are based on a

2,000 calorie diet.
New Product–Documentation: Talk with Robert Nissenbaum of Imagine Foods. 1994. Nov. 23. This product was introduced in March, 1994.

Product (vanilla) with Label purchased at Berkeley Natural Grocery Co., California. 1994. Dec. 1. 3.5 by 7.75 by 2.25 inches. Tetra Brik Aseptic carton. Note this new tall, slim carton with a new easy-pour reclosable cap. Blue, black, and light purple on white. Photo of a stem glass filled with white rice drink. "1% fat non-dairy beverage. With vitamins A and D plus calcium. Not to be used as an infant formula." On one side is a recipe for Rice Dream Smoothie.

6592. Ling, C. 1994. We must stop the Europeans renaming our soya milk and calling it soya drink. *Health Food Business* (*England*). March. p. 37.
Address: Plamil Foods, Folkestone, Kent, England.

6593. Mahmud, T.Y. Tunku; Kasim, A. Abu. 1994. Processing and marketing of fresh soybean milk for income and employment generation in the Klang Valley, Malaysia. *Palawija News* (*Bogor, Indonesia*) 11(1):9-14. March.
• ***Summary:*** "An interesting development taking place in the food processing industry is the increase of fresh soybean milk retailers in night and farmers' markets. Entry into this business is relatively easy because it requires low initial capital outlay and the raw materials are readily available. It appears that Malaysian consumers are acquiring a taste for this relatively new product."

"There are three main objectives of this study: 1. To determine the number of establishments involved in the processing and marketing of fresh soybean milk and the employment generated in the Klang Valley. 2. To determine the income and expenditure of processors and retailers of fresh soybean milk in the Klang Valley. 3. To estimate the market size of fresh soybean milk in the Klang Valley."
Address: Malaysian Agricultural Research and Development Inst. (MARDI), Malaysia.

6594. Minnesota Soybean Growers Association; Minnesota Soybean Research & Promotion Council. 1994. Cooking with soy. North Mankato, Minnesota. 45 p. March.
• ***Summary:*** Talk with Christie Metzger of the MSRPC. 1996. Jan. 4. The first edition of this book was published in March 1994. Some of the recipes came from the winners of a contest. Address: 360 Pierce Ave., Suite 110, North Mankato, Minnesota 56003. Phone: 507-388-1635.

6595. Robbins, John. 1994. Apocalypse cow. *EarthSave* 5(1):1-5. March.
• ***Summary:*** About the potential dangers of Bovine Growth Hormone (BGH or rBGH) in dairy milk. Also discusses IGF-1, somatotropin, Monsanto.

Page 6 states that "The first case of fatal 'mad-cow' disease was confirmed in North America on a western Canadian farm in December 1993 (Source: Reuters News, 10 Dec. 1993).

The slogan "Personal Food Choices... Global Results" now appears at the top of page 1 of this Newsletter.

Note: This is the earliest document seen (July 2013) that contains the term "rBGH" (recombinant bovine growth hormone). Address: Director, EarthSave, California.

6596. **Product Name:** Scotty's Non-Dairy Beverage (Fresh Rice Milk) [Almond Light, Vanilla Light, Carob Vanilla Light, Original].
Manufacturer's Name: Scotty's Wholesome Foods.
Manufacturer's Address: 1780 55th St., Suite C, Boulder, CO 80301. Phone: 303-443-3359.
Date of Introduction: 1994. March.
Wt/Vol., Packaging, Price: Pint (16 oz.) and half gallon plastic jug.
How Stored: Refrigerated.
New Product–Documentation: Talk with Scott Silverman, founder and owner of Scotty's Wholesome Foods. 1994. May 5 and 6. He introduced this beverage in March 1994. He is presently selling it in plastic milk jugs only in Boulder, Colorado, as a test market. This product is similar to Rice Dream, however it is not made with commercial enzymes, but rather from converted koji. He would like to have it packed in gable-top Pure-Pak cartons–like milk. He is age 25.

6597. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Non-dairy whip toppings (with or without soy protein)–Bibliography and sourcebook, 1944 to 1994: Detailed information on 115 published documents (extensively annotated bibliography), 21 commercial whip topping products, 48 original interviews (many full text) and overviews, 49 unpublished archival documents. Lafayette, California: Soyfoods Center. 135 p. Subject/geographical index. Author/company index. Printed March 1. 28 cm. [202 ref]
• ***Summary:*** This is the most comprehensive book ever published about non-dairy whip toppings–which resemble whipped cream. It has been compiled, one record at a time over a period of 19 years, in an attempt to document the history of this subject. Its scope includes all known information about soy-based non-dairy whip toppings, worldwide, from 1944 to the present, plus considerable information about non-dairy whip toppings that are historically related to soy-based whip toppings. It does not attempt to give comprehensive coverage of other so-called non-dairy whip toppings–most of which are based on casein, the major protein found in cow's milk, yet which nevertheless are allowed to be labeled "non-dairy."

This book is also the single most current and useful source of information on non-dairy whip toppings, since

99% of all records contain a summary/abstract averaging 348 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 27 different document types, both published and unpublished; every known publication on the subject in every language–including 200 in English, 2 in French, and 1 in German; 48 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of soy-based non-dairy whip toppings and related products from their earliest beginnings to the present.

The bibliographic records in this book include 115 published documents and 49 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 21 commercial whip topping products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

6598. *SoyaCow Newsletter* (*Ottawa, Canada*). 1994. Top Russian government kitchens make soyfoods. 3(1):1. Jan/March.
• ***Summary:*** "In March, six SoyaCows were delivered to Moscow, where most were promptly installed in the kitchens of key government buildings. The sites included: The Russian Council of Ministers (White House), Ministry of Finance, Ministry of Economics, Ministry of Agriculture, and the State Bank.

"At the initiative of Alexander Podobedov, director of the Russian Soybean Association, 'ASSOY,' these pilot operations are building a broad political awareness and will launch the first soyfoods program throughout Russia. In addition to flavoured beverages, the SC-20 systems are providing for soy yogurt, tofu, and baked goods using the 'okara' fibre. Hundreds of top government people have sampled the various products, made with homegrown soybeans, with generally positive results."

6599. *SoyaCow Newsletter* (*Ottawa, Canada*). 1994. Child Haven establishes SoyaCow Centre in India. 3(1):2. Jan/March.
• ***Summary:*** "The SoyaCow Centre has now been established in Ghaziabad, about 30 minutes drive from Delhi, to serve the growing population of SoyaCows in India. The Centre's main objective is to help women in self-employment by producing and selling soymilk and its products at affordable prices.

The Centre promotes a table-top SoyaCow SC-20 machine that makes high-quality soymilk on demand at the cottage industry level, producing 13-14 liters every 30 minutes (using 1.75 kg of soybeans costing about 10 rupees per kg) at a cost of Rs. 2-3 per litre. The SoyaCows, which will be made in India under a technology transfer agreement with Child Haven, include accessories for making tofu from the soymilk.

Letter (e-mail) from Ratan Sharma, PhD of India. 2010. Oct. 11. Ratan established this Centre on 8 March 1994.

6600. **Product Name:** Tradsoy (Soya Milk).
Manufacturer's Name: Trade Group Africa (Israel) (Marketer).
Manufacturer's Address: P.O. Box 5318 Afridar, Ashkelon, Israel. Phone: 09972-7-713390.
Date of Introduction: 1994. March.
New Product–Documentation: Form filled out by Zvi Sundy. 1994. July 25. Trade Group Africa (Israel) started producing soyfoods in March 1994. One of the two products they launched in 1994 was Tradsoy (Soya Milk).

6601. Vitasoy International Holdings Ltd. 1994. New issue of 127,200,000 shares of $0.25 each at $2.28 per share: Prospectus. Hong Kong: Vitasoy International Holdings Ltd. 94 + 94 p. March 15. 28 cm. [Eng; Chi]
• ***Summary:*** This prospectus announces the first public sale of Vitasoy stock. Half the prospectus is written in English and the other half in Chinese. The sponsor and manager of this initial public stock offering is Wardley Corporate Finance Limited. Underwriters: Wardley Corporate Finance Limited, and Schroders Asia Ltd. The symbol "$" refers to Hong Kong dollars unless otherwise indicated; 7.8 Hong Kong dollars = 1 U.S. dollar, and the exchange rate is fixed.

Contents: Summary. Expected timetable. Definitions. Preliminary. Conditions of the new issue. Share capital. Indebtedness. Risk factor. Directors and corporate information. Parties involved in the new issue. Information relating to the Group: Introduction, corporate structure, history and development (see separate record), strategy,

brands, market share and competition, marketing and sales, operations, tofu, Guang Ming Farm, Gardner Merchant, financial information, future plans and prospects, directors, management and staff, trademark valuation, profit and dividend forecasts, proceeds of the New Issue and working capital, adjusted net tangible assets and net assets. Appendixes: 1. Accountants' report. 2. Profit forecasts. 3. Trademark valuation. 4. Property valuation. 5. Statutory and general information. Prospectuses and application forms. Procedure for application.

Financial summary (in million Hong Kong dollars): Turnover (sales) has grown from 795 in 1991 to 912 in 1992 to 996 in 1993. Profit before taxation has grown from 43.8 in 1991 to 88.6 in 1992 to 108.8 in 1993. The company has 5 executive directors and 4 non-executive directors. All of the directors have British, Australian, U.S., or Canadian nationality. Three of the 5 executive directors are children of the founder, K.S. Lo: (1) Mr. Winston Lo Yau Lai, age 52, of Hong Kong (British nationality). Frank graduated from the University of Illinois with a BS degree in Food Science, then earned his MSc degree in Food Science from Cornell University in New York; (2) Mr. Frank Lo Yau Ki, age 54, of Hong Kong (British nationality). Frank attended Queensland Agricultural College where he obtained a diploma in dairy manufacturing before joining the group in 1965; (3) Ms. Yvonne Lo Mo-Ling, age 45, of San Francisco (California; USA nationality). Yvonne is president of the Group's operations in the USA and has been responsible for them since 1980. She received a BA degree from Oberlin College in Ohio and took undergraduate studies in Urban and Regional Planning at the University of Toronto in Canada.

Brands: Vitasoy soybean milk is the Group's principal product. Sales (in million Hong Kong dollars) were $337.4 in 1991 (42.5% of total sales), $397.0 in 1992 (43.5% of total), and $411.6 in 1993 (413% of total sales). Sales of tofu and other food products were $32.9 (US$4.21 million) in 1991, $50.2 (US$6.44) in 1992 and $50.7 (US$6.5) in 1993.

In terms of turnover (sales) by geographical area, Hong Kong is by far the leading area with 78.9% of total worldwide turnover ($995 million) in 1993, followed by North America (12.0%), Macau (2.4%), Singapore (2.2%), PRC (1.6%), Australia/New Zealand (1.6%), and others (1.1%).

Senior management includes: Mr. Jerry Maynard, age 43, who is president of Nasoya. He joined the group in 1988 and became president of Nasoya in Sept. 1993. Mr. Michael Ho, age 38, is president of Azumaya. He joined the Group in 1982 and became president of Azumaya in June 1993.

Trademark valuation: An independent valuer has valued them at HK$260 million.

Assets: The main trade marks are Vitasoy, Vita, Balanz, Azumaya, and Nasoya. Tangible: $781 million. Net assets: $1,051 million.

Subsidiaries: Value of issued and paid up share capital: Vitasoy (U.S.A.) Inc. US$12.0 million. Nasoya Foods Inc. US$6.346 million (incorporated 13 July 1990). Azumaya Inc. US$6.5 million (incorporated 1 July 1969).

Properties: The main property, located at No. 1 Kin Wong St., Tuen Muen, New Territories, has a capital value of HK$140 million on 28 Feb. 1994. This is a 17-story industrial building, completed in 1986, on a site of 33,250 square feet (3.089 square miles). It has a total gross floor area of approximately 311,815 square feet, including 38 lorry parking spaces and 22 private parking spaces. The property is held from the Government under New Grant No. 2606 for a term extending to 2047. The current ground rent is $600 per annum. The Azumaya rental property comprises 37,172 square feet of interior floor space on 2 acres of land. Monthly rental is about $20,000. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

6602. Vitasoy International Holdings Ltd. 1994. History and development (Document part). In: New issue of 127,200,000 shares of $0.25 each at $2.28 per share: Prospectus. 1994. Hong Kong: Vitasoy. 94 + 94 p. See p. 14-15. March 15. 28 cm. [Eng; Chi]

• ***Summary:*** The Company, originally named Hong Kong Soya Bean Products Company Ltd. was founded in March 1940 by four men, Mr. (later Dr.) Lo Kwee Seong, Mr. Shiu Wai-Ming, Mr. Chan Nam-Cheong, and Mr. Kwan Yim-Chor. The Company's first product, named Vitamilk, was first sold in Hong Kong just prior to the outbreak of World War II. Note: Production began on 9 March 1940. Vitamilk was fortified with calcium, cod-liver oil, and vitamins, and sold in small milk bottles. Production of Vitamilk ceased during the War, but after the War the Company relaunched Vitamilk, which was then produced at and sold from, small premises in Causeway Bay. 1950–The Company moved to new premises in Aberdeen to keep up with growing sales; it now had increased production capacity and facilities for research and development. At the same time the Company became the franchisee for Green Spot, an orange flavoured soft drink. Green Spot proved highly popular in Hong Kong and provided the company with the opportunity to gain important experience in pasteurization and sterilization techniques. 1953–This new expertise led to the Company's development of a sterilized version of Vitamilk, which had a longer shelf life. At the same time the product was renamed Vitasoy in English and repackaged in narrow-necked soft drink bottles, which replaced the traditional milk bottles. Note: In 1953 the company first began to work with UNICEF to popularize the use of soy beverages in developing countries. 1957–The Pepsi-Cola franchise replaced the Green Spot franchise.

1960–The image of Vitasoy as a nutritious quality product received a boost when UNICEF became aware of the attractions of a high protein, vitamin enriched soybean milk for use in developing countries. 1961–An additional soymilk

production plant was opened in Kwun Tong to keep up with rapid increases in sales of Vitasoy. 1962–The introduction of a malt Vitasoy helped lead to further increases in sales. From 1955 to 1970 sales of Vitasoy grew from approximately 12 million bottles to approximately 60 million bottles per annum.

1970s–The Company continued to expand and develop. 1975–A major development was the adoption of a new Tetra Pak packaging process, which brought many benefits. "In addition to enhancing the quality of the product, the new light and disposable packaging meant that Vitasoy could be sold in the non-returnable soft drinks market which significantly reduced both the delivery costs of the product and the costs associated with collecting returned bottles. The new packaging also offered greater scope for innovative design which assisted in marketing the Company's products. To coincide with this technical innovation, in the mid-1970s the Company repositioned Vitasoy in the market by promoting it as a soft drink as well as a milk substitute. The remainder of the 1970s saw the Company's product base expand away from Vitasoy and malt Vitasoy.

1976–A range of fruit juice drinks was introduced under the vita brand name. These were also packaged in Tetra Pak cartons and initial flavors included orange, lime, mango, and guava. 1976–The Company decided to relinquish the Pepsi-Cola franchise in favor of producing its own range of carbonated drinks, again under the Vita brand name. The carbonated products, which included cola, orange, lemon lime, and cream soda, were initially sold in returnable bottles and subsequently also in the form of fountain syrups. Both Vita Juice drinks and Vita carbonated drinks won immediate consumer acceptance upon their introduction. 1977–Exports to Australia began. 1978–Vita Juice drinks now have over 30% of the Hong Kong fruit juice drinks market. 1978–The Company moved its Aberdeen production facilities to Heung Yip Road in Aberdeen. 1978–The Company launched a line of traditional teas, the first of which was chrysanthemum, which were sold under the Vita brand and packaged in Tetra Pak cartons.

1979–The Company began a further significant diversification of its business by entering into an agreement with Guang Ming Farm [at Shenzhen, just inside China]. Under the initial agreement, which was for a term of 5 years, and subsequent revisions to this agreement, the Company obtained the rights to market and sell most of the farm's fresh milk output in Hong Kong and Macau. Today the farm produces approximately 55% of all fresh milk sold in Hong Kong.

The late 1970s and early 1980s were characterized by the Company's push into overseas export markets. Each of these export markets took time to develop, both in terms of developing consumer awareness of the Vitasoy and Vita products and particularly in identifying the most suitable and effective distribution channels. 1979–Exports to Papua New Guinea and to Canada began. 1979 Jan. 15–Vitasoy (U.S.A.) Inc. is incorporated.

1980–Exports to the United States began. 1982–In the United States, the Company established its own distribution operations. 1982–Exports to Singapore began. 1985–The Company acquired the operations of its Singapore distributor to gain greater control over and more efficient distribution of its products. 1987–Due to growth of operations, the Company opened a new head office and principal manufacturing facility in Tuen Mun. 1989–The Company acquired a 12% equity stake in its contract packer in Papua New Guinea to gain greater control over and more efficient distribution of its products.

1990 Sept. 24–The Company name is changed to Vitasoy International Holdings Ltd. from Hong Kong Soya Bean Products Co. Ltd. 1990–The Group made the first of two significant diversifications from its traditional business by entering into a joint venture with Gardner Merchant to provide large-scale contract catering services in Hong Kong. Gardner Merchant, headquartered in the United Kingdom, is one of the leading contract catering firms in the UK; the Group has a 40% interest in the joint venture.

1990 Aug.–In its second diversification the Group entered into the manufacture and distribution of tofu in the United States through the purchase of Nasoya, based in Leominster, Massachusetts on the east coast of the United States. 1993 May–The Group acquired Azumaya, a large tofu manufacturer based in San Francisco, California, with a distribution network covering the west coast and mid west of the United States. These acquisitions have not only made the group a [sic, the] leading manufacturer and distributor of tofu in the United States but have also provided the Group with an extensive distribution network throughout the United States and Canada for its other products. 1992–Distilled water was launched under the Vita brand.

1994 Feb.–The Group opened a new production facility on a site at Guang Ming Farm at Shenzhen in the PRC [China] to replace the group's plant in Aberdeen. The Shenzhen plant, which has been built and will be operated pursuant to a joint venture with Guang Ming Farm, is currently operating at partial capacity and is expected to be fully operational by the middle of 1994. The Group's old production and packaging facility at Aberdeen is currently being leased by the Group to provide production capacity unti the Shenzhen plant becomes fully operational. At that time the Group will cease to lease the facility at Aberdeen and all beverage production will then be at Tuen Mun and Shenzhen. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

6603. Schmitz, Tom. 1994. Tofu cook believes she nourishes body and soul: Linda Lam, tofu maker. *Mercury News* (*San Jose, California*). April 3. p. 1E, 3E.

• ***Summary:*** A large color photo shows Linda Lam and

her husband Thom Tran at their Fuji Fresh Tofu Co. in Japantown, San Jose. They make tofu 6 days a week, as well as tofu pudding, soymilk (in plastic quart jugs), tofu spring rolls, Okinawa tofu, and Peking tofu. Linda Lam learned to make tofu as a girl in Vietnam, where she was taught by the monks at her local Buddhist temple. She stayed at the monastery during school vacations, preparing meals and studying the scriptures. "Three decades later, Lam remains a devout Buddhist. And her faith in tofu is equally strong." She and her family are vegetarian. She uses nigari as a curding agent in making her tofu.

Before leaving Vietnam in 1979, she worked as a high school teacher. Later she ran a catering service.

6604. Rose, Richard. 1994. The cheese alternatives industry and market in America. Part I (Interview). *SoyaScan Notes.* April 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Note: We define cheese alternatives as those which contain a major protein source (such as soy protein or nut protein) in addition to or in place of dairy protein.

Milestones (arrived at jointly by Soyfoods Center and Richard Rose): The soy cheese and cheese alternative category in America started with Soyarella, which was introduced in March 1985. Though expensive, the product was a runaway success, in part because the label claimed (incorrectly) that it contained no casein or other dairy products. Its success alerted other soyfoods companies to the potential of soy cheese. The first major soy cheese to hit the market was Soya Kaas, introduced in Jan. 1986 by Richard McIntyre of Swan Gardens Inc. In June 1986 Mozzarella Style Tofu-Rella was introduced by Richard and Sharon Rose of Brightsong Foods–which had become interested in the category because of Soyarella (not Soya Kaas). The company later became Sharon's Finest and the product was renamed TofuRella. In Oct. 1986 Original Pizsoy (a whole-wheat pizza topped with soy cheese) was introduced by Tree Tavern Products; It was the first product in which soy cheese was used as an ingredient. In Jan. 1987 Soymage was introduced by Soyco Foods, a Division of Galaxy Cheese Co.; This was Soyco's first soy cheese product and the first soy cheese that contained no casein. In April 1987 NuTofu was introduced by Cemac Foods Corp. This was Cemac's first soy cheese product. In April 1988 Soyco shreds and slices were introduced–the first soy cheese shreds and slices. In Jan. 1991 Fat-Free Soyco was introduced–the first fat-free soy cheese. In Dec. 1992 Almond Cheese was introduced by Wholesome & Hearty Foods–the first major non-soy cheese alternative. In April 1994 VeganRella (made from Brazil nuts) was introduced by Sharon's Finest–a true non-dairy non-soy cheese with excellent flavor.

In the cheese alternatives market, about 98-99% of the products contain casein (milk protein, which makes the cheeses melt) and only 1-2% are truly non-dairy (free of casein). About 95% are hard cheeses and 5% are soft cheeses, mainly cream cheeses, About 95% are soy cheeses and 5% are nut cheeses without soy.

Big American food companies make basically two types of imitation cheeses. The first is a filled cheese in which vegetable oil is used to replace butterfat. The product is positioned as inexpensive rather than low-cholesterol. Roughly 98% of these products are sold to food processors, foodservice organizations, and restaurants, and only 2% to consumers. The market size is about $500 million. The second is fat-free dairy cheese (the butterfat is replaced by non-fat ingredients such as gums), such as FREE made by Kraft or Healthy Choice from ConAgra. Both are widely sold in supermarkets to the tune of $50 million to $100 million.

The size of the natural foods cheese alternatives market in the USA is about $15 million/year at wholesale and $25 million/year at retail; this is the equivalent of about 5 million lb/year. The largest manufacturers (Mfg.) and primary marketers (Mar.; they buy a private labeled cheese from a manufacturer who must sell exclusively to them) are: 1. Soya Kaas, Mfg., $6 million/year wholesale. 2. Sharon's Finest, Mar., $3 million/year wholesale. Their source is confidential. 3. Cemac / NuTofu, Mfg., $2 million/year wholesale. 4. Galaxy / Soyco Foods, Mfg., $2 million/year wholesale. 5. Phil Leisac & Sons of Portland, Oregon, Mfg. They are owned by or involved with Pacific Foods of Oregon, and make Almond Cheeze for Wholesome & Hearty of Oregon and Soy Gourmet for Patrick Cochran of Nutrition Specialties International, Inc. of Riverside, California.

The major secondary marketers of soy cheeses as such (they must buy from one of the above companies) are: White Wave and Rosewood Farms. Companies that make important foods that use soy cheese as an ingredient in foods are: Imagine Foods (Ken & Robert's Veggie Pockets), Farm Foods (Pizsoy and Pizsoy Pockets), Cedarlane Foods, Amy's Kitchen Inc. (Pot Pies), Rademacher–Worley Farms of Sonoma County (Solar Tacos). The main types of foods in which soy cheese are used as an ingredient are pizzas, pockets, and other. Since soy cheeses and other cheese alternatives are a major part of the natural foods market, any company that develops a product containing cheese must seriously consider using a cheese alternative, which contains little or no cholesterol or lactose, and usually less fat and calories.

The cheese alternatives market is has grown at the rate of about 20% a year for the past 3 years, but now it is starting to level off.

Most people who buy cheese alternatives (estimated 60% of the total) are those who prefer not to eat dairy products and mistakenly believe that these products are non-dairy products. This the market is based on consumer misunderstanding and deception. Labels promote "Cholesterol free and lactose free" because they don't want to say "dairy free." Yet only an estimated 20% of the

products are purchased primarily because they are free of cholesterol, and lower in fat, saturated fat and calories. Another 20% are purchased for other reasons (such as lactose free). Of the buyers, an estimated 20% are vegans, 60% are vegetarians, and 20% other. As for outlets, an estimated 75% are sold at natural- and health food stores and 25% at supermarkets. Sharon's Finest sells their cheese alternatives at every Trader Joe's, and at many Lucky, Vaughns, and Ralphs supermarkets in the Los Angeles area. Most of the other manufacturers also sell in some supermarket chains, especially in their geographical region. Wildwood Natural Foods sells NuTofu at each of their sets in Safeway supermarkets in California. Continued. Address: President, Sharon's Finest, P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

6605. Rose, Richard. 1994. The cheese alternatives industry and market in America. Part II (Interview). *SoyaScan Notes.* April 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Cheese alternatives retail for about 1.5 to 2 times as much as their regular dairy cheese counterparts–but the price difference is decreasing. Soya Kaas retails for about $4.90 for 12 oz ($6.53/lb) in California. TofuRella cheddar retails for $2.75 for 8 oz. ($5.50/lb). Dairy cheddar retails for about $2.50–$3.20 a lb. The cheese alternatives are more expensive because relatively small quantities are sold, the market is small, and their ingredients are more expensive. Richard's non-soy cheeses with casein (such as AlmondRella) are about 10% to 20% more expensive than his soy cheeses with casein (such as TofuRella). The difference is small in part because Sharon's Finest takes a smaller markup on AlmondRella; soybeans are, of course, much less expensive than almonds. Richard's non-soy non-casein cheese (VeganRella) is more expensive (10-50%) than AlmondRella, again because of the economies of scale. Casein now costs about $1.60/lb.

The biggest company that makes powdered tofu (the main soy ingredient in many soy cheeses) is DMV USA (basically a cheese company owned by Danes) in La Crosse, Wisconsin (Agronico does the spray drying for DMV; Ed Pedrick brought know-how and maybe technology from Clofine), followed by Clofine in Linwood, New Jersey. Pedrick now works for some company in Iowa–maybe Devansoy (formerly Solait International, before that Miller Farms Food Co.). Richard does not think that St. Peter's Creamery presently sells to this market. Richard thinks that these companies curd the soymilk before they spray-dry it.

Sharon's Finest is growing nicely. They are in the INC. 500 this year with annual sales of about $3 million a year. Last year's sales did not increase much over the previous year, but this year Richard predicts a 50% sales increase, based on predicted large sales of VeganRella–in both hard cheese and cream cheese consistencies. Richard believes that VeganRella will outsell his TofuRella in 2 years, and become America's leading brand of cheese alternative in 2 years–including Soya Kaas. All kinds of people, including kids, really like VeganRella. The company's best-selling product is TofuRella (all flavors), followed by slices, then Zero-FatRella. All of Wholesome & Hearty's non-soy business (Almond Cheeze and White Almond Beverage) only accounted for $700,000 in sales last year.

Concerning the outlook and forecast for the cheese alternatives market in the USA, Richard sees the market maturing, with steady upward (but slower) growth of about 10% a year, and moving more toward truly non-dairy products that contain no casein. There is presently little or no room for new companies to enter the category, prices will start to drop, marginal or "me too" products (like Soy Gourmet) will not survive, and more consolidation (within 1-2 years Galaxy will not be selling to the natural foods market; now most of their products sell only because retailers want their Soymage and Parmesan).

Cheese alternatives have been slower to catch on in Europe than in America, even though per-capita cheese consumption is higher in Europe, because European retailers and consumers have not been deluded into thinking that a product can contain casein and still be dairy free. If they want to sell a cheese-like product that contains casein, they would be likely to sell a rennetless vegetarian cheese. Sharon's Finest used to sell its products to a distributor in the UK [The Redwood Company], but Richard found that retailers and consumers said "It has casein. Why bother?" The company that Sharon's Finest sold to in the UK was implicated in the death of an Indian boy who (Richard heard) died of suffocation when left alone by his grandmother eating soy cheese (he was not allergic to the casein in the product). There was no trial. Richard sees a big potential market for his VeganRella in Europe. Richard thinks he can make a better, cost competitive product from Brazil nuts than from soybeans. Soy causes some flatulence problems. Richard donates a portion of the profits from sales of VeganRella to Earthsave, which both a vegan and an environmental organization. On the back of the VeganRella is an Earthsave logo and Earthsave is supporting the product.

Talk with Richard Rose. 1997. March 16. The truly non-dairy cheese alternatives which contain no casein (such as Vegan-Rella and Soymage) have not caught on in America; they are more popular in Europe. Vegan-Rella is now Sharon's Finest slowest selling cheese alternative. Address: President, Sharon's Finest, P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

6606. Messina, Mark J. 1994. New developments with soyfoods. Do soyfoods prevent cancer? (Interview). *SoyaScan Notes.* April 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Mark sees more of ASA's interest in soyfoods

coming from individual state soybean boards rather than from the headquarters in Missouri. One good example is the fine work of Jim Weyer and Connie LaBarr of the Nebraska Soybean Program. Jim was the first person to ever invite Mark to speak. The ASA (American Soybean Association) has a food advisory panel which is completely focused on soy oil. Mark wishes ASA would establish a separate panel to discuss and promote soyfoods.

Mark is now working on a new book about the health benefits of a vegetarian diet. It will be published by Harmony Books in New York–a publisher which is very interested in vegetarianism and was willing to give a good advance for the book.

Mark believes that when the people in a culture consume 4-6 ounces a day of tofu, that will lower the cancer risk of the population significantly. The basic message of his new book, *The Simple Soybean and Your Health,* is that one serving of soyfoods (any kind, ideally tofu or soymilk) each day will have a protective effect. "But our present knowledge would not allow us to say that 20 mg/day of genistein would have some specified amount of protective effect."

Mark pronounces daidzin and daidzein as DAYD-zin and DAYD-zeen respectively. Some scientists pronounce the latter word DAYD-zain.

Mark thinks it would be a good idea–but a bold step–for tofu manufacturers to write "Contains genistein" on their tofu packages. It is certainly legal, as long as no claims are made about genistein. The question is how many people who buy tofu know what genistein is? Mark thinks that genistein is the one biologically active substance that would be best to put on the front of a product. Phytic acid binds minerals, and protease inhibitors are still thought of as antinutritional factors.

"If the cancer preventing effect is real in humans, it is probably due to genistein. But I have no idea whether or not it is real. It is all conjecture at this point. I don't put any faith in the animal research. It's part of what you have to do to develop a hypothesis because everybody else is going to be looking at it. I don't think the animal studies are particularly impressive at this point. There is good reason to think that consuming soyfoods may reduce cancer risk and it will probably lower your cholesterol and saturated fat content. There is apparently no down-side to eating soyfoods and there is a considerable up-side to it. We may eventually find out that the effect is valid only if people consume soy from an early age. The strongest studies are those done in vitro, but there are many problems extrapolating those results to humans. I only wish the soyfoods industry would take advantage of this window of opportunity, where people are talking about the possibility that soy prevents cancer, to get people to taste their products. Even if it turns out 5 years from now that soy doesn't prevent cancer, people will probably continue to consume the soyfoods, and realize many other health benefits." Address: PhD, Libertytown, Maryland 21762. Phone: 301-898-5769.

6607. Althoff, Susanne. 1994. Meatless muscle: Vegetarian bodybuilders bulk up just fine without the beef. *Vegetarian Times.* April. p. 69-70, 72, 74-75.

• ***Summary:*** Vegetarian bodybuilders include Andreas Cahling ("Mr. International," weighs 210 lb, from Cardiff by the Sea, California) and Bill Pearl (four time "Mr. Universe." He was a vegetarian when he won his titles in 1967 and 1971), Spice Williams (vegan actress and stuntwoman), and Beth M. Ley.

"'Twenty-five years ago there were virtually no professional bodybuilders who were vegetarian,' says James E. Wright, at editor at Muscle & Fitness magazine (Woodland Hills, California). 'Now there are several."

A table gives typical daily menus for Bill Pearl, Andreas Cahling (incl. Tofu Burrito and Rice pudding made with soymilk), Spice Williams (10 oz. shake with soymilk, water, and soy protein powder, 8 oz. tempeh burger, 2 cups cooked TVP (textured vegetable protein)).

Pearl, age 63, is still a vegetarian but no longer competes. "Spice Williams turned vegetarian as part of a program to get her life back on track after overdosing on drugs."

Photos show the muscled bodies of (1) Bill Pearl. (2) Spice Williams. (3) Andreas Cahling.

6608. Child Haven International. 1994. Soymilk Cottage Industry–Phase IV: A request for funding to the NGO Division of CIDA-OIDP. Maxville, Ontario, Canada: CHI. iii + 38 p. April.

• ***Summary:*** This proposal for funding was written by Hart Jansson. In the title: NGO stands for "non-governmental organization. CIDA-OIDP stands for Canadian International Development Agency–Ontario International Development Program. This proposal was written after the report by Thakur (24 Sept. 1993) basically stopped all funding from CIDA itself to Child Haven's "Soymilk Cottage Industry" project.

Contents: Country. Project history. Sector. Objectives: General, specific. Background: Problems, assumptions, risks. Relevant experience. Implementing NGOs. Means to achieve objectives: Project structure, inputs. Implementing, monitoring and reporting: Implementation schedule, equipment installation logistics. Self-reliance. Results expected. Evaluation: Impact on women, impact on the environment. Previous contributions.

Appendices: 1. Interim Progress Reports for the Third Phase of the SoyaCow project and the SoyaCow Newsletters. 2. Letter of intent regarding the royalty fee licensing of the SoyaCow patent. 3. The SoyaCow technology and method of producing soymilk. 4. Cost-benefit analysis for the SoyaCow technology. 5. Budget for the Fourth Phase of the SoyaCow Project. 6. Letters of appreciation from soyfoods experts.

Letter (e-mail) from Hart Jansson. 2010. Oct. 27. We did not receive any funding for the Phase IV proposal. I believe that funding was denied due to a change in priorities at CIDA, and of course the negative report [in Sept. 1993 by Dr. Thakur]. Address: Maxville, Ontario, Canada.

6609. Colorio, S. 1994. Re: The Agrolactor–A soya milk production machine (Letter to the editor). *Soyafoods* (*ASA, Europe*) 5(1):7. Spring.
• ***Summary:*** The writer states that his company makes the Agrolactor which "can produce, by simple efficient technology, between 2,000 and 3,000 litres of soya 'milk' per day and the soya milk is of exceptional quality." The fully automatic machine, which is particularly suitable for small and medium sized operations, allows for sterilization of the mixing water, measuring and crushing of soybeans, soymilk extraction, okara recovery, incorporation of flavor and syrup, pasteurization at 100ºC for 2 minutes, and cooling to +4ºC. Address: Agrolactor, Actini SA, Parc de Montigny, Maxilly, 74500 Evian, France. Phone: +33 5070 7474.

6610. *Food Processing* (*Chicago*). 1994. To ban or not to ban: Here's what *Food Processing* readers had to say about BGH [Bovine Growth Hormone]. 55(4):108. April.
• ***Summary:*** This magazine polled its readers with the question, "Do you think the food industry should ban the use of milk from BGH-enhanced cows?" 64% said Yes, ban BGH! 36% said no. Many sample comments are printed.

Thereafter this sidebar notes that a recent poll by the *Chicago Sun-Times* asked readers if they would drink milk from cows fed with growth hormones. 89% said No, and only 11% said Yes.

Accompanying the sidebar is "An open letter to Jeremy Rifkin," by Kitty Kevin, associate editor, criticizing Rifkin's views and ways of expressing.

6611. Kath. Gemeinden St. Johann und St. Joseph. 1994. Soja fuer Ghana [Soya for Ghana]. Duisburg-Hamborn, Germany. 24 p. Illust. 21 cm. [Ger]
• ***Summary:*** Each year this group of German Catholics has one development-help project in Ghana. In 1991 and 1992 it was trees for Ghana. In 1993 it was soya for Ghana. Contents: Development help? by Gottfried O. Praem. Africa's need (incl. population growth, demographics, per capita GNP, and infant mortality). Our new project: Soya for Ghana. Why soya? Yields a variety of foods, healthy, ethical (in relation to eating animals and protecting the environment), good for agriculture. History of the soybean plant. Food products from the soybean: Soymilk, tofu, soy protein, soy sauce, miso, tempeh, soy oil, soy sprouts. Cultivation of soybeans in northern Ghana. Planting and harvest. Ghana–the land and its agricultural products. Teaching hygiene in Ghanaian. Dear money: Where does it come from and how is it spent? Past projects in Ghana and the 1993 Soya for Ghana project. The Bole mission station in northern Ghana (90,000 inhabitants of which 4,000 are Christian). Recipes. A talk with Brother Rudolf, age 62, during his visit to Hamburg in Sept. 1993. Address: Duisburg-Hamborn, Germany.

6612. Messina, Mark J.; Persky, Victoria; Setchell, K.D.R.; Barnes, S. 1994. Soy intake and cancer risk: A review of the *in vitro* and *in vivo* data. *Nutrition and Cancer* 21(2):113-31. March/April. [112 ref]
• ***Summary:*** Contents: Abstract. Introduction. Estrogenic and antiestrogenic properties of genistein. Genistein, signal transduction, and cancer cell inhibition. Animal studies: Mammary cancer, intestinal cancer, liver and bladder cancer, prostate, skin and stomach cancers. Epidemiologic studies: Breast cancer, prostate cancer, colorectal cancer, lung cancer, stomach cancer, esophagus, bile duct, liver, and pancreatic cancers. Discussion.

Tables: (1) Preparation and use of traditional soyfoods and Western soy products. The traditional soyfoods are tofu, soymilk, and miso. The Western soy products are soy protein isolate (used in infant formulas etc.), soy protein concentrate, soy flour / grits, textured soy protein. (2) Effects of soy or soy isoflavones on spontaneous and chemically induced cancers or precancerous lesions in laboratory animals (listing of 26 experiments in 5 columns; author, year and reference number, animal, soy product, cancer / inducing agent, findings {no effect or protective}). (3) Epidemiologic studies involving soy product intake and cancer risk (listing of 40 experiments in 7 columns on 3 full pages).

Note: This is Dr. Messina's most comprehensive article on the subject to date. He spent 2 years writing it. Originally it was a 45-page manuscript with 300 references, but both the number of words and references were condensed by about half. Yet for years it was the most widely cited paper in the field of soy. Address: 1. 8401 Mapleville Rd., Mt. Airy, Maryland 21771; 2. Epidemiology/Biostatistics Program, School of Public Health, Univ. of Illinois at Chicago, Chicago, IL 60680. Phone: 301-898-5769.

6613. *Natural Foods Merchandiser.* 1994. Monsanto sues dairy producers over BGH-free label. April. p. 10.
• ***Summary:*** Monsanto makes Posilac, generically known as BGH or bovine growth hormone. It is suing two dairy companies that do not use BGH on the grounds that their promotional materials falsely imply that milk from untreated cows is safer or of higher quality than milk from treated cows.

Monsanto also sent letters to several retailers warning them that their advertising is in violation of federal guidelines. Karen Buckey, a retailer who received on of the letters, says she "will achieve FDA's 'proper context' by saying she is carrying rBGH-free products because her customers want them, because of her concern for the health

of the cows and because of possible negative economic effects on small family farmers.'"

"The board of directors for the NNFA voted unanimously to condemn FDA's disclaimer requirements.

"HFA, a San Francisco-based advocacy group, also opposes the FDA guide-lines. HFA is spearheading a campaign to remove BGH-treated milk from school food programs and has run full-page anti-BGH ads in *Time, Newsweek, U.S. News* and other national publications. For more information, contact HFA at 1550 California St., Suite #6, San Francisco, CA 94109, 415-485-1495."

6614. **Product Name:** VeganRella (Cheese Alternative–Non-Dairy, Non-Soy): [Mexican, or Italian].
Manufacturer's Name: Sharon's Finest (Product Developer-Marketer).
Manufacturer's Address: P.O. Box 5020, Santa Rosa, CA 95402-5020. Phone: 707-576-7050.
Date of Introduction: 1994. April.
Ingredients: Organic Brazil-nut milk (water, certified organic Brazil nuts), tapioca, rice, oats, canola oil, Irish moss, yeast, garlic, spices, basil, sun-dried tomatoes, citric acid, salt.
Wt/Vol., Packaging, Price: 8 oz.
How Stored: Refrigerated.
New Product–Documentation: Reed Mangels. 1993. Vegetarian Journal. Nov/Dec. p. 26. "Vegetarian Journal's guide to cheese alternatives and non-dairy yogurt." As this magazine goes to press, Sharon's Finest (of Santa Rosa, California), after 7 years of research, has just released a new vegan cheese named Vegan Rella. "We had an opportunity to taste the cheese and found it to be a big improvement over Soymage" [Made by Galaxy]. Vegan Rella contains organic Brazil-nut milk, tapioca, rice, oats, canola oil, Irish moss, garlic, spices, basil, sun-dried tomatoes, citric acid, and salt. It is available in hard cheese form (in Mexican and Italian flavors) and in cream cheese form (in either plain, or onion and dill flavor).

Leaflet distributed at Natural Products Expo East in Baltimore, Maryland. 1993. Oct. "Product Information: Vegan Rella" "VeganRella is the breakthrough 100% non-dairy cheese alternative. Firm when cold, it melts easily when heated, and stretches and tastes like cheese. A special process uses organic brazil nuts from the Amazon to make the cheese-like base." Product features: Low in fat (all from canola oil). "Free of soy, dairy and cholesterol. 5% of profits go to Rain Forest protection groups ($13,400 so far), and EarthSave Foundation. Our purchase of Brazil Nuts helps indigenous workers in the Amazon Rain Forest."

VeganRella "Fact sheet." Dated 1993. July 22. Contents of this single-sided leaflet (28 cm): Introduction. The concept. Product features. Products. In the list of ingredients, casein is not mentioned.

Leaflet (8½ by 11 inch, black, purple, and green on tan kenaf paper) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 1994. March 10-13. "Product information. Sharon's Finest Healthy Alternatives." "VeganRella: The first 100% non-dairy alternative to cheese that melts, tastes, and shreds great. Lower in fat and free of cholesterol and lactose. Uses certified organic Brazil nuts from the Rain Forest to replace all dairy products. Delicious cream cheese varieties also." Ingredients: "Organic Rainforest Nectar (water, FVO-certified organic Brazil Nuts), tapioca, rice, oats, irish moss, yeast, spices, citric acid, salt.

Letter (fax) from Judy Bowhall of Sharon's Finest in response to enquiry. 1994. April 20. This product was introduced in Sept. 1993 but the first two flavors (Mexican and Italian) were not sold until April 1994.

Talk with Bob Davis of Washington. 1994. May 7. He developed the VeganRella line of products. He has just finalized a nori-ginger flavor of VeganRella. This will be the third international flavor after Mexican and Italian.

Talk with Richard Rose, President of Sharon's Finest. 1995. April 3. The hard cheese form of VeganRella outsells the soft tub form by about two or three to one.

6615. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Cheese and cream cheese alternatives (with or without soy)–Bibliography and sourcebook, 1896 to 1994: Detailed information on 334 published documents (extensively annotated bibliography), 159 cheese alternative products, 119 original interviews (many full text) and overviews, 44 unpublished archival documents. Lafayette, California: Soyfoods Center. 225 p. Subject/geographical index. Author/company index. Printed April 28. 28 cm. [570 ref]
• ***Summary:*** This is the most comprehensive book ever published about soy cheese, soy cream cheese, and other cheese alternatives. It has been compiled, one record at a time, over a period of 19 years, in an attempt to document the history of this subject. Its scope includes all known information about cheese and cream cheese alternatives, worldwide, from 1910 to the present.

This book is also the single most current and useful source of information on soy cheese, since 97% of all records contain a summary/abstract averaging 190 words in length.

This is one of more than 45 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 34 different document types, both published and unpublished; every known publication on the subject in every language–including 528 in English, 11 in French, 11 in Japanese, 10 in German, etc.; 47 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of soy cheese from its earliest beginnings to the present.

The bibliographic records in this book include

334 published documents and 44 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 159 commercial cheese and cream cheese alternatives products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included.

A brief history of cheese alternatives (p. 7-8): Cheese alternatives are Western-style cheeselike products that contain a significant amount of non-dairy protein, typically from soybeans, nuts, or seeds. They may or may not contain casein or caseinates (the main protein found in milk). The hard cheeses that contain casein typically melt, stretch, and shred in much the same way as dairy cheeses. We distinguish cheese alternatives from imitation cheeses and cheese substitutes in which the butterfat is typically removed and replaced by vegetable oil or by no fat at all.

The world's first non-dairy cheeselike products were the various types of fermented tofu made in China (where they are called *doufu-ru, fuyu,* or *sufu*). Said to have been developed 1,400 to 1,500 years ago, they were first mentioned in documents during the Ming dynasty in China in the 1500s (Chin Kan. 1534. Messenger to Ryukyu; Li Shih-chen. 1578-1597. *Pen-ts'ao kang-mu*). Since we consider fermented tofu (sometimes called "soy cheese") to belong to a different category of foods from cheese alternatives (in part since the former do not melt), we discuss them in a separate book.

The first commercial cheese alternative in the Western world was invented and made by Dr. John Harvey Kellogg, the famous Seventh-day Adventist physician and vegetarian. Named Nuttose, it was launched in 1896. Made largely from peanuts, it was a true non-dairy product that was also used as a meat alternative.

The first commercial soy cheeses in the Western world were developed and made Li Yu-ying in 1911. At his modern soyfoods factory near Paris, Li manufactured Fermented Tofu Cheese in Gruyère, Roquefort and Camembert flavors.

Between 1911 and 1985 most of the commercial cheese alternatives in America were made by Seventh-day Adventist companies. Though we know the names of these early products, their ingredients and properties are not always clear. In 1939 Madison Foods (Madison, Tennessee) introduced Cheze-O-Soy, based on tofu. In 1942 Butler Food Co. (Cedar Lake, Michigan) launched ViM-eat Soy-Nut Cheese and in 1944 Butler's Soynut Cheese. In 1951 Loma Linda Foods (Arlington, California) rolled out Vege-Chee (canned, based on tofu). And in 1961 Worthington Foods (Ohio) introduced Kreem-Chee, the world's second commercial non-dairy cream cheese.

The idea of cream cheese alternatives was first conceived of by another Seventh-day Adventist, Jethro Kloss. In April 1934 the *Miami Daily News* reported how approximately 6,000 people had recently heard him speak about dairylike foods made from soy beans at Bayfront park. He exhibited 21 foods made from soy beans (including cream cheese, yellow cheese, and cottage cheese) and invited the public to taste them.

By November 1938 the Wigmore Health Shop in London was making the world's first Soya Cream Cheese. The first two commercial tofu cheesecakes were created in 1971 by students of macrobiotics: One by Marcea Newman was sold at her Souen restaurant in New York; the other by David Kalan (named Tofu Blueberry Pie) was sold at his Crane's Call Bakery in Boston. The first two recipes for a soy cheesecake appeared in 1974: One by Marcea Newman (made with tofu) in her book *The Sweet Life: Marcea Newman's Natural Food Dessert Book;* the other by The Farm in Summertown, Tennessee (made with soy cheese, from naturally fermented / soured soymilk) in their booklet *Yay Soybeans!* The first recipe for a "Tofu Cheesecake" appeared in *The Book of Tofu* by Shurtleff and Aoyagi (1975).

The modern category of commercial soy cheeses and cheese alternatives was born under a bad sign. It began in America in March 1985 with the introduction of Soyarella–probably the most deceptive soyfood product ever launched in America. Though extremely popular for about a year, it was unfortunately mislabeled to deliberately deceive consumers. Though marketed as a "non-dairy soy product" which contained no casein yet melted like cheese, it was later found to contain about 15% casein. The "source" of Soyarella (not to be confused with TofuRella) is thought to have been Nature's Best in Osseo, Michigan. But the name of the manufacturer was not given on the label–and it remains a mystery to this day.

In America, this new category has a number of basic characteristics: (1) Casein (a milk protein) or caseinates is used in more than 95% of all products to make them melt and stretch like dairy cheeses. Less than 5% of all products are truly non-dairy; (2) In the late 1980s, most manufacturers, marketers, and retailers deliberately

concealed from consumers the fact that casein is derived from cow's milk (complicated by the fact that FDA regulations allow food products that contain casein to be called "non-dairy"); (3) Many consumers believe that most cheese alternatives are truly non-dairy products. Fortunately, labels and promotional materials have become more honest with each passing year–yet many consumers still remain confused and some deceptive practices still exist; (4) All products are free of cholesterol and lactose, and relatively low in saturated fats. Some are also low in total fats, calories, and sodium; (5) About 95% of the products are soy cheeses and 5% are nut or seed cheeses without soy. Most products contain tofu (either dried or fresh) as a major ingredient; (6) Most products are sold at natural- or health food stores, and retail for about 50% more than typical dairy cheese sold at supermarkets; (7) About 95% of the products are hard cheeses and 5% are soft cheeses, mainly cream cheeses.

The first major soy cheese to hit the market was Soya Kaas, introduced in Jan. 1986 by Richard McIntyre of Soya Kaas Inc., a subsidiary of Swan Gardens Inc. Marketed exclusively by American Natural Snacks of Florida, it is still America's most popular cheese alternative. In June 1986 Mozzarella Style Tofu-Rella was introduced by Richard and Sharon Rose of Brightsong Foods. The company later became Sharon's Finest and the product was renamed TofuRella. In Oct. 1986 Original Pizsoy (a whole-wheat pizza topped with soy cheese) was introduced by Tree Tavern Products; It was the first product in which soy cheese was used as an ingredient.

In Jan. 1987 Soymage was introduced by Soyco Foods, a Division of Galaxy Cheese Co.; This was Soyco's first soy cheese product and the first modern soy cheese that contained no casein. In April 1987 NuTofu was introduced by Cemac Foods Corp. This was Cemac's first soy cheese product.

In April 1988 Soyco shreds and slices were introduced–the first soy cheese shreds and slices. In 1988 new labels for Sharon's Finest Tofu-Rella became the first (as far as we can tell) to state clearly on the label that the casein in the product is derived from milk.

In Jan. 1991 Fat-Free Soyco was introduced–the first fat-free soy cheese. In Dec. 1992 Almond Cheeze was introduced by Wholesome & Hearty Foods–the first major non-soy cheese alternative.

In April 1994 VeganRella (made from Brazil nuts) was introduced by Sharon's Finest–a true non-dairy non-soy cheese said to have excellent flavor and texture.

The size of the natural foods cheese alternatives market in the USA is about $15 million/year at wholesale and $25 million/year at retail; this is the equivalent of about 5 million lb/year. The category has grown at a remarkable rate–about 20% a year for the past 3-5 years. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

6616. *Soyafoods* (*ASA, Europe*). 1994. UK catches up with soya 'milk' rules. 5(1):2. Spring.
• ***Summary:*** "Since 1987 it has been illegal, in the EC (according to EC regulation 1898/97) to use the word 'milk' on 'soyamilk' products. Hence the appearance of 'soya drinks' and 'soya beverage' labels throughout Europe, excepting the UK and Ireland.

"The UK, however, has taken a somewhat relaxed view of this ruling–until recently that is." The Ministry of Agriculture, Fisheries and Food (MAFF) is now cracking down and UK manufacturers may soon be required to use the term 'soya drink.' During negotiations on the EC regulation, MAFF tried to obtain an exemption for soya milks but failed. Yet the same regulation allows the term "coconut milk."

6617. *Soyafoods* (*ASA, Europe*). 1994. Soya 'milk' in Vietnam. 5(1):2. Spring.
• ***Summary:*** The second Franco-Vietnamese food and agriculture exhibition will take place in Hanoi on May 11-15. More than 100 French companies plan to participate. One of these, Actimode, has been working in Vietnam on joint projects since 1990. Near Hanoi they have established a soya milk factory using the Agrolactor system (see p. 8). The products made at this plant have been well accepted by consumers and the factory now makes 400,000 liters per year of soymilk.

6618. Woodhams, Dr. David J. 1994. Introductory essay: The toxicity of soybeans and related products. In: Valerie James and Richard James. 1994. The Toxicity of Soybeans and Their Related Products. Vol. 1. Scientific Reports, Laboratory Analyses, Field Observations. Auckland, New Zealand: Published by James and James. See Section Two. 9 p. April 11. [9 ref]
• ***Summary:*** Contents: Background. Soy protein based infant formulas. Traditional use. Conclusions.

Note: This was published as a separate booklet on 5 March 1995 by the Soy Information Network (SIN; Whangarei, New Zealand). Address: PhD, CEng, MIChemE, MIPENZ, MNZIC, Dairy Process Consultant, 2/47 Church St., Devonport 1309, New Zealand.

6619. Bean Supreme Ltd. 1994. Wholesale price list. P.O. Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. 2 p. May 1. 28 cm.
• ***Summary:*** The company sells the following soyfoods: Tofu (firm bulk and vacuum pack), Tofu Luncheon (3 flavors), Soysage, Tempeh (vacuum pack), Soymilk (Nice 'n' Healthy), Lite Licks Non-Dairy Frozen Dessert (6 flavors in 2 liter size, 3 of those flavors in 475 ml size, and bulk packs of 9 liters and 16 liters).

It also sells the following non-soy foods: Biofarm organic yoghurts (3 flavors), Malabar goat yoghurt, Cyclops

acidophilus yoghurt (5 flavors), Koromiko cheeses (10 flavors), Olive grove Middle Eastern foods (falafel mix, hoummus, Middle Eastern sauce, tahini), herbal teas (3 flavors), and Pacific Harvest sea vegetables (Karengo fronds, flakes, and shaker, and kelp shaker). Address: Penrose, Auckland, New Zealand.

6620. Elliott, Tom. 1994. Update on FarmSoy Company (Interview). *SoyaScan Notes.* May 1.
• ***Summary:*** Tom, who has lived on The Farm for almost 20 years, and his wife Barbara, purchased this company in July 1991 from Michael Lee. Michael was going to simply close the company and he had let it run down. Tom's background is in the excavating business and his wife is a nurse. He has not introduced any new products since he bought the company, but he did change the company name to FarmSoy Company. The company's main product is pasteurized tofu; they produce 1,500 to 1,600 lb once a week. They also make a little soy yogurt, soymilk, and tempeh, which is sold mostly to people living on The Farm. The company has 2 adult employees and has a positive cash flow.

People on The Farm no longer all get together like they used to when it was run communally. Stephen no longer to talks like he used to.

Update on the change of company name: Talk with Tom. 1998. July 8. Tom and Barbara incorporated their company on 2 March 1994 in the state of Tennessee. At that time they changed the company name to FarmSoy Company from The Farm Soy Dairy. Tom and Barbara are the only shareholders in the corporation. Address: 156 Drakes Lane (P.O. Box 96), Summertown, Tennessee 38483. Phone: 615-964-2411.

6621. Roller, Ron. 1994. Barley malt used as a sweetener in soymilk and other foods in America (Interview). *SoyaScan Notes.* May 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron knows quite a lot about barley malt and barley malt extract based on years of experience with these products. The terminology is important. It is important to distinguish between malted barley, barley malt, and barley malt extract, co-extracted barley malt, and barley malt syrup. During the years 1983 to 1986 the term "barley malt" appeared on Edensoy labels as the name of the sweetener. In fact this was "co-extracted malted barley with corn," without added enzymes. Since about 1992 the name of this sweetener has been changed to "malted cereal extract" but the sweetener itself has not changed.

Malted barley is the barley grain that has been almost sprouted and dried. It is a rich source of enzymes for subsequent processes. From malted barley, one can make barley malt syrup and barley malt extract. Barley malt syrup usually contains some other added ingredient, such as [high fructose] corn syrup, whereas barley malt extract is a sweet syrup extracted from barley without the addition of anything else. Premose was a brand of natural barley malt syrups, and corn-barley malt syrups.

The main malting industry in the USA is for beer. Usually the maltsters, who make the malted barley, work separately from the people who make the extract. Barley extract is widely used as a browning and flavoring agent by the baking industry. It is sold in both powdered and liquid forms mostly to cereal and bread companies. It gives a malt flavor to breakfast cereals.

There are two types of barley malt extract–that which is co-extracted and that which is not. Co-extract means that an adjunct (such as pre-gelatinized corn, rice, wheat, or potatoes) is used with the barley. Malted barley is put in a mash tun, then the temperature is raised to a particular level, held there to activate the enzymes, then raised to the next level to activate other enzymes. They keep raising it. The barley has a very strong flavor and dark color. Adding the adjunct allows the extract to have a sweeter flavor and lighter color during co-extraction. Co-extraction can be accomplished using only the natural enzymes in the malted barley, however the more adjunct you add, the longer it takes to do the conversion, so most places add additional enzymes (said to be extracted from barley) to speed the conversion. The co-extracted barley malt added to Edensoy does not have any added enzymes. Straight 100% malt extract has an overpowering barley taste and very dark color. "The flavor of malt, in and of itself, if you're using it as a sweetener, has a super strong malt taste. That's why rice syrup has worked well in soymilks–it's sweeter (has a higher DE content), and doesn't have a dark color or malt taste. But ASP likes the malt taste. That is the taste of Edensoy.

ASP prefers not to use the term "barley malt syrup" because they feel it has a negative connotation to natural food consumers. It implies an artificial product, such as log cabin syrup. The labeling laws regarding syrups and extracts are not extremely clear. ASP did not want to say "malted extract and corn syrup" on the label since it sounds like the product contains high fructose corn syrup. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6622. *SoyaScan Notes.* 1994. Foods of East Asian origin that the macrobiotic movement/community has played a leading role in introducing to America, starting in about 1960 (Overview). May 10. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** These include brown rice, rice cakes, miso (many types), shoyu (traditional Japanese-style soy sauce), tamari (Japanese soy sauce containing little or no wheat; prior to about 1980 many practitioners of macrobiotics referred to natural shoyu as "tamari," thus inadvertently popularizing real tamari, which now may be better known in the USA than it is in Japan), natto (fermented soybeans), seitan (wheat gluten seasoned with a soy sauce broth; this

word was coined by George Ohsawa), amazake (thick rice beverage), umeboshi salt plums, sea vegetables (kombu, wakame, hijiki, nori, etc), tofu, soymilk, alternatives to dairy products (macrobiotics do not consume dairy products), buckwheat noodles (*soba*), kuzu, rice syrup, barley malt syrup, azuki beans, sesame seeds, sesame salt (*gomashio*), daikon (white radish) and daikon pickles, kabocha (Hokkaido pumpkin), shiitake mushrooms (also known as Chinese black mushrooms, they have a firm "meaty" texture), burdock, jinenjo (glutinous yam).

They have done this by starting and running many natural food companies to import, distribute, manufacture or grow these foods; by writing cookbooks and other books about these foods; by teaching classes (including many cooking classes in which these foods are used); by influencing other people to do all of the above.

The Japanese names of many of these foods have become anglicized and are now the standard English-language names.

The macrobiotic movement also played a major role in introducing "tahini" or sesame butter (a Middle-Eastern food) to America, starting with George Ohsawa's book *Zen Macrobiotics* in 1960. Of the first 20 records in the SoyaScan database that mention "tahini," 14 are associated with macrobiotics. Likewise, 22 of the first 50 records are associated with macrobiotics.

6623. Woodard, Teresa P. 1994. Re: Chronology of Combibloc, Inc. Letter to William Shurtleff at Soyfoods Center, May 12. 2 p. Typed, with signature on letterhead.
• ***Summary:*** 1930s–Perga-pack, the first carton-pack for liquids, is developed by the Jangenberg family's paper machinery business.

1958–PKL Verpackungssysteme GmbH is established in Linnich, Germany, as a subsidiary of the Jagenberg business. PKL is the parent company of Combibloc, Inc.

1960s–Blokpak, developed by PKL, becomes a leading packaging system for fresh milk and fresh milk products in Europe.

1970s. In 1972 PKL introduces the pergabloc system. In 1976 it is followed by the "combibloc," the carton system for aseptically packaging long-life food. In 1979 it is followed by the quadrobloc system.

1982–The FDA approves hydrogen peroxide sterilization of packaging materials in the USA.

1983–Combibloc, Inc. is founded in Columbus, Ohio, to meet the expanding market for aseptically packaged foods and beverages in North America and Latin America.

1984–Production begins at Combibloc, Inc. in Ohio.

1985–Combibloc secures a major contract with General Foods. Soups containing solids in "combibloc" aseptic cartons are introduced.

1989–PKL is acquired by two Swiss companies: SIG (Swiss Industrial Group) owns 75.1% and Swiss Bank Corporation owns 24.9%.

1989–Aseptic processing is hailed by the U.S. Institute of Food Technologists (IFT) as the "most significant food science innovation of the last 50 years"–even more significant than the microwave oven. The package ensures "outstanding protection of food contents... while ensuring maximum safety for consumer."

1989–Aseptic packages are banned in the state of Maine.

1990–The Aseptic Packaging Council is formed to initiate recycling programs throughout the United States and communicate the package's environmental attributes to consumers and legislators. Combibloc is an active member.

1991–The Swiss Industrial Group (SIG) becomes the sole owner of PKL.

1993 Feb.–Combibloc introduces Pour 'n Seal, a reclosable aseptic multi-serve carton, at the International Exposition for Food Processors.

1993 Sept.–Pour 'n Seal receives the Gold Star Award from the Institute of Packing Professionals at the AmeriStar Packaging Competition.

1993 Dec.–The first isotonic product is packaged in a Combibloc aseptic carton for U.S. domestic consumption.

1994 March–Curbside recycling of drink boxes reaches 3 million households milestone.

1994–The first juice concentrate is packaged in a Combibloc aseptic carton for domestic consumption.

1994–Maine repeals its ban on aseptic packages.
Address: Marketing Communications Manager, Combibloc Inc., 4800 Roberts Rd., Columbus, Ohio 43228. Phone: (614) 876 3700.

6624. Studer, Margaret; Winslow, Ron. 1994. Sandoz, under pressure, looks to Gerber for protection: Acquisition comes as company's drug division faces stiff competition. *Wall Street Journal.* May 25. p. B4 (West).
• ***Summary:*** Sandoz Ltd. has acquired Gerber Products Co. for $3.7 billion in order to diversify the company's business and protect itself from pricing attacks on its drug division. In the past Sandoz, founded in 1895, has relied on its drug division to provide a majority of total revenue. About 70% of Sandoz's world-wide profits were related to drugs, and about 35% its total profits came from one drug: Sandimmune (also known as cyclosporine) which is used in preventing the rejection of transplanted organs. The reliance on one big product as a major reason for Sandoz's move to diversify.

With the expiration of the patent for this particular drug next year, many generic companies will compete for this very lucrative market for Sandimmune and bring the price down. Analysts wouldn't be surprised if that product's sales drop 70 to 80% in the U.S. in the first year. To compete and stay on top, Sandoz has to diversify into businesses that are better protected.

Sandoz's major products are pharmaceuticals, nutrition, seeds, fine chemicals, agrochemicals, construction

chemicals, environmental engineering. But Sandoz CEO Rolf W. Schweizer says the plan is for pharmaceuticals, nutrition, and chemicals to contribute a roughly equal share of revenue. In 1967 Sandoz first entered the nutrition sector when it acquired the British health-food company Wander, the maker of Ovaltine [as well as the soy-based milk alternatives Wanderlac and Velactin]. Since then Sandoz has steadily built up its health food business through a number of acquisitions. Sandoz is the only one of Europe's three major chemical companies to make a major move into nutrition. The big three German companies–Hoechst AG, BASF AG, and Bayer AG–have held to their traditional focus, as have Roche Holding Ltd. and Ciba-Geigy Ltd., Sandoz's major Swiss rivals.

Sandoz's other major competitors are Imperial Chemical Industries PLC, Zeneca, Merck of the U.S., SmithKline Beecham, Glaxo, Nestle SA, Quaker Oats, and Coca-Cola.

Note: This is the earliest document seen (Aug. 2009) concerning either Sandoz or the roots of Syngenta. Address: 1. Basel, Switzerland; 2. New York. Staff Reporters.

6625. Marketing 632 Class–San Francisco State University. 1994. Vitasoy (U.S.A.) Inc.: Market research study. San Francisco, California. 33 p. 28 cm.

• ***Summary:*** This study was conducted by the students at San Francisco State University taking the Marketing 632 class. The project was introduced to the class by Jennifer Corsiglia of Vitasoy (USA).

Contents: Executive summary. Introduction: History, purpose of research, prior research, hypothesis. Methodology and limitations: Project planning, secondary research, expert interviews, focus group, questionnaire group, computer analysis and visual aids (the four types of respondents, based on usage, interest in the product, and future purchase intentions, are users, potentials, potential-triers [they have tried soymilk], potential-non-triers [they have not tried soymilk]). Issues. Conclusions. Recommendations. Bibliography [very poor]. Appendices: Purpose/strategy of focus group, focus group preparation, focus group meeting (10 people in San Francisco, 13 March 1994), focus group questionnaire (22 questions), budget and expenditures, findings, recommendations and conclusion.

Currently, 90% of Vitasoy's sales are through natural and health food stores. But recently the company has decided to look into how it could move into the broader mainstream marketplace, preferably into large supermarkets. The objective of this research was to help Vitasoy identify the characteristics of this potential market. The majority of the potential target market is defined as health conscious and active, between the ages of 18 and 32. Over 80% have some college education, and are primarily Caucasians (47%) or Asian Americans (24%). Most fall into an income range of $28,000 or less. Some 81% shop at supermarkets. The issues are: (1) Who is Vitasoy's target audience? A breakdown of all respondents shows that 17% are users (Note!!), 57% are potentials, and 26% are other. (2) Product positioning: The product should be positioned primarily as a healthy, nutritious beverage and secondarily as a milk substitute. (3) Promotional strategy: The group believes that free sample coupons are needed to entice potential customers to try the product. (4) Price strategy: Both the potentials and the users were found to be price sensitive.

What are the major factors in determining the brand of beverage to buy? Flavor 50%, price 35%, brand loyalty 10%, packaging 5%. If respondents received a free sample coupon for soymilk, 65% said they would use it (=redeem it). Address: San Francisco, California.

6626. Melina, Vesanto; Davis, Brenda; Harrison, Victoria. 1994. Becoming vegetarian: A complete guide to adopting a healthy vegetarian diet. Toronto, Canada: Macmillan Canada. x + 262 p. Foreword by Louise Lambert-Lagacé. Index. 26 cm. [20 ref]

• ***Summary:*** An excellent vegan sourcebook and cookbook by three registered dietitians. For the Contents and details, see the 1995 revised American edition.

Talk with Vesanto Melina. 1996. July 22. This book has presently sold about 25,000 copies in Canada alone. A revised U.S. edition was published in Nov. 1995 by The Book Publishing Co. in Summertown, Tennessee. Address: Canada.

6627. Youngerberg, Mike. 1994. A brief, rough history of Minnesota Edamame (Interview). *SoyaScan Notes.* June 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The idea for Minnesota Edamame originated in 1987. It came from a Japanese lady named Reiko Weston who lived in the metropolitan Minneapolis area, and was founder and operator of the Fuji-Ya restaurant. She was importing edamamé from Taiwan for use in her restaurant. Reiko called James Lambert, who owned Jameson-Williams Co., a grain elevator at Huntley, Minnesota, and a farm management company that does business in the Jackson and Fairmont area. She asked Lambert to find her land where she could grow edamamé locally. Jim Lambert was the moving force in the beginning. He brought in shareholders to raise money.

Mike is under the impression that James Lambert has left Minnesota Edamame and is now "out of the picture." He was in the grain business for some years. He was very involved in getting it started. Some other investors have become involved in it. The company still exists; its new address is Route 1, Box 53A, East County Road 34, Jackson, Minnesota 56143. Previously it was located at Route 3, Box 4, Fairmont, Minnesota. Bob Luedtke (pronounced LUD-kee) is now the manager. The company had a plant in Fairmont (actually in Huntley, which was a small town about 8 miles north of Fairmont). They moved this plant to Jackson

in about June 1991. In the plant they process and wash green soybean plants, blanch the pods, and then quick-freeze them in freezing tunnels.

The plant is still operating but the excessive rains and floods last year ("the nightmare of 1993") were very hard on all soybeans in Minnesota.

In Minnesota there is a quasi-governmental program named AURI (Ag Utilization Research Institute) that get funds from various sources (the lottery, etc.). Minnesota Edamame has received help from AURI in the form of technical expertise, etc. Two people at AURI who have worked closely with Minnesota Edamame are Duaine Flanders (Morris, Minnesota. Phone: 612-589-4532) and Keith Sannes (Crookston, MN. Phone: 218-281-7101). AURI has introduced Minnesota Edamame to another company in south central Minnesota named Minnesota Waxy, which does a lot of waxy corn plus Soy Supreme spray-dried soymilk. Minnesota Waxy, which has extensive contacts, is working to help Minnesota Edamame on its marketing program. From Japan, he brought in Mike Nishihara (president) Mr. E.J. Watanabe (general manager) of Nishimoto Trading Ltd. Bob Luedtke joined the company after Jim Lambert had gotten things started. They worked together for several years. The company first processed edamamé in 1989.

Minnesota Edamame, with the help of the Minnesota Soybean Growers' Assoc., got some MIATCO funds which are like Targeted Export Assistance (TEA) funds. MIATCO (Mid-America Agri-Trade Council) is the federal agency that helps companies target export markets with effective advertising, etc.

In Sept. 1991 Minnesota Edamame held a big saké party that was attended by the governor of Minnesota. It marked the signing of a 5-year, multi-million dollar soybean contract between Jameson-Williams Co. of Fairmont and Nishimoto Trading Co. The company changed its name to Minnesota Edamame in about May 1992 and at the same time Jim Lambert left. The plant was moved in about May 1992. The office was in Fairmont, then they bought a building in Jackson where they actually do the processing and freezing. Address: Director of Field Services, Minnesota Soybean Growers Assoc., 360 Pierce, Suite 110, N. Mankato, MN 56001. Phone: 507-388-1635.

6628. Clifford, Mark. 1994. Profile: K.S. Lo, Hong Kong. Milk for the millions. Grandson of indentured servant in Malaysia epitomises the Overseas Chinese success story. *Far Eastern Economic Review.* June 9. p. 78.

• ***Summary:*** K.S. Lo is the grandson of an indentured servant who had been sent to work in Malaysia's tin mines. K.S. Lo was born into the poverty of a Hakka family in China's rural Guangdong province, the son of a would-be scholar who moved to Malaysia after failing China's imperial exams. Mr. Lo lived in Malaysia from age 10 to 20. In 1930 the future soy-milk magnate relocated to Hong Kong to attend Hong Kong University, where he studied commerce and law. After graduation, he worked as a secretary to Malaysian-Chinese property magnate Eu Tongseng.

"But a trip to Shanghai in 1937 [sic, 1936], on a mission to wind up a failed business that one of Eu's sons had started, forever changed Lo's life. Shanghai in those days didn't have much of a nightlife for sober sorts like Lo, so he often passed his evenings at the YMCA reading and listening to lectures. One of those lectures, given by an American diplomat from Nanjing, was called 'Soyabean: The Cow of China' and it extolled the role that soya had historically played in the Chinese diet."

Describes the founding and early history of Vitasoy. In 1940 he set up a soy milk factory in Hong Kong's Causeway Bay district. The company got off to a slow start. "It was only when Vitasoy opened a retail store that sales took off.

"War put an end to the business after less than two years. Fortunately, Lo managed to sell the firm's stock of soybeans and sugar before the Japanese commandeered the company headquarters, giving him enough money to survive the nearly four years of war which followed.

"What he did with the proceeds of the sale was typical of Lo's inclination to go against the grain. Rather than investing in gold, the usual Chinese store of value, Lo bought useful products such as telephone wire and tins of anti-malaria medicine."

In 1942, Lo smuggled his family over the border into China, where a tobacco-farming venture flopped. So he returned to doing what he knew best: soy. His wife made cakes and he made soy milk; the business thrived. Vitasoy was first listed on the Hong Kong Stock Exchange earlier this year; now run by his son, Winston, it has annual sales of more than HK$1 billion. The company produces more than one million drinks a day.

"To fully understand Lo, it is necessary to understand his parents. From his mother, Lo imbibed a do-good instinct. From his scholarly father, he acquired a taste for the finer objects in Chinese culture. His teapot collection, which is being readied for a world tour, was born after he stumbled on a collection of Yixing teapots in a Hong Kong antique store. Now, more than 3,000 antique teapots later, Lo is the major benefactor of the Hong Kong Museum of Tea Ware." A photo shows K.S. Lo, smiling.

6629. Clifford, Mary. 1994. Many uses for soymilk. *Soy Connection* (*The*) (*Chesterfield, Missouri–United Soybean Board*) 2(2):2-3. [9 ref]

• ***Summary:*** Discusses soymilk as a milk substitute related to lactose intolerance, allergies, and insulin-dependent diabetes mellitus. It may also have anti-atherogenic and anti-tumor properties. Page 3 discusses soymilk nutrition, using soymilk, buying and storing soymilk, and gives a recipe for Strawberry-banana frosty. Address: RD, Roanoke Valley, Virginia.

6630. *INTSOY Newsletter* (*Urbana, Illinois*). 1994. INTSOY assists Egypt in establishing model soy foods processing pilot plant. No. 45. p. 2. June.
• ***Summary:*** INTSOY and the Food Technology Research Institute (FTRI, established in 1991) at the Agricultural Research Center (ARC) have opened a model processing pilot plant in Giza, Egypt. FTRI has a staff of about 150 researchers. A photo shows Wilmot Wijeratne of INTSOY training Egyptian scientists in the dry processing room, which contains an Insta-Pro extruder and ancillary equipment needed to grind soybean meal into flour for baking. The adjacent wet processing area contains complete systems for the production of soymilk, tofu, and dairylike products such as soy ice cream and soy yogurt. It is hoped that the facility will serve as a model for stimulating local entrepreneurs to use soybeans in commercial food products.

6631. Sousa, António Saraiva de. 1994. Re: Making cheese with cow's milk enriched with soymilk protein at Universidade Eduardo Mondlane in Mozambique. Letter to William Shurtleff at Soyfoods Center, June. 1 p.
• ***Summary:*** For the last several years, his department has been conducting research on soyfood products. They have achieved some results, mainly in the field of soymilk production. They are presently concentrating their efforts on making dairy products enriched with soymilk or the protein from soymilk. They are look for more information. Address: Prof. Dr., Eng., Dep. of Chemical Engineering, Faculty of Engineering, Universidade Eduardo Mondlane, C.P. 257, Maputo, Mozambique. Phone: 427 851.

6632. *SoyaCow Newsletter* (*Ottawa, Canada*). 1994. Agriculture Canada to develop protein isolates from soymilk. 3(2):2. April/June.
• ***Summary:*** The research will be headed by Dr. C.Y. Ma, a leading protein chemist at Agriculture Canada. The soymilk will be made from whole soybeans using ProSoya's patented process of air-less cold grinding.

6633. *SoyaCow Newsletter* (*Ottawa, Canada*). 1994. A Soyafood Alliance getting ready to go global with government support. 3(2):2. April/June.
• ***Summary:*** Agriculture Canada has decided to support a team of companies on a matching grant basis to develop value-added products and global markets based on milk from the SoyaCow. The companies include ProSoya, Gelato Fresco (an ice cream company), and two well-known dairies.

6634. Xu, Xia; Wang, H.J.; Murphy, P.A.; Cook, L.; Hendrich, S. 1994. Daidzein is a more bioavailable soymilk isoflavone than is genistein in adult women. *J. of Nutrition* 124(6):825-32. June. [33 ref]
• ***Summary:*** Though soybean isoflavones may have anti-cancer activity, their effective doses have not yet been determined. In this study 12 young adult women received single doses of 0.7 1.3 and 2.0 mg of soy isoflavones per kg of body weight from soymilk as part of a liquid diet. After 24 hours, approximately 21% of the daidzein and only 9% of the genistein were detected in the urine at all 3 doses. The total amount of isoflavones excreted in the feces was only 1-2% of the amount ingested. Total isoflavone concentration in the blood plasma was significantly increased to 4.4 ± 2.5 μmol/liter at 6.5 hours after a does of 2.0 mg/kg. The plasma concentrations of daidzein and genistein were approximately equal. 24 hours after ingestion, isoflavone concentrations in both the plasma and urine were nearly zero. The bioavailability of soymilk isoflavones seems to be, on average, only 15%, probably due to a first-pass effect; the remaining 85% seem to be degraded by bacteria in the intestines. But the bioavailability, especially of daidzein, may be sufficient to exert some health-protective effects. Greater focus on the biological effects of daidzein may be warranted.

Discusses: soymilk (powder, Now Foods), daidzein, genistein. Address: Dep. of Food Science and Human Nutrition, Iowa State Univ., Ames, Iowa 50011.

6635. Johnston, Trevor. 1994. Re: Recent developments at Bean Supreme Ltd. in New Zealand. Questions answered on Soyfoods Center letterhead (dated 27 June 1994) and returned to SC on 8 July 1994. 2 p. Plus handwritten note with signature on letterhead.
• ***Summary:*** In April 1989, in order to expand operations, the company moved to its present address in Penrose from its former location at 1 Wallingford St., Grey Lynn, Auckland. In about Feb. 1990 the company changed its name to Down to Earth Natural Products Ltd. in order to try to reposition away from a specialty soy identity. However a major household cleaner company in New Zealand launched a product with the same name, "Down to Earth," so Trevor had to change the company name back to the original name. But at the same time the company redeveloped its logos and the corporate identity.

Presently, the company's best-selling soyfood products are Nice 'n' Healthy (isolated-based soymilk, launched in March 1989), and Lite Licks Dessert (soy ice cream, launched in Oct. 1986).

The company's brands also include Bio Farm, and Spiral Foods. Address: Managing Director, Bean Supreme Ltd., P.O. Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. Phone: (09) 590 592.

6636. Bianchini, Gilberto. 1994. Re: Early history of tofu and seitan in Italy. Letter to William Shurtleff at Soyfoods Center, July 16–in reply to inquiry. 3 p. Typed. [Eng]
• ***Summary:*** "I started to make tofu and sell it officially in October 1979 in Rimini, Italy, at Via Cuoco 9 (Community Food). I first learned how to make tofu in London at the

Community Health Foundation, Old Street 98, in 1976 or 1977. Then I gained additional experience in making Japanese-style nigari tofu from Centers and individuals in France and Belgium. I first visited the United States in late 1978 and early 1979. On 9 Feb. 1979 I visited you [William Shurtleff and Akiko Aoyagi] at New-Age Foods Study Center in Lafayette, California, having a good impulse in tofu pioneering, to talk about making tofu in Italy.

"In 1980 I visited a friend, Mr. Franco Pagliano, in Milan; that city had many Chinese restaurants. Mr. Pagliano had learned how to make tofu from Mr. Roland di Centa. was supplying these Chinese restaurants with a small quantity of tofu (he made it the Chinese way, with calcium sulfate), but he was soon forced to stop production because he had difficulties producing, unofficially without the proper permits, in his apartment. It was a really good experience for me to get to know Chinese and Japanese people; Franco was very skillful and shared many secrets with me. Then after several months he called me to say that he was going to stop tofu production and that he could introduce me to his clients–which he did, including a Japanese restaurant, Suntory Italia, which had not previously accepted his Chinese-style tofu. I had contacts in Milan and met Mrs. Giovanna Mazzieri at a conference in Milan, where tofu was presented to the public and the press, together with the Italian Chefs' Association. I remember that on that occasion I first had a large number of tofu kits sold through Mrs. Mazzieri.

"I survived financially making tofu for the first couple of years. I sold my tofu to the Chinese restaurants of Milan, driving there once a week from Rimini in my small refrigerated car (280 km each way). I soon got tired of the trip, but actually I was motivated and satisfied and full of curiosity for the Chinese and Japanese atmosphere. Meanwhile, I was stopping to deliver my tofu at all of the macrobiotic and natural food shops and restaurants along the way (in Cesena, Forlì [Forli], Faenza, Bologna, Modena, Reggio Emilia, Parma, etc.). During those years I did promotion for soyfoods, including cooking classes.

"In July 1982 I attended the Soyfoods Conference in Seattle, Washington (we met again) because of my interest in large-scale production and in making a report on soyfoods, together with a lady dietitian from Bologna (I forget her name) supported by the University of Bologna. She continued introducing the many good qualities of soyfoods to those in her field, medical doctors and nutritionists. For more information on this, contact the Sunsoy Food company in Bologna.

"After my 1982 trip to the USA (now having with me color slides, literature, and information), I developed contacts with the largest food distributing company in Italy, Coop Italia, but the people in charge believed that it was too early to distribute tofu widely in Italy–the market was not yet ready... maybe in the future. Even though they were open to innovative ideas, the negative answer was disappointing.

"I remember there was a time in 1983 when I had the luck of meeting a Japanese girl, Fusako Aoki, who was just passing through Rimini–a very rare occasion. She helped me in tofu-making classes for about 3 months, in Rimini and other cities. Meanwhile many people visited me to learn about making and selling tofu (future competitors)!

"I had enough technical skills to develop and build (mostly by myself) a stainless steel continuous open-air steam cooker (not pressurized! a secret for good tofu), a second-hand Weston (from the USA) vibrating screen, a good stainless steel hammer mill. This was really good equipment for those times, the only equipment of its kind in Italy that I knew of.

"I was in charge of everything–production, sale, promotion, and new product development. Unfortunately I was not able to grow from the individual to the team aspect of the work. I exhausted myself, ending production in June 1988. In that year I was supplying centers in cities like Rome, Firenze [Florence], Torino [Turin], Bologna, Treviso, and Ravenna–mostly in northern and central Italy. The demand was growing and it reached the point that in places like Florence, Rome, and Torino people started companies to make soyfoods. At that point, I could survive only by diversifying products, improving packaging, moving into a larger factory at a new location, and expanding the company and the number of employees.

"I could not do this, and after a project of moving in Toscana near Florence, to live and work there, I had to discontinue my activities. The other reason was that my family was growing rapidly; I had 2 children in 1985 and 1987, and I did not want to jeopardize or endanger my family's personal financial situation. Looking back, I think I made the right choice, but I feel good when someone remembers me for my good tofu. I sold my equipment at a low price to a company named Food for All in Verona, then helped them with my knowledge of making and selling tofu. They are connected to the Ananda Marga Society, are supporting activities in India, and are really nice people.

"While in business, I was producing: Tofu (vacuum packaged or in bulk), tofu spreads (various flavors), tofu burgers, tofu mayo (fresh or long-life, in glass jars), seitan, seitan burgers, spreads, soymilk (sometimes, and only fresh), and various tofu desserts (fresh and perishable). I only made small batches of tempeh, for personal use and experimentation (not sold commercially) using cultures from the USA. Near the end of my activities, I produced 400 kg (and up to 600 kg) of tofu (base product); officially I had only one (maximum two) part time workers, with good help from my relatives.

"The only company (apart from the person of Mr. Pagliano) I know that made tofu before I did was the Poporoya company in Rome, which produced and sold it at his branch in Milan, the Poporoya-shop, a Japanese shop.

"People introducing soyfoods in Italy were the

macrobiotic centers: Mr. Ferro Ledvinka from Rome, Mr. Alois Grassany from Bologna, and Mr. Roberto Marocchesi from Torino.

"I still see an opportunity in the future for making and selling tofu and tofu products in Rimini; this would be for me and my friends, but it would work only if it was connected with a larger project of a vegetarian cultural center. Who knows? Now I am a 'natural wood' carpenter." Address: Via Cuoco 9, 47037 Rimini, Italy.

6637. Weaver, Eric. 1994. Growing soybeans organically in Nicaragua (Interview). *SoyaScan Notes.* July 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Eric also supervises the development of Earth Trade's project in Nicaragua and he spends a large amount of time down there. During the last year or so, he has been to Nicaragua 4 times, a total of a month. Before that he worked for 10 years on the *Central America Bulletin,* an economics and politics newsletter published monthly in the USA by the Central America Research Group, so he went to Nicaragua regularly.

Cottonseed oil was the basic food oil in Nicaragua until 1991, after the new government of Violetta Chamorro took over from Daniel Ortega and the Sandinistas in national elections on 25 Feb. 1990; the Chamorro government changed the policies on subsidies in general and conducted an economic rationalization. Before that, the Nicaraguan government subsidized cotton production at huge losses. The official justification was that they needed the oil, but Eric thinks there were more complicated political factors. The cotton crop has now basically collapsed in Nicaragua. Starting in 1991, Nicaragua began to import soybeans, which they processed in the country's 9 or 10 cottonseed processing mills. President Violetta Chamorro's son-in-law, Antonio Lacayo, who is actually the de-facto president, got into soy oil processing even before the cotton was phased out. That is another reason for the move toward soy oil–because he had business interests in soya. Earth Trade is now starting to do a feasibility study of organic oil processing in Nicaragua. The company would like to set up an organic facility that will process not only soy oil, but also peanuts, sesame, etc. to produce a variety of organic oils.

Starting in the mid-1980s Nicaraguan breeders at CEA (a cotton experimental center near Leon) developed a soybean strain named CH86 from the Brazilian tropical varieties of soybeans. Now CH86 has been grown increasingly by farmers during the last few years–starting in about 1991 or 1992. The variety that they call Cristalina (which may be known internationally as light hilum) is a tropical variety that grows pretty well in Nicaragua. Nicaraguans calculate crop yields in hundredweights (cwt) per manzana. Note: 1 hundredweight = 112 pounds. A *manzana,* a traditional unit of land area in Central America, is the area of a square 100 *varas* on a side; it therefore varies according to the length of the vara. On average it equals 0.7 hectares or 1.7 acres. The CH86 averages 47-50 cwt/manzana and the Cristalina averages about 30 cwt/manzana. There is a big demand for the seed of these two varieties, and that's why there is a shortage on the market. Earth Trade grows both varieties. Earth Trade has talked with some Japanese buyers who are interested in Cristalina for soymilk and CH86 for tofu. They were very close to signing a contract then the price started to fall, so they backed off for a while.

Earth Trade's first organic soybean crop in Nicaragua was harvested in December 1993 as a rotation for sesame. They were planning to sell it on the international market organically, but the producer sun-dried it and it got rained on and became spotted; so Earth Trade sold those soybeans for $12-$12.50 per cwt on the local Nicaraguan market for soy oil Earth Trade presently has in the ground enough soybean seeds to produce approximately 1,000 tonnes of the CH86 and 500 tonnes of the Cristalina. The CH86 was planted in June and the Cristalina is being planted now, in July; both should be ready to harvest in December.

In Nicaragua, all substantial agriculture is located on the Pacific Coast; Earth Trade grows its soybeans in this region to the northwest of Managua, around the city of León (the capital of León Department) and in Chinandega. Address: Secretary-Treasurer, Earth Trade, 1814 Franklin St., Suite 710-E, Oakland, California 94612. Phone: 510-987-7222.

6638. Guerimbaye, Midaye B. 1994. Moyen Chari: Palidoyer pour le soja [Central Chari: A speech in the defense of soya]. *Progres* (*N'Djamena, Tchad*)**.** July 28. p. 8. [Fre]

• ***Summary:*** His name is Akintayo Issaya, a volunteer for the United Nations dispatched to the Directorate of Human Resources in the Ministry of Agriculture. From Doyaba to Sarh in Tchad [Chad] he is making the promotion of soya his top priority. Animated with an exceptional courage, he visits village after village in central Tchad to explain to the population the importance of intensifying their cultivation of soybeans, always with emphasis on its popularization. He says that soya is a pill to take to counter the unfortunate effects of the devaluation of the franc in rural areas. Rich in nutritional value, soya can be substituted for a variety of more expensive foods. He teaches workshops to groups of women in villages, to help them fight against malnutrition by using soy in many different forms and ways.

Soya is rich in protein as well as essential vitamins. A kilogram of meat contains 200 gm of protein, while a kg of soybeans contains 450 gm. Soybean seeds contain 30-45% protein compared with only 27% in peanuts and 25% in common beans. The soybean can also play a major role in improving the soil, by adding nitrogen obtained from the air. Practically speaking, the soybean can be consumed in many different ways, which are easily incorporated into traditional recipes. With the soybean, once can prepare milk, croquettes,

biscuits, bread, mustard, yogurt, and coffee.

Note: This article makes no mention of soybean cultivation in Africa. Is Mr. Issaya (like Johnny Appleseed) not taking soybeans with him in his travels and showing Africans how to grow them in their home gardens (for use, perhaps, as edamamé) or farms. Address: Chad.

6639. Dwyer, Johanna; Goldin, B.R.; Saul, N.; Gaultieri, L.; Barakat, S.; Adlercreutz, H. 1994. Tofu and soy drinks contain phytoestrogens. *J. of the American Dietetic Association* 94(7):739-43. July. [45 ref]

• ***Summary:*** Phytoestrogens, compounds with weak estrogenic activity such as isoflavones, coumestans, and resorcyclic acid lactones (lignans), are found in several dozen plants eaten by humans, including some soy products. As the intake of soyfoods rises in the American diet, the activity of phytoestrogens may reach biologically effective levels. Phytoestrogens appear to have both estrogenic and antiestrogenic activity. They may also help prevent cancer. "Anticancer activity has been demonstrated by inhibition of tumor cell growth. Also, they appear to act in other ways that may inhibit tumor formation and growth, including inhibition of tyrosine kinase; inhibition of cell growth stimulated by epidermal growth factor; inhibition of steroid aromatase kinase and of DNA topo-isomerase; elevation of sex-hormone-binding globulin; and possibly lowering of endogenous estrogen levels."

Of the various products tested, tofu contained the highest level of isoflavones. Different brands of tofu contain from 73.0 to 97.5 micrograms per gram (wet weight) of the phytoestrogen daidzein and 187.4 to 215.9 micrograms of genistein per gram. By comparison, the soy drink First Alternative (made by Protein Technologies International of St. Louis, Missouri) contains only 7.0 micrograms of daidzein per gram of weight and 21.0 micrograms of genistein. The two soy-based specialty formulas tested were nearly devoid of these two isoflavones.

The tofu products tested were: Kikkoman firm, Nasoya soft, Azumaya soft, and Vitasoy silken. The soy-based specialty formulas were Jevity Isotonic, Enrich, and Glucerna–each made by Ross laboratories, Columbus, Ohio.

Note: What is the isoflavone content of a typical 130 gm serving of tofu? 9.5 to 12.7 mg of daidzein and 24.3 to 28.1 mg of genistein.

A sidebar (p. 741) features an interview with Johanna Dwyer and Nora Saul (both women); their hospital happens to be located in Boston's Chinese community. "Journal: What are phytoestrogens? How do they function? Dwyer: Phytoestrogens such as isoflavonoids and lignans, are compounds found in certain plants that are inherently active or are converted by human intestinal microflora into biologically active, hormone-like substances. Phytoestrogens exert weak estrogenic activity, most likely attributable to their ability to activate estrogen receptors in cells such as those in the vagina, uterus, and mammary glands. Depending on the biological environment and their chemical structures, phytoestrogens can function as either estrogens or antiestrogens.

"For example, in premenopausal women, who have high levels of circulating estrogens, phytoestrogens may function as antiestrogens. This is because phytoestrogens that bind weakly at estrogen receptor sites may compete for a place on the estrogen receptors with endogenous estrogens, which have much stronger affinity for the receptor sites. On the other hand, in postmenopausal women, who have low levels of endogenous estrogens, phytoestrogens may function as estrogens. Although phytoestrogens only bind weakly at estrogen receptor sites, there is little other estrogen in circulation, so phytoestrogens do bind to estrogen receptors At present, however, this explanation is based on hypotheses and must be tested."

"Journal: Why are these substances important biologically? Dwyer: A growing body of research suggests that phytoestrogens may reduce risks of certain cancers, especially hormone dependent diseases such as breast and prostate cancers." Address: 1. Prof. of Nutrition at the Tufts Univ. Schools of Medicine and Nutrition and director of the Frances Stern Nutrition Center, New England Medical Center, Boston, Massachusetts.

6640. Eden Foods, Inc. 1994. We've added something here (Antioxidants, vitamins & minerals) and cut something here (Ad). *Vegetarian Gourmet* (*Montrose, Pennsylvania*) No. 10. Summer. p. 3.

• ***Summary:*** This full-page color ad for Original Edensoy Extra shows a carton and a glass filled with the soymilk. At the bottom of the page is a $0.40 manufacturer's coupon. Edensoy is fortified with calcium and antioxidant vitamins Beta Carotene A, E, and D-2. Address: 701 Tecumseh Rd., Clinton, Michigan 49236.

6641. Harris, Mark. 1994. BGH: Cloudy judgment? *Vegetarian Times.* July. p. 16.

• ***Summary:*** The Pure Food Campaign (PFC), a consumer watchdog group based in Washington, DC, accuses Michael Taylor of the FDA of conflict of interest and unethical conduct in writing interim guidelines related to BGH (bovine growth hormone), a controversial drug that enables cows to produce more milk. Before joining the FDA in 1991, Taylor was a partner in the Washington-based law firm of King and Spauling, where he represented Monsanto, maker of the only approved BGH product on the market in this country.

6642. Imagine Foods, Inc. 1994. Who needs milk? (Ad). *Vegetarian Times.* July. p. 3.

• ***Summary:*** This attractive full-page color ad shows a large glass and 3 cartons of Rice Dream non-dairy beverage, in original, chocolate, and vanilla flavors. "More and more

Americans are reaching the same conclusion–they can enjoy life without milk. Now Rice Dream Enriched offers the best tasting dairy free alternative with as much calcium and vitamins A and D as milk."

This ad also appeared in the Oct. 1994 issue, p. 5, and the Nov. 1994 issue, p. 59. Address: Palo Alto, California. Phone: 415-327-1444.

6643. Moyes, John. 1994. Dear Soyafoods. Re: Use of the term "soya milk" in the UK. *Soyafoods* (*ASA, Europe*) 5(2):7. Summer.
• ***Summary:*** "The soya milk industry was somewhat perplexed by the article "UK catches up with soya 'milk' rules" in your Spring issue. Far from MAFF cracking down on manufacturers, the UK Minister for Agriculture, Fisheries, and Food, Gillian Shephard MP, has gone on record as asking for 'all steps to be taken to try and ensure that the term 'soya milk' can continue to be used in the UK.

"The UK government has submitted robust arguments to the Commission and industry is making its own representations in support of the Government position. It is abundantly clear that the influential dairy lobby within the EC is seeking to enforce an arcane directive in the mistaken belief that 'soya milk' represents a serious threat to their industry.

"The plain fact is that soya milk is a niche product and has no impact on dairy milk consumption. It is used by people who cannot take milk for medical reasons or reject it on moral and ethical grounds, e.g. vegans. The chance of selling cow's milk to these people is minimal, therefore the enforcement of the regulation would have no practical benefit to the dairy industry at all."

6645. **Product Name:** [Tofu, Tempeh, Soymilk, Okara Croquette, Soy Ice Cream].
Manufacturer's Name: Nutrem Soy Shop.
Manufacturer's Address: Managua, Nicaragua.
Date of Introduction: 1994. July.
New Product–Documentation: John Gabriel. 1995. Plenty Bulletin (Summertown, Tennessee). 11(3):4. Fall. "A Plenty volunteer in Nicaragua writes."

Chuck Haren. 1995. Nov. 8. SoyaScan Notes. "Soyfoods, Soynica, and Nutrem Soy Shop in Nicaragua" (Interview).

Note: This is the earliest known commercial soy product made in Nicaragua.

6646. Rattenbury, Jeanne. 1994. Answers about aluminum [packaging for soymilks and tofu]. *Vegetarian Times.* July. p. 26, 28.
• ***Summary:*** D.P.S. of Phoenix, Arizona, writes: "I've been wondering about the aluminum content of soymilks, juices and tofus that come in aluminum-lined paperboard containers. What is the aluminum level of these products? How safe are they to consume? Also, what about aluminum cookware? I've heard conflicting things about its contributing role in Alzheimer's and other illnesses."

Ans: "The first thing to know about aluminum is that you can't avoid it. The third most common element found in the earth's crust (after hydrogen and silicon), aluminum circulates in the dust in the air we breathe. Plants also inevitably absorb aluminum from soil and pass it along to their fruits and vegetables. Aluminum has no known physiological function; our kidneys do a good job of filtering it out of our systems before we absorb much of it. The U.S. Food and Drug Administration (FDA) has set no recommended dietary allowance (RDA) for aluminum intake, nor has it set any ceiling on the maximum amount of aluminum considered safe to ingest."

To be on the safe side, it may be best not to cook in aluminum pots–especially when cooking acidic foods such as tomatoes.

The current scientific consensus concerning Alzheimer's is that it is not necessary to take any extra ordinary steps to avoid aluminum in one's diet or otherwise.

6647. Simms, Kelly. 1994. Re: Soy's bad rap (Letter to the editor). *Vegetarian Times.* July. p. 8.
• ***Summary:*** The writer explains that she is a day-care provider who recently signed up to participate in a childcare food program which is funded by the USDA and the Michigan Dept. of Education. The program is designed to reimburse day-care providers for serving healthful meals and snacks to children.

"To ensure that the meals are healthful, guidelines are designed to require a provider to pattern the food components of a meal after the Food Guide Pyramid. Providers are also given a long list of unacceptable foods, which supposedly meet no nutritional need." The provider will not be reimbursed for the meals if they include an unacceptable foods. This list includes tofu, imitation milk (like soy beverages and infant formula, except in the case of allergies), and dairy substitutes (like soy cheese).

"Any program that allows the breading on a corn dog to count as a grain component but considers tofu to have no nutritional value at all is suspect. This food program really misses the mark, and I do feel slighted that as a provider, I cannot with a clear conscience participate in it. Give them a tofu covered stick for me." Address: Lansing, Michigan.

6648. *Soyafoods* (*ASA, Europe*). 1994. U.S. soyfoods consumption predicted to grow. 5(2):3. Summer.
• ***Summary:*** A U.S. study titled *An economic analysis of the use of soybeans as human food* predicts that domestic increases in consumption of soyfoods could use an additional

100 to 240 million bushels of soybeans each year. The study was conducted for the North Central Soybean Research Program by researchers at Agricultural Education and Consulting in Savoy, Illinois (Phone: 217-352-1190).

The study found that the following food categories which have the greatest potential to use soya as an ingredient (listed in descending order of projected use levels): (1) Flour products–bread, bakery products, pasta, and pizza dough. 2. Meat products–ground beef and processed meats. 3. Dairy products–liquid milk replacements, processed cheeses and yogurt. 4. Snack foods–crisps, extruded snacks, snack nuts and meat snacks. 5. Soyfoods–tofu, soymilk, tempeh, soy sauce, and miso. 6. Fresh vegetables–green vegetable soybeans.

However there will be tradeoffs. For example, increased use of soya to make meatlike products will ultimately lead to less need for soybean meal to feed livestock animals. But overall, the researchers believe that net crop income, at least for the North Central Region of the United States, will rise from nearly 8% to over 30%.

6649. **Product Name:** Provamel Organic Soya Milk (With Organic Wheat Syrup).
Manufacturer's Name: Vandemoortele (UK) Ltd. (Marketer-Distributor). Made in Belgium by Alpro.
Manufacturer's Address: Ashley House, 86-94 High Street, Hounslow, Middlesex TW3 1NH, England. Phone: (81) 577 2727.
Date of Introduction: 1994. July.
Ingredients: Incl. de-hulled soybeans, organic wheat syrup.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton. Retails for £1.22 (7/94, England).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Spot in Soyafoods (ASA, Europe). 1994. Summer, p. 5. "New from Provamel." The use of wheat syrup is innovative.

6650. Stevens, Liz. 1994. You call this milk? Yes, there are palatable alternatives to the real thing. *Detroit News.* Aug. 30. p. 3D, 12D.
• ***Summary:*** An overview of soymilks and rice milks in America. Address: Michigan.

6651. Organic Processing Corp. 1994. The organic industry's ingredient supplier (Ad). *Natural Foods Merchandiser.* Aug. p. 22.
• ***Summary:*** "Whole soybeans. Meal & flour. TVP & soy oil. Liquid soy extract. Protein concentrate. Whole wheat & unbleached flour. Degermed corn flour & grits. Corn malt syrup." Note: No address is given, but the company is located in Ohio.

6652. **Product Name:** VeganRella (100% Non-Dairy Cream Cheese Alternative–Non-Soy): [Plain, or Onion & Dill].
Manufacturer's Name: Sharon's Finest (Product Developer-Marketer).
Manufacturer's Address: P.O. Box 5020, Santa Rosa, CA 95402-5020. Phone: 707-576-7050.
Date of Introduction: 1994. August.
Ingredients: Rainforest Nectar (water, certified organic Brazil Nuts from the Rain Forest), canola oil, tapioca, rice, oats, onion, yeast, salt, dill, citric acid.
Wt/Vol., Packaging, Price: 8 oz plastic tub.
How Stored: Refrigerated.
New Product–Documentation: Reed Mangels. 1993. Vegetarian Journal. Nov/Dec. p. 26. "Vegetarian Journal's guide to cheese alternatives and non-dairy yogurt." As this magazine goes to press, Sharon's Finest (of Santa Rosa, California), after 7 years of research, has just released a new vegan cheese named Vegan Rella. "We had an opportunity to taste the cheese and found it to be a big improvement over Soymage" [made by Galaxy Foods]. Vegan Rella contains organic Brazil-nut milk, tapioca, rice, oats, canola oil, Irish moss, garlic, spices, basil, sun-dried tomatoes, citric acid, and salt. It is available in hard cheese form (in Mexican and Italian flavors) and in cream cheese form (in either plain, or onion and dill flavor).

Letter (fax) and prototype of two labels sent by Judy Bowhall of Sharon's Finest in response to enquiry. 1994. April 20. The company expects to sell a VeganRella Cream Cheese Alternative (in Plain and Onion & Dill flavors) in June 1994.

Talk with Richard Rose. 1994. April 21. He trademarked the term "Rainforest Nectar" in part to get around the questionable term "Brazil Nut Milk," and in part because in the future his company might have a whole line of Rainforest Nectar products. Its the same kind of concept as using Nutrasweet to refer to aspartame.

Call from Richard Rose. 1994. Sept. VeganRella Cream Cheese is now on the market.

Leaflet sent by Patricia Smith from Natural Products Expo West at Anaheim, California. 1995. March. "Free recipes! Using delicious cheese alternatives from the Sharon's Finest 'Land of Rella'! TofuRella, HempRella, VeganRella, Zero-FatRella, and AlmondRella." Contains 8 recipes. For more information call 1-800 NJOY NOW. Our internet address is richrose@nbn.com.

Product with Label purchased at Open Sesame in Lafayette, California. 1995. March 11. It retails for $3.59 for 8 oz. The tub is printed purple and green on white. Soyfoods Center product evaluation. Taste: Poor. Consistency: Poor, like custard. Price: Too expensive. Moreover, there was a patch of mold growing on the surface of the product.

6653. Soyfoods Association of America, Standards Committee. 1994. Soymilk standards: Second draft (First revision). Bar Harbor, Maine. 24 p. Aug. Unpublished manuscript. 28 cm. [19 footnotes]

• ***Summary:*** Contents: Purpose of standards. Definition of soymilk. Classification of soymilk. Definitions. Labeling of soymilk products. Microbiological guidelines for "soymilk." Endorsement; "Seal of Soymilk Integrity." Soymilk Standards Committee; Adoption and amendment of standards. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207/288-4969.

6654. Wang, Huei-ju; Murphy, Patricia A. 1994. Isoflavone content in commercial soybean foods. *J. of Agricultural and Food Chemistry* 42(8):1666-73. Aug. [28 ref]
• ***Summary:*** Isoflavones are one class of phytochemicals and are found in soybeans in large amounts. Twelve isomers of isoflavones were quantified: three aglycons and nine glucosides. Soybeans contain two major isoflavone aglycons, genistein and daidzein, and a minor one, glycitein. In the seed, the isoflavones are present primarily as Beta-glucosides. The nine glucosides are: daidzin, genistin, glycitin; 6"-O-acetyldaidzin, -genistin, or -glycitin; and 6"-O-malonyldaidzin, -genistin, or -glycitin.

This paper gives data on the concentration and distribution of isoflavones in 29 commercial soybean foods, grouped into three types: Soy ingredients, traditional East Asian soy foods, and second-generation soyfoods. Four values are given for each product in micrograms per gram, on an "as is" basis: daidzein, genistein, glycitein, and total isoflavones.

(1) Soy ingredients: Vinton 81 90: 600, 954, 82, 1636. Vinton 8191: 240, 648, 107, 995. Green vegetable soybeans: 546, 729, 79, 1354. Soy flour: 226, 810, 88, 1124. TVP #1: 473, 707, 202, 1382. TVP #1: 484, 702, 156, 1342. Soy isolate #1: 77, 273, 115, 466. Soy isolate #2: 115, 392, 102, 610. Soy isolate #3: 122, 393, 99, 615. Soy concentrate: trace, 13, 42, 56.

(2) Traditional soy foods: Roasted soybeans: 563, 869, 193, 1625. Instant soy beverage #1: 311, 617, 109, 1037. Instant soy beverage #4: 407, 665, 111, 1183. Tofu (73% moisture): 146, 162, 29, 337. Tempeh: 273, 320, 32, 625. Bean paste (ko chu jang in Korea): 272, 245, 77, 593. Fermented tofu: 143, 224, 23, 390. Honzukuri miso (rice and soybeans): 79, 177, 38, 294.

(3) Second generation soyfoods: Soy hot dog: 34, 82, 34, 150. Soy bacon: 28, 69, 24, 122. Tempeh burger: 64, 196, 30, 289. Tofu yogurt: 57, 94, 12, 164. Soy Parmesan: 15, 8, 41, 65. Soy Cheddar cheese #1: 2, 5, 27, 34. Soy Cheddar cheese #1: 34, 40, 35, 109. Soy mozzarella cheese: 11, 36, 30, 76. Flat soy noodle: 9, 37, 39, 85.

Some manufacturers use ethyl alcohol extraction to prepare soy protein concentrates; this process removes a substantial portion of the isoflavones. The products examined for this paper which had the lowest content of isoflavones (all less than 100 micrograms per gram) were: soy cheddar cheese A 34, soy protein concentrate 56, soy Parmesan 65, soy mozzarella cheese 76, flat noodle 85.

"Proposed anticarcinogenic doses of soybean isoflavones range from 1.5 to 2.0 mg per kg of body weight per day (Hendrick et al, 1994). There are a number of soy food choices that will fit this dose requirement without the need to consume unusual amounts of these soy foods."

Isoflavone standards and extraction of isoflavones: Authentic standards of daidzein and genistein were obtained from commercial sources (ICN Pharmaceuticals, Plainview, New York, and Calbiochem Corp., San Diego, California). Daidzein and genistein were from previous work in the laboratory (Murphy 1981). The starting material for extracting isoflavones was defatted soybean flour. It was, in turn, extracted with acetonitrile (ACN) and 0.1 N HCl [hydrochloric acid] (1:5:1 w/v/v) according to the procedure of Murphy 1981. Address: Food Science and Human Nutrition, 2312 Food Sciences Building, Iowa State Univ., Ames, Iowa 50011.

6655. Hill, David. 1994. Tofu-maker sold, re-opens. *Journal* (*Ithaca, New York*). Sept. 5.
• ***Summary:*** Ithaca Tofu began production again in late July after restaurateur Michael Pan bought Ithaca Soy from Michael Scovronick, who co-founded the business in 1981. Pan, with 3 employees, now makes about 3,000 pounds/week of tofu in the former Ithaca Bakery plant in the Lansing Small Mall on Cinema Drive. The company also makes soymilk and Spiced Tofu Kan.

6656. Belleme, John. 1994. New developments with rice beverages and natto (Interview). *SoyaScan Notes.* Sept. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** At the recent Natural Products Expo on the East Coast there was a big battle of the rice beverages. Westbrae has just launched two new rice beverages in aseptic cartons with spouts; one is regular strength and the other is concentrated. This may be the first natural foods product in an aseptic carton with a spout. Imagine Foods then switched to a carton with a spout. Then Imagine Foods put out a big poster explaining why their Rice Dream is superior to Westbrae's. John prefers the flavor and texture of Rice Dream.

John's main business is now exporting to Mitoku. There is a big demand for organically grown soybeans in Japan. John has a standing order from Mitoku for 1,000 tons of small-seeded organically-grown soybeans to be used in Japan for making natto. Tommy Carter at North Carolina State University in Raleigh is breeding natto-type soybeans. Charles Kendall, a natto manufacturer in Massachusetts, is now testing the soybeans that Carter breeds. It is a nice relationship. Address: P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

6657. Mann, Sue. 1994. Tempeh, tofu, and soymilk in Ecuador (Interview). *SoyaScan Notes.* Sept. 23. Conducted

by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sue, who has lived in Quito for 6 years, is interested in making tempeh commercially in Ecuador, South America. She went to Ecuador originally as a teacher in an American school. Some people at Ambato Votec College [a Vocational-Technical College about 3 hours bus ride from Quito] in Ecuador are making quinoa tempeh, supposedly on a commercial scale; they sell it mostly in Quito.

Also some Chinese or Korean people make tofu in Quito and sell it at one stall of an outdoor Oriental foods market. They make the tofu somewhere else and sell it twice a week fresh, from a bathtub, at the stall. They also make a pressed tofu. A lot of the health food stores in Quito occasionally sell fresh tofu; she has never asked where it is made.

She also knows a Baha'i person who makes soymilk in Ecuador. Address: c/o Donna Lewen, Cassilla 17-12-578, Quito, Ecuador. Phone: 593 2-570-600.

6658. Archer Daniels Midland Co. 1994. Annual report. P.O. Box 1470, Decatur, IL 62525. 42 p. Sept.
• ***Summary:*** Net sales and other operating income for 1994 (year ended June 30) were $11,374 million, up 15.9% from 1993. Net earnings for 1994 were $484.1 million, down 14.8% from 1993. Shareholders' equity (net worth) is $5,045 million, up 3.3% from 1993. Net earnings per common share: $1.40, down 11.4% from 1993. Number of shareholders: 33,940.

ADM's decline in profits was due largely to the great Midwestern flood of 1993 and rise in corn costs. Today ADM has 165 operating plants, 300 grain elevators, 2,000 barges, and 10,000 railroad cars. On any given day, together with affiliates in Europe, the company has 100 cargo ships on the high seas.

ADM Began processing corn in 1971, with a single wet-milling plant that had an annual processing capacity of 104,000 tons. Today ADM has an annual wet and dry corn processing capacity of 14.2 million tons. Corn is the origin of ADM's river of dextrose, from which is made HFCS, sorbitol, cornstarch, and ethanol. It is fermented to yield lysine, threonine, lactic acid, citric acid, and MSG. New products from corn fermentation scheduled for production by ADM in late 1994 include xanthan gum (a high-performance stabilizer is syrups, salad dressings, etc.), tryptophan, and vitamin C.

In recent years the U.S. government "has been providing strong incentives for farmers to grow more corn and fewer soybeans, thus turning the oilseed growing business over to Canada, Brazil, Argentina, India and the European Union (EU)–all while U.S. acreage shrank by 10 million acres... Consumers all over the world got a major setback when trade negotiators in Paris sat around a shiny table quarreling over which one should take the biggest cut in the production of oilseeds. The result was that the United States gave up its policy of being competitive in world markets for vegetable oil and the EU agreed to drastically reduce oilseed production. French farmers, proud of their productivity, protested." Many countries are in dire need of more cooking oil. "It was agreed that Europe would first idle several million acres and then be allowed to produce oilseeds on those acres for industrial purposes only. The result is obscene. The EU is requiring processors to take perfectly good cooking oil worth $1.65 a gallon and turn it into diesel fuel worth perhaps 40 cents.

A sidebar on p. 13 gives ADM's views opposing the U.S. government's efforts to reduce the amount of cropland, mainly to reduce surpluses but also for soil conservation. A graph shows that world oilseed acreage has risen dramatically since 1967, while that in the USA rose slowly from 1967 to 1982, then fell thereafter.

NutriBev is a new milk alternative made largely from soy protein isolates and concentrates; it has the same nutritional value as milk but can be produced free of lactose. The Harvest Burger plant is being greatly expanded to meet the product's rapid growth in sales. "The USDA's new school lunch regulations will soon make it possible for school districts to be reimbursed for using 100% soy products such as Harvest Burger. In addition, schools will be required to reduce average fat levels in meals. A number of fat-reduced products contain ADM soy isolates. ADM's soy products are thus well positioned as extenders or a stand-alone products. Before the new regulations were announced, ADM provided testimony on the benefits of soy protein at a number of USDA hearings. We have put increased emphasis on increased soy protein research. We are also isolating some of the components in soy that are said by many scientists to inhibit cancer and some types of diabetes." A half-page color photo shows the Green Giant Harvest Burger and its package. A new lecithin plant was fully integrated into the existing oil refinery at Europoort, Netherlands, increasing efficiency substantially.

Pages 16-18 discuss ADM's worldwide procurement network and its unique partnership with A.C. Topfer.

Page 41 shows the officers of ADM's subsidiaries and divisions: David H. Swanson is chairman of Premiere Agri-Technologies, Inc. Larry H. Cunningham is president of ADM Protein Specialties Division. John R. Mahlich is managing director of The British Arkady Co., Ltd.

Update: March 1995. The Republican congress is now downsizing the U.S. government and trying to balance the federal budget. Yet ADM is quite dependent on government subsidies, especially for their most profitable products such as ethanol and PL-480 food products. How vulnerable does this make ADM, which is the largest manufacturer of ethyl alcohol in the world? One cannot tell from reading ADM's annual report. Address: Decatur, Illinois.

6659. *Bluebook Update* (*Bar Harbor, Maine*). 1994. Bühler process advances soymilk and soya flour. 1(3):1, 4. July/

Sept.
• ***Summary:*** Buehler Ltd. of Uzwil, Switzerland, makes milling equipment that can transform whole soybeans into an ultra-fine soya powder, which can be made directly into soymilk or used as an ingredient in foods or baked goods. In early 1994 Buehler's latest soya flour and soymilk plant began operation in Italy. The company reports it has installed a total of 13 systems in 8 countries including France, Italy, Switzerland, Brazil, Taiwan, Ethiopia, China, and Japan.

6660. Business Trend Analysts, Inc. 1994. The health and natural food market: Past performance, current trends, and opportunities for growth. 2171 Jericho Turnpike #342, Commack, NY 11725. 325 p. Sept. Price $995.00. *
• ***Summary:*** Chapter 3 of this report, the first of seven chapters that discuss individual product categories, is titled "The Market for Soy Foods: An in-depth analysis of historical, current, and projected sales. Trends in the U.S. market for soy foods. Manufacturers' total sales of soy foods. Manufacturers' sales of soy foods, by distribution channel. Total retail sales of soy foods. Retail sales of soy foods, by distribution channel. Retail sales of soy foods, by type: Soy sauce, tofu, second generation, soymilk, miso, soynuts, tempeh. Worldwide soybean production, total and per capita. U.S. production of soybean oil. New product introductions in the market for soy and vegetarian foods, including names of manufacturers, brand names, and product descriptions.

Under "Report Highlights and Special Features" we read that after the 3-year recession, most product categories posted strong gains, but "several segments failed to cash in on the growth bonanza. Manufacturers' sales of soyfoods were up a meager 2½%, while the market for frozen health foods declined slightly... One-third of consumers under the age of 35 feel it is extremely important that the food products they purchase are natural; the percentage is even higher among older consumers. Over 40% of adults believe they will contract heart disease or cancer." Today 68% of adults are overweight, up from only 58% a decade ago.

Overall report Contents: 1. Executive summary. 2. Overall market dynamics (including Soyfoods). 3. The market for soy foods. 4. The market for herbal teas. 5. The market for dairy foods. 6. The market for grains and cereals. 7. The market for frozen foods. 8. The market for snack foods. 9. The market for groceries. 10. The health food consumer. 11. The health/natural food store industry. 12. Competitor profiles. 13. Industry directory. Address: Commack, New York. Phone: 516-462-2410.

6661. Haren, Chuck. 1994. Alimentos San Bartolo. *Plenty Bulletin* (*Summertown, Tennessee*) 10(3):1-3. Fall.
• ***Summary:*** "Tempeh, tofu, flavored [soy] milk cicles, [soy] ice cream, soy milk, and toasted soy flour are sold daily from this village processing facility. It was great to see that since last year ASB had built a small room to cook the tempeh (a cultured soy food). The quality of tempeh they were making had improved considerably."

Photos show: (1) Two Guatemalan young people in traditional Mayan dress, holding two soy ice cream cones each, and standing outside the window of Alimentos San Bartolo (ASB–San Bartolo Foods). Caption: "Soy ice cream has been enjoyed in San Bartolo since 1979." (2) Three Mayan staff people in traditional dress at ASB package tofu for market.

6662. **Product Name:** Rice Dream (Rice Milk in a Tetra Brik Carton with Pour Spout) [Original, or Vanilla].
Manufacturer's Name: Imagine Foods, Inc. (Marketer-Distributor). Rice milk made by California Natural Products, Manteca, Calif.
Manufacturer's Address: 299 California Ave. #305, Palo Alto, CA 94306. Phone: 415-327-1444.
Date of Introduction: 1994. September.
Ingredients: Filtered water, certified organic brown rice (partially milled)*, expeller pressed high oleic safflower oil, sea salt. * = Organically grown and processed in accordance with Section 26569.11 of the California Health and Safety Code.
Wt/Vol., Packaging, Price: 23 fl oz (946 ml) Tetra Brik Aseptic carton. Retails for $1.59 (11/93 at Trader Joe's, Concord, California).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Robert Nissenbaum of Imagine Foods. 1994. Nov. 23. This product in the new Tetra Brik carton was on the shelves in stores in late September or early October 1994.

Product (vanilla) with Label purchased at Berkeley Natural Grocery Co., California. 1994. Dec. 1. 3.5 by 7.75 by 2.25 inches. Tetra Brik Aseptic carton. Note this new tall, slim carton with a new easy-pour reclosable cap. White clouds against a blue sky, fading into peach color, behind black letters, at bottom of carton. "1% fat non-dairy beverage. Made from brown rice. Not to be used as an infant formula." On one side is a recipe for Rice Dream Smoothie.

6663. Laokole, Dedjoguere. 1994. Tchad: Combattre la malnutrition par le soja [Chad: Combatting malnutrition with soya]. *Communautes Africaines* No. 49. p. 12-13. July/Sept. [Fre]
• ***Summary:*** This article, in a section titled *"Actions de Developpement,"* follows a question and answer format. Dr. Akintayo, a teacher in the PNUD project, answers the questions. Q–When and why was the UN International Volunteer Corps (*journée Internationale des Volontaires*) created? Ans:–the JIV was established in 1985 by the General Assembly of the United Nations. It has three main goals, but in each country the work must be suited to local needs. In Central Chari the main problem is malnutrition, especially of children. Dr. Akintayo is using the soybean, a

miracle plant, to fight this problem. Many different delicious foods, such as milk, yogurt, cheese [tofu], sojatine or soy coffee, oil, biscuits, bread, cakes, etc. can be obtained from soya. These foods can greatly enrich the local diet.

Q–What obstacles has production of soya faced in Tchad? Ans: The soybean was introduced to Tchad about 20 years ago, because the peasants were interested in its production. Unfortunately this interest quickly disappeared because there was no market for the first harvest. The many ways of using the soybean and its benefits were unknown by the population at that time. This is one of the objects of our exposition.

Note 1. This article makes no mention of current soybean cultivation in Chad.

Note 2. This is the earliest document seen (Aug. 2009) concerning soybeans in Chad, or the cultivation of soybeans in Chad. This document contains the earliest date seen for soybeans in Chad, or the cultivation of soybeans in Chad (about 20 years ago, i.e., about 1975). The source of these soybeans is unknown. Address: Chad.

6664. Osho, S.M. 1994. The role of research in the development of soybean based small and medium food enterprises scale. Paper presented at the Small and Medium Scale Agro-food Enterprises Seminar. 34 p. Held 12-14 Sept. 1994 at Dakar, Senegal.

• ***Summary:*** "Abstract: Protein deficiency is still a major problem in Africa particularly among the low income group. Soybean has the potential for alleviating malnutrition in African diets via soybean based industries. The paper discusses the role of soybeans in the development of soybean based small and medium scale food enterprises in Nigeria. The IDRC funded soybean utilization project jointly implemented by IITA and National Institutes in Nigeria has been successful through research extension activities, in developing several food uses for soybean and disseminating these technologies to industries. Several people have received training on soybean technologies and over fifty industries are processing soybean into weaning foods, breakfast cereal, extruded products, fermented soybean products, soybean soups and condiments. The success of the soybean project is based on dissemination of developed technologies on soybean."

Contents: Introduction: Research for development. The role of International Institute of Tropical Agriculture (IITA) in international agriculture research (It was founded in 1976 at Ibadan): Soybean research at IITA as it focuses on nutrition in Africa, nutritional value of soybeans, soybean processing, utilization, and dissemination model (product development research, training and extension activities, assessment of impact), development of household and small scale processing technologies, soybean food options and technology (soybean beverages and ice cream, soybean based baby foods and breakfast cereals, defatted cake processing and soybean oil extraction using mechanical screw press technology: IITA concept, extrusion cooking: IITA concept, other advantages of extrusion processing). Impact of soybean utilization project: Constraints in research, policies and programmes that affect soybean research at IITA. Conclusion ("The future of soybean looks bright in Africa").

Selected tables show: (3) Yield and quality of soy oil as affected by processing temperature. (4) Nutrient composition of selected soy flours from the extruder and the screw press. Defatted and full fat; four types.

(6) Forty nine soybean products that are being processed and marketed by companies in Nigeria (Feb. 1994). The soy percentage of the product is given in parentheses. In Lagos: Betamarks, Soybean flours (100%). Farina, Soy beverages (100%). Lisabi Foods, Soy custard (30%). Smallette, Sogi (30%). Glaxo Nigeria, "Babeena" baby food (30%). Nestle Foods, "Nutrend" baby food and "Golden Morn" breakfast food (each 30%). Cadbury Nigeria, "Dash" candles (10%). Morrison Ltd., Extruded products (100%). Goodings Health Goods, "Nutrela" texturized vegetable protein (100%). Niger Dock, Soymilk (100%). Al-Bahamas, Baba Ogi (30%). Odichie Bakery, Soybread (10%). Pfizer Nigeria Ltd., Livestock feed (30%). Buckingham Ltd., Mama Joy baby food (30%). Cocoa Industries, Chocolate bar (10%). Green Source Nigeria Ltd., High protein cake (100%). Golden Compass Foundation, Babyfood (100%). CAPL, High protein cake (10%). NAINTO Ltd., Soymilk (10%).

In Oyo: DLOB, Soy oil / High protein cake (100%). Milkman, Soy milk (100%). Oja Farms, Soy oil / High protein cake / Casasoy (30%). Uncle Segun Food Proc. & Preserv. Co., Soy powder (100%). Jomartex, Soy milk (100%). Deagbo Industries, Soyvita (beverages) (100%). Tella Food Industries, Soymilk (100%). Orman Industries Co. Ld., Extruded full-fat soy, Defatted soycake (100%). Morgan, Soyflour (100%). Alphatec, Soyoil & Livestock feed (100%). Florets Ltd., Soyflour / Babyfood (100%). Vita soy, Soymilk (100%). Dare foods, Soyflour (100%). Sarah Farms, Soyflour (100%). Benny Commercial Co. Ltd., High protein cake (100%).

In other locations in Nigeria: Kofa Agric. Venture (Kawara), Soy oil / High protein cake (100%). Taraku Oil Mills (Benue), Soy oil / High protein cake (100%). Funta Oil Mills (Kaduna), Soy oil / High protein cake (100%). Imo Health Foods (Imo), Soy beverages (100%). Tuns Oil (Osun), Soy oil / High protein cake, Extruded products (100%). Akiibiti Farms (Ondo), Extruded products (100%). Jof Ideal Family Farm (Ondo), Vegetable oil (100%). Termitope Biscuit Industry Ltd. (Ogun), Soybiscuit (10%), Baby food (30%). Rainbow Manufacturing Industries (Ogun), Soyflour / High protein cake (100%). Babs Ventures (Ondo), Soymilk / Cassory (100%). Parakletos Co. Ltd. (Osun), Soyflour / Baby food (100%). IBOL (Osun), High protein cake (100%). Oyalemi Farm (Ondo), Soy vegetable oil (100%). Women's Group (Jos), Soyflour (100%). Golden

Oil Industry (Anambra), Soy oil / Cake (100%).

(7) Summary of number of markets and retail outlets for soybean and products in Ibadan, Nigeria (1987 to 1994). The survey was conducted in January of each year. In Jan. 1987, 2 markets and 4 retailers were selling soy. Soybeans cost 1.50 Naira per kg; only soybeans (seeds) were sold. In Jan. 1990, 19 markets and 419 retailers were selling soy. Soybeans cost 4.25 Naira per kg; soybeans (seeds) and soy flour were sold. In Jan. 1994, 64 markets and 1,017 retailers were selling soy. Soybeans cost 20.00 Naira per kg; soybeans (seeds) and soy flour were sold.

Figures show: (1) Comparative prices of selected commodities that are sources of protein in Nigeria (1987-1994). Soybeans are by far the least expensive source of protein and milk powder is by far the most expensive. Inflation increased dramatically after 1990. (2) Schematic diagram of commercial soymilk production (UHT and aseptic). (3) Schematic diagram of soybean processing by extrusion / expelling.

(5) Processing of soybeans and cereals by dry extrusion. Includes full fat soy flour and snack foods. (6) Number of indigenous soy processing companies in Nigeria (1987-1994). The number increased from about 2 in 1987 to about 22 in 1991 to about 52 in 1994.

Soymilk yoghurt and frozen soy lollies (ice cream on a stick) are sold commercially in Nigeria. Six companies are involved in soy beverages. About 7 large-scale companies and several small ones in Nigeria are using soybean as part of the raw material in the manufacture of baby foods and breakfast cereals (p. 13). Address: PhD, Food Technologist & Coordinator, Soybean Utilization Project, International Inst. of Tropical Agriculture, Oyo Road, PMB 5320, Ibadan, Nigeria.

6665. Parks, Thomas R.; Bindon, J.N.; Bowles, A.J.G.; Golbitz, P.; Lampi, R.A.; Marquardt, R.F. 1994. Methodologies for processing plant material into acceptable food on a small scale, phase II. Moffett Field, California: National Aeronautics and Space Administration, Ames Research Center. x + 219 + 21 p. Sept. Illust. No index. 28 cm. Technical Report. NASA CR-177647, A-94130. Govt. Doc. No.: NAS 1.26:177647. [10 ref]

• ***Summary:*** A study of simple processing equipment for the foods to be used by NASA in closed ecological life support systems (CELSS) on a space station under micro-/zero-gravity conditions. Most nutrient requirements can be met by four crops, which were studied: Soybeans, wheat, white potatoes, and sweet potatoes.

The section titled Soyfoods (p. 171-96) has the following contents: Introduction (composition of dried soybeans, best foods for CELSS, processing equipment), soymilk, tofu, okara, tempeh, edamame (immature green soybeans), soy sprouts, processing by extrusion/expelling (oil), expeller pressed soy oil, whole fat soy flour, soymilk beverages, tofu-based meat replacers, tempe-based meat replacers, soy yogurt (fermented), frozen desserts, textured soy flour, extrusion impact on functional properties, materials balance. The production of wheat gluten from wheat, and the biomass culture of mushrooms are also discussed (p. 160).

Tables and figures show: (T7) Soyfoods–Composition and nutrient content (based on USDA Handbook No. 8-16, full page). (F78) Chart of modern soyfoods, divided into: Soya-based dairy alternatives and Soya-based prepared foods. (F79) Four methods of soymilk production: Traditional, Cornell, Illinois, ProSoya. (F80) Modified ProSoya system with pressure plate and centrifugal basket for okara removal. (F81) Flow chart for regular tofu production. (F82) Flow chart for tempeh production. (F83) Flow chart for soybean processing by extrusion/expelling. (F84) Flow chart for soymilk yogurt. (F85) Flow chart for soymilk ice cream. (F86) Processing soybeans for primary soyfood products with extruder. Address: Food and AgroSystems, Inc., 1289 Mandarin Dr., Sunnyvale, California 94087.

6666. *SoyaCow Newsletter* (*Ottawa, Canada*). 1994. Plenty's El Salvador Project feeding soya to 500 kids. 3(3):1-2. July/Sept.

• ***Summary:*** With the financial help of the members of the Bell's Corners United Church near Ottawa, together with Plenty Canada and the Canadian International Development Agency (CIDA), a SoyaCow project has been established in El Salvador in the poor municipality of Mejicanos. Two SoyaCow SC20 systems are in operation providing soymilk and soy ice cream to over 500 local kindergarten children. The left-over okara is used as an ingredient in making tortillas. A photo shows children enjoying soymilk at school in Mejicanos.

6667. *SoyaCow Newsletter* (*Ottawa, Canada*). 1994. Russian ASSOY director tours Canadian food processors. 3(3):1-2. July/Sept.

• ***Summary:*** "Mr. A. Podobedov, General Director of the Russian Soybean Association, visited Canada in early September to tour a variety of soyfood and dairy processors. His objective was to gain insights into the production of tofu, ice cream, and dairy-type beverages made from soymilk. The tour was a complement to his visit to ProSoya Inc., the company building the industrial-scale SoyaCow SC2000 systems for installation in Russia.

Mr. Podobedov visited: La Soyarie in Hull, Quebec (which makes tofu and meat alternatives; President: Mr. Koichi Watanabe); scientists Dr. C.Y. Ma and Dr. W. Modler of Agriculture Canada (they are developing isolates and concentrates from soymilk); the Neilson Dairy facility in Ottawa; and Gelato Fresco (which is making soy ice cream and has signed a distribution deal with Modern Products, of Milwaukee, Wisconsin).

6668. *SoyaCow Newsletter* (*Ottawa, Canada*). 1994. First SC-100 plant installation completed. 3(3):2. July/Sept.
• ***Summary:*** "The installation of the first SC-100 plant has now been completed at ProSoya's Canotek road facility. The plant has been built to modern dairy standards complete with tiled floor, CIP system, culinary steam supply, and purified water supply. The plant presently can produce 500 L/H of high quality non-beany soymilk. The refrigerated storage capacity is 20,000 litres.

"The Canotek plant will also be used as a pilot facility to implement technology improvements and perform product development on an on-going basis."

6669. Roller, Ron. 1994. Breeding soybeans to use for making soymilk in America. Part I (Interview). *SoyaScan Notes.* Oct. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron finds that 1 pound of soybeans yields roughly 8.8 pounds of regular non-flavored soymilk and 11.88 pounds of lite soymilk. For regular soymilk, the solids content of flavored soymilk is less than that of "original" or dairylike soymilk. In 1993 an estimated 9.8 million gallons or 81.6 million lb of soymilk were sold in the USA and Canada. Of this, about 80% was regular and the rest was lite. To make this much soymilk required about 8.78 million lb or 146,333 bu or 3,982 metric tons of soybeans. Almost all of these soybeans were organically grown. Soyfoods manufacturers have to pay about 70% more for organically grown soybeans than for non-organic.

Ron knows that most soybean breeders are breeding soybeans for food uses–especially large-seeded food-grade soybeans for the export market. Many of the large-seeded soybeans are selected for high sugar content and processability (cooking with the seedcoat on, dehulling, etc.). Ron has contacted almost all the seed companies and has asked them for "food use clear-hilum soybeans." They say they are working on such products but say they are all sold to Japan. These seed companies are generally working on large-seeded, high-protein, Vinton-type, clear-hilum soybeans. Ron does not think most companies are interested in phytochemicals yet, but Prof. Maurice Bennink at Michigan State is studying the effect of genistein on colon cancer.

Enrei is a very large-seeded Japanese soybean, with a clear hilum, high sugar content, good taste, and seedcoat that is suitable for both harvesting and dehulling during processing. There is an Enrei industry (association and breeding program) in Toyama, Japan. They treat this variety as if each bean was a gold nugget. They hand-cultivate the plants. Ron has had Michigan State working on Enrei soybeans in their breeding program, and he is developing a program to grow it.

When Ron chooses a soybean variety for making soymilk, the most important factor is the taste of the resulting soymilk. For good taste he wants a soybean with high sugar content, high protein, and relatively low fat–but he is not sure what causes a soybean to taste good. A panel of 5-6 experienced people from American Soy Products (ASP) tests the soymilks in a 4-5 sample blind test, always with the same control sample–where the control sample is their basic soybean, that every panelist can distinguish from the other samples every time with no problem whatsoever. Second is the protein and oil content of the soybean: high protein, low fat. Third is availability of the seed. Fourth is the price. They pay a premium of 60-70% above the Chicago Board of Trade (CBOT) price for specialty, organically grown soybeans. In 1994 the price went as high as $18/bushel, but it used to be $8-9. Many people are willing to pay high prices for organically grown Vintons, but Ron is not willing to pay that for Vintons, he doesn't buy them. But there are other soybeans he will pay more for. Other factors: The region in which it will grow. Processability (easily dehulled and does not produce much foam when cooked). Clear hilum. Large seed size. Many of these characteristics are interrelated. In terms of the agronomic characteristics: Seed yield, including disease resistance, lodging and shatter resistance, emergence, etc.

Ron contracts directly with farmers for all the soybeans he buys. Some varieties he uses are confidential, others are not. ASP developing varieties that they do not want their competitors to know about. He also buys some varieties bred by Pioneer Hi-Bred: his growers can go to their local elevator and buy that seed. Ron generally tells the farmers with whom he contracts to grow his soybeans what varieties he would like them to grow and where they can go to buy those varieties. Once he tells this to the farmers, the farmers generally tell the industry and ASP's competitors often grow the same varieties. "We are continually testing soybeans to find the best ones for our process and product. It's more selection than breeding. We're taking a number of soybean varieties and storing them in specific bin locations, then blending the varieties to create or maintain a certain, consistent taste and product." Ron generally buy's large-seeded soybeans (but not the biggest), because experience has shown that they taste best, and the sugar content seems to have something to do with the good flavor. But for one variety, the flavor changes from field to field, and from one growing area to another. As ASP's demand for soybeans has grown, so has their growing area, and this requires the use of more varieties of soybeans. Moreover, Ron would not take the risk of growing all their soybeans in one geographical area–since they could then all be destroyed by flood, frost, drought, etc. A good soybean for soymilk must yield well for the farmer and make good soymilk. Continued. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6670. Roller, Ron. 1994. Tetra Pak's new TBA Slim Re-

cap aseptic carton (Interview). *SoyaScan Notes.* Oct. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Tetra Pak has a new carton named TBA Slim Re-cap (available only in the slim form) that is the equivalent is the Combibloc Pour 'n Seal. You open the Re-cap. pull the foil seal off, then when you are done just close the Re-cap–rather than pushing the spout down into the liquid as you must do with Combibloc. The spout is shaped in such a way that air can enter when you are pouring.

Combibloc came out first, but only in a high-acid version. Both are good. Combibloc doesn't have many low-acid filling machines. Yoo-Hoo chocolate milk was the first one out.

Westbrae is using the Tetra Pak carton. Ron thinks that Westbrae's product is just now starting to arrive in natural food stores. It will be interesting to see how the new packaging is received. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6671. Roller, Ron. 1994. Breeding soybeans to use for making soymilk in America. Part II (Interview). *SoyaScan Notes.* Oct. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** How often does Ron change the soybean variety he uses? He has several base varieties, which are kept secret and which he tries to build on. Every year he tries to find new soybean varieties which are like the base varieties but which will grow in other geographic areas. Moreover the acreage for a particular variety must be expanded slowly as it proves itself both agronomically and from a food point of view. When Ron contracts with a farmer he contracts bushels, not acres. That is, guarantees to pay a certain amount per bushel if the farmer plants a certain number of acres, never just a certain amount per acre planted. This way, both sides take a risk: If the farmer has a large yield, then Ron must buy more soybeans than he wants to. ASP has been hurt before by contracting acres, when there was a flood or frost. Each farmer must get certified, which pretty much guarantees that he has grown the soybeans organically. After a while, ASP knows which growers it can trust, and they become part of ASP's steadily expanding grower base or network.

There are probably very few U.S. soyfood manufacturers that have enough volume that they need to contract directly with farmers. But those that are big or have a large need for organic soybeans must contract directly with farmers to assure themselves an adequate supply of the type of soybeans they want.

Ron would be very interested to know more about how the composition of a soybean affects its flavor. He has a good deal of respect for Pioneer Hi-Bred Seed Co. He thinks they have good seeds, a good staff and research department, and a good distribution system. And they have generally been reliable. They have helped Ron find soybeans for certain growing areas that they sell. He likes the fact that they are national, spanning the breadth and width of the U.S. soybean growing area, and selling all maturity groups. However, 3-4 years ago, Pioneer Seed Co. got into the cultivation, cleaning, bagging, and export of organic soybeans–with their Better Life program (no pesticides or herbicides, but they can use chemical fertilizers). So they began to compete with Ron for organic farmers to grow their seeds, and they pay the farmers more than Ron does.

Pioneer has a pretty extensive base of soybean customers in Japan for regular soybeans, Better Life soybeans, natto beans, large-seeded soybeans, and organic soybeans. Their Specialty Crops Division has penetrated the Japanese market in many areas. Their employees travel frequently to Japan, they speak Japanese, they have an office there, and they're plugged in. They study those industries in Japan, find out what they want, then they come back and try to breed that into a soybean. As far as Ron can tell, Pioneer is the leader in breeding soybeans for food uses in terms of both volume and specific varieties.

Another company doing research in this area is Jacob Hartz Seed Co. in Arkansas. They are working on some large-seeded soybeans but they are having a lot of trouble. Ron has a low opinion of the soybeans Hartz breeds for making natto; he studied that market intensively.

There has been a demand from Japan to supply some organic beans, so many of the U.S. companies that supply soybeans to Japan have begun small organic programs (not because they want to–they hate it), just to satisfy their Japanese customers. Even though Mitsui or Mitsubishi or Marubeni don't want a lot of organic soybeans, they want enough in a tight market to drive the price way up. It was because of the Japanese demand plus a small soybean crop that organic soybean prices were so high in 1994. Country Life went out of business, with unpaid debts of $400,000 to $500,000. Some of the farmers formed cooperative marketing groups; they grow varieties desired by the Japanese, and pool their resources in cleaning and bagging, so they can export containers to Japan and eliminate U.S. middlemen or soybean brokers. Ron feels the price for organic soybeans will stabilize at about $10-$12 per bushel.

If Ron worked closely with a soybean breeder and seed company, he would want the right for the farmers with whom he contracts to be able to buy the seed from the seed company. His company is unique in having a large number of cooperating organic growers, and that gives ASP the lowest price and highest quality. If Ron contacts the growers early and tells them what ASP will pay per bushel of organic beans, that becomes the standard base contract price for other companies too. Word travels fast. Nichii buys directly from soybean farmers, but Ron thinks Vitasoy buys from a middleman (a soybean broker or trading company such as Pacific Soybean and Grain). Some soyfoods manufacturers

buy through soybean brokers–the biggest of which are Pacific Soybean and Grain, American Health and Nutrition, and Purity Foods. Domestic soyfoods manufacturers get deluged with calls from farmers who want to grow soybeans just for them at a premium price and sell direct without a middleman. The middlemen or soybean brokers tend to survive on export business.

This is a very complicated issue–particularly seen from the viewpoint of a seed company that wants to breed better soybeans for food uses. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6672. Demos, Steve. 1994. How White Wave selects soybeans to make tofu, tempeh, and soy yogurt, and to create value-added products (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** White Wave now uses 3 varieties of soybeans: A blend of two varieties for making tofu, and one different variety for tempeh. Steve selected these varieties over a number of years by a trial and error process–but he would like to be able to select them in a more scientific way. For making soy yogurt, Steve is looking for a new variety, which must have a low flavor profile (i.e. little beany flavor). Within the last year, he began talking with a soybean breeder who approached Steve saying that he had one soybean with a low lipoxygenase content (which is thought to give soymilk with little beany flavor), and another with a low fat content. Steve is looking for better flavor and lower calories because he is trying to develop value-added products out of former commodities for his Vegetarian Cuisine line. The key to doing this is developing products that taste better.

For many years, soyfoods consumers were willing to sacrifice taste for ideology or price. Tofu and tempeh have traditionally been bought and sold as commodities, so manufacturers of these foods have traditionally paid more attention to yield and functional properties than to flavor–since the flavor quickly gets lost in the surrounding water. "Most tofu makers won't use only Vinton soybeans because they are too expensive and that added expense cannot be passed on to the consumer. Yet everyone knows that vegetable-type soybeans produce a superior product–bigger, glossier curds, meatier texture. Vintons also give a superior tofu yield–but Steve does not know why and he would be very interested in knowing the science and theory behind this phenomenon. Is more of the protein in the bean extracted in the soymilk? Does it have a higher nitrogen solubility index? Do the curds trap more water? I think U.S. tofu makers totally disregard flavor when buying soybeans for tofu; they are concerned mostly with the quality and texture of the curd–the size, firmness, and elasticity of the curd. The majority of consumers believe that tofu has no taste anyway." But value-added products are judged in a totally different way than commodities; consumers demand good taste. White Wave's way of making soyfoods is capital intensive; therefore he would prefer to sell value-added products rather than commodities. So Steve is now studying how to transform his commodities into value-added products that command a premium price and have consumer loyalty. White Wave's low-fat tofu is sold as a value-added product, and it has recently become the company's best-selling tofu product. It allows him to "add a couple of higher gross margin points to his profit." Adding *Bifidus* also adds value. A major opportunity is to associate soyfoods with medical benefits [as by showing that eating soyfoods reduces ones risk of a major disease, or by adding genistein–which Steve had not heard of].

The main factor moving White Wave in this direction is the "organic problem" that is emerging in America; high prices and limited supplies. For a number of years, Steve has contracted for his soybeans with a broker (also called a consolidator) at a certain time of year each year; the name of the broker and the time of year are confidential. Steve contracts for specified amounts of certain identity-preserved soybean varieties at a specified price, to be delivered over a specified period of time. He also specifies the maximum moisture content, foreign material, etc. The broker then contracts with soybean growers and the broker stores the soybeans after harvest until delivery. The broker takes the risks associated with reduced yield or crop failure. It is much easier to contract with farmers if they are located nearby; but the farmers who end up growing Steve's soybeans are all far away. It would be hard (and too much trouble) for him to keep in touch with weather conditions far away, and to visit the farmers from time to time. The organic business used to be based on affidavits issued by the farmer; now it is changing to third-party certification, and that change should be finished after about one year. Having soybeans certified by a third party raises their cost to the manufacturer by about 25%. It is virtually impossible to pass that on to the tofu consumer, since tofu is seen as a commodity. The federal organic law may be different in particulars from the California organic law–which has been the standard. All the tofu Steve now produces is made from organically grown soybeans, but soon he will offer both a low-cost regular (non-organic) tofu, and a certified organic tofu that retails for about $0.15 per pound more. Then the consumer will have a choice. This has never really been done before.

In the future, Steve would like to work much more closely with soybean breeders and seed companies to help solve his problems, improve the flavor of his products, develop new products, and learn more about the theory and science that connects soybeans and soyfoods. In addition he is planning to set up an in-house R&D department; White Wave already has a test kitchen and a food technologist on staff. A key function of the R&D department will be to develop value-added products. White Wave is already conducting in-house taste panels but is selecting soybeans

"from a grab-bag mentality rather than from an organized, scientific project mentality... There is absolutely no question that the long-term strategic development of soyfoods requires this approach." The timing is perfect and Steve would like to establish such a relationship with a seed company as soon as possible. White Wave is now in the process of strategic planning for the next 5-7 years. But a company must be big enough (as White Wave now is) to devote the focused mind time and invest the resources to follow through for the seed companies this way. As a company gets larger it has a greater need and ability to base its choice of raw materials on a solid scientific foundation. Smaller companies might agree to work with seed companies but it would be hard for them to do it properly over the long term.

In the past, White Wave has chosen one or two soybean varieties and then stopped looking for better ones for several years. But that will change as soon as the new R&D department begins operation. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

6673. Loh, Michael. 1994. Early history of Vitasoy and K.S. Lo (Interview). *SoyaScan Notes.* Oct. 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Michael's father-on-law was named Soo Putt. Born in Malaysia, he worked for the same company as K.S. Lo, who founded Vitasoy. This company, named Eu Tong Seng, was involved in tin mining and trading. K.S. Lo, who lived in Malaya before he moved to Hong Kong, was a protege of Mr. Eu, who sent him to Hong Kong to attend college. Address: Export Development Specialist, Ontario Ministry of Agriculture and Food, Market Development Branch, 33 Yonge St., Suite 800, Toronto, ONT M5E 1X2 Canada. Phone: 416-326-3551.

6674. **Product Name:** [Soja Biostar Cream Alternative].
Foreign Name: Soja Biostar Douceur.
Manufacturer's Name: Celia's Soja-Biostar.
Manufacturer's Address: B.P. 10, 45550 St.-Denis-de-l'Hôtel, France. Phone: +33 16 3846 3022.
Date of Introduction: 1994. October.
Ingredients: Based on soya milk.
Wt/Vol., Packaging, Price: 2 liter aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml.: Calories (kcal) 239, protein 2.2 gm, carbohydrate 3.6 gm, fat 24 gm (of which 19.2 gm is monounsaturated), cholesterol 0 mg.
New Product–Documentation: Spot in Soyafoods (ASA, Europe). 1995. Spring. p. 4. "Soya Douceur–world premier at Sial '94." The latest Sial was held in Paris, France, in Oct. 1994. This product, which is free of cholesterol and lactose, can be used in place of cream in cooking. A photo shows the package.

6675. Global Exchange. 1994. Soy Cubano! The Cuba soyfood company. Honorary "share." An investment in the health of Cuban children. 1 p. Front and back. Oct. Unpublished typescript. 22 x 28 cm.
• ***Summary:*** "This certifies that (Name, Address, Phone #) has made a contribution of $ ___ to the Soy Cubano! Company and is therefore the owner of ___ fully paid shares in the Soy Cubano! Company at a value of $5 per share.

"These shares will be invested in Cuba's soy food products industry, particularly in the construction of soy yogurt factories in each province of Cuba. These factories will provide two liters of soy yogurt drink per week for Cuban children between the ages of seven and fourteen–those who can no longer receive their previously guaranteed "liter of milk per day" due to the current economic crisis in Cuba. The shares will fund the purchase of raw materials and equipment as well as further research in the production of a variety of soy food products to extend the protein intake of Cuban children. Investors in these factories are guaranteed a high rate of 'return'–the satisfaction of knowing that Cuban children are enjoying the benefits of a nutritious diet, despite the U.S. embargo of Cuba that causes terrible suffering to the people of Cuba and serves no national security interests of the people of the United States."

"Warning: Investing in the health of Cuba's children, through such projects as the Soy Cubano! Company, may be considered 'trading with the enemy' by the U.S. government, which carries a maximum penalty of 10 years in prison and a $250,000 fine. The founding members of the Soy Cubano! Company agree with the American Public Health Association that 'when it comes to food and medicine, there is no enemy.'

The founding partners of Soy Cubano! are: Pamela Montanaro, MS, Coordinator of Soy Cubano Company. Medea Benjamin, MS & MPH, Co-Director of Global Exchange, Dr. Hesham Ragab, M.D., Executive Director of Pediatricians and Parents for Peace [he is assisting Pamela with Soy Cubano!]. Peter Rosset, PhD, Executive Director of Food First. Rene Saucedo, Esq. Blase Bonpane, PhD, Executive Director of Office of the Americas.

"Three soy factories are already operating in Holguin, Santiago and Pinar del Rio, Eight more factories will be constructed before the end of 1994... The cost of building one soy yogurt factory is $50,000. The goal of the Soy Cubano! Company is to raise the funds needed to build, equip and staff at least one factory within the first year."

Note: In Jan. 1994 Soyfoods Center purchased twenty of these shares for $100 to help the children of Cuba and to help soyfoods in Cuba. Address: Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St. #303C, San Francisco, Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St. #303C, San Francisco, California 94110. Phone: 415-558-8682.

6676. Goh, Francis. 1994. Soybean in Singapore and its

utilisation for the production of tofu and soymilk. Paper presented at Incoming Soybean Technical Mission. 7 p. 18 Oct. 1994 at Harrow Research Station, Harrow Ontario, Canada.
• ***Summary:*** Singapore (population 3 million, of which 78% are Chinese and 14% Malay) imports 33,360 tonnes (metric tons) per year of soybeans for local consumption and re-export. About 51% of these soybeans are imported from Canada. There are 45 small and medium sized tofu factories in Singapore (which together use 600-700 kg/day of soybeans) and 2 large factories (which together use 2 tonnes of soybeans and each have an are of 1,500 square meters of more). Unicurd is the biggest. Four tofu companies have a history of 70 years in Singapore. No family wants to marry its daughter to a tofu maker because the work requires such long hours, often all night.

Mr. Goh and his wife bought an existing company in 1981. Theirs was the first company in Singapore to bring automatic machinery from Japan to produce soymilk and pack tofu in containers. In Singapore, tofu used to be considered a poor-man's food; if it was served more than once every two weeks, family members might complain. But Unicurd repositioned tofu as a "nutritional food." The company markets its products mostly to the Japanese community of 20,000 people in Singapore.

There are 6 traditional soymilk makers in Singapore; the people like a product with a "strong beany flavor." Address: Managing Director, Unicurd Food Co. Pte Ltd., Blk. 6020 Ang Mo Kio Industrial Park 3, #01-154/156/158/160, Singapore 2056. Phone: 482-5454.

6677. Lee, Mu-Tsun [Mucun]; Huang, Shuhui. 1994. Tofu! Tofu! Tofu!: Chinese style. Monterey Park, California: Wei-Chuan Publishing Co. 79 p. Illust. (color). Index. 13 x 19 cm. [Eng; Chi]
• ***Summary:*** Contents: Conversion table. Soybean products: Soft tofu, hard tofu, bean curd skin (*fu p'i*) [yuba], pressed bean curd (*doufu gan*), bean curd strips and bean curd sheets ("Bai Yeh"). Homemade soymilk. Homemade tofu. Tofu: Salads, appetizers, frying, stir-frying, cooking in sauces, deep-frying, steaming.

For most recipes, there is one recipe on each two-page spread. A color photo occupies two-thirds of the left page together with the English-language list of ingredients. The rest of the recipe is on the right page. For the rest of the recipes, there is a second recipe with a small photo on the right page.

6678. Olson, Joan. 1994. Tofu in good taste. *Ag Innovation News* (*AURI–Agricultural Utilization Research Inst., Crookston, Minnesota*) 3(4):11. Oct.
• ***Summary:*** Tofu and soymilk could soon have a milder flavor. USDA's Agricultural Research Service (ARS) soybean breeders have bred out the "rancid" taste, yet the new varieties still have acceptable yields, insect tolerance, and resistance to pod shattering. But the tofu and soymilk made from these soybeans is more yellow than usual, so the scientists are working to identify and remove the chemical causing the yellow color.

Letter from Joan Olson. 1994. Dec. 20. For details on the new soybean contact Niels Nielsen, Purdue Univ., West Lafayette, Indiana 47907. Phone: 317-494-6076.

6679. Or, Gary. 1994. Our personal experiences with utilizing Ontario soybeans for Vitasoy production. Paper presented at Incoming Soybean Technical Mission. 12 p. 18 Oct. 1994 at Harrow Research Station, Harrow Ontario, Canada. [Eng]
• ***Summary:*** Contents: Company profile. Soymilk production. Our experience with Ontario soybean. Varieties to help Vitasoy International in future expansion.

The company was founded in 1940 by Mr. Guan, Mr. Chen, and Mr. Chu. In March 1994 Vitasoy shares were first listed on the Hong Kong Stock Exchange. Today Vitasoy exports to more than 20 countries via distributors in North America, Macao (Portuguese Macau, near Canton), Singapore, and China (PRC). The company's mission is to produce and promote high-quality, nutritious and wholesome products which can be purchased anywhere, at any time, at a price that everyone can afford."

The company makes two kinds of soymilk: Regular and organic. For regular soymilk, which contains 2% protein and 1% fat, Grade No. 1 Ontario soybeans are the first choice; more than 120 containers (mostly 20 tons each) were received from Jan. to Sept. 1994. No shipment was rejected. The current packaging is 45 kg gunny sacks [Note: Gunny, a term first used in 1711, is derived from the Hindi term *gani.* It is a coarse heavy fabric, usually of jute or hemp, used especially for bagging]. The soybeans are first ground into flour. A mild beany flavor is desired. For organic soymilk, which contains 3.5% protein, U.S. soybeans with OGBA [Organic Growers and Buyers Association] certification are used. The whole beans are ground to a slurry, and are not first ground into a flour. The fat content is 3.0% for regular and 1% for lite. Beany flavor is removed.

Vitasoy would like to buy high-protein, organically grown Ontario soybeans–ideally OGBA certified–but they are not readily available. Vitasoy is planning a franchising program. Address: Technical Research and Quality Assurance Manager, Vitasoy International Holdings Ltd., No. 1, Kin Wong Street, Tuen Mun, N.T., Hong Kong. Phone: 466 0333.

6680. Shurtleff, William. 1994. Report on soybean and soyfoods research trip to Ontario, Canada: 17-19 October. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549 USA. 21 p. Unpublished manuscript.
• ***Summary:*** Contents: 3-page program titled "Incoming

Soybean Technical Mission." Oct. 17. Talk with Fred Brandenburg, executive director of OSGMB about food-grade Ontario soybeans exported to Asia. Canada is working to increase its sale of food-grade soybeans to Asia. Even though these soybeans are more expensive, they are of better quality and thus preferred. They are also very clean, since soyfoods makers want soybeans with little or no foreign matter. Most are not sold identity preserved, but they are large seeded, white hilum beans. Fred speaks of "crusher beans" and "food beans."

Oct. 18. Visit to Harrow Research Station, run by the Canadian federal government. (1) Talk by Michael Loh: Canada has 72% of the Singapore soybean market, 52% of the Hong Kong market, and 14% of the Malaysia market for soybeans imported for all purposes. Ontario's goal is to double exports by the year 2000. Their strategy is selling value-added products to niche markets. Food-grade soybeans now being developed in Japan include Enrei, Toyo Suzu, Toyo Masari, Otsura, and Kita Musume. (2) Talk by William Shurtleff on "Breeding Soybeans for Food Uses." (3) Presentation by Doug Jessop of the Food Processing Lab. at Harrow. He has been making and studying tofu there since 1983, and on a regular basis since 1984. He shows us his process, using lab equipment that cost about $15,000 not including the Instron system that measures texture. (4) Talk with transparencies by Dr. Dick Buzzell on breeding soybeans to make tofu. Harovinton gives the best tofu yield of all the varieties developed in Canada. A soyfoods maker can either contract with farmers in advance to have soybeans grown for them, or buy the soybeans from traders after they are harvested. To take optimum advantage of a soybean for making tofu, you must know the protein content then add the appropriate amount of water. The more protein in the bean, the more water you must add to get the highest yield. Identity preservation (IP) costs more. The yields will be lower and you must contract for it in advance; a problem is how to deliver the beans year-round to the end user. (4) Talk by Dr. Ma of Central Food and Animal Research. His specialty is vegetable protein. He is collaborating with ProSoya to make soy protein isolates from soymilk since Russia wants to make its own isolates. The soybeans with the highest protein content (on a dry weight basis) are BARC-6 53.4%, Harovinton 45.5%, Enrei 45.0%. One Japanese mutant soybean has none of the three types of lipoxygenase. Lines that lack A-4 protein give firmer tofu. In isolines, everything is the same except for one trait.

Oct. 19. (1) Visit to OSGMB with Fred Brandenburg to hear presentation, see facilities and collect documents. It takes more solar energy to lay down oil in a soybean than protein. Thus after a hot, dry summer, Canadian soybeans contain more oil. Soybeans in hot, tropical countries near the equator also generally contain more oil. In 1985 Canada became a net exporter of soybeans. The cost of producing soybeans in Canada is about the same as in the USA, but the U.S. often ships full vessels of soybeans and is near oceans, whereas Ontario often ships containers (20 or 40 tons), either out the St. Lawrence Seaway or down the Mississippi River. Some agrochemicals that are legal in America are not legal in Canada. All agrochemicals must be licensed, as must some farmers. Mr. Goh says that Chinese believe white hilum soybeans contain more protein than other soybeans. (2) Visit to Canadian Grain Commission to learn how Canada inspects and exports soybeans. The closest that a full seagoing vessel can get to Ontario is Montreal (Quebec)–the last deep-water port up the St. Lawrence Seaway. In Canada, dockage (both big and tiny foreign matter) is removed from soybeans before foreign material is calculated. This makes Canadian soybean much cleaner than those from the USA. Address: Lafayette, California. Phone: 510-283-2991.

6681. **Product Name:** UltraSoy (Soymilk, Non-Aseptic) [Original, or Vanilla].
Manufacturer's Name: Ultra Beverages.
Manufacturer's Address: 4015 Cherry St., Cincinnati, OH 45223. Phone: 1-800-514-3683.
Date of Introduction: 1994. October.
Ingredients: Purified water, whole soybeans, brown rice, oat bran, malted cereal extract, tricalcium phosphate, sea salt, vitamin A palmitate, vitamin D-2.
Wt/Vol., Packaging, Price: ½ pint, quart, and half gallon. Recommended retail: $1.29 to $1.59 per quart, or $2.89 per ½ gallon.
How Stored: Refrigerated. Dated 60 days from pack date at 36-42ºF.
Nutrition: Fat: 1%.
New Product–Documentation: Ad (1/3 page, black-and-white) in Natural Foods Merchandiser. 1994. Dec. p. 20. "A refreshing new approach to soymilk. UltraSoy. In your dairy case. Made with brown rice & oat bran. Fortified with vitamins A & D and calcium. Low temperature pasteurization [less than 180ºF for 15 seconds] for a refreshing flavor unlike aseptic products. Preferred in taste tests by 75% over leading brands. 21 day shelf life. 7 days after opening. Distributor inquiries welcome." A photo shows 3 sizes of cartons.

Talk with Bill Bolduc, owner of Ultra Beverages. 1995. Jan. 23. He spent an entire year developing this product, which was introduced at the Natural Products Expo at Baltimore in Sept. 1994, and first sold commercially on 1 Oct. 1994 to Alberts. The product has a shelf life of 21 days if stored at 35ºF, the recommended temperature. The secret is an extremely sanitary, clean manufacturing plant. The products is sold at a few Fresh Fields stores and they are about to get into the Whole Foods chain. They plan to have a booth at the NFM show in Anaheim and they will try for distribution on the West Coast. The product is now often sold on special at $0.99 per quart. The recommended retail price is $1.29-1.49/quart. The oat bran acts as a stabilizer and antioxidant. He still packs for Westbrae and produces

some of Westbrae's soymilk. In consumer taste tests in the Dayton, Ohio, area, when UltraSoy (original flavor with low temperature pasteurization) was compared with Edensoy and Westsoy, 75% of the participants said they preferred UltraSoy. Bill is thinking about introducing a product with high temperature pasteurization so he can get a longer shelf life and wider distribution–even though that means a loss of flavor. Bill presently owns 92% of the shares in Ultra Beverages; organic farmers own the other 8% for which they paid $82,500. Now Bill is looking for additional capital.

Product specifications and description sent by Peggy A. Maus of Ultra Beverages. 1995. Feb. 2.

6682. Redmond, Tim. 1994. Soyfoods Association of America had a booth at the American Dietetics Association (ADA) annual convention (Interview). *SoyaScan Notes.* Nov. 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The annual national 3-day ADA convention, held this year in Orlando, Florida, and was attended by 9,000 registered dietitians, nutritionists, and food service operators. Two panel discussions on soyfoods were held. At the first session, Mark Messina, PhD, and Anne Patterson, R.D., gave excellent speeches on "Soyfoods in Prevention of Chronic Disease" to an audience of about 650 people in a large room at the convention. The next day there was standing room only when Dr. Stephen Barnes, Dr. James Anderson, and Dr. George Blackburn spoke on "Challenging paradigms: The case for a plant-based diet."

Many dietitians came to the Soyfoods Association booth the next day and seemed very interested in information about soyfoods. "SAA displayed a wide range of soyfoods made by member companies, along with product brochures, and sampled soy hot dogs and soymilk. SAA distributed 2,000 Soyfoods Information Kits which also contained coupons and information about SAA members' products." Those in the soyfoods industry who attended the show included Tim, Michelle Edwards (of SAA) and her new husband, and Rick McKelvey from Lightlife. Ginny Messina staffed the PCRM booth, and the Vegetarian Resource Group also had a booth. A company named Omaha Steaks (whose main product is mail-order frozen steaks) had only one product there–their soyburger. Address: Vice President of Marketing and Sales, American Soy Products, Inc., 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

6683. Morano, Jim. 1994. The patent for making rice syrup owned by California Natural Products may not be valid because of prior art (Interview). *SoyaScan Notes.* Nov. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jim has a PhD in food science from Rutgers University, as well as an MBA and a Master's degree in philosophy from Rutgers. His business, Innovative Sweeteners, manufactures organic malt extract, sweet sorghum syrup, and corn syrup from grits. He wants to start making rice syrup using commercial enzymes, he has found a customer for this product, and he has done considerable research on the process. He was recently told by Pam Sander of Zumbro, Inc., that her company has started to make rice syrup using commercial enzymes. They were challenged by California Natural Products (CNP, which has two patents on the process) but CNP dropped their challenge and essentially backed down [Note: Not correct; see interview with Pam Sander 16 Nov. 1994].

He has also talked with Tony Plotkin of Grainaissance, Bob Kennedy of Chico-San, the man who developed Kennedy's enzyme process for making rice syrup, and several men from H.J. Heinz who were closely involved in the purchase of Chico-San. Jim knows the Heinz and many people who work there. Chico-San once made rice syrup in California. [Note: Chico-San started to make rice syrup (*amé*) in 1972. A fire in 1972 destroyed the Chico-San plant located at Chico, California, and set back the company's marketing efforts 5 years]. Originally they made it using the traditional koji method, but then in about 1974 Kennedy decided to switch to using commercial enzymes because of the difficulty in using koji. Over a period of time, Kennedy had three plants in California for making rice syrup; Jim thinks the first one burned down. He had to move his operations to a new third plant when sales of Rice Cakes started to take off.

In 1974 a man named Carl Abbot, a very smart technical person, was loaned to Chico-San by a local nut company. The owner of the nut company owned a portion of Chico-San at the time. He looked at the koji enzymes, which were basically fungal alpha amylases, and he found several companies that sold those enzymes, as extracts of the *Aspergillus oryzae* in koji. By choosing alpha amylase as the main enzyme, he kept the high level of maltose in Chico-San's new rice syrup made with enzymes. Then he added another enzyme, a high-temperature alpha amylase that helped to liquefy the rice at very high temperatures. So in 1974-76 Carl developed the procedures and enzymes to switch from koji conversion to enzymatic conversion.

After a while, Chico-San's rice cake business began to grow so fast that the rice syrup business became a nuisance. He had to concentrate on making rice cakes, so Peter Milbury found CNP, and Chico-San contracted with CNP to manufacture their rice syrup, and guaranteed to buy and certain minimum amount each month. CNP could not sell this rice syrup to any else, and Chico-San kept ownership of the process. At that time, Chico-San taught CNP how to make rice syrup using enzymes.

In 1984 the rice cakes were selling so fast that Bob Kennedy had the opportunity to sell Chico-San to H.J. Heinz. The man who was mainly responsible for evaluating then buying Chico-San, Ken Smialek (pronounced SMAI-lek), is now the director of H.J. Heinz's operations in Australia. Working closely with him was Jim Fox, a technical expert,

who no longer works with Heinz. He lives in Indiana and works as a private consultant. Jim has talked at length with Jim Fox about Chico-San Rice Syrup. Jim's attorney have told him that if he were to make rice syrup using enzymes, CNP would probably not be able to win a legal challenge.

Heinz bought Chico-San mainly for their rice cake; at first they couldn't decide what to do with the rice syrup business. Jim Fox went to California, talked with Cheryl Mitchell of CNP, and explained that rice syrup was not of much use in the regular food industry because it was not sweet enough. She said that she knew how to make it sweeter (she was probably referring to the use of glucosidases or gluco-amylases to develop glucose) but Bob Kennedy never wanted any glucose in his products because he felt that the natural/health foods industry would not be attracted to such a product since consumption of the glucose by a diabetic could stimulate his or her body's production of insulin which could lead to insulin shock.

When Heinz bought Chico-San they automatically became responsible for all of Chico-San's contractual obligations–including the one to purchase a certain amount of rice syrup from CNP each month. So Heinz said that if CNP would relieve Heinz of its obligation to buy rice syrup, Heinz would give CNP in exchange all rights to make and sell rice syrup. Kennedy now feels he made a big mistake by selling the rights to Rice Syrup to Heinz–something they never really wanted.

CNP was issued the first rice syrup patent in May 1988. But 3 months earlier, in February 1988, William Shurtleff interviewed the Mitchell's about their rice syrup. Pat said: "We did not want to come out with another Grainaissance type product. We wanted a really fine tasting product. Grainaissance has what we consider a lot of negative characteristics, such as a glucose bight. Apparently he [Tony Plotkin, owner of Grainaissance] is using some type of glucose enzyme. Some people like things very sweet." Jim notes that if he can show that Tony was using a glucose-generating enzyme prior to the filing of the first CNP patent, the CNP patent is null and void–because of prior art. Jim has asked Tony about this, but he is unable to discuss it because of his agreement with CNP. But if CNP were to take Jim to court over making rice syrup with enzymes, Jim would simply ask his attorney to depose Tony, who would be required by law to tell the truth–despite his agreement with CNP.

Jim holds numerous patents and he has found by long experience that avoiding an existing patent is five times more difficult than writing a novel patent. He has spent more time researching prior art and ferreting around than he would have if he had written the patent himself. Address: PhD, owner of Innovative Sweeteners, 1 Kingsbridge Road, Somerset, New Jersey 08873. Phone: 908-545-5544.

6684. Cloud, Jon. 1994. Re: Work with organic farming in Canada. Letters to William Shurtleff at Soyfoods Center, Nov. 14 and Dec. 27–in reply to inquiry. 2 p. and 1 p. Typed, with signature on letterhead.

• ***Summary:*** To the best of John's knowledge, the first soybeans grown organically in Canada (after 1960) were produced in 1974 in Wainfleet, Ontario, under contract with John. They started growing organically because John was willing to "issue them contracts guaranteeing floor prices and ready sales." "Through extensive field work with these and other growers, the quality and field yield of organic soybeans have steadily increased." John now works in a cooperative arrangement with W.G. Thompson & Sons Ltd. in Blenhein, Ontario, Canada. This arrangement "allows us to secure soybeans at harvest, clean them, and store them in facilities that maintain that quality. I'm still training farmers in organic methods."

"I'm no longer at Soy City Foods. I sold my interest there on 1 Jan. 1994 and now I am gratefully involved in taking the industry to its next level of expansion with W.G. Thompson & Sons.

"I began working with Thompson in May 1994. We have a partnership where they are responsible for marketing the complete line of organic commodities. My responsibility is the operational grower / production side of the business. I train farmers in growing techniques so that the organic acreage can be greatly expanded.

"Presently we have about 295 growers on our mailing list. Approximately 50% of these growers produce organic soybeans, and about 40-50 of them produce them in any one year. However many of these growers have limited soybean sales due to their dairy operations and/or position in the 7-year crop rotation. In Ontario there are over 1,500 farmers growing crops organically but mostly on mixed farms [with non-organic crops]. Probably no more than 60-70 of these grow soybeans organically. Due to crop rotations, the acreage in organic soybeans fluctuates dramatically from year to year; anywhere from 1,000 to 2,500 acres of organic soybeans would be under production in any given year. This means that the bulk of their commodities are going for beef and dairy operations. About one fourth of the 1,500 are cash croppers. The number of farmers has not changed appreciably in the past four years but the size of the farms has. The smaller farms have opted for market garden operations while the larger farms are more efficient at cash cropping–things like soybeans, wheat, and spelt.

"At present we market a full line of organic commodities including soybeans which we ship globally. Other organic crops include spelt, soft white winter wheat, hard red spring wheat, rye, buckwheat, barley, corn, and sunflowers. When you take into consideration that soybeans constitute only one of the commodities in the rotation, you can see that the tonnage is greatly expanded by handling all of the commodities. It is our hope that we will be able to move quickly 4,000 to 5,000 acres of soybeans. The vast majority

of our current soybeans are high protein for tofu or soymilk.

"Ontario sells few organic soybeans to East Asia because the bulk of our production has historically been shipped to Europe. That has changed this year with Japan receiving its first shipments. Other Pacific Rim countries started receiving minimal amounts of organic soybeans in 1992 and 1993.

"Although I was forced to leave the Ontario Oil Protein Seed Crop Committee because of excessive work load, I still sit as an ad hoc member of that committee in a technical assistance capacity to the plant breeders in designing higher quality soybeans. My two latest projects focus on soluble protein increases and elimination of trypsin inhibitors in soybeans."

John encloses a leaflet titled "Training in organic production techniques: Workshop schedule for the winter of 1994-1995." There are two 4-day workshops each month, one in Blenheim and one in Toronto, Ontario. Each workshop costs $25.

Update: 1995 May 17. Acreage of organic soybeans in Ontario is up about 300% over last year and acreage for all organically grown crops in Ontario is up about 100%. John contracts 75% or more of the organic acreage in Ontario. One crop that is rapidly expanding is spelt. It has a better flavor and protein content than typical wheat, and it lacks one of the glutens to which some people are allergic.

Update: 1999 March 20. Talk with an associate of W.G. Thompson. Jon Cloud now has a very bad reputation with at least one manager at W.G. Thompson. According to this manager, Cloud misrepresented his relationship with the company and did some unscrupulous things, then disappeared leaving some unpaid debts. Address: Cloud Mountain Inc., 342 Indian Rd. Cres., Toronto, ONT M6P 2H1 Canada. Phone: (416) 762-0940.

6685. Sander, Pamela A. 1994. Litigation between Zumbro, Inc. and California Natural Products concerning patents on rice milk (Interview). *SoyaScan Notes.* Nov. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Zumbro has begun making a hydrolyzed rice product. California Natural Products (CNP) began threatening Zumbro plus different customers and brokers saying that they would sue Zumbro, and then they would sue the customers and brokers if they bought this rice product from CNP, since Zumbro was violating CNP's patents. Zumbro told CNP many times that they were not violating CNP's patents, but though Zumbro tried, they couldn't come to an agreement. So Zumbro sued CNP in the Minneapolis circuit court in Minnesota, in order to resolve the problem and to get a summary judgment that Zumbro was not violating CNP's patents, that the CNP patents were not valid, and that CNP was interfering with Zumbro's business. The two companies fought over this matter for about a year in court. "CNP fought the entire time to get the case dismissed. In the end CNP did get the case dismissed in Sept. 1994 on the grounds that they do not do business in Minnesota. Now they could conceivably sue us in California, but I feel fairly certain they won't, because they didn't ask for the case to be transferred to California. They fought so hard to have the case dismissed that I think they don't want this to come out."

During the case Zumbro sent CNP considerable information on amazake, rice syrup, and related subjects obtained in a search of the SoyaScan database. Zumbro also interviewed a number of people mentioned in that search, including Bob Kennedy, Peter Milbury, Joel Wollner, etc.–all of whom said that this process was prior art, that Chico-San had taught the basic process to CNP, and that they would testify as such. Zumbro also sent information obtained in these interviews to CNP. "We told CNP that this enzyme process predates you, and we can document that and we have witnesses who will testify. We want to discuss this in court. We tried to come to some agreement with them before the suit, and even during the suit. Let's agree on the amount of glucose we can have in our rice product. Your patent says 'about 5% or more of glucose,' so let's go to 4½%. But they said 'about 5% also includes 3%.' They would let us have up to 3% glucose, but no more. They argue that amazake contained very low glucose and that their invention was to have higher glucose. But we have tested the glucose levels on commercial amazake products and they have high glucose, like 60%. So we feel it is incorrect to say that typical amazake contains less than 5% glucose."

Although CNP won the suit (arguing that they could not be sued in Minnesota) and did not back down, Pam feels that CNP would not like the matter to become widely known. "I don't expect to hear from them again about this matter. I think we're done, and I don't think they are going to sue us. I think there are so many people coming out with similar rice products, that they will not be able to sue everybody. Also, a company named Habib Arkady makes rice syrup in Pakistan, and have for many years. Gaffar Habib, the president, says the CNP patents are ridiculous. He went around with them on this several years ago and they finally backed down, and have not bothered him since."

Update. 1997. Jan. 16. Pam Sander left Zumbro in spring or summer of 1996 to start her own company, The Big Map Company, which makes large maps. Phone: 507-775-7130. She is no longer in the food business. Address: Vice President R&D, Zumbro, Inc., Route 1, Box 83, Hayfield, Minnesota 55940. Phone: 507-365-8400.

6686. Gupta, Rajendra ("Raj") P.; Daller, Frank. 1994. Update on ProSoya Inc. and the SoyaCow Centre (Interview). *SoyaScan Notes.* Nov. 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** ProSoya Inc. (named ProSoya Foods International until late 1993) is the company that developed and owns SoyaCow, which is a machine that makes soymilk.

The name SoyaCow was intended originally for smaller machines for developing countries, but now it is used also for the larger, more expensive systems.

In 1985 ProSoya had no manufacturing capability, so Raj talked with APV about developing equipment for ProSoya. APV did some research and development work for ProSoya but no money changed hands. ProSoya was considering giving APV a license to manufacture the machine, but APV found eventually that there are not many companies in the soyfoods market that are big enough to afford APV equipment, and most who could afford a large system might buy it from STS, which APV acquired in 1986. STS also looked at making the SoyaCow, but decided that the market was too small. APV has never owned ProSoya, and ProSoya never licensed any technology or equipment to APV.

The hard part was finding the right people. Once ProSoya found the right people, they chipped in some money, got some bank financing, and some small money from some shareholders. Only 15% of the company is owned by outsiders. So ProSoya is a corporation with about 8 shareholders, of which 4 are principal shareholders; the rest are relatives, accountants, etc. Raj still has the controlling interest. Frank Daller has raised all the outside capital within the last 1-2 years but most of it came in early in 1994. This has allowed ProSoya to construct a building where they do final manual assembly of SoyaCows, to publish a newsletter, and to market its SoyaCow very effectively. Most of the new funds have been used to build this assembly building, which does not have an assembly line and does not manufacture any of the SoyaCow's component 200 parts; they are custom fabricated by various other companies. ProSoya has 15-30 SoyaCows made at a time–built to order; each takes only 2-3 hours to assemble, and they inventory only a few at a time. In the building there is also a pilot plant, where potential customers can see how the SoyaCow works and taste the finished product.

ProSoya has not gone to any large companies for capital, and has not had to made any compromises as to its goals. In fact, they have been very selective about bringing in capital, desiring only investors who share Raj and Frank's views and goals. Frank invested money, and they have brought in outside money from only one other significant source, which is their West Coast licensee. This is a new entity in Vancouver, British Columbia, named Pacific ProSoya, which has acquired the license to produce soymilk in bulk, using ProSoya technology, for the western part of Canada and the northwest USA. The milk, made in a plant which ProSoya is building for them, will be sold to food processors. It is sort of joint venture and licensing deal. ProSoya holds equity in their company and they hold equity on ProSoya. The relationship began about 2 months ago, though they have been discussing this for the last 9 months.

Another new development is that ProSoya in Ottawa is starting to make bulk soymilk for food processors. They will be serving cow's milk dairies which will be test marketing Pure-Pak cartons of soymilk, as well as an ice cream company and a yogurt company and a Tetra Pack filler.

ProSoya is aggressively looking for a company to manufacture their SoyaCow assembly-line style in East Asia (especially in China, Taiwan, or Korea) for about half the price they can make it for in Canada. They see a large potential market in China and throughout the less developed countries if they can reduce the price to end users.

How much does a SoyaCow cost? The SC-20, the smallest machine which makes 20 liters of soymilk per batch, is extremely compact, uses a patented airless cold-grind process to produce a very good-tasting soymilk, and retails for US$7,000. The SC-100, which can produces 100 liters per batch and can make up to 400 to 500 liters/hour, retails for a minimum of US$175,000, not including the boiler, chiller, and clean-in-place system. They are about to introduce a continuous-process machine.

People learn about the SoyaCow mostly through word of mouth and from the *SoyaCow Newsletter,* which is written mostly by Raj and Frank. It goes out to several hundred people.

The Russians have translated Mark Messina's book, *The Simple Soybean and Your Health* into Russian. They want to print 10,000 copies. Address: The SoyaCow Centre, 9 Veery Lane, Ottawa, ONT, K1J 7W7, Canada. Phone: 613-745-9115.

6687. Nissenbaum, Robert. 1994. The early work of Imagine Foods with Chico-San, California Natural Products, and enzymes in making Rice Dream. Part I (Interview). *SoyaScan Notes.* Nov. 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In March 1983 Robert started making amazake, using the traditional koji method, at a company named Imagine Foods, Inc., Moniteau Farm, Jamestown, Missouri. As an additional sweetener he added Yinnies syrup, a rice-based syrup made by Chico-San in Chico, California. Robert was also buying organically-grown rice from Chico-San. Chico-San bought this rice mostly from Mike Polit of Polit Farms in Maxwell, California. To this day, Robert buys all his organic rice from Mike Polit. The story of why Chico-San left Wehah Farms in the early 1970s is a story of its own. Paul Hawken of Erewhon went to Lundberg and asked to buy their organic brown rice direct, rather than going through Chico-San. Note: The 1975 Erewhon catalog lists Wehah Farm as its supplier of organic and non-organic brown rice. Peter Milbury claims that Wehah broke its exclusive contract with Chico-San. From that point, Chico-San became very upset at Wehah Farm, so Chico-San developed new sources, primarily Polit Farm. Then Mike Polit started developing other organic farmers in the area. The Lundberg brothers of Wehah did the same thing; they do not grow all the organic

rice they sell. Polit and Lundberg became arch competitors.

In June 1984 Imagine Foods launched Rice Dream, a non-dairy frozen dessert, based on their traditional amazake (made from koji) and sold in hard packs (not soft serve). They sold it in the Midwest and the product seemed to have excellent potential. Robert had become good friends with Peter Milbury, who was Chico-San's operations manager. Robert told Peter that he would have to do something to expand his production of amazake. At the time Chico-San was selling very little rice syrup. Robert said: "Whatever you are doing to make Yinnies syrup, we could probably do something similar to make a product like our amazake." They talked about this for several months.

In early June of 1984 Imagine Foods took Rice Dream to its first trade show in Atlanta, Georgia. They wanted to introduce the product nationally. At that show, every major distributor in America wanted to sell Rice Dream. But Robert could not supply this huge new demand from his little plant in Missouri that used a traditional koji process. Peter Milbury was at the same show, as was Joel Wollner, who was doing some consulting work for Chico-San, though he was not employed by Chico-San. Wollner was involved with Mountain Ark, a macrobiotic trading company and community in Fayetteville, Arkansas, a rice farming center. Bob Kennedy was thinking of putting up the money to start making more macrobiotic products in America rather than importing them from Japan, and he was thinking of making these products in Fayetteville. In about May, Joel had learned about Kennedy's ideas from Peter Milbury. So Joel visited Robert's booth at the show in Atlanta, and he and Robert started talking about Fayetteville. Peter invited Robert to visit Chico-San in California after the show; he said they could talk about new possibilities for cooperation in Fayetteville or California or Missouri. Neither Chico-San or Nissenbaum knew anything about California Natural Products (CNP) at this time.

So in late June of 1984 Robert visited Chico-San see how they made the Yinnies syrup (rice syrup) that he used in his amazake, and to see why their quality was so inconsistent. He met Bob Kennedy for the first time. He was taken to a a building that was "like a big garage" at the end of an alley in Chico. It was in a different part of town from Chico-San's rice cake plant and other operations. "It was not a pretty sight. They had almost no control over what they were doing. Technically, the operation was a disaster. They just didn't know what they were doing. I was really surprised to see the way it was produced." Robert recalls visiting this plant twice. Chico-San wasn't selling much rice syrup in part because of the inconsistent quality, and in part because they didn't have the time or money to invest in improving the rice syrup process–since all their resources were going into making rice cakes. "We got a different product every time we received a shipment." Robert has heard of Carl Abbot (the man who developed Chico-San's process using commercial enzymes), but he never met him.

For the next several months Robert, Peter Milbury, and Bob Kennedy discussed possible ways of working together so that Imagine Foods could expand its production of amazake. One idea that looked promising was Imagine Foods making its amazake and Chico-San making its Yinnies rice syrup at the same plant (which they would construct, with Chico-San providing most of the funding) in Fayetteville, Arkansas. Then one day Robert got a call from Peter Milbury, who said that all plans (including those involving Fayetteville) would have to be put on hold because Bob Kennedy had received an offer to buy the company. At about that time Quaker Oats bought Arden, which was the only other maker of rice cakes in America and thus Chico-San's biggest competitor. That is what precipitated the sale of Chico-San to Heinz. Peter was concerned about his job. Robert told Peter he could not wait, but as asked Peter to keep him posted of new developments. A few days later Peter called Robert again, and said, "There is a couple name Pat and Cheryl Mitchell of California Natural Products (CNP), who I have met at natural food trade shows. I know that they have food processing equipment that they are not using all of the time. Would you like me to call them." Robert said "yes." So Peter talked with them and called Robert back to say that Pat and Cheryl were not interested. But after Pat and Cheryl thought about the matter for a few days, they called Peter back and said, "Let's talk about it."

At the time Pat was basically a big produce farmer in central California and Cheryl had a PhD in food chemistry. Pat's father, Bill Mitchell, who worked for General Foods, had been one of America's foremost food scientists and developers of food products. He had roughly 50 food patents, and had been in on the original Jello and pudding patents, and in the development of Cool Whip. He got Pat and Cheryl interested in making various food products. Bill was interested in inulin, which was a pharmaceutical product used to treat diabetics–and was the main product used before the synthesis of insulin in 1920. All U.S. supplies were imported from Israel and it was very expensive. Bill encouraged Pat to grow the dahlia plant from which inulin was extracted, then Bill would try to figure out a way to extract the inulin less expensively using a sort of malting process. Almost by accident, while making inulin into a syrup, Bill and Cheryl found that if they dried the syrup the resulting product had a flavor like grain coffee. So they decided to approach the natural foods industry to see if they could sell this grain coffee. They started going to natural foods trade shows and Peter Milbury met them at one of these shows. At that time, CNP was not using enzymes in food processing operations, but Cheryl had been a consultant for General Foods and other food companies and she was very familiar with enzymes. Continued. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

6688. Nissenbaum, Robert. 1994. The early work of Imagine Foods with Chico-San, California Natural Products, and enzymes in making Rice Dream. Part II (Interview). *SoyaScan Notes.* Nov. 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: Robert is not sure whether he met Pat and Cheryl Mitchell before or after they first visited Chico-San in the summer of 1984. When they first visited Chico-San's plant that made rice syrup in Chico, she was appalled. But she knew about enzyme technology and she thought that their company, California Natural Products (CNP) in Manteca, California, could make the product. Peter Milbury felt that Rice Dream (a non-dairy ice cream made from amazake) had a great deal of potential and he convinced Bob Kennedy that transferring the production of Yinnies rice syrup to CNP was a good idea. Nobody knew what would come of Heinz's offer to buy Chico-San, but after Pat & Cheryl talked with Bob Kennedy he "agreed that the Yinnies syrup operation was a mess" and decided to make the transfer to CNP. Note that Chico-San never made Rice Dream base.

In 1984 (before Heinz made its offer to buy Chico-San) Pat and Cheryl moved the rice syrup equipment from Chico to CNP in Manteca. They were still basically in the farming business and their entire food processing operation was a very small business they did as a "side business"–since Pat was looking for a way to get out of farming. Robert does not know if the Mitchells bought Chico-San's rice syrup equipment or not, but much of it turned out to be worthless and he is quite sure that if any money was involved in the transaction, it was not much. CNP signed a contract with Chico-San stating that Chico-San would buy a minimum amount of Yinnies rice syrup from CNP each month. CNP only got into this business of processing rice because Rice Dream, made by Imagine Foods, looked like it had real potential. Robert went to California and met Pat and Cheryl, who were very skeptical about Chico-San and rice syrup. But the three of them soon got along very well together, and Robert soon convinced them to get involved because of Rice Dream's potential, based on promises from big natural foods distributors. Robert had to buy all of his Rice Dream base, made by CNP, through Chico-San, and he agreed to buy a certain minimum amount of this base each month. At the time, Robert also told the Mitchells that he was making a beverage product, traditional amazake (Robert made the koji by hand), and that he wanted to find a way to produce it on a much larger scale. He knew that he would not be able to continue making it in the traditional way as volume expanded. "I knew there must be some way to make this rice beverage without using koji. [Note: Robert prefers the term "rice beverage" to "rice drink]. I spent a lot of time talking with Betty Stechmeyer of GEM Cultures (from whom we were already buying our cultures) about the possibility of inoculating the rice directly with koji spores, without growing the mold on it first. We ran many experiments. At the time I was not aware that commercial enzymes were the answer to our problem. When I got involved with Chico-San I asked them how they made rice syrup, but they declined to reveal their secret (they were using commercial enzymes, but they had 'koji' on their labels and in their catalogs). I began to suspect they were not using koji."

When Kennedy sold Chico-San to Heinz in Nov. 1984, Heinz automatically took over Chico-San's contract and obligations with CNP, and they had to send CNP a check every month–which Heinz disliked. Imagine Foods was required to buy its minimum amounts of Rice Dream base through Heinz. To Heinz, Rice Dream looked like a minuscule product. During this time, Pat, Cheryl and Robert were developing a very close personal and business relationship. Together (and without Bob Kennedy) they developed a completely new and innovative process for making Rice Dream base using commercial enzymes. "We started literally by hand, from scratch, using buckets, trying to make the new Rice Dream base at CNP–even before Chico-San's plant was set up in Manteca. I spent days working on the process during the fall of 1984. I didn't know if an enzyme method would work. I had a sense for the product and the Mitchells had some technical expertise I lacked. It was a good fit."

On 16 November 1984 Bob Kennedy sold Chico-San to Heinz. At this time, the experiments that Robert and the Mitchells were conducting at CNP were looking more and more promising. In late 1984 Robert moved Imagine Foods from Jamestown, Missouri, to Fayetteville, Arkansas. In about December 1984 the Rice Dream base was good enough that CNP began sending it to a dairy plant in Palo Alto, California, for experiments in making this new base into Rice Dream non-dairy frozen dessert. In the meantime, Imagine Foods was still making Rice Dream in Missouri or Arkansas using the traditional koji process.

In January 1985 the new Rice Dream non-dairy frozen dessert was launched commercially, in hard-pack pints in seven flavors: Vanilla, carob, strawberry, lemon, carob chip, orange, and carob almond. The base was made for Imagine Foods, using the new enzyme process, by CNP, and shipped in a large stainless steel tanker The actual frozen dessert was made by Peninsula Creamery at 900 High Street, in Palo Alto. Koji was no longer used. The use of commercial enzymes increased the glucose content of the product, obviating the use of maple syrup. Robert still lived in Fayetteville (probably) but he traveled frequently to Palo Alto.

Robert, Pat and Cheryl all hoped to have Heinz out of the picture as soon as possible, so they all acted as a sort of thorn in Heinz's side. Within about 6 months after Heinz bought Chico-San almost everyone who had formerly worked for Chico-San (including Kennedy and Milbury)

had left Heinz. The only person who stayed with Heinz a little longer was Bob Kennedy's daughter, Gail. Heinz eventually closed down the offices in Chico. Heinz soon realized that though they had a contract to buy rice syrup from CNP, they were hardly selling any. Sales of Rice Dream base were small in Heinz's eyes. So Heinz had to pay for a product they did not want. Pat Mitchell, who is a relentless negotiator, finally convinced Heinz to get out of the rice syrup business because their involvement made no sense to anyone. Continued. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

6689. Nissenbaum, Robert. 1994. The early work of Imagine Foods with Chico-San, California Natural Products, and enzymes in making Rice Dream. Part III (Interview). *SoyaScan Notes.* Nov. 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Robert has about four letters in his "nostalgia" file documenting key events relating to Heinz and CNP from the summer of 1985 on. A letter dated 31 July 1985 from Pat Mitchell to Joe Ward (a major figure at Heinz) summarizes the problems that exist between CNP and Heinz as CNP understands them. Representatives of the two companies met at CNP on 30 July 1985. Heinz had a contractual obligation to CNP for a specified amount of money, of which a certain amount is still due and which Heinz wishes to terminate. "Because Heinz has not actively marketed the rice syrup and has no apparent intention of doing so in the immediate future, CNP would be agreeable to the proposed termination of the agreement. CNP's commitment to mere contractual minimums as opposed to twice the minimums as originally promised by Chico-San has caused a financial burden to CNP. CNP would be agreeable to the purchase by Heinz of a right-of-refusal on future rice syrup business prospects exclusive of those customers already provided on a list by CNP to Heinz." Many natural foods companies wanted to buy rice syrup from CNP because the quality was so much better. But CNP felt that Heinz was doing nothing to develop this market, so they didn't want to pay Heinz for product sold to customers that CNP had found and developed. "It is understood by Heinz that upon termination of the agreement with Heinz that CNP will be relying on the Imagine Foods account for a specified number of dollars per week. The only way for CNP to survive economically would be to have the Imagine Foods account. Without the Imagine Foods account, CNP has no choice but to enforce the current contract with Heinz and accept the minimums." In short, Imagine Foods was buying more than its required minimums, whereas Heinz was not. Yet Heinz was trying to have the best of both worlds. They wanted to void their obligations to buy at least a minimum amount of rice syrup from CNP, yet they still wanted to take of a cut of the increasing sales of Rice Dream base to Imagine Foods. "CNP recognizes Robert Nissenbaum of Imagine Foods as having certain rights of inventorship to the process and formula of the amazake developed in conjunction with CNP for Imagine Foods. CNP also recognizes Robert Nissenbaum as having full product rights making a non-dairy ice cream from amazake since he originally approached Chico-San with the concept and product that he was already making. It should be noted that Robert Nissenbaum of Imagine Foods has already indicated his dissatisfaction with regards to the pricing and service structure that is currently being received from Heinz. It is a possibility that Imagine Foods for economic reasons will seek out, within months, the other two companies currently in amazake production to make his formula." Robert felt that he was not getting his money's worth from Heinz; all they were doing was taking a percentage of sales (Robert had to send his payments directly to Heinz rather than CNP) and doing nothing in return. It was just a nightmare. So Robert was threatening to void the contract, which said that things had to be done to the satisfaction of both parties.

A letter dated 9 Aug. 1985 from Marianne McCullough, marketing manager of Chico-San in Pittsburgh, Pennsylvania, written on Chico-San stationery, to Robert Nissenbaum in Fayetteville, Arkansas, states that Chico-San will not pursue negotiations with Imagine Foods for a long-term contract. Agreement in principle has been made with CNP to service Imagine Foods directly, effective date of August 19, 1985, per signed agreement with CNP. In the meantime, Imagine Foods will continue to order through Chico-San's Pittsburgh center.

Within a month or two Heinz was no longer involved with CNP or Imagine Foods. For the first time, Imagine Foods placed its orders directly with CNP and paid its bills to CNP.

In 1986 Robert moved to Palo Alto, taking his company with him. Then in September Imagine Foods moved from 299 California Ave., #305, Palo Alto 94306, to 350 Cambridge Ave., Suite 350, Palo Alto 94306. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

6690. Nissenbaum, Robert. 1994. Imagine Foods, Westbrae, rice drinks, and the pour spout carton (Interview). *SoyaScan Notes.* Nov. 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Imagine Foods and Westbrae launched a commercial rice beverage in a pour spout carton at about the same time. Pacific Foods, where Rice Dream (non-dairy beverage) is currently being packed in aseptic Tetra-Brik cartons, made an agreement with Tetra Pak about a year ago to get new filling machinery that will package in a carton that has a pour spout. Pacific Foods was told they would have the second machine in the USA that filled this new carton; Steuben Foods (1150 Maple Road, Elma [near Buffalo], New York 14059) got the first machine. Pacific Foods planned to

be the first rice beverage on the market in the new pour spout container. Ever since Robert began working with Tetra Pak 5 years ago, he has been encouraging them to improve their package. Tetra Pak was spurred to introduce the new package after Combibloc introduced it first.

Westbrae was having their aseptic packaging done by White Knight Packing [in Grand Rapids, Michigan], which is owned by a very large company in Europe [Parmalat]. When Westbrae found out that Pacific Foods would soon be getting equipment to package with a pour spout, Westbrae contacted White Knight, which in turn contacted their parent company saying that Westbrae wanted to get the pour spout packaging as fast as possible. So the president of Parmalat went to Tetra Pak, and since his company was Tetra Pak's biggest customer, he was able to say "I have to have one of these new machines." So Tetra Pak went around the normal channels and got White Knight a new machine very quickly at about the same time that Pacific Foods got theirs. Pacific Foods was very upset about this.

Westbrae's new rice beverage in the pour spout carton was probably on the market in late September 1994, a week or so before Imagine Foods' rice beverage, but Imagine Foods' product was on the market first on the West Coast.

Westbrae's rice beverage is made from rice syrup (made by California Natural Products, CNP, in Manteca, California) and rice starch. Westbrae has been buying rice syrup from CNP for a long time, to use as a sweetener in their soymilk products. [Note: In fact, on a solids basis, Westbrae buys about as much or perhaps even more rice hydrolysates from CNP as Imagine Foods does.] About 7-8 years ago Imagine Foods tried making a product using the same ingredients (from CNP) that Westbrae is making now; but CNP's ingredients are much better now. One reason Robert decided not to use this approach because of the high content of glucose in the product. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

6691. Nissenbaum, Robert. 1994. Imagine Foods' future plans (Interview). *SoyaScan Notes.* Nov. 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Imagine Foods has decided to install their own Tetra Pak line at California Natural Products (CNP) so they don't have to ship their rice beverage to Pacific Foods of Oregon to have it packaged. That will cut the cost of making Rice Dream. They now have a really good source of organically grown rice, which they buy directly from the farm, and they do all their own rice milling. It is a really good situation with great efficiency at the CNP plant. Imagine has been planning to do this for a long time since they have developed a very significant international market for this non-dairy beverage–especially in Europe. They are designing an international package. It still makes sense to manufacture the product in one place in the USA–at CNP. Address: President, Imagine Foods Inc., 350 Cambridge Ave., Suite 350 Palo Alto, California 94306. Phone: 415-327-1444.

6692. Lombardi, Joyce. 1994. Re: Growing and using soybeans in Chad. Letter to William Shurtleff at Soyfoods Center, Nov. 24. Thanksgiving. 2 p. Handwritten. [Eng]
• ***Summary:*** "A friend in New York sent me *The Book of Tofu* because I am one of the people sending soybeans to the four directions, as you put it. I am a Peace Corps Volunteer in southern Chad, and just today I returned from the communal field of the local midwives. We have just harvested our first sack (50 kg) of soybeans. The idea of soybeans is catching on slowly in Chad, but quickly in my village of Bissada." She then requests soy recipe books in French or recipes especially developed for Africa.

"In January I will be devoting more time to soybean transformations in the village. Soymilk, soy porridge, soy beignets [fritters] made with okara, and soybean coffee are all I've managed to make here, but more adventurous people have had soybeans in fish sauce, soy snacks, and so on. Unfortunately, soy is expensive here because it is still an unknown crop, but that's changing slowly. The health team is pushing for its nutritional value, and mothers are pretty interested. It's also a good profit-maker for now."

Note: This is the 2nd earliest document seen (Aug. 2009) concerning soybeans in Chad, or the cultivation of soybeans in Chad. Address: U.S. Peace Corps, B.P. 193, Sarh, Chad.

6693. Mercado, Sam. 1994. Re: The Plenty Canada soy program in El Salvador. Letter to Mr. Frank Daller, ProSoya Foods International Inc., 5350 Canatek Road, Ottawa, ONT K1J 9C9 Canada, Nov. 25. 4 p. Typed, with signature on letterhead.
• ***Summary:*** The SoyaCow project is part of Plenty Canada's Integrated Rural Development Program (CIDEP) in El Salvador. An evaluation made by CIDA in March 1994 showed the following achievements: 1. A small soya production has been established in the municipality of Mejicanos. It is equipped with two SoyaCows, each producing more than 130 liters of soymilk a day. More than 500 children in three kindergarten schools receive soymilk and soy ice cream as part of the breakfast program. The okara (solids) is used as a raw material in making tortillas; in the future the okara will also be used in making *pupusas,* a very popular staple food in El Salvador.

2. One person in El Salvador was trained in the operation and maintenance of the SoyaCow. This person trains other Salvadorian trainees. 3. This project has created five permanent and several other part-time jobs in the poor neighborhood of the municipality of Mejicanos. It has also provided the local staff of CIDEP and the child care center hands-on experience in organizing and operating a small

enterprise.

Demonstrations and extension visits, though on a very limited scale, helped make local people aware of the benefits of soyfoods. CIDEP received several requests from women's groups and individuals to help them with training in processing and to set up related small income-generating activities. Address: Central America Program Officer, Plenty Canada, Lanark, ONT Canada K0G 1KO. Phone: (613) 278-2215.

6694. Morano, Jim. 1994. Processing rice with enzymes to make rice hydrolysates, including syrup and rice beverage (Interview). *SoyaScan Notes.* Nov. 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Enzymes work best at their optimum conditions, which come from adjusting their pH by adding acids or bases. Natural foods companies didn't want to add acids or bases, so they just processed rice under less than optimum conditions. Jim thinks Tony Plotkin of Grainaissance may have been the first person in the natural food industry to process rice with commercial enzymes–but he can't talk about it. Frank Marero might know some of the details. Apparently Tony and the others (Joel Wollner, Sjon Welters) all knew Miles Laboratories.

The industry will soon be entering a new phase as big companies get involved. Jim is affiliated and working with a company that is much larger than either his company or Zumbro. It is a Fortune 500 company, with $500 million in food sales, that will make cereal syrups and starch hydrolysates (including rice syrups and rice maltodextrins) for Innovative Sweeteners, which retains the exclusive rights to sell these products to the natural/health food industry, and the big company retains the exclusive rights to sell them to the mass market. This big company, which has a plant in Chicago, Illinois, is one of the major manufacturers of malt extracts in the USA. He pays them a contract manufacturing fee, since Innovative Sweeteners is only a product development and marketing company that owns no manufacturing facilities. This big company needs to see a market for at least 5 million pounds of a rice hydrolysate (80 brix extract) before they would be interested in starting to make it. Jim sees an immediate potential market for 2-4 million pounds/year of rice syrup.

Amazake is really a form of rice maltodextrins. Jim is more interested in rice syrup than amazake-type products, that is a rice hydrolysate as a beverage. Zumbro is partly interested in rice syrup solids, but she is mostly interested in amazake type products made with commercial enzymes. Rice maltodextrins may be able to serve as a fat substitute in the food industry. One popular malted cereal syrup, which is 70% corn syrup/hydrolysate and 30% malt, would be excellent as a natural sweetener for soymilks.

All rice hydrolysates typically start at 18-24% solids. A gallon of this base is diluted to make 1½ gallons of rice drink. Amazake exists as a low-solids liquid, that contains 10-15% solids including the oil and rice syrup that is added back to many commercial products. If you concentrate the original hydrolysate to 80% solids, you get rice syrup. For a rice drink or amazake, you can get the desired sweetness either in the basic processing (as is done with Rice Dream beverage) or by adding rice syrup later. Westbrae can't do that because of the CNP patents.

Jim's wife owns Suzanne's Specialties (which used to be named T&A Gourmet), and which started in about 1986 focusing on the gourmet industry. She buys koji (made in the traditional way) and makes rice syrup, which she sells in relatively small quantities (pails and drums) to people in the health food industry. She makes about 500,000 lb/year of koji-converted rice syrup.

Koji is a generalized, non-specific term. It can be made with *Aspergillus oryzae* (which produces sugars mostly in the form of maltose) or with *Aspergillus niger* (which produces sugars mostly in the form of glucose). Amazake made with traditional koji (made with pure culture *Aspergillus oryzae*) would probably contain less than 10% glucose on a solids basis. But any rice drink or syrup made with koji is outside the domain of the CNP patent.

Jim has discussed these matters at length with Ron Roller of Eden Foods. Address: PhD, owner of Innovative Sweeteners, 1 Kingsbridge Road, Somerset, New Jersey 08873. Phone: 908-545-5544.

6695. APV DTD. 1994. DTD 25. Aarhus, Denmark: Danish Turnkey Dairies Ltd. 55 p. 21 x 27 cm. [Eng]

• ***Summary:*** Published on DTD's 25th anniversary, this book tells the story of the company founded on 1 Nov. 1969 by Mr. Jorn B. Jensen. In May 1971 the company signed the world's first contract for a turnkey dairy plant–signaling a new era for the dairy industry.

In 1981 DTD established a new subsidiary company, STS-Soya Technology Systems Ltd., based in Singapore together with DTD's South East Asian regional office. STS developed new technologies for production of a wide range of soy-based products.

1984–STS breaks into the European market with the building of a complete soymilk plant in Germany [for DE-VAU-GE]. Address: 2, Europaplads, P.O. Box 146, DK-8100 Aarhus C, Denmark. Phone: +45 86 12 41 55.

6696. Barnes, Stephen; Kirk, M.; Coward, L. 1994. Isoflavones and their conjugates in soy foods: Extraction conditions and analysis by HPLC-mass spectrometry. *J. of Agricultural and Food Chemistry* 42(11):2466-74. Nov. [16 ref]

• ***Summary:*** HPLC is "high-pressure liquid chromatography." The isoflavone genistein has attracted a great deal of attention because it can serve as an *in vitro* inhibitor of protein tyrosine kinases, many of which form

part of growth factor-stimulated signal transduction cascades in normal and transformed cancer cells.

Discusses: Soymilk, soy protein isolate, toasted soy flour, daidzein, genistein, glycitein. Address: 1. Dep. of Biochemistry; 1-2. UAB Comprehensive Cancer Center Mass Spectrometry Core Facility; 1,3. Dep. of Pharmacology. All: Univ. of Alabama at Birmingham, Birmingham, AL 35294-0019. Phone: (205) 934-7117. Fax: (205) 934-8240.

6697. Imagine Foods, Inc. 1994. Imitation is the highest form of flattery. (But you don't have to settle for it) (Ad). *Natural Foods Merchandiser.* Nov. Insert glued in after p. 26.
• ***Summary:*** The front of this color 8½ by 11 inch insert ad shows a large carton of Rice Dream. On both sides of it are cartons of four imitations, named "Rice This–New" "Rice That–So Incredibly Sweet," "Rice Drink Knock Off–Westward Ho," and "Brand X Rice Syrup Drink." The text begins: "Have you noticed that several soy milk companies have been introducing rice drinks lately" This new enthusiasm for a beverage we pioneered may have something to do with the fact that Rice Dream has become the best selling alternative to milk in the natural food store.* (Footnote: *"Based on a poll of leading natural food distributors). Why? Superior quality and taste. And try as they might, other rice beverages can't duplicate Rice Dream–we have two U.S. patents to guarantee it."

The back of this ad is titled "Rice Dream vs. Westbrae's Rice Drink." A table shows the differences. Westbrae's drink is said to be reconstituted from concentrates. The main ingredient is high glucose rice syrup. It is thickened by adding rice starch and carrageenan. The Westbrae drink contains 50% more fat than Rice Dream.

This ad also appeared in *Vegetarian Times* (Dec. 1994, p. 5; Feb. 1995, p. 3).

Talk with Robert Nissenbaum of Imagine Foods. 1994. Nov. 23. This ad is saying that Rice Dream, including all of its different flavors and varieties (SKUs), is the best-selling brand of milk alternative in U.S. natural food stores nationwide (ahead of Edensoy, which is the best-selling brand of soymilk, including all its different flavors and varieties). It is not saying that more rice milk is sold in U.S. natural food stores than soymilk. Imagine Foods' best-selling single product (SKU or stock-keeping unit) is Rice Dream Original, followed by Rice Dream Vanilla. Many major U.S. distributors have reported to Imagine Foods that these two products are, in many cases by far, the two best-selling products among ALL products of all categories sold by that distributor. In both Mountain People's Warehouse and Nature's Best, which are the two largest western U.S. regional distributors, these two products are the two best-selling single products for both distributors. Likewise in every one of the other large distributors (Tree of Life, Cornucopia, Stow Mills, etc.), Rice Dream is among the top SKUs. Since Tree of Life tends to promote its own brands, Rice Dream products may not be the very top SKUs, but they are very high on the list. Address: Palo Alto, California.

6698. INTSOY. 1994. Soybean processing and utilization. May 17-June 15, 1995. An international training program (Brochure). Urbana, Illinois. 12 panels. Each 22 x 10 cm.
• ***Summary:*** Contents: Basic topics to be presented in the 1995 course: Basic processing concepts, nutrition and functionality, oil extraction, extrusion technology, soymilk and dairy analogs, Oriental soybean foods (tofu, tempeh, etc.), animal feed applications, quality control, global overview of the soybean industry, economics and marketing of soy products. Professional opportunities. Cost and travel information (the course costs $3,900 plus an estimated $1,900 for room, board, and other local living expenses. INTSOY is unable to offer scholarships).

The course time consists of 35% lectures, 45% hands-on exercises, and 20% industry visits. This is the 15th offering of the training program. Some 155 persons from 26 countries have attended the course. Danny Erickson is the training officer in charge. Facilities at the University of Illinois include the largest public university library in the United States, the nation's largest supercomputer complex, and the National Soybean Research Laboratory. Address: International Soybean Program, Univ. of Illinois, 169 Environmental and Agricultural Sciences Building, 1101 West Peabody Drive, Urbana, Illinois 61801. Phone: (217) 333-6422.

6699. **Product Name:** [Rizoleil (Rice Drink)].
Foreign Name: Rizoleil.
Manufacturer's Name: Les Aliments Tarasoy Ltée (Tarasoy Foods Ltd.).
Manufacturer's Address: 3455 Local D rue Isabelle, Brossard, QUE J4Y 2R2, Canada. Phone: 514-659-6586.
Date of Introduction: 1994. November.
Ingredients: Incl rice.
Wt/Vol., Packaging, Price: 1 liter Pure-Pak.
How Stored: Refrigerated.
New Product–Documentation: Talk with Helen Wan, sales manager. 1995. May 26. In Nov. 1994 they introduced *Rizoleil,* a rice drink–which is the company's only product not made from soy. Helen does not know whether the rice drink is made with the traditional koji fermentation process or with enzymes. It is sold fresh, packaged in 1-liter Pure-Pak cartons, with a remarkable 20-day shelf life.

6700. *Soyafoods* (*ASA, Europe*). 1994. EU rules against 'soya milk.' 5(3):1. Autumn.
• ***Summary:*** On June 16 the EU Milk Management Committee, despite opposition from the UK, decided by a vote of 10 to 1 (with Ireland abstaining) that use of the term "soya milk" should be phased out because they consider

that it infringes on the Dairy Designations Regulations (1989/87/EEC). The UK Government opposed the decision because it does not believe that consumers are confused by use of the term. But the UK Government has decided not to appeal the decision. These regulations specify that the term "milk" should be used only for cow's milk, although some traditionally named products such as coconut milk, cream sherry and cream crackers are exempted.

About £10 million of 'soya milk' is sold each year in the UK, compared with £3.3 billion of regular milk.

6701. *Soyafoods* (*ASA, Europe*). 1994. Sojinal acquired by B & K Holdings. 5(3):2. Autumn.
• ***Summary:*** Sojinal, the soyfoods manufacturer from Issenheim, France, which manufactures the Biosoja and Ligne S lines, is now owned by B & K Holdings [a Swiss company].

In a spot on page 5, a photo shows several newly changed packages in the Ligne S line which includes tofu, soya beverages, desserts, biscuits and bars.

6702. *Soyafoods* (*ASA, Europe*). 1994. In depth: Food Ingredients Europe. 5(3):6-7. Autumn.
• ***Summary:*** Food Ingredients Europe, the international exhibition of food ingredients, was held this year on Oct. 4-6 in London, England, at Earl's Court. This was the biggest FIE in its 9-year history, with more than 500 exhibitors. The American Soybean Association (ASA) had a very successful booth at the U.S. Pavilion. One of the most interesting new products was Befine, from a company named VPS Europe. This unique, patented soya-based granule, sold fresh or frozen, mimics the texture of ground meat but it is not TVP or textured soy protein concentrate. Made from organic whole soybeans, it contains 18% protein. ADM Protein Specialties Division introduced their new WMR4, a dry soymilk based on soy protein isolate. Protein Technologies International exhibited Supro brand Isolated Soy Protein and Fibrim brand soy fiber. A line of texturized Danprotex (H-29, B-39, and F) and functional Danpro (DS) soy protein concentrates were launched by Central Soya Aarhus A/S, a member of the Eridania/Beghin-Say agro-industrial group. Kikkoman Trading Europe exhibited their naturally fermented soy sauces in liquid and dehydrated dorms. Other soy sauce exhibitors included Henry Lamotte GmbH and Mandarin Soy Sauce Inc. Loders Croklaan exhibited a new soya concentrate line. Alsace-based Sojinal, which supplies soy products to the food industry, exhibited along with their new sister company, Sevenday. SFI Netherlands BV (SFI = Special Food Ingredients, formerly Solnuts Inc.) exhibited their line of dry roasted soynuts. Also present were Stern Lecithin and Soja GmbH & Co. KG, Sapa and Dafa Associès (makers of Dafasoy for the food, dietetic, and pharmaceutical industries), Soya Mainz & Co. KG and Solbar Hatzor (soy protein concentrates), Dalgety Food Ingredients International (with the former Spillers Premier Products), Lucas Meyer GmbH (with a phosphatidyl choline lecithin powder and a de-oiled lecithin for frozen doughs), Edelsoja GmbH, Celia SA, Freeze-Dry Foods GmbH, and GMB Proteins (a division of Bush Boake Allen Ltd.). The address and fax number of each company is given.

6703. *Soyafoods* (*ASA, Europe*). 1994. Sunrise Health Foods. 5(3):5. Autumn.
• ***Summary:*** Soya Health Foods Ltd. is located at Unit 4, Guiness Road, Trafford Park, Manchester M17 1AU, England. Phone: +44 61 872 0549. Under the Sunrise brand the company has a range of soya products including natural and flavored soya drinks, vegetarian burgers, non-dairy products such as Ice Dream (a non-dairy frozen dessert in 6 flavors), Ice Yoghert (a non-dairy frozen dessert in 2 flavors), and Carob Ices. Their spray dried soymilk powder made from pure soymilk is a suitable ingredient for use in non-dairy cheeses, tofu, yogurts, frozen desserts, etc.

6704. Soyfoods Association of America. 1994. Get the soy edge (Ad). *Vegetarian Times.* Nov. p. 71-74.
• ***Summary:*** This 4-page advertorial, with 17 color photos, is sponsored by the following organizations: ADM, DevanSoy Farms, Inc., Eden Foods, Inc., Lightlife Foods, Lumen Food Corp., Morinaga Nutritional Foods Inc., Soyfoods Association of America, Tofutti Brands Inc., Worthington Foods.

"Did you know you can fit soy into your diet without giving up your favorite foods? Try soy burgers, soy ice cream, soy yogurt, soy hot dogs, soy flour, soy cream cheese, soy sausage, soy chili, soy frozen juice bars, soy margarine, soy milk, soy tacos, soy sour cream, soy sloppy joes, soy 'chicken' patties..." Address: Palo Alto, California. Phone: 415-327-1444.

6705. **Product Name:** Westbrae Rice Drink (Non Dairy) [Only 1% Fat, and Concentrate; Plain, and Vanilla].
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor). Made in Manteca, California, by California Natural Products.
Manufacturer's Address: Carson, CA 90746.
Date of Introduction: 1994. November.
Ingredients: Plain: Rice base (filtered water, brown rice syrup, rice starch), expeller pressed canola oil, tricalcium phosphate, pea protein, natural flavors, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retails for $1.69 (12/94, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per cup (240 ml): Calories 100, calories from fat 25, total fat 3X gm (5% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 70 mg (3%), total carbohydrate 18 gm (dietary fiber 0 gm, sugars 16 gm), protein 1 gm. Vitamin

A 10%, calcium 25%, vitamin D 25%, vitamin C 0%, iron 0%, riboflavin 25%, vitamin E 2%, phosphorus 10%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Ad in Natural Foods Merchandiser. 1994. Nov. p. 11. "Wake up! You don't have to dream any longer." This is a full page color ad for two new Westbrae Rice Drink products: Only 1% Fat, and Concentrate (which makes 2 quarts). Both products are in a new "Easy Pour" aseptic carton, with added calcium and vitamins A&D. The word "dream" in the ad's title refers to Rice Dream, the leader in the rice beverage category. A color photo shows the two colorful quart packages of Rice Drink against a blue background on a blue and white tablecloth, with glasses of milk, a bowl of cereal topped with berries, and assorted fruits in the foreground.

Product (1% fat in plain and vanilla flavors) with Label purchased at Berkeley Natural Grocery Co., California. 3.5 by 7.75 by 2.25 inches. Tetra Brik Aseptic carton. Note this new tall, slim carton with a new easy-pour reclosable cap. Blue, white. red, and black. Photo of white rice drink being poured from a pitcher into a glass, against a light blue background. "Only 1% fat. Rice drink. A cholesterol free food. Tastes great! Non dairy drink. New easy pour. Reclosable spout. With calcium and vitamins A&D. Not to be used as an infant formula." On one side is a message from President Andrew H. Jacobson titled "We're here for life."

6706. Westbrae Natural Foods. 1994. Wake up! You don't have to dream any longer (Ad). *Natural Foods Merchandiser.* Nov. p. 11.
• ***Summary:*** This is a full-page color ad for two new Westbrae Rice Drink products: Only 1% Fat, and Concentrate (which makes 2 quarts). The word "dream" in the ad's title refers to Rice Dream, the leader in the rice milk category. A color photo shows the two colorful quart packages of Rice Drink against a blue background on a blue and white tablecloth, with glasses of milk, a bowl of cereal topped with berries, and assorted fruits in the foreground. Address: P.O. Box 48006, Gardena, California 90248.

6707. *Daily Post* (*Rotorua, New Zealand*)*.* 1994. Fears prompt probe of baby formula. Dec. 8.
• ***Summary:*** "The Ministry of Health is to investigate the safety of soy-based infant formulas." Variations on this article appeared on this date in Australia in the *Northern Advocate, Nelson Evening Mail, Evening Standard,* and *Waikato Times.*

6708. *New Zealand Herald.* 1994. Govt. checks soya milk. Dec. 8.
• ***Summary:*** The Wellington staff reports that the Ministry of Health is investigating a report on the effects of soya-bean based infant milk. "The Minister of Health, Mrs. [Jenny] Shipley, told Parliament yesterday that the ministry had received a report on the matter from the Auckland School of Medicine by a senior lecturer in toxicology, Dr. Iain Robertson. The report recommends that the use of soya-bean products in infant milk formula be stopped because of the high level of oestrogenic compounds found in the four major brands on sale in New Zealand.

"Mrs. Shipley was responding to a question from the Alliance leader, Sandra Lee, who tabled a letter to the ministry from a Devonport process engineering consultant, Dr. David Woodhams. Dr. Woodhams described himself as a member of a privately funded group which has been looking into the scientific literature on soya beans and soya-bean products and their effects on humans. 'I imagine that few mothers would choose to feed a formula containing both active oestrogens and an immune suppressant to their baby during the first few months of life if they had an informed choice,' he said. Mrs. Shipley said the ministry was investigating to see whether the claims could be substantiated. At this stage, there was insufficient evidence to withdraw the products." Address: Wellington staff.

6709. New Zealand Ministry of Health. 1994. Director General's privileged statement under Section 37 of the Food Act 1981 (News release). 13 Molsworth St., P.O. Box 3013, Wellington, New Zealand. 1 p. Dec. 8. [1 ref]
• ***Summary:*** "Acting Director-General of Health David Smyth says the Ministry of Health has no knowledge of any reputable scientific studies that suggest soy based milk formulas are detrimental to baby's health. 'Babies who are being fed soy based milk formula on the advice of their health specialist should continue being fed with this product,' says Mr. Smyth.

"The Ministry is, however, investigating the claim that soy based milk formulas have adverse health affects. The claim was made in an independent report prepared and released by Mr. and Mrs. James in Whangarei."

"The soy based milk formulas, which are produced and sold by international companies all around the world, have been in New Zealand for approximately 20 years and in the United States for 30 years. Parents who have any queries about their baby's diet should ring The Royal New Zealand Plunket Society's free phone 0800 101067 for more information.

"Signed by Acting Director-General of Health, David Smyth." Address: Wellington, New Zealand. Phone: (04) 496 2000.

6710. Roberts, Rosemary. 1994. Grotesque deaths transform bird hobby to heartbreak: Soybean investigation sparks infant food safety scare. *Northern Advocate* (*Whangarei, New Zealand*)*.* Dec. 8. p. 2.
• ***Summary:*** "Richard and Valerie James' retirement home at Whangarei Heads turned from heaven into Heartbreak House about 3 years ago when many of their parrots began dying

inexplicably.

"Their efforts to work out what had happened to their birds led them to make inquiries all over the world and spend well over $100,000 on research and information.

"Some of this research has resulted in the story published in today's *Northern Advocate* on soy-based infant formulas. The Auckland Medical School's chief toxicologist, Dr Iain Robertson, has called for use of soy-based infant formulas to be discontinued until more research has been done into their levels of phyto (plant) oestrogens.

"Richard and Valerie James are New Zealanders who lived and worked overseas for 19 years in law, education and real estate. They returned to New Zealand in 1984 and retired to Whangarei Heads about five years ago."

"The birds began to die when the couple started using commercially-prepared handrearing baby bird food, about four years ago.

"'Initially they grew brilliantly. Then they died,' says Valerie James.

"Others were born deformed. The breeding birds laid malformed eggs. Some also suffered convulsions, behaved strangely, and frequently haemorrhaged violently before dying."

"Early in 1993 the Jameses had immediate autopsies on a few young parrots done at several laboratories, including the Massey University School of Veterinary Pathology.

"The full autopsy report suggested the underlying cause of death was severe depression of the birds' immune systems. The James' were told previous autopsies on other birds of different origin but fed similar food had also revealed this feature.

"Extremely concerned at the implications of what little they knew at the time, the couple commissioned tests at laboratories in New Zealand and the United States.

"The mystery started to unravel for the couple when they realised two things. One was that the base for most anti-coagulant rat poison was originally synthesised from a naturally occurring plant toxin with oestrogenic properties. The other was that the soybean was high in plant oestrogens."

Photos show: (1) Valerie and Richard James (portraits, p. 2); (2) Valerie and Richard, each with a cockatiel on the shoulder, by their outdoors bird cages, with their report, books, and a dish of dry soy bird food (p. 1).

This article (slightly changed) also appeared in New Zealand on this same date in the *Marlborough Express* under the title "Couple spends fortune on feathered friends' deaths: Richard and Valerie James didn't realise what they were getting into when they began investigating the inexplicable deaths of their parrots."

6711. Roberts, Rosemary. 1994. Infant food safety queried. Ministry will investigate. *Northern Advocate* (*Whangarei, New Zealand*). Dec. 8. p. 1.

• ***Summary:*** "Infants on a soy-based diet might be consuming up to 12 contraceptive pill equivalents per day," according to Auckland research scientist Mike Fitzpatrick. Auckland Medical School senior toxicologist Iain Robertson says that the use of soybean-based infant formulas should be discontinued pending further research on possible side-effects on babies. Four soy-based infant formulas are currently on sale in new Zealand–Prosobee, Isomil, Karicare, and Infasoy. Robertson said new research has showed that soy-based infant products have high levels of phyto-oestrogens (plant oestrogens) and researchers have little knowledge of the effects of these compounds on babies.

His recommendation to discontinue the use of such soy-based infant products is contained in a review of a scientific study commissioned by Richard and Valerie James of Whangarei, New Zealand. Mr. and Mrs. James commissioned the investigation by Mike Fitzpatrick, PhD, after the unusual and painful deaths of many of their newly-hatched parrot chicks, and the often premature maturing of the few survivors. These parrots were reared solely on a commercial soy-based bird food. The New Zealand Ministry of Health also plans to investigate the safety of the soy-based infant formulas. The Ministry's chief toxicologist Martin Edwards said he had received a copy of the Fitzpatrick report and was taking its recommendations seriously. He said the ministry would consult organisations such as the Pediatricians Society and the Plunket Society.

Similar articles appeared in 3-4 New Zealand newspapers on this same day, including the *Marlborough Express* and *Gisborne Herald.*

6712. Roberts, Rosemary. 1994. Maker welcomes call for research [into safety of soy-based infant food]. *Northern Advocate* (*Whangarei, New Zealand*). Dec. 8. p. 1.

• ***Summary:*** Douglas Pharmaceuticals produces Karicare brand soy-based infant formula; according Dr. John Birbeck, the company's private consultant, Douglas is the only New Zealand company making such a product. He believes other similar foods are being imported. Birbeck says the company welcomes more research on the oestrogen content of its soy-based product, and says it is likely the industry will fund the study.

Columbit New Zealand, the company which imports soy isolates to New Zealand, also backs the call for more research, and is confident research will clear its product. Columbit is a partner of the large international corporation Protein Technologies [International]; principals of that U.S.-based company said that they would respond to any requests for information about their products.

Sanitarium Foods [of New Zealand and Australia] does not produce soy-based infant formulae, but does use soy protein isolates in some of its products. The company's technology superintendent, Graham Jackson, said his company was keeping an eye on the situation.

A large photo shows Valerie and Richard James at their New Zealand aviary, with several large white birds, soy bird food, and reports on soy. A similar article appeared in the *Marlborough Express* on this same day.

6713. Royal New Zealand Plunket Society. 1994. Formula 1 [Statement on the safety of soy-based infant formulas] (News release). New Zealand. 1 p. Dec. 8.
• ***Summary:*** "The Plunket Society says there is no evidence that soy-based infant formula is dangerous to babies' health–and parents should not be anxious about using the product. Concerns have been raised over the safety of soy-based formulas, after research found they contained a plant-based substance similar to the hormone oestrogen. Plunket says that further research and observation is planned, but there is no reason for undue concern over the products.

"Plunket paediatrician Dr. Charles Essex says that soy formula has been used internationally for many decades and in New Zealand for more than 10 years, with no reports of adverse effects. In New Zealand, soy formulas account for about 13 per cent of all [infant] formula sales. 'Millions of babies have been fed soy formula,' Dr. Essex says, 'and one would have imagined any serious side effects would have shown up by now.'

"Dr. Essex says that soy contains a compound which is chemically similar to oestrogen. However even breastfed infants can often exhibit oestrogen effects, from maternal oestrogen. These are quite normal, and can include small breast buds for up to six months after birth, secretion of small amounts of breast milk, and a little vaginal bleeding, like a mini-period. 'Infants under one year of age, for their main milk drink, should ideally be breastfed,' Dr. Essex says. Otherwise they should be fed a recognized infant formula, either cow's milk-based or soy-based.'" Address: New Zealand.

6714. NZPA. 1994. Ministry queries soy formula risk. *New Zealand Herald.* Dec. 9.
• ***Summary:*** "The Ministry of Health and the Plunket Society have moved to allay fears that soya-based milk formulas could be harmful to babies. Both said they were unaware of any reputable studies showing soy-based milk products could have adverse health effects.

"Concerns have been raised over the safety of soy products after research found they contained a plant-based compound which is chemically similar to the hormone oestrogen.

"The Acting Director General of Health, Mr. David Smyth, said parents who were feeding babies with soy-based milk on the advice of a doctor should continue doing so. However the ministry was investigating a claim that soy-based formulas might have general adverse health effects."

"A Plunket paediatrician, Dr. Charles Essex, said further research was planned, but there was no reason for undue concern about the products. In New Zealand soy formulas account for 13 per cent of all formula sales."

"Infants who have a definite cow's milk allergy should use a hydrolysed formula, and there are products available for infants with lactose intolerance," according to Dr. Essex.

Note 1. Concerned parents should telephone the Plunket Society's free telephone on 0800 101067 for more information. Note 2. Similar articles appeared on this same day in the *Hawkes Bay Herald Tribune, Dairy News* (*New Plymouth*), *Southland Times, Nelson Evening Mail, Marlborough Express, Evening Standard* (*Palmerston North*), *Bay of Plenty Times* (*Tauranga*), *and Gisborne Herald.* Address: Wellington, New Zealand.

6715. Roberts, Rosemary. 1994. Soy formulae caution urged again. *Northern Advocate* (*Whangarei, New Zealand*). Dec. 10.
• ***Summary:*** New Zealand research scientist Dr. Mike Fitzpatrick has again called for parents to be wary of soy-based infant formulae. Dr. Fitzpatrick, whose report on the toxicity of soybean-based products spared alarm about infant formulae, said yesterday that a Plunket statement on the subject "missed the point entirely."

Dr. Fitzpatrick said he fully supported the statement of research scientist Dr. Richard Sharpe, of the Medical Research Council in Edinburgh, Scotland, that oestrogens from whatever source should be kept to a minimum for babies.

6716. *SoyaScan Notes.* 1994. Soymilk and cow's milk prices in California, December 1994 (Overview). Dec. 10. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Since 1987, every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. In Dec. 1994 at Berkeley Natural Grocery Co., a large natural food store at 1336 Gilman St. in Berkeley, California, unflavored (plain or original) soymilk made from organically grown soybeans retails for the following prices: Westsoy Lite plain 1% fat liter $0.99 (the equivalent of $0.899/quart), Vitasoy creamy original liter $1.49 ($1.35/quart), Pacific Foods liter $1.69 ($1.53/quart), Vitasoy Lite original liter $1.89 ($1.715/quart), Edensoy original liter $1.99 ($1.88/quart). The most expensive soymilk is Health Valley Soy Moo at $2.35/quart.

At Trader Joe's, a gourmet and natural foods chain in California, Soy-Um quart (plain, vanilla, or chocolate) retails for $1.39. Edensoy vanilla liter retails for $1.59. Rice Dream Enriched Non-Dairy Beverage (a non-soy rice beverage) retails for $1.29/liter (but $1.59 with reclosable spout).

The average price of the quart equivalents of the 6 least expensive soy beverage brands is $1.46 a quart. This is $0.46 per quart lower or 24.0% lower than the $1.92 in Dec. 1992.

Cow's milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette,

California: (1) Nonfat: $0.85/quart or $1.42/half gallon or $2.74/gallon; (2) Extra light (1% fat; protein fortified): $0.89/quart or $1.51/half gallon or $2.86/gallon; (3) Low-fat (2% fat; protein fortified): $0.89/quart or $1.27/half gallon; (4) Whole: $0.89/quart or $1.51/half gallon. The best-seller among these is non-fat in half gallons.

Thus in Dec. 1994 soymilk in liter cartons is, on average, 1.71 times as expensive per unit volume as nonfat dairy milk purchased in quarts, 2.05 times as expensive as in half gallons, and 2.13 times as expensive as in gallons. In Dec. 1992 a quart of soymilk was 2.78 times as expensive as a quart of the best-selling cow's milk. So in the last 2 years the price of soymilk has fallen significantly relative to that of cow's milk.

In Oct. 1987, after most soymilk brands were available in liter or quart sizes, soymilk retailed, on average, for $1.88/quart and cow's milk for $0.55/quart; thus soymilk was 3.42 times as expensive per unit volume as dairy milk purchased in quarts–compared with just 1.71 times as expensive in Dec. 1994. Since 1987, the average price of soymilk has decreased by 22.4%, while the average price of cow's milk has increased by 54.5% on a quart basis. So the price of soymilk has decreased by 50% relative to the price of cow's milk in quarts over the last 7 years.

6717. Soyfoods Center. 1994. The price of soymilk has fallen by 50% relative to the price of cow's milk since 1987 (News release). P.O. Box 234, Lafayette, CA 94549. 2 p. Dec. 19. [1 ref]

• ***Summary:*** Since 1987, every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. Since 1987, the average price of soymilk has decreased by 22.4%, while the average price of cow's milk has increased by 54.5% on a quart basis.

In Oct. 1987, after most soymilk brands were available in liter or quart sizes, soymilk retailed, on average, for $1.88/quart and cow's milk for $0.55/quart; thus soymilk was 3.42 times as expensive per unit volume as dairy milk purchased in quarts. But soymilk was just 1.71 times as expensive in Dec. 1994.

6718. Behling, Ann. 1994. Put soybeans on that pizza, please. *Soybean Digest.* Dec. p. 32h.

• ***Summary:*** Suzanne Nielsen, a food scientist at Purdue University, is studying the cause of the beany flavor in soybeans and how to get rid of it. It is know that the lipoxygenase enzyme, which breaks down the oil within the soybean and creates off-flavors, has three forms: L1, L2, and L3. Soybeans were bred lacking one or more of these 3 forms, then Nielsen made soymilk from the various soybeans. Taste panels found that soymilk made from soybeans lacking both the L2 and L3 forms tasted best. These soybeans were then used to make soy protein isolate. A cheese made with this L2-L3-less isolate was compared with a cheese made with milk casein and a cheese made from a typical commercial soy protein isolate. Nielsen's taste panel ranked the casein cheese as being best, closely followed by the cheese made with the L2-L3-less isolate; the cheese made with the conventional isolate finished last.

Soy isolate made from this new soybean variety could be used as a partial replacement for rennet casein in pizza cheese.

6719. Holin, Fae. 1994. Chemical-free plant markets organic soybeans. *Soybean Digest.* Dec. p. 22. In "New Uses Digest" section.

• ***Summary:*** Agronico, a small oilseed processing company in southeastern Minnesota, claims to be the only one in America using a chemical-free cold process to extract oil from soybeans. Started by former commodity trader Mike Vincent, the company operates a converted 6,000-square-foot machine shed on a farm near Le Center, Minnesota. During 1993, Agronico processed 30,000 bushels of soybeans and sold $400,000 worth of soy flour, meal, and oil. About 30% of the company's products are made from organically-grown soybeans. Vincent hopes to increase that to 50%. He buys organic soybeans wherever he can, but his best source is farmers in Minnesota.

Soy flour and meal are sold to the health food industry to be used in soymilk powder and specialty foods, including desserts and drink mixes. About 80% of the soy oil is sold to local hog farmers, who mix it with commercial feed to keep barn dust down and add nutrients. The remaining 20% is sold to food processing plants.

By next summer, Vincent hopes to build a 20,000-square-foot processing plant in Le Center. His goal is to reach $10 million in annual sales within 5 years.

6720. Kashama Batabela, Johnny. 1994. Influence du depelliculage at de la durée de trempage des graines de soja (*Glycine max* (L) Merill) sur les qualities organoleptiques du lait de soja [Influence of dehulling and soaking time on the organoleptic qualities of soymilk]. Thesis, Département de Chime et Industries Agricoles, Institut Facultaire des Sciences Agronomiques (I.F.A.–Yangambi, Zaire). 42 p. Accepted Dec. 9. [21 ref. Fre; eng]*

• ***Summary:*** The effect of two variables (soaking time and dehulling) were measured at 25ºC in the preparation of eight batches of soymilk. Four batches of soymilk were made from dehulled soybeans, and four from non-dehulled. The dehulled or non-dehulled soybeans were soaked for either 10, 12, 14, or 24 hours. The soymilk preferred by taste panelists was that made from dehulled soybeans that had been soaked for 12 hours at 25ºC. A test of the acceptability of a new product made from soybeans (tofu) was done.

Letter from Johnny Kashama. 1994. Nov. 29. He is writing from Kisangani, in Zaire, but his return address is given as c/o Mr. Projet Bahali [a person], B.P. 364, Cyangugu, Rwanda. He has finished his thesis (cited above) and hopes to finish his studies this year. Letter from Kashama. 1996. Sept. 26. The thesis was accepted on 9 Dec. 1994. He earned the degree of *Ingenieur Agronome, Chemiste et des Industrie Agricoles.* Address: Kisangani, Zaire.

6721. **Product Name:** Soya-Cow Soymilk (Bulk).
Manufacturer's Name: ProSoya International.
Manufacturer's Address: The SoyaCow Centre, 9 Veery Lane, Ottawa, ONT, K1J 7W7, Canada. Phone: 613-745-9115.
Date of Introduction: 1994. December.
New Product–Documentation: Talk with Raj Gupta and Frank Daller of ProSoya in Ottawa, Ontario, Canada. 1995. Nov. 21. Another new development is that ProSoya in Ottawa is starting to make bulk soymilk for food processors. They will be serving cow's milk dairies which will be test marketing Pure-Pak cartons of soymilk.

Talk with Frank Daller of ProSoya. 1995. March 7. This products was first sold commercially in bulk in Dec. 1994. It was sold to an ice cream company.

6722. Rochet, Maurice. 1994. Le tonyu: Interets nutritionnels, distribution, integration dans l'alimentation quotidienne: Interview de Mr. Maurice Rochet [Soymilk: Nutritional interests, distribution, integration into the daily diet: Interview with Mr. Maurice Rochet]. *Info Soja* (*Sojaxa, France*) No. 4. Dec. p. 1-2. [Fre]
• ***Summary:*** A photo (p. 1) shows soybean pods. Address: Président de Sojaxa, Association loi de 1901, Siège social: 12, avenue George V–75008 Paris.

6723. *SoyaCow Newsletter* (*Ottawa, Canada*). 1994. New license for West Coast plant. 3(4):1. Oct/Dec.
• ***Summary:*** "A Western Canadian group has formed Pacific ProSoya Foods Inc. to act as a licensed producer of soymilk using the SoyaCow process." In March, 1995, a SoyaCow SC2000 (which can produce 2,000+ liters/hour in a continuous process) is slated for installation at Pacific ProSoya's facility in Langley, British Columbia, Canada. This plant will ship bulk soymilk to British Columbia, Alberta, Oregon, and Washington.

Note: Three SC2000 systems have been ordered and will be installed in (1) British Columbia, (2) Russia, and (3) at the ProSoya test plant in Ottawa.

Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. May 10. The SC-2000 was ProSoya's first continuous-process soymilk cooker. Development started in early 1993. Raj designed it and ProSoya and George debugged it and got it to work; it didn't work when it was first installed in the British Columbia plant.

6724. *SoyaCow Newsletter* (*Ottawa, Canada*). 1994. New SC100 system successfully tested. 3(4):1-2. Oct/Dec.
• ***Summary:*** "In November, the new Ottawa facility of ProSoya Inc. successfully tested the latest generation of the SoyaCow SC100." It produces 500 liters/hour of soymilk and can be upgraded to the continuous process SC2000. A photo shows the SoyaCow SC100 Plant at ProSoya's facility in Ottawa.

6725. *SoyaCow Newsletter* (*Ottawa, Canada*). 1994. Gelato Fresco receives first bulk soymilk shipment. 3(4):2. Oct/Dec.
• ***Summary:*** In late December Gelato Fresco, a maker of premium dairy and of soymilk ice cream in Toronto, was the first to receive a 1,000-liter test shipment of the bulk soymilk produced by the new SoyaCow plant in Ottawa. For the last year Gelato Fresco has used (and over-used) its own SoyaCow SC20 which could produce only 20 liters/hour. Gelato Fresco has successfully test marketed a premium line of soymilk-based frozen desserts. Orders are also coming in from a distributor in Wisconsin.

6726. *SoyaCow Newsletter* (*Ottawa, Canada*). 1994. Russian program orders more SC-20s. 3(4):2. Oct/Dec.
• ***Summary:*** The Russian Soybean Association (ASSOY) has ordered 20 more tabletop SoyaCow SC20 systems to add to the ten similar systems they have already acquired during the past year. "ASSOY's soyfood program, which is based exclusively on the SoyaCow technology, is developing with unusual speed. Soymilk derived yogurt, tofu, mayonnaise, drinks, and ice cream as well as baked goods made using 'okara' soy-fibre, are all made in pilot or cottage industry production."

6727. **Product Name:** [Fresol: Soy Drinks].
Foreign Name: Fresol: Bebida de Soya.
Manufacturer's Name: Benali Cabo Verde.
Manufacturer's Address: Praia (capital city), Sao Tiago (island), Cape Verde.
Date of Introduction: 1994.
Ingredients: Soybeans, water, flavor, sugar.
Wt/Vol., Packaging, Price: 157 ml PE pouches.
How Stored: Refrigerated.
New Product–Documentation: J.L. Voisin. 1995, Oct. 3-5. Dairy like soyfoods in Africa: Evolution & perspectives. Paper presented at the Third Bi-Annual SoyAfrica Conference. 5 p. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma. Actimonde of Archamps, France, installed an Agrolactor (soymilk processing plant) at this company in 1994. A private company is producing soydrinks and fruit juices (from imported concentrate); today 80% is from fruit.

Note: This is the earliest known commercial soy product made in Cape Verde.

6728. **Product Name:** Berri Soy Drink (Non Dairy) [Plain with Dietary Fibre, or Vanilla].
Manufacturer's Name: Berrivale Orchards.
Manufacturer's Address: McKay Road, Berri, SA 5343, Australia. Phone: (085) 82 1019.
Date of Introduction: 1994.
Wt/Vol., Packaging, Price: 1 liter Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: The Berrivale Orchards Story. 1994? (Undated). On the rear cover of this 6-panel glossy brochure is a section on "Soy Drinks: Berrivale produces the one-litre 'Berri Soy Drink' seen in supermarkets across Australia." It is available in two flavours: Plain and vanilla. A color photo shows the front of both packages.

Leaflet titled "Berri Soy Drink." Undated. On the front cover is a lady in a white workout suit lying on her back on the floor, supported by her elbows, holding a glass of soymilk, with her legs straight up in the air–against a blue background. The text says: "Berri Soy Drink is different... made in the heart of Australia's Riverland at Berri, from soybeans grown in Australia... Unlike so many other soy drinks Berri Soy Drink is made from fresh soybeans (not imported soybean powder) and then directly filled into packs." No salt is added. Contains 40%less fat than milk. Two recipes are given.

6729. **Product Name:** [Line "S" Soy {Aseptically Packaged Calcium-Enriched Soymilk} (Extra, Calcium)].
Foreign Name: Ligne "S" Soja (Extra, Calcium).
Manufacturer's Name: Biosoja [Sojinal].
Manufacturer's Address: 10, rue Lavoisier, 68000 Colmar, France.
Date of Introduction: 1994.
Wt/Vol., Packaging, Price: 1 liter Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label sent by Heather Paine of SoyaFoods in London. 1994. On the front panel of Soja Extra is a photo of two tall glasses of soymilk; on one is a red lipstick mark. On the front panel of Soja Calcium is a illustration of a glass of white soymilk with a yellow flex-straw going down into it. On the white part is an illustration of four children dancing. A yellow tennis ball is in the background.

6730. **Product Name:** [Line "S" Soy Dessert {Aseptically Packaged} (Chocolate, Caramel)].
Foreign Name: Ligne "S" Soja Dessert (Chocolat, Caramel).
Manufacturer's Name: Biosoja [Sojinal].
Manufacturer's Address: 10, rue Lavoisier, 68000 Colmar, France.
Date of Introduction: 1994.
Wt/Vol., Packaging, Price: 500 ml Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label sent by Heather Paine of SoyaFoods in London. 1994. On the front panel of each is a stem glass of dessert.

6731. Chikere, A.C. 1994. Preservation of soymilk with extracts from *Afromonum danielli* and *Allium sativum.* MSc thesis, University of Ibadan, Nigeria. Supervisors: O.C. Aworh and S.M. Osho. *
• ***Summary:*** *Allium sativum* is garlic. Extracts from these two plants were screened in vitro for their ability to inhibit the growth of 7 spoilage microorganisms isolated from soymilk. All treated samples were rated inferior in acceptability to a reference sample with no additives during the first 2 days of storage in all 5 attributes measured: Changes in acceptability, pH, titratable acidity, and microbial load. Spoilage set in after 2 days storage under ambient conditions. Address: Nigeria.

6732. **Product Name:** [Soymilk, Tofu].
Manufacturer's Name: Rey Sol.
Manufacturer's Address: Colonia el Recreo, Lote No. 9, Amatitlan, Guatemala. Phone: +502 633-0971.
Date of Introduction: 1994.
How Stored: Refrigerated.
New Product–Documentation: Letter (fax) from Juan Guillermo Tornoe. 1999. Aug. 31. Rey Sol is owned by Mario Cesar Jimenez and Blanca de Jimenez, both members of the "Gran Fraternidad Universal" (GFU), which is some kind of new-age association that practices yoga, meditation, tai-chi, vegetarianism, etc. They have a production plant near Lake Amatitlan, which is about 30 km (18.5 miles) from Guatemala City. From there, they supply 3 health food stores/restaurants that they own. One is in downtown Guatemala City, the second is in Centro Comercial Gran Via Roosevelt, Zone 7, and the third and newest one is in 10 Avenida 33-73 zona 11 Las Charcas. From the latter he encloses a promotional leaflet. They make soymilk, tofu, meat alternatives made from soy with different flavors (beef, chicken, etc.), sausages (like hot dogs, and imitations of local sausage-like products such as the "chorizo" and "longaniza"), soy tacos, green peppers stuffed with soy, and a variety of sweet and regular soy breads and cakes. They sell their soymilk in 1 liter plastic bottles but these bottles do not have a label–only a sticker with the expiration date; they advertise the product as "leche de soya" and retail it for about $US0.89. The company also distributes their products to other health food stores. Miss Blanca Jimenez gives vegetarian cooking classes at the GFU offices and is in charge of bakeries. Mr. Mario Cesar is in charge of most of the soy products. Leaflet (8½ by 5½, black on white, in Spanish) sent by Mr. Tornoe. 1999. Aug. 31. "A new option!

Now everything that's necessary for your health and nutrition is at Las Charcas in Zona 11. Taste our vegetarian buffet, the best in baked goods and whole-grain pastries, soya meats and sausages, tofu (*toffú*), granola, natural medicine, natural vitamins and much more. Vegetarian restaurant "Rey Sol" Las Charcas. 10 Avenida 33-73 Zona 11 Las Charcas. "We have our own parking lot (*Contamos con Parqueo Propio!!!*)."

Talk with Blanca de Jimenez. 1999. Aug. 8. They started making tofu and soymilk about 4 years ago. She has been a vegetarian for 30 years and her son has been a vegetarian his entire life.

6733. **Product Name:** Supreme, Number 1, and Eezee.
Manufacturer's Name: Sasko International.
Manufacturer's Address: P.O. Box 4315, Luipardsvlei 1743, South Africa. Phone: +27 11762 5300 x-116.
Date of Introduction: 1994.
New Product–Documentation: Spot in Soyafoods (ASA, Europe). 1995. Spring. p. 4. "Sasko International at Sial '94." Sasko makes and supplies foods, from consumer goods to nutritional assistance programs. "Under the brand names Supreme, Number 1, and Eezee they produce a range of soya products, such as flavoured, cubed TVP, flavoured minced TVP, soups and gravy powders. In addition they manufacture soya milk powder and other high protein drink powders. The TVP based products are available in a number of flavours including 'monkey gland'! whilst a range of fruit flavors are used for the high protein drink powders. The company also produces cereal mixes and batter mixes using soya, and a protein, mineral and vitamin enriched drink also based on soya."

6734. **Product Name:** Soymilk (Chocolate-Peanut Butter).
Manufacturer's Name: Sweet Carrot Café.
Manufacturer's Address: 702 14th St. East, Saskatoon, SK, S7N 0P7 Canada.
Date of Introduction: 1994.
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. April 21. George introduced this, his last flavor of bottled soymilk, sometime in 1994. The Chocolate-Peanut Butter was a "power drink" that–along with the Soy Nog–people loved. Both flavors especially popular with cyclists. George used to keep a refrigerator at a cycle shop stocked with product. These guys would come back from their bicycle trips to the cycle shop and down a liter of soymilk.

6735. **Product Name:** [Deli Salads: Hawaii, Garden, Mexican, Shanghai].
Foreign Name: Feinkostsalat: Hawai, Jardinière, Mexicano, Shanghai.
Manufacturer's Name: Viana Naturkost GmbH.
Manufacturer's Address: Neusserstr. 199, D-5000 Cologne 60, West Germany. Phone: (02233) 41323.
Date of Introduction: 1994.
Ingredients: Shanghai: Seitan (*Seitan*)*, soymilk (*Sojamilch*)*, corn oil (*Maiskeimöl*), soy sprouts (*Sojasprossen*), wine vinegar*, corn malt (Maismalz)*,¼ paprika, wheat starch, herbs, sea salt, carob*. * = Organically grown.

Note: The main ingredient in Hawaii flavor is smoked tempeh, and in Garden and Mexican is soy tempeh.
Wt/Vol., Packaging, Price: 200 gm or 100 gm.
How Stored: Refrigerated.
New Product–Documentation: Labels brought by Bernd Drosihn of Viana. 1995. March 11. 3.5 x 4.75 inches. Red, white, and black on yellow (Hawaii), or light green (Garden), or red (Mexican), or purple (Shanghai). Cardstock. 150 gm.

6736. Bates, Chris; Bates, Ling-li. 1994. Culture shock! Taiwan. Portland, Oregon: Graphic Arts Center Publishing Co. 256 p. Illust. Map. Index. 20 cm. [11 ref]
• ***Summary:*** A guide to Taiwan's customs and etiquette. Ling-Li is a Taiwanese native and Chris, her husband, is an American who lived and studied in Taiwan for a number of years. In Chapter 3, "Settling In," the section titled "A stroll through the wet market" [the traditional fresh vegetable market, where each vendor rents a stall] is a section (p. 50-51) about doufu and doufu products. "If it is marinated and dried further, it becomes *doufu gan* (dried bean curd [sic, pressed tofu]). If it is fermented, it becomes *chou doufu* (smelly bean curd).

Chapter 7, "Cuisine of the Ilha Formosa" is about Taiwanese restaurants–where happy noise and clanging dishes are part of what Chinese value in dining out.

Page 160-61: "Junior is off to cram school, so Mom eats a specialty at a push cart to remind her of the flavors of her youth. When they have all returned home they might go out together for *syau ye* (midnight snack). This might be a bowl of noodles, or *chou doufu* (smelly bean curd–they say it smells like a sewer and tastes like a dream; bean curd's equivalent to Blue Stilton cheese)."

Note: This is the earliest English-language document seen (Oct. 2011) that contains the term "smelly bean curd."

6737. Becker, Egon. 1994. Soya bean milk and cheese from Africa's soil (Videotape). Falls Church, Virginia: Landmark Media, Inc. 15 minutes. VHS. Written and directed by Egon Becker. Series: Fruits of the earth: Promising plants for tomorrow. [Eng]*
• ***Summary:*** "Soya, one of the most important oil and foodstuff sources on the world market, is being adjusted to the requirements of African cooking in Nigeria and also cultivated for the production of milk and cheese for city dwellers."

6738. Chik, Hon Man; Ng, Lam Sim Yuk. 1994. Chinese-English dictionary: Cantonese in Yale romanization. Mandarin in pinyin. Shatin, N.T., Hong Kong: New Asia–Yale-in-China Chinese Language Center, The Chinese University of Hong Kong. 512 + 9 p. Radical index. Number of strokes index. Cantonese romanization index. 17 cm. [Eng; chi]
• ***Summary:*** Page 430: Dauh (Md [Mandarin] dou): beans and peas. Dauh fuh: bean curd. Dauh ngah: bean sprouts as a vegetable. Dauh jeung: soybean milk. Sih (Md chi): fermented bean.

Appendix 3 is a "Comparative chart for four different kinds of Cantonese romanization systems": Yale, IPA, Sidney Lau, and Meyer-Wempe. For each is given: initials [initial sounds], finals, and tones (of which seven can be represented).

Note. This is the earliest Cantonese Chinese-language document seen (Aug. 2013) that uses the term *Dauh jeung* to refer to soymilk. Address: Hong Kong.

6739. Crane, Milton G. 1994. Almond milk (Recipe). Weimar, California. 1 p.
• ***Summary:*** A recipe, with nutritional analysis, for making about 1 quart of almond milk at home. Ingredients: ½ cup almonds, 1 quart water, 2 tablespoons cooked rice or millet (optional), and 1/8 teaspoon salt (optional). Supplements: 100 mcg. of vitamin B-12. Two Tri-Boron Plus capsules (TwinLab Co. for calcium, magnesium, zinc, and boron).

The almonds should be first ground in a coffee bean grinder, then blended with ½ cup water plus the other solid ingredients in a blender until smooth. Add supplements, plus the rest of the water, and blend for about 1 minute. Remove from blender and strain with a colander (optional). Then store in refrigerator. Address: M.D., Medical Dep., Weimar Inst., Box 486, Weimar, California 95736. Phone: 916-637-4111.

6740. Diehl Specialties International (DSI). 1994. Vitamite favorite recipes: For people who can't drink milk. 2nd edition. Defiance, Ohio. 25 p. 22 cm.
Address: Defiance, Ohio.

6741. Gordy, Josephine Shih. 1994. Chinese in southeast Florida 1900-1992. Miami, Florida: Broadley Publishing. See p. 78-79. 28 cm. [Eng]
• ***Summary:*** On pages 78-79 is the biography of Mr. Manny Wong and his company, Fully, Inc.–based on an interview with Mr. Wong on 8 March 1994 in Miami. He was born in Cuba in 1953 of Cuban immigrant parents. His entire family immigrated to Miami in 1961. His father had gone to Cuba from China as a young man of age 18 in 1943; he had a distant uncle in Cuba who sponsored him. He was married, but he had to leave his wife behind. She came to Cuba in 1950. In Miami, Manny's father, together with several partners, started a restaurant in downtown Miami and named it Hong Kong Restaurant. In 1963 he bought a second Chinese restaurant in Little Havana and named it Oriental Restaurant; it was an still is a Cuban-Chinese restaurant.

After graduation, Manny did not take over his father's restaurant business, but pursued his own career. He and his brother-in-law started their own business in Miami. Named Fully, Inc., it makes beans sprouts, soy sprouts, tofu and soy milk. Its clientele includes all the Chinese grocery stores, most of the Chinese restaurants, and Chinese food distributors in the tri-county area. Manny enjoys being an entrepreneur. Address: Florida.

6742. Grogan, Bryanna Clark. 1994. The (almost) no-fat cookbook: Everyday vegetarian recipes. Summertown, Tennessee: The Book Publishing Co. 192 p. Index. 21 cm. [10 ref]
• ***Summary:*** This low-fat vegan cookbook contains a wealth of soy-related recipes, including 27 recipes that call for tofu. Address: Denman Island, east of Vancouver, British Columbia, Canada.

6743. LeShane, Patricia. 1994. Vegetarian cookery for people with diabetes. Summertown, Tennessee: The Book Publishing Co. 143 p. Index. 21 cm.
• ***Summary:*** This is a vegan cookbook. Approximately 12 million Americans have diabetes, but only about 50% of them are currently aware that they have it. The index contains 21 entries for tofu, 2 for soybeans (p. 106, 107), 1 for soy yogurt, and lots for soymilk.

6744. Lien, Eric L. 1994. The ratio of linoleic acid to α-linolenic acid in infant formulas: current facts and future research directions. *World Review of Nutrition and Dietetics* 75:92-95. [11 ref]
• ***Summary:*** Essential fatty acids (LA = linoleic acid; LNA = linolenic acid) must be provided in all infant formulas. The fatty acids in infant formula play two important roles in the rapidly growing neonate: they provide 50% of dietary energy and they also provide essential fatty acids.

Omega-3 fatty acids are now being viewed as essential nutrients for infants.

Table 2 shows that soybean oil, corn oil, and canola oil can each supply essential fatty acids for infant formulas. Soy and corn oil are the two most widely used of the three. "Soy oil contains a more balanced proportion of LA to LNA, and if prepared under appropriate conditions can be used to produce a stable infant formula." Address: Wyeth-Ayerst Labs., Philadelphia, Pennsylvania.

6745. Mindell, Earl. 1994. Earl Mindell's food as medicine. New York, NY: Simon & Schuster. 393 p. Index. 22 cm. [97 ref]
• ***Summary:*** Here Mindell, who would write *Earl Mindell's*

Soy Miracle in 1995, gives a preview of his growing belief in the health benefits of consuming soy. Phytochemicals (p. 13, 25): Genistein, which is found in the urine of those who eat soy-based foods, appears to block the growth of new capillaries that supply blood to some tumors. Researchers hypothesize that genistein may be responsible for the low incidence of certain forms of cancer among "Japanese, who eat a diet rich in soy foods."

Phytates (p. 28) found in soybeans and cereal grains deactivate steroidal hormones that promote tumors. However excessive intake of phytates is known to interfere with absorption of minerals such as calcium.

Protease inhibitors (p. 29), found in soybeans and soyfoods, can prevent the conversion of normal cells to malignant ones.

Calcium (p. 65): Tofu curded with calcium sulfate is a good source of calcium. Sodium (p. 83-84): Recommends the use of reduced-salt soy sauce.

Breast cancer (p. 215-16): "Soybeans and soy products (soy milk, tofu, etc.) may also provide some protection against breast cancer." Women in East Asia who eat a lot of soy products have 10-15% lower circulating estrogen levels than Caucasian women and must lower rates of breast cancer.

Osteoporosis (p. 242-44): Eat tofu (curded with calcium sulfate), miso, and other traditional soy products.

Menopausal symptoms (p. 261-63): Japanese women seem to have less discomfort. Mindell thinks this may be because the Japanese diet is rich in soy products (tofu, miso, soybeans, etc.). Address: R.Ph, PhD, registered pharmacist and Prof. of Nutrition at Pacific Western Univ. in Los Angeles. He lives in Beverly Hills, California.

6746. Oser, Marie. 1994. Luscious low-fat desserts. Montrose, Pennsylvania: Chariot Publishing, Inc. 124 p. Foreword by Scott W. Sanders, PhD. 21 cm. [18 ref]

• ***Summary:*** The many recipes in this vegan cookbook are low in fat (only 3 grams of fat per recipe), use no dairy products or eggs, and contain no cholesterol. Twenty-five attractive full-page color photos show the prepared recipes. The glossary of ingredients contains entries for the following soy ingredients:

"Lite silken tofu–a reduced-fat form of silken tofu. It is sold in aseptic packages in large supermarkets and natural food stores. Lite silken tofu has 75% less fat than regular silken tofu and does not sacrifice flavor or texture."

"Silken Tofu–a smooth-textured, custard-like tofu that is sold in aseptic packages and is available in most supermarkets and natural food stores. Like regular tofu it is made from soybeans. Silken tofu is an effective egg substitute when used in ¼ cup tofu to one egg proportions. It is also available in soft, firm and extra firm consistencies. I prefer the extra firm consistency."

"Soy buttermilk–a good substitute for dairy buttermilk in baked goods. It is made by adding 2 tablespoons of lemon juice to 1 cup of soy milk."

"Soy milk lite–a reduced fat soy milk that is 1% fat. It is available in large supermarkets and natural food stores." Soy milk lite was first introduced in the USA in March 1990 as WestSoy Lite. Also in 1990 it was introduced in Australia as Sanitarium So Good Lite.

The glossary also defines "Rice milk" as "a delicious non-dairy beverage with a mildly sweet flavor that can be used in place of dairy milk and soy milk. The Rice Dream (R) brand is available in both original (plain) or vanilla flavors and contains 1% fat and no cholesterol."

It also defines the following sweeteners: Barley malt syrup, brown rice syrup, date sugar, FruitSource (made from grapes and grains), maple syrup, Mystic Lake fruit sweetener, natural applesauce, and Sucanat (granulated organic sugar cane juice).

At the listing for "Tofu" in the index, we are asked to "see lite silken tofu,"–which is used in 33 dessert recipes–including the following (listed alphabetically): Almond streusel cake. Apricot almond custard Austrian apple torte. Banana cream pie. Blueberry custard pie. Chocolate dream pie. Chocolate truffles. Classic pumpkin pie. Lemon yellow icing. Peaches 'n cream parfait. Raspberry banana mousse. Strawberry Nice Cream (creamy frozen dessert like ice cream).

In the introduction to the chapter on cakes, the author says: "One way I achieve a rich cake without eggs or dairy is to use lite silken tofu. Its creamy, custard-like consistency is perfect for replacing the eggs and milk found in traditional cakes. And its low-fat profile will keep you coming back for seconds.

A small color photo on the rear cover shows Marie Oser, who has been a vegetarian since 1971. She left a career in TV advertising to pursue her interest in food and nutrition.

Note: The words "low-fat" are hyphenated on the cover but not on the title page. Address: Agoura Hills, California 91391. Phone: 818-707-7353.

6747. Pan, Lynn. 1994. Sons of the Yellow Emperor: A history of the Chinese diaspora. New York: Kodansha International. xx + 418 p. Illust. (16 pages of plates). Index. 22 cm. [174* ref]

• ***Summary:*** On page xiv is a very interesting map of southern China, with a blowup of southern Kwangtung [Guangdong] province, the area around Canton the Pearl River, the South China Sea, Macao, and Hong Kong. For this area was at the heart of the Chinese diaspora–especially in the 19th and 20th centuries and especially from two small areas southeast of Canton: (1) Sam Yap (Three Districts) of Punyu, Shuntak, and Namhoi–the more affluent counties. (2) Sze Yap (Four Districts) of Hoiping, Sunwui, Toishan, and Yanping–the poorer and ruder area southwest of Sam Yap. Although the people from both areas speak Cantonese, they have difficulty understanding each other's speech. Other

important languages of the diaspora were Hakka and its numerous variants (spoken in Guangdong, Fujian, etc.) and Hokkien (spoken in southern Fujian, Taiwan, and by many overseas Chinese throughout Southeast Asia). It is closely related to Teochew / Teochiu, though mutual comprehension is difficult,

In Part Four: 1960s to 1980s, Chapter 16, titled "Food" contains a history (p. 320-23) of Amoy Food Limited, now an international firm, with its headquarters in Hong Kong, owned largely by overseas Chinese. For many overseas Chinese, "perhaps no label has quite the resonance of Amoy." In 1908, T'ao-hua Ta-t'ung, the predecessor of the company, was founded in Xiamen for producing bottled soy sauce and dairy milk. Its founder was Yang Ko-fei, who soon brought in other shareholders. In 1911 clashes between the founder and other shareholders lead to a break-up of the company, with one party going it alone as T'ai-hua (Tao Fia), and the other as Ta-T'ung. Yang Ko-fei went with the latter company, who chief shareholder was Tan Kah Kee, the rubber and pineapple magnate.

It became increasingly apparent, however, that the two companies would do much better of they operated as a single unit. So in 1928, when a new rival appeared, they merged, with the smaller of the two now located in Hong Kong. Thereafter the company experienced steady growth. Eventually the branch in Hong Kong came to eclipse the parent company in Amoy. In 1937, when the Japanese invaded China and war broke out, almost the entire canning plant was moved to Hong Kong from Amoy. In 1951, when the company went public, the ownership passed mainly into the hands of overseas Chinese.

Today Amoy Foods' products are on the shelves of supermarkets and Asian markets in 37 countries. Half of Amoy Foods' shares are owned by the American food giant Pillsbury (owner of Haagen-Dazs and the Burger King hamburger chain) and the other half by Hang Lung (a Hong Kong real estate company). Amoy's line of 34 sauces include dark soy sauce (lau-ch'ou), light soy sauce (*sheng-ch'ou*), black bean sauce [made of fermented black soybeans], sweet and sour sauce, etc.

On the roof of the Amoy factory's main building a visitor can see a demonstration of the old-fashioned process; "here, an old man with sleeves rolled up goes from earthen vat to earthen at plunging his arm into the thick brew of black and yellow soy beans to give it a gentle, almost loving stir. He works rhythmically, with deep concentration. A Soy Master with thirty or forty years behind him, he stands in a line which goes back to the fifth century, from when dates the earliest surviving soy sauce recipe."

Companies like Amoy have helped to make Chinese foods more widely available in the West. Not so long ago, Chinese cookbooks published in England said that Worcestershire sauce was an acceptable substitute for soy sauce, because the latter was available only at delicatessens and specialty shops [Asian grocery stores] in London. Even during the last five years, the range of Chinese foods available in London's Chinatown has grown remarkably. In Chinatowns in the United States [and especially those in San Francisco {California} and New York] the selection of Chinese foods has long [perhaps always] been greater than at those in London or other places in Europe.

Page 324: The first person to make tofu in Europe was Li Shih-tseng [Li Yü-ying, Li Shizeng], a Chinese intellectual and educator. As a young student of biochemistry in France in 1900, Li was to be greatly influenced by the writings of Nietzsche and Bergson. A Francophile, Li was one of the founders of the Work and Study Program, which sent Chinese students abroad for part-time work and part-time study. One of these students, who would later become famous, was Deng Xiaoping. While establishing his tofu [beancurd] factory in France, Li drew on his knowledge of biochemistry; the factory provided jobs for many students in the Work-Study Program.

Li, a vegetarian, was a firm believer in the nutritional value of tofu and other soybean foods. His factory also made and sold soybean flour, fermented tofu, soy-bean milk, and soy-bean jam, and these foods nourished not just Chinese, but also Westerners, including American soldiers who fought in France during World War I (Lin Hai-yin 1971, p. 125). "All this was before the faddish demand for tofu by health food enthusiasts, and before it became widely known as an unbeatable source of protein. The company closed after the war, but among certain Chinese *émigrés* [emigrants from China] France was never to lose its reputation for beancurd. In Europe up to the 1980s *tofu kan,* a particular variety of fermented beancurd [sic, pressed tofu] much demanded by eastern Chinese palates, could only be had in Paris, and the handful of *émigrés* in London had to send over for it."

Li was also a founder of the Université Franco-Chinoise at Lyons, a sort of accommodation and placement agency.

About the author (facing p. 418). Lynn Pan was born in Shanghai; she left as a child. She "has lived as an immigrant in North Borneo and England, and worked as a social scientist, journalist and writer in London, Geneva, Helsinki, and Hong Kong." In 1981 she returned to Shanghai for the first time, and was gripped by deep, haunting sensations of nostalgia. She had found the place where she belonged, her inheritance, and she began to write this book. She is the author of at least five other books–all listed facing the title page. Her Epilogue and Afterword at the end of this book are both very interesting.

6748. Pennington, Jean A.T.; Church, Helen Nichols. eds. 1994. Bowes and Church's food values of portions commonly used. 16th ed. Philadelphia, Pennsylvania: J.B. Lippincott Co. 257 p. 1st ed. was 1937. 2nd ed. was 1939. 10th ed. was 1966. [62 ref]

• ***Summary:*** Soy is mentioned on pages 62 (shortenings),

63 (soybean oil, regular and hydrogenated), 83 (soy muffin, with soy flour replacing 25% of the white wheat flour), 84 (soy pancake, with soy flour replacing 25% of the white wheat flour), 73 (soybean flour, regular and defatted; whole wheat and soy flour), 114 (meat analogues made by Loma Linda and Worthington Foods), 116 (soybean milk, liquid, concentrate and powder), 119 (soy bean nuts [soynuts]), 126 (soy sauce), 142 (soybean mayonnaise, regular and imitation; spread and stick of soybean and palm), 158 (soybean sprouts; soybeans immature [edamame]), 163 (soybean protein). Address: 1. Formerly Instructor of Nutrition, City College of San Francisco, San Francisco, California [Now with U.S. Food and Drug Administration, Washington, DC]. Phone: 202-245-1064.

6749. Stepaniak, Joanne. 1994. The uncheese cookbook: Creating amazing dairy-free cheese substitutes and classic "uncheese" dishes. Summertown, Tennessee: The Book Publishing Co. 192 p. Index. 21 x 18 cm. [16 ref]
• ***Summary:*** This is an excellent, very creative cookbook with a poor index, developed especially for people who, due to choice or chance, have eliminated cheese from their diet. The recipes are well designed to satisfy any compelling cheese fantasies you may have.

Contents: Introduction. Cheezes, spreads & dips. Soups and chowders. Fondues & rarebits. Sauces. pestos & dressings. Pizzas, polentas & breads. Quiches, casseroles & entrées. Sweets. Glossary. Mail order suppliers of natural foods.

Tofu is used as a major ingredient throughout this cookbook. For example: Muenster cheese (p. 23). Chunky Roquefort dip & dressing (p. 24). Tofu cottage cheese (p. 27). Tofu ricotta (p. 27). Betta feta (p. 28). Brie (p. 31). Liptauer käse (p. 32). Boursin cheese (p. 33). Tofu cream cheeze–rich or light (p. 34-35). Kefir cheeze (p. 36). Garbanatto (p. 39). Hot Parmesan artichoke dip (p. 41). Pecan cheese (p. 42). Egg-free (vegan) mayonnaise (p. 89). Tofu sour cream (p. 90). Calzones (p. 100-10). Tofu tetrazzini (p. 122) Tofu devonshires (p. 140). Mattar paneer (p. 146). Tofu cheezecakes & cream pies (ten varieties, p. 164-74). Tofu whipped topping (p. 172).

Many other recipes also call for "low-fat, dairy-free (vegan) milk" which is defined (p. 183) as "a generic term which refers to any creamy beverage such as soymilk, nut milk, or rice milk that is produced from non-animal products.

Interesting products in the glossary (p. 180-184) include: Agar, barley malt syrup, brown rice syrup, liquid aminos, mirin, miso, seitan, tahini, tamari, tempeh, toasted sesame oil, tofu, umeboshi plum paste, vegan milk, yeast–nutritional (*Saccharomyces cerevisiae*).

6750. **Product Name:** [Soymilk–Enriched with Calcium].
Foreign Name: Soyamilk–Arricchito in Calcio.
Manufacturer's Name: Valsoia S.p.A.
Manufacturer's Address: Via Iacopo Barozzi 4, 40126 Bologna, Italy. Phone: +39 051-659-9900.
Date of Introduction: 1994. January.
Ingredients: Water, soybeans (20%), chicory syrup (*sciroppo di cicoria*), calcium carbonate (*carbonato di calcio*), sea salt, spices (*aromi*).
Wt/Vol., Packaging, Price: 500 ml Tetra Brik cartons.
How Stored: Shelf stable, 9 month shelf life. Refrigerate after opening.
Nutrition: Per 100 ml.: Energy 178 kJoules / 43 Kcal (calories), protein 3.6 gm, carbohydrate 2.3 gm, fat 2.1 gm (of which 0.4 gm saturated, 0.4 gm monounsaturated, 1.3 gm polyunsaturated, cholesterol 0 mg), calcium 120 mg (15% of RDA).
New Product–Documentation: Talk with Dr. Piero Bontempi and Laura of Valsoia. 1995. June 6. This product was introduced in 1994. Color leaflet and product specifications showing labels. 1995. "Valsoia–Bonta' e Salute. Soyamilk–Arricchito in Calcio. 100% vegetale. Senza zucchero (saccarosio) (Free of sugar). Prodotto Dietetico." The company uses the word "Soyamilk" as a registered trademark. The leaflet describes the product as "Il latte di soia dietetico."

6751. Asahi Food Processing Co. 1994? Soybean materials and tofu quality: Soybean use at Asahi. Gyoda-shi, Saitama-ken, Japan. 13 p. 28 cm. Undated. [Eng]
• ***Summary:*** This very interesting report was produced by the Tofu Research Team in the company's Foods Laboratory. It shows how a top Japanese tofu manufacturer evaluates soybeans and processes for making tofu. Each year Asahi uses 4,900 tonnes (metric tons) of soybeans, of which 3,000 tonnes (61.2%) are IOM from the USA and 1,900 tonnes (38.8%) are grown in Japan. Contents: Flow sheet for making soymilk and tofu.

Chemical composition and viscosity of soymilk and hardness of tofu, made using 26 different soybean varieties and 3 coagulants–GDL, calcium sulfate, and magnesium chloride. The main soybeans are Enrei, Toyosuzu, Suzuyutaka, Nanbushirome, Tachinagaha, Yamabe daizu (+ or -), IOM, Vinton, Beeson, Kunitz, Zane, Forrest, 9 experimental Canadian soybeans bred at Harrow [Ontario], Best One (Harrovinton [Harovinton]), plus soybeans from Nepal, Celebes, and Chiang Mai.

Chemical composition of 26 soybean varieties and subunit composition of their protein (11S, 7S, etc.). Composition of other soybeans tested: Vinton organic, Tachiyutaka, Tamahomare, Fukuyutaka, Murayutaka, Raisen, Nakasennari, etc. Variables affecting tofu breakage, and tofu compression. Graph showing effect of A-4 subunit on viscosity change of soymilk after addition of magnesium chloride. Graph showing viscosity curves after addition of magnesium chloride coagulant (0.2%) to soymilk derived from 8 different soybean varieties (Note: Enrei gives the

lowest viscosity and Vinton the highest). Dendrogram of cluster analysis on principal component score for Japanese soybean cultivars (Best suited for tofu are Enrei, Toyosuzu, Fukuyutaka, Shirosennari). Note: *Webster's Dictionary* defines dendrogram (a term first used in about 1953) as "a branching diagram representing a hierarchy of categories based on degree of similarity or number of shared characteristics esp. in biological taxonomy."

Three dimension chart of factor loading. Chart (2 pages) of variables affecting tofu quality: Vertical columns: Deliciousness (Color, taste, flavor, texture), nutrition, sanitation, cost. Horizontal columns: Points/characteristics, soybeans, extraction of soymilk, coagulation operation to make tofu, viewpoints (notes), Enrei, IOM. Address: 2-17-8 Mochida, Gyoda-shi, Saitama-ken, Japan.

6752. **Product Name:** [Fresh Tofu-Based Pastry (Carob)].
Foreign Name: Tof'délice (Caroube).
Manufacturer's Name: Gaia.
Manufacturer's Address: 11, rue François Chancel, 31190 Auterive, France. Phone: 61 50 67 39.
Date of Introduction: 1994?
Ingredients: Tofu*, sunflower oil*, corn syrup*, sea salt, soymilk* [filtrat de soja], agar-agar, carob*, flour T65*. * = Organically grown.
Wt/Vol., Packaging, Price: 150 gm.
New Product–Documentation: Color leaflet (undated, 6 panels) sent by Jean-Luc Alonso. 1994. May 16. *Une gamme de pains spéciaux, goûtres et desserts naturels, 100% végétals, biologiques et sans adjonction de sucre* [A line of special breads, snacks, and natural desserts. Made purely from plants, organically grown, and without the addition of sugar]. The printed address has been crossed out; the new address is: 7, rue du Mail, 81300 Graulhet, France. Phone: 63 42 16 03. The following products are included in the leaflet (the label of each is shown): Tof'délice–Caroube (A fresh carob pastry based on tofu). Tof'quiche–Au tofu fume (Tofu quiche based on smoked tofu). Friand au seitan (Seitan appetizer).

6753. **Product Name:** [Tofu Quiche (With Smoked Tofu)].
Foreign Name: Tof'quiche–Au Tofu Fume.
Manufacturer's Name: Gaia.
Manufacturer's Address: 11, rue François Chancel, 31190 Auterive, France. Phone: 61 50 67 39.
Date of Introduction: 1994?
Ingredients: Tofu*, soymilk* [filtrat de soja], smoked tofu*, flour T65*, rolled oats, sunflower oil*, shoyu [sauce de soja], miso [pâte de soja], aromatic herbs. * = Organically grown.
Wt/Vol., Packaging, Price: 130 gm.
New Product–Documentation: Color leaflet (undated, 6 panels) sent by Jean-Luc Alonso. 1994. May 16. *Une gamme de pains spéciaux, goûtres et desserts naturels, 100% végétals, biologiques et sans adjonction de sucre* [A line of special breads, snacks, and natural desserts. Made purely from plants, organically grown, and without the addition of sugar]. The printed address has been crossed out; the new address is: 7, rue du Mail, 81300 Graulhet, France. Phone: 63 42 16 03. The following products are included in the leaflet (the label of each is shown): Tof'délice–Caroube (A fresh carob pastry based on tofu). Tof'quiche–Au tofu fume (Tofu quiche based on smoked tofu). Friand au seitan (Seitan appetizer).

6754. **Product Name:** Tofu, Soymilk, Dried Tofu Curds, and Veggie Burgers.
Manufacturer's Name: Harcan Kingsoya Co. Ltd.
Manufacturer's Address: 33 Casebridge Court, Units 5&6, Scarborough, ONT M1B 3J5, Canada. Phone: (416) 283-8328.
Date of Introduction: 1994?
New Product–Documentation: Talk with Duff MacKinnon of the Ontario Ministry of Agriculture and Food in Guelph. 1995. March 6. Harcan makes tofu, soymilk, dried tofu curds, and veggie burgers. They have a very small plant. One partner, from mainland China, speaks excellent English. The other two partners are Canadian.

6755. Rosas, Juan Carlos; Young, Roberto A. 1994? El cultivo de la soya. Quinta edición [The cultivation of soya. 5th ed.]. *Departamento de Agronomía* (*Zamorano, Honduras*), *Publication* No. AG-9603. 68 p. Undated. [Spa] • ***Summary:*** Contents: 1. Overview: Economic importance, chemical composition, history, taxonomy. 2. Morphology of the soybean plant. 3. Physiology of the growth and development of the soybean plant: Stages of development. 4. Environmental factors that affect the cultivation of soya: Soil, water, irrigation, light / photoperiod, temperature, period of growth. 5. Practical cultivation: Preparation of the soil, time of planting, density of planting, quantity of seeds, systems of cultivation, control of weeds (methods of weed control, chemical control). 6. Mineral nutrition of soybeans (and inoculation). 7. Diseases that affect the cultivation of soybeans and their management: Bacterial, fungal, viral, other, seed treatment. 7. Insects that attack soybeans. 8. Harvest and storing. 10. Improvement of soybeans. 11. Processing and utilization: Industrial processing (extraction of oil, soy flours, soy protein concentrates {*concentrados proteícos de soya*}, soybean cake). Direct consumption: In the Far East, the soybean is consumed in the form of fermented and non-fermented foods. Fermented foods include shoyu, miso, mato [sic, natto], and tempeh, while non-fermented foods include soymilk (*la leche de soya*), tofu, yuba (*juba*), and kinako. 12. The cultivation of soya in Honduras (history).

In 1972, the Ministry of Natural Resources (*Ministerio de Recursos Naturales*) reported the initiation of commercial

soybean production on a small scale in various departments of the country (Olancho, El Paraíso and Comayagua). Three varieties were used at that time: Biloxi, Hardee and Jupiter. However, before these reports were made, at the Panamerican Agricultural School (*la Escuela Agrícola Panamerican* (*EAP*)), some hectares had already been planted with the varieties Jupiter and Pelican. Discusses additional developments in 1974, 1982, 1986, 1987, and 1988. Address: 1. PhD; 2. PhD.

6756. Much, Marilyn. 1995. Seeds bear fruit at Archer Daniels Midland: Profits surge at huge grain processor thanks to growing sales of higher margin additives. *Investor's Business Daily.* Jan. 5.
• ***Summary:*** A photo shows ADM Chairman and CEO Dwayne Andreas who said that his company's business has doubled every six years for the past 20 years. In 1994 ADM had bad luck because of the great Midwest floods; earnings dropped 11% even as revenues rose 16% to $11.4 billion. ADM's strategy is to nurture core businesses, like milling of corn, wheat, and soybeans, while expanding and upgrading products into higher margin items.

Over the past few years ADM has used new technologies to extract amino acids from corn. Today ADM is a leader in the production of amino acids like lysine and threonine, which are used as livestock feed supplements. It will soon start making tryptophan for use in livestock feeding. Andreas estimates that consumption of such value-added products is growing anywhere from 6% to 25% a year. That explains why he has invested several hundred million dollars in making these items. "This investment includes the January acquisition of Central Soya Co., one of the largest global distributors of multivitamin products." [Note: In Jan. 1994 (not 1995) a subsidiary of ADM acquired Central Soya's feed division–but not the entire Central Soya company].

Analyst David Nelson of NatWest Securities predicts that ADM's earnings overall will grow at a compound annual rate of 9% to 12% over the next 5 years as the firm reaps the benefits of its wise investments, and as agricultural trade becomes more liberalized. That's up from only 3% from 1990-1994. For example, the market for ADM fructose has exploded. ADM plans to diversify into new bioproduct categories. Long-term, Andreas plans to produce all six antioxidant vitamins from natural sources–and penicillin.

ADM's soy protein business is growing rapidly. Six years ago the company invented a new way to isolate [concentrate?] soy protein and make a product similar in taste and texture to meat. This is used as an ingredient in the Harvest Burger patties marketed at retail by Pillsbury's Green Giant.

Andreas has found that liberalization of agricultural trade through NAFTA and GATT has been of tremendous benefit to ADM and similar companies. ADM is now shipping to China vastly increased amounts of vegetable oil. "The company has shipped $26 million of a total $100 million order from the Ukraine for soy protein to be used in milk. And the former Soviet Union has asked ADM if it can supply it with 3 million tons of milk from soy protein in the future, says Andreas." Address: Staff reporter.

6757. Food Commission (The), London. 1995. Question mark hangs over infant soya milks (News release). Third Floor, Viking House, 5/11 Worship Street, London EC2A 2BH. 1 p. Jan. 11.
• ***Summary:*** "New research published by the Food Commission today [See Living Earth and Food Magazine, page 3] shows evidence that the levels of naturally-occurring hormones (phytoestrogens) present in soya baby milks may be equivalent to giving a young infant several contraceptive pills every day. The research, undertaken in New Zealand, raises questions over the advisability of giving babies soya formulae as the biological effect of phytoestrogens could be 100 times greater than the amount of natural oestrogen a child would receive from breastmilk.

"The Food Commission has also discovered that UK Government experts called for monitoring of the phytoestrogens in soya formula in 1992 but, despite being on MAFF's 'priority list', the research has yet to start.

"Phytoestrogens can be toxic to animals and could potentially decrease fertility in women yet little is known about their effects on children. However one leading UK researcher is recommending that oestrogens from whatever source should be kept to a minimum especially during childhood." Address: London, England. Phone: 071 628 7774.

6758. Roberts, Rosemary. 1995. New voice urges care with soy formula. *Northern Advocate* (*Whangarei, New Zealand*). Jan. 18.
• ***Summary:*** David Russell, chief executive officer of the Consumers Institute (in New Zealand) said this week that people should be "'very, very cautious' about giving infants soybean-based formulae. Mr. Russell said scientists had shown there was cause for concern because of the high phyto (plant) oestrogen content in the formulae."

"Yesterday in Britain, the British Food Commission's magazine, The Food Magazine, published the results of Dr Fitzpatrick's research, highlighting his comments on the probable risks of feeding soy infant formulae to babies.

"The magazine also reminded readers that in 1992 the United Kingdom's expert committee on toxicity recommended that levels of phyto-oestrogens in soy baby milks and other soy foods for children be analysed as part of its review of natural toxicants in foods.

"No research had yet been done, the magazine said.

"The British Food Commission also asked companies supplying soy baby milks in the UK to provide information on levels of phyto-oestrogens. Only one company had done

so, and the level appeared to be about two-thirds that in New Zealand formulae.

"Dr Iain Robertson, senior toxicologist at the Auckland Medical School, has also restated the strong views he expressed last month on the use of soy infant formulae. Reviewing the Fitzpatrick report, he said use of soybean-based infant formulae should be discontinued until research on their possible effects on babies was carried out."

6759. Lo, K.S. 1995. Re: New developments at Vitasoy, and some early history. Letter to William Shurtleff at Soyfoods Center, Jan. 25. 2 p. Typed, with signature.
• ***Summary:*** As of January 1994, Dr. Lo stepped down from the chairmanship of Vitasoy International Holdings Limited when the company went public. The company is now being run by Dr. Lo's son, Winston, as the Chief Executive. All matters relating to the company should be referred to him at his office: No. 1, Kin Wong St., Tuen Mun, New Territories, Hong Kong.

Dr. Lo sends a photocopy of an article from the *S.C.M. Post* titled "Soya Bean Milk Factory Opened," published on 10 March. 1940. It describes the opening ceremony of his original soymilk factory, which took place on 9 March 1940. Dr. Lo writes that this factory "was situated at Great George Street, Causeway Bay, Hong Kong, where the Park Lane Hotel stands today. It was not until 1950 when we moved down to Aberdeen."

Mr. Lo's new office address is: Chairman, Ping Ping Investment Co., Ltd., B-1, 1st Floor, Vita Tower, 29 Wong Chuk Hang Road, Aberdeen, Hong Kong. Address: Former chairman, The Hong Kong Soya Bean Products Co., Ltd., 41 Heung Yip Rd., Aberdeen, Hong Kong. Phone: 5-528211.

6760. **Product Name:** Vitamite: 2% Fat Chocolate Non-Dairy Flavored Beverage.
Manufacturer's Name: Diehl Specialties International (DSI).
Manufacturer's Address: Defiance, Ohio.
Date of Introduction: 1995. January.
Ingredients: 1995: Water, corn syrup solids, partially hydrogenated canola oil, potassium caseinate (a milk derivative), isolated soy protein, cocoa processed with alkali, tricalcium phosphate, natural cocoa, salt, dipotassium phosphate, guar gum, xanthan gum, carrageenan, mono- and diglycerides, calcium sulfate, sodium stearoyl lactylate, artificial flavor, calcium d-pantothenate, vitamin A palmitate, vitamin D-3, riboflavin, pyridoxine hydrochloride, thiamine mononitrate, annatto (color), vitamin B-12.
Wt/Vol., Packaging, Price: 1 quart gable-top Pure Pak carton.
How Stored: Refrigerated.
New Product–Documentation: Liz Stevens. 1994. Detroit News. Aug. 30. p. 3D, 12D. "You call this milk? Yes, there are palatable alternatives to the real thing." Mentions Vitamite.

Label sent by Irene Stuttman, President and CEO, Sycamore Creek in Michigan. 1995. Nov. 2. Quart Pure Pak carton. Chocolate brown and red on white. "Lactose free. Cholesterol free. High calcium. Delicious chocolate taste. Contains milk protein. Homogenized / Ultra pasteurized. Vitamins A & D added." "For lactose intolerant people."

Talk with Tom Mekus, Vice President of Sales and Marketing, at DSI toll-free number (1-800-643-3930). 1995. Nov. 6. Vitamite is sold in the dairy section at most supermarkets throughout most of the United States, including most Safeway supermarkets in California. It comes in both liquid and powdered forms. They are the licensee, Diehl Specialties International in Defiance, Ohio. Their factory there makes the powder base and ships it nationwide to dairies that process it into a liquid milk alternative then package it. Ryan Milks processes the powder in the California area. The company makes "2% white" (blue carton) and "2% chocolate." They are developing a non-fat version. The product contains both soy protein and some potassium caseinate which is a milk derivative but is not considered to be a dairy product. Vitamite is distributed throughout most of the USA except in the northeast from Philadelphia (Pennsylvania) up through New York and Boston.

6761. Eshett, Susan. 1995. Sidi Modupe Osho: Nutrition for Nigeria. *IRDC Reports* p. 11.
• ***Summary:*** "Food technologist Dr. Sidi Modupe Osho attributes much of her recent success in research to a somewhat unlikely source–a small cream-coloured bean known as soybean. Simply stated, soybean is nothing less than a 'miracle crop,' she says. Soybean was like 'a vehicle for me to carry out research activities.'

"However, most colleagues would likely say that it is Osho's own singular intelligence, enthusiasm and dedication that have been vital factors in her achievements in developing food products from soybean that now find growing acceptance among her fellow Nigerians.

"Born thirty-five years ago into a large Nigerian family, her love for information was evident from an early age. 'As a child, my parents said I was the most curious of my siblings,' she says. Although science became her eventual vocation, throughout her secondary education she was more inclined to the arts. However, as she grew older she became fascinated by science.

"At Delta College University Centre, in Michigan, she obtained an associate degree in agriculture, followed by a degree in food science from Michigan State University. Then came a Master's degree in food processing and technology from Ohio State University in 1982.

"Osho's first contact with soybean in Nigeria came indirectly, through research she was conducting on cassava, a staple in West Africa but a crop with very low protein

content–in some cases none at all. She began investigating the potential of legumes that could improve the nutritional value of cassava-based products.

"Years after that initial contact, Osho has succeeded in popularizing soybean as an alternative source of protein, one which is affordable and acceptable to Nigerians, particularly among low income and rural communities. Most of her work entails coordinating the soybean utilization and processing program at the International Institute of Tropical Agriculture (IITA), located in Ibadan, southwest Nigeria. For the past seven years, she has worked in a soybean utilization project initiated by the IITA in collaboration with the Institute of Agricultural Research and Training (IART), also in Ibadan, the National Cereals Research Institute, Badeggi, National Agricultural Extension Research and Liaison Services, Zaria, and the University of Nigeria, Nsukka. The project is funded by IDRC.

"Osho came well suited to the project, owing to her doctoral research on plantain processing and preservation while at the University of Ibadan. This research allowed her to live in a rural community in Oyo State and to learn from villagers the technique of processing *dodo ikire,* a nutritional plantain-based food product that had been developed locally.

"Osho worked with an economist, agronomists, agricultural economists and a home economist. The team was multidisciplinary because, as she notes, it had to 'develop uses for soybean that were acceptable traditionally in our food systems and interact with the rural household to uncover simple technologies that will fit their own life style.' The main obstacle in the research was the negative perception of soybeans. 'The missionaries that introduced the crop in Nigeria in the early part of this century told farmers soybeans had a toxic component.' The researchers had to erase that belief, then prove to rural folk that soybean was nutritionally beneficial.

"Osho recognizes the role of cultural factors in introducing new foods such as soybean-based products to Nigerians. 'In the northern region they have a lot of cereals so most of the soybean technologies that we developed were to suit that part.'

"She points to the fact that soybean originated in China and from there was introduced to other parts of the world, and that most of the technologies now in use were borrowed from China and the Asian sub-continent. 'Drinking soybean milk is a typical Asian habit, which we are now adopting in Nigeria.'

"Osho and her husband, a biometrician, met as students in the United States. They have three boys. 'I am married to a very understanding person,' she explains. 'He is also a researcher, works in the University of Ibadan and knows the dedication that research requires.' He assists her in the documentation of her work and statistical analysis.

"Osho envisages a great need for developing countries to increase food production levels. But for now, what is paramount for the Nigerian researcher is the sustainability of the soybean project. The next challenge is to develop strong research programs with national institutions in other African countries. Her achievements in Nigeria could serve as a springboard for spreading her experiences to other parts of the African continent and even beyond."

A portrait photo show Sidi Osho. Her soybean research in Nigeria could help other countries seeking an affordable alternative source of protein. Address: Correspondent for NTA News, Nigeria.

6762. Mindell, Earl. 1995. Earl Mindell's soy miracle. New York, NY: Simon & Schuster. A Fireside Book. 256 p. Index. 22 cm. [97 ref]

• ***Summary:*** Contents. Part I: Soy–The miracle food. 1. The soy story: explaining the miracle. 2. Soy by any other name. 3. Does soy prevent cancer? 4. Heart and soy. Part II: Soy for special needs. 5. Just for women: Rx for menopause and osteoporosis. 6. Just for men: Rx for prostate problems. 7. Kids, cancer, and heart disease. 8. Tips for vegetarians. Part III: Not by soy alone. 9. Thirty-seven miracle foods from the Pacific Rim. Earl's pearls: A guide to vitamins and minerals. Part IV: Get more soy in your life. 11. Savvy substitutions. 12. Cooking with soy. 13. Breakfast the soy way. Part V: Seventy super soy recipes (p. 149-230). Glossary. Resources. Selected bibliography.

Pages 12-13 note that soybeans are an abundant source of many different types of phytochemicals, including isoflavones, genistein, protease inhibitors, and phytic acids.

Chapter 2 describes the different types of soy foods. Traditional soy foods: Soy milk, tofu (firm tofu, silken tofu, yakidofu, koyodofu [sic, koya-dofu]), okara, natto, tempeh, miso, soy sauce, kinnoko [sic, kinnako] flour. Soy protein products: Soy protein concentrates, soy protein isolate, soy flour, texturized soy protein, meat analogs. Other soy products: Soy fiber, soybean oil, lecithin. Questions about soy foods. Page 33 asks the question: "If phytochemicals in soybeans are so healthy, why can't they be extracted from food and made into a pill like a vitamin?" Answer: Researchers are not yet certain which phytochemicals are the most important. "There may even be other beneficial compounds in soy that have yet to be identified. Your best bet is to eat the real food." A section titled "Soy's top ten benefits" (p. 36-38) discusses: 1. Antioxidant. 2. Breast cancer. 3. Cholesterol lowering. 4. Colon cancer. 5. Hip fracture. 6. Hot flashes. 7. Immunity. 8. Kidney disease. 9. Lung cancer. 10. Prostate cancer.

Chapter 3, titled "Does soy prevent cancer?" discusses six compounds which cancer researchers believe may be effective in cancer prevention: Isoflavones, genistein, daidzein, protease inhibitors, phytic acid, and saponins. A long section later in the chapter discusses each of these, with special emphasis on genistein.

Note: The author has also written *Earl Mindell's*

Herb Bible and *Earl Mindell's Food as Medicine.* He is a newcomer to this field. This book may appeal to those who are looking for miracles from the foods they eat. Most of the information contained in this book can be found in Mark and Virginia Messina's outstanding *The Simple Soybean and Your Health* (1994), and the *First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease: Proceedings from a symposium held in Mesa, Arizona, on February 20-23, 1994,* published in full in *The Journal of Nutrition* Vol. 125, No. 3S, March 1995 Supplement. It was from this symposium and the outline published before the symposium that Mindell got his idea for this popular book.

Dr. Mindell is an R.Ph. (Registered Pharmacist) with a PhD in Nutrition from Pacific Western College in Renton, Washington.

According to a review of *Earl Mindell's New and Revised Vitamin Bible,* by James A. Lowell, PhD. (Nutrition Forum, June 1986) "Mindell claims to hold valid credentials in nutrition. Although he does have a bachelor's degree in pharmacy from the University of North Dakota, his Ph.D. is from the University of Beverly Hills, an unaccredited school which lacks a campus or laboratory facilities." Mindell helped to found the Great Earth chain of vitamin and health food stores, numbering about 200 in 1986, America's second largest such chain. Address: R.Ph, PhD, registered pharmacist and Prof. of Nutrition at Pacific Western Univ. in Los Angeles. He lives in Beverly Hills, California.

6763. Minnesota Soybean Growers Association; Minnesota Soybean Research & Promotion Council. 1995. Cooking with soy. Revised 2nd ed. North Mankato, Minnesota. 48 p. Jan. 22 cm.

• ***Summary:*** Contents: Introduction. Tofu facts. Soy milk facts. Soy flour facts. Miso facts. Tempeh facts. Texturized soy protein facts. Meat analog facts. Soy oil facts. Whole (dry) soybean facts. Whole (green) soybean facts. How to cook whole soybeans.

Recipes: Appetizers & snacks. Dips & dressings. Beverages. Salads & soups. Breads. Main entrees. Cakes, cookies & desserts. Substitutions.

Talk with Christie Metzger of the MSRPC. 1996. Jan. 4. The revised edition of this book was published in Jan. 1995; the first edition was published in March 1994. Address: 360 Pierce Ave., Suite 110, North Mankato, Minnesota 56003. Phone: 507-388-1635.

6764. **Product Name:** Pacific Rice: Non Dairy Drink (Lowfat) [Vanilla, Cocoa, or Plain].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1995. January.
Ingredients: Plain: Filtered water, brown rice, expeller pressed canola oil, tricalcium phosphate, *Lactobacillus acidophilus* and *L. bifidus* cultured product added, guar gum, xanthan gum, carrageenan, sea salt, vitamin A palmitate, vitamin D-2.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 8 fl. oz. (240 ml): Calories 70, calories from fat 15, total fat 1.5 gm (2% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 55 mg (2%), total carbohydrates 14 gm (dietary fiber 0 gm, sugars 9 gm), protein 1 gm. Vitamin A 10%, vitamin C 0%, calcium 15%, iron 6%, vitamin D 30%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo East (Baltimore, Maryland). 1995. Sept. 15-18. "New from Pacific Foods. New! All-rice beverages are completely enriched, taste great, and come in resealable, easy-to-pour containers. Plus, Pacific Foods offers the first fat-free rice non-dairy drinks!" A color photo on the cover shows 3 low-fat and 3 non-fat products. Label: On the front panel is a color illustration of a glass of rice beverage surrounded by leaves of grass. Below the word "lowfat" appears: Calcium, vitamins A&D, and L. acidophilus cultured product added: On one side panel for all flavors: "Simply the best. Pure Cascade mountain water. Brown rice. A cholesterol-free and lactose-free food. Low sodium. No animal fats. No preservatives. Lactobacillus acidophilus and L. bifidus cultured product added."

Fax with photocopies of 3 Labels sent by Kaye Barnes of Pacific Foods. 1996. Jan. 5. These three products were introduced in Jan. 1995.

6765. **Product Name:** Pacific Rice: Non Dairy Drink (Fat Free) [Cocoa, Vanilla, or Plain].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1995. January.
Ingredients: Plain: Filtered water, brown rice, tricalcium phosphate, *Lactobacillus acidophilus* and *L. bifidus* cultured product added, guar gum, xanthan gum, carrageenan, sea salt, vitamin A palmitate, vitamin D-2.

Pure Cascade mountain water. Brown rice. A cholesterol-free and lactose-free food. Low sodium. No added oils. No preservatives. Lactobacillus acidophilus and L. bifidus cultured product added."

Fax with photocopies of 3 Labels sent by Kaye Barnes of Pacific Foods. 1996. Jan. 5. These three products were introduced in Jan. 1995. New package designs were introduced in Feb. and March 1995. The latter are in both English and French.

Product with Label purchased at Trader Joe's in Concord, California. 1996. Jan. 3.5 by 7.75 by 2.25 inches, with resealable spout. Aseptic carton. Green, purple, and black on white. Retails for $1.19. Soyfoods Center taste test. Tastes pretty bad, like a mixture of starch and sugar.

6766. Ubiera, L.R. 1995. Tofu y leche de soya: Alimentos macróbiotics–naturales. Una guía practica para su manufactura en casa. La proteina del futuro, ahora [Tofu and soymilk: Macrobiotic natural foods. A practical guide for home preparation. Protein source of the future, now]. Santo Domingo, Dominican Republic: Published by the author. iii + 156 p. Illust. Index. 21 cm. [5 ref. Spa]

• ***Summary:*** The author was born on 20 Jan. 1955 in the Dominican Republic. He also practices and teaches Hatha Yoga. Contents: Dedication to his teacher Maestro el Swami Guru Devanand Saraswati J. Maharaj, and others. Prolog, by José A. Fortunato of New York. Introduction. How to make tofu and soymilk at home. Preparatory techniques for tofu. How to make tofu cutlets, burgers, and pouches. Recipes: Sauces, salads, and soups. Main dishes. Other recipes– *Aderezos, cremas, salsas, ensaladas, sopas, entremeses, pastelones y platos, pastas, estofados y otros platos, postres, dulces y bizcochos, panes.* Photos and illustrations (from The Book of Tofu, by Shurtleff & Aoyagi). A color photo on the rear cover shows the author. Address: Ufiesa Nutrisoya, C/33 No. 9 A, Villa Carmen Este, Santo Domingo, Dominican Republic. Phone: (809) 590-3418.

6767. Westbrae Natural Foods. 1995. Only Westbrae... No other brand has 100% organic non dairy beverage (Ad). *Vegetarian Times.* Jan. p. 7.

• ***Summary:*** This full-page color ad shows the front of a large carton of WestSoy 100% Organic Non Dairy Beverage (Original, only 2% fat), with a convenient new pour spout. It also has a free book offer: Buy 4 quarts of WestSoy and get a free copy of *Earl Mindell's Soy Miracle.* A photo shows Earl Mindell. "Find out how phytochemicals like isoflavones, that help protect plants from disease, may also help prevent chronic illnesses in humans. These same isoflavones, particularly genistein, are found in abundance in soy."

This ad also appeared in the March 1995 issue (p. 7) of this magazine. Address: P.O. Box 48006, Gardena, California 90248.

6768. Wildwood Natural Foods. 1995. Price list–January 9, 1995. Fairfax, California. 5 p.

• ***Summary:*** Wildwood's own product lines include: Sandwiches (7 products, incl. burritos and sushi), salads (17), tofu and tofu products (13), soymilk (2), hot dogs (1), tempeh (4).

Wildwood also distributes products made by other companies: Red Wood Foods (16 products), Mrs. Wiggles Rocket Juice (12), Grainaissance (17; amazake, pudding, and mochi), Sonoma Salsa (7), Yves Veggie Cuisine (9), Lightlife Foods (13), Turtle Island Foods (1), NuTofu soy cheese (3), Señor Felix's (8), Heart & Soul (5, Trim Slices), Natures Babies (10, baby foods). Address: 135 Bolinas Rd., Fairfax, California 94930. Phone: (415) 459-3919.

6769. Ham, P. Marc. 1995. The work of Semences Prograin Inc. (Micronisation Canada Inc.) in Quebec (Interview). *SoyaScan Notes.* Feb. 1. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This company was established in 1980 and is now a leader in Canada in the field of value added soy products. About two-thirds of their business is making full-fat micronized soybeans for use in animal feeds (mainly dairy cows, plus hogs and poultry), and one-third is in breeding and growing soybean seed (they presently grow about 2,000 acres year for use as soybean seed). They now have two micronizing plants which produce the Micro Flake, the Micro Milled product and the Micro Elite (made from higher protein soybeans, with high bypass). Mark believes that a micronized product makes better feed than that produced on a low cost extrusion cooker. Extrusion may be better for monogastric animals than it is for dairy. They have a research and development program for new soybean varieties. They also contract with a winter nursery in Chile for reproduction during the winter. They buy about 55,000 tonnes/year of soybeans for processing into animal feed and for exporting to the Pacific Rim. They are one of the largest companies in Quebec that buy soybeans and keep them in Quebec. The big trading houses buy soybeans then export them mostly to Rotterdam, Netherlands, to the European crush market. Prograin keeps its Maple Glen varieties identity preserved. They screen soybeans to sort them into 3 sizes. The big beans (18/64 inch and over) are sold to Japan for use as green vegetable soybeans, the medium sized beans (500 tonnes/year) are used in the Chinatown in Quebec to

make tofu and soymilk, and the small soybeans are used by 3 companies for making soy sprouts in Quebec. They have a natto program as well. Address: Semences Prograin Inc. (Micronisation Canada Inc.), 145 Bas Riviere Nord, St-Cesaire, Quebec, J0L 1T0, Canada. Phone: (514) 469-5744.

6770. Flinn, John. 1995. Who won in Sunday's ad bowl? *San Francisco Examiner.* Feb. 3. p. C-1, C-3. Business section.
• ***Summary:*** In the second quarter of the 1995 Super Bowl (football), Nike ran an ad featuring Dennis Hopper. As the little referee (Stanley Craver) is lamenting his being so weak and puny that he couldn't play football, he says something like "I was allergic to milk and the soybean juice my mother gave me made my bones weak."

One viewer wrote the Examiner: "For Nike to equate soy-milk with malformation/weakness is socially irresponsible. My family has never bought Nike and never will."

6771. Lombardi, Joyce. 1995. Re: History of growing and using soybeans in Chad. Letter to William Shurtleff at Soyfoods Center, Feb. 4. 3 p. Typed, with signature. [Eng]
• ***Summary:*** "Thank you for your response and enthusiasm for our soya work in Chad. I am forwarding your letter to people in town who are very involved in spreading the good bean throughout the land. One, an agronomist from Togo named Dr. Akintayo, has come to Chad for soy propaganda only. He has recently produced a book which will be of great interest to you, and is also very involved in training soybean trainers at the *Centre de Formation Professionale d'Agriculture* (*CFPA*), a farm extension service launched about 6 years ago by Swiss development workers.

"It is in fact from a Swiss-Italian development worker that I got the idea, and later the seeds, for soybean cultivation in my village. I had enjoyed ginger-flavored soymilk at his villa, and had heard him extoll the soil-enriching properties of the soy bean, so when people in my village began complaining about the low rates they were getting from the state's cotton company, I asked if they had thought about planting another cash crop, like soy. I was told it had been done in the past, but people here don't really known how to do much with soy beyond what you call dawa-dawa, fermented sauce. So a few weeks later, after more discussions with villagers, who told our health team that famine was their biggest health worry, the *Comite de Sante de la Paix* was born. Its mission–to grow, sell, and popularize the soybean in the village of Bessada, Chad.

"As far as I can tell, the farthest back anyone can remember planting soy in our region of southeastern Chad is 10 years ago [i.e. in about 1985]. Most people credit the above-mentioned CFPA with introducing the crop here 6 years ago. From its base in town, the CFPA also has several outposts in smaller towns (i.e. Koumra) and villages (i.e. Modjibe) near, or within a 20 km radius of Bessada. Farmers report success with the crop, especially as our soil is 'tired' from a constant rotation of cotton, millet and peanuts. People report that one 100 kg sack fetches between 23,000–50,000 cfa ($41-90) compared to half that for a sack of millet. The main buyers seems to be ONGs run by ex-pats [expatriates] or missions. Local buyers make dawa-dawa, or *ndi,* as it is called in the Sara language here, and several women in my village report making sojateen, or soybean coffee. However the cost, between 150-500 cfa per kg is prohibitive, and soy is still seen as a luxury food here. For comparison, millet is about 50-100 cfa/kg, and peanuts a bit less. Nonetheless, people generally know that soy is good for the body and soil, and were very interested in our collective soybean field.

"So, on July 17 1994, our rather ad hoc health team–made up of four men previously elected as village health delegates and 10 ten traditional birth attendants, old women with lined, tribal-scarred faces, canes, strong wiry hands–planted 6 kg of soybeans on a cleared ½ hectare plot, known here as a corde... Millet and cotton had been planted on our plot before, the debris cleaned away with the usual bushfire method.

"Our yield, just barely over 100 kg, was dismal. Reasons: we planted too late in the rainy season, which begins in May/June, and harvested our beans on Thanksgiving Day. Akintayo informed me that we planted the 120-day variety, which is what the CFPA has made available to folks here. Also, we only weeded twice, and very late in the game. The tribulations of collective labor as I'm sure you remember from your Peace Crops days. Third, our soil is rather sandy, and I'm told soy prefers clay and shade. Indeed, we remarked that the plants growing in the shade of a karite tree produced very well while the plants in the shade of an ndil tree produced a lot of foliage but not much bean. A farmer 7 km away reported a yield of 250 kg from 4 kg of seeds on a one-corde plot. He planted earlier and had better soil. His village has a water table of 23 meters, ours is 47."

"So, now, the sack of beans sits in my hut, away from mice and thieves, until we move it to a communal silo with another sack we're buying on credit. We have siphoned out some of the beans already to stage a big village-wide soybean transformation day, January 25, run by two animatrices sent by the CFPA in nearby Koumra. The two women journeyed out on their red moped to teach the health committee members, representatives from church and women's groups, 25 total participants, to make soy milk, cheese (tofu), fried tofu, beignets (spicy tofuburgers made with the residue [okara] whose name in Japanese I saw in your Book of Tofu), cake, steamed pate with fish and tomatoes, sweet donuts, and cake. The consensus was: porridge (I forgot to mention it above), spicy beignets and cake. Those were the big hits. People were shocked that one could bake a delicious cake there under the mango tree outside our clinic. Our tools were 3-rock fires, wooden mortars, big iron cauldrons and manual labor. Perhaps Niger

was the same way, but Chad has next to nothing in the way of time-saving tools. We did manage to borrow someone's hand-cranked meat grinder to make the soy milk.

"The fallout from soyday is this: the chef du canton, in whose compound I live, wants to make our village a center for soya cake, and we plan to serve it to the US Ambassador and Minister of Health who are due out in the village next week to inaugurate our newly renovated clinic, *grâce à* USAID. New members of the health team want to launch an infant-feeding program of soy porridge at the dispensary each Saturday or vaccination day. There is one such program started by a French doctor named Dr. Magguie Negri in a village called Bekemba, about 60 km north of here. She started the program in 1991, and reports feeding 103 children in 1993, on a continued basis. She encourages mothers to prepare the soy meals (porridge) themselves, and to aid with a community soycrop. (Paperwork to follow if I can find any).

"The infant nutrition program couldn't come at a better time for Bessada which now finds itself in the midst of a fatal measles epidemic, compounded by the beliefs that vaccinations give AIDS and measles, and that giving meat to baby or child with measles will make her sicker.

"So, in my village, soybeans are growing fast and well, and I will leave here knowing that at least I have made a substantial contribution to the well-being of a place it seems that history has forgotten. God, it's hard here. People scrape a living out of the sand with their bare hands."

"So. The gospel spreads forth. Having seen the damage wrought by so many other egos and programs come here to save the Africans, plugging away for The Soybean is one of the only acts of development I really feel comfortable engaging in.

"So no, in answer to your question, soybean cultivation is not a specific Peace Corps program or govt. program here."

"As for me, I was a Vanilla Edensoy and tahini tofuburger fan back in the States, but I never knew much about soy until now."

Color photos taken by Joyce show: (1) Three African men weeding a field of soybeans by hand, Sept/Oct. 1994. (2) Soybean plants in Bessada growing in the shade of a Karité tree, Aug. 1994. (3) Four Africans (two in traditional dress) from the health team seated outside of Joyce's round mud-walled house with conical thatched roof. Atop a wooden mortar are five glasses of soybean coffee on a white plate. Enclosed is a recipe for "Bessadonian soya coffee deluxe," by Joyce. Season, if desired, with *tumba* (Arabic tea spice). It's cheap, nutritious, and you can eat the grounds. Address: U.S. Peace Corps, B.P. 193, Sarh, Chad.

6772. Messina, Mark J. 1995. The effect of phytoestrogens and isoflavones in soyfoods on reproduction and fertility: We are about to see a wave of negative information, but important questions need to be asked (Interview). *SoyaScan Notes.* Feb. 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Richard James, an American who lives in New Zealand, fed his parrots a soy-based formula feed and they died. He blamed the soy. He got a New Zealand toxicologist (Mike Fitzpatrick, who works for the government) to do a report on toxins in raw or heat-treated soy, including all the well-known antinutritional factors. The report showed a lack of knowledge of the subject. It was a classic example of a little knowledge being dangerous. The conclusion of the report was that there are many toxins in soy, and that may explain why the parrots died–although it is too early to tell. However James is very dedicated about warning people about the possible dangers of soy. The health department of the Government of New Zealand sent out a questionnaire to soyfoods manufacturers asking them to indicate the levels of various antinutritional substances in their products, can they show that these products are safe, etc. For example, Bean Supreme in New Zealand has been seriously affected by this problem.

The main concern is with phytoestrogens, and more specifically with isoflavones. The two main isoflavones in soy are genistein and daidzein. Mark feels this is a very legitimate and serious concern, especially as it relates to reproduction, fertility, infants, and children. However he believes that in the end, scientific research will show that this is not a problem. This concern has now spread to England, Canada, and Australia. Mark got a copy of a document that was on the Internet; it discussed the many toxins in soy. It said that the information in this document came from an article on toxins in soybeans in the January 1995 issue of *Food* magazine (published by the Food Commission in London).

Nowadays when Mark appears on radio talk shows, roughly one-third of the calls are negative. Mark is now hearing a great deal of incorrect, negative information about the phytoestrogens in soy; some people are very afraid of their potential toxicity. In a book by John Thomas titled *Young Again: How to Reverse the Aging Process* (1994) the author had a chapter on soybean toxicity, in which he warned people not to consume tofu because of the lectins it contains. It was ridiculous; this is a non-issue.

In 1946, reports began to appear in the Australian veterinary journals concerning the decrease in lambs from ewes grazing in subterranean clover [*Trifolium subterraneum*]. In some cases lambing fell below 10% of normal with a 30% loss in ewes. It was shown that the presence of 7-10 grams/day of genistein in ewe rations resulted in sterility or infertility of the female. In 1987 Ken Setchell and coworkers, in an international symposium paper titled "Dietary factors in the development of liver disease and infertility in the captive cheetah," reported that the soy component of diets fed to captive cheetahs, which was

added for economic reasons, was responsible for the severe breeding problems in these animals.

More recently the Perinatal Nutrition Group (one of the dietetic practice groups of the American Dietetic Association; see Gunderson 1994) suggested that women who were trying to get pregnant not consume excessive amounts of soy.

Starting about 6 months ago, Mark began telling leaders of the soyfoods industry that they need to write a report refuting the rising tide of false information related to isoflavones. He has even contacted people at ADM, and they offered, along with other companies, to help fund a review of the literature on the toxicity of isoflavones.

A recent issue of *The Soy Connection* (a professional journal which Mark edits) was devoted to the subject of phytoestrogens and isoflavones. It showed the need for more research on this subject, since scientists realize how potent the isoflavones are. One cup of soymilk contains about 40 mg of phytoestrogen. For example, if 25 mg have a noticeable effect in extending the length of an adult woman's menstrual cycle, what will be the effect of 100 mg in a 1-year-old child–roughly 24 times the dosage on a body-weight basis. People are saying that 1-2 cups of soymilk may contain approximately as much estrogen as is found in 3-4 contraceptive pills, however Mark thinks that one cannot make direct comparisons because the phytoestrogens are different, and are absorbed and metabolized differently. Dosage is clearly the key. But scientists do not yet understand the effect of this relatively large dose of phytoestrogens on the development of an infant. How much soymilk can be safely consumed by young children (who have been weaned). Should Mark feel safe in recommending that vegans consume 3 cups of soymilk a day in place of 3 cups of cow's milk?

In Sept. 1994 the National Cancer Institute had a meeting that focused on the subject of isoflavones. A number of researchers were honestly concerned about unanswered questions regarding the effect of soy isoflavones on humans. Researchers call these "toxicity" questions, and there are a number of disagreements among researchers. The key issues are fertility, sex hormones, and gonadotropins (hormones which stimulate growth or function of the ovaries or testes). Do normal doses make it more difficult for women to become fertile? Are three servings of soyfoods a day better or worse than two servings, or no servings? Can one level of consumption reduce cancer risks, while another increases those risks? Can the ideal does of isoflavones for reducing cancer risk simultaneously cause fertility problems? Do isoflavones behave differently when studied as an isolated compound versus when they are consumed in the form of food with many other substances (e.g. genistein and daidzein consumed together, which is always the case with soy, vs. separately).

The answers will always be related to dosage. Studies can be done on animals, but the conclusions may not be correct when applied to humans. Clinical studies are problematic. If you go to the FDA and you want to prove that genistein (an isolated substance) is safe so you can sell it in pill form, you will be required to conduct a series of standard toxicity tests, starting with two species. If there is no toxicity at the maximum tolerated dose, then you conduct human studies, looking first at absorption and metabolism (kinetic) studies. Then you proceed with the standard FDA protocol.

Bad news can travel very fast, and bad news can easily cancel good news. Remember the dramatic effects of the story of Alar and apples. Imagine the damage that would be done to the soyfoods industry if there were a major half-true TV documentary on problems of isoflavones in soy. The soyfoods industry and Soyfoods Association of America needs a plan of action to deal with this problem. The first thing we need is a brief 2-page report summarizing what we know and what we don't know about isoflavones and phytoestrogens in soy–a review of the most relevant literature. There should be one for consumers and one for professionals (with say 30 citations). The report should be written by the leading American experts in this field–especially related to toxicity, reproduction, and sex hormones. This would give us something to deal with the rising wave of negative information that is coming. We must remind critics that much scientific information shows benefits of consuming isoflavones, and entire populations in East Asia have consumed soyfoods for centuries with no known adverse health effects and probably many benefits. Moreover, reproductive effects is a cheetah, for example, do not necessarily apply to humans. It is very unfortunate that the debate on isoflavones has been picked up by the media before it has been resolved by the scientific community. This has the potential to be the biggest problem yet faced by the soyfoods industry worldwide. "If I owned stock in a soyfoods company right now, I'd be worried and I'd do everything I could to try to make sure the industry is ready to counteract any negative publicity.

Update: 1995. April 27. Sales of infant formulas in New Zealand have decreased significantly since the negative publicity started. Mark has calculated, based on published data, that an infant consuming 1 liter/day of a reconstituted infant formula based on isolated soy protein would be consuming about 40 mg/day of isoflavones. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 206-379-9544.

6773. Weber, Marcea Newman. 1995. Re: Work with natural foods and tofu in England and Australia. Letter to William Shurtleff at Soyfoods Center, Feb. 12–in reply to inquiry. 3 p. Typed, without signature.

• ***Summary:*** Marcea and Daniel Weber met in Boston in about 1972, and both studied macrobiotics. They left Boston in 1974 to live in England because Daniel wanted to study acupuncture in one of the acupuncture schools in

Buckinghamshire. They stayed there for 6 months and then moved to London, where they connected with Bill Tara, who was working at starting an East West Centre. Marcea began teaching cooking classes and started a Wholefoods Bakery with an English woman. This continued for 1½ years.

During this time Marcea met Bruce Gyngell, an Australian who met Michio Kushi while he was in London. Michio suggested that Bruce change his diet, so Bruce came to the East West Centre and studied cooking. He was looking for a cook for himself. He was at that time living in England and working for one of the television studies. He was the person responsible for bringing television to Australia, so he was quite influential. He wanted macrobiotics to find its way to Australia, so he invited Marcea and Daniel to visit Australia and bought them each a round-trip ticket. He said they could see if they wanted to stay and start a centre in Australia. So in 1976, after visiting Japan and Oki sensei and his Oki Yoga Dojo in Mishima, Japan, for several weeks, they arrived in Australia, and have lived there ever since. In December 1982 Marcea and Daniel Weber were married in Australia.

"The Soy Bean Factory was established in Dec. 1978, when Michael De Campo, Yoshiko Wright and Marcea Weber started a company devoted to producing traditional Japanese tofu using nigari (a sea water extract) as a coagulating agent. The fresh Japanese-style tofu began to arrive in the health food stores and Japanese supermarkets around April 1979." As far as Marcea knows, theirs was the first Caucasian-run tofu company in Australia. It was her idea to start the company. Shares were issued at the beginning. Marcea initially invested about $5,000 to $7,000, Yoshiko Wright was brought in to invest about $3,000, and Michael De Campo invested about $3,000 or a little less. His main role was making the tofu and working with Marcea on improving product quality.

"The Soy Bean Factory was located just outside Chinatown and in the central district of Sydney, New South Wales, Australia. We concentrated on making a tofu equal in quality to the fresh tofu sold in Japan today. We were able to service people who wanted fresh tofu by selling it straight from the Factory to the public, as well as packaged in a plastic container with a plastic film on top."

The Soy Bean Factory ceased operation in October 1981. Note: On 8 Nov. 1981 Marcea wrote Bill Shurtleff, on a letterhead of the East West Foundation, 363 George St. in Sydney: "Our factory has shut down, and now one of the Chinese producers [Sin Ma Trading Co., 9 Meeks Road, Marrickville (in southwestern Sydney), NSW] is allowing us to use their premises to make our tofu... We are hoping to start another factory with more capitol behind us. Unfortunately, we were grossly undercapitalized, and this was our downfall." While making tofu at Sin Ma Trading Co., The Soy Bean Factory continued to use its original name, since they had lots of packaging and labels, and no need to change names.

"After getting into the swing of making Japanese-style tofu and using the packaging equipment, we decided to find a source of organically grown soybeans that would produce the same quality tofu as the non-organic beans we had been using. In 1983, after several months and many trials, we finally found a bean that would give almost the same quality, though with a small drop in tofu volume [yield].

"As the demand increased up to as much as 600 pieces per week of tofu (each piece weighed 300 gm), we began to look for larger premises, which were found in Leichhardt (about 7 miles southwest of downtown Sydney), so by early 1982 we had re-located to 355 Parramatta Road, Leichhardt, NSW 2040–and had started making tofu. At that time, Yoshiko Wright and Michael De Campo sold their shares to John Fenwick and me, and the name of the company was changed to Soyfoods Australia. Still having a controlling interest in the business, I hired Tony Wondal, a Chinese man, to help operate the business. A year later (in about 1983), after an increase of sales, John decided to sell his shares to Ross Ebert, and we moved to even larger premises at 14/2 Paton Place, Manly Vale (northeast of downtown Sydney), New South Wales. After a year of production and trying to make soymilk without proper soymilk equipment, I decided to sell my share of the company to Ross Ebert. I was expecting my first child in August 1985 and didn't want to be tied down to any business. So I left the tofu business and never looked back! As far as I know, Ross never put any new products out on the market and so the business only sold tofu–and still does today with new owners.

Note: In Sept. 1986 Ross B. Ebert had just spent $100,000 on fairly sophisticated soymilk equipment. He was selling soymilk fresh to Coles supermarkets in plastic bottles. In Nov. 1988 Lindsay Kotzman purchased the business, which was named Great Australian Pty. Ltd. In July 1990 Jennifer Young purchased the business, still located at 14/2 Paton Place. "The Company is Great Australian Tofu Pty. Ltd., trading as Soyfoods Pty. Ltd."

As far as Marcea knows, Sin Ma Trading Co. and Castle Trading Co. were both tofu manufacturers. Address: 56 St. Georges Cres., Faulconbridge 2776 NSW, Australia.

6774. Chu, Debbie. 1995. Shougang slides in less-intense session. *South China Morning Post* (*Hong Kong*). Feb. 23. Business section. p. 15. Ed. 2.
• ***Summary:*** Various Chinese-related stocks fell in value. "Vitasoy lost 7% to close 22.5 cents lower at $2.95 on a turnover of $1.89 million. Business of the non-carbonated drinks manufacturer was badly hit by heavy rainfall last summer."

6775. Goodale, Ralph. 1995. Re: Opening of the ProSoya bulk soya milk processing plant in Gloucester, Ontario, Canada. Letter to Mr. Frank Daller, President of ProSoya

Inc., 5350 Canotek Road, Unit 7, Gloucester, Ontario K1J 9C9, Canada, Feb. 24. 1 p.

• ***Summary:*** "It was a pleasure to meet you and participate in the opening of the ProSoya bulk soya milk processing plant in Gloucester on January 12, 1995.

"I would like to congratulate your company for being part of the dynamic strategic alliance of companies which will, beginning with this plant, turn Canadian soya beans into beverages and foods for the domestic and export markets."

Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. May 10. George was present at the commissioning of this plant in Gloucester (pronounced GLOS-tur, a suburb of Ottawa, Ontario, located south southeast of Ottawa) and he met Ralph Goodale. This is the one and only ProSoya R&D facility and bulk soymilk plant in Ontario. It contained a new SC-100–better than the first SC-100 prototype developed for ProSoya by APV-Crepaco; the prototype finally wound up in Russia. APV-Crepaco built this machine to sell, using ProSoya technology. The SC-100 uses a batch process; it is basically just a big SC-20. Address: Minister of Agriculture, Ottawa.

6776. Montanaro, Pamela. 1995. Revolutionary developments with soymilk in Cuba. Part I (Interview). *SoyaScan Notes.* Feb. 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Cuba now has at least 15 factories in operation that make a soy yogurt drink for children. The goal is to have 37 factories in operation by the end of 1995. Leaders of the project believe these 37 factories will be sufficient to provide at least 2 liters per week of soy yogurt drink to all Cuban children ages 7 to 14. Given that the population of Cuba is about 11 million and 23% of the population is under the age of 15, there are roughly 1.1 million kids eligible to receive free soymilk. So Cuba plans to be producing about 2.2 million liters of soymilk a week by the end of 1995. Amazing!

Pam coordinates the Freedom to Travel Campaign for Global Exchange (based in San Francisco). They had decided to do a trip to Cuba during the first week in October, 1994, where the itinerary was focused on projects related to sustainable development–such as organic agriculture, alternative energy, alternative medicine, the bicycle revolution, etc. The trip would also be a "Travel Challenge," since the U.S. government presently prohibits most Americans from traveling to Cuba, and from investing in or spending U.S. dollars in Cuba. In 1962 the U.S. imposed an export embargo against Cuba, severely damaging the economy. This unilateral embargo, which is still in effect, prohibits even the export of food or medicine from the USA to Cuba. Stiffer trade sanctions enacted by the U.S. in 1992 made things even worse. The only other country that has consistently voted with the USA at the United Nations in favor of this embargo is Israel–and Israel is now operating the largest citrus plantation in the world in Cuba, and also benefitting greatly from investments in Cuban textiles, etc. for export. The "Travel Challenge" is designed to expose U.S. anti-Cuba policies and invite public debate in the USA about their usefulness. The Soy Cubano! project is part of a larger campaign to get food and medicine exempted from the U.S. trade embargo against Cuba. Pam recently met with the staff of Senator Paul Simon (Democrat from Illinois) who is about to introduce a bill that would exempt food and medicine from all U.S. embargoes.

While on this trip in Oct. 1994, Pam met and had a long talk with Dr. Alberto Ortega-Jhones, who is head of Cuba's new soyfoods research project (Address: *Instituto de Investigaciones para la Industria Alimenticia,* Carreterra al Guatal, Km. 3½, La Lisa, Havana, Cuba. Phone: 29-9110). Dr. Ortega is a Cuban-born national in his late 40s or early 50s; Pam found him to be "so moving, kind of like a saint in my eyes, very sweet and modest." One of the vice-directors at the Cuban Food Research Institute in Havana, he was involved for several decades in dairy food research. He was an expert in the subject, studied all over the world, and speaks very good English. He said that since the "Special Period" of austerity started in 1989, production of cow's milk has been cut to about 20% of what it used to be. To provide an alternative protein drink, the Cuban Ministry of Agriculture made soyfoods a priority, and started to seriously divert resources into the soy yogurt drink project. By May 1994 Dr. Ortega's project developed soymilk technology and a recipe that was efficient to produce and that Cuban children liked. Dr. Ortega said he believed that "soy protein is the protein of the future" and he feels the Cuban soymilk project and its technology could serve as a model for Third World countries.

Cuba has about 100 factories across the country that produce dairy products. Dr. Ortega was one of the leaders involved in setting up these plants and in launching the program that has provided one liter of cow's milk per day on the ration to every Cuban child between the ages of 7 and 14. This milk went to families, not to schools, so that family members could share the milk if desired. People 65 and over also got a liter a day.

From Dr. Ortega, Pam learned that Cuba was developing a number of facilities to manufacture a soymilk yogurt drink. Each facility was located inside a former cow's milk dairy, and was based on converting former dairy equipment to soymilk production. Cow's milk is being phased out. By Oct. 1994 three soy factories were already operating in Holguin, Santiago and Pinar del Rio. Pam visited the latter factory. While in Cuba, she also tasted a soy-based hard cheese and a cream cheese.

The refrigerated soy yogurt drink is packed in liter bottles, and sent to the neighborhood grocery shop (*bodega*). Cuba is on a ration system and the soy protein drink is available on the ration, so people go to their neighborhood

bodega, present their ration card, and pick up their rations, including the soy yogurt drink. This drink is very thick–more like kefir or a milk shake than milk. It apparently has a low pH, which extends its shelf life–and most people in Cuba now have a refrigerator. After finishing the soymilk, a family returns the bottle to the bodega for recycling.

Cuba presently imports most of the soybeans used to make its soy yogurt drink from Canada and Brazil. Pam learned from Chuck Haren of Plenty Foundation that, at one point in its history, Cuba had developed a soybean variety that was especially well suited for tropical climates at that latitude. Plenty used to grow this variety in Dominica. By Oct. 1994 agricultural co-ops in Cuba were starting to grow soybeans under contract for the soy yogurt drink factories.

When Pam returned to the USA from Cuba she decided to try to help the Cuban soymilk project. So in October 1994 she established a new company named Soy Cubano! Company–the Cuba Soyfood Company, which would try to raise $50,000 to help fund another soymilk plant in Cuba by selling "honorary shares" to Americans interested in investing in the health of Cuban children. For a description of the company and its shares see Global Exchange 1994. As of Feb. 1995 Soy Cubano! had raised several thousand dollars. They have not yet sent the money to Cuba, since they are hoping that the Cuban government will allow it to be considered a direct business investment–thus creating the opportunity for a test case to challenge the U.S. embargo. If that does not materialize, the money will be used to make a direct cash donation–which is also "trading with the enemy."

One "Honorary Share" in Soy Cubano costs $5. Anyone who is interested in "investing" can contact the Food and Medicine Campaign at Global Exchange in San Francisco. Remember, however, that doing this involves a big risk because the penalty, if the U.S. government should choose to arrest anyone for "trading with the enemy," is up to 10 years in prison and a $250,000 fine. Pam says of Soy Cubano! "It's been kind of a magical project. It has so many dimensions to it and so many fine people are involved.

When Pam returned to Cuba in November 1994, eleven soymilk factories were in operation; she goes to Cuba roughly 5-6 times a year. Dr. Heshan Ragab, M.D., is working with Pam on this project. Pam has read Mark Messina's book, *The Simple Soybean and Your Health.* She found it "incredibly enlightening," and has purchased several copies of it since and given them to key people, including Dr. Ortega. Continued. Address: Coordinator of Soy Cubano! Company, Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St. #303C, San Francisco, California 94110. Phone: 415-255-7296 or 415-558-8682.

6777. Montanaro, Pamela. 1995. Revolutionary developments with soymilk in Cuba. Part II (Interview). *SoyaScan Notes.* Feb. 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The "Special Period" is what the Cubans call the time since the Soviet Bloc fell apart in 1989 and they lost 75% of their foreign trade. Conditions in Cuba had gotten very bad by 1991, but now they have bottomed out and the standard of living is slowly improving. Cuba is now involved in a massive conversion to sustainable development, including a conversion to organic agriculture from chemical agriculture. Pam has a video on that, and her group is working with Food First on sustainable agriculture in Cuba, and they are aware of Earth Trade / Progressive Asset Management, and has seen their video on organic farming in Nicaragua and El Salvador.

How does the future of Soy Cubano look? Since Oct. 1994 Global Exchange has been negotiating with Cuba to try to do a straight trade investment in this humanitarian area, where there would be some modest return. It's mostly for show, but the people who are doing this are taking a big risk because the penalties for "trading with the enemy." The barrier to progress has been partly from the government of Cuba. Only a few years ago did they start to allow foreign investment at all. Their laws presently allow foreign investment only in factories producing for export–and soy yogurt drink is produced only for domestic consumption. From a socialist viewpoint, the idea of anyone, especially foreigners, making a profit on products such as food and medicine that fill primary human needs–is anathema. On the other hand, Cuban's think Soy Cubano! is a great project, and they want to see a group of people directly challenge the U.S. trade embargo. One approach would be for Global Exchange to apply to the U.S. government for a license to work directly with Cuba's Food Research Institute. They would probably be denied, and that would set the stage for a larger coalition of development groups to conduct a campaign to expose the U.S. embargo which denies food and medicine to the people of Cuba.

Internationally, an interesting movement is starting to look at the whole issue of embargoes and their effects on innocent civilians–in Iraq, for example, where a U.S.-led embargo has been in effect since the Desert Storm war ended in Feb. 1991. Though more than 85,000 Iraqis died in the war, it is estimated that even a larger number of civilians (including 250,000 children) have died since the war due to the embargo.

This is increasingly being seen as a human rights issue–with the USA being seen as the major violator of Cuban human rights. Global Exchange feels that it has a responsibility to educate the American people about what the U.S. government doing in their name, but often without their awareness.

Cuba is now moving toward a mixed economy, where free private enterprise can coexist with state-run socialism. Global Exchange is very eager that they not loose the tremendous gains they have made in providing for the primary needs of their people. Moreover, Cuba is taking the

lead among developing countries worldwide in sustainable development projects. So good things are growing out of the present suffering and hardships in Cuba. Address: Coordinator of Soy Cubano! Company, Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St. #303C, San Francisco, California 94110. Phone: 415-255-7296 or 415-558-8682.

6778. Arnold, Kathryn. 1995. The joy of soy. *Delicious!* (*Boulder, Colorado*). Feb. p. 34-36. [3 ref]
• ***Summary:*** The soybean "has long been revered by vegetarians as a nutritional powerhouse. However, the real secret is that soyfoods may help prevent disease." They are cancer fighters and good for the heart. A table (p. 36) lists 12 different types of soyfoods and their uses: Tofu, tempeh, okara, miso, natto, TVP, soymilk, soy grits, soy flour, soy cheese, soy sauce, soy yogurt.

Note: This periodical, which began publication in about 1983, is published for natural products consumers by New Hope Communications in Boulder, Colorado. As of March 1998 some 425,000 copies of Delicious! are distributed each month to over 900 health food retail stores throughout the United States.

6779. **Product Name:** [Soghurt {Soy Yogurt} (Original, Peach, Cherry, Strawberry)].
Foreign Name: Soghurt {pflanzliche Zubereitung nach Joghurt-Art} (Natur, Pfirsich, Kirsch, Erdbeer).
Manufacturer's Name: Bruno Fischer GmbH.
Manufacturer's Address: Im Auel 88, 53783 Aetorf, Germany. Phone: 49-2243-4021.
Date of Introduction: 1995. February.
Ingredients: Peach: Water, soybeans*, fruit preparation (Peaches*, thick grape juice* [Traubendicksaft], corn syrup, honey, corn starch*, natural aroma). * = Organically grown (*aus kontrolliert biologischem Anbau*).
Wt/Vol., Packaging, Price: 250 gm reusable glass jar.
How Stored: Refrigerated at +6ºC, 21 day shelf life.
Nutrition: No information given.
New Product–Documentation: Talk with Bruno Fischer, who calls from Germany. 1995. March 22. His company introduced this fermented product at Biofach in Feb. 1995. The product has a 21-day shelf life.

Photocopies of 4 labels sent by Bruno Fischer. April 21. The product is described on the front panel in German as a plant-based preparation resembling yogurt *"(pflanzliche Zubereitung nach Joghurt-Art).*"

Talk with Bruno Fischer. 1998. May 14. The same day Bruno Fischer introduced this Soghurt, Life Food GmbH introduced a soy yogurt under the Taifun brand. Bruno Fischer had their product made in a small milk plant and kitchen by an anthroposophic community that work with drug addicts. The product was produced using fresh soymilk made by Sojinal; Triballat was too far away. The ingredients were organic soymilk, whole cane juice, yogurt cultures, and fruit–that was mixed in. But in the long run they could not guarantee the microbiological quality that was required. This product was discontinued about 6 months after it was launched. The Taifun product was also discontinued about a year ago.

6780. Clarkson, Thomas B.; Anthony, Mary S.; Hughes, C.L., Jr. 1995. Estrogenic soybean isoflavones and chronic disease: Risks, and benefits. *Trends in Endocrinology and Metabolism* 6(1):11-16. Jan/Feb. [56 ref]
• ***Summary:*** Includes a discussion of the effects in infants of soy isoflavones. Address: Comparative Medicine Clinical Research Center, Bowman Gray School of Medicine, Wake Forest Univ., Winston-Salem, North Carolina 27157-1040.

6781. Ferrell, John S. 1995. Fruits of creation: A look at global sustainability through the eyes of George Washington Carver. Shakopee, Minnesota: Macalester Park Publishing Co.; Wynnewood, Pennsylvania: Green Cross (jointly published). 117 p. 22 cm. [95 endnotes]
• ***Summary:*** A very carefully researched and well-written view of an important and pioneering contribution made by G.W. Carver of which many people are not aware. Carver extended the Golden Rule to stewardship of God's earth. He was not a vegetarian. Address: 2000 N.E. 42nd Ave., #332, Portland, Oregon 97213.

6782. *Image Sandoz: La Lettre de Sandoz en France* (*Rueil-Malmaison*). 1995. "Nutrition & Soja": Avec cette nouvelle unité de production, Nutrition & Santé s'investit dans le soja [Nutrition & Soja: With this new production unit, Nutrition & Santé invests itself in soya]. No. 21. Feb. p. 1, 16-17. [Fre]
• ***Summary:*** The inauguration of the production unit "Nutrition & Soja" took place on 15 October 1994 in the industrial park at Revel (in the Department of Haute-Garonne). A color photo shows the many important people who attended the event at the ribbon-cutting ceremony under the skies of Lauragais: Mr. Jean Puech (French Minister of Agriculture and Fisheries), Alain Chatillon (president of Nutrition & Santé and of Nutrition & Soja), Pierre Izard (President of the Consul General of Haute Garonne), René Basdevant (President of Sandoz France), Marc Censi (President of the Region Midi-Pyrénées), and Alain Bidou (Prefect / Chief Administrator of the Region Midi-Pyrénées). In his speech, Minister Jean Puech underlined the importance of this factory for local agriculture. Nutrition & Soja (formerly named Société Soy and founded by Mr. Bernard Storup and Mr. Jean de Préneuf) is a wholly owned subsidiary of Nutrition & Santé. The company will maintain its functional autonomy, under the responsibility of its two founders: Mr. Storup is administrative director and director of *Exploitation,* and Mr. Preneuf is plant manager and director of development.

The new factory rests on a piece of land 17,000 square meters in size (4.2 acres), and has a floor space of 3,000 square meters. Nutrition & Soja has four main activities: Milling (heating and dehulling soybeans), a production line for soymilk (*jus de soja*), a tofu production line, and a area for transforming fresh tofu into various food products.

The nutritional goal of Nutrition & Santé is to market food products having high nutritional, dietetic, and biological content, which promote the good health and well-being of the consumers. Most or all of the soybeans are organically grown. The commercial goal of Nutrition & Santé is to be on the forefront as the market evolves, and to anticipate new technological developments and the needs of consumers. In France, one person in five who is concerned about their weight or figure, and their well-being, consumes soya. In the USA, this figure is more than 50%. Soya has "formidable potential."

Other photos show: The public figures who attended the event examining Nutrition & Soja's line of packaged products. An external view of the headquarters of Nutrition & Santé at Revel–a four-story building with 3 flags flying. The inside of the soyfoods factory, where the public figures receive an explanation of equipment from Jean de Préneuf.

A sidebar notes that Nutrition & Soja: * Received 40 million French francs of investment in 1994. Employs 45 people. The products are distributed in dietetic stores under the brand Soy and mainstream stores under the brands Union Nature and Céréal.

Note: This periodical is an internal publication of Sandoz in France. Address: France.

6783. Krizmanic, Judy. 1995. The buzz on BGH: Biotechnology. *Vegetarian Times.* Feb. p. 18-19.
• ***Summary:*** An update on genetically engineered bovine growth hormone (BGH), which can increase a cow's milk production by 5% to 20%. Each year the U.S. government spends about $250 million to buy surplus milk to keep prices steady; the Office of Management and Budget estimates that BGH use will increase that sum by 40%. The FDA estimates that in its first 6 months, BGH was used on 560,000 dairy cows. During this time Monsanto received 95 reports from farmers who were using BGH that they had problems with their herds–such as mastitis, a painful udder infection. Among consumers and farmers, there is still widespread resistance to using BGH.

6784. Messina, Mark; Messina, Virginia. 1995. Soybeans linked to health benefits. *Vegetarian Voice* (*Dolgeville, New York*) 20(4):10-11. Winter.
• ***Summary:*** Contents: Introduction. Soy and heart disease. Soy and cancer. Other roles for soy. What if you can't tolerate soy. The whole diet approach.

A table shows the isoflavone content of selected foods: Soymilk (1 cup) 40 mg. Tofu (½ cup) 40 mg. Tempeh (½ cup) 40 mg. Miso (½ cup) 40 mg. TVP, cooked (½ cup) 35 mg. Soy flour (½ cup) 50 mg. Soybeans, cooked (½ cup) 35 mg. Soy nuts (1 ounce) 40 mg. Isoflavones (unlike vitamins) are not destroyed in conventional cooking methods.

6785. Minnesota Soybean Research & Promotion Council. 1995. Soybeans–Designed for life (Recipe cards). North Mankato, Minnesota. 14 cards. Each card: 8 x 13 cm. Feb.
• ***Summary:*** This is a set of recipe cards, consisting of 14 cards and 12 recipes, linked to fold out accordion style. Printed with blue and yellow soy ink on white card stock, the recipes call for the use of tofu (8 recipes), green vegetable soybeans, soy flour, whole dry soybeans, and soymilk. Only one recipe calls for the use of meat.

Talk with Bonnie McCarvel, executive director of the Minnesota Soybean Research & Promotion Council. 1996. Feb. 2. These recipe cards were developed by the Minnesota Soybean Board in conjunction with a video bearing the same title. Both were released in about Feb. 1995. Minnesota paid all expenses, then made the video and the cards available to all the other state soybean boards. Address: 360 Pierce Ave., Suite 110, North Mankato, Minnesota 56003. Phone: 507-388-1635.

6786. *Ontario Soybean Growers' Marketing Board Newsletter.* 1995. 1994 Annual Meeting highlights. Feb. p. 3.
• ***Summary:*** More than 300 soybean growers, industry and government representatives, and suppliers attended the Dec. 1994 Annual Meeting of the Ontario Soybean Growers' Marketing Board. Bernard Leung (photo shown) of Harcan Kingsoya spoke on soyfood opportunities. Garth Baxter of Maple Leaf Foods expressed his belief that the miso market holds the best potential for expansion of Canada's food soybean exports to Asia. New markets with good potential include Taiwan, South Korea, Indonesia, and the Philippines.

"Frank Daller of ProSoya reported that his company is setting up soymilk production facilities in several locations across Canada. Their strategy is to sell bulk soymilk to dairies for processing and packaging."

The Board reported a financial operating surplus of $311,225 for the year ending 31 August 1994, and a reduction in Board fees from 90 cents per tonne to 80 cents for the 1994 crop. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

6787. Reilly, Lee. 1995. Answering machine: Buttermilk minus the milk. *Vegetarian Times.* Feb. p. 30.
• ***Summary:*** There are two good ways to make non-dairy buttermilk. 1. Add 2 teaspoons of lemon juice or vinegar to a cup of soymilk. 2. Blend 3/4 cup of soft or silken tofu with ¼ cup water, 1 tablespoon lemon juice or vinegar, and a pinch of salt. Address: Free-lance writer.

6788. Krizstan, Jan. 1995. Re: Work with seitan and

soyfoods in Slovenia. Letter to William Shurtleff at Soyfoods Center, March 1. 2 p. Typed, with signature.

• ***Summary:*** Jan phoned on 6 January 1995, then wrote a long letter dated March 1. His first name is pronounced "Yan." He was born in 1967 in Ljubljana, the capital of Slovenia, where he now lives. He worked for two years on Slovenian television, then in 1992 he quit because of unhealthy working conditions. He had already been a vegetarian for 2 years and he knew that many people are looking for and need healthy food, but they don't know how to get it. So he started a small private company named "Izvor" ("The Source") and in Sept. 1992 started (together with friends) to publish a magazine in Slovenian titled *Bio Novice* ("Bio News") that would connect these people. The main subjects were growing plant foods in accordance with Nature, healthy diets, ecology, alternative medicine, and the culture of peace and non-violence. "It was very difficult, because we started with almost no money, but we published 15 issues of *Bio News.* In December 1994 we had to stop publishing because of big financial problems.

"One of my friends [Vesna Crnivec] translated some paragraphs from *The Book of Tofu* about preparing home made tofu and made an article. We published her translation, a summary of the Introduction, and some of Akiko's illustrations in one of the first issues of *Bio News* (See issue 5/6, letnik 1993, p. 40-44). Some readers (especially women) showed great interest in it! Later I translated some paragraphs from *The Book of Tofu* and published them (together with Akiko's good illustrations) in issues 14 and 15 of *Bio News.* At the end of the article I gave the address of Soyfoods Center for all people interested in ordering your books.

"Last year I was attracted to making seitan and tofu from organic wheat and soybeans. Mr. Mirko Trampus is my very good friend. He has an organic farm in Metlika (1 km from the border with Croatia, in southeastern Slovenia). He has been growing wheat, soybeans, and daikon organically for the last 6 years with very good results. We decided to make a kitchen in his house for transforming Mr. Trampus' soybeans, wheat and daikon into tofu, tempeh, natto, soymilk, seitan and pickled daikon.

"A few days before New Year 1995 I visited all Ljubljana's bookshops, because I wanted to find some information about tofu and seitan. What a surprise! There was your *Book of Tofu.* I found it once again and bought a copy. I was so happy. Not far away I found the book *Cooking with Seitan* by Barbara and Leonard Jacobs, with a foreword by Aveline Kushi.

"Now (at the end of February 1995) we are making about 50 kg of seitan per week by hand. We sell it in some 20 healthy food shops all over Slovenia." He would like to start making tofu, soymilk, natto, and tempeh, Later he would like to make miso too. "Our aim is preparing 100% vegetarian foods of the highest possible quality, made from organically grown soybeans, wheat, and daikon. Now we need more information. Presently Mr. Trampus grows about 12,000 kg of wheat and 9,000 kg of soybeans per year. Prof. Spanring is our good friend. He helped Mr. Trampus to choose the best varieties of soybeans for making tofu and the wheat with the highest gluten content for seitan. Now we use hard winter wheat. We mill it into flour in our own mill with stones. From 100 kg of wheat flour we get about 23 kg of very dark brown seitan.

"Up until now, all of the starch has been rinsed by hand, but we have constructed an automatic rinsing machine which will be prepared for use very soon. We presently rinse using only warm water at about 30ºC. We discard all the starch (putting it on compost heaps on the fields), but later we will use it as an ingredient in cooked soymilk puddings."

Jan would like to order *The Book of Tempeh.* He is looking for a source of tempeh starter. Tempeh is largely unknown in Slovenia, but he would like to introduce it because it is a healthy food and tastes very good. Address: Mestni trg 22/1, 68330 Metlika, Republic of Slovenia. Phone: (386) 068 59 481.

6789. Woodhams, David J. 1995. Nutritional deficiencies in soy protein based infant formulas. Whangarei, New Zealand: Soy Information Network (SIN). 15 p. March 5. 21 cm. [28 ref]

• ***Summary:*** Contents: Introduction. Soy protein based infant formulas. Trypsin inhibitors. Estrogens. Lectins. Phytic acid. Conclusions. Acknowledgements.

This booklet, written for both the lay reader and the scientist, is helpful in explaining the meaning of scientific terms such as pancreas, hypertrophy, hyperplasia, estrogen, etc.

Table 1 shows an analysis, conducted by M.G. Fitzpatrick (Grayson Laboratories Ltd.) of the concentrations (in mg/kg) of total genistein and daidzein in four commercial soy-based infant formulas: Infasoy 98 / 53. Isomil 72 / 73. Prosobee 118 / 59. Karicare 91 / 48 (Nutricia, NSW, Australia). Address: PhD, CEng, MIChemE, MIPENZ, MNZIC, 2/47 Church St., Devonport 1309, New Zealand.

6790. Storup, Bernard. 1995. Société Soy was acquired by Diétetique et Santé in July 1993, was renamed Nutrition et Soja, and is now located in Revel (near Toulouse) in southern France. Part I (Interview). *SoyaScan Notes.* March 6. Conducted by William Shurtleff of Soyfoods Center. [Eng]

• ***Summary:*** In 1993 Bernard was contacted by Diétetique et Santé, a big French manufacturer of health foods (founded in 1972), which wanted to buy his company, Société Soy. At the time Bernard's company was doing well financially and they had excellent equipment. But they had reached the maximum they could achieve in the health food market, and the only market into which they could expand was supermarkets.

First some background: In Sept. 1990 Société Soy

had taken in an outside investor, a retired banker, who was wealthy and friendly man, and who invested as a private individual. In exchange for contributing cash funds to help in expansion and give the company more of its own capital (*fonds propre*), he was given ownership of 25% of Société Soy's shares. The banker also worked at the company one day a week as an accountant. At this time, the company was making money–but not that much.

In early 1991 Bernard had created the new and more neutral brand *Union Natur* to be used on all products sold in supermarkets by Société Soy. So Bernard was looking for a company with which he could work as a partner in entering this big new market.

In the late 1980s and early 1990s the Sandoz Group accelerated its expansion into the healthy/nutritional foods industry throughout Europe. The Sandoz Group is best known in Europe as a manufacturer of pharmaceuticals (its largest division) and chemicals (its second largest division). Sandoz's food/nutrition division is now its third largest. About 5-6 years ago Sandoz was involved in major pollution problems related to its chemical production. Sandoz, the big Swiss pharmaceutical company, was famous during the 1960s among young people in Europe and America as the manufacturer of LSD. From one viewpoint, this popular psychedelic started the counterculture revolution in the Western World, including the natural foods movement. One of the Sandoz Group's earliest acquisitions in the health food field had been the British-based Wander Co. In about 1987-88 the Sandoz Group bought the Céréal Co. Then on 1 July 1992 Sandoz bought Diétetique et Santé in Revel, France–which was renamed Nutrition et Santé on 1 Aug. 1994. Also on 25 Aug. 1994 the Sandoz Group purchased Gerber, the huge American manufacturer of baby foods (headquartered in Fremont, Michigan). Two months ago the Sandoz Group announced that it plans to sell its entire chemical division, with about 10,000 employees. Sandoz was a world leader in dyes. Money from the sale chemical division will be used to buy more companies in the field of food and nutrition. In the future, Sandoz plans to keep only its pharmaceutical and its food/nutrition divisions.

Dietetique et Santé was established in 1972 in Revel and that year they purchased the brand (registered trademark) Gerblé from a small company located near Lyons (French = Lyon) in France. So now Nutrition et Santé is the head of Sandoz nutrition branch in France. In addition, Sandoz has a nutrition division in every European country, with a major food company as head of that branch. Approximately 95% of the sales of these companies are to supermarkets, and only about 5% to natural- and health-food stores.

Although it is owned by the Sandoz Group, the company Nutrition et Santé is not well known by consumers. Yet its brands, trademarks and products are very well known–some all over Europe. These include Ovomaltine [Ovaltine], Céreal, Wander, Wasa (a Swedish bread, pronounced VA-sa), Gerblé, Nerjisport, and Isostar. The latter two products are non-protein sports drinks, rich in mineral salts, that replace electrolytes after exercise. They are now developing a product named Gerlinea (like Slimfast, a low-calorie diet powder or bars).

Nutrition et Santé is the leading company in the health food market in France. Sandoz-owned counterparts in other European countries include Sandoz-Spain, Sandoz-Italy, Eden in Germany, Reforma in the Netherlands, and Wander in the UK. They have 54% of the health food market in supermarkets in France.

So in July 1993 Bernard sold Société Soy to the Sandoz Group because he believed the sale would help the company to develop and grow. He stayed on as managing director and was given a great deal of independence and responsibility. Sandoz wanted to keep the acquisition fairly quiet so that retailers and consumers would not be concerned. Very little information about the deal appeared in the public press, except in the financial press. Before the sale, Société Soy was a corporation whose shares were owned as follows: Bernard Storup 35%, Jean de Preneuf 35%, the retired banker 25%, and the company's workers 5%.

After Société was sold, Nutrition et Santé owned 100% of the shares. Bernard and Jean had no difficulty at all giving up their share of ownership in the company they had started in 1982. Nutrition et Santé had offered Bernard and Jean ownership in the company, but the latter two men felt the situation would be more clear if Nutrition et Santé owned 100%. "The world is big and life is short. Daily work is just as interesting as ever." Continued. Address: Managing Director, Nutrition et Soja, Z.I. de la Pomme, B.P. 33, 31250 Revel (near Toulouse), France. Phone: +33 62.18.72.50.

6791. Storup, Bernard. 1995. Société Soy was acquired by Diétetique et Santé in July 1993, was renamed Nutrition et Soja, and is now located in Revel (near Toulouse) in southern France. Part II (Interview). *SoyaScan Notes.* March 6. Conducted by William Shurtleff of Soyfoods Center. [Eng] • ***Summary:*** In August 1994 Bernard moved the company from Saint-Chamond to Revel, near Toulouse in the south of France and on 1 Aug. 1994 the company name was changed from Société Soy to Nutrition et Soja (pronounced nu-tree-SYON et so-ZHA). On the same day the name of Dietetique et Santé was changed to Nutrition et Santé. Nutrition et Soja still uses *Soy* as their trademark for products sold at health food shops; this trademark is very widely known among health food consumers in France. "Remember that 'Soy' doesn't mean anything in French." The water in Revel is of excellent quality, just like the water in Saint-Chamond. In Revel, Nutrition et Soja gets its water from another natural park.

Bernard's company is now located only 500 meters from another factory owned by Nutrition et Santé that makes Gerblé brand products–such as organic cookies, cereals, etc.

The Céréal brand products are made at a factory in Annonay, 500 km from Revel.

Bernard's company moved into a completely new factory, with an integrated production line from dehulling to packaging in Tetra-Pak cartons. It is really a big installation. The company has not introduced many new products since it was acquired 18 months ago. Bernard has been working a lot with companies in Germany, Spain, the Netherlands, and Italy which have been selling soymilk made typically by Alpro in Belgium or Innoval in France. But Innoval went out of business and no longer exists. They declared bankruptcy twice, first in 1993 and again in late January 1995. In 1993 an investor bought Innoval for almost nothing, invested a little money in it, but was not able to make it survive. Nutrition et Santé bought all of Innoval's equipment (made by Alfa-Laval; it was very nice), and Bernard is now using some of this equipment (including a large, automatic Buehler dehulling system) and some of the equipment he had before in Saint-Chamond. And Bernard has been working with their former soymilk customers in hopes of becoming their supplier of soymilk. Most of Bernard's sales have always been to health food stores under the *Soy* trademark. This has not changed since the acquisition. Bernard estimates that he has at least 80% of the fresh soyfoods market in France–not including soymilk.

The soymilk market continues to grow, but there is still excess soymilk manufacturing capacity. Nutrition et Soja is now the leading soymilk manufacturer in France, and they may be the second largest in Europe after Alpro–though they are much smaller than Alpro, which sells about 25 million liters of soymilk and soy desserts each year. Alpro has five Tetra-Pak packaging lines, including one that packs in 500 ml (half liter) cartons.

Nutrition et Soja doesn't compete much with Alpro because Nutrition et Soja sells its soymilk under its own trademarks–Céréal and Gerblé–in supermarkets all over Europe. There is not much difference between these two products, but because they used to be made by two different companies, different consumers have loyalty to each brand. For the health food market, Nutrition et Soja sells its soymilk under the BioSoy trademark, which was first used in 1990 by Société Soy.

Jean de Preneuf is still with the company, working as technical manager. Bernard is in charge of the total company Nutrition et Soja, in charge of production, administration, sales, and marketing. Bernard is very happy with his new parent company, which gives him lots of independence and responsibility, and which is doing a very good job at thinking in terms of the new integrated European market. One of the products with which Bernard is especially happy is their vegetarian sausage–which is 100% organic.

Thirteen years ago Société Soy registered and owned the trademark "tofu." But recently Bernard came to feel that this was not "fair play," so he gave ownership of the trademark to SOJAXA (pronounced so-zhak-SAA), the French soyfoods association. Address: Managing Director, Nutrition et Soja, Z.I. de la Pomme, B.P. 33, 31250 Revel (near Toulouse), France. Phone: +33 62.18.72.50.

6792. Storup, Bernard. 1995. Update on Sojinal (Interview). *SoyaScan Notes.* March 6. Conducted by William Shurtleff of Soyfoods Center. [Eng]

• ***Summary:*** In mid-1993 Sojinal was purchased by B & K Holding, a Swiss group; the owner is one of the Buehler brothers, involved with the company that makes milling equipment. After the Buehlers sold their milling equipment company, they used the money to buy various factories in Europe. They also bought a company to make breakfast cereals. But during the last 2 years there has been an economic crisis in France. Though things are beginning to look better now, Sojinal is for sale again because they are losing lots of money–and nobody wants to buy it.

Update: 21 June 1995–Sojinal is still for sale; Bernard thinks it will be sold before long. Address: Managing Director, Nutrition et Soja, Z.I. de la Pomme, B.P. 33, 31250 Revel (near Toulouse), France. Phone: +33 62.18.72.50.

6793. Lang, Paul. 1995. HiPro Food Products (Minnesota), Clofine, and Devansoy (Interview). *SoyaScan Notes.* March 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Paul is looking at buying a company name HiPro Food Products in Minnesota. This company has a patent on an indirect roasting process. The two men who own the company are both in their late '70s, and they have not marketed their product well. Most of their business has come from recommendations from Peter Golbitz. They also make enzyme-active full-fat soy flour, which they sell to companies such as Clofine and Devansoy. They dehull the bean then use the new technology of spray drying or flash drying to go straight to tofu powder and soymilk powder. Paul is thinking about by-passing the expensive spray-drying or flash-drying process and going straight into a soymilk processing equipment. Their full-fat soy flours are sold most to companies that make waffles, pancake mixes, etc. They use organically grown soybeans. They sell roughly $24,000 a year of product to Clofine, which starts with an enzyme-active full-fat soy flour. Clofine takes the raw materials to a dairy, where it is boiled to inactivate the enzymes. Then they spray-dry it. The particles are so fine there is no need to make soymilk. So they by-pass the filtration step.

Note: As of Aug. 1994 HiPro Food Products, Inc., was located at 775 Colorado Ave. South, Minneapolis, Minnesota 55416. Phone: 612-545-0151. Robert F. Cross, President. Their manufacturing plant is in New Germany, Minnesota. They make soy fiber, soy flour (full fat), and soy grits. Address: Natural Products Inc., Grinnell, Iowa. Phone: 515-236-4635.

6794. MacKinnon, Duff. 1995. Restrictions on mixing soy and dairy products in Ontario province, Canada (Interview). *SoyaScan Notes.* March 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Under Canada's Edible Oil Act, the blending of most soy and dairy products is not legal, although certain specific products, such as coffee whitener and edible oil topping (whip topping) that were on the market when the law was written were grandfathered and kept legal. Duff would guess that this Act was passed in the 1950s or 1960s.

If illegal imported products are noticed on the shelves of Canadian food stores, any person may complain to the Canadian Ministry of Agriculture. Inspectors will investigate the case. Address: Ontario Ministry of Agriculture and Food, GAC RR#5, P.O. Box 1030, Guelph, ON N1H 6N1, Canada. Phone: 519-767-3166.

6795. Ball, Stephen. 1995. Spiked carton drinks trigger warning. *South China Morning Post* (*Hong Kong*). March 14. 23. News section. p. 3. Ed. 2.
• ***Summary:*** "People should avoid drinking cartons of soya milk and fruit juice on the streets in case they are spiked with drugs, the chairman of the Consumer Council warned yesterday. The call for action comes after a series of unsolved carton drink druggings, in which victims bought drinks from corner stores then woke up on the streets to find they had been robbed."

6796. *Focus on Farming* (*Moravia, New York*). 1995. Cornell graduate creates fellowship in food service. March 20.
• ***Summary:*** In Dec. 1994 Winston Lo, a Cornell graduate, pledged to create the Vitasoy and Lo Fellowship in Food Science at Cornell's Agricultural Experiment Station in Geneva, New York. The fellowship is an endowment, so each year interest income from the fund will provide support for a graduate student at Geneva in Food Science and Technology. Lo received his master's degree in 1967 from the Department of Food Science and Technology at Geneva.

The first student to be supported by the fellowship, Grace Feng, is doing research on soymilk in Terry Acree's lab. She will try to identify the flavors produced by soymilk processing.

6797. Goh, Francis Nyang Kuang. 1995. The tofu industry and market in Singapore. Suitability of various soybean varieties for making tofu. Paper presented at meeting of Canadian outgoing soybean mission and Singapore tofu makers. 4 p. Typewritten.
• ***Summary:*** "As you will be visiting some soybean importers this afternoon, I would take this opportunity to concentrate mainly on the technical aspects of soybean. There are 40 plus tofu makers in Singapore producing a wide variety of tofu products, such as soft or silken tofu, firm and extra-firm tofu, tofu puff, soymilk and sweet tofu. The market for soybean-based food products, particularly tofu, is growing rapidly due to its nutritious value. However competition is very keen in our line of business." Therefore we need to produce high quality products.

Mr. Goh tested six varieties of soybeans: S 20-20, Marathon, Hypro, Orient Pearl (Harovinton), Dominator, and Vinton. He summarizes the results in a table which evaluates each variety for tofu production in terms of 5 variables: Texture, firmness, fragrance, colour, yield of tofu, plus remarks. Overall, Harovinton gave the best results, but the price is 12% above the standard price. Discusses his specifications for an outstanding soybeans for making tofu and issues related to identity preservation. Address: Managing Director, Unicurd Food Co. (Pte.) Ltd., Blk. 6020 Ang Mo Kio Industrial Park 3, #01-154/156/158/160, Singapore 2056. Phone: 482-5454.

6798. Mouton-Bluys, Rene. 1995. Recent developments at Alimentos Alfa Ltda. Productos Nordland, in Bolivia (Interview). *SoyaScan Notes.* March 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** His equipment and technology comes from a mixture of sources: Bean Machines Inc., with ideas from the University of Illinois, and a Bolivian research center.

Cochabamba is a traditional dairy city [population in 1992 404,000] so he has had a hard time introducing his products. He didn't have any publicity or strong campaign surrounding the launch of each product. His company is independent, not connected with any other company.

The company now makes 5,000 liters/day of soymilk, 1,000 liters/day of ice cream, and 2 to 3 tons/day of soy yogurt. All of these products are sold only in Bolivia; 60% are sold in Cochabamba, and a little is sold in the cities of Santa Cruz, and La Paz. His products are much less expensive than dairy products, retailing for only about 60% as much. So initially people bought his products because they were less expensive than dairy products, but now customers are increasingly interested in the health benefits. New he is developing a large 9-month campaign to educate the people on the benefits of his products.

He uses an enzyme, α-galactosidase, to get hydrolyze and rid of the oligosaccharides, which could otherwise cause flatulence in his soymilk. Address: Cochabamba, Bolivia. Phone: +591 (042) 70094.

6799. Silla, José A. 1995. Re: Soymilk is now being produced in Valencia, Spain. Letter (fax) to William Shurtleff at Soyfoods Center, March 24. 1 p.
• ***Summary:*** The name of the soymilk manufacturer is not given. Impiva is a public organization for the development of small and medium industries in the region o0f Valencia. Address: IMPIVA, Plza, Ayuntamiento 8, E-46002 Valencia, Spain. Phone: Fax: 96-394-21 74.

6800. Cloud, Jon. 1995. Relationship with ProSoya Inc. in Ontario, Canada (Interview). *SoyaScan Notes.* March 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** John has known the people at ProSoya for years. ProSoya has a staff of 3, and they are not producing any products yet. They were operating off government grants initially–probably both provincial and federal (Ag Canada) grants. The government apparently saw the possibility of creating jobs, setting up a franchise, and perhaps exporting the technology or products. John shipped them at least 3 large samples of organically grown soybeans on a skid in Sept. 1994. They had no records of the shipment, and only one person vaguely remembered it. They called John in the fall and asked him to set aside a considerable tonnage of organically grown soybeans–of which they have taken none because they are not in production. John wonders how long the company can survive.

Update, 1995 May 17. ProSoya may have a contract with Neilson Dairy, a large Canadian ice cream manufacturer. ProSoya may make soymilk for them to use in making a non-dairy soy ice cream. This could pull ProSoya's fat out of the fire. Note: Neilson launched this soy ice cream in Nov. 1996. Address: Cloud Mountain Inc., 342 Indian Rd. Cres., Toronto, ONT M6P 2H1 Canada. Phone: (416) 762-0940.

6801. Barr, Susan Learner. 1995. Don't overdo the tofu. *Longevity* (*New York, NY*). March.
• ***Summary:*** In recent years cancer research has focused on isoflavones, such as daidzein and genistein, "found in abundance in soy." That, in turn, has increased the demand for soy products such as tofu and soy beverages. There is even talk of isoflavone supplements. But since isoflavones are weak estrogens–which counter the effect of natural body estrogens–some experts have become concerned about the potential side effects on women of childbearing age of a diet high in soy and other phytoestrogens (plant estrogens).

At Emory University in Atlanta, Georgia, Patricia Whitten, PhD, found that among the offspring of rats fed large amounts of phytoestrogens from bean sprouts, sunflower seeds and red clover, the females were unable to ovulate and reproduce, while the males' sexual performance was impaired. Whitten thinks that these findings warrant studies on the effects of phytoestrogens on humans.

Whitten and other researchers are not questioning the value of adding nutritious soy products to the diet in moderation–say, one serving a day. Address: R.D.

6802. Birbeck, John. 1995. Soy debate. *Nutrition News* (*New Zealand Nutrition Foundation*). March. p. 1-2.
• ***Summary:*** Discusses the views of Dr. Mark Messina (a private soy consultant and advocate from the USA) and Professor Cliff Irvine (Prof. of Animal & Veterinary Science at Lincoln University, New Zealand, with a particular interest in human reproduction). Prof. Irvine "maintains that infants are more susceptible to the effects of oestrogens and is surprised at the dearth of information and lack of research. He raised questions about the long term serious effects of synthetic hormones in the 40's, through to the 70's. However it should be noted that the effects recorded related to only one specific synthetic substance (DES) and not to the many others used."

6803. Blankenship, J.; Crane, M.; Mullen, T.; Gregory, R.; Lukens, R.; Sample, C.; Cruise, R. 1995. Serum lipoprotein(a) increased by powdered soymilk in subjects on a total vegetarian diet (Abstract). *J. of Nutrition* 125(3S):802S-803S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease.
• ***Summary:*** Serum lipoprotein(a) (Lpa) was measured in 4 groups of adults. A low level of Lpa is desirable for adults with cardiovascular ailments. Group 1 ate a total vegetarian diet with no powdered soymilk. Group 3 at the same diet but with 1-2 cups/day of commercial powdered soymilk. Group 1 had the lowest Lpa of the 4 groups. The authors conclude that exclusion of powdered soymilk and other free fats significantly lowers Lpa. Address: 1&7. School of Public Health, Loma Linda Univ., Loma Linda, California 92350; 2-6. Dep. of Medicine, Weimar Inst., P.O. Box 486, Weimar, California 95736.

Dep. of Pediatrics, New York; Novo Nordisk, Denmark.

6805. Furuhata, Hideki. 1995. Japanese soyfoods markets. Paper presented at a conference titled "Producing Soybeans for the Soyfoods Market." 9 p. Held 2 March 1995 at Ames, Iowa.
• ***Summary:*** This paper consists of nine very interesting statistical tables, one on each page. Table 1 shows the supply and demand for soybeans in Japan from 1984 to 1992 (in tonne = metric tons). The supply of Japanese-grown soybeans decreased from 126,000 tonnes in 1984 to a low of 73,000 tonnes in 1992, and imports increased from 4,401,000 tonnes in 1984 to 4,725,000 tonnes in 1992. The demand for soybeans from crushers has stayed about steady, ranging from a low of 3,428,000 tonnes in 1991 to a high of 3,928,000 tonnes in 1985. Demand for food uses has increased from 786,000 tonnes in 1984 to a high of

927,000 tonnes in 1992 (up 18%). Demand for use as feed has increased from 55,000 tonnes in 1984 to 95,000 tonnes in 1992.

Table 2 shows soybean utilization in Japan by type of food product from 1987 to 1994: Use of soybeans for tofu and aburage stayed about steady at 498,000 tonnes, by far the largest food use. Use for miso decreased slightly from 180,000 tonnes in 1987 to 170,000 tonnes in 1994. Use for natto grew strongly from 97,000 tons in 1987 to 110,000 tonnes in 1994. Use for kori-tofu (dried-frozen tofu) grew slightly from 29,000 tonnes in 1987 to 30,000 tonnes in 1994. Use for soy sauce grew strongly from 5,350 tonnes in 1987 to a record 25,300 tonnes in 1992, dropping slightly to 23,000 tonnes in 1994. Use for soymilk decreased slightly from 4,000 tonnes in 1987 to 3,100 tonnes in 9994. Total use of soybeans for food in Japan grew slowly from 875,350 tonnes in 1987 to 930,000 tonnes in 1994 (up 6%).

Table 3 shows Japanese population and per capita consumption of soyfoods from 1982 to 1992. Population grew from 103,720,000 to 124,452,000 during this period, while per capita consumption grew from 6.8 to 7.4 kg/capita (up 8.8%).

Table 4 shows per family expenditures and consumption per year on tofu, natto, miso, and soy sauce from 1982 to 1992. For example, expenditures on tofu increased from 2,535 yen in 1982 to 7,992 yen in 1992, while consumption fell from 87.98 cakes to 79.26 cakes. Thus in 1992 the average Japanese family consumed 1 cake of tofu every 4.6 days.

Table 6 shows imports of soybeans for food from the USA, Canada, and China from 1982 to 1992. Imports from the USA are subdivided into IOM, Beeson, and other identified varieties. In 1992 about 88.7% of food-grade soybeans imported to Japan from the USA were IOM. Moreover, of all these soybeans imported for food use in 1992, about 76.6% came from the USA, 21.5% from China, and 1.85% from Canada.

Table 6 shows the amount spent per capita by people of different 5-year age-groups on four soyfood products. The average person in the age 60-64 year group spent ¥2,976 on tofu, ¥1,539 on miso, ¥1,490 on soy sauce, and ¥1,098 on natto. The average person in the age 30-34 year group spent ¥1,581 on tofu, ¥603 on miso, ¥508 on soy sauce, and ¥708 on natto.

Table 7 shows the source of soybean used to make four soyfood products in 1984, 1990, and 1992. In 1992, of the 498,000 tonnes of soybeans used in tofu and aburage in Japan, 74.8% of the soybeans were IOM from the USA, 6.0% were Beeson (USA), 8.0% were other U.S. varieties, 3.0% were from China, and 8.0% were grown in Japan. Of the 30,000 tonnes use to make dried-frozen tofu, 86.7% were IOM and the rest were from China. Of the 108,000 tonnes used to make natto, 55.5% were from the USA and Canada, 39.8% were from China, and 4.6% were grown in Japan. Of the 176,000 tonnes of soybeans used to make miso, 88.0% were from China, 5.7% were white-hilum beans from the USA, and 6.25% were grown in Japan.

Table 8 shows that production of soybeans in Japan from 1982 to 1994 has decreased sharply. In 1982 some 262,300 tonnes were produced on 147,000 ha with a yield of 1,782 kg/ha. In 1994 some 98,800 tonnes were produced on 26,500 ha with a yield of 1,620 kg/ha.

Table 9 is two charts showing the distribution system for (1) Imported soybeans from suppliers to end users, and (2) Domestic soybeans from farmer to end users. Farmers sell to the Zenno Nokyo or a collector. Address: Mitsui & Co. Phone: 515-294-0160.

6806. Golbitz, Peter. 1995. Traditional soyfoods: Processing and products. *J. of Nutrition* 125(3S):570S-572S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease. [9 ref]

6808. Hayes, Keri. 1995. Feeding their own: Cubans turn to soy as an alternative protein source. *Bluebook Update* (*Bar Harbor, Maine*) 2(1):1, 3-4. Jan/March.
• ***Summary:*** Pam Montanaro of Global Exchange (San Francisco, California) explains how Cubans–led by Alberto Ortega Jhones–have turned to soy and developed a host of delicious products, especially soymilk yogurt drink (in five flavors), which are now being produced in factories that formerly made dairy products. These factories are also manufacturing hard cheese from soymilk, soymilk cream cheese, and soymilk ice cream.

Some of the soybeans used to make these soyfoods are now being grown in Cuba; however most are imported from Canada and Brazil.

The USA, which has a trade embargo against Cuba, also holds embargoes against Iraq, North Korea, Libya, Serbia, and Montenegro. However the "Cuban embargo is the only one, at this time, that denies the right to trade for food and medicine." A photo shows two men at work in one of the

dairy factories that has been converted to include a soyfoods processing section.

6809. *Living Earth & Food Magazine* (*Food Commission, London*). 1995. New Zealand research questions safety of hormones in soya baby milks. Jan/March. p. 3. [1 ref]
• ***Summary:*** The Food Commission is a UK consumer advocacy group. "The Food Commission has received evidence from New Zealand that soya formula milks for babies contain levels of chemicals, known as phytoestrogens, which, the researchers say, give young babies the equivalent of several contraceptive hormone pills a day*. (Footnote: *James et al. 1994. *The Toxicity of Soybeans and Related Products*). The research has been widely reported in the New Zealand press with calls for soya formulae to be withdrawn from sale."

"The Food Commission asked companies supplying soya baby milks in the UK to provide information on levels of phytoestrogens. As we went to press, only one company, Wyeth, which makes SMA Wysoy formula, was able to provide the Food Commission with figures. SMA told the Food Commission: 'Our soy formula contains no more than 20-28 micrograms/ml (of phytoestrogens) in the reconstituted product.'

Sales of soya-based infant formulas are worth nearly £9 million a year from the 3% of babies in the UK who are fed soya-formula, with about 85% of sales on prescription.

6810. *Living Earth & Food Magazine* (*Food Commission, London*). 1995. BST banned until next century. Jan/March. p. 3.
• ***Summary:*** "The genetically engineered milk-boosting hormone Bovine Somatotropin (BST) is to be banned in the European Union until January 1, 2000." The product is made by Monsanto and Eli Lilly–who argue they have a right to market animal pharmaceuticals that are safe and effective. However consumer and animal rights groups are unhappy with evidence that the drug leads to distressed animals and a raised incidence of mastitis. "Dairy trade organisations are deeply unhappy with the damage that BST could do to the image of milk as a clean, fresh product that has not been processed or tampered with." For more information contact BST Concern, London (Phone: 0171-638-0606).

First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease.
Address: Dep. of Preventive Medicine and Community Health, The Univ. of Texas Medical Branch, Galveston, TX 77555.

6812. Ontario Soybean Growers' Marketing Board. 1995. Technical soybean mission: Japan, Hong Kong, Malaysia, Singapore. March 10-26, 1995. Chatham, Ontario, Canada. 23 p. 28 cm. [Eng]
• ***Summary:*** Contents: Participating members: Dr. Karen Lapsley, Mr. Ron McDougall, Mr. Michael Loh, Mr. Doug Jessop (food technologist and tofu expert, Harrow Research Station), Mr. Kim Cooper (marketing specialist, OSGMB). Note: This is the first Canadian soybean mission in which a food technologist (Doug Jessop) participated. Background. Mission objectives. Acknowledgements. Mission details–Japan: Canadian embassy.

Japan Miso-Co-op Industrial Association: Japan imports about 250,000 tonnes {metric tons} of soybeans from China each year, and about 150,000 tonnes of that amount is for the miso market. The remaining miso soybeans come from Canada, USA, and Japan. The best soybean for making miso comes from the Hokkaido area of Japan. It is a large, white hilum type, perhaps Toyomasuri. Generally the larger the soybean the better for making miso. Japanese miso makers need two types of soybeans from Canada: (1) Normal SQWH (Special Quality White Hilum); average values for color, taste and texture are acceptable though higher values would be preferable; (2) High Premium Soybeans; they would consider paying a premium for better color, taste, and texture.

Azuma Natto Foods Co. Ltd.: This natto company uses 7,000 tonnes/year of soybeans making them the third largest natto maker in Japan. They use 65% USA, 25% Japanese, and 15% Canadian soybeans. There are four sizes of natto: Small natto < 5.5 mm accounts for 72% of the natto market in Japan; Large natto, 5.5 to 6.2, account for 18%. Extra large natto > 8.5 mm account for 18%. Split seed natto account for 10%. Factors in assessing the suitability of soybeans for natto are: Fat content should be less than 19%. Total sugars–Group 1 contains sucrose, fructose, and glucose, group 2 contains raffinose and stachyose. Calcium affects the hardness or softness of natto. The ideal range is 180-250 mg/100 gm. Sanwa Company–Tofu manufacturer.

Wed., March 15–Japan Tofu Association: There are over 20,000 tofu makers in Japan, and 53 of these are members of this association, with half of the 53 being in the Tokyo area. Only 185 tofu manufacturers in Japan have 30 or more employees. Tofu makers consider there are two types of organic soybeans: true organic and semi-organic. The association imports about 2,000 tonnes of each type from the USA; they are OCIA certified.

Home Foods Company Ltd. uses 4,000 metric tons of soybeans a year, mostly a blend of 70% Chinese white hilum and 30% U.S. white hilum. The soys from the USA are I.O.M. soybeans, especially the "High Super" variety. For the more premium market they use a blend of 50% Japanese soys and 50% Harovinton soybeans. They have

also just started blending 50% Chinese and 50% Canadian white hilum soybeans. The two most important criteria for their soybeans are high protein and high total sugars. Sugar levels of Chinese soybeans (24-25%) are higher than those of Canadian soybeans (23-24%).

Thursday, March 16–Takeya Miso Co.: Ikuo Fujimori, President. Takeya has two plants employing 100 production workers and using 5,000 to 6,000 tonnes of soybeans yearly. 70-80% of their products are sold in supermarkets. For years they have been using the U.S. soybean variety Kanrich.

Nagano Chushin Agricultural Experiment Station: They have been breeding soybeans since 1957 and in that time have developed and released 17 varieties, the most famous being Enrei. The staff of 34 includes 5 soybean breeders. Dr. Nobuo Takahashi has been breeding soybeans for over 18 years. Japan has domestic soybean area of 370,500 acres (150,000 ha); it is decreasing, so imports are increasing.

Nagano Miso Industrial United Co-operatives: This group consists of 8 local co-ops made up of 160 miso manufacturers, who pay a fee to this group based on sales. There was a detailed discussion of the types of sugars in soybeans necessary for good miso.

Friday March 17–National Food Research Institute. Tsukuba is developing into a science research park, now containing over 200 different research institutes. NFRI, originally founded in 1934 as the Rice Institute, moved to Tsukuba from Tokyo in 1973. Thirty years ago, all tofu in Japan was made with Japanese soybeans. Dr. Toshiro Nagai spoke about natto: In 1992 the natto needs of Japan were met by soybeans from China (45%), USA (38%), Canada (17%), and Japanese domestic (8%). Natto consumption has increased by about 10% for each of the last few years. Dr. Sayuki Nikkuni spoke about miso: In 1992 the miso needs of Japan were met by soybeans from China (87%), USA (6%), Japan (6%), and Canada (1%). Dr. Kaoro Koyama spoke about tofu: In 1992 the soybeans for tofu totaled 490,000 tonnes and came from USA (390,000 tonnes; 80%), Canada (50,000; 10%), Japan (20,000; 4.1%), China (20,000; 4.1%), and South America (10,000; 2.0%).

Asahi Food Processing Co. Ltd. This plant, which has 350 employees and operates 365 days/year, was established in 1972 and produces tofu, fried tofu, natto, noodles, and juices. They use 15 tonnes of soybeans daily or 4,900 tonnes/year, of which 38.8% are grown in Japan and the remaining 61.2% are IOM from the USA. Each day they make 120,000 cakes of tofu, 100,000 pieces of fried tofu, and 20,000 packages of natto. Most of the soybeans they use in production are dehulled. They use about 500 tonnes/year of OCIA certified soybeans from the USA and some semi-organic soybeans from Japan. The prices they pay per kg of soybeans are: IOM 30-40 yen; Vinton, identity preserved varieties, and Harrovinton [Harovinton] 100 yen; organic 120-140 yen; Enrei (Japanese) 400 yen.

Saturday, March 18–Hong Kong. Canadian High Commission. Canada Packers (Hong Kong) Ltd.

Monday, March 20. Shenzhen Economic Zone: This area of 30 square km, just outside the Hong Kong border, contains 1 million people or 60% of the provincial population, all of whom require a special permit to work in the area. This economic zone is booming, basically due to spiralling costs in Hong Kong, where many businesses and factories are closing and moving to this area, where land and labor costs are much lower.

Shenzhen Vitasoy (Guang Dong) Foods & Beverage Co. This plant, which is only one year old, produces a major share of the soymilk for Hong Kong. They are able to import soybeans at a low tariff rate because they ship the majority of their finished products back into Hong Kong. The plant uses Canadian SQWH (Special Quality White Hilum) soybeans, but has problems with uneven seed size. They presently receive the soybeans in 45 kg jute bags, but would prefer strong 45 kg poly-lined paper bags. A small percentage of dairy milk is mixed with the soymilk, which is thought to improve its texture and taste.

Tuesday, March 21. Dah Chong Hong, Ltd. This was the first company to import Canadian soybeans for food use in the early 1970s. Dah Chong pointed out that Ontario soybeans were experiencing increasing competition from Quebec soybeans, especially in the past two years. The Quebec soybeans are 5-10% less expensive, due to lower basis levels, lower freight costs, and being more aggressive in a new market. Their quality is similar to Ontario, though the seed coat color is somewhat darker. There are about 50 tofu makers in Hong Kong, 10 larger size and 40 smaller size, although there is not a large difference in size. Consumers believe that packaged tofu is not as fresh as that purchased fresh daily from local markets.

Amoy Food Ltd. (Dr. Alain Butler; This plant makes soy sauce and other sauces used in cooking. They use only Canadian soybeans, the Maple Glen variety from Quebec). Wed., March 22. The group visited Hung Tao Soya Bean Products Pty., a traditional Hong Kong tofu and soybean sprout plant in the New Territories.

Thursday, March 23–Malaysia. Canadian High Commission. Yeo Hiap Seng (Malaysia) Berhad (Contains excellent details on the company). Chop Lee Kit Heng Sdn. Bhd. (A soybean trader selling to end users in Malaysia).

Friday, March 24–Singapore. Canadian High Commission. Yeo Hiap Seng Ltd. (Singapore). Meeting with nine tofu manufacturers in Singapore. (The name of each company is given. There are 40 tofu makers in Singapore, and the majority now use Canadian soybeans. Tofu growth in the last 5 years has been very rapid and competition is fierce). Asia Corporation Pte. Ltd. (This company accounts for about 70% of the soybeans imported into Singapore and Malaysia. They first brought Canadian soybeans into the area in 1978). Canadec Private Ltd. Sing Yeap Trading Pte. Ltd.

Saturday, March 25–Unicurd Food Company Pte. Ltd.

(Mr. Goh gave a tour of his facility and discussed his plans for a new plant in late 1995). Yam Thye & Co. (Warehouse).

Encore Ltd.: Sylvia B. Hollenstein, managing director. This company, based in Switzerland, uses Swiss technology to produce soy yogurts, chocolates, and noodles in Switzerland from Chinese soybeans–mostly for the taste. The products are shipped from Switzerland to the company's 3 retail stores in East Asia; they plan to expand to 10 retail stores by the end of 1995.

Appendixes A through J, issued as a separate document, contain extensive and detailed information and some published documents related to the technical mission. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

6813. Petrakis, N.; Wiencke, J.; Coward, L.; Kirk, M.; Barnes, S. 1995. A clinical trial of the chemopreventive effect of a soy beverage in women at high risk for breast cancer (Abstract). *J. of Nutrition* 125(3S):800S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease.
• ***Summary:*** It has been proposed that the isoflavone genistein is responsible for the low rate of breast cancer observed in women from Southeast Asia. To evaluate this hypothesis, a pilot study for a clinical trial of the chemopreventive properties of soy protein is being conducted in American women at high risk for breast cancer. Fifty such premenopausal women, previously studied at UCSF, have been recruited and are incorporating into their diet two servings a day of a soy-based nutritional beverage powder prepared using Supro isolated soy protein (made by Protein Technologies International, St Louis, Missouri) for 12 months. The 38 gm of soy protein consumed each day contains about 70 mg of genistein (mostly as glycosidic conjugates). At 3-month intervals on the diet, tests for cytological and biochemical surrogate endpoint biomarkers (SEBs) will be conducted to see if breast cancer risk is reduced. Supported by a grant from the United Soybean Board. Address: 1-2. Dep. of Epidemiology, Univ. of California at San Francisco (UCSF); 3-5. Dep. of Pharmacology, Univ. of Alabama at Birmingham, Birmingham, AL 35294.

6814. **Product Name:** R.F.'s Gourmet Organic Brown Rice Pudding (Made with Soymilk–Dairy Free) [Raisin-Cinnamon, Chocolate, or Banana].
Manufacturer's Name: R.F. Bakery International, Inc. (Gourmet Foods Div.).
Manufacturer's Address: 8101 Orion Ave. Unit 6, Van Nuys, CA 91406. Phone: (818) 785-6945.
Date of Introduction: 1995. March.
Ingredients: Raisin-Cinnamon: Organic* brown rice, soy milk (organic* soybeans, filtered water), pineapple juice concentrate, raisins, peach juice concentrate, pear juice concentrate, pure vanilla, spices, lemon, sea salt. * = Organically grown in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 6½ oz tub.
How Stored: Refrigerated.
New Product–Documentation: Leaflet (2 pages, with all 3 labels) from the Natural Products Expo (Anaheim, California). 1995. March.

6815. Smith, Paul. 1995. The life and work of F.G. Roberts, naturopath, and Australia's first soyfoods pioneer. Part II. Early years in Australia, 1927-1932. Bayswater, Victoria, Australia. 6 p. March. Unpublished manuscript. Handwritten. Updated by several interviews with and letters to William Shurtleff in March 1995.
• ***Summary:*** Continued: In early 1927, after his clinic in Hobart was well established, F.G. Roberts traveled to Melbourne (in Victoria, southern Australia), where he became licensed in 1929 and established his first mainland clinic at Latrobe Street and commenced his well-known lectures. Initially his wife kept the clinic and rest home going in Hobart, then she and the children joined him in Melbourne in late 1927, when the family took up residence in Mordialloc, later moving their house and clinic to 232 St. Kilda Road.

In Nov. 1928 F.G. Roberts and his wife, Gladys, from their headquarters in Melbourne, began publishing a magazine titled *Nature's Path to Health* (NPH). The first issue was volume 5, number 5–raising many questions about previous volumes and issues. They continued publishing NPH until 1951-52. Gladys was a major contributor, serving as editor, publisher and even writer of articles when her husband was away. In later years, Gladys was assisted by her sister, Muriel Ackerman. The magazine became Roberts' main vehicle for announcing his lecture and travel plans, advertising his products, and disseminating his ideas about health, naturopathy, and diet.

In 1929 Roberts established the Australian College of Naturopathy and began offering lectures and study courses, including some in chiropractic; he used his home as the organization's first headquarters. Soon more space was required, so the Roberts family moved to 428-430 St. Kilda Road, where they also established yet another rest home.

During 1930, 1931, and 1932 frequent advertisements appear in *Nature's Path to Health* (Melbourne) for F.G. Roberts interstate lecture circuit, giving dates and venues. He established centers in Sydney and Newcastle (New South Wales), Brisbane, Ipswich, Toowoomba (Darling Downs), Maryborough, Bundaberg, and Rockhampton (Queensland). After traveling this northern circuit by train, he would return to Melbourne for several weeks to rest and attend to his duties there, prior to traveling by car to Ballarat and Geelong (both in southern Victoria), where he had also established centers. Then he was away by train to Adelaide (South

Australia), and Fremantle (near Perth, Western Australia). He loved to travel, and in all these places he lectured and treated people. He also participated in radio (wireless) interviews and programs. As his students became qualified, he opened clinics and shops to give the public the goods and services he felt they needed. During this time he closed the St. Kilda Road Clinic and opened a new clinic at Post Office Place.

At about this time, F.G. Roberts may well have traveled to the United States. Esmae N. Jackson (born in 1937), the Roberts' granddaughter, recalls vividly that he told her about several visits (at least two) there during her years in primary and secondary school; she does not know when his trip took place but thinks vaguely late 1930s to mid-1940s. She recalls her grandfather mentioning Loma Linda (which was named College of Medical Evangelists from 1906 to 1 July 1961, when it was renamed Loma Linda University). Paul's father, Ron Smith, has no recollection of F.G. Roberts going to the USA between 1948 and 1954. If Roberts did go, there are three good reasons for thinking he may well have visited Benedict Lust (pronounced LOOST; rhymes with "boost"), who was based in New York. First, Lust published (from July 1925 to 1960) a naturopathic magazine titled *Nature's Path* (New York City). In 1930 F.G. Roberts, assisted by his wife (Gladys), began editing and publishing a bimonthly (later monthly) magazine titled *Nature's Path to Health.* He continued to publish it until about 1952. The magazine was published in Melbourne and Gladys kept it going during her husband's travels. Some articles by Benedict Lust appeared in the Roberts' Australian periodical. And articles by other writers, first published in *Nature's Path* (USA) later appeared in the Australian magazine. By Sept. 1939 Lust appears on the magazine's masthead as "American Contributing Editor"–all indicating a spirit of cooperation and friendship.

Second, the Sept/Oct. 1937 issue of *Nature's Path to Health* (Australia) states (p. 14): "The Naturopathic School of Dr. Benedict Lust conferred on F.G. Roberts, N.D., D.O., D.C. [doctor of naturopathy, osteopathy, and chiropractic], of 430 St. Kilda Road, Melbourne, Australia, the Degree of Dr. of Natural Therapeutics." Esmae believes the honorary doctorate arrived by mail, and that F.G.R. was enormously proud of the honour.

Third, Dr. Lust was widely considered the world's leading practitioner of natural healing (naturopathy) at the time, and it seems likely that an energetic, curious, and dedicated man such as F.G. Roberts would have wanted to meet him, to talk with him about their mutual interests, and perhaps to study Lust's organization, publications, and healing methods. Note: A careful examination of Dr. Lust's magazine might mention a visit from Roberts.

During the 1930s Roberts began to import a range of packet herbs, tablets, and other herbal remedies from Potter and Clark in London.

In 1934-35 F.G. and Gladys Roberts established a restaurant named the Curative Dining and Health Service, on the 2nd floor, 300 Little Collins St., Melbourne. It was renamed Cafe Naytura (see ad in 15 Aug. 1936 NPH). (Note: In 1943 Sanitarium Health Food Co. {SDA} had a cafe and natural food store at 293 Little Collins St., Melbourne). During the 1950s it was located in the basement at this same address and run by the Cutting family. It continued at this address until the late 1970s, when it was purchased by Don Newsome, a pharmacist, and moved to its current Bourke Street Mall location. Don used his experience to establish the Naytura Health Food Section nationwide through the Safeway (Victoria) / Woolworths supermarket chain. The Bourke St. store is used to evaluate products for potential supermarket sale and the basement restaurant still carries on the tradition of the Roberts' 1934-35 Cafe.

In the early 1930s, F.G. Roberts became interested in Mr. Willson's food manufacturing business–probably because his son, Horace, worked there. It may have been that Roberts took over the business to keep Horace in a job. F.G.R. never had the time or any real interest in running it.

In the Aug. 15, 1936 issue of *Nature's Path to Health* we find the first advertisement for "F.G. Roberts' Health Food Products, 40a Chapel St., East St. Kilda." The same appears in the "Directory of health aids." He had acquired this health food factory which had been previously named Drummond Health Food Products. St. Kilda was a beach-side suburb of Melbourne, Victoria, Australia. A photo of this original red brick factory appeared in the May-June 1937 issue of *Nature's Path to Health* (p. 22); an original hangs on the office wall at Soy Products of Australia. The factory began to pack a variety of herbal products, and to manufacture some new foods, all to service the needs of Roberts' shops and clinics. Many herbs were grown locally in Australia to supplement the supplies imported from England. It was during the mid-1930s that many of the products still manufactured today by Soy Products of Australia Pty. Ltd. under the Roberts brand name were first formulated and developed. By the late 1930s F.G. Roberts, his teachings, and his products were known nationwide. From 1951 onward Potter & Clark's herbs were replaced by herbs mixed and packaged in Australia using some imported ingredients.

During this period the Australian College of Naturopathy (which Roberts had founded in 1929) became more closely affiliated with the British College and became known as the British and Australasian College of Naturopathy; the two colleges were run on the same standards and principles.

The Roberts' children had now grown up and were taking an active interest in the business, training for and working in key positions. The eldest son, Fred, Jr., and the daughter, Gladys, worked in the clinics. Fred, Jr. later moved to Brisbane and his son, Peter, carries on the family tradition, practicing as a chiropractor. Mr. Roberts was good at treating people and lecturing, but was less interested in managing the food factory, a role that his youngest son, Horace Roberts, fulfilled. Horace also managed the shop at the Post Office

Place Clinic. Horace was instrumental in transforming his father's ideas into formulations and products. Starting in the mid-1930s, and continuing until the 1950s, F.G. Roberts developed a number of health food products, which were sold throughout Australia. They were hand-mixed and packaged at his factory, F.G. Roberts Health Food Products, in St. Kilda and from 1933 he was advertising them nationwide in his magazine *Nature's Path to Health.*

Several of these products contained soy flour. Prior to 1950 he launched and sold the following soy products, listed here is the order they were first advertised in his magazine: (1) Soy Wheat Macaroni (Aug. 1936); (2) Soy Bev (tea or coffee substitute; Nov. 1937) was made primarily from ground roasted soybeans and roasted milled chicory; Paul thinks it was first introduced in about 1935-36; (3) Soy Flakes (Dec. 1937); (4-5) Roberts' Soy Nut Roast; Soy Beans in Tomato (in glass, Oct. 1938; canned June 1940); (6) Malto-Soy Drink (tea or coffee substitute; Sept. 1939); (7) Soy Milk Compound (Sept. 1939; originally a mixture of soy flour, malt, lactose, and nonfat dry milk [skim milk]). This product is still made today in modified form under the name Soy Compound; Paul thinks it was introduced in about 1933 or 1934. It was made using defatted soy flour imported from America; (8) Soya Choc-Malt (Jan. 1940), renamed Soya-Choc in Aug. 1946; it was the Soy Milk Compound plus natural cocoa; Paul thinks it too was introduced in about 1933 or 1934; (9-10) Roberts Soy Nut Brawn, Soy Nut Cheese (May 1940); (11) Vita Elm (1948). This early and widely advertised herbal product was being advertised by May 1935 in *Nature's Path to Health* as a "vitalizer" that can give "Glorious Health." Vita-Elm, which always contained slippery elm, was based on an old English formula that went back to the 1750s; the company still makes the product today. Published ads from 1935, 1936, and 1949 said it contained "the Germ of Life of Wheat, Oats, Barley, Rye, Maize" (and slippery elm) but Paul is sure that somewhere prior to 1948 it also contained small amounts of soya flour. Esmae Jackson believes that the soy was added to Vita Elm in 1937, when Roberts first became interested in it. Continued. Address: Director/General Manager, Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.

6816. Smith, Paul. 1995. The life and work of F.G. Roberts, naturopath, and Australia's first soyfoods pioneer. F.G. Roberts Health Food Products, and Ron Smith. Part II. Mid-1930s to 1949. Bayswater, Victoria, Australia. 6 p. March. Unpublished manuscript. Handwritten. Updated by several interviews with and letters to William Shurtleff in March 1995.

• ***Summary:*** Continued: It is not clear when and how F.G. Roberts first learned about soybeans and soy flour. Paul suspects that he read about Dr. Harry W. Miller (a Seventh-day Adventist doctor) and his pioneering work with soyfoods in China, starting in the 1930s. "There is definitely some connection and I believe it is highly likely that F.G. Roberts met Harry W. Miller." Or the two men may have corresponded. If Roberts visited Loma Linda, California, he would surely have visited Loma Linda Foods, which made a large range of early soyfoods: In 1922 Loma Linda introduced–Smokene (a seasoning based on roasted soy flour). 1934–Soy Mince Sandwich Spread, Soymilk, VegeCheese, Soy Bean Spread, Breakfast Cup (coffee substitute), Soy Wafers, Soybeans with Proteena and Tomato Sauce. 1936–Soy Beans (plain, canned). 1938–Gluten Burger (with soy flour). 1940–Soy Beans with Tomato, Soy Beans with Proteena, etc.

During the 1930s, F.G. Roberts and others were experimenting with soybean cultivation in Australia on a small home-garden and experimental level. An article in *Nature's Path to Health* (15 July 1936, p. 35-36) gives details. Roberts concluded: "The Soya Bean has been very successfully grown in Australia." But there were no commercial crops until the 1950s.

In 1940 Horace Roberts, the youngest son, left the company when he volunteered for service with an ambulance corps being formed in Melbourne. Serving as a non-combatant male nurse during World War II, he was sent to Singapore. With Horace's departure, F.G. Roberts' food production business began to languish; the man who had managed the plant and attended to daily details was gone. Although the company's soy products were available during the war, it continued to languish until Ron Smith entered the business in 1948.

Meanwhile, during World War II, with the clinics and college all well established and running smoothly, F.G. Roberts turned some of his time and attention to a property at Panton Hills, an outer Melbourne suburb, between Eltham and Lilydale, where a home was built; he grew fresh fruit, herbs, and vegetables, and practiced composting. This provided family, friends, and pupils from the college with a place to visit and relax. It never made the expected profit.

Shortly after World War II ended, the Roberts family received devastating news. Their youngest son, Horace, had been captured in Singapore and interned by the Japanese in Changi, their prisoner of war camp there. He had died in October 1943 in Burma (working as a forced laborer on the Thailand-Burma Railway)–unbeknownst to his family until after the war had ended. So shattered was F.G. Roberts by the death of his son that he began to lose interest in the shop and the factory. The shop and clinic in the Post Office Place was closed and the family moved to Malvern Road, Prahran. The factory continued to run indifferently while F.G. Roberts put most of his time and energy into public lectures, the college, and seeing and treating patients.

Esmae recalls that for many years on a Thursday [sic Tuesday] night, often weekly, F.G. Roberts had addressed the public about "Health Matters" at the Athenaeum Art Gallery

Hall at 188 Collins Street, Melbourne. Esmae personally attended many of these evenings, singing, playing the piano, and on one occasion addressing the audience with a speech of her own about diet and health.

In 1946 Ron Smith first came in contact with the F.G. Roberts at the Athenaeum. Vincent Ronald "Ron" and Mabel Smith, both originally from Western Australia, had married and settled in Melbourne after World War II. Ron was born on 10 December 1918 at Boulder (near Kalgoorlie), Western Australia. Mabel was born on 16 Dec. 1919 in Bunberry, also in Western Australia. Both in their late 20s and dogged by ill health, they first attended several of F.G. Roberts' lectures and later went to him for advice and treatment. Ron, in particular, was slightly built, had worn glasses for years, and had never enjoyed really robust good health. F.G. Roberts prescribed an exercise program and made radical alterations to the Smith family diet. Almost immediately the Smith family's health began to improve. Ron's physique developed and his eyes improved to where he was able to discard his glasses for nearly 30 years. Thus began a long and ongoing association with the Roberts family.

F.G. Roberts owned Green Island, a small island just off the coast of Queensland at Mackay, near the Great Barrier Reef; you could walk across at low tide. There he built a retreat to which he took his friends and pupils to enjoy the sea air, balmy climate, and the cleansing diet of fresh tropical fruits–pineapples, papayas, bananas, coconuts, and mangoes. Ron Smith enjoyed unforgettable visits with the Roberts at Green Island several times between 1948 and 1954.

F.G. Roberts had an enormous enthusiasm and an almost boundless capacity for work. When he got a bit tired or run down, he would switch off and head for Green Island for a few weeks of relaxation. He was good fun and good company to go away with. He would buy a case of good quality ripe oranges and, with his guests, would enjoy fresh squeezed orange juice and half a ripe pineapple (freshly sliced with a sharp machete and handed around to all present) for morning and afternoon tea. He practiced what he preached.

The Roberts presided over the prenatal and antenatal care of Mabel Smith during the birth of her two sons in 1949 and 1950 with beneficial results to both infants and mother. The Smiths became lifelong converts to Mr. Roberts' philosophy. Note: In 1995, at age 76, Ron Smith still comes to work at the company each day, and often puts in a 10-hour day as managing director of the company.

In early 1948, after several unsuccessful attempts to start his own business, Ron Smith went to work for F.G. Roberts. He worked as an employee at the factory at 40 Chapel St., St. Kilda, increasingly taking over the daily management and running of this operation–formerly the responsibility of Horace, the Roberts' son, who died in the war.

Although a great healer and publicist, F.G. Roberts was not strong in the technical aspects of food production or marketing. The factory at 40 Chapel St. was more like a cottage industry. It was small, cramped, and labor intensive; mechanical aids were either non-existent or very primitive. Output was small and most products were mixed and packed by hand.

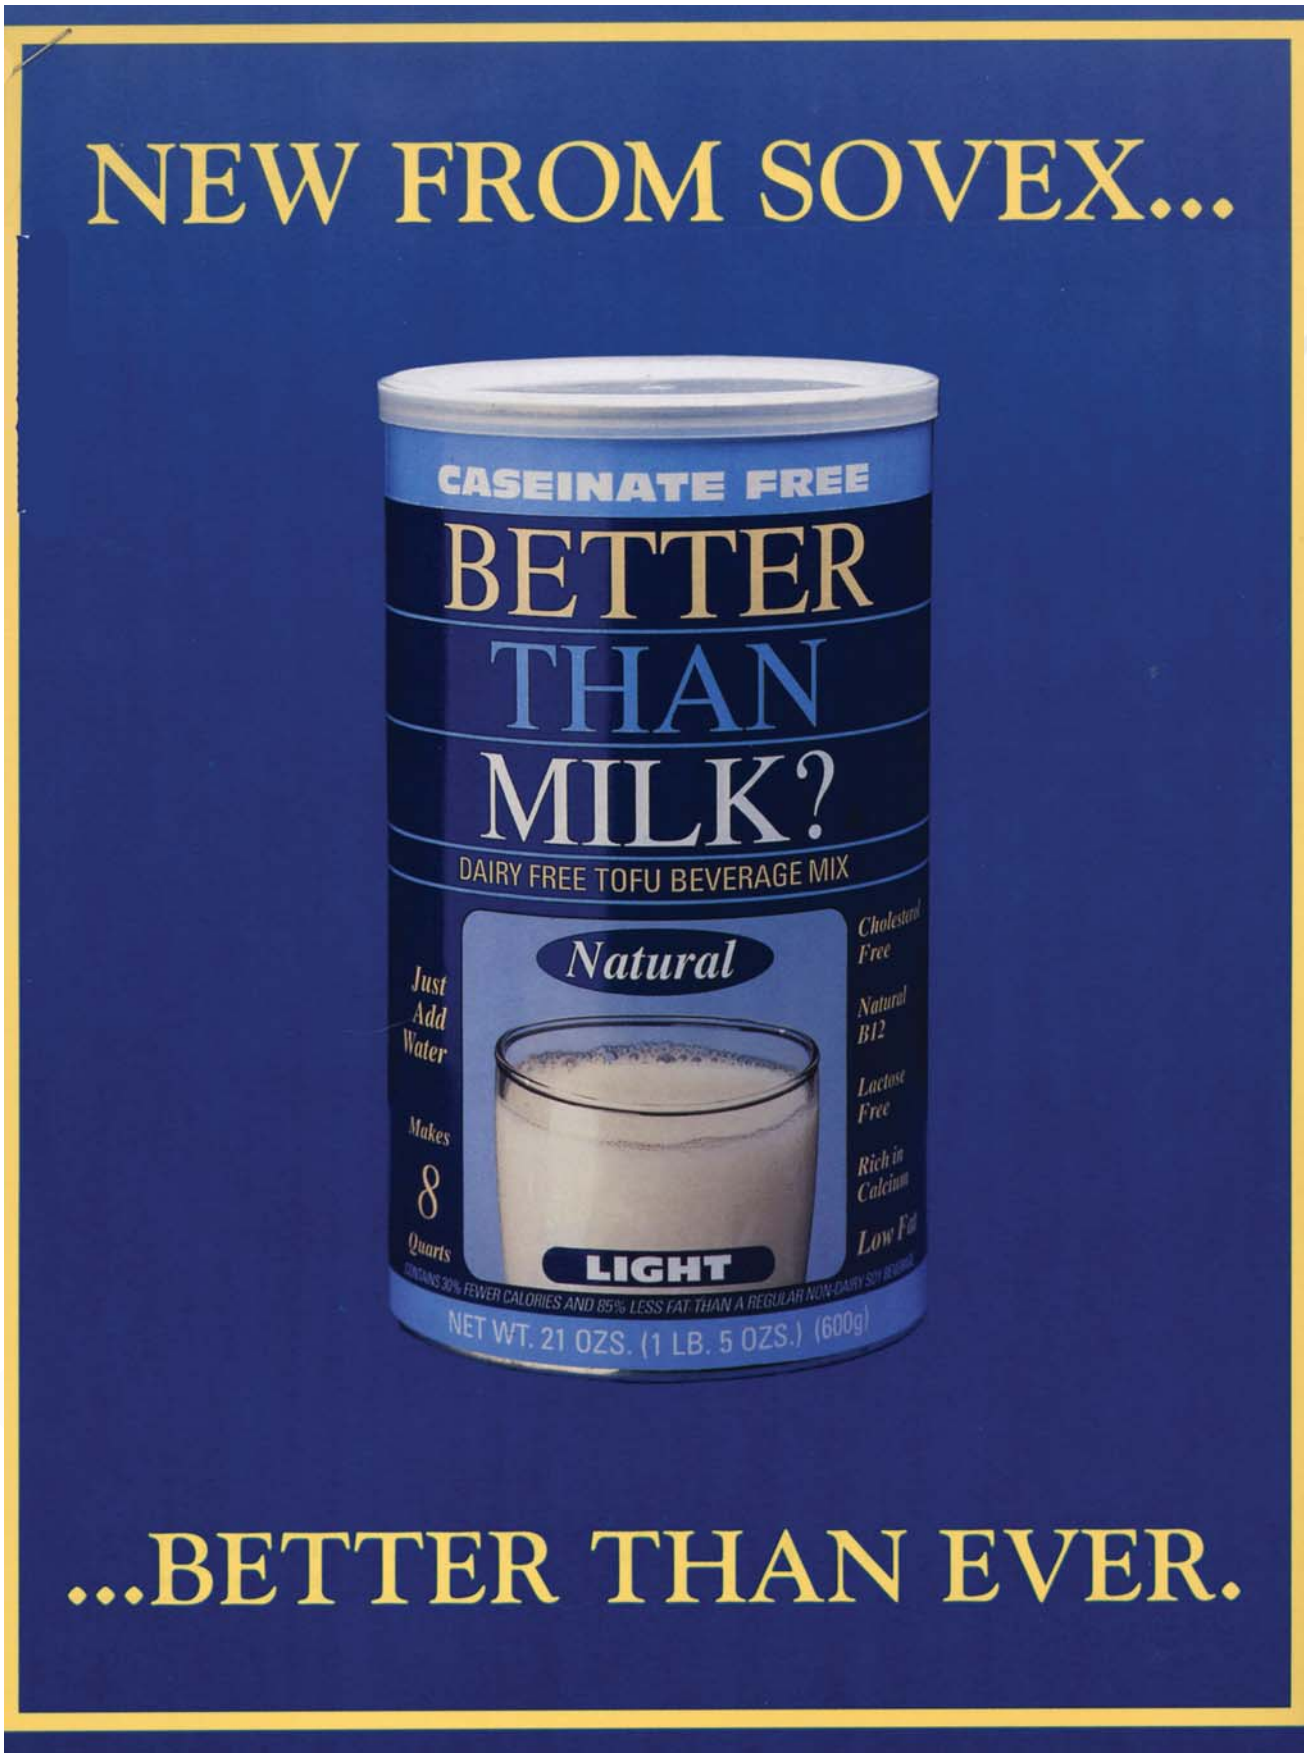
Ron sparked the resumption of manufacturing, even though wartime rationing was still in place and obtaining permission to import anything was difficult. Paul recalls (28 March 1995): "Roberts, himself, was a dreamer, and far too preoccupied with travelling, treating patients, lecturing, and racing on to the next new idea. He lacked the patience, persistence, and stability to run a manufacturing business. His skills and interests lay elsewhere."

F.G. Roberts was an osteopath, naturopath, registered dietitian, iris diagnostician, and had several other natural healing qualifications. He studied by attending courses in the U.K. and by correspondence. He was first registered in Australia as a "Consultant Dietitian" in 1942-43. Continued. Address: Director/General Manager, Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.

6817. **Product Name:** Better Than Milk? Caseinate Free. Dairy Free Tofu Beverage Mix.
Manufacturer's Name: Sovex Natural Foods, Inc.
Manufacturer's Address: 9104 Apison Pike, P.O. Box 2178, Collegedale, TN 37315. Phone: 615-396-3145.
Date of Introduction: 1995. March.
Wt/Vol., Packaging, Price: 21 oz (1 lb 5 ozs) paperboard carton.
How Stored: Shelf stable.
New Product–Documentation: Leaflet sent by Patricia Smith from Natural Products Expo West at Anaheim. 1995. March. "New from Sovex... Better than ever." A large photo shows a can of Better Than Milk? on a deep blue background. On the rear are nutrition facts and ingredients (printed too small to read except with a magnifying glass) for seven SKUs. Caseinate Fre Better than Milk? in Natural, Natural Light, Carob, and Chocolate flavors. Low Fat Better than Ice Cream in Vanilla and Strawberry flavors, and Caseinate Free Better Than Milk in a Natural flavor in an aseptic package.

6818. *SoyaCow Newsletter* (*Ottawa, Canada*). 1995. Health of SoyaCows in India. 4(1):2. Jan/March.
• ***Summary:*** "In a recent visit to India, Frank Daller reported that most of the SoyaCow SC20 systems sent to India originally under Child-Haven / CIDA project were not being used anywhere close to their potential. He noticed lack of adequate management and organization barring the optimal use of the systems.

"Since CIDA no longer supports the project, Frank is determined to overhaul the project by raising adequate funds and devoting a significant portion of his time. With the help



of Dr. R.K. Sharma, Manager–SoyaCow Centre, India, he found a company suitable for manufacturing the SoyaCow system in any size and capacity in India at a reasonable cost."

6819. *SoyaCow Newsletter* (*Ottawa, Canada*). 1995. Protein isolates from soymilk: Canadian scientists developing technology. 4(1):2. Jan/March.
• ***Summary:*** "Protein isolates were successfully prepared using [whole bean] soymilk from SoyaCow SC20 and SC100 in a laboratory as well as at a pilot scale. These isolates were found to be comparable to a commercial product, Supro 610, made from defatted soybean flakes by Protein Technologies International of St. Louis, Missouri."

The project was the result of collaborative research between ProSoya Inc. and an Agriculture Canada team led by Dr. C.Y. Ma. "Isoelectric precipitation and ultrafiltration were used to remove the carbohydrates and solvent extraction was used to remove the fat. Alternate means of removing the fat are currently being explored."

A large table compares the functional properties of isolates made from ProSoya soymilk vs. those of Supro 610.

6820. *Soyafoods* (*ASA, Europe*). 1995. A phytoestrogen story. 6(1):6. Spring.
• ***Summary:*** A "media scare story" concerning soya recently appeared in the British press. The story originated in New Zealand last year when a firm of consultants carried out some research on phytoestrogen levels in soy-based infant formulas. They concluded that the levels "were equivalent to giving several contraceptive pills a day" and submitted a report to the New Zealand authorities requesting the immediate withdrawal of soy-based infant formulas from the market. The story was reported in the New Zealand press.

When the story appeared in the UK, headlines questioned the safety of soy-based infant formulas and made comparisons with contraceptive pills. But the story failed to mention that "the research was commissioned privately by two New Zealanders concerned about side effects in their pet parrots who were being fed soya (not a proprietary bird feed!). Secondly, the research had not been published either independently or in a scientific journal and so it has not been peer-reviewed. The report, itself, is only available on payment of a substantial fee (£250)."

The New Zealand government and the New Zealand national association of health visitors both stated that there was insufficient evidence to warrant any action.

SoyaFoods concludes: "We don't yet know the role that phytoestrogens play in our diet, although studies on their health effects in adults are generally positive. Of course, where infants are concerned we need to be cautious, but we also need to keep a sense of proportion, after all millions of babies have been fed soya infant formulas over the past 20 to 30 years with no harmful effects."

6821. **Product Name:** Tofu, Sweetened Soymilk.
Manufacturer's Name: Thanh Son.
Manufacturer's Address: 905 N.W. 23rd St., Oklahoma City, OK 73106. Phone: 405-525-2690.
Date of Introduction: 1995. March.
New Product–Documentation: Talk with daughter of owner of L&H Bean Sprout Co. in Oklahoma City. 1996. July 5. There is now one tofu company in Oklahoma City, named Thanh Son (pronounced TAN-sun). Talk with Mr. Trung Nguyen. 1996. July 5. He started making tofu and sweetened soymilk in March 1995 in Oklahoma City. He came to the USA from Vietnam in 1978. His surname is pronounced "Nwen."

6822. Urban, D.; Grizzie, W.E.; Coward, L.; Kirk, M.; Barnes, S. 1995. A clinical trial of the chemopreventive effect of a soy beverage in men at high risk for prostate cancer (Abstract). *J. of Nutrition* 125(3S):800S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease.
• ***Summary:*** "Men in Southeast Asian countries have a 10-fold lower risk of prostate cancer than American men. Epidemiologic data have suggested that nonfermented soy foods, which contain conjugates of the isoflavone genistein, are associated with the lowering of prostate cancer risk. Experiments carried out on human prostate cancer cell lines have shown that genistein inhibits epidermal growth factor (EDF)-stimulated cell proliferation." Address: Div. of Urology, Dep. of Surgery, and Depts. of Biochemistry, Pathology and Pharmacology, Univ. of Alabama at Birmingham, Birmingham, AL 35294.

6823. **Product Name:** Provamel (Soya Milk Flavoured with 100% Natural Vanilla Extract).
Manufacturer's Name: Vandemoortele (UK) Ltd.
Manufacturer's Address: Ashley House, 86-94 Hogh Street, Hounslow, Middlesex TW3 1NH, England. Phone: +44 181 577 2727.
Date of Introduction: 1995. March.
Ingredients: Incl. soymilk and natural vanilla extract.
Wt/Vol., Packaging, Price: 1 liter Tetra Brik Aseptic carton. Retails for £1.14 (5/94, England).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Spot in Soyafoods (ASA, Europe). 1995. Spring. p. 4. "A new soya milk from Provamel." The product will be available at health food shops and selected supermarkets from March 1995 onwards.

6824. Rose, Richard. 1995. Sharon's Finest is moving towards hemp products (Interview). *SoyaScan Notes.* April 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Richard first introduced the idea of using hempseed protein in natural food products in America. His

is still the only company making such products, and demand for them is growing rapidly. "Our business is moving toward hemp." He recently published a brochure titled "Hemp Food," that explains the many benefits of growing hemp. Many people still do not realize that hemp is not the same as marijuana; they are different plants.

Sharon's Finest now makes HempRella (a non-dairy cheese alternative containing 5% milled hemp seeds) and Hempeh Burger (a soybean and rice tempeh burger containing 10% whole hemp seeds). The future of Hemp Foods lies in sprouting hemp seeds then processing them to make milk (similar to making soymilk from the soybean), yogurt, ice cream, tofu, cheese, meat alternatives, and the like. Address: President, Sharon's Finest, P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

6825. Leah, Rickard. 1995. Brand scorecard: Price hikes, baby boom nurture formula sales. *Advertising Age* 66(15):27. April 10.
• ***Summary:*** This overview of the infant formula market in the USA discusses the major manufacturers of infant formula (* = lactose-free, soy-based). A table, titled "Modified milk" shows the top ten brands, their rank in 1994 and 1995, dollar sales to date (for the 52 weeks ended 14 Jan. 1995) and percentage change from 1994, and their market share in 1995 and 1994. For each company the dairy-based product is listed first, and has at least twice the market share as the non-dairy product.

Abbott Laboratories/Ross Labs–Sturgis: Similac 36.6%, Isomil* 14.9%.

Bristol-Myers Squibb Co./Mead Johnson Nutritionals: Enfamil 18.5%, Prosobee* 6.3%, Nutramigen 2.1%.

Wyeth-Ayerst/Wyeth Nutritionals: SMA 7.2%. Nursoy* 3.3%. Nestle Carnation Food Service Co.: Goodstart 3.1%, Follow-up* 2.2%.

Gerber 2.4%.

Total sales of these ten brands in 1994 were $2,565.8 million. Sales of only the soy-based formulas were: Isomil $382.2 million. Prosobee $160.9 million. Nursoy $85.7 million. Carnation Follow-Up $57.2 million. Sales of these four soy brands total $687.00 million, account for 26.8% of total sales.

The two largest companies control almost 80% of the total U.S. market. The WIC program accounts for about one-third of these total sales. (Note: WIC is the Special Supplemental Nutrition Program for Women, Infants and Children. It is administered by the USDA's Food and Consumer Services (FCS)). Many states join into groups to request WIC bids. Fluctuation in market share thus depends greatly on a company winning or losing WIC bids. In 1994 the U.S. infant formula market was worth $2.6 billion. The top six baby formula brands are not advertised directly to the consumer, but marketed through physicians and hospitals.

Note: Wyeth-Ayerst left the U.S. market in 1996.

6826. Reuter (Havana). 1995. Cuba turns to soy to curb protein shortage. *Manitoba Cooperator* (*Winnipeg, MB, Canada*). April 13.
• ***Summary:*** Cuba's present rationing system allows all children under 7 years of age to receive a quart of cow's milk a day. Food Industry Minister Alejandro Roca reports that Cuba, faced with severe shortages of beef and cow's milk, is increasing production of "protein-rich soy products such as soy yogurt, soy ice cream, and soyburgers." Yogurt, ice cream, and cream cheese made from cow's milk were widely available until about 1990, after which there has been a steep drop in their production. Roca said the production of yogurt made from soy milk will reach 40,000 tons this year, up from only 11,000 tons last year, with a goal of 100,000 tons by 1996. He also said that production of ice cream and cream cheese made from soy milk will be increasing.

Since the mid-1980s, soybean meal has been used in Cuba as a meat extender for the ground (minced) meat received by Cuban families under the strict system of food rationing. The official meat ration in Havana is 12 ounces every 10 days. Hamburgers extended with 30% soybean meal are sometimes available in restaurants and cafeterias.

6827. *Glencoe News* (*Chicago, Illinois*). 1995. Soy-based natural foods enter the mainstream. April 20. [1 ref]
• ***Summary:*** Once soy-based foods were found only at health food or natural food stores. Now they are finding their way into mainstream grocery stores, as more and more Americans are recognizing the need to eat healthy. According to the Illinois Soybean Association, the main products to look for are tofu, soymilk, frozen desserts, soy flour, and analogs (like "veggie" burgers).

6828. García, Alvaro. 1995. Re: Soyfoods research at IIIA in Cuba. Letter (fax) to William Shurtleff at Soyfoods Center, April 24. 1 p. [Eng]
• ***Summary:*** "The Food Industry Research Institute (IIIA; *Instituto de Investigaciones para la Industria Alimenticia*) is the only institution working in research and development in foods in Cuba. All areas of food technology are represented in the IIIA. This Institute is equipped with the required laboratories and pilot plant installations and employs 140 research scientists. I am the director of this institution and my own research centers on soy processing for human consumption. I have been working in this field since 1984 and have had favorable results with the installation of 16 soy yoghurt production lines in different areas of the country in which we will produce about 40 million liters this year. We are now working to produce industrial production of soy mayonnaise and cheese."

Alvero (pronounced AL-vay-ro) asks about ways that IIIA could cooperate with Soyfoods Center and access the

Soyfoods Center information system.

Talk with Pam Montanaro of Global Exchange. 1995. April 24. Alvero, who is director of the IIIA, is very sharp and incisive; he loves to absorb new information but he does not speak English. Alberto Ortega-Jhones, who is head of Cuba's new soyfood research project, is vice director of the IIIA. He has a great heart. Pam just returned from a trip to Cuba where the Soy Cubano project donated $3,000 to the soy yogurt factory at Pinar del Rio (Armando Jimenez Diaz, Director). They plan to use the money to grow soybeans locally. Address: IIIA, Carreterra al Guatal, Km. 3½, La Lisa, Havana, Cuba. Phone: 29-9110.

6829. Gupta, Rajendra P. 1995. Automatic food processor. *U.S. Patent* 5,408,922. April 25. 6 p. Application filed 7 June 1993. 3 drawings. [1 ref]
Address: 9 Veery Lane, Ottawa, ONT, K1J 8X4 Canada. Phone: 613-745-9115 or 613-744-4401.

6830. *Living Earth & Food Magazine* (*Food Commission, London*). 1995. New Zealand Health Ministry investigates soya baby milks. April/June. p. 3. [3 ref]
• ***Summary:*** The Food Commission is a UK consumer advocacy group. The New Zealand Health department has started an enquiry into the safety of soy-based infant formulas after a report indicated that the could contain dangerous high levels of phytoestrogens. "The Health Department has circulated a questionnaire to importers and manufacturers of soy-based products and asked scientists from around the world to contribute to the enquiry. It is anticipated that the matter may be referred to the World Health Organization for further investigation."

The UK government has been slow to respond to the matter. "In a letter to the Food Commission Baroness Cumberlege writes, The Committee (on Toxicity) considered that it was extremely difficult... to predict the actions of ingested phytoestrogens in humans... We agree that this is an area which requires further investigation."

6831. McCarthy, Paul. 1995. Dietary phytoestrogens: Scientists stalk potential soy chemopreventives. Research round-up. *Oncology Times* (*New York, NY*). April. p. 19-20.
• ***Summary:*** A good overview and summary, highlighting the work of leading researchers. According to biochemist Kenneth D.R. Setchell, PhD, investigations in this relatively new field began in his laboratory in the early 1980s. Dr. Setchell is Director of the Clinical Mass Spectrometry lab and Professor of Pediatrics at Children's Hospital Medical Center in Cincinnati, Ohio. He found equol, a phytoestrogen metabolite that is structurally similar to estradiol-17B, in human urine. He then determined that eating soy had the greatest effect on equol levels; 40 gm/day of soy protein made equol levels in the blood and urine jump 5,000 times above baseline.

This led him to measure phytoestrogen levels in Asians; he found their levels to be very high. Since weak estrogens have both estrogenic and anti-estrogenic effects, he hypothesized that soy might have properties similar to tamoxifen (a drug which is widely used in the successful treatment of hormone-dependent breast cancer in humans) and that a diet high in soy might explain the lower rates of breast and prostate cancers in Asia. Several key experiments conducted by Setchell, Dr. Stephen Barnes, and others, previously published in scientific journals, are then described.

The results have been provocative, but the mechanism behind the anticancer actions of soy remains unclear. Dr. Setchell is not convinced that it is as simple as his 1984 hypothesis, that the phytoestrogens in soy act like tamoxifen. Since then it has become clear that phytoestrogens also act as antioxidants. Moreover, genistein is a potent inhibitor of protein kinases, the key enzymes involved in the regulation of the phosphorylation of cells.

Herman Adlercreutz, M.D., PhD, of the University of Helsinki in Finland, has studied the anticancer role of soy in prostate cancer and is interested in the mechanism. Soy's estrogenic properties might suppress the growth of prostate tumors. This makes sense because prostate cancer is treated with estrogen. Dr. Adlercreutz has shown that genistein is one of the strongest known natural inhibitors of angiogenesis; it helps to cut off the blood supply that tumors need to grow. Alternatively, soy can suppress the production of gonadotropin secretions by the hypothalmus. This may cause a secondary decrease in testosterone production, which may be reflected in the lower levels found in Japanese men. And lifelong lower testosterone levels may postpone the development of prostate cancer.

Dr. Barnes has observed that prostate-specific antigen (PSA) values fall sharply in men with prostate cancer after that start a soy regimen. So he has started a systematic investigation of PSA values and other bio-markers of prostate cancer to determine if they can be favorably altered by soy.

Some researchers believe that soy could substitute for estrogen-replacement therapy (ERT). Barry R. Goldin of Tufts University School of Medicine notes that a Japanese woman on a traditional high soy diet (about 55 gm/day) is getting the daily equivalent of a low dose of Premarin. Already Dr. Adlercreutz and Mark Whalqvist, MD, Chairman of the Department of Medicine at Monash University in Melbourne, Australia, offer a soy alternative to women who are reluctant to take ERT.

Dr. Margo N. Woods at Tufts is now conducting a study on soy and breast cancer in a group of 200 women. She will be studying levels of serum hormones, luteinizing hormones (LH), and follicle-stimulating hormones (FSH), and trying to correlate them with diary recorded hot flashes and night sweats.

No one knows if consuming large amounts of soy could prove harmful to humans; soy researchers typically respond that the Chinese and Japanese have no apparent problems. But fertility specialist Claude L. Hughes, Jr., PhD, MD, raises important questions. Associate Professor of Comparative Medicine and Obstetrics & Gynecology at Bowman-Gray School of Medicine of Wake Forest University (Winston-Salem, North Carolina), Hughes urges researchers to look at both risks and benefits, especially for humans and other animals in their early developmental stages. He "said he wouldn't be comfortable with his pregnant wife eating large amounts of soy. Nor would he want to expose a neonate [an infant less than 4 weeks old] to soy-based formula." Dr. Hughes sees puberty as another opportunity for research. He is feeding soy to peripubertal male and female monkeys to see if it "perturbs the events of puberty from a reproductive/endocrine point of view."

"After puberty, except when a woman is trying to conceive, he said he expects that soy will prove to be a good addition to Western diets and possibly chemopreventive for breast and prostate cancers."

Photos show Dr. Kenneth D.R. Setchell, Dr. Margo N. Woods, and Dr. Claude L. Hughes.

6832. Slavin, Joanne L. 1995. Health benefits of soy fiber: A quick taste. *Soy Connection* (*The*) (*Chesterfield, Missouri–United Soybean Board*) 3(2):1, 4. Spring. [9 ref]

• ***Summary:*** The insoluble dietary fiber content in ½ cup of various soyfoods is as follows: Soybeans (raw/uncooked) 12.0 gm, soymeal [soy flour] 7.0 gm, miso 3.9 gm, soymilk 1.3 gm, tofu (raw) 0.6 gm.

Soy fiber is also isolated and used as a food additive. Different companies produce various types of soy fiber, but most of the published research is on soy polysaccharide, which contains 75% total dietary fiber (TDF) including a mixture of cellulosic and noncellulosic structural components of the internal cell wall. Soy polysaccharide is mostly insoluble dietary fiber, but clinical studies have shown it has properties of both insoluble and soluble dietary fiber. Soy polysaccharides, like other insoluble fibers, increases stool weight.

There is considerable evidence that intake of fiber-rich foods is inversely related to risk of cancers in the colon and rectum. It is estimated that the risk of colorectal cancer could be reduced by about 31% if fiber intake were increased by 13 gm/day.

"Dietary fiber has also been shown to be effective in lowering serum cholesterol. It may decrease risk of coronary heart disease by decreasing serum lipids, lowering blood pressure, improving glucose metabolism, and aiding weight maintenance. Soluble fibers appear most effective in lowering serum cholesterol" but they are only effective in subjects with elevated cholesterol levels.

"Potential negative effects of dietary fiber include lower absorption of vitamins, minerals protein and calories. It is unlikely that healthy adults who consume fiber amounts within the recommended ranges will have problems with nutrient absorption."

"Soy fiber appears to be extremely fermentable in human subjects, with 93% of the dietary fiber as soy polysaccharide being fermented... Fermentation of dietary fiber produces gas and short chain fatty acids, one of which, butyrate, appears to play an important role in cancer prevention."

"Compared with other fiber sources available as supplements for food, soy fiber provides a range of positive functional, nutritional, and physiological effects. Soluble fibers, such as gums and pectins, lower serum cholesterol but are difficult to incorporate into foods and are not palatable. Insoluble fibers, such as wheat bran or cellulose, are effective in the prevention and treatment of constipation, but are difficult to consume on a long term basis. Soy polysaccharide has found wide acceptance as a supplemental fiber source and is added to hospital nutrition products, breads, and other baked products, including muffins, cookies, and crackers." Address: Prof., Dep. of Food Science and Nutrition, Univ. of Minnesota, St. Paul, MN.

6833. Walker, Morton. 1995. Concentrated soybean phytochemicals. *Healthy & Natural Journal* 2(2):58-60. April. [12 ref]

• ***Summary:*** Contents: Introduction (Designer Foods Symposium III). Cancer inhibitors in soybeans. Prostate cancer cured by fermented soybean drink (Haelan 851). The therapeutic characteristics of Haelan 851. Note: The address, phone number, and fax number of Haelan Products Inc. in Metairie, Louisiana, is given.

Soybeans contain five different types of anti-cancer agents: protease inhibitors, phytate, phytosterols, saponins, and isoflavones. The latter are plant estrogens with strong inhibiting effects in hormone-related malignancies such as prostate, ovarian, cervical, and breast cancers. Isoflavones are found in a variety of soy foods, including soy milk, tofu, tempeh, miso, textured vegetable protein, soy flour, soy nuts, and soybeans. "The isoflavone component which most excites the medical research community is genistein. It's an overpowering suppressor of the oncogene enzymes that ordinarily stimulate pathological cell growth." Address: Medical Journalist, 484 High Ridge Road, Stamford, Connecticut 06905-3020.

6834. Demos, Steve. 1995. New developments at White Wave (Interview). *SoyaScan Notes.* May 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Steve is planning to introduce soymilk in a gable-top carton. He has been able to get a 90-day shelf life at dairy storage temperatures. He has the product, which has passed many taste tests. His problem is finding a maker

of soy base. He is working closely with Ted Nordquist in California and has visited Ted's house. None of the companies who make soy base in Tetra Pak are willing to cooperate. Steve tried to work with Pacific Foods of Oregon but they backed out. He has the money to build a state of the art soymilk factory but first he has to prove that the market exists for soymilk in a gable-top carton. He has to run a 5-month test in one major urban market. He would sell this soymilk in supermarkets as part of his shelf set which is on the edge of the dairy section. White Wave is the only soyfoods company with nationwide refrigerated distribution.

White Wave has just purchased Meat of Wheat, and hired Mark Machlis.

White Wave has just completed a $100,000 market study on how consumers view vegetarian foods, meat alternatives, etc. The idea for the study came from Ken Vickerstaff (vice president of sales; he came out of General Foods, Celestial Seasonings) and the results were extremely revealing. Steve was surprised to learn what the word "vegetarian" means to typical consumers. The two terms "meat analogs" and "meat alternatives" are both "off target." Steve took off much of last year (working 30-35 hours a week), involved in this study, gardening, flower arranging, and looking for good ideas. He sat behind a glass wall and watched consumer panels answer questions and taste products for over 2 weeks. They brought in random people (called out of the phone book) who had a proclivity for this kind of life style. He wants White Wave to be the company most closely associated with vegetarianism in America. White Wave now has annual sales of $6-7 million, trying to get to $12 million. "We know that we can do that in the natural foods business, but that's not the game. We're missing the game. We wanted to find out what the game really is, and out was a real eye-popper to find out. What Wave has been able to redefine strategically where they are going and how they are going to get there." The information acquired during the study will be come very apparent as White Wave applies it. "We are a vegetarian company and we always will be. We want to define vegetarianism. Our strategy is to make the word 'vegetarian' and White Wave synonymous. We want people think of White Wave when they think of vegetarianism."

Americans are reducing their use of red meat. So 1-3 meals in the normal family meal rotation are up for grabs. People don't know what to put in place of that red meat.

White Wave is now contracting with Jonathan Gordon from England; he wrote his PhD thesis on acidified soy curd (related to tofu) for use in tropical climates. He is currently the international ingredients specialist for Kraft Foods in Memphis, Tennessee. Steve is hiring him this summer as White Wave's operations director. He will start work in about September, and his first project will be to develop some new soy yogurts. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

6835. Kwok, Shirley. 1995. Vitasoy inventor Lo dies aged 85. *South China Morning Post* (*Hong Kong*)**.** May 8. News section. p. 3. Ed. 2.
• ***Summary:*** "Industrialist Dr Lo Kwee-seong, inventor of one of the territory's most popular soft drinks and an avid art collector, has died aged 85. Lo died peacefully on Friday in Queen Mary Hospital. He established Vitasoy in 1940 at a time when diseases caused by malnutrition were widespread in the territory. He aimed to produce a cheap, nutritious, high-protein soyabean milk drink. The product was first sold just before the outbreak of World War II. Today, Vitasoy not only produces soyabean milk but many other soft drinks. Lo resigned from Vitasoy International Holdings last year.

"Besides being a successful businessman, he was an avid collector of Chinese art, donating many classical pieces to public collections. He also gave money to help develop educational facilities to support China's modernisation, served in many community posts, and was a member of the Urban Council and Legislative Council, chairman of the Consumer Council and a member of the 1983 Chinese People's Political Consultative Conference. He is survived by his wife, Elizabeth Lo Shing."

6836. Pratt, Steven. 1995. Copy cows: Soy- and rice-based drinks stand in for milk, but with nutritional consequences. *Chicago Tribune.* May 10. p. 3.
• ***Summary:*** Discusses and gives comments on Rice Dream, Naturally Tofu (Sovex), EdenSoy Extra, and Almond Mylk. Address: Tribune Staff Writer.

6837. Carrasquillo, Fausto. 1995. New developments with soyfoods in Puerto Rico (Interview). *SoyaScan Notes.* May 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Two years ago Fausto sold his natural foods distribution company named *Nuevas Comidas* to a regular food distributor named *Productos de Nutricion,* which is located in a suburb of San Juan (Carretera 876, Km. 4.3, Barrio Las Cuevas, Trujillo Arto, Puerto Rico 00758). Now they want to make tofu and soymilk, and Fausto is working with them to make this happen. He is presently importing tofu and soy cheese from White Wave, but the cost of importing is expensive. Fausto would also like to grow soybeans in Puerto Rico and sell them as green vegetable soybeans. Address: Puerto Rico.

6838. Feldman, Nick. 1995. New developments at Nutrisoya (Interview). *SoyaScan Notes.* May 16. Conducted by William Shurtleff of Soyfoods Center. [Eng]
• ***Summary:*** Giles Goulet is no longer president of Nutrisoya. In Oct. 1993, he sold his shares to Nick Feldman and one other person, then he (Giles) left the company in Aug/Sept. 1994. Nick is the new president. As soon as Mr. Goulet was out of the company, it started doing very well,

and it is still doing well. Mr. Goulet had big ideas but they were not feasible. He did not know the market and was not skilled at marketing.

Nutrisoya got its company name from a brand name owned by Victor Food Products, Ltd. in Scarborough, Ontario. "We had our lawyers take care of that." But Nutrisoya did not buy the company Victor Food Products.

Nutrisoya built its own soymilk plant using components from various sources, including many pieces made by Alfa-Laval. "If you have the right engineers who know something about making good-tasting soymilk, with a few modifications, we have been able to make a soymilk with no beany flavor."

Nutrisoya has never had a Tetra-Brik machine in house; they have their soymilk products packaged in Tetra-Brik cartons by a very large co-packer in Canada. Nutrisoya's competition in soymilk comes largely from Edensoy and from Pacific Foods "which now has a 3rd generation Tetra Pak machine, with the re-cap capability, though supposedly they have not yet perfected the technology." Nutrisoya is the biggest soymilk manufacturer in Canada, with little competition in soymilk from other Canadian companies.

Soymilk products: They no longer make Chocoya; even though it is a great product, it was marketed incorrectly, more like a dairy milk. Since the word "Soya" did not appear on the front panel, consumers often thought it was a dairy milk and so they were not willing to pay a little more for it. It was sold on the shelf in Quebec next to a dairy milk named Chocayo, which retailed for $0.30 less per 3-pack. He plans to introduce it again some time. Nutrisoya still makes their Natura (pronounced nah-TUR-uh) line of soymilks in strawberry, vanilla, and original flavors, in aseptic Tetra Brik cartons. Nick has a brand new soymilk product named Nutrisoy that he is ready to launch in 1 liter Tetra Brik cartons. "We've been working on it for quite a while. I just have to press a button and it will be out in 2½-3 weeks. It has the exact same ingredients as Edensoy, except it is lower in fat, and has a more neutral taste and a better nutritional profile. The Nutrisoy line, which will start with vanilla and original flavors, will probably end up replacing the Natura line." Nick would ideally like to package the new line in re-cap Tetra Brik cartons like Pacific does, but that package is not available to him. "I'm a little bit scared to invest a lot of money in a product and its packaging that is going to be competing against other products that have more advanced packaging," the re-cap pack. So Nick hasn't decided when, or even if, he will "press the button." The big question is this: What percentage of consumers, who are less cost conscious, are willing to pay about 20% more at retail for the re-cap pack. Bill suggests that Nick contact Tetra Pak and ask to see their market research on this question. Most of Tetra Pak's film for all of North American is made at a plant in Aurora, Ontario (near Toronto). A plant in Denton, Texas, specializes in the new re-cap packaging. The Natura soymilk line is made more for the supermarkets in Quebec, which sell 10-15% of the total volume. In British Columbia a lot of soymilk is sold in supermarkets. Nick feels his new-formula Nutrisoy soymilk will give him a big advantage over Edensoy. Eden has to pay a 5% duty on soymilk shipped into Canada, plus large transport costs. So a Canadian distributor receives Edensoy at $19 a case, versus only $13 a case (32% less) for Nutrisoy. Nick is concerned that Edensoy is coming out in a re-cap package.

Tofu: Nutrisoya is the largest tofu manufacturer in Eastern Canada, but Sunrise is the largest tofu maker in all of Canada. They now makes 3 types of tofu, all curded with magnesium chloride and extra firm in texture: Natural, Fine Herbs (*Fines Herbes*) and Pimento & Onion (*Piment-Oignon*). The two flavored products were introduced in about 1990. They do not make an almond tofu. They package all their tofu products with a $120,000 Multivac vacuum packaging machine that they own. He likes vacuum packing; Nutrisoya sells a lot of their tofu to supermarkets, and this packaging seems to give a longer shelf life and a neater package. He also plans to buy a water-pack machine.

Nutrisoya makes most of its money from its tofu products; the competition in the soymilk market from Eden Foods and Pacific Foods (who Nick believes is dumping product in Canada) leads to low profit margins. Plans for new tofu products: Nick would like to introduce soft tofu curded with calcium sulfate. Most Caucasian Canadians now buy tofu curded with magnesium chloride (nigari); it is now a $1.4 million market. Note: Most of the tofu sold in the USA is curded with calcium sulfate because it is a good source of calcium, and is less expensive and much easier to make. Address: President, Nutrisoya Inc., 4050 Pinard, St.-Hyacinthe, QUE, J2S 8K4, Canada. Phone: 514-796-4261.

6839. Akintayo, Issaya. 1995. Re: Introduction of soybeans to Chad. Letter to William Shurtleff at Soyfoods Center, May 22. 3 p. Typed, with signature.

• ***Summary:*** "Joyce Lombardi sent me your correspondence on the subject of the cultivation and utilization of soya in Chad. The soybean was introduced to Chad in about the year 1975. It was cultivated on an experimental basis at the CFPA (*Centre de Formation Professionelle Agricole*). Unfortunately its popularization did not last long, because those who introduced the soybean did not show the population the different possible uses of this miracle plant. The only way of using soybeans that the population knows is as dawa dawa, called "Ndi" here in Chad.

"After my arrival in Chad in 1992 the soybean was given a second chance to succeed. In effect, having noted the very high level of malnutrition in the country, and above all among the infants and children, I conducted a program of educating the population by showing them how they could make a line of products from soya such as milk, yogurt, cheese, cakes, biscuits, bread, pizza, patés, *sojatine*

(soya coffee, for which I coined the name, and which name everyone now uses), and weaning foods based on soy flour.

"For example, roasted soybeans + maize/corn flour + sweet potato flour gives a mixture of flours, which I called 'Maïpaso.' I introduced it to people via several expositions of soy-based menus, through demonstration shops that processed soya, and gifts of soya to hospitals to aid malnourished infants and children.

"In terms of agronomy, I have introduced several soybean varieties from Nigeria (IITA), Senegal, Togo, etc. These introductions were made to identify early maturing varieties that could be used to extend soybean cultivation into several ecological zones within Chad. These varietal studies are still in progress.

"In terms of education, during 1994 I educated more than 400 people. The demands for education are great but unfortunately we do not have the budget to realize them. Presently the population has taken an interest in the utilization of soya. Certain groups are taking charge of educational materials and are asking for my help to teach them how to make the different menus. Periodically I give interviews which are broadcast widely via rural radio and the written press. Copies of some articles are enclosed. At the end of last year I wrote and had published a 40-page color document titled 'Soya, how to cultivate and use it' which also contained recipes.

"After this summary, I will try to answer your questions: 1. There was no written documentation on soybean cultivation and use in Chad [Tchad] before the publication of my book at the end of last year. 2. Soybean was introduced to Chad during the late 1970s. 3. The origin of the soybean presently cultivated in Chad is not documented. It may have come from Nigeria. The variety name is not known either. 4. The average yield is about 800 kg/ha. 5. The total area cultivated is not known because nobody was working with this crop until my arrival in this country. It is only now that its cultivation is gaining momentum. Now everybody wants to cultivate soybean. It became the crop of the year."

Accompanying this letter are four excellent color photos which show: (1) A Chadian woman pounding soybeans using a wooden mortar and pestle. She is surrounded by other women, all dressed in traditional colorful clothing, and taking part in an educational workshop. The pounded soybeans will be used to make soymilk and other soy products. (2) A Chadian man holding a bag containing long loaves of soy-fortified bread (baguettes). "This product is greatly appreciated by the local population."

(3) A Chadian mother hand-weeding a field of soybean plants. Her baby is sleeping on her back; both are dressed in traditional clothing. (4) A Chadian woman seated othe porch of her home in Sarh pressing the soymilk out of a bag of pounded soybeans mixed with water. In front of her are a wooden mortar and pestle.

Note: This document contains the earliest date seen for

soybeans in Chad, or the cultivation of soybeans in Chad (about 1975). The source of these soybeans is unknown. Address: PhD, UNDP Project Advisor, Box 9, Sarh, Chad. Phone: +235 68-12-43 Fax: (235) 68-1309.

6840. Irvine, Cliff; Fitzpatrick, Mike; Robertson, Iain; Woodhams, David. 1995. The potential adverse effects of soybean phytoestrogens in infant feeding (Letter to the editor). *New Zealand Medical Journal* 108(1000):208-09. May 24. [10 ref]

• ***Summary:*** This letter (with 10 references) is a call, by experts in the field, to ban soy-based infant formula in New Zealand.

6841. Roberts, Rosemary. 1995. Leading scientist backs call to ban soy baby food. *Northern Advocate* (*Whangarei, New Zealand*). May 25.

• ***Summary:*** "One of New Zealand's foremost scientists has thrown his weight behind a campaign to halt sales of soybean-based infant formulas.

"In a letter published in the *New Zealand Medical Journal* today, Professor Cliff Irvine, of Lincoln University, has joined three fellow scientists in calling for general sales of soy-based infant formulas to be stopped.

"The letter reopens the debate over the content of soy-based infant formulas."

"In today's issue of the Medical Journal, Mr. Irvine, who holds three doctorates, Iain Robertson, PhD, toxicologist at the Auckland University Medical School, David Woodhams, PhD, a food process consultant, and Mike Fitzpatrick, PhD, the environmental consultant who produced the James' report, have called on the Ministry of Health to stop sales. But despite their concerns the Ministry, which has been gathering information on the subject, says all soy products, including infant formulas, will stay on the market."

• ***Summary:*** This article also appears in *Sunday Times* 6 July. Address: Whangarei.

6843. Wan, Helen. 1995. Brief history of Les Aliments Tarasoy Ltée in Brossard, Quebec (Interview). *SoyaScan Notes.* May 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This company was founded in Dec. 1986 by her brothers, who are Chinese-Canadians and who own shares–but it is not just a family business since other people also own shares. Her brother, Billy Chin, is the president and one of the main founders. Helen has been employed by the company since the beginning as sales manager; she was born in Canada, and educated in English-speaking schools, though she also speaks French. The name of the company, Tarasoy, is derived from the name of a person they know, to which they added the word "soy." The company's first products were introduced in the spring of 1987. These included: SoftShakes (a soya drink in chocolate and vanilla flavors, and in single serving sizes), Regular Tofu (*Tofu Nature*), Herb Tofu (*Tofu Fines Herbes*), and Tofu with Dehydrated Vegetables (*Tofu au Legumes*)**.** Their tofu products are all sold in 450 gm vacuum packs. The vacuum packaging gives a longer shelf life. Regular (plain) tofu is now the company's number 2 best-selling product.

In 1988 they introduced *Soyolait,* a 1-liter soya drink that is presently the company's best-selling product and also the best-selling fresh soymilk in Quebec. It is sold fresh in Pure-Pak cartons, and has a remarkable 21-day shelf life at 3ºC. The product is made and packaged entirely at their plant. It is sweetened with barley malt extract and sold only in Quebec, and mostly at natural food stores. It is consumed by Caucasian-Canadians rather than by Chinese-Canadians (who prefer a sugar-sweetened product). Soyolait is less expensive than Edensoy, since the packaging is less expensive. Many other Chinese companies in Canada make fresh sugar-sweetened soya drinks, sold in plastic bottles. At about the time Soyolait was launched, SoftShakes was discontinued; It had limited appeal as a single portion novelty drink, whereas Soyolait came in a larger carton and was more versatile, since it could be used for cooking, baking, etc.

In 1993 the company launched *MagiSoy,* a soy cheese, that they make in-house; it melts.

In Nov. 1994 they introduced *Rizoleil,* a rice drink–which is the company's only product not made from soy. Helen does not know whether the rice drink is made with the traditional koji fermentation process or with enzymes. It is sold fresh, packaged in 1-liter Pure-Pak cartons, with a remarkable 20-day shelf life.

One of the major focuses of the company is selling fresh products. This requires that they distribute all their own products. They have excellent quality control. Most of their products are sold in natural- and health food stores, and very little in Oriental food stores. The company has about 20 employees (both Chinese- and Caucasian-Canadians), but they keep a low profile. They have very good people in their research and development department, which is why they have interesting fresh products with a log shelf life.

They are always developing new products which they plan to introduce within the next 6 months, but information on these is confidential until the products are launched. Helen does not have a brochure about the company or its products. Several years ago a French-language article about the company was published. Address: Sales Manager, Les Aliments Tarasoy Ltée (Tarasoy Foods Ltd.), 3455 Local D rue Isabelle, Brossard, QUE J4Y 2R2, Canada. Phone: 514-659-6586.

6844. *New York Times.* 1995. Make it 'Borough of restaurants': In Queens, culinary homes for all. May 28. p. CY12.
• ***Summary:*** Contains summaries of previous reviews of the Golden Monkey and the Taipei Wall Sea Street Taiwanese Restaurant, described in detail by Ruth Reichl in the Feb. 24 issue of this newspaper (p. C24). Mentions "fermented bean curd."

In addition, there is a summary review of Penang Cuisine Malaysia which includes "Penang rojak, a refreshing peppery salad of cucumber, jicama, pineapple, zucchini and tofu enhanced by a pungent fermented shrimp paste, and tofu stuffed with ground fish and served in a spicy coconut milk and bitter melon sauce." Also: "Whole fried pompano in black bean sauce."

6845. Lazzaro, Don. 1995. New developments with soymilk in Australia (Interview). *SoyaScan Notes.* May 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Pureharvest has, for some time, been buying its soymilk from Australian Natural Foods (ANF), but recently the quality of this soymilk has been very inconsistent, and often unacceptable. Berryvale Orchards is Australia's largest manufacturer of fruit juices–a huge company. In about 1988-89, after Sanitarium Foods launched So Good, a small distributor in Victoria approached Berryvale and offered to sell them the technology and know how to make soymilk from whole soybeans. Unfortunately this little fellow didn't know how to make soymilk, so Berryvale's initial products were of very poor quality. Recently they have installed a rather low-cost soymilk plant and Don has switched to using them as his source of soymilk. But the quality is still not as good as he would like. Address: Pureharvest, 15 Ardena Ct., East Bentleigh, Victoria 3166 Melbourne, Australia.

6846. *SoyaScan Notes.* 1995. Dr. Chungs Food Co. Ltd. USA (Overview). May 30. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** In the '94 Soya Bluebook is a listing for this famous Korean soymilk manufacturer at 960 Massachusetts Ave., Boston, Massachusetts 02118. Phone: 617-427-1507. Contact Rob Martel, Sales Manager. They may be planning to make soymilk in North America and it is said that they have a co-packing contract with Pacific Foods of Oregon. They are now constructing a soymilk plant in Australia.

6847. Allen, Andrea Horwich. 1995. Can isoflavones give soy mainstream acceptance? *Food Product Design.* May. p. 20-21.
• ***Summary:*** Researchers now believe that a family of phytochemicals present in soy, called isoflavones, may actually reduce the risk of atherosclerosis by preventing the formation of plaque on artery walls. One isoflavone, genistein, which is present only in soy, also fights cancer by inhibiting the growth of cancer cells. Genistein appears to mimic the effects of estrogen so that the body produces less of that hormone, thus reducing the risk of estrogen-dependent cancers, especially breast cancer. One study of Japanese men suggests that those who eat a diet high in soy protein have a lower incidence of prostate cancer.

Representatives from Morinaga Nutritional Foods, Westbrae, and Pillsbury Green Giant are trying to take advantage of the new discoveries by educating their customers. The FDA seems unlikely to be ready to approve a soy-related health claim such as "Includes your daily intake of soy." ADM, who makes the Green Giant frozen burgers, is said to retain Mark Messina, PhD, as a consultant. A large photo shows a carton of WestSoy Low Fat Soy Drink (Vanilla). Address: Assoc. Editor.

6848. Aseptic Resources, Inc. 1995. Aseptic packaging in the United States. West Chester, Pennsylvania: Packaging Strategies, Inc. iii + 96 p. 28 cm in 3-ring binder. *
• ***Summary:*** This multi-client report is the industry's most comprehensive market study and census. There is no special section on "soy" beverages, but section 7 is titled "Aseptic fillers for low-acid foods." As of May 1995 there are 465 aseptic fillers installed in the USA; of these 131 are low-acid aseptic fillers (28% of the total). The leading filler manufacturer is Tetra Pak (132, or 28.3% of the total), followed by Scholle (88), Fran Rica Bag (45), Combibloc (42), and Dole (34). Address: Overland Park, Kansas.

6849. *Bluebook Update* (*Bar Harbor, Maine*). 1995. ProSoya forms Soyfood Alliance: Canadian dairies and soymilk supplier agree to work together. 2(2):1, 4. April/June.
• ***Summary:*** This agreement, now known as the "Soyfood Alliance," was signed by ProSoya, Inc. of Ottawa, Canada, and three Canadian dairy processors–Neilson Dairy, Fieldfresh Farms, and Gelato Fresco. It is seen as the first step in an effort, assisted by the Canadian government, to bring high quality, fresh soymilk products to the North American market. Emphasis is on the word "fresh."

To take advantage of equipment already available in the dairies, fresh soymilk is being pasteurized in traditional "gable-top" dairy cartons rather than Tetra Brik cartons. This can save the processor 30-50% in packaging costs. It is hoped that the product will retail for just slightly more than cow's milk.

Currently Neilson and Fieldfresh are producing flavored organic soymilk, while Gelato Fresco is making soy-based frozen desserts.

A photo shows members of the Soyfood Alliance: Tom Reynolds, Alliance Coordinator; Peter Warmels, General Manager of Fieldfresh; Ralph Goodale, Canadian Minister of Agriculture; Melvin Hart, President of Gelato Fresco; Walter Parsons, Sr., Vice President of Neilson Dairy; Frank Daller, President of ProSoya Inc.

Talk with Raj Gupta of ProSoya. 1995. June 6. These companies are now developing and test marketing products containing ProSoya soymilk. Raj expects commercial products to be available by August or September 1995.

6850. *Bluebook Update* (*Bar Harbor, Maine*). 1995. UK Soya Milk Alliance petitions EU. 2(2):3. April/June.
• ***Summary:*** Three leading soymilk manufacturers in the UK (Vandemoortele (UK) Ltd., Haldane Foods Group, and Plamil Foods Ltd.), have formed the Soya Milk Alliance in order to petition the European Union (EU) to accept the term "soya milk." This decision followed a ruling on 16 June 1994 by the EU Milk Management Committee that the term "soya milk" could not be used on soymilk packages in the UK or Europe. The basis of the Committee's decision is EC Regulation 1898/87 of July 2, 1987, which states that the term "milk" is prohibited from use when the food does not contain any dairy ingredient. However the UK government has repeatedly drawn the Commission's attention to clause 3.1 which grants exemptions for foods "the exact nature of which is clear from traditional usage."

The campaign to save the term "soya milk" has gained considerable momentum as 23 ministers have already signed a petition addressed to the Commission. According to the Alliance, many more ministers have agreed to sign the petition.

6851. **Product Name:** Carnation Follow-Up Soy: Formula for babies 12 months & older eating cereal & other baby foods–Iron fortified. Powder.
Manufacturer's Name: Carnation Nutritional Products Div., Nestlé Food Company.
Manufacturer's Address: Made in Au Claire, Wisconsin. Corporate headquarters: Glendale, CA 91203. Phone: 1-800-543-3112.

Date of Introduction: 1995. May.
Ingredients: Maltodextrin (potato), soy oil, soy protein isolate, sucrose, minerals (calcium phosphate, potassium chloride, potassium citrate, calcium carbonate, calcium citrate, magnesium phosphate, sodium chloride, magnesium chloride, ferrous sulfate, zinc sulfate, copper sulfate, potassium iodide, sodium selenite), soy lecithin, vitamins (ascorbic acid, choline bitartrate, inositol, alpha-tocopheryl acetate, niacinamide, calcium pantothenate, thiamine hydrochloride, vitamin A palmitate, riboflavin, pyridoxine hydrochloride, folic acid, biotin, phytonadione, vitamin D-3, vitamin B-12), L-methionine, taurine, L-carnitine.
Wt/Vol., Packaging, Price: 14 oz (396 gm) steel can. Retails for $6.99 (10/95, Safeway supermarket, Lafayette, California).
How Stored: Shelf stable.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1995. Oct. 24. Can is 4.75 inches high and 4 inches in diameter. Paper label. Red, blue, yellow, and green on white. Illustration of three wooden ducks on front panel. "Carnation Follow-Up is not intended to take the place of breast feeding. It is intended to replace traditional starter formula when your baby is eating cereal and other baby foods. Caution: If you suspect your baby is prone to allergy, consult your pediatrician." "See inside label for Spanish instructions."

Talk with Brenda at Carnation's toll-free number. In May 1995 Carnation purchased Mt. Vernon Foods (Mt. Vernon, Ohio), which made i-Soyalac and Soyalac. The product names were changed to Alsoy and Follup-Soy in May 1995, but both of these products are made from isolated soy protein; whole soybeans are not used as they were in Soyalac. These are Carnation's first two soy-based infant formulas. Carnation Good Start was on the market in 1988, but it was not soy-based. Follow-Up Soy comes only in powder form in a 14 ounce can. Some amount of these products are made at Carnation's main plant in Au Claire, Wisconsin, and the remainder is made at other plants in the USA whose addresses are confidential.

6852. **Product Name:** Carnation Alsoy: Soy formula for milk-free feeding during baby's first year. Iron fortified. Concentrate liquid–Add water.
Manufacturer's Name: Carnation Nutritional Products Div., Nestlé Food Company.
Manufacturer's Address: Made in Au Claire, Wisconsin. Corporate headquarters: Glendale, CA 91203. Phone: 1-800-543-3112.
Date of Introduction: 1995. May.
Ingredients: 14 oz concentrate: Water, sucrose, soy oil, soy protein isolate, tapioca dextrin, minerals (calcium phosphate, potassium citrate, calcium citrate, potassium chloride, calcium carbonate, magnesium phosphate, sodium chloride, magnesium chloride, ferrous sulfate, zinc sulfate, copper sulfate, potassium iodide, sodium selenite), soy lecithin, vitamins (ascorbic acid, choline bitartrate, inositol, alpha-tocopheryl acetate, niacinamide, calcium pantothenate, thiamine hydrochloride, vitamin A palmitate, riboflavin, pyridoxine hydrochloride, folic acid, biotin, phytonadione, vitamin D-3, vitamin B-12), L-methionine, taurine, L-carnitine, calcium carrageenan.
Wt/Vol., Packaging, Price: 14 fl oz (384 ml) steel can. Retails for $1.99 (10/95, Safeway supermarket, Lafayette, California). 32 oz can ready to feed, and a 14 oz can of powder.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label purchased at Safeway supermarket in Lafayette, California. 1995. Oct. 24. Can is 4 inches high and 3 inches in diameter. Paper label. Red, blue, yellow, and green on white fading into light blue. Illustration of three wooden rabbits on front panel. "Use as instructed by your physician. Breast milk is the preferred feeding for infants. Before deciding to use an infant formula, consult your doctor for advice. Caution: If you suspect your baby is prone to allergy, consult your pediatrician." "See inside label for Spanish instructions."

Talk with Brenda at Carnation's toll-free number. In May 1995 Carnation purchased Mt. Vernon Foods (Mt. Vernon, Ohio), which made i-Soyalac and Soyalac. The product names were changed to Alsoy and Follup-Soy in May 1995. These are Carnation's first two soy-based infant formulas. Alsoy is sold in a 13 fl oz concentrate can, a 32 oz can ready to feed, and a 14 oz can of powder. Some amount of these products are made at Carnation's main plant in Au Claire, Wisconsin, and the remainder is made at other plants in the USA whose addresses are confidential.

Call to Nutricia–Loma Linda Foods in Mt. Vernon, Ohio. 1995. Oct. 30. A message at this number says: "Hello. You have reached the Mt. Vernon Foods Facility, which has recently been closed. The Alsoy product line is being produced at another Nestle facility. If you are a consumer and have questions regarding the product, please dial 1-800-932-5525. For all other enquiries, please dial #201 and leave a message."

Talk with David Polakowski or Mt. Vernon Chamber of Commerce. 1995. Oct. 30. The former Loma Linda soymilk plant is now standing empty. It is owned by Nestle, and the Area Development Council (ADC) is helping Nestle look for a buyer. Nestle purchased the property in Sept. 1994 from Mt. Vernon Foods. They made soymilk at the plant until July 1995, when they closed it. For more details call Tom Heine (president of the ADC and Chamber of Commerce) at this number of the Knox County Recorder (of deeds, 614-393-6755).

Talk with Phil Carlisle, manager of Loma Linda Market. 1995. Oct. 30. The former Loma Linda building is now standing empty, but a new company will be moving in soon. Nutricia bought the Loma Linda name and was using it for

the infant formula. They sold the food manufacturing end of the business to Worthington Foods. Recently Worthington re-acquired the name Loma Linda Foods, and they are making old Loma Linda products in Worthington, Ohio, under the name Loma Linda Foods. For a good history and details see the 1995 interview with David Geriguis of La Sierra University.

6853. Liu, Keshun; Orthoefer, Frank; Thompson, Keith. 1995. The case for food-grade soybean varieties. *INFORM* (*AOCS*) 6(5):593-96, 598-99. May. [10 ref]
• ***Summary:*** Contents: Introduction. Food beans vs. oil beans. Traditional soyfoods: Soymilk, tofu, toasted full-fat soy flour [kinako], soy sprouts, soy sauce, miso, tempeh, natto. Soy protein ingredients: Soy grits and flour, soy protein concentrates, soy protein isolates. Soyfood nutrition. Current size of food bean market. Breeding of food beans. Conclusions.

"Oil/meal beans include all the commonly produced soybeans." The oil is typically used for food and the meal for livestock feed. However the "new varieties of food soybeans" are generally exported to countries in East Asia for preparation of Oriental soyfoods. Table 3 compares the attributes of food beans vs. oil beans. Seed size: Large vs. small to large. Seed uniformity: High vs. no preference. Hull color: White-yellow vs. yellow. Hull quality: Thin, firm vs. no preference. Hilum color: Clear to buff vs. clear to blank. Protein content: High vs. medium to high. Oil content: Low to high vs. high. Cleanliness: U.S. Grade 1 or better vs. any grade. Major applications: Tofu, soymilk vs. oil, defatted meal.

In addition to their use in making traditional soyfoods, the "new food-grade varieties," especially those with high protein content, have been marketed for preparation of toasted full-fat soy flour, defatted soy flour, and soy protein concentrates and isolates.

Photos show: (1) Keshun Liu, Frank Orthoefer, and Keith Thompson. (2) Color and size comparison of soybeans for food use and those intended for crushing (color). The "food beans" are larger than the "oil beans."

Note: This is the earliest English-language document seen (July 2001) that contains the term "oil beans" or the term "oil/meal beans," both used in contrast to "food beans" or "food soybeans." This is also the earliest English-language document seen (July 2001) with the term "food-grade" (or "food grade") used in the title to refer to soybeans or soybean varieties. Address: 1. Project Leader, Soyfood Lab., Jacob Hartz Seed Co. Inc., 901 N. Park Ave., Stuttgart, Arkansas 72160; 2. Vice President for research and development, Riceland Foods Inc., P.O. Box 927, Stuttgart, AR 72160; 3. Vice president, International Soyfood Sales, Jacob Hartz Seed Co.

6854. Packaged Facts. 1995. The meat and dairy alternatives market. New York, NY: Packaged Facts. xii+ 162 + 42 + 6 p. May. 28 cm.
• ***Summary:*** In 1994 retail sales of these products reached an all-time high of $286 million, and these sales are projected to top $660 million in 1999. This very interesting report can be ordered from Packaged Facts, 625 Avenue of the Americas, New York, NY 10011. Phone: 212-627-3228. Price: $2,150. The authors were Sarah and Peter Starr, though their names do not appear in the report. The product director was David Lumis.

Contents: Part I: The products. Scope of the report (Vegetarian products sold as meat or dairy alternatives, products not covered), history of the industry (an emerging market, part of the vegetarian movement, soybeans–an ancient food of Asia, soybeans arrive in the new world in the 18th century, Kellogg family starts health foods industry, makes first meat analogs, Seventh-day Adventists and others produce tofu and meat alternatives in the 1920s, Henry Ford early proponent of soybeans, meat analogs commercially developed in the United States in the 1940s, non-dairy beverages, growth of "Americanized" meat and dairy analogs booming), product definition (foods used to replace meat or dairy products, description of ingredients–tofu, tempeh, soymilk, okara, soy protein concentrates and isolates, textured vegetable protein, wheat gluten and seitan), product categories (three main categories of meat and dairy alternative products, meat alternatives, dairy alternatives, prepared meals), government regulations (the FDA and FTC, NLEA labeling considerations {went into effect in May 1994, making the USA the world's first country to have mandatory nutrition labeling}, soy protein allowed in meat products without special labeling, bovine growth hormone), industry associations (the Soyfoods Association of America, the American Soybean Association, the Vegetarian Awareness Network).

Part II: The Market. Introduction (Retail sales of meat and dairy alternative products by category–1989-94–graph, retail sales of dairy alternatives products by segment–1989-94–graph), market size and growth (market is difficult to monitor, 1994 retail sales estimated at $286 million, dairy alternatives surpass $142 million, meat alternatives soar to $132 million, prepared meals grow steadily to over $12 million, estimated retail sales of meat and dairy alternative products by category–1989-1994–table, growth in milk substitutes segment leveling off but still in double digits, cheese alternatives segment also experiences slight slow-down in 1994, non-dairy desserts–a slow-growth segment, estimated retail sales of dairy alternative products by segment–1989-1994–table), factors in market growth–overall market (maturing population and interest in nutrition, new dietary guidelines, medical community accepts plant-based diet, studies show vegetarian diet equals a healthier–longer life, soy might help to prevent heart disease and cancer, consumers now approve of

vegetarian diets, increased demand for vegetarian foods, youth adopts meatless meals, exposure through foodservice, mass market begins to support meat and dairy alternatives, products in wider distribution, innovative new products, improved technology equals better taste, increased funding for soyfoods through foreign capital, pricing continues to limit market, image–taste and texture still a problem), factors in market growth–meat alternatives (concern about health hazards of meat, fat calories targeted by labeling law, an alternative to chicken and fish, ecological and social considerations will propel meatless meals, meatless meals difficult to handle by foodservice), factors in market growth–dairy alternatives (milk substitutes enter dairy case, awareness of lactose intolerance on the rise, taste profile limits acceptance, cheese alternatives–are they healthier?, projected retail sales of meat and dairy alternative products by category–1994-1999–graph {p. 34}, projected retail sales of dairy alternative products by segment–1994-1999–graph {p. 35}), projected market growth (overall market to reach $662 million in 1999, meat alternatives and prepared meals to lead growth, projected retail sales of meat and dairy alternative products by category–1994-1999–table, growth of milk substitutes and other dairy alternatives expected to slow somewhat by 1999, projected retail sales of dairy alternative products by segment–1994-1999–table), market composition (meat alternatives will outsell dairy alternatives, share of sales by product category–meat and dairy alternatives–graph, soy-based ingredients most frequently used in meat-like products, protein ingredients used in meat-like products by number of products made with ingredient–1990-1992–table, bulk of dairy alternative sales from milk substitutes, share of sales by product segment–1989 vs. 1994–graph, sales by retail outlet, share of sales by retail outlet–meat and dairy alternatives–1994–graph).

Part III: The marketers. The marketers (About 30 significant marketers–most small, major companies move into the market, meat alternatives–other mass-market players, meat alternatives–natural foods players, the leaders in milk substitutes, cheese alternative market leaders, the leaders in non-dairy desserts, prepared meals market leaders, selected marketers and brands of meat and dairy alternative products–chart), market and brand shares (mass-market leader Worthington Foods challenged by ADM/Pillsbury Green Giant Harvest Burger, wholesome and hearty growing fast, Boca Burger boogies by the Bystanders, marketer and brand shares of meat alternative products sold through supermarkets–1993 vs. 1994–table, natural foods sales of meat alternatives more fragmented, Worthington is leader in natural foods stores, White Wave and Lightlife hold second and third place, estimated marketer and brand shares of meat alternative products sold through natural foods stores–1994–table, many small regional players capture local markets, Eden Foods leads in milk substitutes, estimated marketer and brand shares of milk substitute products mass-market and natural foods stores–1994–table, Imagine Foods' Rice Dream is leading rice beverage, other vegetable beverages, Tree of Life's Soya Kaas holds leading share of cheese alternatives market, estimated marketer and brand shares of cheese alternative products sold through natural foods stores–1994–table, Tofutti holds top market share in frozen desserts, Fairmont Foods establishes lead in supermarkets, marketer and brand shares of prepared meals sold through supermarkets–1994–table, natural foods prepared meals–many brands and no one leader), competitive situation–overall market (marketers compete primarily through new product introductions, growth through mergers and acquisitions). Continued.

6855. Packaged Facts. 1995. The meat and dairy alternatives market (Continued–Document part II). New York, NY: Packaged Facts. xii+ 162 + 42 + 6 p. May. 28 cm.
• ***Summary:*** Contents: Continued from p. vi. Part III: The Marketers. Competitive situation–meat alternatives (Worthington pioneers Seventh-day Adventist vegetarian market, Miles Laboratories acquires Worthington–places Morningstar Farms in mass market, tofu drives natural foods market, soy frank marketers exploit tofu opportunities, tempeh–another meat alternative ingredient gains interest, wheat-based alternative seitan expands presence, Worthington places tofu patties in natural foods stores–changes hands again, Wholesome and Hearty develops foodservice distribution, meatless burger market heats up, patty competition fierce in natural foods arena, ADM/Pillsbury alliance brings soy burgers to mass market, Worthington fights back, category differentiates in the early 1990s, soy attacked by soy-free burger companies, meat alternative marketers cut the fat, low-fat sausages and franks, tightly targeted vegetarian fun foods and snacks, mass-market companies introduce ground meat analogs, natural product companies follow suit, Wholesome and Hearty seeks retail growth, others seek lucrative foodservice market), competitive situation–milk substitutes (early market limited to ethnic community, Edensoy a big hit–Vitasoy responds, new lines introduced, competition–domestic manufacturing and larger containers bring down soy beverage prices, flavors and packaging distinguish early products, Westbrae introduces first low-fat soymilk, fortification has become key selling point, Eden's fortified product suits strict vegetarians, new package sizes expand market, re-closable–easy to pour, rice beverages–line extensions grab shelf space, Wholesome and Hearty's almond beverage, 100% organic products, a fresh–new market–some products shift to dairy case, mass-market interest), competitive situation–cheese alternatives (Seventh-day Adventists start category, first natural foods cheese alternative, Soyarella, not dairy-free, handful of marketers compete on price in natural foods arena {Soya Kaas, TofuRella by Brightsong / Sharon's Finest, Cemac Foods, Galaxy Foods, White Wave}, new

products parallel dairy-based mass market, a move toward lower fat and fat-free, seeking the most melt-able cheese, Sharon's finest finds innovative ingredients, marketers target vegan market), competitive situation–non-dairy desserts (Tofutti dominates, dairy-free puddings–one major player {Imagine Foods sells a rice-based non-dairy pudding}, non-dairy yogurt has yet to catch on–but White Wave's Dairyless, a non-dairy soy yogurt, seems to be the only major natural foods brand in this category), competitive situation–prepared meals (flavored tofu and seitan expanded into meals, Legume is early innovator, cheese alternatives in prepared meals, other companies dive into prepared meals, action has been in natural foods, supermarket products have not succeeded), competitive profiles (The Archer Daniels Midland Co.–Grand Metropolitan PLC–Pillsbury division partnership, Amy's Kitchen Inc., A&A Amazing Foods Inc., Boca Burger Co.–Sun Foods, Eden Foods Inc., Fairmont Foods of Minnesota Inc., Fantastic Foods Inc., The Hain Food Group Inc., Imagine Foods Inc., Lightlife Foods Inc., Sharon's Finest, Tofutti Brands Inc., Vestro Natural Foods Inc., Vitasoy–USA Inc., White Wave Inc., Wholesome and Hearty Foods Inc., Worthington Foods Inc., Yves Veggie Cuisine Inc.), marketing trends (updated packaging, burger market segmenting into natural and mass market, Worthington–a master at working both markets, hamburger look-alikes crossing back into natural foods, veggie patties crossing into mass market, nostalgia–creating brand loyalty, marketers expanding into other categories, moving into the frozen breakfast section, retail displays, pushing into new distribution channels), new product trends (new–improved packaging, light and healthy, product names emphasize healthy, fat-reversal–mass-market burger-substitutes gaining fat, ground meat alternatives, new flavors and varieties–many gourmet and upscale, ethnic–especially Mexican and Southwestern, convenience, technology produces better mimics, mixing soy with grains and other ingredients, mainstreaming health foods, natural ingredients preferred–organic even better, selected new product introductions–meat and dairy alternatives–1994-March 1995–chart), advertising expenditures (most advertising not measured, specialty magazines are preferred medium, radio is another alternative, little consumer advertising, Worthington outspends competition, ADM-Pillsbury spends millions to launch Harvest Burger in 1994, Eden Foods targets mass market, Fantastic Foods' first major spending), advertising positioning (good health is overlying theme, and fat is prime concern, vegetables are a solution to a bad diet, milk substitutes advertised to lactose-intolerant market, highlighting a sense of the familiar, foods children love, traditional burger images used to woo mass market, vegetarian appeal used for meatless patties, organic is important feature in natural foods, examples of consumer advertising), consumer advertising (consumer promotions not heavily used, money-off coupons from several companies, new lines offer more generous rebates, recipes and books educate consumers, in-store promotions–the White Wave Center, marketers join forces in advertorial, sponsoring sports events–a healthy fit, 25 years of earth day, non-profit tie-ins, Turtle Island's recycling program, other types of promotions, examples of consumer promotions), trade advertising and promotions (three key trade publications, trade ads also used as consumer ads, trade ads scheduled to run in convention issues, trade ads announce growing business, editorial promotions, reaching retailers, example of trade ads). Continued.

6856. Packaged Facts. 1995. The meat and dairy alternatives market (Continued–Document part III). New York, NY: Packaged Facts. xii + 162 + 42 + 6 p. May. 28 cm.
• ***Summary:*** Contents: Continued from p. x. Continued Part IV: Distribution and retail. Distribution (Two distinct channels, mass-market products–warehouse delivery used most, natural foods products–independent distributors used most, distributors offer wide range of services, direct buying, several large distributors dominate health food channel, margins for the two channels differ, brokers support marketers' sales efforts, marketers' sales forces work with brokers), at the retail level–natural foods stores (the leading outlet–natural foods stores, soy-based products the heart and soul of natural foods store, products sold in several locations, stores adding refrigerator and freezer space, margins, product price comparison, meat alternatives–table, milk substitutes–table, cheese alternatives–table, frozen non-dairy desserts–table, prepared meals–table, in-store demos are top promotional activity, an increase in store advertising, examples of retail promotions), at the retail level–mass market (most products not in mass market, store placement of meat alternatives varies, store-within-a-store, increased selection and space, targeting the vegetarian consumer, margins, warehouse clubs, *Cergro* pricing data). Part V: The consumer. Consumer use–soyfoods (About 25 million U.S. adults use soyfoods, natural foods shoppers more likely to purchase soy products, demographics of meatless burger consumers, use by type–tofu and soy burger use most common, other types of soyfoods used by about 2% of consumers, types of soyfoods eaten five or more times in the past year–table), the vegetarian consumer (what is a vegetarian, 12-22 million vegetarians and growing, small number of strict vegans, meat restrictors–a broader target of 77 million, who are vegetarians, demographic characteristics of vegetarians–table), consumer attitudes (main reason for choosing vegetarian foods, most important reason for becoming a vegetarian–table, concern about health higher among semi-vegetarians, most important reason for choosing vegetarian foods–table, cholesterol-fat primary health concerns, primary health concern when becoming a vegetarian–table, grocery store shoppers more influenced by doctor's orders, health also key reason given

by restaurant diners, fat–salt–fiber and cholesterol top health concerns for meatless burger consumers, environment pollution tops list of other social concerns of vegetarians, vegetarians considered nutrition advisors, a slow transition to vegetarianism, attitudes about meat alternatives, room for improvement on taste, consumers have a positive image on soy, more interest in soymilk from natural foods shoppers). Appendix I: Examples of consumer and trade advertising and promotions [photocopies of ads]. Appendix II: Addresses of selected marketers.

Scope of the report: This is a study of vegetarian foods made to resemble meat and dairy products and sold at retail, mostly through supermarkets and health and natural food stores. These products include meatless burgers and luncheon slices, soymilk and rice milk, cheese alternatives, non-dairy desserts (usually non-dairy ice creams), and prepared vegetarian meals containing meat and dairy alternatives as major ingredients.

Products not covered: (1) Bulk and packaged tofu, unflavored tempeh–However products such as tofu- or tempeh burgers are covered. (2) Margarine, non-dairy creamer, non-dairy whip toppings, and egg substitutes. Although the first three of these categories are alternative to dairy products, they have become well accepted in the American diet and are not necessarily purchased by consumers wishing to avoid dairy products. "Also, the sheer size of these categories–each of which is many times larger than the overall meat and dairy alternatives market–would drastically skew the market numbers and trend information away from the products that are the focus of this report. For similar reasons, egg substitutes are also excluded."

6857. Packaged Facts. 1995. Retail sales of dairy alternative products by segment: 1989-1994 (in million dollars) (Document part). In: Packaged Facts. 1995. The Meat and Dairy Alternatives Market. New York, NY: Packaged Facts. 162 + 42 + 6 p. See p. 18. May. 28 cm.
• ***Summary:*** Sales of milk substitutes (mostly soy and rice milks, in million dollars) rose from $46.0 in 1989 to $72.0 in 1991 to $96.8 in 1993 and $108.4 in 1994.

Sales of cheese alternatives (in million dollars) rose from $12.0 in 1989 to $17.3 in 1991 to $25.0 in 1993 and $28.8 in 1994. The average annual sales growth for this period was 19.1%.

Sales of non-dairy desserts (in million dollars) rose from $4.0 in 1989 to $4.5 in 1991 to $5.0 in 1993 and $5.2 in 1994. The average annual sales growth for this period was 5.4%.

The combined sales of these three dairy alternative product categories (in million dollars) rose from $62.0 in 1989 to $93.8 in 1991 to $126.8 in 1993 and $142.4 in 1994. The average annual sales growth for this period was 18.2%.

Concerning the accuracy of these figures, page 19 notes that sales in these markets are difficult to quantify because a large share of retail dollar volume moves through natural foods stores, where sales are mostly untracked, and because various information sources define meat and dairy alternatives products differently. Therefore these "estimates are based on information provided by Soyatech, Inc., the Soyfoods Center, Information Resources, Inc., the natural foods trade, and various manufacturers."

A table (p. 53) shows estimated market shares of major manufacturers of milk substitute products sold through the mass-market and natural food stores in 1994: (1) Soymilk: Eden Foods (Edensoy) 48%. Vestro Foods (Westsoy, Westbrae) 30%. Vitasoy 12%. Pacific Foods of Oregon 7%. Other 3%. (2) Rice beverages: Imagine Foods (Rice Dream) 85%. Vestro Foods (Westbrae Rice) 10%. Eden Foods (Eden Rice) 5%. (3) Potato beverages: A&A Amazing Foods (Vegelicious) 100%. (4) Almond beverages: Wholesome & Hearty Foods (almondMylk) 100%.

A second table (p. 54) shows estimated market shares of major manufacturers and marketers of cheese alternatives sold through natural food stores in 1994: Tree of Life (Soya Kaas) 41.5%. Sharon's Finest 20.7%. Soyco Foods (Soyco, Soymage) 12.7%. Cemac Foods (Nu Tofu) 12.7%. Other 12.4%.

Pages 54-55 state that Tofutti commands about 80% of the frozen non-dairy dessert segment. The remaining 20% is controlled by Imagine Foods (frozen Rice Dream), Turtle Mountain (Sweet Nothings and Living Rightly), and The Hain Food Group (Farm Foods Ice Bean).

6858. The memorial service for Dr. Kwee-seong Lo, B.A., LL.D., O.B.E., C.B.E., J.P. 1995. Hong Kong. 6 p. 22 cm.
• ***Summary:*** This service was held at 4:00 p.m. on 11 May 1995 at St. John's Cathedral, Garden Road, Hong Kong. A nice portrait photo (p. 1) shows K.S. Lo, who lived 2 Feb. 1910 to 5 May 1995.

Obituary: "Dr. Kwee-seong Lo was born of Hakka descent in Meixian county in Guangdong province, China, on February 2, 1910. His father, Chin-hing Lo, took the family to live in Malaya when Kwee-seong was still young. Following his graduation from secondary school in 1929, Kwee-seong moved to Hong Kong to study Economics at the University of Hong Kong, from where he graduated [with a BA degree] in 1934.

"As war engulfed East Asia in the 1930's, causing much suffering among the Chinese population, Dr. Lo turned his attention to improving standards of health through the provision of nutritious of food at affordable prices. On a business trip to Shanghai in 1936, he attended a seminar entitled "Soya Bean–the Cow of China" non the nutritional value of the soya bean, which had been a major source of protein for the Chinese for more than 3,000 years. He knew this was the solution he had been looking for and, pooling all resources, he founded Hong Kong Soya Bean Products Company in 1940, the forerunner of today's Vitasoy

International Holdings, Ltd."

Discusses the history of the company, and joint ventures with China starting in 1979 with Kwang Ming Dairy Farm in Shenzhen. "This signified the first step in fulfilling Dr. Lo's ideal of "Nation Saving by Industry."

Though busy with his business, K.S. Lo made time for an active life of public service. In 1961 he was honoured as a Justice of the Peace (J.P.). In 1971 he was awarded the Officer Order of the British Empire (OBE), and in 1979 the Commander of the British Empire (CBE). In 1982 he was awarded an honorary doctorate of Law by the University of Hong Kong–thus becoming Dr. Lo. In 1994 he retired from the position of Chairman of Vitasoy International.

His many public, business, and personal contributions are then discussed. In 1986 his book titled *The Stonewares of Yixing* was published.

Dr. Lo has his early education in a Methodist School in Malaya where he had his first contact of Christianity. He was baptized in a church located at the Mount of Double Happiness, Lin County, Guangdong, during the period of Japanese occupation of Hong Kong. At that time, he had a very deep religious experience. In the last part of his journey on earth, he experienced the revival of his faith and consequently a renewal of his relationships with God and his family members. He therefore faced his destiny with peace and joy.

"Dr. K.S. Lo passed away peacefully in Queen Mary Hospital on 5th of May, 1995. Although he has now left us to sleep in the arms of God, Dr. Lo will not be forgotten. His achievements and his qualities live on and will be remembered by those whose lives he touched." Address: Hong Kong.

6859. Bontempi, Piero. 1995. Valsoia, Italy's leading soymilk manufacturer (Interview). *SoyaScan Notes.* June 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Valsoia was established in 1990 as a joint venture between Buton and Crivellaro. It is now an independent company that manufactures soymilk, soymilk products, and other soy products. It was sold to many shareholders in Aug. 1993 by Buton and Crivellaro, and the latter two companies now own none of the stock. The CEO is Dr. Lorenzo Sassoli de Bianchi. Valsoia now has a 73% share of the Italian soymilk market, which is 4 million liters/year. They now produce about 7,000 tonnes/year of all products. The technical director of soymilk production is Dr. Piero Bontempi, who has a PhD in chemistry, and a food background with CPC making jams, sauces, and fruit juices. Their soymilk plant was built using components from APV, Alfa-Laval, and Srau.

They have an very attractive portfolio showing their product line, with one glossy color sheet for each product. Address: Technical Director, Valsoia S.p.A., Via Iacopo Barozzi 4, 40126 Bologna, Italy. Phone: +39 051-659-9900.

6860. Lazzaro, Don. 1995. History and current status of soymilk in Australia (Interview). *SoyaScan Notes.* June 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ceres Natural Foods is their holding company and Pureharvest is their trading name. They made this name change in 1982 since they found the word Ceres was difficult for many people to pronounce. The first soymilk they imported to Australia was made by Saniku in Japan and imported from Mitoku.

Don is interested in macrobiotics. In early 1979 he took over the running of a small macrobiotic and natural foods retail store in Melbourne named Ceres Wholefoods. The only way he could make it viable was to try to buy at better prices, so in April 1979 he started a wholesale and import company, which he named Ceres Natural Foods, also in Melbourne. There was a company named Real Foods (run by Michael Pels) in New South Wales, Australia, that was importing, through Mitoku in Japan, tamari, soy sauce, miso, tofu, etc. Real Foods was the first company in Australia to import foods from Mitoku in Japan.

Don knew Michael from when they both used to live in Sydney in about 1978. Michael purchased some rice cake machines (the same kind used by Chico-san) through Mitoku from Airin Co. These machines were very poorly engineered and constructed. Michael has already sold 168 of these machines to Quaker.

When Don took over the Ceres Wholefoods retail store in 1979, he approached Michael and asked to be the distributor in Victoria of the food products Michael was importing from Japan through Mitoku. Michael said okay, and Don began distributing. Don asked Michael to import some soymilk from Mitoku, which he did in mid-1980. The stick-on label over the Japanese label said Ceres Natural, in Choc-Malt and Natural flavors. But the first soymilk in Australia was imported from Japan in about 1977-78, through Muso by 3-4 health food stores named Russel's; it was made by Marusan in a stand-up plastic pouch. Not much of it was sold. In about 1980-81, Michael decided to get out of the whole import business in order to focus on making rice cakes. So Mitoku Mr. Kazama and Chris Dawson asked Don to become their importer in Australia. Don also ran a 3rd company, a center that provided information and advice on macrobiotics.

Jim Wilson, who was running Spiral Foods in Australia, had been importing from Mitoku. He convinced Mitoku not to sell to Don, his competitor; Mitoku agreed. Mitoku then approached Saniku, and in about 1981 Don began importing soy milk made by Saniku through Mitoku. Don sold it under the same label he had used before. The Muso started to import some soymilk packaged in Tetra Brik cartons through Spiral Foods. Don got the same product from Kibun, and on it began to use the name Pureharvest.

In short: Four companies pioneered in importing

soymilk to Australia: Real Foods, Russel's, Spiral Foods, and Ceres Natural Foods. There was also a little relatively beany Chinese soymilk sold in the ethnic Chinese market. Ceres, as a result of its Tetra Brik package, managed to get fairly good distribution into the grocery / supermarket trade, starting in late 1983 or early 1984. By this time Ceres was by far the biggest seller of soymilk in Australia. They were importing five 20-foot containers per month of the Kibun soymilk product. Ceres was actively promoting this soymilk, doing trade shows, etc.

In 1986 Ceres was approached by a small soymilk maker named Australian Natural Foods (ANF) in Sydney; basically they had old machinery and were in trouble. They approached Don asking if they could make a soymilk for him. They worked out an exclusive deal and formula, and in Nov. 1986 Ceres launched this as Aussie Soy in its first 1 liter package, in Tetra Brik. Sales shot up. It was trucked in a dairy tanker to Bon Lait in Victoria (almost 1,000 miles away) where it was packaged in a dairy that had a Tetra Brick packaging machine. In about 1990-91 ANF first got its own Tetra Brik packaging machine. That same year ANF launched its own soymilk product, named So Natural, to compete with Sanitarium's So Good. It is made from whole soybeans, and is very similar to the Aussie Soy product they have long made for Don.

As early as 1980 Sanitarium Foods was importing Soyalac in tins / cans. They sold it mostly to Seventh-day Adventists through their own retail stores. Then in April 1987 Sanitarium Foods launched their own So Good soymilk (made from a blend of soy protein isolates, made and packaged by dairy companies) in Australia. They went into it in a big way, with a national campaign. It was the best thing that ever happened to Don and Ceres, because this campaign grew the market dramatically. By April 1987 Ceres was selling 10,000 cartons / month of their Aussie Soy, not including their Japan imports. One year later the figure had skyrocketed to 60,000 cartons / month, increasing to 152,000 on year after that.

Nevertheless, according to the *Australian Grocery Industry Marketing Guide* (1995), Sanitarium has 71% of the dairylike (unflavored) Australian soymilk market, followed by Vitasoy at 7% (they launched in about 1991, and have done a very aggressive marketing campaign), then So Natural (made by ANF) at 5%, Sun Gold at 5%, and Aussie Soy at 4-5%. Of the total Australian soymilk market, flavored soymilks account for only about 5% of the total; the remaining 95% is dairylike; its a milk alternatives market. Each of the three major supermarket chains in Australia (Woolworth's Safeway, Franklin's, and Cole's) has its own soymilk brand. Franklin's has an isolate soymilk made by ANF, starting about a year ago. Sun Gold, made by Associated Dairies of New South Wales, is almost identical to So Good, made by the dairy company that used to mix Sanitarium's product. In about 1990 Sanitarium set up their own soymilk mixing and packaging factory.

Today the soymilk retail market in Australia is $45 million, with a population of only 17 million people. This is huge on a per capita basis. This market has three main segments: (1) Middle class, educated, with some allergies–70%. (2) Age 50 and older, concerned with cholesterol–20%. (3) Natural foods and vegetarian–10%.

In late 1993 and early 1994 Don approached Berrivale Orchard Ltd. (a cooperative of fruit growers, headquarters in Berri, South Australia) to see if they would be interested in making a soymilk product for Ceres / Pureharvest–because Don's relationship with ANF had become intolerable.

In 1979, to get tofu to sell at his retail store, Don used to go to Chinatown in Melbourne twice a week. He bought it from a little Chinese company (whose name he does not remember) located opposite Victoria Market. He would take a couple of buckets and carry it home in bulk, under water. Address: Pureharvest, 15 Ardena Ct., East Bentleigh, Victoria 3166 Melbourne, Australia.

6861. Melvin, Hart. 1995. Why it is difficult to launch a soy ice cream in Canada (Interview). *SoyaScan Notes.* June 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** First, the entire frozen dessert industry in Canada has been exclusively the domain of the big dairies. The dairies were subsets of the Marketing Board–which creates a totally different market environment than in the USA. Canada has a relatively small population (10.7% of the U.S. population; 28.1 million vs. 260.7 million in the USA) and it is spread over a land area that is slightly larger than that of the USA (including Alaska). So a company needs to have a significant product line to pay the costs of distribution and to pay the large "listing fees" required to get onto supermarket shelves. It has only been in the last 10 years that any small companies have even attempted to developed frozen dessert products. It is difficult to start a company in Canada making soy ice creams because the market is so small and dispersed. You can't start a company in Canada with your initial target market in the USA. Now Canadian supermarkets are trying to establish individual identities, and one of the ways they do that is by bringing in specialty products, either as is or under their own brand and label. Both his soy and dairy products are in most of the major supermarkets in Canada under their own label–simply because his company is offering unique products not made by the big guys, and these products make the supermarket more competitive with the boutique.

The second reason has to do with Canadian bilingual labeling laws. If you have a half liter or pint carton or tub, you have very little surface area, so you can't get overly descriptive. If you want to make claims (such as "cholesterol free") then you must do fat analysis, and that has to be presented in both French and English. So you quickly run out of space on the label. So a small company has generic

nutritional information on the body of the package, with flavor-specific information on the lid only. This saves printing costs. So the bilingual label restricts a company's ability to make claims, and it hurts small companies more than big ones. The smaller the package size, the bigger the problem. His soy ice creams make a "cholesterol free" claim and print the fat analysis in two languages.

One new development in Canada (within the last 10 years) is the public awareness of lactose intolerance; this makes it easier to market non-dairy ice creams. Address: Product Manager, Gelato Fresco, 60 Tycos Drive, Toronto, ONT M6B 1V9, Canada. Phone: 416-785-5415.

6862. Storup, Bernard. 1995. The soyfoods industry and market in Italy (Interview). *SoyaScan Notes.* June 21. Conducted by William Shurtleff of Soyfoods Center. [Eng]
• ***Summary:*** Recently Bernard has been working with various companies in Europe (including Italy) that have been selling soymilk made by other companies. The few companies that he knows are all small, such as Fonte della Vita (a small tofu manufacturer). He is not well aware of Valsoia in Bologna, Italy, but he has the impression that they make soymilk from soy protein isolates and that they are not a major company. (Note: Valsoia claims to have 73% of the Italian soymilk market, which is 4 million liters a year).

Several years ago Bernard had wanted to get very involved in the Italian soyfoods market, but things have changed significantly during the last 18 months. The Italian lost about 23% of its value against the French franc. Thus Bernard's products are now 23% more expensive when sold in Italy. Now Bernard is too busy expanding into supermarkets in France. Address: Managing Director, Nutrition et Soja, Z.I. de la Pomme, B.P. 33, 31250 Revel (near Toulouse), France. Phone: +33 62.18.72.50.

6863. Guy, Camille. 1995. Soy under suspicion: Natural toxins in soybeans could be putting our health at risk. *New Zealand Herald.* June 24. Section 8. p. 2.
• ***Summary:*** "At Whangarei Heads a retired couple keep hundreds of dead parrots in a freezer. The prized chicks were hand-reared on a commercial bird feed derived from the much touted 'health food' soybean.

"Bird-breeders Richard and Valerie James are preserving the birds because they believe they were poisoned. You could dismiss them as cranks, except that the American Food and Drug Administration is now showing serious interest in the contents of the makeshift morgue.

"The couple who once nurtured 600 breeding birds of 40 different species now discount their personal losses. They found the implications of the parrot deaths so serious they went into debt to have them investigated.

"After two years' work at an estimated cost of $354,000, the Jameses and four New Zealand scientists now believe the parrot deaths were probably due to natural toxins in soybeans."

"The Whangarei couple's parrot problems began in 1992 when chicks, fed exclusively on a soy-based product died in ways consistent with eating rat poison. The birds haemorrhaged violently from the beak and suffered total collapse of their internal organs. Survivors suffered deformities, were infertile, or laid deformed eggs.

"Dick James, a New Zealand-born lawyer with a masters degree in business administration from California, was determined to establish why his birds died. Autopsies carried out at Massey University suggested the deaths were due to severe depression of the birds' immune systems."

"At no stage would any Government body contribute to the cost of this work. In 1994 New Zealand imported nearly 350,000 kg of soybeans, 18 million kg of soy flour, and 18 million litres of soybean oil. One seller of soy products, Healtheries of New Zealand Ltd., did help with the cost of the Fitzpatrick analyses. The company's technical manager, Robert Shaw, gave assistance, including getting Healtheries to commission Auckland Medical School senior toxicologist Dr. Iain Robertson to do an independent review of the Fitzpatrick report.

"The review, dated October 1994, was succinct and forthright. Dr Robertson found the Fitzpatrick report 'detailed and reasoned' and made eight recommendations. The first was that the use of soybean products in infant formula be discontinued. 'I can see no good reason why anyone would wish to continue with general sales of such products. Infants are a high-risk population.' Interfering with the many hormone-driven processes going on in infants could affect their growth or immunity, or put them at risk of cancer, Dr Robertson said.

"Healtheries does not produce a soy infant formula but the pharmaceutical company Wyeth does. Its Sydney-based [in Australia] marketing director, Dr Gregory Rough, told the *New Zealand Herald* that he believes the New Zealand reports are speculative and scientifically flawed. Dr Rough was unable to name any scientist not connected to the soy industry who could dispute them," but pointed to millions of babies using soy formula for 15-20 years without reports of adverse effects. "Dr Rough agrees there have been no long term studies but says Asians are exposed to a high level of phytoestrogens without problems."

Photos show: (1) Richard and Valerie James with a large white bird in one of their aviaries. The caption: "Richard and Valerie James are on a personal crusade to expose the dangers of soybeans." (2) Three dead parrots stores in the Jameses' freezer. The caption notes that they "are thought to have died as a result of eating feed containing soybean."

This article also appeared in *Christchurch Press* 25 Jan. 1996.

Britain: Report suggests that the milk contains high levels of hormones. Radio New Zealand News, NZBC London correspondent. 12:30 PM News Tuesday, 20, June 1995.

6865. **Product Name:** Soyfine Tofu Powder, and Soymilk Powder.
Manufacturer's Name: Clofine Dairy & Food Products, Inc.
Manufacturer's Address: P.O. Box 335 (1407 New Rd.), Linwood, NJ 08221. Phone: 609-653-1000.
Date of Introduction: 1995. June.
New Product–Documentation: Leaflet from Clofine. 1996. June.

6866. Jacobi, Dana. ed. 1995. The natural health cookbook: More than 150 recipes to sustain and heal the body. New York, London, Toronto, Sydney, Tokyo, Singapore: Simon & Schuster. 271 p. . June. 25 cm.
• ***Summary:*** This is a selection of the best recipes published in *East West Journal,* compiled by Dana Jacobi, Dan Seamens, and the editors or *Natural Health* magazine. The recipes are generally low in fat, free of white sugar and other refined foods, and nutrient dense, based on grains, legumes, and vegetables; some contain fish and shellfish. Chapter 4 is titled "Seitan, tempeh, and tofu." Miso and soy sauce are used throughout as seasonings.

Contains recipes for Amasake dressing (p. 153), and Amasake scones (p. 191). Amasake (or Amazake) is defined in the Glossary of ingredients (p. 243). Address: New York City, NY.

6867. Kwok, Kin-Chor; Niranjan, Keshavan. 1995. Review: Effect of thermal processing on soymilk. *International J. of Food Science and Technology* 30(3):263-95. June. [102 ref]
• ***Summary:*** Contents: Summary. Keywords. Introduction. Methods of thermal processing. Effect of heat on microorganisms in soymilk. Effect of heat treatment of trypsin inhibitor (TI) activity. Elimination of off-flavour in soymilk. Effect of thermal processing on nutrients. Effect of heat on yields of solids and proteins. Other heat-induced effects. Concluding remarks. Acknowledgment. Address: 1. Dep. of Applied Biology and Chemical Technology, Hong Kong Polytechnic Univ., Hung Hom, Kowloon, Hong Kong; 2. Dep. of Food Science and Technology, Univ. of Reading, Whiteknights, P.O. Box 226, Reading RG6 2AP, UK.

6868. Natural lifestyle magazine and mail-order market. 1995. Asheville, North Carolina: Natural Lifestyle Supplies. 55 p. Catalog. 28 cm.
• ***Summary:*** A macrobiotic mail-order catalog with several nice articles, it sells many types of soyfoods and related products, including the full line of Kushi Cuisine, organic soybeans (yellow and black), azuki beans, amazake, Rice Dream, soymilk, soy Malteds (Westbrae), Nasoya Vegi-Dressings, Nayonaise, Farmhouse Tekka, organic soy sauce, fresh tofu, snow-dried tofu, kuzu, and miso. 6869. *Ontario Soybean Growers' Marketing Board Newsletter.* 1995. ProSoya forges alliance with dairy processors. June. p. 6.
• ***Summary:*** ProSoya recently formed a "Soyfood Alliance" with three Canadian dairy processors: Neilson Dairy, Fieldfresh Farms, and Gelato Fresco. A photo shows Raj Gupta of ProSoya with the smaller version of his original "SoyaCow." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

6870. Parr, Jan. 1995. BGH labeling laws baffle dairy producers. *Vegetarian Times.* July. p. 15.
• ***Summary:*** Consumers are concerned about genetically engineered bovine growth hormone (BGH), which can increase a cow's milk production by 5% to 20% and the incidence of mastitis (a painful udder infection)–leading to increased use of antibiotics in the animals.

Therefore many milk producers and retailers have been considering labeling. This is hardest for products that are sold across state lines But finding a label that is acceptable to all 48 states is extremely expensive and time consuming–as Ben & Jerry's ice cream has found out.

6871. *SoyaCow Newsletter* (*Ottawa, Canada*). 1995. Pacific ProSoya starts production using SC2000. 4(2):1. April/June.
• ***Summary:*** "Pacific ProSoya Foods Inc. received the SoyaCow SC2000 system into its brand new facility in Surrey, British Columbia, Canada, in April. The skid mounted system can produce 2,000 litres per hour of non-beany soymilk."

The system was hooked up to a steam boiler and other utilities soon after it arrived. In helping with the initial testing, the untiring efforts of Graham Clarke, George Conquergood and Bud Hnetka were especially commendable. Lorne Broten, President of Pacific ProSoya, kept everyone's spirit alive. The first test run produced soymilk on 6 May 1995. "Dusty Cunningham, VP Marketing of Pacific ProSoya has lined up dairies and other customers in B.C., Washington state, Oregon, and California to buy most of the soymilk" produced by the big SoyaCow.

A photo shows the huge installed system in Surrey, B.C.

6872. *SoyaCow Newsletter* (*Ottawa, Canada*). 1995. Manav Vikas Parishad–a model SoyaCow site in India. 4(2):1-2. April/June.
• ***Summary:*** "Among all the SoyaCow sites currently operating SC20 systems in India, Manav Vikas Parishad is undoubtedly a model site. MVP is an NGO [non-

governmental organization] for training the unemployed, especially women, in self-employment.

"What is a model site? It is an enterprise that profitably uses a SoyaCow to provide employment, especially to women, as well as nutritional foods to the needy at a reasonable cost, and encourages and rains people to start enterprises for producing soymilk and its products and byproducts at a cottage industry level.

"Dr. R.K. Sharma discovered MVP almost a year ago to develop into a model site. Dr. Sharma immediately started working with Mr. S.B. Srivastava and his staff at MVP and provided them with a SoyaCow SC20 and all the needed help. MVP responded very well and worked diligently to quickly start regular production and marketing of soymilk, tofu, pakoras, and many other items."

6873. *SoyaCow Newsletter* (*Ottawa, Canada*). 1995. SSP to manufacture SoyaCows in India. 4(2):1. April/June.
• ***Summary:*** "In a recent visit to India, Frank Daller, President of ProSoya Inc., made arrangements with SSP of Faridabad, India, to develop an SC20 prototype in stainless steel. SSP is a reputable stainless steel fabricator for the dairy, food, and chemical process industries with focus on evaporation and drying equipment including spray dryers.

Dr. Ratan Sharma, Manager, the SoyaCow Centre of Child Haven International in India, will coordinate the project with Mr. Tapas Chatterji, Managing Director, SSP. The SC20 prototype is expected to be ready for testing at SSP in the autumn of 1995. The prototype development costs are to be entirely borne by SSP."

"Earlier attempts of technology transfer to India to manufacture SoyaCows were not successful due to lack of expertise and capabilities required in a manufacturer to produce robust SC20 systems. Also, the final burden for the technology was not shared by the earlier parties.

"Currently only SSP has the license to manufacture or market the SoyaCow technology in India and the neighbouring countries."

6874. *SoyaCow Newsletter* (*Ottawa, Canada*). 1995. Notice of change. 4(2):2. April/June.
• ***Summary:*** Please note that *The SoyaCow Newsletter* will from now on be published by ProSoya Inc.

Note: The company has also moved from 9 Veery Lane, Ottawa. A box on page 2 shows that the Newsletter is now published quarterly at "7-5350 Canotek Road, Ottawa, Canada K1J 9C9, Telephone: 613 / 745-9115. Fax: 613 / 745-2045. Editor: R.P. Gupta, Ph.D."

6875. Soyfoods Association of America. 1995. A consumer profile of the soyfoods shopper. San Francisco, California. 100 p. *
• ***Summary:*** Contents: Executive summary. Overview. 1. U.S. population–Awareness of soyfoods: Number of consumers who have heard of soyfoods (most have heard of tofu, few have heard of tempeh), demographics of soyfood-aware consumers (consumers under age 60 more aware of soyfoods, soyfoods-aware consumers are more affluent, greater number of Easterners but awareness is nationwide, more likely to be married).

2. Soyfoods consumers–Demographics: Use of soyfoods (about 26 million soyfoods consumers–15 million eat tofu, consumers who use one kind of soy product more likely to use another type), demographics (younger households and baby boomers, household incomes skew higher, more than two-thirds are college-educated, employed in white-collar professions, women in soyfoods households less likely to be in clerical jobs, men working full-time–some self-employed, busy women in a variety of employment situations, one-third of soyfoods consumers have children at home, most in the east–proportionately more in the west, proportionately more in pacific, live in areas of greater population density, living the American dream, mostly home-owners).

3. Soyfoods consumers–Shopping and eating patterns: Frequency of eating types of soyfoods (most eat soyfoods infrequently, soy cheese used more frequently, regular users use soyfoods–especially soymilk–a lot, consumers of one type use other types more), where consumers buy soyfoods (groceries/supermarkets stores of choice for tofu, natural foods store shoppers more dedicated soyfoods consumers, meat substitutes purchased in mass-market, other soyfoods in natural foods stores, soymilk customers split between grocery and natural foods, miso popular in Asian stores), future purchase plans (more than 6 million consumers plan to use soyfoods more, soy hot dog–cheese and frozen dessert consumers most enthused about eating more soyfoods), the soyfood shopper's diet (seek low-fat/cholesterol/sodium/sugar foods, health interests vary by types of soy products tried), other red meat alternatives (most list fish and poultry as red meat alternatives, vegetarian foods favored by consumers of specific soy products).

4. Soyfoods consumers–Attitudes about soyfoods: Attributes of soyfoods (a positive opinion of soyfoods' health benefits–consumers approve less of taste and ease-of-use, soymilk and soy hot dog consumers most likely to agree that soyfoods are healthy, few consumers have negative health image of soyfoods, soy products users believe in soyfoods' special nutrients, soyfoods easier to use than public thinks, familiarity breeds affection, users of various soy products see cost savings, those who use specific soy products–especially tempeh–cannot find them where they shop, consumers of various types do not feel soyfoods are a problem for allergies), importance of organically grown (more than one-third of soyfoods consumers seek organically grown, attitudes about organic stronger among users of specific products).

5. Soyfoods consumers–Sources of product information: Where consumers first learned of soyfoods (word of mouth

is primary source, promotion works for packaged products), why consumers first began to eat soyfoods (novelty and health are the prime motivators, soymilk consumers more concerned about specific health and lifestyle issues–soy burger consumers seeking low-fat meat substitutes), why consumers currently eat soyfoods (consumers less sure why they currently eat soyfoods, tofu–soymilk–and soy burger consumers more likely to have specific reasons), familiarity with health connections (consumers unfamiliar with some of soyfoods' health benefits–familiar with soyfoods' link to cholesterol and heart disease, both users and interested non-users aware of link to cholesterol and heart disease, core consumers not well-informed about other health benefits), sources of information (magazines and newspapers most common source of health information).

6. U.S. population–Why consumers aren't eating more soyfoods: Who is interested in eating more types of soyfoods (consumers would like to try new soyfoods), what would get consumers to eat more soyfoods (taste and lack of cooking suggestions are barriers to use, soy hot dog consumers seeking lower prices–soymilk shoppers seeking more outlets–tofu consumers want recipes, rural–southern and consumers seek lower cost–more affluent seek better taste).

7. Children and soyfoods: How often children eat soyfoods (among soyfoods households–two-thirds of kids age 2-12 eat these products, households with children age 2-12 eat more soy burgers–soymilk, children age 13-18 more likely to be infrequent soyfoods consumers, households with older children tend to choose same products as soyfoods consumers overall), children's attitudes about soyfoods (children's attitudes toward soyfoods are mixed–many parents cannot speak for their children).

8. The tofu shopper: Ways consumers use tofu most often (tofu use most often in stir-frys), why consumers eat tofu (consumers say they eat tofu because it is healthy), what influences brand choice (price–freshness and taste), why consumers aren't eating more tofu (tofu consumers are looking for new ways to use tofu), demographics (most tofu users are 30-59–those 60 and over avoid it, higher household incomes, tofu household heads are highly educated and have executive jobs, household size and marital status similar to average American, concentrated in more populated areas–East and West coasts).

9. The soymilk shopper: Ways consumers use soymilk most often (most often used as a beverage), why consumers use soymilk (non-specific health features and convenience attract soymilk users), what influences brand choice (freshness, quality, taste drive soymilk sales), why consumers aren't using more soymilk (cost and availability hinder use), demographics (younger households use soymilk, more affluent households, education and occupation, more multiple-person households, more Westerners and those in mid-size MSAs).

10. The soy-based meat alternatives shopper: Why consumers use soy-based meat alternatives (because they are healthier), what influences brand choice (taste and price), why consumers aren't buying/using more soy-based meat alternatives (cost, unfamiliarity, taste and availability hinder use, cost and availability factors are higher among users of specific products), demographics (soy burger users and interested non-users are younger, household income somewhat higher among meat alternatives users, college educated and graduates, white collar employees, two person households for some products–soy burgers mirror U.S. population, soy bacon use higher in East–burgers higher in central region, variations by types of products used).

11. The soy-based dairy alternatives shopper: Why consumers used soy-based dairy alternatives (for health reasons), what influences brand choice (taste primarily), why consumers aren't buying or using more soy-based dairy alternatives (cost an unfamiliarity hinder use), demographics (older and more affluent, educated and professionally employed, smaller size households–more singles, live in moderately populated areas, more concentrated in east and west).

12. Other soyfoods shoppers–Soy flour, tempeh, and miso: Demographics (soy flour consumers older–miso consumers most affluent, soy flour, tempeh and miso found in educated households, occupation status similar to other soyfoods shoppers, smaller households and more singles use tempeh, more soy flour users in low-density areas, east and west coasts for miso and tempeh).

Methodology. Questionnaire. Continued. Address: One Sutter St., Suite 300, San Francisco, California 94104. Phone: 510-935-9764.

6876. Soyfoods Association of America. 1995. A consumer profile of the soyfoods shopper. II. Methodology of collecting information. San Francisco, California. 100 p. * • ***Summary:*** This survey was conducted by Market Facts, Inc., a market research firm based in Chicago, Illinois. Project directors for this report were Tim Redmond (American Soy Products) and Peter Golbitz (Soyatech, Inc.). Fieldwork was done by Sheri Hoffenberg (Market Facts). Analysis and Report: Sara M. Starr and Peter Starr (Starr Track). Price: SAA members $475. Nonmembers: $975.

The survey was conducted in two parts. In the first part a questionnaire was mailed to 20,000 people in the Market Facts database. Of these, 17,715 people mailed back responses, and of these 15,168 were completed and usable. Three questions related to soyfoods: 1. Have you ever heard of: Ten types of soyfoods are listed–Tofu, soymilk, soy flour, tempeh, miso soup stock paste, soy burgers, soy hot dogs, soy bacon or breakfast sausage, soy cheese, and soy frozen desserts. The respondent is asked to check those that he or she has heard of. 2. Which of these ten soyfoods have you eaten 5 or more times in the past year? The same list is repeated and the consumer is asked to check as indicated.

3. "I would eat more soyfoods if... (1) They were more accessible where I shop for food, (2) I knew better what to do with them, i.e. recipes, (3) I was better informed on the health benefits; (4) I thought they tasted good; (5) They were less expensive. Check all that apply.

Part II. From the 15,168 people who mailed back completed and usable responses to part I, 750 people were chosen to participate in a follow-up survey, which consisted of a 4-page questionnaire containing in-depth questions about consumption of and attitudes toward ten different types of soyfoods, purchasing motivations and patterns, and questions about children's attitudes toward soyfoods. The sample was divided into 3 groups. A questionnaire was mailed to a representative sample of 626 people (anyone who indicated they had eaten soyfoods at least 5 times in the past year). An over-quota sample of 67 soymilk users and 57 respondents who indicated that they were soy cheese users. This was done in order to ensure enough completed questionnaires among people who used soymilk and soy cheese. To ensure the sample quality, consumers were again asked about their use of various kinds of soyfoods. Consumers who responded affirmatively to using at least one kind of soyfoods were retained in the mail survey sample. Address: One Sutter St., Suite 300, San Francisco, California 94104. Phone: 510-935-9764.

6877. Chin, Michelle. 1995. Vitasoy adds dash of flavour to results: Winston Lo Yau-lai says Vitasoy's Shenzhen plant should start contributing in the coming financial year, after reaching full capacity in mid-1994. *South China Morning Post* (*Hong Kong*). July 19. Business section. p. 2. Ed. 2. • ***Summary:*** Vitasoy International Holdings has increased its profit attributable to shareholders by 16% to $122.27 million. For the year ended March 31, turnover increased 9% to $1.25 billion from $1.15 billion previously. The manufacturer of non-carbonated drinks declared a final dividend of 5.9 cents, making the total for the year 9.6 cents. Earnings per share were 24 cents, down from 27.4 cents previously. The Hong Kong market contributed 70% to turnover, with North America earning the remaining 30%. Executive director John Lau Shek-hung said the China market would be the focus of future business. Although this mainland market showed remarkable growth of more than 70%, it failed to add to the group's coffers.

The Shenzhen plant, located inside China right on the north border of Hong Kong, in which Vitasoy holds a 70% stake, replaced the Aberdeen plant, producing both carbonated and non-carbonated beverages and powder concentrate for Vitasoy products. The company hoped that China market would make up 15% of the total turnover in 5 year's time.

"Vitasoy recently purchased land in Shanghai, which will be the site of a $228 million plant. To be completed in 1999, the plant will service eastern China and will produce 60 million liters in a full range of beverages."

6878. Montanaro, Pamela. 1995. New developments with soybeans and soyfoods in Cuba (Interview). *SoyaScan Notes.* July 26. Conducted by William Shurtleff of Soyfoods Center. • ***Summary:*** Pam Montanaro, Coordinator of the Cuba Campaign Department of Global Exchange (GX), returned from the sixth Freedom to Travel Challenge trip to Cuba June 23-30, where a general contract was signed between the *Instituto de Investigaciones Fundamental en Agricultura Tropical* (*INIFAT*) and another GX-sponsored project, the Soy Cubano Company (SCC).

The SCC will fund a small project in soybean production, helping the Cubans to become more self sufficient in soybeans while challenging the U.S. embargo against Cuba. The project will start small, with a 13.4 hectare (one *cabellería* plot) in Havana province, this August. Two to three varieties of soybeans will be grown to produce enough seed to plant 20 *cabellería*s next year, 19 *cabellería*s worth will be sold to the soyfood factories for soyfood production; one *cabellería* will be reserved for planting the following year.

Also on this trip Pam met a very fine and interesting man named Dick Strohl who is an American soybean farmer and businessman from Minnesota; he is now negotiating with the Ministry of Agriculture and *INIFAT* to grow soybeans in Cuba.

The SCC also delivered a computer and modem to Ing. Alvaro Garcia, director of the *Instituto de Investigaciones para la Industria Alimenticia* (IIIA; Food Research Institute) which is developing varieties of soyfoods for domestic consumption.

Frank Daller of ProSoya Inc. (based in Ontario, Canada) will be traveling to Cuba on July 30 for one week to explore investment opportunities in the field of soyfoods–especially soymilk. Frank is the new director of the Canadian branch of the U.S.-based Association for Free Trade with Cuba (AFTC); it was started by Global Exchange in the spring of 1994, immediately after the U.S. lifted the embargo against Vietnam to get the progressive business community interested in working to end the embargo and in investing in worthwhile projects in Cuba such as soyfoods, alternative energy and medicine, and organic agriculture.

In June, at an international exposition, Pam was introduced to a new soy product developed in Cuba–a Chorizo (spicy meat sausage) extended with soy protein, as is or in a pastry blanket, sort of like a corn dog. The Food Research Institute was also exhibiting the other soy products it has developed, including some meat alternatives.

Pam also had a brief meeting with Ing. Elisa Panadés, a women who is a vice director of the Food Research Institute (like Alberto is); she stands in for Dr. Alvero Garcia when he is away. She was very interested in the information on genistein in soybeans compiled by Soyfoods Center. Her

main interest is medicinal properties of food.

Another interesting man Pam met was Dr. Gilberto Fleites (pronounced hil-BAER-toe FLAY-tees), M.D., a cancer surgeon at the Instituto Nacional de Oncologia y Radiobiologia (office phone: +53 7-325977; he lives in Miramar, Havana). He has gotten permission from John Robbins to translate *Diet for a New America* into Spanish. He speaks good English and is also showing John Robbins' videotapes on Cuban television. Pam's group gave him a small grant to start working on a half-hour video in Cuba, with a Cuban videographer, on vegetarianism. On Pam's trip to Cuba in June were three young people who had been raised as vegetarians. Dr. Fleites interviewed the vegetarian youth on film, saying: "Most Cubans have been forced into a primarily vegetarian diet by the U.S. blockade and the loss of their primary trading partners. It is important for Cuban parents to see these healthy vegetarian children on film, because they are very worried that you cannot raise a healthy child without meat and dairy products."

On the July trip Pam also met with some very interesting people who are working on projects in solar energy, wholistic medicine, chiropractic, and Chinese medicine. Dr. Marcos Diaz Mastellari has founded the Center for Holistic Medicine and the International Federation of Holistic Medicine (Ave. 25 No. 15805 entre 158 y 160, Havana, Cuba. Phone: +53 7-336356. Fax: 332420).

Update. 195. Oct. 30. Pam has been in touch with Oxfam Canada; their representative Minor Sinclair has gotten involved in some soy projects in eastern Cuba and wants to work more with Global Exchange. Dick Strohl has some good ideas. Address: Coordinator of Soy Cubano! Company, Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St. #303C, San Francisco, California 94110. Phone: 415-255-7296 or 415-558-8682.

6879. *Soy Cubano! Company: Report to the Shareholders* (*Global Exchange, San Francisco*). 1995. Soy Cubano! Company signs agreement with the Cuban Institute for Basic Research in Tropical Agriculture. 1(1):1. Summer.
• ***Summary:*** "On July 6, 1995, a representative of the Soy Cubano! Company signed a letter of intention with the Cuban Institute for Basic Research in Tropical Agriculture (INIFAT) to enter into a joint venture with Cuba's soy foods industry. This agreement is the result of months of discussion with Cuban ministries and institutes aimed at concretizing how best to invest Soy Cubano! capital to bring the greatest benefit to Cuba's children. Our initial agreement is designed to help Cuba become self-sufficient in soybeans for domestic food production. The first step is the production of large quantities of soybean seed.

'The agreement stipulates that in August 1995, the Soy Cubano! Company will invest $6,000 in the planting of 13.4 hectares to produce 20 tons of soybean seed for the soy food factories in Pinar del Rio and Havana. The seed will be harvested, dried, and stored in November 1995, and in January 1996, Soy Cubano! and the Research Institute will sit down to evaluate the results. In August 1996, and additional 286 hectares will be planted to produce 400 tons of beans and an additional 20 tons of seed. By December 1996, these beans–approximately 40% of the amount needed in Havana and Pinar del Rio per annum, will be delivered to their first targeted factories.

"An important aspect of our commitment as a company is to submit proposals to, and to work with, suitable funding/lending agencies to obtain even larger investments towards Cuba's self-sufficiency in soybeans. Given Cuba's commitment to make healthier and tastier soy food products–soy milk, yogurt, ice cream, cheeses, margarine, mayonnaise and meat substitutes, we have pledged to get experts in organic soy food research and production to Cuba, and to procure large quantities of herb and spice seed for use in soy food recipes."

"As of mid July, 1995, we have 200 shareholders. Our goal is a minimum of 500 shareholders by Thanksgiving, when we will publicly announce that we are 'trading with the enemy' through a Washington, DC, press conference."

"On the April 1995 Freedom to Travel Challenge, Soy Cubano! shareholders delivered $3,000 to a soy food factory in Pinar del Rio. So your dollars are already at work making it possible for Cuban Children in Pinar del Rio to get soy yogurt and other soy foods..."

A photo shows "Two Cuban children benefitting from the soy yogurt drink." Address: Cuba Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St., San Francisco, California 94110. Phone: 415-558-8682.

6880. Vitasoy International Holdings Ltd. 1995. Annual report 1994-95. New Territories, Hong Kong. 92 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** For the fiscal year ended 31 March 1995, group turnover (sales) was HK$1,252 million, up 9% over the previous year. Operating profit was $138.9, up 12%. Earnings per share were 24.0 cents, down 12%. Dividends for the year were 9.6 cents. The price of one share is now about $HK2.69.

The Group has secured local government approval to establish a wholly foreign owned enterprise in Songjiang Industrial Zone of Shanghai and will soon begin construction of a production facility there, investing about HL$228 million in it. About 90% of its output will be sold in Eastern China.

The founder and guiding force for more than 50 years, Dr. K.S. Lo, passed away in May of 1994. "The success of the Group is a reflection of the strong Confucian morals which Dr. Lo worked so hard to instill." In Hong Kong, Vitasoy soymilk saw a slight decrease in sales.

In North America, Traditional Vitasoy soymilk [marketed to Chinese Americans] benefited from ethnic

brand loyalty together with the continued migration from Hong Kong and Taiwan to North America and especially Vancouver, BC, Canada. This helped improve overall sales in the North America market with 11% increase over the previous year. Natural Vitasoy soymilk experienced a slight drop in sales in the U.S. market but made strong gains in Canada. The launch of Vitasoy Chocolate Soymilk played a role in lifting the market share of soymilk in the Chinatown districts from 50.4% to 52.5%. The Group plans to introduce a new family-sized fresh soymilk. Tofu sales in North America recorded growth of 13.6% with the strongest push coming from the East Coast ethnic markets. To help make consumers more aware of the many benefits of tofu, the Group has sponsored the highly acclaimed "Yan Can Cook" program. In addition an 8-minute instructional video titled "Cooking with Tofu" has also been produced. The huge multi-billion dollar pasta market, of which Oriental pasta is one of the fastest growing segments, will be a key focal point for us over the next fiscal year.

Employees: 1,582 at the end of March 1995, up 13.8% Over the previous year.

Use of the $270.2 million for the initial public stock offering: (1) $228 million to develop a wholly foreign-owned production facilities in Shanghai, PRC (China); (2) $40 million for the development of this factory's distribution network in PRC and Hong Kong; (3) $60 to install a distilled water production facility at its existing facility at Guang Ming Farm, Shenzhen.

Color photos show: Winston Lo, Executive Chairman and Managing Director. Three natural Vitasoy soymilk products, Azumaya Asian products, 3 water-packed tubs of Vitasoy Chinese-label tofu, and Nasoya brands (silken and soft tofu), 3 bottled dressings, and Nayonaise. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

6881. Manning, Anita. 1995. Using soy for protein helps reduce cholesterol. *USA Today.* Aug. 3. [1 ref]
• ***Summary:*** A study by Dr. James Anderson in today's *New England Journal of Medicine* reported that "soy in the diet can significantly lower high cholesterol." The research, which analyzed 38 studies involving 730 people, was funded in part by Protein Technologies International, a manufacturer of soy protein. Cholesterol levels dropped 20% in people who started above 300 mg/dl, and about 4% in those under 200.

A small sidebar titled "Soy sources available," states that soy milk contains 4-10 gm of protein per 8 oz glass, tofu contains 8-13 gm per 4-ounce cube, and soy flour contains 10-13 gm of protein per ounce. It is also used in a range of products from burgers to baked goods, according to John Erdman Jr. of the University of Illinois.

6882. Hamlin, Suzanne. 1995. Do you speak tofu or miso yet? *New York Times.* Aug. 9. p. C2. Living section. Wednesday. [1 ref]
• ***Summary:*** Tofu is a "spongy white block that is a major part of Asian diets... Asian restaurants have increased the popularity of tofu, which sustained much of the Woodstock generation. Still there is notable resistance to the chalky soybean derivative that is often called 'the cheese of Asia.'

Note. This is the earliest English-language document seen (April 2013) that uses the term "cheese of Asia" to refer to tofu.

"Johanna H. Dwyer, director of the Frances Stern Nutrition Center at the New England Medical Center Hospitals in Boston [Massachusetts], discovered this resistance during a four-year study on soy protein and estrogen levels in women. She couldn't find subjects that were willing to consume enough tofu to make the study valid." So she ended up using a concentrated soy protein in the study. Dr. Dwyer still feels that "tofu is a good part of a healthy diet, even if by itself it doesn't prove to be a magic bullet. And a good diet is one that is low in saturated fat, high in fiber, and rich in fruits and vegetables."

Each of the following common soybean products is defined: Soy milk, tofu, tempeh, miso, soy flour, textured soy protein.

6883. Demos, Steve. 1995. New developments at White Wave (Interview). *SoyaScan Notes.* Aug. 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** White Wave is working to take advantage of the huge amount of publicity about soy protein lowering blood cholesterol. He would like to develop soy-based nutraceuticals (a term Steve first heard from Jeffrey Bland several years ago; the new food medicine) or dietary supplements as a sort of bridge to motivate people to move toward healthy foods. The only two motivators are fear and greed; he will use fear since soy is not glamorous enough to use greed. He has talked with FDA attorneys who have made it clear that under NLEA only dietary supplements can make nutritional claims. Yet the line between foods and dietary supplements is very unclear. It largely depends on how the product is positioned and marketed. Garlic is by far the best-selling supplement in the USA. Slim Fast is a dietary supplement. A soy yogurt or a fortified soymilk could also be positioned as a dietary supplement. Shurtleff's comments: Danger of excess protein intake, which is hard on kidneys and can leach calcium from bones (hypercalciuria). Most of the cholesterol-lowering effect of soy protein may be due to the phytoestrogens bonded to it, so we may want to focus on genistein rather than soy protein. Consider a small product like the lactobacillus drink sold in Japan. Sandoz's concept of selling nutrition not food.

Topic #2. Position on the World Wide Web. Steve's mission is to build brand equity. Paul Chasnoff has registered and "locked in" three positions on the World Wide Web:

Tofu.com, Soy.com, and WhiteWave.com. These give him control of the on-ramp to the web. It is very cheap and there are no protections at this time. He has just traded beads for Manhattan, for ownership of the key subject headings in the card catalog. If things change, there will probably be a grandfather clause to protect him.

His soymilk should be on the market in a gable-top caton in November. He has not yet proved marketability. He thinks he has found a manufacturer. Pacific Foods refused to sell him base. Protein Technologies International (PTI) is selling a consumer soymilk somewhere.

One big upcoming project is to launch a line entrees in five flavors. The center of the meal will be a starch (such as rice or noodles) with flavored protein over the top. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

6884. Dorsch, Alan. 1995. Information Resources, Inc. (IRI): The world's largest independent market research firm and supplier of scanner data, and their InfoScan database service (Interview). *SoyaScan Notes.* Aug. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** IRI has been in business for about 15 years; 2-3 years ago they passed Nielsen to become the world's largest independent market research firm. Nielsen, which is IRI's only competitor, is owned by Dun & Bradstreet. The U.S. market for syndicated data services is roughly a $600 million a year market. IRI has about 55% of this market share, while Nielsen has about 45%. They collect scanner data from food, drug, mass, and convenience stores (c-stores). They supplement this with audit data in the stores that don't have scanning. Note: They do not cover natural/health food stores. Their food-related information comes only from scanner data. They develop categories (they now have about 250) and they process the data, and serve it up with software to consumer products goods companies–like Worthington, which has been a customer since 1992. Their customer use that information to measure their marketing programs, track trends, etc.

Information is available in two general formats: (1) Syndicated database and (2) a customized database. The customer is allowed extensive input in the way they set up a customized database. This database has 4 basic dimensions: Products, time periods, measures, and geographies. They have a structured hierarchy for their databases that is unique to IRI. The hierarchy starts at the category level, and gets more detailed the further you drill down. Looking at each one: (1) Product dimensions: Category (e.g. meat alternatives, soap). Type (e.g. refrigerated/frozen, shelf stable, hand soap, laundry soap, shower gels). Parent Co. (e.g. R.J. Reynolds). Vendor/child (e.g. Nabisco, subsidiary of Reynolds). Brand (e.g. Morningstar Farms). Then UPC (the lowest level on the hierarchy). If you are only interested in one specific product, you can drill right down to UPC and get trends on it. Any customer has potential access (if they pay for it) to information on all products in the industry–so they can do comparisons with key competitors. (2) Time periods: 4, 5, 12, 12, 13 weeks, quarterly, and annual. Data is typically available back 5 years. (3) Measures is all the different ways you can look at the data. There are hundreds of different measures but the basic five are: Tracking measures (e.g. dollar sales or volume sales), distribution measures (e.g. ACV = All Commodity Volume, so an 80% ACV distribution in a food store chain means that you have good penetration in that chain), velocity measures (e.g. sales per point of distribution, or sales million ACV; it tells you the strength of your penetration), pricing measures (e.g. average base price per unit on the retail shelf, or on display), promotion based measures (e.g. what percentage of the weekly volume is on display–like a temporary end cap or free-standing display). (4) Geographics: For each of basic store types (food, drug, mass, convenience stores, club stores), the following geographic breaks/breakdowns are available: Total USA, standard 8 geographic regions based on the U.S. Census (e.g. northeast, south central, west coast, etc.), 64 major markets (e.g. New York, Los Angeles), and key accounts (e.g., Safeway, A&P).

Each client negotiates what information they need. IRI has a contractual agreement to protect each customer's customized database and the way they look at data.

For its syndicated service, IRI has a category named "meat substitutes" There are two types: Refrigerated (= refrigerated and frozen) and shelf stable. Meat is also included in the refrigerated type, so a client can compare meat and meat substitutes. Another category is milk. One type is kefir/milk substitutes/soymilk.

How does IRI get its data? Every main chain in the USA scans and accumulates its own raw data from its cash registers. IRI has a relationship with each of these chains, and it gathers all this scanned data from the corporate headquarters. IRI often puts software and systems on site at the headquarters which allows the chain to read and use its own data. In some cases IRI has to pay for this data, while in other cases it is a barter agreement.

How much does it cost to get information from IRI? One report might cost $1,000. But to set up a custom database might cost $50,000 on up to $1,000,000. Once a company has their own database, they may be able to access it electronically whenever they want to.

IRI's product is named InfoScan, whether it is syndicated or customized. IRI also has Infoscan Census (based on every store in key accounts), Infoscan Panel. They also offer testing services (to set up a test market), MRA (marketing research analysis, with curves, pricing sensitivity, etc.) IRI also has a software division named IRI Software that has separate revenue.

All of these services are sample-based services. They use projection techniques to estimate the entire market.

SAMI (Selling Areas Marketing, Inc.), which was a company, no longer exists. In about 1989 or 1990 it was owned by Arbitron, and was in the process of going out of business. Arbitron focused on rating advertising penetration on radio and TV, and was a competitor of Nielsen (which did TV ratings). IRI did not buy SAMI per se; rather it bought 60-80 of SAMI's employee contracts (those these former SAMI employees went to work for IRI) and SAMI's client files and contracts. SAMI was slow to get into scanned data; IRI, which saw scanner data as the future, came on so fast that SAMI could not recover. Nielsen has always focused on audit data more than scanner data.

Retailers use their own scanner data extensively, as to do category management, track trends and sales of individual products.

Alan is now developing IRI's page on the World Wide Web. The URL is http://pages.prodigy.com/KY/ abdorsch/ abdorschinfores.html.

Update: 1997 April 24–"Over the course of the last two years, Category Management has moved from concept to buzzword to the point where it occupies a substantial part of every modern marketer's time and energy." There is now an "IRI University," where a full-day course on Category Management will be taught on June 18 in New York City. Address: Assoc. Director of Client Services, Information Resources, Inc., Chiquita Center, Suite 700, 240 East 50th St., Cincinnati, Ohio 45202. Phone: 513-357-8025.

6885. *South China Morning Post* (*Hong Kong*). 1995. Duties threaten beverage makers. Aug. 17. Business section. p. 2. Ed. 2.

• ***Summary:*** Winston Lo (chairman and managing director of Vitasoy International Holdings), is the newly appointed president of the Beverage Manufacturers Association of Hong Kong, the key lobby group which plans to confront the government over duties which it says discriminate against domestic beer brewers. These fees are not levied against imported beers. Mr. Lo said a variety of problems had brought about a slowdown in the growth of the overall domestic beverage market; 1994 was the first year in which the industry experienced no year-on-year growth, based on total combined sales of carbonated and non-carbonated beverages, beer, and milk.

6886. Cunningham, Dusty. 1995. Recent developments at Pacific ProSoya in Vancouver, Canada (Interview). *SoyaScan Notes.* Aug. 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** On Aug. 14 the company made its first successful batch of soymilk. They are presently selling only bulk soymilk. Since a spray drying operation is located nearby, they would like to offer spray-dried soymilk as well. They are selling bulk soymilk to three different companies in British Columbia which are each developing different non-dairy products: One is developing soy ice creams, the second soy yogurts, and the third soy puddings.

She just had a visitor to the plant from a big distributing company in France. He was comparing their soymilk with French brands. Address: Vice-President Marketing, Pacific ProSoya Foods Inc., 312-19262 60th Ave., Surrey (Vancouver), BC V3S 8E5, Canada. Phone: 604-532-8030.

6887. Guy, Camille. 1995. Growth disorders reopen soy debate: Parents who fed their babies soy formula are asking questions about growth problems the children are now suffering. *New Zealand Herald–Weekend Magazine.* Aug. 26. Section 8. p. 6. Saturday.

• ***Summary:*** 11 weeks, mother's milk was supplemented with soy formula, which Sarah continued to drink until she was 5.

"Sarah's childhood was not an easy ride. At 18 months she broke her femur. She was troubled by eczema and asthma.

"More puzzling was the way Sarah's face developed an abnormal flush at about six months. Later dark rings formed under her eyes.

"Sarah's parents took comfort from their daughter's growth rate, which was just fine. But at 12 Sarah suddenly stopped growing–except for her breasts. She is now seeking breast-reduction surgery.

"Sarah's bones sometimes ache and are easily dislocated. She has had abnormal hair growth, and recently hair loss.

"Sarah's periods have never been regular and she has endured prolonged bleeding. She is under specialist medical care, but doctors can offer no satisfactory explanation for Sarah's disorders.

"Sarah's mother felt driven to tell her daughter's story when she read a *New Zealand Herald* feature article in June on natural toxins in soybeans. ["Soybean campaigner turns up the heat," June 15]. We reported that four New Zealand scientists have persistently urged our Ministry of Health to stop general sales of soy infant formula.

"Professor Cliff Irvine, Dr Mike Fitzpatrick, Dr David Woodhams and Dr Iain Robertson all believe scientific understandings about the toxins particularly the phytoestrogens (isoflavones), found in soy products, and especially in soy infant formula, indicate possible long-term ill-effects.

"But the ministry is reluctant to act until 'researchers give us a more definitive steer.' And the soy industry continues to express confidence in its products. In the *Herald* article, Dr. Gregory Rough of the Wyeth pharmaceutical company said that babies had used soy formula for 25 years without adverse reports.

"The comment prompted several *Herald* readers to offer their own stories. They say they fed their babies soy formula, back in the days when that was unusual–one couple even

importing the product by the case-load because it was not locally available.

Those soy-fed children are now teens or adults, and their parents voice concerns about their development. Those with sons report hyperactivity, learning difficulties, limited concentration and genital abnormalities. One mother says her son became extremely self-conscious about his pointed nipples.

"Parents with daughters speak of arrested development, learning difficulties, delayed puberty, bleeding disorders, ovary disorders, and difficulties with brittle bones, yellowed teeth and retention of baby teeth. One woman developed one breast two years before the other one grew.

"Nobody claims that soy caused these problems. The long-term studies to determine whether there could be any connection have not been done. But the parents the *Herald* spoke to are so struck by the resemblance between reported isoflavone effects on animals, and the disorders they are noticing in their children, that they are asking for urgent investigation. They want to rule out the possibility that feeding their babies soy formula contributed to their present problems."

A nutrition conference will be held at the Auckland University Medical School next week. Some eminent overseas scientists (including Dr. Kenneth Setchell from Cincinnati [Ohio], and Dr. Patricia Whitten from Emory University in Georgia) plan to attend the session on phytoestrogens.

6888. Guy, Camille. 1995. Nutrition experts argue over possible risks or benefits of feeding infants soy formula. *New Zealand Herald.* Aug. 30.

• ***Summary:*** At the joint Australia and New Zealand nutrition conference being held at the Auckland Medical School this weekend, nutrition scientists failed to agree on the possible risks of feeding babies soy infant formula.

Dr. Ian Robertson, a senior lecturer in toxicology at the school, "told the conference that he believed the 800 to 1,600 New Zealand babies put on soy formula each year receive three to six times the dose of phytoestrogens shown to lengthen the menstrual cycles of women consuming a small amount of soy food."

6889. Blank, Christine. 1995. Organic soy products: Industry remains optimistic. *Organic Food Business News* (*Altamonte Springs, Florida*) 7(8):5-7. Aug.

• ***Summary:*** "Even though Japanese demand for organic soy is falling this year," new studies proclaiming the health benefits of soy products have sparked optimism among manufacturers for higher sales in the near future. Supply of organic soybeans is now greater than demand as the Japanese, who have been willing to pay premiums for organic soybeans during the past two years, have lost interest.

Terry Tanaka, executive director of Nichii Company of America, Inc. (Jefferson, Iowa) exports 95% of its organic soybean flakes to its parent company in Japan. Tanaka had been planning to ship 140 tons/month of flakes to Japan, but is now shipping only 50 tons/month, due to sagging consumer interest. The company sends its flakes by rail to Seattle, Washington, whence they travel by cargo ship to Japan.

David Singsank is co-owner of American Health and Nutrition in Ann Arbor, Michigan. His company is now selling an organic soy protein product named Manna to wholesalers for use in bulk bins in co-ops and natural food stores. It has a chewy texture and will cost wholesalers $0.75 to $0.90/lb.

When prices skyrocketed last year, some soyfood manufacturers had to raise prices or discontinue products. For example, White Wave in Boulder, Colorado, started using commercial (non-organic) soybeans in two of its products that had been organic last season. Now the company is reported to have switched back to organic ingredients when many of its customers complained. White Wave is said to use at least 95% organic ingredients in its soy products, including tofu, soymilk, and tempeh.

New contract prices are about $14/bushel FOB for cleaned clear hilum soybeans and $19/bushel FOB for Vinton. OCIA (president Tom Harding) is the main certifier of organic soybeans; others include Farm Verified Organic (FVO), Oregon Tilth, and Quality Assurance International. Reciprocity is a major issue for soyfoods manufacturers.

Jan Remak, vice president of marketing at Vitasoy (Brisbane, California) says that Vitasoy soymilk is sold in some major supermarket chains, such as Kroger, Fred Meyer, Lucky, and Ralph's. Address: Staff writer.

6890. Blank, Dennis. 1995. Street talk [Bill Bolduc]. *Organic Food Business News* (*Altamonte Springs, Florida*) 7(8):3. Aug.

• ***Summary:*** The last issue of this newsletter reported on the financial difficulties of Bill Bolduc, who is said to have had an outstanding debt of $200,000, owned mostly to growers of organic soybeans in the Yellow Springs, Ohio, area, where Bolduc had set up Organic Processing Corp. His company is now no longer licensed by OCIA and state agricultural officials are investigating.

Bolduc told the newsletter that he has no immediate plans to pay off his debt, but he does plan to offer them shares of stock in his company. He now lives at 4015 Cherry Street, Cincinnati, Ohio 45222. Phone: 513-533-9302. The farmers are upset that they have not been paid. Address: Publisher-Editor.

6891. Orthoefer, Frank T.; Liu, Keshun. 1995. Soybeans for food uses. *International Food Marketing & Technology* (*Germany*) 9(4):4-8. Aug. [5 ref]

• ***Summary:*** Contents: Introduction. Traditional soy foods: Soy milk, tofu, toasted whole soybeans and full-fat soy flour ("The toasted flour is often used in rice recipes or for the preparation of flavored bakery snacks. The toasted powder may be mixed with plastic fats and sugar to be used as a filling for confectionery and bakery products"), soybean sprouts, yuba, soy sauce, tempeh, natto, miso. Soy protein ingredients: Soy grits and flour, soy protein concentrates, soy protein isolates. Soy nutrition: Soy protein, fat and calories, phytochemicals. Food bean market. Summary.

Two "different types of soybeans have emerged: oil beans and food beans. This is particularly true in the US soy market..."

Of the fourteen phytochemicals, seven are present in soybeans. These seven are phytates, isoflavones, carotenoids, coumarins, triterpenes, lignans, and phenolic acids. Phytochemicals have been shown to affect human health as much as vitamins and minerals, and many of them have anti-cancer properties. The discovery of phytochemicals may change how the nutritional value of food is assessed.

The world market for soybeans for food use is estimated at about 1 million metric tons (tonnes). In Japan alone about 830,000 tonnes are made into soyfoods as shown in a pie chart as follows: Tofu (552,000 tonnes, 63.4%), miso (180,000 tonnes, 21.5%), natto (90,000 tonnes, 10.7%), soymilk (10,000 tonnes, 1.2%), soy sauce (5,000 tonnes, 0.6%), and others (22,000 tonnes, 2.6%). In the USA the food bean market is estimated at 50,000 tonnes. Other major markets for food beans are in Korea, China, Taiwan, Hong Kong, Singapore, Malaysia, and Thailand. Food-grade soybeans can be sold by the growers at a premium of 5-20% above the base price. The demand for food beans is increasing steadily. Address: 1. Vice President, R&D, Riceland Foods, Stuttgart, Arkansas; 2. Project Leader, Soy Food Lab., Jacob Hartz Seed Co., Stuttgart, Arkansas.

6892. Stevens, Jane Ade; Stevens, Roger. ed. and comp. 1995. U.S. soyfoods directory. Lebanon, Indiana: Indiana Soybean Development Council. 31 p. 28 cm.
• ***Summary:*** This first edition of the directory contains more than 270 company listings. The cover is checkerboard red and white. Contents: Forward [sic, Foreword]. How to use the Soyfoods Directory (incl. Internet access). Soyfood descriptions (alphabetical): Edamame (Sweet beans), food use soybeans (whole soybeans), organically grown soybeans, isolated soy proteins, lecithins, meat analogs (meat alternatives), miso, natto, nondairy (soy) frozen desserts, okara, soy cheese & yogurt, soy flour & grits, soy grits, soy meal & flakes, soynuts, soyoil, soy protein concentrates, soy sauces (tamari, shoyu, teriyaki), soymilk, tempeh, textured soy proteins, tofu & products. Composition and nutrient content of soyfoods (large table, p. 7). Soybean products chart: From whole soybeans, from soybean meal, from soyoil and lecithin. Soyfood companies by product (products listed alphabetically).

Soyfood companies (alphabetical by company name; Each listing contains address, contact, phone, soy products, product names, distribution, to locate product, classification). Soyfood companies by state (alphabetical by state; California has by far the most). Professional associations and industry information resources. U.S. soybean facts. Soyfoods directory survey.

This directory's address on Internet's World Wide Web is http://www.in.net/soy. For more information or suggestions, call 1-800-275-7679. Address: Stevens & Associates, 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 1-800-275-7679.

6893. **Product Name:** Naturally Tofu Drinks, Tempeh Burger, Vegetarian Chili, Meatless Healthy Bologna, Vegetarian Sloppy Joe.
Manufacturer's Name: Wellwide International Ltd. (Importer).
Manufacturer's Address: Room 2905 Wah Yin House, Wah Kwai Estate, Hong Kong. Phone: 852/2549-1173.
Date of Introduction: 1995. August.
New Product–Documentation: Listing in '95-96 Soya Bluebook, p. 100. The company is an importer. Contact Della Leung, Director.

6894. Dinsdale, Mike. 1995. U.S. expert urges research on soy baby food risk. *Northern Advocate* (*Whangarei, New Zealand*). Sept. 6.
• ***Summary:*** Prof. Pat Whitten, an American reproductive expert, visited Whangarei couple Valerie and Richard James this week while in New Zealand for a symposium on the reproductive and developmental actions of dietary phytoestrogens. Ms. Whitten is from the reproductive ecology and environmental toxicology department of anthropology at Emory University in Atlanta, Georgia, USA. She noted that the levels of phytoestrogens in soy infant formulae are three to four times higher than what an adult would consume in soybeans–and that needs to be explored, ideally by an independent and impartial government-run inquiry. A photo shows Pat Whitten.

6895. Fleming, Donna. 1995. What are you feeding your baby? NZ health scandal. *New Zealand Woman's Weekly.* Sept. 11. p. 22-23. [1 ref]
• ***Summary:*** Tells the sad stories of three young women (Jenny, Sarah, and Denise) who were raised on soy-based infant formulae and later suffered serious health problems.

Much of the information in this article was published previously in "Growth disorders reopen soy debate," by Camille Guy (*New Zealand Herald–Weekend Magazine,* Aug. 26. Section 8, p. 6. Sat.).

6896. Archer Daniels Midland Co. 1995. Annual report. P.O.

Box 1470, Decatur, IL 62525. 42 p. Sept.

• ***Summary:*** Net sales and other operating income for 1995 (year ended June 30) were $12,671 million, up 11.4% from 1994. Net earnings for 1995 were $795.9 million, up 64.4% from 1994. Shareholders' equity (net worth) is $5,854 million, up 16% from 1994. Net earnings per common share: $1.47, up 65.2% from 1994. Number of shareholders: 34,385.

On the cover is an American flag and a photo of President John F. Kennedy with the famous quotation from his 1961 inaugural address, "Ask not what your country can do for you–ask what you can do for your country." ADM contributed $6.5 billion last year to America's balance of trade.

On page 3 are graphs showing rising global consumption of soybean meal and vegetable oils from 1964 to 2004, and lysine from 1975 to 2004. For lysine, the equivalent of ten more ADMs will be needed in the next 10 years, for vegetable oil 5 more ADMs, and for soybean meal one more ADM.

On pages 4-5 is a speech delivered by President Eisenhower in 1953 urging the USA to export more food and fewer weapons. Ike's program [Public Law 480 or Food for Peace] resulted in $50 billion in exports to needy countries from 1954 to 1994.

"While the whole of ADM's business can be divided into families of products and services, virtually all can be summarized in a single thought: value-added." ADM makes peanut oil at a mill in Augusta, Georgia. "Soybean oil: Our Europoort facility in the Netherlands remains the world's busiest soybean processor, while in the United Kingdom plans are underway to install a new state-of-the-art vegetable oil refinery and packaging plant at Erith [on the River Thames about 13 miles east of the center of London]. Crushing and refining operations are also being modernized in Hamburg, Germany. These terminals give us access to the three most important rivers in Europe–the Rhine, Elbe and Danube–all the way to the Black Sea" (p. 7).

ADM makes vitamin E from soybean oil distillate. With the completion of a new state-of-the art facility in Decatur, Illinois, ADM has begin to make distilled monoglycerides from soybeans (p. 9).

"BioProducts: ADM BioProducts traditionally introduces at least one new fermentation product each year: in the past year the newcomer was xanthan gum for both food and industrial applications. In 1996 ADM BioProducts expects to add ascorbic acid (vitamin C), astaxanthan and biotin to a lineup that includes monosodium glutamate, sorbitol, citric and lactic acids and their salts. ADM's vitamin C will be produced in a brand-new world-class facility in Decatur. Other products planned for the near future include penicillin, vitamin B-12 and beta-carotene.

"Amino acids for the feed industry remain a major focus of ADM BioProducts. Units to produce threonine and tryptophan are now in full production. This, along with our interest in a methionine plant, makes ADM the only company offering all four leading amino acids: lysine, methionine, tryptophan and threonine" (p. 13).

Isolated soy protein: Construction of increased isolate capacity has begun at Europoort (Netherlands) and in the USA. "Low nitrite ProFam 781 was successfully introduced into the European infant formula market during the past year. The Pacific Rim and former Soviet Union are growing markets for isolates." Harvest Burgers: "Since the beginning of our joint venture with Pillsbury 46 million Harvest Burgers have been sold under the Green Giant label... In Europe Harvest Burger products are now being carried by a German supermarket chain with over 2,300 stores. Another German firm is introducing a line of Harvest Burger frozen entrees that will eventually be marketed in seven EC countries" (p. 15).

"Other soy-based foods: Work is underway on a soy-based dry mix that is the nutritional equivalent of milk. This product would be distributed at little expense wherever starvation exists or powdered milk is too expensive. The product has a shelf life of over a year, requires no refrigeration and is made by adding water.

"A similar product is being developed as a milk alternative for North America. This flavored cholesterol-free product would be carried in the refrigerated dairy section of supermarkets and would appeal to the lactose-intolerant (31% of Americans) and other health-conscious consumers. A frozen dessert version of this product is also being developed. In the United Kingdom Haldane Foods offers the soy-based Vege Mince, Vege Bites, Vege Steaks, yogurt and 'pot noodles'" (p. 15). A full-page color photo (p. 14) shows rich soymilk being poured onto a bowl of cereal and fruits.

"Cogeneration is an efficient low-cost source of energy and steam and is the source of power for our seven largest plants in the U.S., the U.K., Ireland, Germany, and the Netherlands. Our cogeneration system is decades ahead of most U.S. technology, and offers substantial savings over traditional power sources. The key is ADM's fluidized bed technology which enables the cogeneration plants to run on an unusual mixture of high-sulfur coal, discarded tires and limestone" (p. 21).

"Note 11–Antitrust investigation and related litigation: The Company, along with a number of other domestic and foreign companies, is the subject of a grand jury investigation into possible related crimes in the food additives industry. The investigation is directed towards possible price-fixing with respect to lysine, citric acid and high fructose corn syrup. Neither the Company nor any director, officer or employee has been charged in connection with the investigation."

Stephen Yu, managing director of ADM Asia Pacific, Ltd. is unrelated to the Stephen Yu who was a tofu pioneer and founder of Victor Food Products, Ltd. (of Toronto,

Ontario, once Canada's largest tofu manufacturer). Address: Decatur, Illinois.

6897. Archer Daniels Midland Co. 1995. 95-96 food ingredient catalog. P.O. Box 1470, Decatur, IL 62525. 43 p.
• ***Summary:*** A quotation by David Brinkley on the cover states: "Farmers are the only indispensable people in this planet."

ADM Arkady (p. 8, Olathe, Kansas)–Wheat glutens: Provim ESP vital wheat gluten, Whetpro-75 vital wheat gluten, Whetpro-80 vital wheat gluten, SQ-48 meat emulsion binder, Meatbind-3000 meat emulsion binder.

ADM lecithin (p. 16-18). Basic types are: Standard lecithins (4 Yelkin products), Capsule grade lecithins (8 Capsulec products), Complexed lecithins (6 Beakin, 2 Performix, and 4 TLV products), Purified lecithin (Yelkin Gold). Modified lecithins (1 Yelkin and 4 Thermolec products), Deoiled lecithins (3 Yelkinol products).

ADM Milling (p. 21, Overland Park, Kansas). Do-Pep vital wheat gluten, Soy fortified bulgur, Soy fortified sorghum grits, Wheat soy blend.

ADM Packaged Oils–Refined packaged vegetable oils (p. 26-33): Soybean oil is used in many of these products. Product categories: Liquid shortening, salad oil, cube margarine, puff pastry, butter flavored oil, popcorn oil, cube shortening, butter blends and spreads.

ADM Protein Specialties (p. 34): Isolated soy proteins. Ardex D & Ardex D Dispersible, Ardex D-HD, Ardex DHV Dispersible, Ardex R, Ardex F & Ardex F Dispersible, Ardex FR.

Page 35: Pro Fam 646, Pro Fam 781, Pro Fam 970, Pro Fam 972, Pro Fam 974 & 974 Fortified, Pro Fam 981, Pro Fam 982, Pro Fam 985.

Page 36: Arcon (Soy protein concentrates): Arcon G, Arcon F, Arcon VF, Arcon S Fortified S. Arcon T (Textured soy protein concentrates): Arcon T & Fortified Arcon T. TVP (Textured vegetable protein): TVP & Fortified TVP, Bacon Bits. Nutrisoy flours/grits (defatted soy flour & grits): Nutrisoy defatted soy flakes, Toasted Nutrisoy grits, Nutrisoy 7B flour, Bakers Nutrisoy, Nutrisoy flour, Toasted Nutrisoy flour. Note: This is the earliest English-language document seen (Dec. 2007) that uses the term "Arcon T" to refer to textured soy protein concentrate. ADM says the product was introduced in Jan. 1989.

Page 37: Soylec (lecithinated) and refatted soy flours: Nutrisoy 220T, 15% refatted Bakers Nutrisoy, Soylec C-15, Soylec C-6, Soylec T-15. Soy Milk: WMR1 (whole milk extender), WMR4 (contains no lactose, cholesterol, or animal fats). Address: Decatur, Illinois.

6898. *Bluebook Update* (*Bar Harbor, Maine*). 1995. Bright future forecast for soyfoods: SAA study profiles shopper, provides demographics. 2(3):1, 4. July/Sept. [1 ref]
• ***Summary:*** The first truly in-depth analysis of the U.S. soyfoods consumer has been recently published, commissioned by the Soyfoods Association of America. The 125-page report, replete with tables and graphs, shows that nearly 15 million Americans are presently eating tofu, and 10 million are consuming soy burgers. The study details the uses of soyfoods, provides consumer demographics, and analyzes shopping patterns. Even among non-consumers of soyfoods, awareness is high. The majority of Americans have heard of at least one type of soyfood. The best known is tofu, available at nearly every supermarket in America, and recognized by 75% of those polled. Some 55% are familiar with soymilk and more than 50% have heard of soy burgers. Approximately 80% of soyfoods consumers say that they will continue to eat the same amount or more in the future–which looks bright.

6899. *Bluebook Update* (*Bar Harbor, Maine*). 1995. Clofine products certified organic. 2(3):2. July/Sept.
• ***Summary:*** Clofine Dairy & Food Products, Inc. of Linwood, New Jersey, manufactures full fat soymilk and tofu products which have been certified organic by Oregon Tilth Certified Organics. Clofine also produces low-fat spray-dried tofu and soymilk with both non-organic and organic soybeans. They will continue to provide kosher parve products in both lines. Richard Eluk is Clofine's vice-president.

6900. Fallon, Sally W.; Enig, Mary G. 1995. Soy products for dairy products? Not so fast. *Health Freedom Newsletter* (*Monrovia, California*) 14(5):12-20. Sept. [35 ref]
• ***Summary:*** Contents: Introduction. History of the bean. Fit for human consumption? Marketing the soybean? Processing denatures and dangers remain. Soy formula not the answer. Fabricated soy foods. Cancer preventing or cancer causing? Soy products are not complete. Only fermented soy products are safe. Another look at milk. Processing is the problem [that transforms healthy milk products into unhealthy ones]. Quality dairy products are available. Butter is a healthy food. Homemade formula best for babies. Contains two recipes for homemade formula: Milk based formula (based on unhomogenized raw organic milk plus lactose, cod liver oil, coconut oil, etc.). Milk free formula (based on 3½ cups of homemade broth, made from beef, lamb, chicken, or fish).

This article is written to scare people "who have turned to soy products as substitutes for dairy products," and to sing the praises of natural (fresh, raw, and organic) dairy products. It is loaded with so much incorrect information and false conclusions about soybeans and their alleged dangers to human health that one does not know where to begin in starting to refute them. To take just a few such statements: (1) "The Chinese did not eat the soybean as they did other pulses (legumes) such as the lentil, because the soybean contains large quantities of a number of harmful substances." Fact: The soybean, processed into a host of soyfoods using

simple technologies, has been the main legume consumed in China since ancient times. It has long been referred to as "The cow of China."

(2) Trypsin inhibitors in soybeans are "not completely deactivated during ordinary cooking and can produce serious gastric distress, reduced protein digestion and chronic deficiencies in amino acid uptake." Facts: The SoyaScan database contains 386 articles on trypsin inhibitors. When active, these proteins inhibit trypsin, a digestive proteolytic enzyme secreted by the pancreas, which helps us to digest proteins. Fortunately, trypsin inhibitors are almost completely deactivated by the typical cooking of soybeans to make soyfoods. There is no scientific evidence that the small percentage remaining has any adverse effects on human health, digestibility, or amino acid absorption. A considerable body of research, starting in the 1970s, shows that trypsin inhibitors have anti-cancer properties.

(3) "The soybean also contains hemaglutinin [sic, hemagglutinins], a clot promoting substance that causes red blood cells to clump together." Fact: Like trypsin inhibitors, hemagglutinins are inactivated by ordinary cooking and have been a non-issue in the scientific literature for at least 10 years.

(4) Soybeans are high in phytic acids or phytates, which can cause health problems. "Only a long period of fermentation will significantly reduce the phytate content of soybeans." "Oriental children who do not get enough meat and fish to counteract the effects of a high phytate diet, frequently suffer rickets, stunting and other growth... Parents would do well to ask their six-year old boys whether they would prefer to be six-foot-one or five-foot-seven when they grow up, before substituting tofu for eggs, meat, and dairy products." Fact: Phytates and phytic acid are a two-edged sword. They appear to inhibit mineral absorption by forming tight chelates with a variety of polyvalent metals such as calcium, zinc, and iron. By virtue of forming a unique iron chelate, they suppresses iron-catalyzed oxidative reactions and may serve a potent antioxidant function in the preservation of seeds. By the same mechanism, dietary phytic acid may lower the incidence of colonic cancer and protect against other inflammatory bowel diseases. Twelve records in the SoyaScan database show phytic acid to have anticancer activity. In addition, they are one source of dietary phosphorus in the soybean.

(5) Aluminum content of soy formula is 10 times greater than milk-based formula, and 100 times greater than unprocessed milk. Aluminum has a toxic effect on the kidneys of infants, and has been implicated as causing Alzheimer's in adults. Fact: Aluminium is the most abundant metal in the earth's surface. It is harmless to humans except for infants with kidney failure–who should not drink soymilk. There is no solid scientific evidence indicating that aluminum causes Alzheimer's disease; that theory, advocated by a few scientists 10 years ago, is no longer being pursued.

(6) Allergies to soy are almost as common as those to milk. Fact: Roughly 10 to 15 times as many infants are allergic to cow's milk compared to soymilk. Since 1910 soy-based infant formulas have saved the lives of many infants whose mothers could not breast feed and who were allergic to cow's milk

The authors conclude that only traditional fermented soy products such as miso, natto, and tempeh, are safe.

About the authors (autobiographical): Sally W. Fallon, M.A. lives in Washington, DC, with her husband and 4 children. A member of the Price Pottenger Nutrition Foundation Advisory Board, she is a regular contributor to their quarterly journal. Mary Enig, PhD, is an expert in the field of lipid chemistry who has conducted many studies on *trans* fatty acids. She is also well known for a career of anti-hydrogenation and anti-margarine research and writing, with funding from the dairy industry. A large percentage of America's margarine is made from soy oil.

Update: Printout of website named Mercola.com sent to Soyfoods Center by Sjon Welters of Cabot, Vermont. 1998. Nov. 6. The title of this 6-page website is "Avoid soy: Concerns regarding soybeans." On the last page we read: "The above information was abstracted from an article written by Sally Fallon and Mary Enig, PhD. (an international expert renown [sic] in the field of lipid chemistry) for Health Freedom News in September of 1995." Address: 1. M.A.; 2. PhD. Phone: 818-357-2181.

6901. Fitzpatrick, Mike. 1995. Soy warning (Letter to the editor). *New Zealand Herald.* Aug. or Sept. 12 or 21.
• ***Summary:*** "Sir,–It is unfortunate that concerns about soy formulas have had a negative impact on companies, such as Bean Supreme, that do not market infant foods. On this issue the Ministry of Health, via Dr Martin Edwards has stated it does not want to 'unduly damage an industry.' But which is the greater tragedy: a loss of confidence in soy products or a potential health risk to babies."

"The conclusion reached was no leap of logic; compounds that are proven hormone disrupters in adult women (not parrots, quail, fish, dogs, cats, cows, pigs, rats, mice or cheetahs–all of which incidentally, suffer hormone-related disorders when exposed to dietary soy phytoestrogens) are present in significant quantities in soy formulas." Address: PhD, Mt. Eden, analytical chemist.

6902. Lusas, Edmund W.; Rhee, Khee Choon. 1995. Soy protein processing and utilization. In: D.R. Erickson, ed. 1995. Practical Handbook of Soybean Processing and Utilization. Champaign, Illinois: American Oil Chemists' Society Press; St. Louis, Missouri: United Soybean Board. viii + 584 p. See p. 117-60. Chap. 8. [96 ref]
• ***Summary:*** Contents: Introduction and definitions: Types of products, history, analysis, handling of soybeans and soy protein products. Full-fat soy flours and grits: Enzyme-active

soy flours, toasted full-fat soy flours and grits, extruder-prepared full-fat soy flours. Extracted flake products: White flakes, defatted soy flours and grits, refatted or lecithinated soy flours, soy protein concentrates (aqueous alcohol process, acid leaching process, hot-water leaching process, product characteristics). Soy protein isolates (pH extraction-precipitation, separation by molecular weight, membrane processing, aqueous extraction processing, separation of intact protein bodies, enzyme-modified protein isolates, whipping proteins–3 types). Dietary fiber products: Soy cotyledon fiber, soy hulls. Texturized products: Spun and fiber-type products, extruder-texturized products. Applications of soy food proteins: Functionality, selection of soy protein preparations, meat applications (processed meats, restructured meats, pumped meats, extruder-texturized soy proteins), baking applications, dairy and beverage applications. Other soy products: Dried soy milks and tofus, nut-like soybean products (incl. soybean butter [sic, soynut butter]).

6903. Pemble, Louise. 1995. Jury is still out on side effects of soy formula. *New Zealand Doctor.* Sept.
• ***Summary:*** At a joint Australian and New Zealand science meeting, experts failed to agree on the risks of infant soy formulas. Visiting American nutrition expert Mark Messina, who was present, was not invited to speak despite his credentials as "a leading authority on soyfoods and cancer prevention." When he asked the panel why no studies have ever reported any adverse effects of soy consumption in humans, other speakers countered that no extensive studies of humans have ever been conducted.

Ian Robertson, senior lecturer in toxicology at the Auckland School of Medicine, advised parents to avoid soy formulas, even though no risk had been proven–because there is no evidence of their safety. He said that the risk is potential but avoidable, so why take it?

A sidebar titled "Soy advocates push hormone advantages" discusses the views of Dr. Mark Messina, who led a panel of nutrition experts in Auckland. Messina was former program director at the Diet and Cancer Branch of the U.S. National Cancer Institute. He conducted his doctoral research on the effects of cruciferous vegetables on colon cancer. He noted that in the USA soy is widely regarded as a health food, in contrast to New Zealand where it is now given negative coverage.

6904. *SoyaCow Newsletter* (*Ottawa, Canada*). 1995. SSP builds SC20 prototype in stainless steel in India. 4(3):2. July/Sept.
• ***Summary:*** "SSP in India completed building and testing the SC20 prototype system at its R&D facility near Delhi. Initial problems were resolved when Frank Dahler (President of ProSoya Inc.) visited the facility in late September." The parties involved have "signed a memorandum of understanding (MOU) that gives certain exclusive rights to SSP for the manufacture and marketing of SoyaCow equipment. Among other things the MOU provides for SP to pay royalties to Child Haven International and to provide partial support for the SoyaCow Centre in India.

"Child Haven and the SoyaCow Centre are dedicated to

humanitarian work mainly in India and Nepal.

"The SC20 system is capable of producing 15 litres of non-beany tasting soymilk every 20 to 30 minutes."

6905. SunRich. 1995. SunRich (Ad). *Soya Bluebook Plus* 1995-96. p. 59.

• ***Summary:*** This one-third page black-and-white ad lists three categories of products: (1) Identity preserved specialty soybeans and grains: IP corn; Food quality soybeans available for soymilk, tofu, tempeh, miso, natto, sprouts, and soy sauce; Shipments available in containers, rail or bulk barge.

(2) Soyamilk powders: Spray-dried soymilk and tofu; Soy/dairy milk.

(3) Sweet Beans: Frozen green soybeans; Podded (*edamame*) or peeled (*mukimame*).

* Certified organic soybeans & products available. Address: P.O. Box 128, Hope, Minnesota 56046. Phone: 1-800-342-6976 or 507-451-3316.

6906. **Product Name:** [Nutrisoya Tofu, Soymilk].
Foreign Name: Nutrisoya Tofu–Queso de Soya, Leche de Soya.
Manufacturer's Name: UFIESA–Division of Productos Nutrisoya.
Manufacturer's Address: Factory: Av. de los Restauradores No. 149. Office: C/33 No. 9 A, Villa Carmen Este, Santo Domingo, Dominican Republic. Phone: (809) 590-3418.
Date of Introduction: 1995. September.
Ingredients: Tofu: 100% leche de soya, vinagre y (Coagulante). Soymilk: Leche de soya, Edulcorante-Azucar crema, especias aromáticas naturales.
How Stored: Refrigerated.
New Product–Documentation: Note: These are the earliest commercial soy products seen in the Dominican Republic. Talk with (call from) Jose Fortunato in New York; he is the partner of Mr. Ubiera. 1997. Feb. 15. Mr. Ubiera wants to order some Spanish-language leaflets. He already has *The Book of Tofu,* which gave him the idea of making tofu in the Dominican Republic. They have been making and selling tofu in the Dominican Republic for about 2 years, starting in August 1995. They make tofu, soymilk, soy yogurt, and a soy salami (from tofu and gluten). Note: L.R. Ubiera, who was born on 20 Jan. 1955 in the Dominican Republic, started this company. He wrote a book titled *Tofu y leche de soya–Alimentos macrobiotics–naturales: Una guia practica para su manufactura en casa.* He also practices and teaches Hatha Yoga.

Letter and leaflets from Leonidas Radhames Ubiera, president of Ufiesa-Nutrisoya. 1997. Jan. 20. "Our company began to operate on September 1, 1995 without experience and too little equipment." Leaflet #1. Green and red on white. "Consuma productos Nutrisoya para su alimentacion una joya. 100% natural. Puros e integrales de soya. Tofu-queso. Leche, lista para tomar ("ready to consume"). Yogourt. Salami. Salichas. Hamburguesa. Chorizo." Leaflet #2. Red, blue, black, and yellow on white. "Productos Nutrisoya. Para su alimentacion una joya. 100% naturales. Recetario especial, platos de tofu (queso)." Gives 5 tofu recipes in Spanish.

Letter from Leonidas Radhames Ubiera. 1997. March 10. Gives the date that each of the company's products were introduced. Tofu and fresh soymilk were both introduced in Sept. 1995. All other products were introduced in 1996. UFIESA is an abbreviation/acronym for Ubiera & Fortunato Import-Export, S.A.

Labels for both products sent by Jose Fortunato. 1997. April 18. 3½ by 3 inches. Self adhesive. (1) Tofu: Blue, red, black, and yellow on white. (2) Soymilk: Light green, red, and black on white.

Note: This is the earliest known commercial soy product made in the Dominican Republic.

6907. Wilson, Lester A. 1995. Soy foods. In: D.R. Erickson, ed. 1995. Practical Handbook of Soybean Processing and Utilization. Champaign, Illinois: American Oil Chemists' Society Press; St. Louis, Missouri: United Soybean Board. viii + 584 p. See p. 428-59. Chap. 22. [41 ref]

• ***Summary:*** Contents: Introduction. Soybean chemical composition. Unfermented soy foods: Soymilk, tofu (momen, kinugoshi or silken, packed tofu, aseptically packaged tofu, deep-fried tofu, kori tofu or dried-frozen tofu), other nonfermented soy foods (yuba, kinako or roasted whole soybean flour, fresh {edamame} and canned soybeans, texturized soy protein-based foods). Fermented soy foods: Miso, shoyu (soy sauce), natto, tempeh, sufu. Japanese Agricultural Standards. Identity preservation and transportation. Soybean quality characteristics: Overview, judging quality (tofu, miso, natto). Note: This is the earliest English-language document seen (Nov. 2012) that contains the term "roasted whole soybean flour."

Tables: 1. Nonfermented soy food products and common names by country. 2. Fermented soy food products and common names by country. 3. Chemical composition of soy foods. 4. Per capita annual consumption of soybeans (kg) in selected Asian countries (China, Indonesia, Japan, Korea, Malaysia, Philippines, Thailand; for the years 1968, 1978, 1988, 1994).

Figures: 1. Flowchart of refrigerated and shelf-stable soymilk production. 2. JAS seal of approval. 3. Diagram of equipment used in large scale tofu production (each piece of equipment is numbered and labeled). 4. Flowchart of regular tofu production. 5. Graph showing percent transmittance of whey versus coagulant concentration for soymilks at 6% solids made from Weber, Vinton, and Amsoy soybeans. A concentration of 0.023 N was selected as the optimum coagulant concentration, since it gave the most transparent whey. 6. Graph showing percent transmittance

of whey versus coagulant concentration for Amsoy soymilk at concentrations of 4, 5, and 8% solids. Concentrations of 0.018N, 0.019N, and 0.035N, respectively, were selected as optimum coagulant concentrations. 7. Flowchart of kinugoshi (silken) tofu production. 8. Flowchart of packaged tofu production. 9. Flowchart of aseptically packaged tofu production. 10. Flowchart of kori (dried-frozen) tofu production. 11. Diagram of equipment used in large scale production of dried-frozen tofu (each piece of equipment is numbered and labeled). 12. Flowchart of miso production. 13. Diagram of the interactive factors producing the characteristic attributes of miso. 14. Flowchart of tempeh production. Address: Iowa State Univ., Ames, Iowa.

6908. Messina, Mark. 1995. Soy formula safety (Letter to the editor). *New Zealand Herald.* Oct. 15.
• ***Summary:*** "In his letter on the safety of soy formula, Dr. Fitzpatrick pointed out that manufacturers have long known their products contain phytoestrogens, yet studies involving infants and phytoestrogens have not been conducted. These statements are true but irrelevant.

"The issue is not the effects of the phytoestrogens but the effects of soy formula. In this regard, countless numbers of studies have been conducted during the past several decades and have concluded that soy formula is safe and promotes normal growth in infants.

"In addition, Dr. Fitzpatrick's use of the word 'toxins' in referring to certain compounds in soybeans is inaccurate and misleading. Phytate, one of these alleged 'toxins,' is widely present in plant foods and, in particular, in food grains" [such as wheat]. Address: PhD, Port Townsend, Washington.

6909. Jenkins, Suzi. 1995. The politics of soyfoods in San Bartolo, Guatemala (Interview). *SoyaScan Notes.* Oct. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Alimentos San Bartolo now employs 6 people, 3 or 4 of whom have worked there for 15 years. The plant operates two days a week, Monday and Wednesday. About 65-75% of the products are sold to expatriates, and the remainder are sold to native Guatemalans. The approximate percentage of sales by product are as follows: Tofu 40%, soy ice cream 30%, tempeh 10%, soymilk 10%, soy flour atole (10%; pronounced ah-TOL), and whole soybeans 5%. Yet the soy flour atole probably earns the company more profit than any other product. It is made by roasting whole soybeans, then grinding them, and mixing about 3 parts of this roasted soy flour with 1 part of cornmeal. The product is sold as a dry mix in a plastic bag, and is served by adding several tablespoons to a cup of hot water, like traditional atole. It is expensive, costing about 2½ times as much as an equal weight of white wheat flour. People are willing to pay the price because they have learned that it is an excellent source of protein, and it tastes good. It is consumed by both infants and adults.

In about 1989 or 1990 the situation at the soy dairy in San Bartolo changed dramatically. Plenty Canada came in, took the keys to the building, and installed a new committee as the "board of directors in charge of the company. Then Plenty Canada pulled out and has never returned. Since that time the Dairy has received no outside funding. Local politics became a big part of the daily operations of the business, and there is now an ongoing political struggle. The leadership did not like the former employees and they continue to discriminate against them. Only one member of the workforce is on the committee." Elena and Agostine Xoquic are in pain. For example, Agostine is made to haul 50-100 lb of tofu and ice water on a long route that goes as far away as Guatemala City, changing buses many times, while the much younger and stronger new manager sits with his feet up on the table. The Dairy does not have its own vehicle.

Plenty USA has no control over the new committee. In addition, most of the people living in San Bartolo are jealous of the 6 people who work in the Soy Dairy, so for a number of years they have been boycotting the Dairy and its products. Suzi is inevitably associated with the old regime, even though she is very close to many people in the community. She has visited at least once a year, usually paying her own way, to check in and see how things are going. When she has worked there in recent years, it has usually been as a volunteer. This was one cause of the divorce process she is now in. She lived in Panajachel, an expatriate community about 15 minutes away by car; her daughter went to school there. She has no plans to go back there as a worker, though she would dearly love to if she could find a way to support herself.

She sees the next steps for the Dairy as trying to get the Guatemalan government to support use of the atole in the village school lunch program, and starting a restaurant in San Bartolo. She believes this basic concept or model could be duplicated and succeed elsewhere in Third World countries. She has had offers to go elsewhere in Guatemala, at good pay, to help start soy dairies. Address: 3967 South 900 E., Apt. 13, Salt Lake City, UT 84124. Phone: 801-268-2717.

6910. Yim, Sauw. 1995. Filter flaw gives milk bad taste [Vitasoy]. *South China Morning Post* (*Hong Kong*). Oct. 25. p. 6. Ed. 2.
• ***Summary:*** A "fault in one of the steam filters during production" was blamed yesterday for the unpleasant taste of some 250 ml paper-packed Vitasoy soya milk drinks, which forced the company to withdraw [not recall] an estimated 50,000 cartons. The faulty filter is suspected of causing "the chemicals and preservatives to react the wrong way" a spokesman said. "The affected drinks, including original Vitasoy, malt Vitasoy, melon Vitasoy, and Vita chocolate milk, would not harm consumers, he said. The Department of Health has taken samples for tests. Major supermarkets

withdrew the affected products. Vitasoy will replace them. The inquiry hotline is 2468 9645."

Note: This was the first of a series of articles about similar but increasingly worse problems for Vitasoy.

6911. Geriguis, David. 1995. What ever happened to Loma Linda Foods and Nutricia in Riverside, California? (Interview). *SoyaScan Notes.* Oct. 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** David's last name is pronounced GER-gus. He worked for Loma Linda Foods in 1989 when the company was sold to Nutricia. He remained with Nutricia, making infant formula at the plant in Riverside, California. The production continued for only a few months, then they had a major problem with the new equipment that was being developed, and they had a recall. It was a disaster. So in about October or November of 1990 Nutricia shut down the plant in Riverside.

Nutricia's plan at that point was to shut down the plant in Mt. Vernon, Ohio, and operate only in Riverside. But after the recall, the opposite happened. Nutricia spent more than $12 million revamping the plant in Ohio, then used it to start making various forms of i-Soyalac (from soy protein isolates) and Soyalac (from whole soybeans). The plant in Riverside went up for sale although Nutricia's sales and marketing departments remained in the office. In mid-1993 Nutricia decided to close their offices at the Riverside and move the rest of the company's operations to Mt. Vernon, Ohio. David left Nutricia in July 1993. Then later in 1993 Nutricia had another recall–and another disaster, which even drove down the stock price of Nutricia in the Netherlands. David thinks that Nutricia's management at headquarters in the Netherlands probably said "This American company is too dangerous for us. We'd better sell it." Nutricia then created a fictitious company named Mt. Vernon Foods to allow them to disassociate that company from the Nutricia. Several months later Nutricia began to negotiate with another venture capital group to buy Nutricia's American operations. These didn't work out so about a year later, in 1994, Nutricia sold Mt. Vernon Foods to Nestle/Carnation.

Nutricia is a good company, but they quickly learned that regulation (by the FDA) is much stricter in the USA than in Europe. In Holland they had 90% of the dairy-based infant formula market, and a significant market share in other European countries, but they made no soy-based products. So soy was a new experience for them. In addition they had quite a few problems getting FDA approval and clinical trails done correctly for their dairy-based formula in America. They planned to discontinue Loma Linda Soyalac, because according to their research, starting with whole soybeans caused nutritional problems in the infant formula (probably flatulence). Apparently Carnation followed through with this plan.

In early 1994 Nutricia sold their plant in Riverside to a company named Dasi (pronounced like the flower "Daisy"), which changed its name to Dasi-Linda. Dasi is a manufacturer of equipment for processing cow's milk, including UHT (ultra-high temperature) systems. Then they got into the actual processing of milk. Right now they are spending a lot of money revamping the former Loma Linda plant on Pierce Street in Riverside with the goal of making UHT dairy milk in aseptic cartons. Parmalat (a huge and very significant Italian food company that is the biggest user of Tetra Pak Aseptic packaging in the world) appears to be both a partner and a customer of Dasi-Linda, which talks about having contracts to package for Parmalat.

La Sierra University no longer owns the property on which the former Loma Linda building stands.

David is quite sure that Carnation introduced Follow-Up Soy before they purchased Mt. Vernon Foods.

Talk with Robert Madey, vice president for R&D of Dasi. 1996. Jan. 19 and 24. The information above concerning Dasi is correct. Dasi first signed a written agreement with Nutricia concerning the purchase of the Loma Linda food plant in Oct. 1993, and the deal was finalized in Sept. 1994. Dasi, which is headquartered in Rockville, Maryland, has several dairy milk processing plants of its own in the USA–one in Decatur, Alabama; it is a partner in another in Utah. The Parmalat plant in Michigan produces essentially all of the Parmalat milk in the USA; it is all sold unrefrigerated. Dasi all sells some of its systems overseas as well. Dasi is now in the process of converting all Parmalat plants worldwide to the use of Dasi equipment ("the Dasi process"). This is all equipment from the balance tank, including pre-heating, sterilizer, homogenizer, and up to but not including the packaging equipment. Address: Director of Industries, La Sierra Univ., 4700 Pierce St., Riverside, CA 92515. Phone: 909-785-2477.

6912. Abate, Gugsa; Gobezie, Abeba. 1995. Soybeans in Ethiopia: A review on historical background, production, and utilization. Paper presented at the Third Bi-Annual SoyAfrica Conference. 18 p. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma. [10 ref]

• ***Summary:*** Contents: Introduction. History of soybeans in Ethiopia. Soybean and its uses in the world: Soybean flour, soybean milk, soybean curd, protein concentrates, protein isolates, soybean oil, soy beverage, soybeans as a vegetable [green immature soybeans], other uses. Nutritional evaluation of soybean. Soybean production in Ethiopia. Climatic condition suitable for soybeans. Uses of soybeans in Ethiopia: Public sector, private sector. Agricultural potential of soybeans. Conclusion.

History in Ethiopia: The first records of soybeans in Ethiopia date back to the 1950s. The years 1956 to 1971 were a trial period for selecting promising varieties and suitable growing areas. During this period, different varieties were tested at the research stations of Debre Zeit, Jimma and

Kulumsa of the former Chilalo Agricultural Development Unit [CADU]. About 20 varieties have been introduced for testing from various parts of the world. In 1972 the Ethiopian Nutrition Institute (ENI) initiated a soybean multiplication program starting with imported seeds of different varieties. The seeds were grown under contract by local farmers. Yields were low due to late weeding and negligence in applying the recommended fertilizer. Finally in 1974 ENI, in collaboration with CADU, introduced soybeans to the local farm population. The aim of this program was to replace the soybean flour imported by ENI for Faffa production with flour made from locally grown soybeans, and to introduce this new bean into Ethiopian diets. A grower's manual was even published and distributed to local farmers. A number of recipes were also developed by ENI for use in the popularization of soybean. This activity started in 1972 and continued until mid-1995.

However, all the efforts made to multiply the soybean and bring it to the local people were discontinued because of low acceptability by the farming community. Presently, no community is producing soybean in Ethiopia. In 1974 IAR took over the basic soybean research program; since then it has remained as a research program. Nevertheless, during the early 1990s, the Faffa plant had an arrangement with settled farmers in Assosa to grow and supply soybeans. Also, Health Care Foods has a soybean supply program with private commercial growers. Most important, since 1978, soybean production on a relatively large scale has been undertaken by certain state farms in Ethiopia: Wollege, Gojam, Kaffa, Awassa, Shashemene, and Awash are the major sites of production in Bellessa. Today, there are only two state farms which produce soybeans. These are Wollega, and Gojam-Gonder Agricultural Development Farms. They supply raw soybeans to the Faffa Food Factory, Health Care Food Manufacturers, and Animal Food Processing Organizations of Kaliti, Akaki, Debre Zeit, and Nazareit. Table 2 (p. 8) shows the area and production of soybeans in Ethiopia from 1979-81 to 1992–however the units are unclear.

Today in Ethiopia, soybeans are used in both the public and private sectors. In the public sector, soybeans are used commercially in the manufacture of Faffa, a high-protein weaning food and famine-relief food. Faffa contains 53% wheat, 18% defatted soy flour, 10% chickpeas, 9% skim milk powder, 7% sugar, and 1% iodized salt, vitamins, and minerals. The Faffa Food Factory is the only big user of both imported and domestically produced soybeans. In addition to Faffa, this factory also makes different soy-based blended food products such as Dube, Cerifam, and Famix. Table 3 (p. 10) shows the production of each of these foods (in metric tons = tonnes) from 1988 to 1994. Faffa has decreased from 5,835 tonnes in 1988 to 1,520 tonnes in 1994. Dube has decreased from 5,937 tonnes to 1,109 tonnes. Cerifam has increased from 10.8 to 20.6 tonnes. Famix (which contains full-fat soy flour) has increased from 10.7 tonnes in 1993 to 3,906 tonnes in 1994.

Table 4 (p. 11) shows the factory's annual consumption of both defatted and full-fat soy flour from 1988 to 1994. Use of defatted soy flour (all imported from the Netherlands) decreased from 1,407 tonnes in 1988 to 376.8 tonnes in 1994. Consumption of full-fat soy flour (locally processed) increased from 0.1 tonnes in 1988 to 684.7 tonnes in 1994. The factory's maximum demand for soybean is estimated to be about 4,000 tonnes/year if it works at full capacity. ENI has developed recipes using soy flour in traditional Ethiopian dishes for the purpose of introducing soy to communities. These dishes are: Injera (fermented, flat pancake), wot & allichas (sauces served with injera), kitta (unleavened bread), dabbo (leavened bread), dabokolo (snack food), and porridge. At its experimental kitchen, ENI has also been testing soy milk and tofu, and the results have been disseminated to home agents to teach people in the communities how to make soymilk and tofu at home.

Private sector: With the advent of the New Economic Policy, private industries are now flourishing in every sector of the economy. A supplement producer named Health Care Food Manufacturers Pvt. Ltd. Co. began to use soybeans in 1993 in the form of full-fat soya flour in all of its supplementary food mixtures. Its production capacity is now 15 tonnes/shift. In Ethiopia, most people, especially members of the Ethiopian Orthodox Church, consume diets free of animal products during their fasting period. The total number of fasting days amounts to 110-150 days/year, but can reach 220 days for priests and monks. Thus soy-based meat and dairy alternatives can serve as good alternatives for these people while they are fasting. Ethiopia should encourage soybean production. Address: Ethiopian Health and Nutrition Research Inst., Addis Ababa, Ethiopia.

6913. Albertson, Ellen. 1995. Super soy: The newest miracle food. *Self.* Oct. p. 148-151, 204. [1 ref]

• ***Summary:*** The subtitle continues: "Okay. One more time. Scientists are telling us they've found the nutritional Holy Grail, a simple food that prevents heart disease and cancer. Do we believe them? Yes!"

"Soy may be so effective that it actually crosses the line from nutritional to medicinal."

This article begins with a summary of the meta-analysis by Dr. James Anderson published in the *New England Journal of Medicine* (3 Aug. 1995). It reported soy in the diet can significantly lower high cholesterol." It also notes that: (1) "Genistein, a powerful natural chemical unique to soy," may stop the growth of cancer cells. (2) The natural estrogens in soybeans may "help alleviate postmenopausal symptoms." In Japan, where soy is typically eaten daily, there is no word for "hot flashes."

Photos and definitions of various soyfood products are given: Tempeh, soy flour, tofu, textured vegetable protein, soy milk. A section titled "15 delicious ways to add soy to

your diet," gives serving suggestions for these and other soyfoods at breakfast, lunch, snack, and dinner.

• ***Summary:*** One of the most surprising discoveries of modern medicine is that enzymes in the liver "can take the most powerful and dangerous chemicals, and, in an instant, render them totally harmless and show them to the door." It takes certain foods to boost or activate these enzymes, which eliminate toxic chemicals in two steps. In phase 1, an enzyme in the liver cell grabs hold of a toxic molecule and attaches oxygen to it. In phase 2, a second enzyme hooks the toxic molecule onto a carrier molecule, such as glutathione, which carries it away via the urine or feces.

The key is to have plenty of phase 2 enzymes. According to Dr. Paul Talalay of Johns Hopkins University, one of the best sources natural chemicals that cause the liver cells create large amounts of these enzymes is broccoli and other cruciferous plants, such as white cabbage, Brussels sprouts, cauliflower, and kale. "Soybean products, such as tofu, tempeh, and soy milk, also contain natural compounds that stimulate your body to make more of these helpful phase 2 enzymes, which may be part of the reason why Asian countries have especially low cancer rates." Address: M.D.

6915. Bloyd-Peshkin, Sharon. 1995. A labor of love: A group of vegetarians has spent two dozen years trying to change the world one acre at a time. *Vegetarian Times.* Oct. p. 66-73, 75.

• ***Summary:*** The Farm is a back-to-the land vegetarian community located about 75 miles southwest of Nashville, Tennessee. They have "spent a quarter century quietly pursuing what have become major trends of the 1990s... In the food business they are on the forefront of healthful eating. They produce tofu, tempeh, and soymilk;... publish vegetarian cookbooks; and run a vegetarian mail-order business that sells hard-to-find vegetarian foods. They've been instrumental in introducing soyfoods to the United States, as well as using them to assist people in developing nations." Their experiment in communal living began in 1971, but they began to come together at Stephen Gaskin's Monday Night Class, a course in the Experimental College at San Francisco State University, where love, tolerance, and compassion were the main tenets. In 1969 Gaskin went on a speaking tour of liberal churches across the country and invited along any members of the class who cared to join him. Seven months and 7,000 miles later a caravan of 300 people in school buses returned to San Francisco. In 1971 the caravan again hit the road, bound for Tennessee. hey rented a tract of land in Lewis County, one of the poorest in the state, and began farming. Others could join if they agreed not to smoke cigarettes, drink alcohol, eat meat, use weapons, or be violent in any way. If they decided to stay, they had to turn over all of their money and property to the community bank–except for tools, musical instruments, and clothes. Now they were part of a community dedicated to living a spiritually meaningful life.

Several years later a 1,000 acre tract of land became available next door to the land the community was renting. They purchased it for $70/acre and began to build a village and a soy dairy. For the first 10 years they had no running water and only battery-powered lighting. Now 10,000 hippies a year came to visit, and some stayed. When 750 more acres of land adjacent to the original farm came on the market, the community quickly bought it.

"But the Farm members' mission was more than just to build a community: They wanted to save the world. With its own basic needs for food and shelter barely met, the Farm sent volunteers to help with disaster relief after an Alabama tornado in 1974. This was the beginning of Plenty, the Farm's charitable relief and development agency. When an earthquake hit Guatemala in 1976 [Feb. 4], Plenty sent a construction crew to help rebuild the homes of poor Mayans... They also found a strain of soybeans that thrived in the local soil, and helped build a soy dairy that still produces tofu, soymilk, and soy ice cream. After the experience in Guatemala, Plenty made soy technology a regular part of its strategy for assisting people in developing countries. Other relief agencies have followed Plenty's lead, discovering that raising soybeans for soyfoods is one of the surest routes out of starvation and into self-sufficiency."

In 1978, after a few years of terrible financial losses, the Farm decided to keep its agricultural operations small scale and organic. By 1980 the population of the Farm had risen to about 1,500 and resources were stretched thin. The population of the Farm began to decline. There was a shift from the idealism of the 1970s to the materialism of the 1980s. The grumbling and discontent escalated, as did

the Farm's debt of $1.2 million owed to local banks and merchants. In 1983, after much research and soul searching, the board decided the Farm should cease being a commune and become a cooperative instead. Members would still own the land in common but they would earn and spend their own money. "Food and medical care would no longer be free, and members would pay monthly dues in order to pay off the community's debt and maintain community property, such as roads and utilities. All adult members would ratify each year's budget and decide other major issues affecting the community.

"In the wake of this metamorphosis, known as the Changeover, more people left; by 1986 only 400 residents remained... Many of the people who left were bitter, feeling they had put everything into the community and were left with nothing." To pay its debts, the Farm sold off some of its communal assets, including Ice Bean, a nondairy ice cream. After 3 years, the Farm was debt free, and local businesses were thriving.

"The soy dairy, begun in order to feed thousands of hungry hippies, has been revived as the Farm Soy Company by founding residents Barbara and Tom Elliott, who today churn out 1,600 pounds of tofu and 10 to 15 gallons of soymilk daily with the help of two part-time employees and cleaning help from four teenagers. The Tempeh Lab, which pioneered U.S. production of this soyfood in 1974, is now owned by Cynthia Bates, who provides tempeh culture to individuals and businesses that make tempeh worldwide. Mushroompeople, owned by Frank Michaels," grows and sells shiitake mushrooms.

"The community's Book Publishing Company, which pays a staff of seven full-time and four part-time Farm members, has made these foods and vegetarian cooking accessible to the mainstream. The company also publishes information on midwifery and the nutritional aspects of a vegetarian diet. The Mail Order Catalog, owned by Cynthia and Bob Holzapfel, is a source of vegetarian foods that are difficult to obtain outside of major metropolitan areas."

Today the Farm owns its land outright and has about 185 residents, about half of them teenagers–who provide living proof that a vegan diet is healthy for children.

6916. *Good Medicine* (*PCRM, Washington, DC*). 1995. New vegetarian wave in Cuba. 4(3):18. Fall.
• ***Summary:*** Last year PCRM's Director of Preventive Medicine, Andrew Nicholson, presented lectures on the role of vegetarian diets in preventing breast cancer at a conference of Latin American surgeons. Soon he was asked to speak in Havana, Cuba, at Oncology '95, an international conference of 400 Latin American oncologists. In June 1995, in Cuba, together with Gilberto Fleites, M.D., Chief of General Surgery at the National Institute of Oncology, Dr. Nicholson launched the National Commission on Diet and Cancer to disseminate information on cancer prevention and vegetarian diets. One of the first tasks will be a 3-month study on how best to help individuals make the transition to vegan diets with locally produced foods.

"Dr. Nicholson received the Oncology '95 award for the best research on cancer prevention. His address to the conference was the subject of tremendous press interest, leading to appearances on five radio broadcasts, numerous tapings for future broadcast, and a lengthy television interview on the equivalent of the *Today Show.* Dr. Fleites also took the opportunity to shoot a Spanish-language video on vegetarian diets."

Production of cow's milk in Cuba has fallen to only 20% of 1989 levels, due to a lack of imported feed grains, and "15 of the nation's dairy factories have been converted to use soy products. Soy yogurt is now produced in every province of Cuba, and is routinely provided to 2½ million children and 1 million senior citizens at a ration of 2 liters per week. Twenty more dairies will make the conversion within the next few months. As the health risks of cow's milk products become more evident, the switch to soy will have benefits that are more than economic.

"Some Cubans continue to be concerned about decreased availability of meat and milk, despite their contribution to heart disease, cancer, and stroke. The new wave of interest in vegetarian diets could have a powerful effect on both dietary habits and health in Cuba."

6917. Mangels, Reed. 1995. Nutrition Hotline: Fortification of soy milk. *Vegetarian Journal* (*Baltimore, Maryland*). Sept/Oct. p. 2.
• ***Summary:*** Question: What are the sources of vitamin D and other added nutrients in the fortified soy and rice milks I've been seeing lately? Are any of these animal derived?

Answer: "The following companies state that their fortified beverages contain no animal-derived ingredients:" A long list of non-dairy products and their makers are given.

Four key nutrients associated with these beverages are calcium, vitamin D, Vitamin B-12, and riboflavin. A nice table (see next page) shows how these beverages compare with cow's milk. Address: PhD, R.D., Baltimore, Maryland.

Industries, Mini Opic milk, Samalic Industries, Milk man, Deagbo Industries. The protein content ranges from 3.01% (Deagbo) to 4.99% (Milk man). (2) Proximate composition of some baby food manufactured by Nigerian companies. Those containing soy are Nutrend, Babeena, Golden Morn, Mama Joy, and Joy Vita; their average price in 1994 is 87 Naira. Non-soy (mostly imported) are SMA, Similac, Nan, and Nan; their average price is 192 Naira–more than twice as expensive. (3) Yield and quality of soy oil and affected by processing temperature. (4) Nutrient composition of selected soy flours from the extruder and the screw press. (5) Physico-chemical characteristics of crude, partially and fully refined soy oil.

(6) Forty nine soybean products that are being processed and marketed by companies in Nigeria (Feb. 1994): In Lagos: Lisabi Foods Soy custard, Smallette Sogi, Glaxo Nigeria "Babeena" baby food, Nestle Foods "Nutrend" baby food and "Golden Morn" breakfast food, Goodings Health Goods "Nutrela" texturized vegetable protein, Niger Dock Soymilk, Al-Bahamas Baba Ogi, Odichie Bakery Soybread, Buckingham Ltd. Mama Joy baby food. In Oyo: Milkman Soy milk, Deagbo Industries Soyvita (beverages), Tella Food Industries Soymilk.

(7) Summary of number of markets and retail sale outlets for soybean (seeds & flour) in Ibadan, Nigeria. Gives figures collected by IAR&T for January each year from 1987 (2 markets, 4 retailers, price 1.50 Naira/kg) to 1994 (64 markets, 1,017 retailers, price 20.00 Naira/kg) to 1994.

Abstract: "Protein deficiency is still a major problem in Africa particularly among the low income group. Soybean has tremendous potential for alleviating protein energy malnutrition in root crops / cereal based African diets via soybean based industries. This paper discusses the soybean technologies available for household, small scale, and industrial level."

In African diets, almost 60% of the proteins comes from cereal grains. Soybeans can be used in traditional recipes and foods in a wide variety of forms including whole soybeans, soymilk, tofu, soy splits (split soybeans), soy flour (raw and heat-treated), soy paste (cooked soybeans ground to a paste), soymilk residue (okara), etc. Traditional Nigerian dishes that were found to benefit from addition of soy are *moinmoin, akara, kuni, fufu, eba, etc.* Soy milk, soy yogurt, and soy ice cream have become readily acceptable and available in Nigerian markets.

"Conclusion: The future of soybean looks bright in Africa. With increasing demand and the increasing costs of protein foods, soybean offers one of the best solutions for improving human nutrition in Africa; particularly the problem of protein energy malnutrition. There is need for more research and training in the area of soybean processing and utilization." Address: Food Technologist and Coordinator, Soybean Utilization Project, International Inst. of Tropical Agriculture (IITA), Oyo Road, PMB 5320, Ibadan, Nigeria. Phone: 234 2 241 2626.

• ***Summary:*** Contents: Introduction. History and production. The benefits of soya: Nutrition, functional properties. Products & applications: oil-based products (soya bean oil, soya lecithin), soya protein products (full-fat soya flours, defatted soya flours, soya concentrates, soya isolates), soya fibre products (incl. soy bran), whole soybean products or soya foods (soya milk or drink, tofu, yuba, soya sauce, miso, tempeh, natto). Trends and problems: Growing market for soy protein ingredients, U.S. soyfoods market, soymilk sales, problems of quality and image and legislation. Address: Editor, Soyfoods, England.

6920. *Plenty Bulletin* (*Summertown, Tennessee*)**.** 1995. Why soy in Guatemala?–The history. 11(3):1, 3. Fall. [1 ref]
• ***Summary:*** In 1982 Plenty published "Plenty Integrated Soy Program Guatemala" from which this article is excerpted. Photos show: Suzi Jenkins serving soy ice cream from the soy dairy in Guatemala in 1980. Suzi Jenkins and Laurie Praskin handing out soy ice cream cones to Mayan kids near Solola, Guatemala, in 1980.

6921. Roberts, Justin J. 1995. Trends in soybean processing and utilization. Paper presented at the Third Bi-Annual SoyAfrica Conference. 43 unnumbered pages. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma.
• ***Summary:*** This paper consists entirely of graphics (prints of overhead transparencies showing many charts and tables).

Background with regards to soy products in general: Healthy and nutritious, protein rich with all essential amino acids, rich in fibre, rich in vitamins and minerals, low in sodium and potassium, cholesterol free and low in fat, probiotic.

Typical soy products available in the RSA [Republic of South Africa]: soybeans, untoasted full fat soya flour, toasted full fat soya flour, micro-milled soya flour (100 mesh), soya mince (coloured or uncoloured)–tvp, textured soya concentrate–tsc (red crumble frozen), uncoloured frozen (coloured and uncoloured frozen chunks), soya chunks (coloured and uncoloured), soya isolate (90% protein), soya concentrate (70% protein).

Typical soya applications in the RSA (many are listed).

Soyabeans (defatted flake products): Food uses, industrial uses of soya flour and grits, soyabean meal (feed uses, industrial uses), soy isolate (edible uses, industrial uses).

Soyabeans (natural full fat products): baked soyabeans, seed, soyabean sprouts, stock feeds. Full fat soya flour (8 uses), roasted soyabeans (8 uses), soyabean derivatives (soymilk, tofu, miso, tempeh, etc.).

Oil products: crude soyabean oil (glycerol, fatty acids, sterols {stigmasterol, sitosterol, tocopherol, hormones}), refined soyabean oil (edible uses {9 uses listed}, medicinals, technical [industrial] uses {12 uses listed}), soyabean lecithin (edible uses {emulsifying agent, nutritional, stabilizing agent, surface active agents, anti-spattering agents, pan grease}, technical [industrial] uses {9 uses are listed}).

Soy products (7 benefits listed). Typical soy products available in South Africa (18 are listed again). Soya applications (Baking industry {7 benefits listed}). Appropriate technology (8 examples). Research needs (12 needs). Soybean research in the Department of Food Science, University of Pretoria (12 areas of research). Modified Intsoy method of making soymilk (to reduce oligosaccharides and urease, lipoxygenase, and trypsin inhibitors). Small / micro and small to medium food enterprises (SMEs, problems and opportunities). Oligosaccharides are probiotic? (7 types of health promotion, 3 unknowns). Soya protein isolate by ultrafiltration (requires less water than usual isoelectric method). Future developments in the soya industry in RSA (turnkey soymilk plants, soy sprout mince, milk and flour, canned soybean products, okara in standard white or brown bread and/or biscuits, tofu).

Mopane or mopani from caterpillars / worms of *Gonimbrasia belina*. Address: Dep. of Food Science, Univ. of Pretoria, South Africa.

6922. United Soybean Board. 1995. The absolutely astounding supermarket soybean search. Chesterfield, Missouri: USB. 6 panels. 28 cm.
• ***Summary:*** This colorful, six-panel foldout contains a panoramic 4½-panel illustration of the inside of a modern supermarket. Each of the aisles and sections are marked. Additional signs show the many places that soy appears in the store.

The bottom half of the first page states: "Ever since the famous American chemist George Washington Carver began exploring the mysteries of this little legume near the turn of the century, the growth in food and technical uses for soybeans has been nothing short of astronomical. Today, every aisle of your local supermarket contains soybean products, and we're not just talking tofu. Take a look at the astounding number of products containing soybeans at the Super Duper Food Store in Anytown, USA."

A sidebar explains four symbols for marking foods made from whole soybeans (circle) or containing soy oil, soy lecithin, and soy protein or soybean meal. For example (moving from left to right): Margarine & spreads. Tofu. Tofu ice cream. Peanut butter (with soy oil). Desserts and Mixes (with soy oil). "Super Soy–Oh Boy" (Soymilk end display, by the case). Cooking oils. Mayonnaise, Salad dressing. New Chips Asoy! Sauces. A sign reading "Think soy." Soya Snax. Soy Joy (in the refrigerated drinks section).

One full page, titled "Believe It," gives a detailed alphabetical listing of 76 categories supermarket items that contain soy, and what type they contain. For example: "Cosmetics: Soybean oil. Crackers: Soybean oil, soybean

oil shortening. Croutons: Soybean oil. Diet drinks: Soybean oil, soy lecithin, soy protein isolate." Also included are: Soy sauce. Soy nuts. Tofu. Not mentioned: Miso. Soymilk. Meat alternatives. Address: 16305 Swingley Ridge Dr. #110, Chesterfield, Missouri 63017.

6923. United Soybean Board. 1995. Soybeans: How a little bean becomes an ingredient in thousands of products from margarine to tofu to chicken feed (Brochure). Chesterfield, Missouri: USB. 12 panels + poster. Each panel: 23 x 10 cm.
• ***Summary:*** This attractive color publication is folded so that the first 12 panels are a brochure. However when fully unfolded, a large color poster appears. The brochure notes: In 1992/93 the USA produced 51% of the world's soybeans. An early history of the soybean in the USA [full of errors]. America livestock (including poultry) consume about 22.5 million tons of soybean meal a year. How soybeans are grown. Composition of the soybean. Foods made from soybeans: Edamame, miso, natto, soy milk, soy sauce, tempeh, tofu or soybean curd, full fat flour. Photos (each incorrect) in the brochure show: "1904: The famous American chemist George Washington Carver discovers that soybeans are a valuable source of protein and oil. 1920s: Combines first used to harvest soybeans. 1922: First U.S. soybean processing plant opens. 1929: Soybean pioneer William J. Morse spends two years in China, gathering more than 10,000 soybean varieties for U.S. researchers to study. 1940: Henry Ford takes an ax to a Ford car body to demonstrate the strength of the soybean plastic he has developed."

The color poster (16 by 27 inches) is a cartoon showing how soybeans are processed into various products, including full fat flakes, crude and degummed soybean oil, soy concentrates, soy isolates, soy flours, and defatted soy flakes. A soybean utilization/processing diagram at the bottom of the poster shows 137 different products that can be made from the soybean, including 33 whole soybean products ("Traditional soyfoods" incl. tofu, soymilk, miso, tempeh, soy sauce, natto), 33 soybean meal products (26 edible uses + 7 feed uses), and 71 soy oil products (13 edible uses, 19 industrial uses, and 18 applications for lecithin). The seven types of lecithin applications are: Emulsifying agent (4 applications), nutritional (medical use, dietary use), anti-spattering agent (in margarine manufacture), stabilizing agent (in shortening), anti-foam agent (yeast manufacture, alcohol manufacture), dispersing agent (in paint, ink, and rubber manufacture, and in insecticides), and wetting agent (in cosmetics, paint pigments, and calf milk replacers).

Accompanying the brochure/poster is a note pad with the same slogan across the top of each sheet: "Soybeans–Designed for life." Across the bottom is written: "United Soybean Board–Investing check-off dollars." Address: P.O. Box 419200, St. Louis, Missouri 63141-9200.

6924. Voisin, Jean-Luc. 1995. Dairy like soyfoods in Africa: Evolution & perspectives. Paper presented at the Third Bi-Annual SoyAfrica Conference. 5 p. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma.
• ***Summary:*** Contents: Foreword. The existing plants. Dairylike foods in Africa–The weak points: The soyfood itself, and the size of the project. The best "compromise": The end products, the size of the plant and investment. Feasibility of a soy yoghurt plant–an example. Conclusion.

During the last 20 years the author has spent most of his time in the study and establishment of more than 30 food processing plants for the private sector throughout Africa (mainly for the milk, fruit, and soya industries) from the smallest (US$100,000 investment) up to the biggest (more than US$15 million) on behalf of small European companies and multinationals. In 1987, while visiting dairy plants in Nigeria, he noticed that all but one had been forced to stop operations because of lack of powdered milk–whose price had quadrupled from $0.50/kg to $2.00/kg within a very short time. Today the price is about $3.00/kg.

At this time he realized that powdered soymilk could be used in place of powdered cow's milk, so he worked with a French company to design and manufacture a soya milk processing machine (named Agrolactor) which made 250 liters/hour of soymilk. They tried to promote this machine in Africa. The first one used commercially was installed in Nigeria in 1990; since then they have installed 7 other plants throughout Africa. The demand for soya processing is steadily increasing, however during the past 5 years these projects have faced many difficulties.

The seven existing plants (with the company name in parentheses) are: (1) 1989–Congo (Agricongo). This was the first project to use the Agrolactor. Agricongo used the machine for research and development. They sold it this year (1995) to a dairy plant in Brazzaville for soy yogurt production. (2) 1990–Lagos, Nigeria (Uncle Soyo): A private Indian investor. After 3 extensions and an aggressive marketing policy, this company was selling more than 300,000 units per day of soydrinks (pouches), soy yogurt, and ice cream. After very good results and profitability, the plant has now been moved to India. (3) 1992–Ivory Coast (Cebon): This plant had planned to process pineapple juice and soy drinks, but in the end only pineapple juice was commercially successful. (4) 1993–Burundi (Vispe): This Italian NGO is still working in Bujumbura, producing soy milk and baked goods. (5) 1994–Cape Verde (*República de Cabo Verde*) (Benali): A private company is producing soydrinks and fruit juices (from imported concentrate); today 80% is from fruit. Note: This is the earliest document seen (Aug. 2009) concerning soybeans in Cape Verde. This document contains the earliest date seen for soybeans in Cape Verde (1994) (one of two documents). The source of these soybeans was France (See Duchatel 1997). Even earlier, sometime between Sept. 1946 and 30 June 1960, the

Cape Verde Islands received 1 shipment of 2,007 lb of Multi-Purpose Food.

(6) 1995–Cairo, Egypt (Sesco): This private company, in a joint venture with Actimonde, is manufacturing soy yogurt. After 3 months of production the break-even point has already been reached (50% of normal capacity, i.e. 20,000 cups/day). (7) 1995–Nigeria: A second plant in Suleja (50 km from Abuja) was installed for a parastatal company; the soydrinks are expected to be launched this month.

The end products: European soyfoods companies are now very creative in research & development. During the last 2-3 years many new products, with better taste and packaging, have been introduced to European food stores, including supermarkets. The author estimates that the sales of the 7 French, Belgian, and Swiss soyfoods companies he knows have increased by approximately 30% every year since 1990! Four groups of products have been the most successful in Europe: 1. Soymilk, packaged in aseptic long-life cartons and sometimes mixed with flavors or fruit juice. 2. The dessert products–soy yogurt (Soyourt) and ice cream. 3. Tofu burger. 4. The dried products–biscuits and energy bars. For the African market, consumer taste tests conducted in 12 countries show that the most acceptable product is soy yogurt, which is very close to the traditional sour milk consumed by many African people. Dried products (energy bars) are also well accepted, and they are easily distributed and stored. Soymilk (whether flavored or plain) is not appreciated and tofu is too sophisticated at present.

In Africa, up until now, all of the soyfoods projects known by the author, have been developed on a relatively small scale with an investment of less than $1 million. Because this size plant involves too many problems, it is now believed that a plant with an investment of approximately $2 million represents the best compromise between production capacity, the market possibilities, profitability, and management capability. An example of the cost breakdown for a soy yogurt plant on this scale is given.

Conclusion: There is no doubt today that dairylike soyfoods are becoming one of the most interesting solutions to nutritional problems facing the growing populations of Africa. In order to realize this potential, the food industry must develop technologies and end products suites to the purchasing power and tastes of African consumers. Those products must be followed up by a strong marketing program. For the success of such medium- and small-scale commercial ventures, it is important that linkages be established between the private investors, NGO's, and International Organizations. Address: Food Engineer, Managing Director, Actimonde, International Business Park, Batiment Athena, 74160 Archamps, France. Phone: +33 50.31 56.40.

6925. **Product Name:** Soydrinks.
Manufacturer's Name: Zuma Foods.
Manufacturer's Address: Suleja, Nigeria.
Date of Introduction: 1995. October.
Ingredients: Soybeans, water, flavor, sugar, starter culture.
Wt/Vol., Packaging, Price: Plastic cup.
How Stored: Refrigerated.
New Product–Documentation: J.L. Voisin. 1995, Oct. 3-5. Dairy like soyfoods in Africa: Evolution & perspectives. Paper presented at the Third Bi-Annual SoyAfrica Conference. 5 p. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma. Actimonde of Archamps, France, installed an Agrolactor (soymilk processing plant) at this company in 1995. A second Agrolactor plant in Suleja, Nigeria, (50 km from Abuja) was installed for a parastatal company; the soydrinks are expected to be launched this month (Oct. 1995).

6926. Haren, Chuck. 1995. Soyfoods, Soynica, and Nutrem Soy Shop in Nicaragua (Interview). *SoyaScan Notes.* Nov. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Nutrem Soy Shop started making and selling small amounts of soyfoods in Managua, Nicaragua, in about June or July 1994. They are managed by *Soynica* (*Organizacion Soya de Nicaragua*), an organization of women working to improve the lot of children and women in the barrios of Managua by providing nutrition and health education and by supplementing the nutritional needs of more than 4,000 children and 500-600 pregnant and nursing mothers. Nutrem is in the process of introducing fresh soyfoods to the marketing sector in Managua. They are also teaching their people how to make these foods on a very small scale. Even when John Gabriel was working to prepare the shop for opening, his wife Charlotte was teaching women how to make tempeh. Plenty USA helped them obtain a grant from the InterAmerican Foundation, to purchase equipment for the plant and pay for people the first year; Chuck is sure this grant money has run out, but they may have had follow-up grants. There will be a big program there soon with Soynica as the center of it; the Belgians or the Austrians are going to fund it. It will include extruders (such as the InstaPro) to make dry products. Chuck thinks several more years will be required before Nutrem can stand on its own; less time would be required if they were just a food business, rather than an educational center with a broad program. The women of Soynica have been making and selling soyfood products for a long time, and helping different women in the barrios on a micro-business scale. Nutrem is an educational center as well as a small producer of foods.

Nutrem now makes small amounts of the following soy products: Tofu, tempeh, soymilk, soy ice cream, and okara croquettes (a mixture of okara, tofu, flour, herbs, and spices). John does not know how many people are employed by Nutrem; it is owned, managed and operated by women, though they may have some technical help from men.

Nutrem's soy products are sold at about 7 different very

small health food stores in Managua; some of these shops focus on herbs and one is macrobiotic. The products are consumed almost entirely by Nicaraguans, not by foreigners. Nutrem has started to sell a little tofu to hospitals. Some of the Soynica women take home soy products made at the shop and sell them in their neighborhoods. Some of these women have micro-businesses in their homes. They will make soyfoods at home with several neighbors in the morning, then sell these fresh in the neighborhood.

Luci Morren, a former Belgian nun, has long been a spearhead for the program. Plenty met her in Chiapas, Mexico, when the Guatemalans fled in the early 1980s. She has been in Nicaragua since about 1981. Casta, Chuck's wife, was the administrator of Soynica; Luci is now the vice president; she was the president. Soynica has a paid staff of about 25 women and a board of directors, which includes people from the Nicaragua National University, a woman judge, etc. Soynica is a group of people who were Sandinistas during the 1980s; they were trying to maintain good nutrition in the country and were teaching people how to use soybeans. Some people in the government didn't like this since the soybeans had to be imported from the USA, but when they started getting the soybeans from Mexico and Brazil, and showed the importance of their work, the government let them continue. Soynica was formed and registered in 1988-89 shortly before the election of Violetta Chamorro in Feb. 1990. Chuck estimates that Soynica has at least 500 members and volunteers. Their most important is *olla communales* or communal eating pots. While educating people in the barrios about nutrition and soyfoods, they organized local groups into which they selected the most needy children and pregnant and nursing mothers. Six mornings a week Soynica offers these people a nutrition supplementation program in the form of an extra meal from the communal pot. Some of the soyfoods made at Nutrem may go into these communal pots. Nicaragua's economy is in pretty bad shape.

Nutrem was not the first tofu shop in Nicaragua. Before Chuck arrived in Nicaragua in 1990, he thinks there was a small tofu shop at the Ben Linder house–or perhaps somewhere else. There is another group named Tonali (pronounced toe-nah-LEE), a women's cooperative which Chuck helped in starting to make soyfoods; they have a bakery in Managua where in about 1992 they started making and selling tofu and soymilk. They also used the okara in their breads.

For details, write Luci Morren, Soynica, ERP-05, Managua, Nicaragua. To phone Nicaragua, where the time is 2 hours later than California: 011 +505-2-73360. Address: 3625 South 1st St. #110, Austin, Texas 78704. Phone: 512-912-1429.

6927. Lang, Paul. 1995. Natural Products, Inc. in Grinnell, Iowa: History, products, and competition (Interview). *SoyaScan Notes.* Nov. 27 and 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Paul started making soy products in Grinnell, Iowa, in August 1995. His family, which owns a 3,000 acre farm there, also now owns this business. They hope to use it as a way of adding value to the soybeans they grow. They do not presently make the roasted soy fiber or the enzyme active soy fiber shown in their ad in *Soya Bluebook Plus.* These two products were basically unground soy hulls, and some bagel companies used them. Some American bakers buy soy hulls to add dietary fiber to their baked goods. He cannot begin to compete with Fibrim made by Ralston Purina. The oil crushers is his area are dumping semi loads of soy fiber on the market for about $0.05 to $0.08 per pound. Paul's family bought a Cargill animal feed mill in Grinnell; it was worth $700,000 (for just the buildings) but Cargill had abandoned it, so they were able to buy it for $52,000. Paul is very interested in identity-preserved soybeans and he has 34 different bins to keep each variety separate. He thinks the future of soyfoods lies in identity preservation. For example, he now uses a low-flatulence soybean to make his soy flour–and his is the only company doing this.

Clofine, located just outside of New York City, buys Paul's products (both enzyme active and inactive roasted whole soy flours) and re-sells them. They are almost like a broker. Using a patented process, Clofine slurries the enzyme active (raw) flour with water (probably hot water) then spray dries it, under high pressure through a small orifice. Ed Pedrick helped to develop this method. After that, Paul does not know how the product is processed, and how they get from soy flour to "spray-dried tofu." He does not know if any coagulant is added, and what is the justification for calling it tofu. He views it as simply a water-soluble soybean flour, with a low PDI. It will hold up in suspension when mixed with water to make soymilk. Paul also sells to Devansoy, where Mr. Pedrick now works full time and makes the same spray-dried product. Devansoy sells the product both under their own trademark and as a raw material for use by other food processors. Both Clofine and Devansoy sell these spray-dried products for about $1.35 per pound; they buy the flour from Paul for about $0.35/pound. If Paul developed a very finely ground soy flour, he could probably take away that market. They sell the roasted flour to bakers in New York City.

In terms of particle size, the smallest is flour, then meal, then grits, then granulers [he coined this phrase], then splits. The big crushers such as ADM and Cargill sell fairly coarse "grits." Generically, the grits go to bagel companies–and he does not know why. The granulers and splits are not presently being sold. His main products are the enzyme active full fat flour, and the lightly roasted inactivated full-fat flour. Paul is working closely with the American Institute of Baking (AIB). Paul also sees a huge potential export market. Address: Natural Products, Inc., 798 Hwy 6, Grinnell, Iowa

6928. Yuen, Ada. 1995. Vitasoy prepared for tougher second half. *South China Morning Post* (*Hong Kong*). Nov. 30. Business section. p. 2. Ed. 2.
• ***Summary:*** Vitasoy's turnover rose 14% from the same period last year to $750 million. Earnings per share stood at 13.3 cents, up 8.1% from last year. A dividend of 4 cents a share was paid, up 8% from last year. Sales of the distilled water, juice, and tea lines showed strong growth, but sales of soya milk products remained stagnant. Sales in North America, the company's second largest market, grew 9% to $128 million. Brand recognition from Hong Kong immigrants and strong demand for health foods contributed to the growth. Sales from the Shenzhen plant, of which Vitasoy owns 70%, grew 63%, partly because of the hot weather and the launch of a distribution network.

6929. Global Exchange. 1995. Soy Cubano! (Color videotape). San Francisco, California: Global Exchange. 30 minutes. Produced by Global Exchange and the Hisperian Foundation, and narrated by writer and activist Alice Walker.
• ***Summary:*** Discusses the food and medicine crisis in Cuba. Strongly suggests that most of the problem is caused by the U.S. embargo on Cuba. Address: Cuba Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St., San Francisco, California 94110. Phone: 415-255-7296.

6930. Idowu, I.A.; Osho, Sidi. 1995. An update of soybean food technology generation and transfer problems in Nigeria: A review of experiences. Paper presented at Conference on Postharvest Technology and Commodity Marketing in West Africa. 8 p. Held 27 Nov.-1 Dec. 1995 at Accra, Ghana. [8 ref]
• ***Summary:*** Published in 1998 under the title "A review of experiences with soybean food technology generation and transfer in Nigeria," in Ferris, R.S.B., ed. 1998. *Postharvest Technology and Commodity Marketing in West Africa. Proceedings of a Conference...*

Contents: Introduction. Agricultural technology generation and transfer concepts. The issue of untapped human resources for technology generation and transfer. The prospects for soybean production in Nigeria. Processing and utilization of soybean. Utilization classes and forms of soybean products (fermented products such as soy-ogi or dawadawa, soy-milk, meat substitutes). Important points on soybean processing and utilization: Acceptability of soybean product, suitability of equipment, misinformation about soybean products, profitability. Improving the status of soybean production, processing, and utilization in Nigeria. Address: 1. Coordinator, lecturer of the Dep. of Agricultural Extension and Rural Development, Univ. of Agriculture, Abeokuta, Nigeria and Socio-Economic Consultant on the IDRC/IITA Soybean Utilization Project; 2. Food Technologist, Grain Legumes Improvement Programme, IITA, Ibadan, Nigeria and Coordinator, IDRC/IITA Soybean Utilization Project.

6931. LaBarr, Connie. 1995. Soy info (Leaflet). Lincoln, Nebraska. 2 panels each side. Each panel: 28 x 21.5 cm. [1 ref]
• ***Summary:*** This leaflet was sent to people who called 1-800-Soy-Info. Contents: Whole soybean facts. Texturized soy protein. Soy protein isolates. Soymilk facts. Soy flour facts. Recipes: Tofu dip. South of the border enchiladas (with tofu). Alfredo pasta sauce (with soft tofu). Easy microwave lasagna (with ground beef and lite soft tofu). Key West cooler (with silken tofu). Nutritional composition of the following is given: Whole soybeans, textured soy protein, soy isolates, soy milk, and soy flour. Address: 1610 S. 70th Street, Suite 200, Lincoln, Nebraska 68506-1565. Phone: 1-800-SOY-INFO.

6932. Melina, Vesanto; Davis, Brenda; Harrison, Victoria. 1995. Becoming vegetarian: A complete guide to adopting a healthy vegetarian diet. Summertown, Tennessee: The Book Publishing Co. x + 262 p. Foreword by Suzanne Havala. Index. 26 cm. [20 ref]
• ***Summary:*** An excellent vegetarian and vegan sourcebook and cookbook by three registered dietitians. Contents: Acknowledgements. Foreword. Introduction. 1. What is a vegetarian? 2. The evidence is in. 3. Without meat–exploding the myths. 4. Without dairy products. 5. Veganism: More food for thought. 6. Fats and oils: A balancing act. 7. Fiber: The gift from plants. 8. The vegetarian food guide: Putting it all together. 9. Vegetarian nutrition in the growing years. 10. Vegetarian diplomacy. 11. From market to meals. 12. Recipes: Simple treasures. Appendixes: 1. Glossary. 2. Nutrition recommendations.

This book contains a wealth of accurate, positive information about many different types of soyfoods (especially tofu) and related subjects, including tofu, soymilk, tempeh, miso, soy yogurt, soy cheese, soy sauce, tamari, and soy oil (incl. omega-3 fatty acids). Plus wheat gluten, seitan, rice milk, sea vegetables, adzuki beans (p. 66, 162), quinoa, amaranth, macrobiotics, phytochemicals, plant estrogens found in tofu and other soy products (p. 75; they may contribute to positive calcium balance and have a protective effect on the bone health of Chinese and Japanese women), dietary fiber.

Talk with Vesanto Melina. 1996. July 22. This book was originally published in Canada in May 1994 by Macmillan Canada in Toronto. A revised U.S. edition was published in Nov. 1995 by The Book Publishing Co. in Summertown, Tennessee. Address: Canada.

6933. **Product Name:** SoyaDeli PeptiPro.
Manufacturer's Name: Miwon Co. Ltd.

Manufacturer's Address: 720 Banghak-Dong, Dobong-Ku, Seoul 132-020, Korea. Phone: +82 2 992 1191.
Date of Introduction: 1995. November.
Ingredients: Incl. soy protein isolate.
How Stored: Shelf stable.
New Product–Documentation: Soyafoods (ASA, Europe). 1996. Spring. p. 6. "New soya products at FiE '95." This product, exhibited at the Food Ingredients Europe Exhibition, is a soy protein hydrolysate made by enzymatic treatment of soy protein isolate. It consists mainly of oligopeptides and amino acids. It is claimed to have good solubility and organoleptic properties over a broad pH range. It can reduce the allergenicity and accelerate the absorption rate of the nitrogen source. As a protein supplement it can be used in nutritional foods and drinks, infant formulas, sports drinks, and enteral feeding products.

6934. **Product Name:** Bulk Soymilk.
Manufacturer's Name: Pacific ProSoya Foods Inc.
Manufacturer's Address: 312–19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: (604) 532-8030.
Date of Introduction: 1995. November.
New Product–Documentation: Talk with Raj Gupta and Frank Daller of ProSoya in Ottawa, Ontario, Canada. 1995. Nov. 21. Their West Coast licensee, a new entity in Vancouver, British Columbia, named Pacific ProSoya Foods Inc., has acquired the license to produce soymilk in bulk, using ProSoya technology, for the western part of Canada and the northwest USA. The milk, made in a plant which ProSoya is building for them, will be sold to food processors. It is sort of a joint venture and licensing deal.

Talk with and letter (fax) Dusty Cunningham, Vice-President Marketing, Pacific ProSoya Foods Inc. 1995. July 5. The company expects to start making soymilk next week.

Talk with Dusty Cunningham. 1995. Aug. 23. Pacific ProSoya made its first successful batch of bulk soymilk on Aug. 14.

Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. May 10. The plant in British Columbia (BC) was unable to produce quality bulk soymilk until the latter part of 1995. The soymilk Dusty talks about making on Aug. 14 was never sold. Pacific ProSoya Foods sent samples to dairies and various yogurt companies (Jersey Farms) and ice cream companies (Mario Gelato in BC) in Western Canada, but they weren't getting anywhere. These companies started looking at this soymilk as just a commodity, and not a unique product, and they kept asking for lower prices. By this time, Dairyworld and Sunrise were starting to finalize an agreement–as a result of an information leak from IPC to Peter Joe of Sunrise. Small amounts (about ten 55-gallon barrels/drums) of soymilk made in BC were first sold to Ted Nordquist of TAN Industries in about Nov. 1995. The first bulk shipment went to Ted in Jan. 1996. Then very small amounts of bulk soymilk was sold to Jersey Farms. Ted and Jersey Farms were the only two companies that bought this bulk soymilk. But this was not what ProSoya's plan called for. They were talking with Tom Reynolds and cow's milk dairies in eastern Canada. Tom and Frank were working with Neilson Dairy and Fieldfresh Farms. When IPC entered the scene in 1994, ProSoya was just starting to task with these people, but they had a whole business plan which Lorne Broten bought into. They were going to have packaged product with Neilson and Fieldfresh, and they were going to give us samples of this packaged product, which we, in turn, were supposed to introduce to Dairyworld–the big dairy on the West Coast. "When they saw the Neilson package, they were expected to fall all over us, and we would be selling them soymilk at the same price that Frank would be selling to the dairies in eastern Canada." But the plan didn't work out that way. First, ProSoya never got a firm deal in the east. Gelato Fresco got their own SoyaCow SC-20, and used it to make the first soymilk that ended up in their soy ice cream; later they bought some bulk soymilk (about 1,000 liters at a time) from the ProSoya plant in Ottawa, which also sent samples of soymilk to Neilson and Fieldfresh for testing–but they never marketed a commercial product. The only company that ever marketed a product–soy ice cream–using soymilk from the Ottawa plant was Gelato Fresco.

6935. Parr, Robert; Litser, Glyn. 1995. "What hath God wrought!" The Sanitarium Health Food Company story. Berkeley Vale, NSW, Australia: Sanitarium Health Food Co. 463 p. Nov. Illust. Index. 29 cm.
• ***Summary:*** This book is strong in describing the unfailing presence of the hand of God in Seventh-day Adventist health work, but short on a clear presentation of history. For example: Seventh-day Adventists were pioneers in the production of peanut butter worldwide. When did they start commercial production in Australia? Here is a brief chronology:

1897 Nov. 8–Edward C. Halsey first arrives in Sydney, Australia (p. 18 left column), from the USA, where he undoubtedly learned how to make peanut butter, probably at Battle Creek [Michigan].

1898 Jan. 28. Halsey roasted the first tray of peanuts–according to his diary (p. 19 left)–probably at the Melbourne plant.

1898 April 27–The first products of the infant company were Granose, Granola, and Caramel Cereal [grain coffee]. The names were registered on patents applied for on this date (p. 16 right).

Undated–There is no evidence of what they said as the first products were taken from the oven; "they were probably too busy with the next batch of Granola or the next tray of peanuts, to be roasted to make the first peanut butter ever made in Australia" (p. 19 right).

1899 May 29–The new factory at Cooranbong is

now "ready to allow Edward Halsey to commence his manufacturing Wizardry. His first product was Peanut Butter" (p. 27 right).

1899 July–The company begins to sell its first products at the Union Conference session held at Avondale. "During this conference he [Halsey] produced (and sold to the delegates) the first Granose Biscuits ever made in Australia" (p. 27 right)–but no peanut butter.

1899 Dec.–Halsey "had the following products off the production line and ready for customers: Granose, Granose flakes, Bromose, Nuttose, Antiseptic (charcoal) Tablets, Granola, Caramel Cereal, Nut Butter, Wheatmeal Biscuits, Gluten Biscuits and Gluten meal" (p. 27 right). If this "Nut Butter" was peanut butter (which seems likely) then Sanitarium Foods first made and sold peanut butter commercially in Australia in Dec. 1899. They probably sold it commercially in late May or early June 1899. However, the company may have made 6-12 months earlier, but the records are unclear. Address: Berkeley Vale, NSW, Australia.

6936. *Soyafoods* (*ASA, Europe*). 1995. GMO labelling for Vermont, USA. 6(3):3. Autumn.
• ***Summary:*** The state of Vermont has passed a law, which requires for the first time in America, any genetically engineered food product to be labeled as such on grocery and supermarket shelves. The law resulted from the controversy surrounding the synthetic hormone BST, a bovine growth hormone made by Monsanto and used to make cow's give more milk. Food industry groups hope to overturn Vermont's ban in court; they fear that drawing attention to a genetically engineered substance might unfairly stigmatize it. Note: This is the earliest document seen (March 2007) that uses the abbreviation "GMO" to refer to "genetically modified organism(s)."

6937. *University of California, Berkeley Wellness Letter.* 1995. Oy, soy: here comes the hype. 12(2):1-2. Nov.
• ***Summary:*** This is an excellent critique of the article by Dr. James Anderson on the ability of soy protein to lower blood cholesterol, published in the *New England Journal of Medicine* (3 Aug. 1995, p. 276-82). Some recent news reports would make you think that soy was a "magic bullet." However there is a danger it may go the way of oat bran. "Remember oat bran? The rise and fall of oat bran was a textbook case in how *not* to think about nutrition." Interestingly Dr. Anderson, an expert on fiber, was a leading proponent of oat bran in the 1980s and the author of a similar meta-analysis on oats.

In short, the Anderson study "found that substituting soy protein (in a wide variety of forms) for some or all animal protein resulted in an average drop of 9% in total blood cholesterol, and a 13% drop in LDL ("bad") cholesterol. There was no significant effect on HDL ("good") cholesterol, which is a plus, since HDL usually fall when the total number drops." But there were some serious problems in the study: (1) Anderson's analysis raises more questions than it answers. This is not new research, but rather a meta-analysis of previous studies on soy protein. The meta-analysis can be a powerful tool, however this one is flawed. The main problem is that the focus supposedly is soy *protein,* yet the 38 studies analyzed actually used a wide range of compounds: various kinds of isolated soy protein and textured soy protein. Some of the soy compounds were 95% protein, some much less. Some diets contained everything in the soybean, including fiber and certain potent phytochemicals, such as isoflavones.

"In other words, we still don't know if soy protein itself lowers cholesterol, as claimed." Part of the effect may be due to the soluble fiber, which is well known to lower blood cholesterol and is found in many plant foods besides soybeans. "What's needed is a study that feeds highly purified soy protein (just the amino acids) to humans–and it hasn't been done. Such a study, using rats, found that the isolated soy protein did *not* significantly lower cholesterol, compared to animal protein. In light of this, don't be surprised if next week the headlines read 'Soy protein does *not* lower cholesterol after all."

(2) Not everyone would benefit, even if soy protein does prove effective. Most of the reported drop in cholesterol (and LDL) occurred in people with very high levels (over 335 mg/dl), which dropped by 20% on the soy-based diet.

(3) A person would have to eat a lot of soy protein. The above results were obtained when people ate an average of 47 grams of soy protein a day. Eating only 25 gm a day cut the drop in half. One cup of soymilk has 4 to 10 gm of protein; 4 ounces of tofu has 8 to 13 gm; 3 ounces of soy burger contains 18 gm. So to get 47 gm of soy protein you would have to drink about 7 cups of soymilk or 1 pound of firm tofu.

(4) Adding soy to a poor diet won't do the trick. In nearly all the studies, soy protein replaced half or even all of the animal protein, which is usually high in fat and dietary cholesterol.

(5) Not all soy products are equally effective in lowering blood cholesterol. In addition, some contain lots of fat (albeit unsaturated) and calories. Some foods claiming to contain soy actually contain little of it. "Even those that contain the same amount of soy protein often have very different levels of fiber and/or other phytochemicals, and may have very different effects on cholesterol."

6938. *Vegetarian Times.* 1995. Can soy save Cuba? Nov. p. 25.
• ***Summary:*** A photo shows two Cuba girls drinking soymilk. The caption reads: "Soymilk is keeping Cuban children healthy." Address: Managing editor, Vegetarian Times.

6939. Vitasoy International Holdings Ltd. 1995. Interim

report 1995. New Territories, Hong Kong. 14 panels. Nov. 29. 21 cm. [Eng; Chi]
• ***Summary:*** For the six months ended 30 Sept. 1995, sales (turnover) were HK$750.2 million, up 14.4% over the same period last year. Operating profit was $77,370, up 9.5%. Earnings per share rose to 13.3 cents, up 8.1%. In Hong Kong, which contributed 70% of the group turnover, sales were up 14%, but sales of soymilk products in this market are stagnant.

In North America, the company's second biggest market, sales showed a 9% increase, to be in excess of HK$128 million. Sales of pasta and tofu were particularly strong. "This market benefits from the strong brand recognition among Hong Kong immigrants, an example being the strong sales increase of Traditional Vitasoy Soyamilk in Canada."

In China, the Shenzhen facility is now fully operational and this contributed to a robust sales increase of 63%. The Shenzhen has already started to make a small contribution to Group profits in its second year of operation.

See also article in the *South China Morning Post* (Hong Kong) of Nov. 30 (Business section, p. 2). Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

6940. Guy, Camille. 1995. Soy infant formula concerns to be aired at conference. *New Zealand Herald.* Dec. 4.
• ***Summary:*** "A Lincoln University scientist will present controversial New Zealand concerns about soy infant formula at a conference in the United States this week.

"Professor Cliff Irvine, a reproductive endocrinologist, has been invited by the United States Food and Drug Administration [FDA] to present a paper at its Arkansas conference on phytoestrogens.

"He will be accompanied by an Auckland analytical chemist, Dr Mike Fitzpatrick, whose findings indicate that soy infant formula and soy infant cereals contain plant estrogens at levels which may be harmful.

"This conclusion is vigorously contested by the soy industry.

"Professor Irvine will also present new findings on phytoestrogen levels in human breast milk, which do not support the soy industry's claim that breast milk also contains phytoestrogens.

"The Health Research Council last week awarded a $32,500 grant to Professor Irvine to look at the effects that soy infant formula has on the reproductive systems of male babies.

"He says this research is necessary because soy estrogens have been shown to affect normal sexual differentiation in the young of several species, with the damage not apparent until puberty. It is not known whether similar effects are found in humans.

"A Soy Information Network has been set up by Auckland scientists and parents."

6941. Bourelly, Thomas. 1995. Plans to start a soymilk plant in Haiti (Interview). *SoyaScan Notes.* Dec. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Thomas is a native of Haiti who speaks fluent English and has been educated in the USA. He has undergraduate degrees in chemistry and biochemistry (from Illinois Institute of Technology), and an MBA. He has run several food companies in the USA. Now he is planning to return to Haiti where he will start a soymilk factory. He has already purchased the land.

Update. 1996. April 3. Thomas calls. He is still as interested as ever in this project, but cannot figure out how to get soymilk with a long shelf life that is not refrigerated and not too expensive.

Update. 1996. August 13. Thomas calls. He is getting ready to order a SoyaCow 400 liter/hour system from ProSoya in Canada. Two problems remain: (1) A type of packaging that is low in cost. Shurtleff recommends he ask ProSoya to solve this problem. (2) A source of flavors. His product is designed to replace Carnation Evaporated Milk, which has a caramelized taste. Haitians prefer vanilla, chocolate, and strawberry flavors. Shurtleff recommends that he use caramel made in Haiti. Address: 15262 Southwest 157th Terrace, Miami, Florida 33187. Phone: 305-233-6691.

6942. Huang, H.T. (Hsing-Tsung). 1995. Early history of soybeans and soyfoods in China (Interview). *SoyaScan Notes.* Dec. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The early *jiang* in China was made from meat or fish. The *jiang* used by Confucius was almost surely made from meat and fish. Many of the ancient books were annotated during the Han dynasty in an attempt to explain the meaning of certain words and passages. A very eminent scholar in the late Han dynasty (about 100 A.D.), talking about events in roughly 500 B.C., said that the *jiang* used by Confucius was made from meat and fish.

The soybean was not an important crop in China until the early Han, say 200 to 300 B.C. The soybean is mentioned in the *Book of Odes,* which is the most ancient and most reliable of Chinese books, not as a crop but as a plant that people gathered from the wild. Then is are a series of books that were traditions of the Chou dynasty; these were codified and gathered by about 300 B.C., but in them there are not many references to the soybean. However by the time of the Western (Former) Han (206 B.C. to 8 A.D.) there were references in the literature to cartloads and big urns of *jiang* [Chinese-style miso]; *shi* (fermented black soybeans) was also mentioned many times in the literature. Both these foods had become commodities.

Soy is also found in the Han Tomb No. 1 at Ma-wang-tui (pronounced "ma-wang-DUI"), a big archaeological find in China. A woman ruler was buried here in about 165 B.C.

with all the 5-6 major grains, including wheat, barley, rice, 2 kinds of millet, soybean (*shu*), and hemp. Also found in the tomb were several seasonings including "soy sauce (*jiang*), *shi* ('salted darkened beans'), and leaven (*qu*)."

The earliest reference to pasteurization in China concerns pasteurization of wine, around the 11th century, long before the Japanese were pasteurizing shoyu before shipping it to Holland. He is not aware of any early reference to the Chinese pasteurizing soy sauce, but he will look again. However soy sauce is so highly salted that it does not require pasteurization, whereas wine does. The wine was filled into to earthenware jars with a small mouth, which was covered with cloth or leaves, then sealed with mud.

Dr. Huang will travel to China next month (to Foochow, capital of Fujian province) and he hopes to see some of the existing traditional fermentation processes. Soymilk was not an important traditional food in China, but it was becoming important when he traveled there in the 1940s with Dr. Joseph Needham. When they visited northern China, early in the morning people would have a huge iron wok of hot soymilk, which they sold for breakfast. Joseph liked the soymilk with bits of *youtiao* (deep-fried bread sticks; W.-G. *yu t'iao*).

One of the chapters in Dr. Huang's book deals with nutrition in China. The Chinese diet is said to be lacking in calcium. It is well know that for calcium to be absorbed, you need lactose, and the ability to tolerate lactose. Thus, it would be surprising to find higher bioavailability of the calcium in soymilk or tofu. Before the time of Confucius (551-479 B.C.) the Chinese ate a lot more animal products than they do now, but the agricultural system developed with the emphasis on grains, less emphasis on animal products, and no emphasis on milk–probably because of the lactose intolerance of the Chinese people. Thus, the Chinese never developed a dairy industry. Mongols are not as lactose tolerant as northern Europeans, but they are heavily dependant on animal milks as a source of food. They get around this problem by converting animal milk into yogurt. This fermentation converts the lactose to lactic acid, which both solves the lactose intolerance problem and extends the life of the product by lowering the pH.

Another interesting problem: Europeans are the only ones who make true cheese, using rennet. The Mongolians and all the pastoral people in Asia rely on various animal milks, including horse's milk to make koumiss, and they even make a type of cheese that is sort of like cottage cheese, coagulated by acid. Dr. Huang thinks the discovery of rennet is one of those major, accidental discoveries that is very rare. If you wash an animal stomach carefully before using it to store milk, that will wash all the rennet away. Another such major discovery is the Chinese discovery of *chu* or koji. Address: 309 Yoakum Parkway #403, Alexandria, Virginia 22304.

6943. *South China Morning Post* (*Hong Kong*). 1995. Sour milk. Dec. 31. p. 3 (Sunday. ed. 2).

• ***Summary:*** Yesterday samples of Malt Vitasoy Milk were collected by the Department of Health following complaints that some 250 ml paper-packed drinks tasted sour. The company, which has been asked to conduct an investigation and submit a report, recalled 3,840 cartons.

6944. Agbo, N.G.; Kouame, N.C.; Kohoro, H.; Traore, R.; Osho, S.M. 1995. Status of soybean production and utilization in Cote d'Ivoire. Paper presented at Conference on Postharvest Technology and Commodity Marketing in West Africa. 6 p. Held 27 Nov.-1 Dec. 1995 at Accra, Ghana. [3 ref]

• ***Summary:*** Published in 1998 under this same title in Ferris, R.S.B., ed. 1998. *Postharvest Technology and Commodity Marketing in West Africa. Proceedings of a Conference...*

"Abstract: Soybean production was introduced officially into Côte d'Ivoire in 1989. In order to initiate the production of that crop, the government decided to assign this responsibility of the work to the office named 'Direction et Controle des Grand Travaux'. This office has the duty to settle farmers in the north-west regions of the country, particularly in the district of Touba and Odienne. A modernized agriculture system was set for the farmers selected. The investment involved in the project to start with was 56.10 millions US dollar (41.032 millions F CFA). From the first harvest in 1991 to the last in 1994, the production increased progressively to reach 25 206 tonnes. Regarding the utilization of soybean, we could state that the crop is only known by industrials and some people living in urban areas and on the production site. Therefore, initiatives should be taken in order to inform more people in Cote d'Ivoire on various advantages the crop offers for humans and animal nutrition. Different ways of utilization need also to be given to them for a proper use and development of some commercial activities. This outcome will, probably, help farmers improve their health and increase their incomes."

Contents: Introduction. Utilization of soybeans: Utilization in the production area, utilization in non-producing and urban areas. Marketing study (The only firm in the country that processes soybeans is named Tritrufaf and is located in Bouake, near the center of the country. The main products are soybean oil {47% of production} and animal feed. Potential soy products include soymilk, soyflour, soy-attieke (local food), and soybean-cereal mixes). Conclusion. Address: 1. Laboratoire de Biotechnologie et de Science des Aliments, Departement de Biochimie, Faculte des Sciences et Techniques (FAST), 22 B.P. 582 Abidjan 22; 2. Institut des Savanes (IDESSA), Bouake; 3. 6945. *Soy Cubano! Company: Report to the Shareholders* (*Global Exchange, San Francisco*). 1995. Soy Cubano! Company expands to over 500 shareholders strong! $25,000 raised thus far! 1(2):1. Winter.
• ***Summary:*** "Following the signing of a letter of intention between the Cuban Institute for Basic Research in Tropical Agriculture (INIFAT) and a representative of Soy Cubano! in the summer of 1995, to enter into a joint venture with Cuba's soy foods industry, the company launched a major drive to sell shares in the company." They are now halfway toward their goal of $50,000.

Phase I of the project is successful; the "soyfields" in Cuba are growing well. Seed harvested in late 1995 will be dried and stored for planting in 1996. "By late 1996, this project will be responsible for the production of a large percentage of the soybeans needed by the Cuban factories per annum island-wide."

A new 30-minute video titled "Soy Cubano!" is now available. Produced by Global Exchange and the Hisperian Foundation, and narrated by writer and activist Alice Walker, it chronicles the food and medicine crisis in Cuba. Address: Cuba Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St., San Francisco, California 94110. Phone: 415-558-8682.

6946. *SoyaCow Newsletter* (*Ottawa, Canada*). 1995. Vocational training in soymilk production and use started in India. 4(4):1. Oct/Dec.
• ***Summary:*** "Manav Vikas Parishad [MVP] of Ghaziabad in collaboration with the Government Polytechnic College and the SoyaCow Centre has developed a short course to train unemployed youths in the production and utilization of soymilk, tofu and okara.

"Thirty students were registered in this first ever vocational training course and were awarded Certificates by the College.

"In a recent visit to MVP, Dr. R.P. Gupta from Canada, was shown the SoyaCow facility by MVP manager, Mr. S.B. Srivastava, and was introduced to some students from the course. They appeared to be knowledgeable about soymilk production and very excited about the training. MVP regularly runs an SC20 system and profitably sells soymilk, tofu, okara, and related products in the local market. It provides sustained employment to a few persons [making these soyfood products]. The products are accepted well in the local market."

"Dr. R.K. Sharma, Manager of the SoyaCow Centre in India, is responsible for providing interested students with all the help needed to write business plans and complete other formalities to secure loans. He will also assist in the purchase of soymilk equipment from SSP, as well as in the equipment installation, and soymilk production and marketing."

A photo shows an Indian woman standing behind MVP's SoyaCow, which is used for vocational training.

6947. *SoyaCow Newsletter* (*Ottawa, Canada*). 1995. SSP gets approval to manufacture SoyaCow SC20s in India. 4(4):2. Oct/Dec.
• ***Summary:*** Upon careful inspection and testing of the modified prototype of the SC20 built by SSP (Pvt.) Ltd., Dr. R.P. Gupta (who is credited jointly with his wife Rashmi with the SoyaCow invention) approved the system for production of ten SC20 systems."

The SSP-built SC20 was recently showcased twice: First, in a program–Krishi Darshan (Farm-Vision)–televised throughout India. And second in a farm exhibition at a trade fair.

"The response to the soymilk machine was overwhelming. Mr. Tapas Chatterji, Managing Director of SSP, says he has now received 250 enquiries with many parties wanting to buy the SoyaCows immediately."

In view of the success at SSP, ProSoya Inc. is thinking about discontinuing the manufacture of SC20s in Canada (where they are made using aluminium vessels) and having SSP manufacture them from stainless steel for the world market.

A photo shows a close-up of a SoyaCow SC20, built by SSP, at a trade fair near New Delhi.

6948. *SoyaCow Newsletter* (*Ottawa, Canada*). 1995. Inox licensed to manufacture big SoyaCows for ProSoya. 4(4):1. Oct/Dec.
• ***Summary:*** "Inox Industries Inc. of Rexdale, Ontario, and ProSoya Inc., recently signed a licensing agreement that gives Inox certain rights and responsibilities for the manufacture and servicing of larger soymilk equipment and plants based on ProSoya's patented. Inox is a custom stainless steel fabricator for the pharmaceutical, food, and dairy Industries."

6949. Soyfoods Association of America, Standards Committee. 1995. Soymilk standards: Second draft (Third revision). Bar Harbor, Maine. 15 p. Dec. Unpublished manuscript. 28 cm. [22 footnotes]
• ***Summary:*** Contents: Purpose of voluntary standards. History and terminology: History, existing standards in other countries, terminology. Definition and classification of soymilk products: Soymilk definition, soymilk classification. Labeling of soymilk products: General, modifiers to the statement of identity, use date labeling, refrigeration information. Microbiological guidelines for soymilk. Standards Committee; Adoption and amendment of standards. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207/288-4969.

6950. Straus, Karen Cope. 1995. At home with the McCartneys: Share the season's best with Paul and Linda.

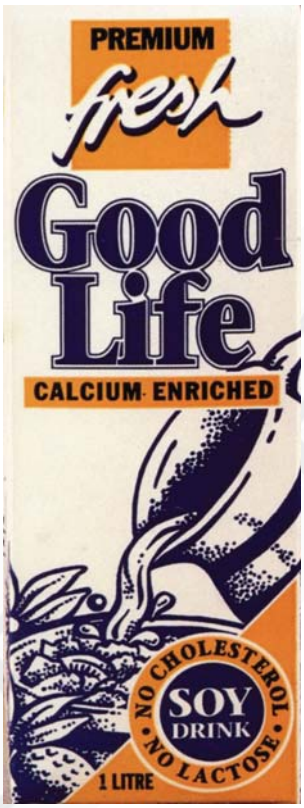
Vegetarian Times. Dec. p. 41-45.
• ***Summary:*** This is largely a selection of lacto-vegetarian recipes from two of Linda McCartney's popular vegetarian cookbooks. Ingredients include TVP granules, soymilk, and soy sauce. Her first cookbook, *Linda McCartney's Home Cooking,* remains "one of the best-selling vegetarian cookbooks published to date." Several nice color photos show Paul and Linda.

6951. **Product Name:** Edensoy Extra: Organic Soy Beverage [Vanilla with Vitamin B-12].
Manufacturer's Name: American Soy Products, Inc.
Manufacturer's Address: 1474 N. Woodland Dr., Saline, MI 48176. Phone: 800-248-0301.
Date of Introduction: 1995.
Ingredients: Purified water, organic soybeans, malted cereal extract, vanilla extract, calcium [calcium carbonate], kombu (seaweed), Lima sea salt, vitamin E, beta carotene, vitamin D-2, vitamin B-12.
Wt/Vol., Packaging, Price: 1 liter (33.8 oz, 1.06 quart) Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: This product is distributed by Eden Foods, Inc., Clinton, Michigan 49236. Label sent by Eden Foods. A color photo on the front panel shows yellow sunlight drifting down through a forest.

6952. **Product Name:** Good Life: Non Dairy Soy Drink (Calcium Enriched in Pure Pak Carton) [Premium, or Low Fat].
Manufacturer's Name: Berrivale Orchards.
Manufacturer's Address: McKay Road, Berri, SA 5343, Australia. Phone: (085) 82 1019.
Date of Introduction: 1995.
Wt/Vol., Packaging, Price: 1 liter Pure Pak carton.
How Stored: Refrigerated, 18 day shelf life.
New Product–Documentation: Product information sheets and leaflets sent by Anna Wieczorek, Food Technologist, at Berrivale Orchards Ltd. 1996. March 14. "Enjoy the Good Life." Color photos show both of the cartons. The low-fat product contains less than 1% fat (0.9 gm per 100 ml) while the premium product contains 3.4 gm of fat per 100 ml. These two products are made and/or packed at the company's MacKay plant.

Soyafoods (ASA, Europe). 1996. Spring. p. 4. "Soya products 'down under.'" Berryvale [sic] Orchards has launched GoodLife, a fresh non-dairy soya drink. It has a shelf life of 18 days and is sold in 1 liter containers.

6953. **Product Name:** Good Life: Non Dairy Soy Drink (Calcium Enriched in Long Life Aseptic Carton) [Premium, or Low Fat].
Manufacturer's Name: Berrivale Orchards.
Manufacturer's Address: McKay Road, Berri, SA 5343,



Australia. Phone: (085) 82 1019.
Date of Introduction: 1995.
Wt/Vol., Packaging, Price: 1 liter Aseptic Combi carton.
How Stored: Refrigerated.
New Product–Documentation: Product information sheets and leaflets sent by Anna Wieczorek, Food Technologist, at Berrivale Orchards Ltd. 1996. March 14. Color photos show both of the cartons. The low-fat product contains less than 1% fat (0.9 gm per 100 ml) while the premium product contains 3.4 gm of fat per 100 ml. These two Isolate UHT products are made and/or packed at the company's MacKay plant.

6956. **Product Name:** Soy Latte (Espresso Latte with Soymilk).
Manufacturer's Name: Starbucks.
Manufacturer's Address: Nationwide.
Date of Introduction: 1995.
Ingredients: Espresso coffee and organic vanilla soymilk.
Wt/Vol., Packaging, Price: Paper cup.
New Product–Documentation: Talk with Bud at Starbucks in Lafayette, California. 2000. March 20. This is a hot beverage prepared at Starbucks' espresso bar. Instead of using any dairy products, they use heated vanilla soymilk. So it is a Latte made with soymilk. It is not available in bottled form. It contains no added sweetener; each customer can add sweetener as he or she wishes. It has been available for at least a year. Purchase Soy Latte at Starbucks in Lafayette. 2000. April 3. Neither this item nor any other of the soy alternatives is listed on the menu. An employee says "We can add soy to any latte; it costs 35 cents more than the regular latte made with dairy milk. The smallest cup of Soy Latte, called "Tall" (about 11 oz) costs $2.50. To make it, Starbucks uses Pacific Vanilla soymilk, which they mix with water then heat with steam before adding it to the Latte. As I place my order for one "Soy Latte," one employee calls out "Soy is for Communists!" When I ask him what he means by that he says he has never tried soy, but he doesn't like it.

Talk with Starbucks headquarters (media relations) in Seattle, Washington. 2000. April 3. In 1995 Soy began to be used (when consumers requested it) as an alternative to milk in various Starbucks' products, especially Latte, Mocha, and Chocolate.

6957. Tezuka, M.; Ono, T.; Itoh, T. 1995. [About tofu and soymilk] *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 42(?):556-61. Month? [Jap; eng]*

6958. American Institute for Cancer Research. 1995. Taking a closer look at phytochemicals: New cancer research. 1759 R Street, N.W., Washington, DC 20069. 12 panels. 20 cm. [5 ref]
• ***Summary:*** Contains extensive information on isoflavones and soyfoods, including brief interviews with Stephen Barnes, PhD and Mark Messina, PhD. "Tofu, soy milk, and other foods made from soybeans are rich in isoflavones, which may inhibit cancer cell growth and division under some conditions. Since cancer is the result of the cell growth process gone awry, isoflavones may provide a means for switching off the unusual growth." Contains an illustration of packages of soy milk and tofu. Address: Washington, DC.

6959. Diehl Specialties International (DSI). 1995. Diehl, Inc. [a chronology] (Leaflet). Defiance, Ohio. 1 p. Single sided. 28 cm.
• ***Summary:*** Diehl Specialties International, the maker of Vitamite, is a subsidiary of Diehl, Inc. 1870–The company was established as the Christ. Diehl Brewing Company and operated as same until 1920 when Prohibition was enacted.

1920–The Defiance Milk Products Company was established and one-half of the brewery was converted to an evaporated milk plant. The balance of the facility was used to bottle water, soft drinks, and "Near Beer."

1933–When Prohibition was repealed, the production of beer was resumed and continued until 1955.

1964–The company began producing spray-dried products–non-dairy creamers, powdered vegetable shortenings, whipped topping mixes and other special formulations as required by industry. Diehl is a leading producer of private label non-dairy creamers.

1966–Acquired the Wilson Milk Co.

1981–Acquired the evaporated milk operations of United Dairy. 1982–Acquired the evaporated milk operations of Westerville Creamery.

1982–Acquired Diehl Specialties, Inc. (DSI), St. Louis [Missouri], and renamed it Diehl Specialties International, (DSI) in 1985. DSI produces non-dairy milk substitutes, chocolate and other flavor powdered drink mixes. It makes private label products for over 100 companies with over 300 labels, has national distribution with warehouses in all major markets, and employs an average of 135 people at two plants. Address: 24 N. Clinton St., Defiance, Ohio 43512-1899. Phone: (419) 782-8219.

6960. Diehl Specialties International (DSI). 1995. Vitamite (Portfolio). Defiance, Ohio. 12 inserts. 30 cm.
• ***Summary:*** The cover of this portfolio is filled with an illustration of white milk being poured and splashing against a blue background. Across the top is written "Vitamite" in white letters on a red background. The 12 documents enclosed in this portfolio (mostly and flyers and brochures) include: Facts on lactose intolerance (2 p.). Vitamite: The answer up to 50 million Americans are looking for could be on your shelf (1 p.; Up to 50 million Americans cannot drink milk–11.5% to 19% of the total U.S. population. This includes 15% of northern European whites, 60% of Hispanics, 80% of Jewish people, 90% of Asian Americans, and 75% of African Americans).

Vitamite–A unique product for an unserved market (1 p.; compares Vitamite with other milk replacements–Lactaid, Enjoy, Presto-Whip, Rich Whip, Reddi-Whip, Dairy Whip, Coffee Rich, Neo-Mull Soy, Ensure, Pro-Sobee, Soyagen).

Lactose intolerance (5 p., from the National Digestive Diseases Information Clearinghouse). Management of a lactose-free diet (2 p.). Ileitis & colitis IBD file (incl. lactose intolerance, and Crohn's disease or ulcerative colitis, 2 p.).

Management of renal failure (2 p.). If you like milk but milk doesn't like you (6 panels). Packet of powdered Vitamite Non-Dairy Beverage. Cover letter and business card from Thomas A. Mekus, Vice President, Sales and Marketing. Address: 24 N. Clinton St., Defiance, Ohio 43512-1899. Phone: (419) 782-8219.

• ***Summary:*** This carefully researched and well written dictionary of food terms also contains 21 useful appendixes and a good bibliography. All enquiries should be directed to: Barron's Educational Series Inc., 250 Wireless Blvd., Hauppauge, New York 11778.

Soy and related entries can be found under the following headings: Adzuki bean (also azuki), agedashi, cheese–imitation cheese (generally includes tofu and lecithin), fermented black beans (also called Chinese black beans and salty black beans), flour–gluten flour, kecap manis / ketjap manis, kudzu, milk (see soy milk), miso, natto, okara, queso fresco (also called queso blanco), quinoa, seitan, shoyu (Japanese for soy sauce), soybean, soybean oil, soy flour, soy milk, soy pea (see soybean), soy sauce (light soy sauce, dark soy sauce, Chinese black soy, tamari), tempe or tempeh, tofu (also called soybean curd and bean curd).

6963. Mindell, Earl. 1995. Earl Mindell's soy miracle cookbook: 70 simple, tasty ways to add soy protein to your diet. New York, NY: Simon & Schuster. A Fireside Book. 91 p. No Index. 22 cm.
• ***Summary:*** The title page states that the recipes in this book were previously published in *Earl Mindell's Soy Miracle* (1995). At the end of each recipes is the source. Many of the recipes were developed by Judith Eaton, M.S., R.R., and Karen Lefkowitz, M.S., who have been tofu advocates for many years. "Judith and Karen run Nutrition Services, a consulting firm in Pomona, New York.

Contents: Salads. Spreads, dressings and sauces. Soups. Main dishes. Breads and breakfasts. Desserts.

The main soyfoods used–in descending order of predominance–are: Tofu (in 47 recipes). Soymilk (13, incl. Vitasoy and Edensoy). Tempeh (8). Texturized soy protein (3). Soy flour (3). Natural Touch okara patties (2) Miso (1). Soy sauce is used here and there as a seasoning.

Note: This is not a vegetarian cookbook. Ground beef, chicken, crabmeat etc. are used in a relative small proportion of the recipes. Address: R.Ph, PhD, registered pharmacist and Prof. of Nutrition at Pacific Western Univ. in Los Angeles. He lives in Beverly Hills, California.

6964. Northrup, Christiane. 1995. Heal your symptoms naturally. Potomac, Maryland: Phillips Publishing Inc. 18 p. 28 cm.
• ***Summary:*** In the section titled "Natural healing for menopause" (p. 1-3) Dr. Northrup advises women to take natural progesterone, since their body stops producing its own progesterone during menopause. This supplement provides relief from both hot flashes and mood swings for many women. "For two weeks out of every month, use a little progesterone cream on the soft areas of your skin, changing sites often... Another form of natural progesterone is plant progesterone. There are many sources. The most common are soy foods and yams (not sweet potatoes)." Also take a safe form of estrogen–estriol. It can be applied as a vaginal cream and may protect against breast cancer. "Natural estrogens such as estriol have been in use for over 50 years, and are considered generic. Although these natural hormones aren't very common in the U.S., estriol is one of the more popular estrogens in Europe." To find a U.S. source call the Women's International Pharmacy at 1-800-279-5708.

"Natural plant hormones with estrogen-like effects are found in soy products, such as soy milk, tofu and miso, in addition to cashews, peanuts, oats, corn, wheat, apples and almonds. Japanese women go through menopause more easily than American women, partly because their diet is so high in the natural estrogens found in soy products. (Note: If you still have your uterus, never take estrogen of any kind without balancing it with progesterone.)"

In the section titled "Natural healing for breast cancer" (p. 6-7) notes that you can lower your risk through diet. "Eat soy products, You can also protect your breasts with tofu. A study published in the September 1994 issue of the *American Journal of Clinical Nutrition* demonstrated that women who ate 60 grams of soy protein per day (about 2 ounces) had changes in the estrogen levels that were similar to the effects of tamoxifen–an antiestrogen drug that is undergoing study as a possible prophylactic agent in women who are at high risk for breast cancer.

"The effects of soy protein on hormonal levels are thought to be from estrogen-like substances in soybeans called isoflavones. These behave like partial estrogen agonists/antagonists, which means they help increase the effects of estrogen in women who have estrogen levels that are too low, while helping to decrease the effects of estrogen in women whose estrogen levels are too high.

"While we're waiting for more research on the subject, I'd recommend adding soy protein to your diet regularly. In addition to tofu, soy protein is found in tempeh, miso and natto. These products are sold in many grocery stores and in almost all health food stores." Address: M.D. (gynecologist), Women to Women, Yarmouth, Maine.

6965. Plenty International. 1995. From the global kitchen: A collection of vegetarian recipes. Summertown, Tennessee: The Book Publishing Company. 124 p. Illust. (57 photos). Index. 21 x 18 cm.
• ***Summary:*** Contents: Foreword, by Virginia & Mark Messina. Introduction. Local ingredients–Cooking tools. Description of uncommon ingredients. Recipe notes: Flours (incl. soy flour), tofu, grating tofu and tempeh, replacing okara with grated tofu or tempeh, cooking, breaking and dehulling soybeans, hand mills and blenders. 1. North America: The Bronx, Native Americans (Oglala Lakota people at Pine Ridge Reservation in South Dakota), recipes (main dishes, salad, breads, desserts). 2. The Caribbean: Introduction (Jamaica, Dominica), recipes. 3. Central America: Introduction (Belize, Guatemala, Nicaragua, Casta Calderon's first experience with soy foods in Nicaragua), recipes. Africa: Introduction (Lesotho, Liberia), recipes. Sri Lanka: Introduction, recipes.

This remarkable, first-of-its-kind book by Plenty International tells the story of the pioneering work they have done over a period of several decades to introduce soyfoods to the Third World. The many vegetarian recipes in each section (each containing at least one soy ingredient, and based mostly on traditional soyfoods) are innovative and well adapted to that region. The 51 black-and-white photos, plus 6 color photos on the front and rear covers, add joy and a human face to the book. Much of the text is by Chuck Haren. Address: P.O. Box 394, Summertown, Tennessee 38483. Phone: (615) 964-4864.

6966. **Product Name:** Rich's Rich Rewards (Single Serving [3/8 ounce] Non-Dairy Flavored Creamer) [Hazelnut, Irish Cream, French Vanilla, Double Chocolate Mint, and Chocolate Raspberry].
Manufacturer's Name: Rich Products Corporation.
Manufacturer's Address: Buffalo, New York.
Date of Introduction: 1995. January.
Wt/Vol., Packaging, Price: 3/8 ounce single serve packs.
How Stored: Refrigerated.
New Product–Documentation: Talk with the toll-free customer service line at Rich Products Corp. 1995. Nov. 1. This product has been discontinued. It was launched in about March 1995 and came in 6 different flavors: Hazelnut, Irish Cream, French Vanilla, Double Chocolate Mint, and Chocolate Raspberry.

6967. Scully, Terrence. 1995. The art of cookery in the Middle Ages. Woodbridge, Suffolk, England: Boydell & Brewer Ltd. (The Boydell Press). 276 p. Index. 24 cm. [89* ref]
• ***Summary:*** Sunflower arrived in Europe by 1250. Peanut references not important on p. 2, 15, 67.

6968. Scully, Terrence. 1995. The art of cookery in the Middle Ages. Woodbridge, Suffolk, England: Boydell & Brewer Ltd. (The Boydell Press). 276 p. Index. 24 cm. [89* ref]
• ***Summary:*** During the 14th and 15th centuries in Europe, the legumes most widely used in cookery were peas and a variety of beans–both dry and fresh. The peas were often pureed ("pea puree") and occasionally ground to make pea flour or fried. Recipes usually called for simply "beans." Chickpeas, probably introduced from the Middle East by Arabs, were used from time to time.

The source of most cooked foods for the lower classes was the stew pot, filled mainly with cereal grains, vegetables, and legumes–such as peas and beans. Popular dishes included pork-and-peas, and pea or bean *cretonnée* (p. 6-7). Pea puree and round breads were staples in the Middle Ages (p. 8-9). Vegetables commonly peddled and cried through town streets included fresh peas in their shells and fresh beans (p. 13). Fried peas, cooked beans, and bean cakes–like today's prepared delicatessen items–were also sold this way. Pea flour was used in Germany (p. 14-15).

The main ingredient in breads was cereal grains; however peas, beans, and lentils were also used. In English households, the standard daily food ration was 2-3 pounds of wheat bread and a gallon of ale (p. 36). Fried beans (*Fava in padella*) (p. 45). Green peas were a common vegetable (p. 67). Everyone knew how (without a recipe) to prepare peas, split beans, mashed beans, sieved beans, and beans in their shell (p. 71). On lean days, to moisten dry ingredients, the cook used the pot containing his pre-prepared pea puree (p. 89). Cooks fashioned imitations of live creatures out of meat-paste or (on lean days) out of pea- or bean-paste (p. 106). A cook could puree fruits and vegetables, then occasionally fry the puree (as with legumes) (p. 110).

In England, a morning soup or mash of corn or legumes was often served (p. 122). Pea puree and strained peas were served at banquets (p. 125-26). For dinner, pea puree or bean puree (p. 133). While peas and beans may cause flatulence, this is in part because they pass through the stomach so easily (p. 134). Pastes of meat or peas required spoons (p. 173). Foods appropriate for robust working men include beef and goat, salt pork, stag, peas, beans, barley and wheat bread. Foods appropriate for the sick and weak include gruels of rice, oats, or barley prepared with almond milk, chickpeas, or pullet broths (p. 191). Chiquart, in his book *On Cookery,* included no less than 17 sick-dish recipes, more than 20% of the total. Most can be divided into four general categories, the first of which is cereal grains or legumes. One such

recipe is a Dish of Chick Peas (#76) (p. 193).

On All Souls' Day, which followed Hallows' Eve (Hallowe'en), it was the practice to share the meal with one's ancestors by taking some of it to the cemetery. Dishes prepared from peas, beans and lentils–which have been called the original 'soul food–were customarily served at that time (p. 205). Among the foodstuffs of late medieval cookery, cheese, peas and beans (legumes), onions and mustard, were almost common enough to be called universal–along with bread and wine (p. 206). A recipe for Fish Jelly called for various spices "distempered with pea puree" (p. 215). In France, the recipe for Cretonne or Gratunne begins with a base of peas or beans (p. 216). The recipe for A Soringue (*Une soringue*) includes pea puree (p. 224). One recipe is named Heathen Peas or Bohemian Peas (p. 235).

6970. **Product Name:** [Orgal Soy Drink Powder, Sweet Cakes of Maize and Rice with Soya, Soya Medallions (Baked, Organic), Organic Soy Fiber Drink].
Foreign Name: Orgal Bebida de Soja, Galleta Dulce de Maiz y Arroz Inflado con Soja, Medallones de Soja (100% Orgánico), Bebida de Fibra de Soja Orgánica (100% Orgánico).
Manufacturer's Name: Alimentaria Rosco S.A.
Manufacturer's Address: Buenos Aires, Argentina. Phone: 54 2477 497136.
Date of Introduction: 1995?
Ingredients: Water, organically grown soybeans, strawberry pulp, rice, sugar, pectin, lactic acid bacteria (*fermentos lácticos*), strawberry essence (*esencia de frutillas*).
Wt/Vol., Packaging, Price: 200 gm plastic yogurt cup.
How Stored: Refrigerated.
New Product–Documentation: Visit with Carlos Planes at Soyinfo Center in Lafayette, California. 2012. Feb. 23. Carlos brought an original sell sheet for these products (4 panels, each 8.25 by 6 inches). On each panel is a description plus a photo of and recipes for each product. Carlos says they used to make a tofu with 3 months shelf life at room temperature.

6971. **Product Name:** Tofu, Soymilk.
Manufacturer's Name: Din Ho Foods, Inc.
Manufacturer's Address: 5475 Rotterman St., Montreal, QUE H4P 1J3, Canada. Phone: 514-735-9503 or 9502.
Date of Introduction: 1995?
New Product–Documentation: Name and address sent by Marc Ham of Prograin in Quebec. 1996. Feb. 1. This company makes tofu and soymilk.

6972. **Product Name:** Tofu, Soymilk.
Manufacturer's Name: Les Aliments Fontaine Santé.
Manufacturer's Address: St.-Laurent St. 4560, QUE H4M 2N5, Canada. Phone: 514-956-7730.
Date of Introduction: 1995?
New Product–Documentation: Name and address sent by Marc Ham of Prograin in Quebec. 1996. Feb. 1. This company makes spreads using tofu, hummous, tahini, etc. The owner is Mr. Di Savioz.

6973. **Product Name:** [Soy Sprouts, Tofu, Soymilk].
Foreign Name: Germes de haricot (Chop suey), Tofu, Boisson de Soja.
Manufacturer's Name: Les Aliments Panda Foods Inc.
Manufacturer's Address: 4800 St.- Ambroise, Suite 110-111, Montreal QUE H4C 3N8, Canada. Phone: 514-846-0824.
Date of Introduction: 1995?
New Product–Documentation: Name and address sent by Marc Ham of Prograin in Quebec. 1996. Feb. 1. The name of the owner / director is Vinh Sieu Tran.

6974. Missouri Soybean Merchandising Council. 1995? Soybeans–Good food for good health. Jefferson City, Missouri. 12 p. Each panel ranges in size from 7.5 x 9.5 cm to 14 x 9.5 cm. Undated.
• ***Summary:*** Printed with green soy ink on white paper, each page of this little booklet is a different height to serve as a sort of tab index. Contents: Good nutrition. Heart disease. Cancer prevention. Other diseases: Osteoporosis, diabetes. Adding soyfoods to your diet is not as hard as you might think: Soymilk, tofu, isolated soy protein, soy flour, whole soybeans.

The information in this brochure is based on "The Simple Soybean and Your Health," by Mark Messina, PhD and Virginia Messina, RD. Though it was developed by the Missouri Soybean Merchandising Council (Susie Oberdahlhoff), any state soybean board could order copies with its name, address, and phone number printed on the back. Address: Missouri. Phone: 507-388-1635.

6975. **Product Name:** [Tofu, Soymilk].
Manufacturer's Name: Super Marché Sun Hing.
Manufacturer's Address: 1050 Boul. St. Laurent, Montreal QUE H2Z 1J5, Canada. Phone: 514-866-8110.
Date of Introduction: 1995?
New Product–Documentation: Name and address sent by Marc Ham of Prograin in Quebec. 1996. Feb. 1.

6976. Olgeirson, Ian. 1996. Boulder tofu company expanding product line: White Wave hopes boomers guzzle soy milk. *Denver Business Journal.* Jan. 4. p. 3A, 17A.

• ***Summary:*** White Wave got its first big break almost 20 years ago when a King Soopers' buyer agreed to stock its products in two stores on a trial basis. "If the tofu did well in the Boulder markets, King Soopers pledged to put White Wave in all of its Colorado outlets. 'Every morning we delivered tofu to the stores,' said president and founder Steve Demos,' and every afternoon I sent my employees out to buy up the remaining stock... Demos [age 46] may not adhere to such guerilla marketing tactics anymore, but the charismatic titan of tofu hasn't lost his zest for the natural foods business... Demos has built his company into the nation's largest industrial seller of tofu, making 150,000 pounds a week on the Boulder factory."

Now he's "preparing to launch a soy milk product called Silk and a line of vegetarian entrees aimed at turning White Wave into the Dannon Yogurt of the soy by-product world. 'I will be called a heretic and then I will be called a genius,' Demos said.

Sheryl Lamb, a sales manager with Mountain People's Warehouse, anticipates a tremendous demand for Silk and for the line of vegetarian entrees called Full Moon Cafe. Demos' primary goal is to establish brand equity for White Wave. A photo shows Demos, dressed casually, leaning against a tree.

6977. Garcia Uriarte, Alvaro; Ortega, Alberto. 1996. Recent history of soyfoods in Cuba. Part I (Interview). *SoyaScan Notes.* Jan. 9. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Overview: Since 1995 Cuba has become the rising star among developing countries in the use of soyfoods–and especially dairylike products. Cuba is the first Third World country to realize the potential of dairylike soy products to enhance the nutrition of the population while dramatically reducing costs and imports of feeds required by dairy animals. In the last 2 years, the Cubans have constructed about 34 "soy dairies" inside of inactive or partially inactive cow dairies. In 1995 they made 34 million liters of soy yogurt and soy yogurt drink, which they distribute free of charge to children ages 7-14. They are now also making delicious non-dairy soy ice cream and spreadable soy cream cheese. In addition, almost all of the regular ice cream made in Cuba now contains 50% soymilk.

This remarkable story was told during two long sessions, mainly by Alvaro, with Alberto adding many key points, in Alvaro's office. Alvaro is director and Alberto is vice-director of Cuba's Food Industry Research Institute (FIRI; In Spanish: *Instituto de Investigaciones para la Industria Alimenticia–IIIA*) near Havana. Catherine Murphy translated the first session and Dr. Gilberto Fleites translated the second. Shurtleff took notes and asked quite a few questions, but this was more the telling of a story than an interview. The meeting was arranged by Pam Montanaro, director of the Soy Cubano! program at Global Exchange, San Francisco. She has met with Alvaro and Alberto many times before and Soy Cubano! has helped significantly to further development of soybeans and soyfoods in Cuba. Soy Cubano! has given Alvaro and Alberto several of Shurtleff's books, helped them to exchange correspondence, and arranged for Shurtleff's present trip to Cuba. The atmosphere is relaxed and friendly.

Alvaro begins: "We would like to tell you the complete story, in depth, of the development of soyfoods in Cuba from 1984 to the present. You are the first person to whom we have ever told the story in this much detail. Please fell free to ask questions." Shurtleff explains that he is not interested in commercial secrets. Alvaro laughs and says "Don't worry. We'll let you know if you ask about anything that is confidential." Cuba hopes to export some of the proprietary technology and processes they have developed.

This phase of Cuba's work with soyfoods began in early 1984, when Fidel Castro obtained a Mechanical Cow from Brazil. Note: This relatively small-scale soymilk production machine was developed in Sao Paulo, Brazil, by Dr. Roberto H. Moretti (of Vanguarda Mecanica and the Dep. of Food Technology, FEA/UNICAMP) starting in 1976 and it was patented in 1979. By Nov. 1980, according to Dr. Moretti, 80-90 Mechanical Cows were in operation in Brazil. Fidel has long been interested in and concerned about food, nutrition, and malnutrition worldwide, and especially in developing countries. It was for this reason that he obtained a Mechanical Cow–which cost about $40,000. After 48 hours without sleeping, Alvaro and his collaborators finished installing the Cow at the Food Industry Research Institute (FIRI). They began using it with much enthusiasm. One month later when the Brazilians arrived, they were to surprised to see it in operation, making soymilk and various products. Ten copies of the Cow were soon made at Cuba's Ministry of Mechanization. But despite much research and attempts to flavor the soymilk with various fruits, it continued to have a strong beany flavor. Soymilk from the Cow was first sold in 1984 at 15 outlets in Havana at non-rationed dairy products stores in the "parallel market." It was not well accepted by the Cuban people, who ended up feeding it to their pets. The product was withdrawn after 1 to 2 years, but scientists at FIRI began a new project to study soyfoods and flavor problems in greater depth. By the beginning of the 1980s partially defatted soy flour (expressed under pressure, but not texturized) was being used in Cuba as an extender in ground meat at levels of 2% to 5%.

In 1990 a series of disasters struck Cuba. Shortly after the dissolution of the Socialist/Soviet Bloc (Warsaw Pact alliance) in late 1989 and early 1990, Cuba suddenly lost at least 75% of its trade, which had focused on sugar bought by the Soviet Union through long-term agreements at prices well above the world market price of that moment. Food production dropped due to a severe shortages of fertilizers, agrichemicals, gasoline, and imported feed for animals. What Cuba now calls the Special Period was phased in. The situation grew even worse in October 1992 when the

United States passed the Torricelli Act (also known as the "Cuban Democracy Act") The United States had had an embargo on trade with Cuba since 1960, but the new Act became essentially a blockade (a true blockade is a military operation), in which the U.S. very effectively pressured foreign nations and companies not to trade with Cuba–in violation of the United Nations charter, the charter of the Organization of American States, and virtually all international law. The Torricelli Act made the economic embargo on Cuba more severe than it had previously been. It curtailed Cuba's ability to trade with subsidiaries of U.S.companies abroad, 90% of which was trade in food and medicine. Thus, it effectively prevented food and medicine from being shipped to Cuba. The only exception was humanitarian aid. The Torricelli Act also made it illegal for Cubans living in the USA to send dollars back to relatives and friends in Cuba.

In response to the Special Period, FIRI began to work first on the meat supply, by extending ground meat with textured extruded soy flour–which was 10 to 15 times less expensive than meat on a protein basis. Initially Cuba imported textured soy flour from Mexico. Two extended meat products were developed: Extended ground beef was sold in the neighborhood meat/butcher ration shops (*carnicerias*), and extended meat patties were sold at places called Saz (a chain of popular cafeterias) on the free market.

One traditional meat product that Cubans love is *picadillo,* which consists of ground meat, garlic, onion, and lemon, and which is sold at the meat ration shops. Instead of pure meat, FIRI now used a mixture of 70% textured soy flour and 30% ground meat. The seasonings in this *picadillo extendido* largely masked the soy flavor, but the reaction of the Cuban people was not very good. Of course, they had no idea of what was in the new mystery product, and how much of it. They were used to pure meat, yet the nation was paralyzed, so this was no longer an option. Even though food was in short supply, there was a large excess of money, so it was not an economic issue–the extended meat had to be sold only at the meat ration shops if everyone was to get a fair share.

The second extended meat product developed by FIRI, the patties, were sold like a hamburger, between buns, with catsup and mustard. The Ministry of Food Industry of Cuba (MINAL) got a patty-forming machine named Koppens from the Netherlands, and the patty-making operation was very successful. MINAL then bought 15 more patty machines, one for each province, and by 1990 Cuba was making 200,000 meat-soy patties a day. Continued. Address: 1. Ing., Director; 2. Vicedirector. Both: Food Research Inst. (*Instituto de Investigaciones para la Industria Alimenticia*), Carretera Guatao Km 3½, La Lis 19200, Havana City, Cuba. Phone: 21-6986 or 21-6742.

6978. Garcia Uriarte, Alvaro; Ortega, Alberto. 1996. Recent history of soyfoods in Cuba. Part II (Interview). *SoyaScan Notes.* Jan. 9. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: After the problems with meat shortages were somewhat under control, the Food Industry Research Institute (FIRI) began to work on alleviating milk shortages. They had not forgotten their previous bad experience with soymilk from the Mechanical Cow, but Alvaro still believed that soya and dairylike soy products had great potential in Cuba, so he took the lead (and a rather big risk) by deciding to do more research on soy products to replace milk.

Note: At this point we must pause to take a look at the important role that milk has played, especially for children and senior citizens, after the Cuban Revolution. This information comes from Alvaro and Alberto, and from the excellent book *No Free Lunch: Food & Revolution in Cuba Today,* by Benjamin, Collins, and Scott (1989, Institute for Food and Development Policy, San Francisco). Page numbers refer to pages in that book. Before the revolution succeeded in Jan. 1959, only 11% of rural Cuban families regularly drank milk (p. 2). Almost one-third of the food consumed in Cuba was imported, including much of the dairy products (p. 8), and more than 70% of these imports came from the United States (p. 19). Just 3 months into the revolution, in May 1959, the new government set official prices for milk, rice, bread and beef (p. 20). Nationwide consumption of milk, and other long-coveted foods such as pork, soared, but the supply could not keep up with demand–for a host of complex reasons (p. 119-27). On 19 October 1960 the Eisenhower administration imposed the first U.S. embargo on Cuba, prohibiting all exports except nonsubsidized foods and medicines. Cuba set a goal to free itself from U.S. imports and to generally become more self-sufficient in food. In April 1961 the USA tried to invade Cuba at the Bay of Pigs–and failed. Then on 7 Feb. 1962 a second and tighter U.S.-imposed embargo on trade with Cuba (including food, but exempting medical supplies) went into effect. That same month the Organization of American States voted 15 to 4 to exclude Cuba from the organization and for member states to break all diplomatic ties. On March 12, in response to these painful measures, Cuba began a program to ration food via the new National Board for the Distribution of Foodstuffs (p. 22, 197-98). Initially, rationing was expected to be temporary, yet as of 1996 it is still in effect–as is the U.S. embargo, though both have changed.

As part of the 1962 ration, all children under the age of 7 received a liter of bottled milk daily, and senior citizens over age 65 could buy six cans of evaporated milk a month (p. 27), both at very low prices–part of Cuba's "right to eat" ethic. Since 98% of Cuba's children are born in a hospital, almost all of them start being breast fed from birth, and the mothers drink the milk during this time. As of 1989, a liter of milk cost only 25 centavos on the ration, but 80 centavos off

the ration in the so-called parallel market (p. 41). Families buy the bottled milk at the neighborhood dairy ration store (*lechería*) and the canned milk at the *bodega.* The Cuban government placed tremendous emphasis on expanding production of cow's milk–perhaps more than on any other food except sugar. Indeed milk production increased threefold from 1962 to 1979. In addition to the 800 million liters produced in 1982, some 600 million liters of powdered and butterfat milk were imported (p. 151-52). One tonne of powdered milk makes 10,000 liters when reconstituted. Yet Cuba's emphasis on milk was expensive, and substantial imports (such as feed for dairy cattle) had to be bought with hard currency (p. 111).

Cubans say that families mourn on a child's seventh birthday, for that is when they lose eligibility to receive one liter per day of low-cost milk. To ease the transition, in the 1970s the Cuban government decided to give ½ liter of milk per day to kids of ages 7-13, and to seniors over age 65. All people would also get one-fifth liter per day as fresh, powdered, or evaporated milk on the ration card. With the arrival of the Special Period in 1990, the whole milk program had to be re-examined from top to bottom. That year, in a speech on July 26, a famous national holiday, Fidel Castro said that Cuba would no longer be able to guarantee milk at traditional levels because milk imports would have to be reduced, and, more important, the money was no longer available to buy feed for dairy cattle. Between 1989 and 1995, consumption of dairy milk in Cuba fell from 1.3 billion liters to 390 million liters, a drop of 70%. This abrupt loss of milk strongly affected everybody in Cuba, except 1.2 million children ages 0 to 7, kids in nurseries, pregnant women, and hospital patients. The spotlight turned to Alvaro and his coworkers to try to solve this immense problem.

The first product they developed was named Cerelac. Introduced in March 1991, it contained 15% whole milk powder, 40% defatted soy flour (all imported), plus sugar, calcium, vitamins, and vanilla flavor. It was sold at subsidized prices to kids ages 7-13 and seniors over age 65. These people found the product acceptable. Soon 7,000 to 8,000 tonnes per year of Cerelac were being mixed in plants inside of ten of Cuba's dairy processing factories. Shortly four more mixing plants were added.

Then Alvaro and his coworkers thought about developing products from whole soybeans, but were cautious because of the bad experience with the Mechanical Cow 7 years earlier. It was then that Alvaro visited the Valsoia soymilk plant in Bologna, Italy. At this plant, which used Alfa-Laval soymilk equipment, Alvaro learned many important secrets. Continued. Address: 1. Ing., Director; 2. Vicedirector. Both: Food Research Inst. (*Instituto de Investigaciones para la Industria Alimenticia*), Carretera Guatao Km 3½, La Lis 19200, Havana City, Cuba. Phone: 21-6986 or 21-6742.

6979. Garcia Uriarte, Alvaro; Ortega, Alberto. 1996. Recent history of soyfoods in Cuba. Part III (Interview). *SoyaScan Notes.* Jan. 9. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: Returning to the Food Industry Research Institute (FIRI), Alvaro worked with his colleagues to construct a soymilk pilot plant in the fruit processing building, where they already had a decanting centrifuge for separating fruit into its juice and pulp. They left this machine (the most expensive and important in the soymilk pilot plant) where it was, and built the pilot plant around it–with a capacity of 500 liters per hour. To get rid of the beany flavor, they added very hot water (above 90ºC) to the mill while grinding the soybeans, then they ran the hot slurry into a horizontal chamber where they kept it at 90ºC or hotter for 2 minutes to wholly inactivate the enzymes. At this point Alvaro drew a diagram of this stage of the process. Soon this plant was producing good-tasting soymilk. But would the Cuban people accept it?

Alvaro decided to make the soymilk into soy yogurt for various reasons: (1) Soy yogurt had acidity, which was important in enabling the product to be sweetened and flavored; (2) Dairy yogurt was popular among the Cuban people; and (3) FIRI had long experience making it. Dairy yogurt has become widespread in Cuba since the revolution thanks to a major Bulgarian aid project in the 1960s (Bulgarians are considered the "fathers of yogurt") and the Cuban government's view that it was a good way to add protein to the diet. Dairy yogurt caught on in part because it is served in work and school cafeterias and snack bars together with free sugar, and it is sold in *lecherías.* Per capita consumption of yogurt soared fifty-fold, from less than 0.1 kg per year in 1963 to 5 kg in 1980 (p. 112). There are two basic types of yogurt, and both are cultured / fermented: Stirred yogurt and set yogurt. Both types had long been made in Cuba, adding sugar for sweetness, in 29 factories. FIRI decided to try to develop both types using cultured soymilk and some of the principles of Bulgarian yogurt technology.

They transported the soymilk made in the fruit building at FIRI, to the dairy processing building, then worked with an interdisciplinary team. FIRI has its own culture collection of food fermentation microorganisms containing a large variety of strains for cultured dairy products. One of FIRI's mandates was to supply these to Cuba's food industry. They tested many fermentation bacteria and arrived at several–the names of which are top secret! One of the bacteria uses the oligosaccharides (complex sugars) in soybeans as a source of energy, thereby getting rid of this undesirable cause of flatulence in humans. But the researchers ran into two basic problems: the technology was very expensive, and the protein yield was very low. Only 50% of the protein in the soybeans ended up in the soymilk. The quality, however, was good. So they asked Alfa-Laval for a firm price on a soymilk plant that would produce 3-4 tons of soymilk per hour. The

answer? $3 to 4 million. Too much!

Each year from 1990 to 1993 the number of calories and grams of protein, per capita, in the Cuban diet dropped as the food problems of the Special Period grew more serious. 1993 was the worst year of all. Malnutrition began to appear, and teams of health professionals arrived from abroad to study the problem and try to help. Something had to be done–soon!

Necessity is the mother of invention. In Havana there was a large dairy products complex named *Complejo Lacteo de la Habana.* It used Alfa-Laval equipment and cow's milk to make cheese, yogurt, ice cream, butter, and (most important) lactose and powdered whey. To produce the lactose required two centrifuges, that had cost $500,000 new. At the moment these two machines were standing idle due to the lack of cow's milk during the Special Period. So in late 1993, around these centrifuges, MINAL researchers built a scaled-up pilot plant with a capacity of 5,000 liters per hour of soymilk–ten times the output of the pilot plant at FIRI. The first soymilk that came out of the enlarged pilot planted tasted great. In January 1994 production of stirred soy yogurt began. It was a drink with the consistency of a milk shake. By early 1994 some 200,000 kids ages 7-13 in Havana were receiving 1 liter per week of this soy yogurt from their local dairy ration stores. The program was a great success. Also in January 1994, production of Cerelac was discontinued.

While this production was going ahead in Havana, the researchers continued work at FIRI on making a set soy yogurt, in part because they had a long tradition of making set dairy yogurt. But now a major problem arose. There was only one pair of the expensive Alfa-Laval centrifuges in all of Cuba. If the country wanted to set up similar soymilk plants in other provinces, it would have to invest millions of dollars to buy more centrifuges. This was clearly impossible. The only alternative was to start all over again, to develop Cuban technology to meet the challenge. A period of intense thinking began.

One Sunday morning in early 1994, at his home, a key idea came to Alvaro. He called Alberto and they worked together with a sense of urgency to try out the idea in Alvaro's kitchen. It worked! Bravo. On Monday at FIRI they began work immediately on the "new technology" (NT), a system that did not use centrifuges. This system also worked.

With the yogurt he had produced, Alvaro had already convinced the Minister of Food Industry of the value of the new technology, and this minister then became a fervent supporter of the project.

After they had developed the technology on a laboratory scale, a period of intensive work began to develop the prototype equipment, made in FIRI's workshop with the participation of researchers, mechanics, electricians, and electronic specialists. A decisive factor in this step was the participation of Ing. Carlos Pérez, vice-director of FIRI, in charge of maintenance. By April 1994 they were ready to install the first prototype NT system in a large idle dairy products plant at Holguín (pronounced hol-GEEN) in eastern Cuba. This plant was chosen because the workers are a very enthusiastic group and also because it has a good workshop and qualified, hard-working mechanics. Thus, it could make a contribution to the successful and speedy installation of the first plant. At this point, the whole interdisciplinary team that had developed the technology and equipment moved to Holguin, where they worked night and day, sometimes 20 hours nonstop, with the men and women of Holguín, catching a little sleep when they could on the floor of the plant. It took, on average, 14 days to install each plant and get it running. This was possible thanks to the spirit and selfless dedication of these local people, who were willing to work so hard and with such great desire to help relieve the severe food shortages. When the soymilk plant was up and running, they tested it and the soy yogurt, made changes, and tested again. Finally in May 1994 the first soy yogurt for the people Cuba came off the line. Everyone tasted it and rejoiced. *Viva la revolucion!* Continued. Address: 1. Ing., Director; 2. Vicedirector. Both: Food Research Inst. (*Instituto de Investigaciones para la Industria Alimenticia*), Carretera Guatao Km 3½, La Lis 19200, Havana City, Cuba. Phone: 21-6986 or 21-6742.

6980. Garcia Uriarte, Alvaro; Ortega, Alberto. 1996. Recent history of soyfoods in Cuba. Part IV (Interview). *SoyaScan Notes.* Jan. 9. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Again and again during 1994 the Food Industry Research Institute (FIRI) team went to dairy processing plants in Cuba. It was a marathon effort. By the end of 1994 a remarkable 14 new soy dairies making soy yogurt had been installed in the wings of existing dairy plants throughout Cuba. This mammoth effort was possible through the cooperation of the Ministry of Food Industry (MINAL) and local enterprises and governments. The NT equipment was built mostly by the Enterprise in Charge of Equipment Building and Installation. Most of the plants had a capacity of either 2,000 or 4,000 liters/hour; the smallest was 1,200 liters/hour. During 1994 the 14 plants churned out a total of 11 million liters of soy yogurt–4 million liters from the one plant in Havana using the two large Alfa-Laval centrifuges, and 7 million liters from the 13 other plants using the new technology. By late 1994 about 400,000 kids ages 7-13 living in the provincial capitals nationwide were receiving 1 liter of soy yogurt a week. Alvaro and his coworkers at FIRI were so convinced of the superiority of their technology that in Nov. 1994 they eliminated the Alfa-Laval plant, replacing it the next month with two new NT production lines.

During 1995 eight more plants were installed, bringing the total to 22. These plants produced 33 million liters of soy yogurt (containing 3.0 to 3.2% protein), which reached about 500,000 kids. Though there are presently about 1,200,000 kids in Cuba, most of those not living in the capitals have

access to milk from the nearby cows. Alvaro showed us a chart listing the location of each plant, the date it began operation, and its capacity. As of mid-January 1996 four new plants are under construction, and 5 more are on the drawing boards, ready to go. One of the plants under construction in Havana will make only spreadable soy cream cheese (*queso crema*), a new product developed at FIRI.

Three basic types of yogurt were made in Cuba's many soy dairies: 50% of the total was set soy yogurt sold in bulk containers, which reduced packaging costs. Local people would bring their own containers in which to take home their portion of the yogurt. Another 25% was set soy yogurt in one liter glass jars–which were, of course, recycled after use. The last 25% was stirred soy yogurt, sold in one liter plastic bags as a drink having the consistency of a milk shake.

The plan for 1996 is to produce 76 million liters of soy yogurt–more than double the total for 1995!

In September 1994, soymilk started to be used (together with dairy milk) in Cuban ice cream, made at the dairy plant at Pinar del Rio. In 1995 some 12 million liters of soymilk were used in Cuba's ice cream, accounting for 50% of the total milk used–the other half being cow's milk. However no soymilk is used in the most famous Cuban brand of ice cream, Copelia. This is made with only fresh milk and cream, using a traditional dairy formula and technology.

In January 1995 a cultured/fermented spreadable soy cream cheese was first made commercially in Cuba at the dairy plant in the province of Villa Clara. Resembling Cuba's traditional *queso crema* but containing no animal products, it is used as a spread on bread or crackers, in salad dressings, served as a dessert topped with marmalade or jam, or mixed with canned meat to make a pâté.

Soybeans were first cultivated in Cuba in 1904, and the climate and soil have always been good for growing them. Yet although Cuban scientists have done extensive research on soybean production over the last few decades and developed new soybean varieties that yield well under Cuban conditions, almost no soybeans are grown in Cuba today, in part because of the historical emphasis on sugar. Therefore Cuba has to import all of the 10,000 tonnes per year of soybeans used to make soymilk and soy yogurt, using precious foreign exchange. In the past, Cuba has also imported roughly 300,000 tonnes of soybeans (as whole beans or soybean meal) for animal feed. The food-grade soybeans come mostly from Canada and Brazil. Canada's white-hilum soybeans are considered the best for soy yogurt. For 45 days during 1995 no soybeans were imported into Cuba due to the lack of hard currency (U.S. dollars). The Soy Cubano! program of Global Exchange in San Francisco is working to help Cuba become more self-sufficient in soybeans. For Cuba to become self-sufficient at 1989 levels of consumption for the 11 million inhabitants, the country would have to grow about 500,000 tonnes of soybeans.

The development of new soyfoods products does not stop here. The FIRI team has two big projects on tap for 1996. The first is to expand commercial production of spreadable soy cream cheese, which will be made at existing dairy plants in 10 provinces throughout Cuba (*Santiago de Cuba, Holguín, Bayamo, Las Tunas, Camagüey, Ciego de Avila, Sancti Spiritus, Villa Clara, Matanzas, and Pinar del Rio*) and to finish the spreadable soy cream cheese factory in Havana with 10 tonnes/day capacity. At each plant they hope to make 500 to 1,000 kg/day, and a total of 5,000 tonnes in 1996; this will require an additional 10 million liters of soymilk. The second project is to make two types of powdered soymilk. Type 1, which is spray dried, contains 85% soymilk and 15% dairy milk, plus cocoa, sugar, salt, and vitamin A. Type 2, which is roller dried, resembles a traditional Nestlé product called *Harina Lacteada.* The ingredients are similar to type 1 except that rice is substituted for cocoa. Cuban researchers are very interested in learning more about Japanese *amazaké* (a traditional non-alcoholic fermented rice beverage made from koji), about the various new enzyme-hydrolyzed rice beverages made in America, and about ways to mix soymilk with ricemilk. Cuba plans to make a total of 2,000 tonnes of powdered soymilk in 1996. They are also working on development of spreadable soybean pâtés with different flavors, among them ham, and *chorizo* (a paprika spiced Spanish-style pork sausage).

To summarize: In 1995 Cuba used 7,000 tonnes of soybeans to make 47 million liters of soymilk; 1 kg of soybeans yields about 7 kg of soymilk. Of this soymilk, 33 million liters were used for soy yogurt, 12 million liters for soy ice cream, and 2 million liters for spreadable soy cream cheese. In 1996 Cuba plans to use 76 million liters for soy yogurt, 14 million liters for soy ice cream, and 10 million liters for spreadable soy cream cheese. Total: 100 million liters, or roughly twice as much. Continued. Address: 1. Ing., Director; 2. Vicedirector. Both: Food Research Inst. (*Instituto de Investigaciones para la Industria Alimenticia*), Carretera Guatao Km 3½, La Lis 19200, Havana City, Cuba. Phone: 21-6986 or 21-6742.

6981. Garcia Uriarte, Alvaro; Ortega, Alberto. 1996. Recent history of soyfoods in Cuba. Part V (Interview). *SoyaScan Notes.* Jan. 9. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** At this point we were invited for lunch at a nice hotel on the Food Industry Research Institute (FIRI) compound. There we were served various flavors of three dairylike soy products developed at FIRI. Our group of two Cubans and three Americans was invited to taste each product and offer our comments. (1) A set soy yogurt in cups in six flavors: Caramel, coconut, banana, orange, vanilla, and strawberry. Caramel, the most widely distributed flavor in Cuba, comes, of course, from Cuba's abundant sugar supply. The soy yogurt's acidity is 0.4 to 0.5 (half that of cow's milk), and it contains 3.2% protein and 1.6% fat. By

comparison, dairy yogurt contains 3.0% protein and 3.4% fat when made from whole milk, or 3.4% protein and 1.7% fat when made from low-fat milk. This set soy yogurt is now sold in all provincial capitals in Cuba.

The soy yogurt plant at Santiago de Cuba had an original capacity of 2,000 liters/hour. The plant was briefly shut down to double its capacity to 4,000 liters/hour. During this period, children in Santiago de Cuba were supplied with dairy yogurt and this caused them to complain, as they objected to the more acid flavor.

(2) Soymilk ice cream (caramel flavored). The ingredients are soymilk, sugar, soy oil, caramel (for flavor), and a stabilizer. (3) Soy Cream Cheese. This is like the traditional Cuban *queso crema,* with much the texture of American Philadelphia cream cheese. Spread on crackers, it is delicious. Our group of five tasters gave each of these three products excellent marks for flavor, texture, and color. Shurtleff (who has the most experience with soyfoods of the five) noted that this is the best soy yogurt he has tasted anywhere, one of the best soy ice creams, and the first fermented soy cream cheese. Also served at this tasting was *queso blanco,* which resembled the traditional non-fermented white cheese but made from whole buffalo's milk. No soymilk was added. It was served in slices about ½ inch thick and 4 inches square, to be enjoyed on toast or crackers. This delicious product might also be made some day from soy.

Alvaro says in summary that his team of researchers is proud of three major achievements: (1) Making soymilk with no beany flavor; (2) Producing it at relatively low cost on equipment designed and constructed in Cuba using middle-level technology; and (3) Making soymilk with a high protein yield (The figure for protein yield is a top secret).

What are the big lessons to be learned from Cuba's bold and very successful experiments with soyfoods? (1) Cuba is the world's first country (outside of the traditional soy countries in East Asia) to fully grasp and realize the potential of soyfoods, and specifically dairylike soy products. Countries with high population densities in East Asia (such as China, Indonesia, and Japan) have known for centuries that it makes much more sense in terms of economics, land use, the environment, and good health to get protein directly from plants (specifically soybeans and cereal grains) than to feed those plants to animals and then eat the animals. Since the 1960s experts in the field of Third World development and food resources have stated repeatedly that soybeans are the protein source of the future. Not only are they the world's lowest cost source of high-quality protein, but they are now known to contain a host of beneficial phytochemicals, not found in any animal products, that appear to protect humans from cancer, heart disease, osteoporosis, and many of the unpleasant symptoms of menopause. Yet it took a major crisis to prompt Cuba to make the switch. (2) Cuba switched from dairy products to dairylike soy products largely for economic reasons and to make the country's food economy more efficient. The fact that Cuba has a centrally controlled economy probably facilitated the swift change. Yet with rapidly growing populations and declining incomes, many Third World countries may soon find it necessary or wise to follow Cuba's lead. Cuba has also become the world leader among Third World countries in sustainable, organic agriculture. Introducing a good food to a country under hardship conditions can pose a threat to that food's future. Will the people associate it so strongly with memories of the hard times that they want to get rid of it when good times arrive? (3) Cuba made the transition to dairylike soy products without constructing any new buildings, and with a relatively modest investment in locally designed, appropriate technology that actually revitalized flagging dairy processing plants. (4) By approaching the challenge with "beginner's mind" and plenty of creativity, Cuba was able to develop exciting new soy products especially suited to Cuban tastes and unknown in other countries. (5) Cuba's new soyfoods technology and processes offer the possibility of a new category of exports, which could earn badly-needed foreign exchange and, perhaps more important, offer new hope in the fight against malnutrition and hunger throughout the Third World.

Wm. Shurtleff was given (1) A list of soymilk plants (converted dairies) in Cuba, with the name and location of the plant, the capacity in liters per hour (mostly 2,000 or 4,000), the date each plant started making soymilk (from April 1994 to May 1995) and any observation (such as "Under construction").

(2) A graph of commercial production of soymilk (all kinds) from 1978 to 1985 in Japan, Thailand, Hong Kong, Korea, Taiwan, Malaysia and Singapore. Address: 1. Ing., Director; 2. Vicedirector. Both: Food Research Inst. (*Instituto de Investigaciones para la Industria Alimenticia*), Carretera Guatao Km 3½, La Lis 19200, Havana City, Cuba. Phone: 21-6986 or 21-6742.

6982. Chan, Chi-Keung; Lee, Stella; Le, Naomi. 1996. Vitasoy recalls 30 million drink cartons. *South China Morning Post* (*Hong Kong*). Jan. 10. p. 1 (Wednesday, ed. 2). • ***Summary:*** "Soft drinks maker Vitasoy yesterday announced it is to recall an estimated 30 million drink cartons from Hong Kong and the rest of the world because of continuing production problems. The company, acting on more complaints about sour-tasting soya milk, is to also suspend production at its Tuen Mun plant. Managing director Winston Lo Yau-lai, who last week announced suspension of the company's Shenzhen carton production lines, last night would not rule out industrial sabotage.

"Retailers are being asked to stop sales of all cartons of Vitasoy drinks including soya milk, lemon tea and juices in 250-millilitre, 375 ml and one-litre packs. Customers and retailers would be offered refunds... The company estimated

that recalling the 15 million packs in circulation in Hong Kong and Macau would take 12 days. But it could not say how long it would take to recall a further 15 million packs from more than 10 countries, including Canada, Australia, and the United States.

"Yesterday's announcement followed three more complaints from consumers concerning sour soya milk produced at the firm's Tuen Mun plant... The group decided to recall eight million drinks manufactured in Shenzhen last Thursday after a barrage of complaints. A day later, it also recalled 42,000 cartons produced in Tuen Mun... The company promised none of the 1,000 workers at the plant would be affected. The recall does not affect the company's bottled products including soya milk, iced teas, distilled water and Vita fresh milk. But paper products represent 'a significant proportion' of turnover.

"The firm admitted that the latest recall would have a 'material adverse effect' on profits. Vitasoy International shares will also be suspended from stock market trading from this morning. The news came just as its share price was recovering from the sharp fall caused by last week's announcement of the problems with Hong Kong and Shenzhen production. After falling more than eight per cent since Friday, the price yesterday rose five per cent to $3.125.

"Mr. Lo rejected claims the announcement had been provoked by Health Department pressure." Preliminary results of Health Department tests showed that of the 240 samples tested, only "four had been found to have abnormal acidity."

"'While bacteria were found in these four samples, they were not of pathogenic (disease-causing) nature,' a spokesman said. 'Further tests will be conducted to confirm the exact identity of the bacteria.'"

6983. Tacey, Elisabeth. 1996. Sour milk leaves experts with disposal headaches. *South China Morning Post* (*Hong Kong*). Jan. 12. p. 1 (Friday, ed. 2).
• ***Summary:*** "How to get rid of 30 million cartons [15 million liters] of unwanted assorted drinks? That's the problem facing Vitasoy and the Environmental Protection Department" [of Hong Kong]. The company recalled all its carton drinks after complaints about sour soymilk. None of the alternatives look good. It would be too expensive to slice open each carton and use the nutrient-rich contents as livestock feed. Vitasoy's biological treatment plants are much too small to remove the organic content from the drinks then release the treated liquid into the sewage system. Nor would landfill companies be able to handle the full cartons as standard household waste.

"The simplest method would be to send it direct to a municipal sewage treatment works, said the Productivity Council engineer, where the liquid could be treated gradually from storage tanks–but just separating the liquid from the cartons would be a massive and complicated task."

6984. Tacey, Elisabeth; Moir, Jane. 1996. Bitter blow for Vitasoy: An old favorite is now facing a crisis of confidence. *South China Morning Post* (*Hong Kong*). Jan. 14. p. 9 (Sunday, ed. 2).
• ***Summary:*** For Lo Kwee-seong, soya beans were the source of a fortune. He "turned a backstreet operation making soya milk drinks into a multi-billion dollar stalwart of Hong Kong life–the ubiquitous Vitasoy.

When Mr. Lo died in May 1995 at age 85, the company had a turnover of $1.25 billion for the 1994-95 fiscal year. He had become a Commander of the British Empire, had a fine collection of Chinese art, and contributed substantially to the Hong Kong Museum of Teaware. After his official retirement from Vitasoy" in late 1993, he "weathered some controversy over a huge $45 million payoff he received during the company's public flotation in 1994."

But ongoing problems with sour soymilk and production have dogged the company at both its Tuen Mun and Shenzhen plants for the past 3 months. Thirty million carton drinks have been recalled from both factories during the past 10 days.

"Analysts and management experts point out the similarities with the Perrier debacle in 1990, when traces of benzene were found in the formerly lauded mineral water. Perrier's market share in the UK, for instance, plummeted from 60% before the crisis to 25% afterwards.

"Vitasoy, with a 90% share of the soya milk market–Watson's, Hi-C and Nestle being its strong competitors–may suffer a similar fate. The firm has been praised for taking all its paper-packed products off the market, despite finding flaws only in the Shenzhen plant and in one of its 13 production lines at Tuen Mun.

"But a build-up of various problems since last October has left a perception of disarray at the firm, says director of the Hong Kong Institute of Marketing, Henry Steele... Directors of the firm, which employs 1,500 people, say they have been too busy trying to put the problems right to spend much time talking publicly about the affair. Four of Mr. Lo's six children remain directors.

"Old Mr. Lo was known as a man of strong Confucian values. Elsie Tu, who worked with him as a legislative and urban Councillor, described him as 'humble and hard-working.'" Here is a brief chronology of what went wrong.

In the autumn of 1995–Vitasoy pulls their new formulation of malt milk drinks from the shelves after undisclosed production problems.

1995 Oct. 24–Complaints of sour taste or kerosene-like smell in soymilk products from the Tuen Mun plant leads to recall of 50,000 cartons. Vitasoy blames the problem on a stem filter used in sterilization.

1996 Jan. 3–Vitasoy promises to step up monitoring of their Shenzhen plant after complaints of sour taste in malt soymilk.

Jan. 4–All seven production lines in Shenzhen halted. Eight million cartons of paper-packed drinks are recalled although complaints relate to about 9,000 250 ml malt soya milk packs from two production lines only. The company says the problem occurred during packaging and says investigation will last a month. The price of Vitasoy shares drops 8.5 percent.

Jan. 5–About 42,000 250 ml malt drinks made at the Tuen Mun plant are recalled after two complaints of sour taste.

Jan. 9–All thirteen lines at Tuen Mun that package in paper cartons are closed. A worldwide recall of 30 million carton drinks begins, covering all milk, tea, and juice products. The company expects an investigation by Swedish food experts to take 2 to 4 weeks. Bottled drinks are unaffected. Trading in Vitasoy shares is suspended. Non-pathogenic bacteria are found in four milk samples.

6985. Manuel, Gren. 1996. Vitasoy cartons disposal scheme. *South China Morning Post* (*Hong Kong*). Jan. 15. p. 5 (Monday, ed. 2).
• ***Summary:*** Vitasoy International is discussing with government officials what proportion of its recalled products will go into landfill and what proportion will go into the sewage system. The 15 million drink cartons contain about 4,000 cubic meters of liquid.

"The collection from consumers will start on Thursday morning when consumers can exchange their paper-packaged Vitasoy and other Vita drinks in paper packages for a voucher, which they will then be able to redeem for a similar pack when production starts."

"The company is preparing a formal statement to shareholders to be released tonight, which would allow the company's shares to start trading again tomorrow."

6986. Daller, Frank. 1996. Interest in and activities related to soyfoods in Cuba (Interview). *SoyaScan Notes.* Jan. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Frank has traveled to Cuba 3 times (paying his own way) to do soy-related work. He was there first in Aug. 1995 and is very impressed with the resourcefulness and sincerity of the Cuban people. He likes the people he has met very much and is trying to help–not trying to sell them equipment or steal their soymilk processing secrets. He plans to buy a SoyaCow with his own funds and donate it to some place in Cuba–probably Dr. Gilberto Fleites at a cancer hospital. He wonders why the Cubans have focused on making soy yogurt rather than soymilk. If they use a hot-blanch process, perhaps because they have a high proportion of suspended solids (rather than dissolved solids), which might settle out in soymilk. In a 4-star hotel in Cuba where he was staying, he was served a sweetened yogurt for breakfast in a cafeteria line. The attendant told him it was soy yogurt, but he is not certain that it was since he could not tell the difference. Through his contact with the Canadian ambassador in Cuba, Frank was able to meet with Jesú Montane (pronounced HAY-su MON-tan-ay), who is a personal secretary of Fidel Castro and who is deeply interested in work with soyfoods in Cuba. Address: ProSoya Inc., 5350 Canotek Road, #7, Gloucester, ONT K1J 9C9, Canada. Phone: 613-745-9115.

6987. Tacey, Elisabeth. 1996. Vitasoy's clean sweep: The drinks company may have over-reacted, but by doing so it kept faith with its customers and saved its image. *South China Morning Post* (*Hong Kong*). Jan. 26. p. 19 (Friday, ed. 2).
• ***Summary:*** A photo shows tonnes of soya milk being loaded, ready to be dumped at a landfill. Forty-three million packs of Vitasoy await destruction, at an estimated cost of $100 million. But did Vitasoy over-react? Throughout the whole affair, there have only been nine complaints from consumers of sour malt and plain soya drinks. The sourness was bad-tasting but did not cause any illness. Even though there were no complaints about Vitasoy's fruit juices and teas, the company has recalled them all anyway and plans to destroy them. One management professor thinks that Vitasoy's actions were a text book example of the right way to protect a brand's image–a very good demonstration of sound business ethics and how much the company values its customers.

But Dr. Irene von Brockelmann, an independent consultant and microbiologist, would have recommended a limited recall. She adds: "I was surprised that they had done a total recall because in my experience there has been no total recall in the world before when there is no danger to health."

"Hong Kongers have grown up with Vitasoy. The firm's expansion since the war has been much like the territory's, making it a symbol of the proud prosperity of Hong Kong–and the people who drink it. Customer loyalty is very high–but so are their expectations."

"Media interest in the case was huge. After the first December complaint about one pack of malt Vitasoy, Hong Kong newspapers splashed the case over their front pages on at least two consecutive days." As attention grew, rumors and speculation spread like wildfire. "Vitasoy executive chairman and managing director Winston Lo Yau-lai said the press played a part in the decision to recall the drinks: 'I read that consumers were confused and there were rumors of sabotage, and poisoning, and so on, so we decided to recall.'"

The company's problems started on 24 October 1995, when a faulty steam filter led to various soya milk drinks going sour, leading to a recall of 1.2 million packs. But the real troubles came at the end of December.

"Of the 43 million packs to be destroyed–30 million of which never left the factory–the company estimates that only about 200 Shenzhen packs and nearly 1,000 in Tuen Mun

were affected. But at the time of the recall, the company only knew that far more than the acceptable 0.3 per cent were failing random tests."

6988. Faulkner, Jessie. 1996. Lots of benefits with local tofu. *Times-Standard* (*Arcata, California*). Jan. 24-30. p. 8. Buyers' Guide.
• ***Summary:*** About The Tofu Shop in Arcata, California. Photos show: (1) Soymilk and three types of tofu (Firm Tofu, Tofu-Vegetable Patties, Tofu Snack Sticks) made by The Tofu Shop. (2) Mike Schwartz, tofu maker, monitors the boiler as slurry goes down a chute.

6989. Anderson, James W. 1996. Soy protein lowers blood cholesterol. *Kentucky Soybean Board Annual Soy Research Symposium* 13:13. Held 5-6 Jan. 1996 at Lexington, Kentucky.
• ***Summary:*** Coronary heart disease (CHD) accounts for approximately 600,000 deaths each year in the USA. "Elevated serum cholesterol concentration is a major risk factor for CHD and oxidation of low-density lipoprotein (LDL) has a central role in the atherosclerosis process." Dr. Anderson's meta-analysis indicates that consuming 17 to 25 gm of soy protein per day could have a meaningful effect on lowering cholesterol levels. A photo shows Dr. Anderson, smiling. In front of him on a table are packages of Mori-Nu Tofu and Vitasoy soymilk. Address: M.D., Metabolic Research Group, VA Medical Center and Univ. of Kentucky, Lexington, KY 40511. Phone: 606-281-4954.

6990. Lai, Benny. 1996. Dah Chong Hong–A pioneer in using Ontario soybeans. *Canadian Export Soybeans* (*OSGMB, Chatham, Ontario, Canada*) 9(1):2. Jan.
• ***Summary:*** In the mid-1970s Mr. Lai was working in the Food and Edible Oil Dept. of Dah Chong Hong's head office in Hong Kong. He and co-workers imported 800 bags of Ontario special quality white hilum soybeans into Hong Kong for testing. They distributed the soybeans to more than 30 manufacturers of soybean curds, tofu, soy milk, soy sauce, and other soy products. "The quality was considered not very terrific by most end-users, in terms of 'yield' when manufacturing the soy products, but was acceptable." To further explore development of this imported product, Mr. Lai and Mr. Chi-bun Leung flew to Canada, where they were warmly welcomed and treated Dah Chong Hong's as pioneers. "Since that time Dah Chong Hong has imported Ontario soybeans for the Hong Kong market continuously every month now for more than 20 years. The overall quality of Ontario soybeans has improved over the years, and the quantity has been growing from only one or two containers per month in the mid-1970s, to hundreds of containers per month presently."

In 1984 Dah Chong Hong (Canada) Ltd., a wholly owned subsidiary of the head office in Hong Kong, was established in Vancouver, British Columbia, Canada. "One of our goals is to export more Canadian soybeans to many countries in Asia." The address in BC is: 4211 No. 3 Road, Richmond, BC V6X 2C3. Phone: 604-273-8222. Fax: 604-273-9222. Address: President, Dah Chong Hong (Canada) Ltd., 4211 No. 3 Road, Richmond, BC V6X 2C3, Canada. Phone: 604-273-8222.

6991. Lark, Susan M. 1996. The estrogen decision: Self help book. Revised & updated. Berkeley, California: Celestial Arts. 313 p. Illust. Index. 22 x 22 cm. [256* ref]
• ***Summary:*** This excellent, well-researched, and easy to understand book is "A complete guide to relief from menopausal symptoms through hormonal replacement and alternative therapies." It is divided into two parts: I. Hormone replacement therapy: Is it for you? (Chapters 1-9). II. Alternatives to hormone replacement therapy (Chapters 10-17).

Soybeans, soyfoods, and vegetarianism are discussed in many parts of this book. Women in the USA who do not suffer from hot flashes tend to eat a more vegetarian diet high in plant estrogens (p. 68). Nondairy soy yogurt made with live acidophilus cultures is an excellent food for preventing vaginal infections (vaginitis), urinary tract infections, and for menopausal women in general; this delicious food is sold at many health food stores (p. 84-86).

In Chapter 10, titled "Dietary principles of menopause relief," is a section on "Foods that ease menopausal symptoms." A long subsection titled "Beans and peas (Legumes)" (p. 124-26) starts by noting that "Soybean-based products actually help reduce and prevent menopausal symptoms. Soybeans are loaded with natural plant or phytoestrogens, called bioflavonoids." It goes on to discuss the reasons for these benefits, with scientific documentation. Soybean oil is also a good source of essential fatty acids (p. 128-29).

Chapter 11, titled "Menus, meal plans, and recipes," calls for use of soyfoods and other legumes in place of red meats, poultry, and dairy products (p. 163-67); tofu and soymilk are used in many menus and at least 14 recipes.

Chapter 12, titled "Vitamins, minerals & essential fatty acids," contains sections on the benefits of bioflavonoids, which are found in soybeans, for relieving menopausal symptoms, such as heavy and irregular bleeding (p. 172), hot flashes, night sweats, vaginal and bladder atrophy (p. 174-75), menopause-related emotional symptoms and insomnia (p. 177-79, also vitamin E found in soy oil). Omega-3 fatty acids, also found in soybeans, can help reduce one's risk of heart disease (p. 188).

Chapter 13, "Herbs for menopause," notes that estrogen and progesterone are widely synthesized from soybeans, which contain a preformed steroidal nucleus.

One problem with this book for more serious students is that the bibliography is completely disconnected from the

text. One cannot easily go from a statement in the text to its source in the bibliography. Address: M.D., 101 First St., Suite 441, Los Altos, California 94022. Phone: 415-941-5905.

6992. **Product Name:** SoyPro Shake [French Vanilla, or Chocolate Malt].
Manufacturer's Name: Life Services Supplements, Inc. (Marketer-Distributor).
Manufacturer's Address: 3535 Route 66, Neptune, NJ 07753. Phone: 1-800-542-3230.
Date of Introduction: 1996. January.
Wt/Vol., Packaging, Price: Chocolate: 22.7 oz can or Vanilla 21.5 oz can. Each (14 servings) sells for $18.17 plus shipping which is $4.75 for 1-2 items (UPS ground) or $5.50 for 3-4 items.
How Stored: Shelf stable.
New Product–Documentation: Ad (full page color) in Vegetarian Times. 1996. March. p. 73. "SoyPro Shake. Delicious soy protein shake!" "The health benefits of a diet high in soy protein isolates and isoflavones, especially genistein, are becoming the subject of increasing world-wide research... Guaranteed source of isoflavones such as Genistein (.222 grams/serving)."

Talk with Shari Goldwyn of Life Services Supplements Inc. 1996. March 11. This product was first sold in Jan. 1996. It comes as a powder in a can; add water or soymilk. No genistein is added to the product.

Leaflet (5½ by 8½ inches). "SoyPro Shake." "Abundant soy protein isolates–10 grams per serving. Only 144 calories per serving. Zero fat."

6993. Ma, C.Y.; Buzzell, R.I.; Jessop, D.B.; Buttery, B.R. 1996. Evaluation of soybeans for tofu processing. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*) 1(1):1-2. Jan.
• ***Summary:*** Contents: Introduction. Tofu yields and texture. Flow properties of soymilk. 11S / 7S globulin ratio. Correlation among soymilk and tofu variables. Conclusions.

In this study, eight Ontario, five USA, and two Japanese soybean cultivars covering a wide range of protein content were evaluated for their tofu processing properties, using glucono delta lactone as a coagulant. Table 1, titled "Characteristics of soymilk and tofu prepared from 15 soybean varieties," lists the following varieties (in descending order of soymilk protein; a water to dry matter ratio of 7 was used in making soymilk and tofu): BARC-6, AC Proteus, Proto, Harovinton, Raiden, Enrei, HP202, Secord, TK-89, Kanrich, RCAT Calico, Maple Arrow, RCAT Angora, Grande. This table contains the following vertical columns: Soybean protein (highest was BARC-6 at 53.4% on moisture-free basis), soymilk protein (highest was 6.1% from AC Proteus), soymilk yield (highest was 5.7 kg/kg from Maple Arrow), tofu yield (highest was 4.6 kg/kg from Harovinton and Raiden), tofu firmness (highest was 0.42 N/mm from Enrei), tofu rigidity (highest was 1680 G', Pa from Maple Arrow), soymilk viscosity (highest was 7.73 from BARC-6), and soymilk 11S/7S (highest was 5.44 from Secord; It has been reported that soybeans with a high 11S/7S ratio will produce firmer tofu).

Conclusion: "Results show that Canadian tofu varieties such as Harovinton have excellent tofu processing properties (yields, textures, etc.) comparable to or exceeding those of Enrei, a Japanese tofu variety." Address: 1. Centre for Food & Animal Research, Agriculture & Agri-Food Canada, Ottawa, Ontario, Canada; 2-4. Harrow Research Centre, Agriculture & Agri-Food Canada, Harrow, Ontario.

6994. McCord, Holly. 1996. Savor the new white-hot superfood. Way, way beyond the usual tofu: 7 easy, tasty ways to get "soying." *Prevention* (*Emmaus, Pennsylvania*). Jan. p. 79-83.
• ***Summary:*** The article begins: "Finally, soy's so hot it's smokin'! After years of neglect, mounting studies now suggest that soy foods help us dodge the big ones–heart disease and breast and prostate cancer. Maybe even osteoporosis... But in the United States, where we grow half the world's soybeans and then feed 'em mostly to chickens, the idea of soy for dinner somehow doesn't cut it. Fear of tofu–a white, spongy, soybean curd that most of us don't have a clue how to cook with–runs deep.

"If this describes you, relax! We've discovered seven surprisingly gentle ways to get you started with soy. They're all delicious and supereasy–foods even soybean sissies can relate to." 1. Pour soy milk on your cereal. 2. Whip up tofu blender smoothies (using Mori-Nu Silken Lite Firm Tofu–aseptic pack). 3. Make chocolate pudding no one can resist (using Mori-Nu Silken Lite Extra Firm Tofu). 4. Add "Sweet Beans" [green vegetable soybeans] to your repertoire. 5. Indulge in healthy Sloppy Joes (add TVP to a can of Sloppy Joe sauce and serve on a bun). 6. Go Nutlettes! The only ready to eat soy breakfast cereal made from a TVP you don't rehydrate. Order by phone from Dixie USA, Inc. 1-800-347-3494. 7. Drink soy protein beverages (such as Take Care. Order by phone from Nutritious Foods, Inc., 1-800-445-3350).

A sidebar discusses why soy is white-hot: Soy protein lowers high cholesterol. Soy isoflavones may beat breast and prostate cancer. Because soy protein causes less calcium excretion from the body than does animal protein, it may reduce osteoporosis. "Also, soy isoflavones may help slow down bone loss after menopause and relieve symptoms such as night sweats and hot flashes." Address: R.D.

6995. Napier, Kristine. 1996. The one food that could save your life: Long a favorite of vegetarians, the soybean is now touted as a potent cholesterol cutter. Why its not just another dietary fad. *Good Housekeeping.* Jan. p. 101-02.

• ***Summary:*** This article begins with a summary of the meta-analysis by Dr. James Anderson of Kentucky, published in the *New England Journal of Medicine* (Aug. 3), showing that soy protein can lower blood cholesterol. Contains two recipes: Hearty pasta & vegetables (with textured soy protein), and Thai tofu stir-fry. A sidebar titled "Where's the soy?," gives a brief description of tofu, tempeh, isolated soy protein, soy flour, soya powder, textured soy protein (TSP), and soy milk. Address: R.D.

6996. **Product Name:** Nutrisoy Premium Lite (Aseptic Soymilk).
Manufacturer's Name: Nutrisoya, Inc.
Manufacturer's Address: 4050 Pinard, St.-Hyacinthe, QUE, J2S 8K4, Canada. Phone: 514-796-4261.
Date of Introduction: 1996. January.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Classified ad in Bluebook Update. 1996. July/Sept. p. 7. In. January 1996 the company launched its new line of aseptic packaged soymilk, "Nutrisoy Premium Lite."

6997. *Prepared Foods.* 1996. New food plant construction: Dasi Linda [Riverside, California]. Jan.
• ***Summary:*** Dasi, Inc., headquartered in Rockville, Maryland, purchased the idle facility in the Loma Linda section of Riverside, California, from Nutricia for $2.2 million, then refurbished it at a cost of $8.5 million. The architects/engineers were O'Mally Engineering, Corona, California. Features: The facility includes an 850,000 cubic foot cooler, with initial capacity to produce more than 50 million quarts of fluid annually. "Dasi's patented processing technology permits gentle UHT pasteurization of fluid products while maintaining their taste. Start-up was expected in Dec. 1995. The plant, which 10,000 square feet of processing space, will make UHT and ESL (Extended Shelf Life) milk, and other dairy and non-dairy products in a variety of packages and sizes.

Talk with Robert Madey, vice president for R&D of Dasi. 1996. Jan. 24. Dasi first signed a written agreement with Nutricia concerning the purchase of the Loma Linda food plant in Oct. 1993, and the deal was finalized in Sept. 1994.

6998. Shurtleff, William. 1996. Report on soyfoods research trip to Cuba: Jan. 7-12, 1996 (Log–unpublished). Soyfoods Center, P.O. Box 234, Lafayette, CA 94549 USA. 68 p. Jan. Unpublished manuscript. Log. 28 cm.
• ***Summary:*** Contents: Daily itinerary and schedule. Questions and to do. Daily notes from interviews and meetings: Visit to INIFAT–Boris Sanchez, Dr. Gilberto Fleites, Dr. Raphael Martinez, Tomas Guzman, Dick Strohl. Visit to Food Research Institute (IIIA): Alvaro Garcia (Director). Alberto Ortega. History of soyfoods in Cuba. Three soy videos at MinAg. To INIFAT with Dr. Martinez: Summaries of many soy-related documents found in the library. With Boris Sanchez at MinAg. Various Cuban's impressions of Fidel Castro. Second visit to IIIA. Taste tests of products. Statistics on soy yogurt production in Cuba. Business cards. Conversations about daily life in Cuba. Trip schedule from Pam Montanaro: San Francisco to Mexico City to Cancun to Havana. Address: Lafayette, California.

6999. *Soybean Quarterly* (*Nebraska Soybean Board, Lincoln, Nebraska*). 1996. New research: Soyfoods consumers are just like you. 2(1):4.
• ***Summary:*** A new study available from the Soyfoods Association of America shows: (1) Urbanites under age 60 on the East and West coasts of the USA are the best soyfoods customers. (2) Soy users are not strict vegetarians; most list fish and chicken as red meat alternatives. (3) Among 26 million soy consumers, 6 million plan to use soyfoods more in the future. (4) Although most eat soyfoods infrequently, consumers would like to try new soyfoods. (5) While value-sensitive soy consumers want lower prices, experienced soy users actually see cost savings when preparing soyfoods. (6) Tofu users want new recipes (besides stir-frys) while soymilk and soy-meat users are concerned more with cost than variety.

7000. Soyfoods Center archival collections, from the 1600s ongoing. 1996. Lafayette, California. [6313 ref]
• ***Summary:*** As of 1 Jan. 1996 the Soyfoods Center Archives contains 6,313 unpublished archival documents–mainly correspondence, interviews, photographs, and unpublished manuscripts relating chiefly to the history of soybeans and soyfoods, and to a lesser extent, the history of vegetarianism and natural foods.

Main subject areas include: early history of soybeans and soyfoods; modern soy protein products; soyfoods industry and market; industrial utilization of soybeans; soy pioneers in the U.S., Europe, and worldwide; major U.S. soybean crushers; Seventh-day Adventists worldwide; pioneer U.S. soy protein companies; pioneer U.S. natural food companies and distributors; soybeans, soyfoods, Third World nations, and world hunger; nutritional and medicinal value of soybeans and soyfoods; and soybean production, trade, and marketing.

Document level access is available through the repository's SoyaScan information retrieval system.

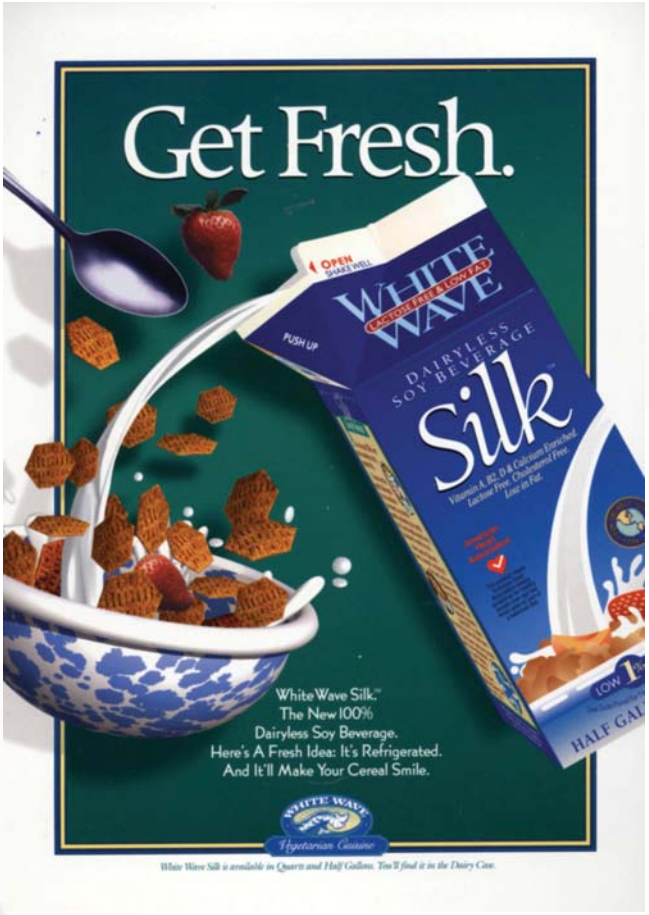
Most important specific subject areas: Miso, natural foods, Seventh-day Adventists, soy sauce, soybean, soybean industry, soybean products, soyfoods, soyfoods industry, soymilk, tempeh, tofu, vegetarianism. Address: P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

7001. **Product Name:** Bulk Soymilk.

Manufacturer's Name: Twin Oaks Community Foods.
Manufacturer's Address: Route 4, Box 169, Louisa, Virginia 23093. Phone: 703-894-4112.
Date of Introduction: 1996. January.
Wt/Vol., Packaging, Price: 4 gallon pouches.
How Stored: Refrigerated.
New Product–Documentation: Letter from then talk with Jon Kessler. 1996. Jan. 29. The soymilk is packed hot into the pouch, then cooled in a cooling sink. The 4-gallon pouches are sealed with a twist tie. Shelf life: 10-14+ days. He has no label for the product since it is sold to only one customer, a group named Synchronicity.

7002. **Product Name:** Silk (Soymilk Sold Refrigerated in Quart or Half Gallon Pure-Pak / Gable Top Cartons) [Vanilla].
Manufacturer's Name: White Wave, Inc. (Product Developer-Distributor). Made in Vancouver, Canada (by Pacific ProSoya Foods) and formulated in Gustine, California (by Tan Industries).
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 1996. January.
Ingredients: Water, whole organic soybeans*, brown rice syrup, raw cane crystals, tricalcium phosphate, natural vanilla flavor, sea salt, carrageenan, xanthan gum, vitamin A palmitate, vitamin D-3, riboflavin (vitamin B-2). * = Grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: Quart or half gallon Pure-Pak Carton. Half gallon retails for $3.59 (Berkeley, California 2/96).
How Stored: Refrigerated.
Nutrition: Per 1 cup (237 ml): Calories 80, calories from fat 20, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 85 mg (4%), total carbohydrate 11 gm (dietary fiber 0 gm, sugars 9 gm), protein 4 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, vitamin C 0%, iron 2%, riboflavin 30%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Steve Demos (who phoned), CEO of White Wave. 1995. Nov. 22. This innovative new product will be launched in a very big way, nationwide, on January 8, 1996. The soymilk will be packaged in Pure-Pak cartons, like most milk, and sold refrigerated. The use-by date will be 35 days from the date of manufacture but it actually lasts 120 days. The milk will be made at a plant that is not owned by White Wave, but Steve hopes that White Wave will be making the product within 2 years and that it will be shipped in condensed form to 8 regional dairies, which will pack and distribute it.

Note: Steve Demos later wrote (Aug. 2013) that Silk was formally launched in March 1996 at the Natural Products Expo at Anaheim.



The regular price (with no discounts) will be about $1.79 a quart. The product will compete based on the fact that (1) Consumers prefer this package to aseptic Tetra Brik packaging, and (2) Consumers prefer the flavor of this product to that of all other non-dairy beverages tested–including Rice Dream. The tests were run 3 times. The product is being marketed for use with breakfast cereal. Steve wants customers to first taste the product on the end of a spoon with cereal. It will not initially compete on price. It will be targeted initially to the natural foods market, primarily as a dairyless soy beverage. In addition it is organic, contains only 1% fat, is calcium fortified, etc. Steve's goal is to capture 10% of the market. Lactaid now has sales of $120 million a year. The market for lactose-free beverages is growing at a very fast rate.

News release from Holden McClure in Boulder, Colorado. 1996. Jan. 10. "Don't forget to drink your Silk. Vegetarian Cuisine company launches refrigerated soy beverage." The dateline is Tofu Town, USA. White Wave, Inc., one of the fastest growing vegetarian cuisine companies in the U.S., "announced today that it is entering the beverage market with the launch of Silk, a lactose-free, low-fat, refrigerated soy beverage to be sold in the dairy case. Packaged in a traditional milk carton, Silk is delicious and 100% dairyless. Beginning in February, Silk will be available

in natural food stores across the country." In many blind taste tests, Silk was consistently preferred to the soy and rice beverages that consumers indicated they currently used. Silk will be sold in quart and half gallon cartons at a suggested retail price of $1.99–$2.49 and $3.99–$4.79 respectively. "Ken Vickerstaff, White Wave's VP of Sales and Marketing, believes positioning silk as a refrigerated soy beverage in a milk carton will be the key to success as White Wave enters this $100 million market. 'We're the first company to offer a nationally distributed soy beverage that isn't mispositioned. To date the category has been mispositioned, offering product in a square dry box at room-temperature. That is just foreign to how we eat." Silk is fortified with calcium plus vitamins A, B-2, and D, is low in fat (1% by weight), is made from organically grown soybeans, meets the American Heart Association guidelines and features the Heart Check seal. The motto: "White Wave Silk. Pour it on."

Letter from then talk with Dusty Cunningham of Pacific ProSoya Foods. 1996. Feb. 8. Her company makes the soymilk for Silk at their plant in British Columbia, then ships it to the packer. It is not made at the ProSoya plant in Ontario. Talk with Mark Brawerman. 1996 Feb. 10. Pacific ProSoya now ships numerous tanker trucks of soymilk each week to a UHT [Ultra High Temperature] packer in the Bay Area. This is probably the soymilk used to make Silk. Note: Talk with George Conquergood of IPC. 1999. May 10. Starting in Jan. 1996, the soy base for this soymilk was made by Pacific ProSoya in British Columbia, Canada, then was sent in tanker loads to Ted Nordquist of TAN Industries for formulation at Avoset dairy [the Morningstar plant] in Gustine, central California (29 miles west of Merced). Note: Laura Tewnion and Ann Shaw, who were in the lab at Gustine, helped Ted with the formulation. The Gustine plant had a UHT pilot plant. George has photos of the first tanker sent to Ted, with Lorne Broten and Dusty Cunningham standing by the tanker. Soy base or Soymilk processed by UHT has a longer shelf life than that processed by HTST [High Temperature Short Time]. UHT is also held for a shorter time at the higher temperature.

Talk with Jonathan Gordon. 1996. Feb. 21. Silk is being sold in two sizes, quarts and half gallons, with only one basic flavor for each size. The product is selling extremely well.

Talk with Steve Demos (who phoned). 1996. Feb. 23. The product was released on Jan. 15. in 226 A-level natural food stores nationwide and is selling very well, at the rate of 1,000 cases/week. Steve traveled 30,000 miles in 60 days to get Silk off the ground. White Wave will host the Silk Soirée dance at the Natural Products Expo at Anaheim in March.

Product (half gallon and quart) with Label purchased from Berkeley Natural Grocery Co. 1996. Feb. 28. Price of half gallon: $3.59. Expensive! Deep blue, light blue, white, red, and light brown. Front and back panels: Illustration of a stream of soymilk splashing onto a bowl of breakfast cereal topped with strawberries. "Dairyless Soy Beverage. Vitamin A, B-2, D * calcium enriched. Lactose free. Cholesterol free. Low in fat." The American Heart Association logo shows a white check on a red heart: "This product meets American Heart Association dietary guidelines for healthy people over age 2 when used as part of a balanced diet." A circular logo shows North and South America: "Made from Organic Soybeans." "Low 1% fat." Side panel: Cartoon motif. "Good morning. As you pour Silk over your morning cereal, ponder this. If cows ran the world, Silk would be our national beverage. Soy protein would probably look pretty hip. Good health would be in. Cholesterol would be out. In the Land of Silk and Honey, hunger is a thing of the past and stress is replaced with deep breathing. White Wave has labored steadily since 1977 to offer the world a taste of that calm. Many have said we should take our enthusiasm for good living and bottle it. We have. White Wave Silk. Pour it on. White Wave's mission is to creatively integrate healthy, natural, vegetarian foods into the American diet." Second side panel: "Not to be used as an infant formula." It is "made from organic soybeans that are raised without herbicides, pesticides, or chemical additives."

Talk with Richard Rose of Sharon's Finest. 1996. March 5. White Wave's Silk is being packaged at Avoset, a company in Gustine (south of Modesto), central California. Richard has heard that Silk has not been selling very well so far. "If it fails, it could put White Wave on the ropes."

Leaflet (19 x 13.5 cm, front and back, glossy) sent by Patricia Smith from Natural Products Expo at Anaheim. 1996. March 15. Front (color): "Get Fresh–White Wave Silk." Rear (black-and-white): "New Silk. For cereal. Deliciously friendly to open, pour and store."

Leaflet (28 x 21 cm, single sided, black and white) sent by White Wave. 1996. Feb. 16. "Silk Fact Sheet."

Update: 1996. May 6. It costs about $4,000 to ship a tanker of soymilk from Vancouver (BC, Canada) to the Midwest.

Product with Label purchased at Open Sesame (natural food store) in Lafayette, California. 1998. Dec. 23. Plain quart of "Silk–Dairyless Soy Beverage" retails for $2.49. A quotation on one side titled "Something worth hanging onto" states: "Wish not so much to live long as to live well"–Benjamin Franklin.

"Silk–Soymilk is cool"–Oval shaped sticker on envelope sent by White Wave. 1999. Jan. 25. 2 inches long by 1¼ inches high. White on blue.

Talk with Denis Bolger of New York City. 2003. June 8. On sale at Pathmark supermarkets in New York City: Silk refrigerated for $0.99/quart in Vanilla, SoyaLatte, and Plain. Dec. 12-18. On sale at Pathmark: two ½ gallon cartons of Silk (Vanilla, Plain, or Chocolate) for $5.

7003. McCullen, Kevin. 1996. Silk is answer to vegetarian non-milk quest. *Rocky Mountain News* (*Denver, Colorado*). Feb. 1.

• ***Summary:*** Silk looks like milk and is packaged in a bright blue milk carton. "Demos said he hopes his company's newest creation will appeal to vegetarians and anyone else looking for a non-milk beverage on their breakfast cereal. But he is also trying to have some fun while he promotes the product... Copy on the Silk package ponders what cows might say about soy if they could decide what to put on breakfast tables." A small photo shows a portrait of Demos. Address: Rocky Mountain news staff writer.

7004. *SoyaScan Notes.* 1996. New soymilk manufacturer in America! Cathay Industrial in Los Angeles, California (Overview). Feb. 7-9. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mr. Shoan Yamauchi bought a brand new building in early 1995 for his son Jon, who has a background in food science and technology, and who started Cathay Industrial in this building at 2121 East 8th St., Los Angeles, California 90021. Phone: 213-623-8126. House Foods needed more space to make tofu so they sold their soymilk manufacturing equipment to Cathay, and in Feb. or March 1995 Cathay began to make the soymilk used in Westbrae Malteds. Cathay also soon began to make soymilk (for use as a beverage) for Wy Ky Foods and for AFC–both companies run by Chinese-Americans. They have always made only soymilk; they do not make any tofu. However they do have their own brand of Cathay Tofu, which is made for them by House Foods & Yamauchi, and which their Cathay Distributing Co. distributes. Boon Nakornratana, a native of Thailand, worked for Mr. Yamauchi for almost 20 years. When Mr. Yamauchi bought this new building, Boon came here with Jon Yamauchi. Mr. Shoan Yamauchi is now semi-retired. He visits Cathay about once a week, and visits House Foods & Yamauchi 3-4 times a week.

Note: Westbrae's soymilk is now made in 3 different locations. Cathay Industrial makes only the soymilk used in Westbrae Malteds. For the past 3 years, part of Westbrae's soymilk has been made by Bill Bolduc and packaged by White Knight, a Tetra Brik packager in Grand Rapids, Michigan. The rest has been made and packaged by Pacific Foods of Tualatin, Oregon.

Update: Feb. 27. Nancy Knudsen, whose father owns the juice company, has started her own company named Healthy Harvest. She is talking with Cathay about making a soy & rice beverage for her.

7005. Holden, Susan L. 1996. If cows ran the world, Silk (TM) would be our national beverage. Soy protein would look pretty hip... (News release). Boulder, Colorado. 1 p. 28 cm. On White Wave letterhead.
• ***Summary:*** "... Good health would be in. Cholesterol would be out. In the Land of Silk and Honey, hunger is a thing of the past, and stress is replaced with deep breathing."

"Look for White Wave Silk at the Natural Foods Expo West–March 14-17 in Anaheim. We'll be in booth #889. White Wave Silk. Pour it on.

"If you'd like additional information on Silk or would like to interview one of our 'cow experts,' please contact me at 303.449.2526." Address: Holden McClure for White Wave. Phone: 303-449-2526.

7006. White Wave, Inc. 1996. Silk fact sheet (Leaflet). Boulder, Colorado. 1 p. Single sided. 28 cm.
• ***Summary:*** "White Wave's biggest new product launch in the company's 18 year history.

"Silk (TM) is a low fat (1% by weight), refrigerated soy beverage. With delicious taste, it is dairyless–100% lactose-free and 100% cholesterol-free.

"Silk meets the American Heart Association dietary guidelines and features the Heart Association's Heart Check seal.

"It is made from organic soybeans, grown and processed in accordance with the California Organic Foods Act of 1990. The natural soybeans are raised without the use of herbicides, pesticides or chemical additives.

"Fortified with Calcium as well as Vitamins A, B2, and D.

"Silk is great poured over cereal, as a cool, refreshing drink, or as an ingredient in any recipe. (A Silk latte is awesome!)

"It is easy to use in cooking and baking, and maintains the same fresh quality and smooth taste associated with milk products.

"It is sold in the dairy case and is packaged in a traditional milk carton.

"Silk is a healthy, protein-packed staple for your daily diet.

"White Wave Silk. Pour it On." Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

7007. White Wave, Inc. 1996. White Wave makes a big splash with Silk: Vegetarian Cuisine Company launches refrigerated soy beverage (News release). Boulder, Colorado. 2 p. 28 cm. On White Wave letterhead.
• ***Summary:*** "TofuTown, USA, February 1996. White Wave, Inc., one of the fastest growing vegetarian cuisine companies in the U.S., announced that it has entered the beverage market with the launch of Silk (TM), a lactose-free, low fat, refrigerated soy beverage. Now available in natural food stores across the country, Silk is uniquely packaged in a traditional milk carton and sold in the dairy case.

"'In just a couple of weeks on the market, Silk has already made a big splash with retailers as well as consumers,' stated Steve Demos, President of White Wave. This is our biggest and most bodacious new product launch in our company's 18 year history. Our sales of Silk in its first week were comparable to White Wave's sales for its entire first year in business in 1977.'

"He continued, 'We've tapped into the demand for a good tasting, 100% dairyless beverage that appeals to a broad range of consumers–vegetarians as well as mainstream consumers who are looking for a fresh, non-milk product for their breakfast cereal, We believe Silk will bring people back to the breakfast table by allowing them to enjoy a healthy breakfast with Silk and their favorite cereal.'

"Ken Vickerstaff, White Wave's VP of Sales and Marketing, believes positioning Silk as a refrigerated soy beverage in a milk carton will be the key to success as White Wave enters this rapidly growing market, which was estimated at $130 million in retail sales for 1995. We're the first company to offer a nationally distributed soy beverage that isn't mis-positioned. To date, the category has been mis-positioned, offering product in a square dry box at room-temperature. That is just foreign to how we eat,' explained Vickerstaff..."

"Contact Susan L. Holden, Holden McClure, 303.449.2526." Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

7008. Lo, Francis. 1996. K.S. Lo died on 5 May 1995. Vitasoy went public several months earlier (Interview). *SoyaScan Notes.* Feb. 19. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Francis is the grandson of K.S. Lo (one of Mr. Lo's 18 grandchildren) and the son of Frank Lo. As a young man Frank studied cheese-making in Australia at the Queensland Agricultural College. Frank is currently in charge of new developments in China. Francis is presently a third year student at the University of Guelph in Canada, studying agricultural business. He would like to get some business experience before he goes to work for Vitasoy; he does not want to use the company as a training ground. Vitasoy shares were first sold to the public in about February or March 1995. Francis has a copy of the booklet that was published at that time. Address: Univ. of Guelph, Guelph, ONT Canada.

7009. SSP Private Limited. 1996. Display ad: Earn Rs. 500/- to Rs. 1,500/- per day. Take advantage of Canadian technology. "Soya Cow" machine for soya milk / soya paneer production. *Times of India* (*The*) (*Bombay*). Feb. 28. p. 22.

• ***Summary:*** "Produce 30 litres/hour soya milk (without beany off flavour) and produce 2.0 kg/hour sweets and other products, or produce 7.0 kg/hours soya paneer from soya milk. Space requirement: 5 square metres. Electrical requirement: 1.0 H.P. [horsepower] (220 volt single phase). Price: Rs. 1.0 lakh [100,000 rupees] + taxes.

A photo shows the "Soya Cow" equipment. Address: 19, DLF, Industrial Area–II, 13/4 Mathura Road, Faridabad–121003, Haryana, India. Phone: 0129 27 5441, 7442, 7730.

7010. Daller, Frank. 1996. Re: Present status of the SoyaCow. Letter to William Shurtleff at Soyfoods Center, Feb. 29–in reply to inquiry. 1 p. Typed, with signature on letterhead.

• ***Summary:*** ProSoya Inc. does "sell the small SoyaCow SC-20 but not to users in North America. This is because the system is not currently built to ASME standards and because America is lawsuit crazy. The SC-20 system is primarily for cottage industries and humanitarian applications in developing countries although it is also used as a pilot or lab-type system in North America. We can make a North American model with UL approval etc. but it would almost double the cost of the system. Because of this, we are primarily interested in the lower cost version.

"We are currently awaiting delivery of an Indian manufactured model of the SC-20 which will be available at a lower price even than the Canadian-made ones. We expect this system will be available for about US$5,000... It should be available in 60-90 days." Address: ProSoya Inc., 5350 Canotek Road, #7, Gloucester, ONT K1J 9C9, Canada. Phone: 613-745-9115.

7011. Behling, Ann. 1996. New technology makes soy foods tastier: Canadian firm makes concentrate for ice cream, milk, and yogurt. *Soybean Digest.* Mid-Feb. p. 56.

• ***Summary:*** About Pacific ProSoya Foods and Jersey Farm Soya Yogurt. Photos show: A label for Jersey Farm Soya Yogurt. The soymilk equipment inside Pacific ProSoya's plant at Surrey, British Columbia.

7012. *Bluebook Update* (*Bar Harbor, Maine*). 1996. ProSoya finds new opportunities in Cuba. 3(1):3. Jan/March.

• ***Summary:*** Frank Daller of Canada has made three trips to Cuba and is planning a fourth this February, when he plans to return to Cuba with the head of a major Canadian agricultural equipment company to discuss possibilities of a joint venture company that would compliment the Soy Cubano program, as well as a separate initiative for the production of Canadian agricultural equipment in Cuba.

On another venture, Mr. Daller is working with Dr. Gilberto Fleites, a cancer surgeon from Havana, and a local entrepreneur to install a small SoyaCow SC20 in the first natural food/vegetarian restaurant in Havana. Dr. Fleites is working to build local awareness of the anti-cancer properties of soyfoods.

7013. **Product Name:** [Rice-Based Drink].
Foreign Name: Reis Drink.
Manufacturer's Name: Bruno Fischer GmbH (Importer-Distributor). Made in Belgium.
Manufacturer's Address: Im Auel 88, D-53783 Aetorf, Germany. Phone: 49-2243-4021.
Date of Introduction: 1996. February.

Ingredients: Water, rice* (9%), sunflower oil*, sea salt, sunflower lecithin, natural vanilla extract. * = Organically grown and controlled.
Wt/Vol., Packaging, Price: 1 liter glass bottle.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label sent by Bruno Fischer. 1998. April 15. Ingredients and nutritional value are given in five languages, each with the flag of that country by the product name: German, English, Italian, French, and Dutch. Talk with Bruno Fischer. 1998. May 13. This product was launched in Feb. 1996. Note: Imagine Foods ships a rice beverage base to the UK and packages it there.

7014. Connolly, Maureen. 1996. Have you had your tofu today? For the health-conscience, soy has become the superfood du jour. Is it all it's cracked up to be or the next incarnation of oat bran? *Women's Sports and Fitness* 18:62-63. Jan/Feb. [3 ref]
• ***Summary:*** Studies show that soy can reduce your risk of coronary disease. A 1990 study by the National Cancer Institute identified five anticarcinogens present in soybeans. As little as 25 gm/day of soy protein can be beneficial to health, and many soy products are now on the market. The author talks about "soy's new celebrity" and asks her readers "why not try tofu?"

A sidebar titled "A smorgasbord of soy" (p. 63) gives a brief description of the following soy products: Isolated soy protein, miso, soybeans, soy flour, soy milk, tempeh, textured soy protein (TSP), and tofu. Address: New Jersey.

7015. Golbitz, Peter. 1996. Nondairy beverage market pours it on. *Natural Foods Merchandiser.* Feb. p. 68.
• ***Summary:*** A graph shows retail sales of milk alternatives in million dollars from 1987 to 1995, and projected to 1999–based on a recent report by Packaged Facts. They have risen dramatically, from 29.0 in 1987, 41.2 in 1988, 60.2 in 1990, 84.2 in 1992, 108.4 in 1994, 130.1 in 1995, 179.5 in 1997 (projected), and 231.2 in 1999 (projected). Interestingly, according to the USDA per capita consumption of fluid cow's milk has fallen nearly 20% since 1970. Soymilk comprises an estimated 80% of the market for fluid milk alternatives, with most of the balance comprised of rice drinks.

Much of the information in this article comes from a consumer study conducted in 1995 for the Soyfoods Association of America (SAA). According to this study, 51% of soymilk consumers first purchased soymilk because they were aware that the product was "generally healthy food" and an additional 32% purchased soymilk because of allergies to dairy products and lactose intolerance. A remarkable 75% said they were familiar with the reported link between soyfoods consumption and reduction in heart disease, and 66% were aware of possible cancer risk reduction.

The SAA study also found that soymilk is by far the most frequently consumed soyfood, used on average almost twice a week. Most people drink it as a beverage, but 25% of them pour it on their cereal and 30% use the product most often in cooking and baking. Where do consumers buy soymilk? 51% buy it in a natural- or health food store or a co-op, 46% buy it in a supermarket (showing that soymilk joined that select group of natural food products that have made a successful leap into the mass market), and 3% buy it in Oriental markets.

Soymilk is too expensive. 47% of current users said they would buy more if it cost less. In addition, 40% said they would buy more if it were more available. Address: President of Soyatech Inc.

7016. Hagler, Louise. 1996. Soyfoods cookery: Your road to better health. Summertown, Tennessee: The Book Publishing Co. 160 p. Illust. Index. 21 cm. Introduction by Mark and Virginia Messina.
• ***Summary:*** Contents: Foreword, by Louise Hagler. Introduction, by Mark Messina and Virginia Messina: Introduction, soybeans–a powerhouse of nutrition, soy and cancer (soybeans–a phytochemical factory, genistein and non-hormone cancers, soy and cancer treatment, isoflavones in the diet), soyfoods and heart disease–beyond cholesterol, soyfoods and bone health, soyfoods and kidney disease, menopause, perspective on soyfoods, about the Messinas. Basic soyfoods (glossary): Whole soybeans, fresh green soybeans, soymilk, okara (soy pulp), soymilk powder, soy protein concentrates, soy protein isolates, tofu, freeze-dried tofu, tempeh, textured vegetable protein, miso, soy flour or grits, yuba or bean curd stick or sheet, natto, soy sauce, soy oil, soy lecithin, convenience soyfoods (frozen soyburgers, frozen tamales and burritos, frozen soy hot dogs or wieners, frozen fat-free soy ground meat replacement, frozen soy pizza, tempeh burgers, frozen tofu lasagne, stuffed shells, manicotti, tortellini or ravioli, frozen soy breakfast links or "sausages" or tempeh "bacon," "ground" tofu, meatless chili mixes, meatless burger mixes, soy "cheeses," eggless soy mayonnaise, tofu salad dressings, soy ice creams, frozen pot pies, frozen pocket breads, instant miso soup, eggless soy cake, quick bread, pancake and waffle mixes, liquid soy coffee creamer, smoked or baked tofu). Feeding babies and children soyfoods. Breakfast, brunch & bread. Whole soybeans. Sauces, spreads, dips & dressings. Soup & salad. Main dishes. Desserts. Drinks & yogurt.

No dairy products or eggs are used; honey is called for in some recipes. Optional microwave instructions are sometimes included. Address: Summertown, Tennessee. Phone: 615-964-3571.

7017. Messina, Mark; Messina, Virginia. 1996. SoyFacts No. 1: Soyfoods & allergies (Leaflet). Lebanon, Indiana: Indiana

Soybean Development Council. 2 p. Front and back. 28 cm. [20 ref]
• ***Summary:*** Contents: Introduction. Soy protein allergy. Soy infant formula. Soyfoods and allergy. Conclusion.

"Soy infant formula: For many years soy-based infant formulas were recommended for infants with cow's milk protein intolerance. In healthy, non-allergic children, soy is generally less allergenic than cow's milk (Eastham 1989). The incidence of cow's milk allergy is thought to range from 0.3 to 7.5 percent among infants (Bana & Heiner 1980); allergy to soy is seen in 0.5 percent or less of the population.

"But there is currently some debate over the advantages of soy formulas for infants who are allergic to cow's milk. Where the gut is already damaged as a result of cow's milk allergy, the incidence of concomitant soy allergy may be substantial. In the early 1980s, the American Academy of Pediatrics Committee on Nutrition recommended that soy-based infant formulas not be used in the dietary management of documented clinical allergic reactions to cow's milk protein, although the committee concluded that soy formula, in comparison to cow's milk formula, is 'probably a better source of nutrition in allergy-prone infants.' More recently, researchers from Italy concluded that most of the studies reporting soy allergenicity had serious flaws. Based on an extensive review of the literature, the Italian researchers concluded that soy formulas should be used for infants with IgE-mediated cow's milk protein allergy."

Note: One version of this leaflet was developed for consumers and another for dietitians. The project was funded by the Indiana Soybean Development Council. Address: 1. PhD; 2. MPH, RD. Both: Nutrition Matters, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

7018. Messina, Mark; Messina, Virginia. 1996. SoyFacts No. 9: Soyfoods & nutrients (Leaflet). Lebanon, Indiana: Indiana Soybean Development Council. 2 p. Front and back. 28 cm.
• ***Summary:*** Contents: Introduction. Macronutrients in soybeans: Protein, fat, fiber. Micronutrients in soyfoods: Calcium, iron, other. A table shows the nutrient content of the following soyfoods: Soybeans (½ cup, cooked). Tempeh (½ cup). Textured soy protein (½ cup cooked). Soynuts (¼ cup). Tofu (½ cup). Soy flour, defatted (¼ cup). Soy milk, plain (1 cup). For each food the following are given: Calories, protein, carbohydrate, fat, saturated fat, niacin, vitamin B-6, folic acid, calcium, iron, magnesium, copper, zinc.

This leaflet begins: "Like other legumes, soybeans are rich in nutrients. However, the macronutrient profile of soybeans differs in some important ways from most other legumes. Soybeans are higher in both protein and fat than other beans and are relatively low in carbohydrate."

Macronutrients–"Protein: Soybeans derive about 35 to 38 percent of their calories from protein compared to approximately 20 to 30 percent in other legumes. Soy protein is also of the highest quality. Under new guidelines that have been adopted by the Food and Drug Administration and the World Health Organization for evaluating protein quality for children and adults, soy protein isolate receives a rating of 1, which is the highest possible score. This means that the quality of soy protein is equal to that of meat and milk proteins."

Note: One version of this leaflet was developed for consumers and another for dietitians. The project was funded by the Indiana Soybean Development Council. Address: 1. PhD; 2. MPH, RD. Both: Nutrition Matters, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

7019. Messina, Mark; Messina, Virginia. 1996. SoyFacts No. 11: Soyfoods & women's health (Leaflet). Lebanon, Indiana: Indiana Soybean Development Council. 2 p. Front and back. 28 cm. [21 ref]
• ***Summary:*** Contents: Introduction. Breast cancer. Menopause. Osteoporosis. Heart disease. Soy and fertility. Soyfoods in the diets of women.

"Menopause: The decrease in estrogen production that signals menopause can produce a variety of symptoms. These include difficulty in regulating body temperature that manifests as night sweats and hot flashes. However the severity of menopause symptoms varies throughout the world. For example, Asian women are typically one-third as likely as American women to report symptoms. Although, to some extent, this may reflect cultural differences regarding willingness to discuss these symptoms, there appears to be an actual difference in the severity and incidence of symptoms (Lock 1994). Soy consumption has been proposed as one explanation for these differences. The estrogenic activity of soybean isoflavones may help to offset the effects of reduced estrogen production by the ovaries. Even though soy isoflavones exhibit very weak activity (1/1,000 to 1/100,000 the potency of endogenous estrogen), in women consuming soyfoods, blood levels of isoflavones can be 1,000 times higher than endogenously produced estrogen levels (Xu et al. 1995). Most important, in a recent Australian study, researchers found that women who consumed 45 grams of soy flour per day experienced a 40 percent decrease in menopause symptoms (Murkies et al. 1995). Several studies examining the effects of soy on menopause symptoms are under way."

Note 1. One version of this leaflet was developed for consumers and another for dietitians. The project was funded by the Indiana Soybean Development Council.

Note 2. The issue of goitrogens / goitrogenic substances in soybeans and soyfoods is not discussed in any of these 11 leaflets. Address: 1. PhD; 2. MPH, RD. Both: Nutrition Matters, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

7020. Ornish, Dean. 1996. Everyday cooking with Dr. Dean Ornish: 150 easy low-fat high-flavor recipes. New York, NY: HarperCollins Publishers. xix + 344 p. Index. 24 cm. [6 ref]
• ***Summary:*** This is Dr. Ornish's 4th book. Recommends low-fat vegetarian meals. Organized into 45 seasonal menus with "recipes that use inexpensive, commonly found ingredients and follow easy time-saving steps."

The opening chapter, "Choices made easy," has the following contents: Why I wrote this book (in response to thousands of letters he receives each year). Delicious and nutritious. Low fat, high flavor (He has commissioned some of America's most celebrated chefs to work within his guidelines and see what they can create. Dr. Ornish and his team have "trained the chefs at the White House, Camp David, the Navy Mess, and on *Air Force One* who cook for President and Mrs. Clinton. We've learned what works"). Beyond heart disease (to improving the quality of your life right now; you will feel so much better!). Good nutrition is easy (If you drink, limit it to one drink per day. "Reducing salt is a good idea for everyone, but its most important if you have high blood pressure, kidney disease, or heart failure") The Life Choice Program ("which also includes moderate exercise, stress management training (stretching, breathing, meditation, visualization, and relaxation techniques), smoking cessation, and psychosocial support... this is a diet and lifestyle program based on (1) the joy of life, not the fear of death, and (2) choice, not coercion"). Why a plant-based diet? ("Cholesterol is found only in animal products, which also tend to be high in saturated fats"). Eat more complex carbohydrates, weigh less. Why 10 percent fat? (recommends 10% of calories from fat. The average American diet has about 40% of its calories from fat. You can eat nonfat dairy, egg whites, but no added oil). Why so little cholesterol? (Your dietary requirement for cholesterol is zero). What is the cause? (His program addresses the cause of the problem rather than trying to get rid of the symptoms). Big changes are easier than small ones (First, you fell so much better so quickly. Second, your palate adjusts quickly so that you prefer low-fat foods. Fat is an acquired taste, not one of the four basic tastes).

Soy related recipes: Vegetable broth ("Experiment with salad dressings made with soft tofu or nonfat yogurt," p. 18-19). Roasted onions (For heightened taste, use soy sauce, Japanese miso, etc., p. 22). Supermarket tips and traps ("Tofu is sometimes in the produce section, sometimes in the dairy case." Take it from the dairy case if you have a choice; the colder temperature keeps tofu fresher, p. 35). Miscellaneous ("Soymilk in aseptic cartons has a long shelf life before its opened. Use it as a cholesterol-free alternative to nonfat cow's milk," p. 39). How to cook legumes (Soybeans contain about twice as much protein as other beans and are a good source of omega-3 fatty acids. Their protein is complete protein, and has been show to lower blood cholesterol levels. For smart ways to incorporate more soy foods into your diet, see p. 313. Two servings a day {½ cup each} from the legume group are ideal, p. 41). Section on "Meat substitutes" (p. 56-57) mentions soy protein, wheat gluten, tofu, etc. "One of the most popular meat substitutes is Textured Vegetable Protein, or TVP." It is made from defatted soy flour and is sold in various flavors and shapes. "The Boca Burger 'No Fat Original' used in some recipes in this book is made from defatted soy protein..." The section on Miso (p. 57) notes that it "adds nutty flavor to soups, stews, and dressings." The section on tofu (p. 58) describes the many types, their uses and nutritional value. Creamy coleslaw (with "Creamy tofu dressing," p. 164-65).

The section on "Commonly asked questions about the Reversal Diet" (p. 306+) has a subsection titled "Since soy products are high in fat, how much can I have?" which begins (p. 313): "Soybean products have no cholesterol and supply essential fatty acids and are an exception to the guideline of no more than 3 grams of fat per serving. However use good judgment... a good rule of thumb is to stay within 4 ounces tofu or 2 cups soy milk per day. Soy milk–the rich creamy product of soybeans ground with water–is an excellent cholesterol-free alternative to cow's milk. It is available plain and flavored, in a range of fat contents."

"Will I get enough protein on the Reversal Diet?" (p. 314-15) begins: "Americans tend to be overly concerned about getting enough protein. In fact, meat eaters tend to get too much. Eating too much protein, especially animal protein, can increase your risk of cancer, diabetes, and heart disease... and may lead to osteoporosis."

"Where do I get protein on the Reversal Diet?" (p. 315) begins: "The body's protein requirement is about 50 grams per day for women and about 60 grams for men." "Good sources include beans and peas, including soy milk and tofu."

On the same page under "combining proteins": "(The soybean is the only plant food with enough of all the essential amino acids to be considered a complete protein)."

The recipes in this book were developed by Janet Fletcher, Jean-Marc Fullsack, and Helen Roe. The Boca Burger is called for in many recipes (p. 57, 177-78, 194-95, 237-38). Address: M.D., President and Director, Preventive Medicine Research Inst., 900 Bridgeway, Suite One, Sausalito, California 94965; Asst. Clinical Prof. of Medicine, School of Medicine, Univ. of California, San Francisco. Phone: 415-332-2525.

7021. Stacy, Michelle. 1996. Can soy save your life? Michelle Stacy separates hype from hope. *Food & Wine.* Feb. p. 88-94, 96. [1 ref]
• ***Summary:*** This story is based on the study by Dr. James Anderson in the *New England Journal of Medicine* (Aug. 1995). "In its cholesterol-busting guise, soy bears an eerie resemblance to another unglamorous food: oat bran."

"A growing body of evidence suggests that it [soy] may help prevent certain cancers, slow calcium loss from bones and moderate symptoms of menopause. Many of these effects, researchers posit, are due to natural substances in soy called isoflavones, which resemble the hormone estrogen and may replicate the many protective effects of estrogen without any of its drawbacks."

But many marketers, including Ronald Paul (president of Technomics, a food-consulting firm in Chicago) believe that soy has a bad image. "It's going to be a marketing challenge to change the public's view of it. I always like to say that if you can make the kiwi a success you can make anything a success." Will companies start to promote their products by advertising on the package "Excellent source of soy!"? Another obstacle to acceptance for some people that tofu reminds them of the health-food era of the 1960s.

Photos show the following packaged soyfoods, each with a brief description: Edamame, soy sauce, soy milk, soy flour, miso, tempeh, roasted soybean powder, tofu. Contains the following recipes, each accompanied by a color photo: Grilled tofu salad. Miso-carrot dressing. Tempeh sandwiches. Chili con tofu. Miso-clam soup. Fried tofu with mushroom gravy. Miso-stuffed chicken. Silken tofu in ginger syrup. A full-page color photo shows green vegetable soybeans in and around one large pod. Small photos show most of the recipes, plus a field of soybeans, and a farmer holding a young soybean plant. Address: Author of *Consumed: Why Americans Love, Hate, and Fear Food* (Simon & Schuster).

7022. The Mail Order Catalog. Spring-summer 1996. Catalog of books and food. 1996. P.O. Box 180, Summertown, TN 38483. 24 p.
• ***Summary:*** The book section of this mail order catalog contains listings for an excellent selection of vegetarian and vegan cookbooks, plus books on food nutrition & health, alternative healthcare, women's healthcare, native Americans and their cultures, and animal rights.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), Harvest Direct vegetarian broth, and Protean, instant gluten flour (regular or flavored), seitan "chicken" or "sausage" mix, Mori-Nu silken tofu, Soja instant soy beverage, organic low-fat soymilk powder, Red Star nutritional yeast, Beano, and tempeh starter. Address: Summertown, Tennessee. Phone: 800-695-2241.

7023. White Wave, Inc. 1996. Get fresh. White Wave Silk (Ad). *Vegetarian Times.* Feb. p. 15.
• ***Summary:*** This attractive full-page color ad shows a carton of White Wave Silk (soymilk) being poured onto a blue and white bowl of breakfast cereal. The background is bluish-green. "The new 100% dairyless soy beverage. Here's a fresh idea: It's refrigerated. And it's make your cereal smile."

This ad also appeared in the March 1996 issue (p. 11) of Vegetarian Times. And in the Feb. 1996 issue of Natural Foods Merchandiser (p. 67). This was also printed on glossy cardstock as a leaflet or poster (19 x 14 cm). Address: Boulder, Colorado.

7024. Woodhams, Dave. 1996. Gag the messenger. *SIN Newsletter* (*Soy Information Network, Whangarei, New Zealand*) No. 2. p. 2-4. Feb.
• ***Summary:*** In October 1995, Dr. Mike Fitzpatrick, then of Grayson Laboratories, was forbidden to speak or write publicly in the soy debate on pain of instant dismissal from his job. He had been invited to present a paper on "The Phytoestrogen Content of Soy-based Infant Foods" at the Third International Conference on Phytoestrogens, at Little Rock, Arkansas. The types of pressure put on Dr. Fitzpatrick are discussed. "He was able to attend the conference on the condition that he did not ask questions in the open sessions or speak to the press on his return." Address: PhD., CEng, MIChemE, MIPENZ, MNZIC, 2/47 Church St., Devonport 1309, New Zealand.

7025. Wieczorek, Anna. 1996. Re: Berrivale Orchards Ltd. Letter to William Shurtleff at Soyfoods Center, March 11–in reply to inquiry. 1 p.
• ***Summary:*** "Berrivale Orchards is the largest manufacturer of fruit juice products in Australia. We are a wholly owned Australian company controlled by Fruit Packing Co-operatives, which are owned by small individual growers."

Note: A color brochure and various product description sheets notes that at the McKay plant the company also makes or packs two Soy Drink products, in 1 liter low fat and premium types. At the Sturt plant the company makes or packs three types of Soy Milk: "Milk extraction from Soya Beans–'Berri.' Pure Harvest Soy and Rice Milk. Good Life Soy Drink (Isolate UHT Soy)." Berri and Good Life Soy Drink are made from soybeans groan and harvested in Australia. Good Life is made at Berri, heart of Australia's Riverland. Good Life Soy Drinks are available in 4 varieties: UHT 1 liter combi in either premium or low fat. Chilled 1 liter PurePak in either premium or low fat. Address: Food Technologist, Technical Dep., Berrivale Orchards Ltd., P.O. Box 396 (McKay Road), Berri, SA 5343, Australia. Phone: (085) 82 1661.

7026. Rayes, Kamal. 1996. Designing and developing the CIDA soy program in Sri Lanka. New developments with Plenty Canada (Interview). *SoyaScan Notes.* March 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Kamal designed and developed the CIDA soy program in Sri Lanka. In 1983 he was sent to Sri Lanka to look at an industrial soy project and possible work with soyfoods at the grass-roots level. He designed the project with two parts: (1) An industrial part, that never took off,

because be thinks CIDA never understood what he was talking about, and (2) A grass-roots part, which did well. His grass-roots soyfoods project in Sri Lanka was the world's first. At the time INTSOY had a pilot plant in Gannoruwa with a food specialist. There was little or no soy industry in Sri Lanka at the time. Kamal designed a small soy plant ($3-4 million) but he got the richest man in Sri Lanka interested in getting involved. "He told me in about 1983 or 1984: 'If you build this plant and you give me four per years (2 people for 2 years) to show us how to manage it, I am willing to pay you back everything you put in and at the same time I will reserve (free of charge) 49% of the equity of the plant for the farmers growing and delivering the soya beans.' He was owner of the Mercantile Bank in Colombo. The whole beautiful idea never happened; it was too difficult for CIDA bureaucrats to understand. This would have been a first in the history of development." For details, call Mr. Jeyabalan in Toronto at 416-498-1394. He knows Ellen Jayawardene. He brought in Muttiah Jeyabalan to manage the Plenty Canada program. Kamal was later shifted to CIDA's program in Indonesia, but he was kept informed of developments in Sri Lanka. Then he took early retirement from CIDA. After a few years Plenty Canada started to fall apart. He thinks Larry McDermott was fired or left and there is a new board of directors. "Now they are almost folded. I think they are about to close shop." They were doing little by 1992. Kamal is a native of Egypt and is now age 64. He came to Canada 31 years ago; before that he was involved with international development at the United States. Now he is thinking of doing something with soymilk, soy yogurt, and soy ice cream in Ontario. He wonders whether the ProSoya technology in Ontario is superior to the one that INTSOY is promoting. Address: 296 Sherwood Dr., Ottawa, ONT K1Y 3W6, Canada. Phone: 613-728-2792.

7027. Demos, Steve. 1996. New developments with Silk–refrigerated fresh soymilk in a Pure Pak carton (Interview). *SoyaScan Notes.* March 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** On Monday, March 18, on the Today Show, the famous television program did a special with *Good Housekeeping* magazine on what happens if your child comes home and announces that he or she is now a vegetarian. They are interviewing the nutritionist for *Good Housekeeping* who had spread out all the products she was recommending in the basic food groups, and there with the Kraft Macaroni and Cheese was White Wave's Silk–for 90 to 120 seconds on national TV. It was unbelievable. It looked great. The product has been out 60 days and its already on national TV. "I said, 'Lift your eyes up to a bigger horizon.' I realized that I'm not really selling a beverage. Rather I'm selling a nutritional, functional complement to breakfast. That is totally different." This could be a new category. "What happens if I find a giant behemoth to dance with and I convince one of these missionaries that this is a real market opportunity out there. I can't educate them. The only people that can are the large corporations who are looking for strategic things that they believe will work. If a cereal company picked up this idea a really believed in it–amazing what we could do and how fast it could occur. I've already got the Today Show showing our product next to Kraft.

Steve just returned from the big Silk Soiree at the Natural Products Expo at Anaheim. It was a great event. One thousand people attended the dance and party. White Wave fed 1,500 people at the industry reception and ran out of food in an hour and a half. The response was extremely positive.

Steve has developed a creative way of introducing food buyers (mainly for retailer chains) to Silk–via the Silk Breakfast. The goal is to absolutely convince buyers to put this product on the shelf under White Wave's terms and conditions. He sends them breakfast by Fed Ex overnight with a blue ice pack in it. It comes in a wicker basket lined with shredded straw as is found in the bottom of Easter baskets. In that they place a Fiesta ceramic bowl, and in it a napkin, a nice spoon. On the right is an empty carton of Silk. At the front are two Tupperware containers, one containing Silk, and the other fruit. In the bowl is cereal, and the bowl is covered with a piece of wax paper with a rubber band around it. The crowning touch is a rose with a flower-water stem. The opening letter begins: "I'm so sorry I can't be there, but I'd like to treat you to breakfast... While you're enjoying the food, please read this letter. We'll call you in 2 hours." In some cases Steve would arrive while the person was just finishing the breakfast. He would say: "How was breakfast and do we have anything to talk about?" It went over very well. The key is not the gift but the creativity–when you breathe life into every aspect of a product.

One of the investigative shows on NBC-TV about 2 months ago said that of all the tofu brands they tested from the New York market, the only ones they could recommend were Nasoya and White Wave. The others had microbiological problems. White Wave pasteurizes its tofu after it is packaged–its the only way to get shelf life beyond 21 days. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

7028. Dairy Farmers of Canada. 1996. Dairy Farmers of Canada response to *Becoming Vegetarian.* Chapter: "Without Dairy Products." Montreal, Canada: Dairy Bureau of Canada. 45 p. March. Undated. No index. 29 cm. [20 ref]

• ***Summary:*** This is a negative critique by Canada's dairy industry of this popular vegan cookbook written by three registered dietitians: Vesanto Melina, Brenda Davis, and Victoria Harrison. Contents: Introduction. 1. Cows and dairy farming. 2. Milk and milk products. 3. Osteoporosis. 4. Calcium. 5. Vitamin D. 6. Riboflavin. 7. The menus. Finally.

Letter from Dairy Farmers of Canada. 1996. Sept. This critique was published in March 1996. Address: 1981 McGill

College Ave., Suite 1330, Montreal, QUE H3A 2X9, Canada. Phone: (514) 284-0449.

7029. **Product Name:** Rice Magic (Non-Dairy Rice Beverage) [Vanilla].
Manufacturer's Name: First Light Foods, Inc. (Distributor).
Manufacturer's Address: 60 East Elm St., Chicago, Illinois 60611. Phone: 1-800-555-4332.
Date of Introduction: 1996. March.
Ingredients: Filtered water, brown rice, expeller pressed canola oil, natural vanilla with other natural flavors, tricalcium phosphate, *Lactobacillus acidophilus* and *L. bifidus* cultured product added, guar gum, xanthan gum, carrageenan, locust bean gum, sea salt, vitamin A palmitate, vitamin D-2.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retails for $1.39.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Product with Label purchased at Open Sesame in Lafayette, California. 1995. April 13. Reclosable cap. The name of the product is in light blue and white, set against a dark blue sky with white stars and a crescent moon. On the bottom half of the front panel some of the white milk is splashing up from corn flakes and blueberries, with a trail of stars connecting the milk and the moon. On the back panel, against the same dark sky, is written, "It just tastes better!!" A side panel states: "Lactose free. No cholesterol. Calcium added. Vitamins A & D. No saturated fat. *Lactobacillus acidophilus* and *L. bifidus* cultured product added.

Call to toll-free number on package. 1996. July 3. This product was apparently developed and is marketed by the same company (J&G Inc.) that developed Soy-Um soymilk.

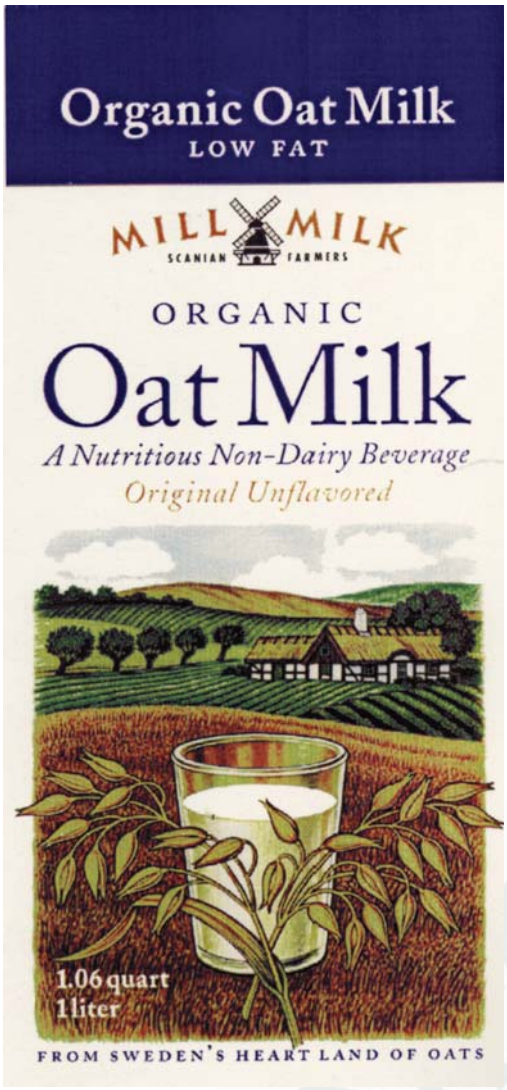
7030. **Product Name:** Imagine Pudding Snacks [Chocolate, Lemon, Banana, Butterscotch].
Manufacturer's Name: Imagine Foods, Inc. (Marketer-Distributor). Rice milk made by California Natural Products, Manteca, Calif.
Manufacturer's Address: 299 California Ave. #305, Palo Alto, CA 94306. Phone: 415-327-1444.
Date of Introduction: 1996. March.
Ingredients: Lemon: Filtered water, partially polished brown rice syrup, rice starch, expeller pressed oleic safflower oil, lemon juice, natural lemon flavor, carrageenan, tricalcium phosphate, sea salt, colored with turmeric.
Wt/Vol., Packaging, Price: Four x 4 oz plastic cups, two atop two, in a paperboard sleeve. Retails for $1.49 (6/96, Concord, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 1 cup = 113 gm.: Calories 150, calories from fat 30, total fat 3 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 50 mg (2%), total carbohydrate 33 gm (dietary fiber 1 gm [5%], sugars 19 gm), protein 1 gm. Vitamin A 2%, vitamin C 2%, calcium 10%, iron 2%, vitamin E 6%, phosphorus 6%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Ad (8½ by 11 inch, color) in Natural Foods Merchandiser. 1996. March. p. 15. "Imagine the perfect chocolate pudding." It would be deliciously rich, naturally creamy, sensibly low fat and surprisingly dairy free. The perfect pudding would be ready to eat anytime, anywhere. Imagine Natural Pudding Snacks–now a reality in four delectable flavors where natural foods are sold." A color illustration shows a large spoon topped with a swirl of chocolate pudding. A color photo shows the 4 products/flavors.

Spot (color) in NFM's New Product Review. 1996. Spring (April). p. 1. Imagine Foods introduces all-natural puddings which are creamy, low in fat, and dairy free. This product is packaged in an aseptic cup, which is pretty standard for the many types of puddings in the USA. Ad (full-page, color) in Vegetarian Times. 1996. June. p. 5. "Imagine. Imagine the perfect chocolate pudding."

Product with Label purchased at Trader Joe's in Concord, California. 1996. June 14. The 4 Aseptic cups wrapped in the paperboard sleeve are 5.25 by 2.75 by 2.25 inches. Lemon yellow, blue, and light purple on white. Illustrations of whole and sliced lemons. "Low fat & non-dairy."

Visit to Trader Joe's in Concord, California. 1997. Sept. 21. They no longer carry this product. Talk with Imagine Foods' Customer Service. 1997. Sept. 22. This product is still on the market in all 4 flavors. Trader Joe's keeps its prices down by picking up all products at the Imagine Foods warehouse, then warehousing all TJ products, thus serving as their own distributor.

7031. **Product Name:** Mill Milk Organic Oat Milk.
Manufacturer's Name: Nordic Farmers, Inc. (Importer-Marketer). Made in Sweden.
Manufacturer's Address: 4848 South Highland Dr., Suite 211, Salt Lake City, Utah 84117. Phone: 801-272-9759.
Date of Introduction: 1996. March.
Ingredients: Artesian spring water, organically grown oats, canola oil.
Wt/Vol., Packaging, Price: 1 liter aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Portfolio sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 1996. March. Contains 8 leaflets describing the product and its development. The product was first successfully introduced in the United Kingdom in the fall of 1995 by the Swedish trading company named Scanian. Development of Oat Milk began over 7 years ago when Swedish farmers, scientists, food producers and packaging companies formed a cooperative venture called Skanska



Lantmannen Group (SLG). Nordic Farmers, founded by Siri Sant Khalsa, founder of CBB Brokerage, is an international trading firm with exclusive rights to sell and distribute the product. In Sweden ecological quality is regulated by KRAV.

Note 1. This product was introduced at this Expo with T-shirts; it tasted good.

Note 2. This is the earliest known commercial oat milk product.

7032. O'Connor, Amy. 1996. BGH linked to cancer in humans. *Vegetarian Times.* March. p. 18.
• ***Summary:*** This study by Samuel Epstein, M.D., was published in the winter issue of the *International Journal of Health Services.* He is professor of environmental toxicology at the University of Illinois-Chicago.

7033. **Product Name:** SoBe (Soy Protein Infused Fruit Drinks) [Berry, Citrus, Peach].
Manufacturer's Name: South Beach Beverage Co.
Manufacturer's Address: Norwalk, Connecticut.
Date of Introduction: 1996. March.
How Stored: Refrigerated.
New Product–Documentation: Dwyer, Steve. 1999. "Shooting from the 'hip.'" Prepared Foods. Oct. John Bello and Norm Snyder are the founders of South Beach Beverage Co. in Norwalk, Connecticut. They started out with "me-too" tea and juice varieties. Then in March 1996 they retooled their brand. Sales jumped from $13 million in 1997 to $67 million in fiscal 1998. "Consumers buy SoBe because it tastes great, provides a nutraceutical benefit and has a hip image."

Spot in Vidette Times. 1999. Nov. 3. "SoBe Soy Essentials Drinks. 14 oz for $1.49. They are sweetened with pure natural cane sugar and come in three flavors: berry, citrus, and peach." A small photo appears to show bottles of the 3 flavors.

7034. *SoyaCow Newsletter* (*Ottawa, Canada*). 1996. Non-profit company to serve NGOs [Frank Daller]. 5(1):1. Jan/March.
• ***Summary:*** "Frank Daller is leaving ProSoya to form a not-for-profit company to serve NGOs [non-governmental organizations], charities, and other institutions' needs for low cost soyfood equipment.

"During the 2½ years of his presidency, Frank helped take ProSoya from a basement research company to a two million dollar a year business, He is the architect of a multi-million dollar sales contract with the Russian Soybean Processors' Association, ASSOY, and the link with SSP, India. Among his many other achievements, he was instrumental in nurturing Pacific ProSoya's deal, and discovering Agriculture Canada's GRTGG (Getting Ready to Go Global) support.

"Brian Harrigan, the Executive Vice-President of ProSoya, will assume Frank's executive responsibilities."

A portrait photo shows Frank Daller.

7035. *SoyaScan Notes.* 1996. A simple prediction for the future of soybeans, isoflavones, and genistein (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1. Soy isoflavones and genistein will soon be available commercially in America. They will probably not be sold in a concentrated form, as supplements, because of the legal risk the manufacturer would face if someone overdosed. Therefore they will probably be sold as a food ingredient, to be added in carefully calculated doses to popular healthy foods such as tofu, soymilk, or soy yogurt–as well as similar non-soy foods. The amount of total isoflavones and of genistein will appear on the package, along with some mention of their protective effects.

2. Within 5-10 years there will be an RDA for the most important phytochemicals (including soy isoflavones or genistein), just as there are today for vitamins and minerals. 3. This will expand the focus of the RDAs from preventing

nutritional deficiencies to preventing disease and promoting good health. 4. The next step in the evolution of the RDA will be to find the optimum doses of certain vitamins and perhaps phytochemicals for promoting good health.

7036. *SoyaScan Notes.* 1996. Interesting new developments at the Natural Products Expo West (Anaheim, California, March 15) (Overview). March. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The big development was the introduction of two refrigerated, extended shelf life (ESL), gable-top, regional soymilk products. One was Silk, by White Wave, and the other was by Nancy Potter.

Kushi Macrobiotic Corp. is in the process of changing its name to Kushi Natural Foods Corp.

An aseptically packed non-dairy beverage named "Organic Oat Milk" was also introduced (with T-shirts) from Sweden. It tasted good. The U.S. distributor is Nordic Farmers, 4848 South Highland Dr., Suite 211, Salt Lake City, Utah 84117. Phone: 801-272-9759. But as of May 17 they have not yet gotten any product in stock.

Michael Potter was conspicuous by his presence at the show. He had a physical problem (perhaps some type of palsy–not a stroke; one half of his face froze up and it was very noticeable), but it has since gotten much better, though there is some lingering effect. When he was in jail, he had an altercation with someone and his head was smashed against a desk; at the time it injured one of his eyes, which has never been quite the same again. He swiped a shuttle van and was soon in handcuffs. Several weeks after the show, during the week of April 4-8, Michael was in San Francisco (where his son Ki lives) talking with his Japanese partners in American Soy Products (ASP) about investing more money in the company to expand the size of the soymilk plant in Michigan; the plant is apparently running at near full capacity.

7037. Soyfoods Association of America, Standards Committee. 1996. Voluntary standards for the composition and labeling of soymilk in the United States. Accepted by the Soyfoods Association of America, March 1996. Bar Harbor, Maine. 15 p. Unpublished manuscript. 28 cm. [22 footnotes]
• ***Summary:*** Contents: Purpose of voluntary standards. History and terminology: History, existing standards in other countries, terminology. Definition and classification of soymilk products: Soymilk definition, soymilk classification (soymilk, soymilk drink, soymilk powder, soymilk concentrate). Labeling of soymilk products: General, modifiers to the statement of identity, use date labeling, refrigeration information labeling. Microbiological guidelines for soymilk. Standards Committee; Adoption and amendment of standards.

A table (fig. 1, p. 5) titled "Soymilk standards for various countries," lists minimum protein, fat, and soybean solids requirements for various soymilk products. In the following, the minimum protein content is given for various products: Japan (soymilk 3.8%, blended soymilk 3.0%, soymilk beverage 1.8%, soy protein beverage 1.8%), Taiwan (soymilk 2.6%, formulated soymilk 2.0%, soy drink 1.4%), Singapore (soymilk 2.0%, soy drink >2.0%), France (soymilk {tonyu} >3.6%, fortified soymilk {extra tonyu} >3.8%), and Thailand (soymilk 2.0%). Fat content ranges from 0.5% in Taiwan to >1.5% in France; it is not specified in Japan or Singapore.

A table (fig. 2, p. 11) titled "Soymilk composition," defines four different types of soymilk in the USA. The three numbers after each are for minimum percentages of soy protein, soy oil (fat), and total solids: Soymilk 3.0, 1.0, 7.0. Soymilk drink 1.5–2.9, 0.5, 3.9. Soymilk powder 38.0, 13.0, 90.0. Soymilk concentrate 6.0, 2.0, 14.0.

Note 1. These standards, which are very similar to the last draft, were accepted by the Soyfoods Association of America in March 1996. A note on page 2 of a final draft circulated in April 1997 states that the Soyfoods Association was formed in 1989; it was actually established in July 1978.

Note 2. In a letter dated 27 June 1996, Peter Golbitz, Standards Committee Chair, notes that the Soyfoods Association of America "is filing a formal 'Citizen's Petition' for a common and usual name for 'soymilk.' Along with this petition, we will be submitting a copy of our standards. We need to have copies of all documents cited in our standards when we make this filing." He asks that Shurtleff send copies of 10 hard-to-find documents located in the Soyfoods Center library. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207/288-4969.

7038. **Product Name:** WestSoy Lite: Non Dairy Soy Beverage [Plain, Vanilla, or Cocoa].
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor). Subsidiary of Vestro Natural Foods.
Manufacturer's Address: 5701 South Eastern Ave. Suite 330, Commerce, CA 90040. Phone: 213-722-9817.
Date of Introduction: 1996. March.
Ingredients: Filtered water, organic soy beverage* (filtered water, organic soybeans*), brown rice syrup, sea salt. * = Organically grown and processed in accordance with the California Foods Act of 1990.
Wt/Vol., Packaging, Price: 64 fluid oz (1.89 liter) Combibloc Aseptic carton. Retails for $1.99 (1997/12, Concord, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 1 cup (8 fl oz = 240 ml): Calories 100, calories from fat 20, total fat 2 gm (2% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 120 mg (5%), total carbohydrate 15 gm (dietary fiber 0 gm, sugars 11 gm), protein 3 gm. Vitamin A 0%, calcium 2%, vitamin C 0%, iron 2%. Percent daily values are based on a 2,000 calorie diet.

New Product–Documentation: Note: This is the first U.S. soymilk product seen sold in a half gallon carton. Talk with Richard Rose. 1996. April. Westbrae introduced a half gallon soymilk at Anaheim. Richard thinks that Pacific Foods no longer makes any soymilk for Westbrae; it may now be made in several places, including perhaps by Parmalat in Michigan. This product is sold in a half-gallon Combibloc carton. Tetra Brik does not have a 64-ounce low acid capacity in the USA.

Product with Label (Plain) purchased from Trader Joe's in Concord, California. 1996. Nov. Retails for $1.99. 6.5 inches. Orange, blue, red, and black on white. Close-up photo of milk being poured from the front of a pitcher into a glass. "New Pour 'n Seal! 1% fat. 50% less fat than Original WestSoy. Lactose Free. A cholesterol-free food."

7039. White Wave Inc. 1996. Join us in Anaheim for the Silk Soirée–A Silk & milk celebration. Boulder, Colorado. 4 panels. 13 x 18 cm.

• ***Summary:*** This is an attractive invitation, blue, black, white, and green, to "A dance party, presented by White Wave & Stonyfield Farms.

The inside panel reads: "Join us for a Silk & milk celebration. 8:00 PM–Midnight. Friday, March 15, 1996. Natural Products Expo West. Join us in Marriott Hall and dance 'til the cows come home. Come dance with us if you dairy–or don't! Sponsored by the folks at Stonyfield Farm (Udderly natural yogurt; Profits for the planet) & White Wave (Vegetarian cuisine)."

On the back panel is printed: "A TofuTown production." Address: 1990 North 57th Court, Boulder, Colorado 80301.

7040. White Wave, Inc. 1996. White Wave's mission statement and company overview (Leaflet). Boulder, Colorado. 1 p. Single sided. 28 cm.

• ***Summary:*** White Wave's mission is to creatively lead the full integration of healthy, natural, vegetarian foods into the average American diet.

"'Our interest is in promoting the use of foods we consider the world better off with, rather than without.' Steve Demos, president of White Wave.

White Wave company overview:

"Founded in 1977 as a tofu company by President Steve Demos, White Wave, Inc. has grown to become one of the largest soyfoods manufacturers in the United States and a leader in the vegetarian foods industry. White Wave's reputation for quality, consistency and innovation has led its sales to grow 20% annually over the last six years. This success has positioned Demos as an award-winning 'entrepreneur' and White Wave as an award-winning small business.

"With its $1.5 million expansion in 1994, White Wave currently has the capacity to produce 2,000 pounds of tofu per working hour every day. That's one-quarter million pounds per week, and thirteen million pounds per year.

"Over the last few years, White Wave has gone 'Beyond Tofu' (TM) and taken a leadership position in the development of the vegetarian cuisine market with the introduction of its new Vegetarian Cuisine Centers (TM), located in supermarkets and natural food stores across the country. Not only do The Centers showcase White Wave's ever-growing product line, but they offer an easy way for shoppers to learn more about their vegetarian eating and cooking options.

"White Wave's introduction of Silk (TM) as the first nationally distributed, refrigerated soy beverage illustrates White Wave's further commitment to expanding its line with truly innovative products. The recent introduction of a new line of three vegetarian burgers–White Wave Prime Burger, Chick'n Burger, and re-introduction of the classic Veggie Life Burger, along with the 1995 acquisition of 'Meat of Wheat' line of seitan products from Ivy Foods of Salt Lake City, Utah, are the company's latest, successful moves to increase it's market share in the meat alternatives category.

"White Wave produces tofu, tempeh, seitan, soy beverages, and a wide variety of easy to prepare meat and dairy replacement foods, including White Wave Silk, Meatless Jumbo Franks, Tempeh Burgers, Vegetarian Fajita Strips, Traditionally Seasoned Seitan, Vegetarian Sloppy Joe, Soy A Melt soy cheeses, and Dairyless soy yogurts. The primary ingredient for White Wave's tofu and tempeh products is soybeans. The company uses approximately 2 million pounds of soybeans per year.

"The majority of White Wave products are cholesterol-free and lactose-free, as well as certified Kosher-Parve by Star K. White Wave is dedicated to producing wholesome, natural foods without artificial ingredients, preservatives or additives.

"Employing over 65 people, White Wave's two Boulder, Colorado plants manufacture foods for distribution in the refrigerated and frozen sections of natural food stores and supermarkets throughout North America." Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

7041. White Wave, Inc. 1996. White Wave products–as of

3/96: Featured in White Wave Vegetarian Cuisine Centers (Leaflet). Boulder, Colorado. 1 p. Single sided. 28 cm. March.

• ***Summary:*** Leaflet (8½ by 11 inch, printed black on blue) sent by Patricia Smith from Natural Products Expo West. 1996. March. Lists all of White Wave's products, grouped by category, as of March 1996.

Tofu (reduced fat, hard style, soft style).

Baked tofu: "Snack'n Savory Tofu (TM)" and a line of International Baked Tofu: "Oriental-style, Italian-Style, Thai-Style, and Mexican Style."

"Tempeh: Original Soy Tempeh, Soy Rice Tempeh, Five Grain Tempeh, Wild Rice Tempeh, Sea Veggie Tempeh.

"Veggie Burgers: Prime Burger, Chick'n Burger, Veggie Life Burger, Tempeh Burger, Teriyaki Tempeh Burger, Lemon Broil Tempeh.

"Dairyless (TM) Soy Yogurt: Raspberry, Key Lime, Strawberry, Lemon, Blueberry, Banana Strawberry, Peach, Vanilla, Lemon-Kiwi, Apricot-Mango, Organic Plain in 6 oz. and Quarts.

"Dairyless Soy Beverage: White Wave *Silk.*

"Sandwich Slices: Turkey-Style Sandwich Slices, Chicken-Style Sandwich Slices, Roast Beef-Style Sandwich Slices, Bologna-Style Sandwich Slices, Pastrami-Style Sandwich Slices.

"Meat Substitutes: Meatless Veggie Franks, Meatless Jumbo Franks, Meatless Veggie Links.

"Seitan: Traditionally Seasoned Seitan, Vegetarian Fajita Strips, Vegetarian Philly Steak Slices, "Meat of Wheat" (TM) Chicken Style Wheat Meat, Meat of Wheat Grilled Burgers Wheat Meat, Meat of Wheat Sausage Style Wheat Meat, Meat of Wheat Beyond Chicken Patties, Meat of Wheat Beyond Turkey, Meat of Wheat Beyond Roast Beef.

"Heat & Serve: Vegetarian Sloppy Joe.

Soy A Melt Soy Cheese: Cheddar Style Soy A Melt, Fat Free Cheddar Style Soy A Melt, Mozzarella Style Soy A Melt, Fat Free Mozzarella Style Soy A Melt, Garlic Herb Style Soy A Melt, Monterey Jack Style Soy A Melt."

Note 1. A new, very similar list was issued in June 1996. "Chicken-style Seitan" had been added, and 3 Meat of Wheat products and one flavor of Soy A Melt (Monterey Jack) had been discontinued.

Note 2. A new, less similar list was issued in Sept. 1998– after sales of Silk soymilk were skyrocketing. The following had been discontinued:

"Veggie Burgers: Prime Burger, Chick'n Burger, Veggie Life Burger, Teriyaki Tempeh Burger.

"Sandwich Slices: Roast Beef-Style Sandwich Slices, Bologna-Style Sandwich Slices.

"Meat Substitutes (all): Meatless Veggie Franks, Meatless Jumbo Franks, Meatless Veggie Links.

"Seitan: All 6 Wheat of Meat products were discontinued but Vegetarian Sloppy Joe had been moved in from the "Heat & Serve" category (which then disappeared).

Four types of tofu were added: Extra Firm Style, Tidal Wave (firm), Hard Water Pack, Hard Vacuum Pack. Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

7042. Montanaro, Pamela. 1996. Attending the First National Soybean Workshop in Cuba (Interview). *SoyaScan Notes.* April 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Pam Montanaro, Coordinator of the Cuba Campaign Department of Global Exchange, just returned from 2 weeks in Cuba. She led an alternative medicine group during the first week. While there, she attended the First National Soybean Workshop (*Primer Taller Nacional Soya*), 2-day meeting held on 11-12 April 1996 at the Food Research Institute outside Havana. It was attended by about 200 Cubans, and many important Cubans were there, including Jesu Montané Oropesa, a top advisor to Fidel Castro, and Vilma Espín, head of the Federation of Cuban Women (*Federation de Mujeres Cubanos, FMC*). One of the founders of the Cuban revolution in the 1950s, she is married to Raul Castro (Fidel's brother), is a chemist or biochemist, speaks good English, and has been involved with popularizing soybeans and soyfoods in Cuba for many years. In the early 1960s Vilma organized a Cuban group named "Friends of the Soybean."

The afternoon sessions on the first day were divided into two parts: Soybean production, and soybean utilization. The first was open to everyone, the second was restricted to speakers only, because of Cuba's proprietary soymilk and soy yogurt technology. Dr. Gilberto Fleites, a top Cuban cancer surgeon who is also a vegetarian, gave a presentation to both sessions on soy, diet and health, with an excellent slide show that he has developed; he answered many questions and received many requests for talk to other organizations.

The conference was attended by representatives from both agriculture and food processing from every Cuban province. The food representatives brought samples of their best soy yogurt and soy cream cheese. At the conference there was a contest to see which organization had the best soy yogurt. Las Tunas won, with a special award going to a factory in Havana. In all, the conference was very up-beat. Video- and audio tapes were made of most of the sessions, and the proceedings are expected to be available in Spanish. Pam has a Spanish language conference agenda.

At the conference, Pam learned that two other foreign groups are apparently involved with growing soybeans in Cuba. Vilma Espín's women's group (FMC) has a project very similar to Global Exchange's funded by Oxfam Canada and now underway in the easternmost province of Cuba, Santiago de Cuba (near Guantanamo Bay, the U.S. naval base). The project is getting its seeds from INIFAT, but there seems to be poor communication between INIFAT and this

project, to the extent that Pam wondered if a rivalry might have developed between them. Oxfam Canada first began work in Cuba in Jan. 1995 and Pam helped to interest them in work with soy. Canadians Minor Sinclair and Sheila Katz are now involved with this soy project. A second Cuban group is also working on this project, the National Association for Small-Scale Agriculture (*Association Nacional de Agricultura Pequena, ANAP*). They just had their first harvest and got a good yield of about 2 tons of seed per acre. Minor (who now lives in Havana with his wife, Martha Thomson) in writing up a report on the project for Pam. Pam's combine has not yet arrived in Cuba.

An Italian NGO (non-governmental organization), which is part of the European Union, is said to be trying to do another soy project, and has offered to invest $1 million in the project.

During 1996, nationwide, Cuba hopes to grow between 6,700 ha and 8,040 ha of soybeans (500 to 600 caberillas; 1 caberilla = 13.4 ha). If all goes well, this area would provide them with about 15,000 metric tons of soybeans–enough for all their food needs but only about 10% of their total needs including vegetable oil and livestock feed.

Only two foreigners attended the soy conference–Pam and a man from Mexico. Pam heard that Cuba has signed a contract to export its soymilk manufacturing technology to an organization in Semaya, Mexico. This would be Cuba's first known export of such technology. Last year Cubans did a lot of traveling throughout Latin America looking for customers.

Tito Nuñez's vegetarian restaurant in the Botanical Garden, next to a Japanese garden, is just lovely and becoming very popular. The food is organically grown and presented in a beautiful way. Address: Coordinator of Soy Cubano! Company, Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St. #303C, San Francisco, California 94110. Phone: 415-255-7296 or 415-558-8682.

7043. Roller, Ron. 1996. Update on the soymilk industry and market in the USA (Interview). *SoyaScan Notes.* April 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In October 1993 Ron estimated (based on a lot of reliable information he had collected) that the size of the soymilk market in the USA and Canada was 9.8 million gallons, up from 8.1 million gallons in 1992. Now he would estimate (without a lot of reliable facts) that this market is about 15 million gallons. Since Dr. James Anderson's article appeared in the *New England Journal of Medicine* on 3 August 1995, and especially during the last 6 months, the soymilk market has expanded rapidly, almost exponentially. Many new consumers have started to drink soymilk, largely for its health benefits. Because of this significant expansion in the customer base, more soymilk is being sold in supermarkets. Ron estimates that about 15% of Edensoy is sold in supermarkets. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

7044. Roller, Ron. 1996. Soymilk in extended shelf life (ESL) gable-top cartons (Interview). *SoyaScan Notes.* April 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron looked at the Tetra Rex ESL program several years ago and discussed the new packaging technology in a SoyaScan interview on 4 Sept. 1993.

Two companies introduced America's first soymilk products in an ESL gable-top carton at the Natural Products Expo at Anaheim in March 1996. White Wave launched Silk, and Nancy Potter, the sister of Michael Potter (founder and CEO of Eden Foods) introduced Healthy Harvest. So Nancy is now in competition with her brother. Ron does not know who makes Nancy's soymilk.

Packaging products in ESL cartons is very expensive, and there are not many ESL machines in the USA. ESL is a technology midway between that of aseptic Tetra Brik packaging and the traditional Pure-Pak gable-top cartons. First ESL involves a UHT (ultra-high temperature) process. Second, the packaging blanks are much more sophisticated than traditional Pure-Pak blanks because they contain a foil layer and they are sterilized with hydrogen peroxide; Ron has heard a rumor that they are irradiated. Finally, ESL has a head space whereas Tetra Brik does not.

Though ESL soymilk is often called a "fresh" product, that would be stretching the meaning of the word "fresh." ESL soymilk made and sold regionally is a threat to aseptically packed soymilk. It involves a different distribution system–one which uses refrigeration. Eden Foods does not sell any refrigerated products, so it would be difficult for Eden to get into ESL. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

7045. *SoyaScan Notes.* 1996. The fixed exchange rate between the Hong Kong dollar and the U.S. dollar. Outlook for Hong Kong after 1997 (Overview). April 16. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** According to the Hong Kong Economic and Trade Office in San Francisco, California, in 1983 the government of Hong Kong established a fixed exchange rate of 7.8 Hong Kong dollars = 1 U.S. dollar. This has not changed since 1983, and is not expected to change. Thus companies such as Vitasoy, which import soymilk from Hong Kong to the USA, have not seen the price of their product rise with the steady devaluation of the dollar against most foreign currencies.

In 1997 Hong Kong will lose its status as a British colony. For at least 5-10 years thereafter, the economic situation in Hong Kong is expected to be stable and bright. The fact that so many Hong Kong citizens recently applied for British passports is of no special significance. They did

so mostly for its convenience as a travel document.

7046. Ali, Nawab. 1996. Indian soybean industry-recent trends and development. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 78-82. [10 ref]
• ***Summary:*** Content: Abstract. Introduction. Processing of soybean. Food industry. Livestock feed. Industrial applications. R&D efforts and entrepreneurship development. Product promotion and policy issues.

During 1993-94 soybean production in India was 3.9 million tonnes [metric tons]; it is expected to be over 4 million tonnes in 1995-96. There are now in India 154 soybean solvent extraction plants (with a total installed capacity of 13.5 million tonnes of soybeans per year), 60 soyfood manufacturing units, 30 companies dealing with soy-related equipment, and 15 organizations and agencies involved in soybean trade. "Soyproducts" such as oil and protein foods have entered the market and been accepted because of the health and economic benefits. The demand for soyproducts is increasing and this makes the future of the soybean industry in India look bright.

In India the soybean has added US$ 500 million a year to the nation's foreign exchange, and it has increased the supply of edible oils by 0.6 million tonnes per year. In addition, it has brought prosperity to soybean farmers. Today, the soybean is India's 3rd most important oilseed crop after groundnuts and rape / mustard, contributing 18% to the total oilseed production of 22 million tonnes. India is now almost self-reliant in edible oil and soybean has played a significant role in this important development.

Tables: (1) Traditional and non-traditional soyproducts in India. (2) State by state soybean oil extraction plants in India and their installed capacity. (3) Type, number, and installed capacity of Indian soyfoods manufacturing units (1995), in descending order of the number of units. 20 units make texturised soy protein / flour, TSP (soynuggets); Installed capacity 120,000 tonnes / year. 10 units make soymilk; capacity 500 tonnes / year. 6 units make Soypaneer (tofu); capacity 1,000 tonnes / year. 5 units make soyflour, flakes, and grits; capacity 20,000 tonnes / year. 5 units make soy-fortified baked products; capacity 1,000 tonnes / year. 5 units make soylecithin; capacity 2,000 tonnes / year–etc. Address: Project Director, Soybean Processing & Utilization Centre, Central Inst. of Agricultural Engineering, Nabi Bagh, Berasia Road, Bhopal–462 038, India.

7047. *Bluebook Update* (*Bar Harbor, Maine*). 1996. Daller resigns from ProSoya. 3(2):3. April/June.
• ***Summary:*** "Frank Daller, president of ProSoya Inc. in Ontario, Canada, is resigning to develop a non-profit corporation dedicated to distributing soyfood technology to developing countries and humanitarian applications." Mr. Daller will continue as a partner and director of ProSoya; Raj Gupta. ProSoya's founder, will assume the role of president.

7048. Buchanan, Alex. ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. Illust. No index. 30 cm. [Eng]
• ***Summary:*** The first international conference of this type was held in Jilin, China, in 1990. Contents: Foreword, by Dr. Saipin Maneepun, Chairman, Scientific Committee. Scientific committee (13 members plus 2 secretaries). Executive summary, by Alastair Hicks. Keynote address. Part I: Crop technology related to processing (2 plenary papers, 2 regular papers, and 13 poster sessions). Part II: Post-production systems (1 plenary paper, 4 regular papers, and 2 poster sessions). Part III: Food processing technology (1 plenary paper, 7 regular papers, and 21 poster sessions). Part IV: Food science and nutrition (1 plenary papers, 5 regular papers, and 7 poster sessions). Part V: Tempe (6 regular papers, and 1 poster session). Part VI: Feed technology (2 plenary papers, and 7 regular papers). Part VII: Marketing technology (1 plenary paper, and 2 regular papers). Part VIII: Industrial technology (1 plenary paper, 4 regular papers, and 5 poster sessions).

This conference was organized by the Department of Agricultural Extension, Ministry of Agriculture and Cooperatives, Thailand. In collaboration with Institute of Food Research and Product Development, Kasetsart Univ., Thailand. Supported by FAO, American Soybean Association, and United Soybean Board.

On the rear cover, below a logo of an orange soybean superimposed on a globe inside a yellow square, is written: "Soybeans and soyfoods: Green, clean and healthy." Address: Bangkok, Thailand.

7049. Ediriweera, Nandanie D. 1996. Effect of calcium salts in minimising beany flavour in soymilk. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Address: Ceylon Inst. of Scientific and Industrial Research, 363 Bauddhaloka Mawatha, Colombo 7, Sri Lanka.

7050. Golbitz, Peter. 1996. New soymilk creates a stir: Silk set to smooth U.S. market. *Bluebook Update* (*Bar Harbor,*

Maine) 3(2):1, 7. April/June.
• ***Summary:*** Soyatech, Inc. estimates that the U.S. soymilk market is worth $130 million a year, and that 95% of the volume is sold in aseptic packaging which requires no refrigeration. Now White Wave Inc., of Boulder, Colorado, developer and marketer of Silk, believes the market is ready for soymilk that is packaged and sold refrigerated like regular milk. Steve Demos, founder and president of White Wave, expects one out of ten soymilk consumers to buy Silk, which retails for $1.99 to $2.49 per quart, and $3.99 to $4.79 per half gallon. A photo shows quart and half-gallon cartons of Silk.

7051. Goulart, Frances Sheridan. 1996. Oh, soy! *Fit* (*New York*). March/April. p. 77-79.
• ***Summary:*** On the section titled "A nutritional wonder," the authors notes that soymilk has 15 times more iron than dairy milk, 50% less fat, and no cholesterol. Tofu is one of the two best sources of calcium (yogurt is the other) recommended by the Osteoporosis Foundation for meeting adult calcium needs (1,000 mg/daily). One 4-oz. serving of tofu provides twice as much calcium as one cup of plain yogurt. Soybeans provide the antioxidant vitamins A and E.

A sidebar titled "Your soy shopping list" gives brief definitions of tofu, tempeh, miso, natto, soy milk, soy cheese, soy sauce, and textured vegetable protein (TVP). Address: Connecticut.

• ***Summary:*** Cooked, dehulled soybeans were inoculated with both *Rhizopus oligosporus* and with *Propionibacterium shermanii* then incubated to make a "high vitamin B-12 tempeh (HVT)."

Vitamin B-12 is produced only by microorganisms. *Propionibacterium shermanii* is widely used in large-scale production of vitamin B-12 (Florent and Ninet, 1979). Krusong et al. (1991) reported that non-sequential mixed fermentation of *Rhizopus oligosporus* and *Propionibacterium shermanii* was able to produce vitamin B-12 in tempeh, called high vitamin B-12 tempeh (HVT); this tempeh contained 10 times as much vitamin B-12 per gram as the original soybeans.

In this article, the HVT tempeh was used to prepare HVT soymilk, and "lactic soydrink" was prepared from the HVT soymilk using a mixed culture of appropriate lactic cultures, a mixed culture of *Lactobacillus bulgaricus* and *Streptococcus thermophilus* at 5% concentration. No sucrose was added to the HVT soymilk during its lactic acid fermentation. It was fermented for 16 hours to attain the highest acid production. Address: 1. • ***Summary:*** Contents: Abstract. Introduction. Using full-fat soyflour (FFSF) in formulated soyfoods: Traditional full-fat soyflour production, processing technology for full-fat soyflour production, baby food products (and conclusions of a metabolic study), cookies, concentrated soymilk, formulated cereal-soy snackfoods (made by an extrusion cooker), soynoodles (using 10% FFSF with wheat flour). Using defatted soy flour (DSF), soy concentrates and isolates. Development of tempeh flour as a food ingredient. Conclusion.

Tables show: (1) Protein content and protein score in various cereal-soy combinations (wheat, corn, or rice unfortified or fortified with soy). (2) Ingredients for six high-protein snacks. (3) Proximate analysis of these 6 high protein snacks. (4) Nutritional evaluation of 8 high protein snacks. (5) Composition of four commercial formulated soyfoods (supplementary baby food, cookie, concentrated soymilk, soynoodle). Address: Director, Inst. of Food Research and Product Development, Kasetsart Univ., P.O. Box 1043, Bangkok 10903, Thailand.

7058. Nakajima, Mitsutoshi; Snape, Jonathan B.; Reddy, K. Kondal; Nabetani, Hiroshi. 1996. Application of membrane technology to soybean processing. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 508-14. [15 ref]
• ***Summary:*** The various types of membrane technology include ultrafiltration (UF), microfiltration (MF), nanofiltration (NF), electrodialysis (ED), and reverse osmosis (RO).

Contents: Abstract. Introduction. Soybean oil processing: Solvent recovery (by reverse osmosis), degumming (UF membranes can be used to remove phospholipids from soybean oil in hexane), lipid separations (separation of tri-, di-, and mono-glycerides and fatty acids from soybean oil by membrane technology), removal of contaminants (such as nickel catalysts from hydrogenated oils), removal of pigments (pigments in soybean oils include chlorophyll, carotenoids, xanthophyll, and their derivatives; use of expensive bleaching earth might be eliminated), wastewater treatment (a typical soybean oil extraction plant {1000 tonnes/day} generates 1,000 cubic meters of waste water each day; each liter contains 100 mg of suspended solids). Soybean protein processing and Beta-amylase production: Soybean saccharides processing, soysauce and other seasonings production. Conclusions.

Membrane technology has been widely accepted in many separation processes, including bioseparation. Although only a few industrial membrane processes have been installed for soybean processing, membrane technology has many potential applications in this broad field. One of the main advantages of membrane technology over conventional processing operations is that much lower temperatures can be used. This leads to large saving in energy costs associated with heating, and minimizes the thermal damage to heat-sensitive soybean components. Figure 1 shows how soybean oil might be processed using MF, UF, NF and RO purification near the beginning of the process, and nitrogen with gas separation membrane between the "refined soybean oil" and "packed oil" stages.

Ultrafiltration can be used to remove low molecular substances such as phytic acid. "When soy milk was processed by UF diafiltration, 86% of the oligosaccharides were removed," and the soymilk quality was improved because off-flavors were reduced (Asahi Kogyo Group, 1987). The Kibon [Kibun] Group (1987) has used UF to concentrate soymilk. Soybean has high Beta-amylase activity, and soybean whey has been used for Beta-amylase production. Recently a new industrial plant for Beta-amylase production that uses defatted soybean meal has been installed (Nomura et al. 1994). (p. 512).

Note: This is the earliest document seen (March 2002) that uses the term "nanofiltration" in connection with soy. Address: 1&4. National Food Research Inst., MAFF, Tsukuba, Ibaraki, Japan 305; 2. Nippon Lever B.V., Shibuya, Tokyo, Japan 150; 3. AP Agricultural Univ., Hyderabad, India.

7059. *Plenty Bulletin* (*Summertown, Tennessee*). 1996. Soy on the frontlines, Liberia, West Africa. 12(1):1, 3. Spring.

• ***Summary:*** From September to December of 1995, with help from the Trull Foundation of Texas, Plenty was able to send a soy / agricultural technician to Liberia to support the farming work of Imani House (IH). The volunteer technician was Ignatius (Gomier) Longville, a Caribbean native, who had worked with Plenty on the Island of St. Lucia from 1984 to 1990. "Gomier is a 'Roots' (Rasta) farmer skilled in ways of growing foods under adverse conditions employing the natural rhythms and resources of the earth. Gomier provided very practical, hands-on assistance related to growing soybeans and other crops in nutrient-deficient soils for Liberian families... He also worked with the IH staff in conducting soy food preparation workshops for farming families, technicians from other development assistance organizations, and UN representatives. At the World Food Day Exposition in Monrovia, Gomier and the IH staff performed soy demonstrations for 10,000 people! They won first prize for their food production demo at this Exposition.

"Recently IH sent out a letter asking NGOs working in rural areas to commit at least 10 acres each for the growing of soybeans. They have been bombarded by requests for seed and information ever since." Photos show: Gomier with several African men making soymilk at a workshop in Liberia. Gomier and 3 other people at a IH soy demonstration plot under palm trees.

• ***Summary:*** Contents: Abstract. Introduction. Indigenous fermented soybean food: Kinema, hawaijar. Modified fermented soybean food: Soy-idli (a rice-based breakfast food in south India), soy-dhokla (a wheat-based snack in west India), soy rabadi (a butter milk staple of west India). Non-fermented soybean products: Green [vegetable] soybeans (a snack in north-eastern India), roasted soybean [soynuts] (a snack throughout India), soybean chutney (a condiment / pickle made from whole soybeans in north-eastern India). Commercially available soybean foods: Soymilk, soypaneer [tofu], soysuji / soy-suji (a snack in Central India), soy fortified biscuit (using soyflour).

Kinema and hawaijar are similar to natto of Japan and thua-nao of Thailand; the principal microorganism in both is *Bacillus subtilis.* Two strains were selected to give the best quality kinema. The main determinants of quality are high viscosity, long sticky strings, and solubilized protein. The optimum fermentation is for 20 hours at 40ºC. "The optimized process can be promoted to popularize more consumption of fermented soybean products as a sustainable supply of low-cost nutritious foods."

Kinema is consumed in eastern Nepal, "in the Darjeeling hills of West Bengal, Sikkim and north-eastern hills of India as a meat substitute in the local diet."

"The preparation of hawaijar is similar to kinema except the wrapping materials used are leaves of the fig plant (*Ficus hispida* L.) and the fermentation time is prolonged for 3-4 days.

To make soybean chutney, whole dried soybeans are soaked, deep-fried in vegetable oil, then mixed with salt and chilies. This chutney is then consumed like a pickle with boiled rice.

Soypaneer is a very good substitute for traditional dairy paneer, a semi-soft mild-flavoured fresh cheese, which is significantly more expensive than its soy counterpart. Soypaneer is deep fried, mixed with vegetarian curry, and sometimes used to make paneer pakoda [pakora], a local recipe.

Note: A pakora is a fritter–any kind of food coated in batter and deep fried.

Soysuji can be used to replace up to half of the wheat suji in the preparation of traditional Indian recipes.

"Cereal-based Indian diets are generally deficient in protein and calories. The protein intake in the local diet is not enough due to high prices of meat and dairy products as well as religious taboos."

Tables: (1) Soybean-based foods in India. The four columns are: Four types of products and 12 specific product names. Substrate (whole soybean, soybean-rice, etc.). Use (breakfast, snack, etc.). Consumption area. (2) Chemical composition of kinema (two types with very different composition).

Fig. 1 (p. 194) is a flow sheet of the traditional method of preparing kinema in a Sikkim village. After cooking and draining, the soybeans are crushed lightly by a wooden pestle. Firewood ash may be added. Wrap the soybeans in fern leaves, and ferment for 1-3 days to make kinema. Fry to make curry or soup. Address: Microbiology Lab., Dep. of Botany, Sikkim Government College, Gangtok 737 102, Sikkim, India.

Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 450-53.

• ***Summary:*** "The Soybean Development Program (SDP) was launched by the Philippine Council for Agriculture, Forestry and Natural Resources Research and Development (PCARRD)–Department of Science and Technology (DOST) in 1983 and later renamed as the Accelerated Soybean Production and Utilization Programme (ASPUP)." The goal of the program is to contribute to community development and improved nutrition.

Lists ASPUP's four main goals related to vertical integration of soybean production and small-scale soybean processing of soybeans for food and animal feed in six regions of the Philippines (in Luzon and in Mindanao) where soybean is grown.

A second list shows six strategies used by ASPUP to attain these goals. The last strategy reads: "(6) Create new markets and promote the use of soybean-based food products like ice cream, soy curd [tofu], soy cheese, soya milk, soy burgers and others as part of the daily diet." Address: National Program Leader, Accelerated Soybean Production and Utilization Programme (ASPUP) and Supervising Science Research Specialist, Crops Research Div., Philippine Council for Agriculture, Forestry and Natural Resources Research and Development (PCARRD), Los Baños, Laguna, Philippines.

7067. Tyler, Jim; Neville, Jan. 1996. Wellspring Natural Food Co. Mail order catalog. Amherst, Massachusetts: Wellspring. 32 p. 28 cm.

• ***Summary:*** This is the first issue of this catalog, and Wellspring started in 1996. Soy-related products include: Miso, shoyu, black soybeans (from Hokkaido, Japan), yellow soybeans (organic), azuki beans, snow-dried tofu, kuzu, miso ramen, kinako, natto miso chutney, tekka miso, soymilk, and amasake.

Jim has been a macrobiotic teacher and counselor since 1975-76 and Jennifer was a chef at the Kushi Institute. Main competitors include Gold Mine and other such companies. This catalog is service oriented, easy to use, and more than 80% of the products have lower prices than the competition. Address: P.O. Box 2473, Amherst, Massachusetts 01004. Phone: 1-800-578-5301.

7068. **Product Name:** Silk (Soymilk Sold Refrigerated in Quart Pure-Pak / Gable Top Cartons) [Chocolate].
Manufacturer's Name: White Wave, Inc. (Product Developer-Distributor). Made in Canada and California.
Manufacturer's Address: 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
Date of Introduction: 1996. April.
Ingredients: May 2000: Filtered water, organic whole soybeans*, organic raw cane crystals*, cocoa (Dutch process), calcium carbonate, natural vanilla flavor, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, vitamin D-3, riboflavin (vitamin B-2), vitamin B-12. * = Grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: Quart Pure-Pak Carton.
How Stored: Refrigerated.
Nutrition: Per 1 cup (240 ml): Calories 120, calories from fat 20, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 95 mg (4%), total carbohydrate 18 gm (dietary fiber 0 gm, sugars 14 gm), protein 5 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, vitamin B-12 50%, vitamin C 0%, iron 2%, riboflavin 30%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Leaflet (20.5 x 13.5 cm, glossy color) sent by Patricia Smith from Natural Products Expo East. 1996. Oct. On the front: Cartons of chocolate and regular silk against a green blackboard. On the blackboard, near the top, is written "No cow," with an arrow pointing to the regular carton. Further down is written "No cow, Now brown" with an arrow pointing to the carton of chocolate Silk. "How? Simple addition. Take pure, delicious White Wave Silk. Add real chocolate. Result: Dairy-free, lactose-free chocolate fun. Class dismissed."

Near the bottom is the White Wave: Vegetarian Cuisine logo. And the American Heart Association logo. On the back (in black on white). A photo of a quart carton of Chocolate Silk. "Made from organic soybeans. Vitamin A, B2, B12, D and calcium enriched. Contains 50% of the RDI for vitamin B-12." The ingredients for chocolate and regular Silk are given.

Carton with Label sent by James Terman of White Wave. 2000. May 11. 2.75 by 2.75 by 8¼ inches. Tetra Rex package. "Organic–Third party certified. Calcium enriched. Low 1% fat & vitamin enriched." Talk with James Terman of White Wave. 2001. May 29. Silk chocolate in quarts was introduced in April 1996.

7069. Lang, Paul. 1996. St. Peter Creamery and Agronico (Interview). *SoyaScan Notes.* May 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Paul does not know what happened to St. Peter Creamery. Note: St. Peter Creamery of St. Peter, Minnesota, introduced Soy Supreme Spray-Dried Soymilk Powder in Dec. 1984 and Soy Supreme Spray-Dried Tofu Powder in July 1985.

Paul tried phoning the company several years ago but there was no answer. He tried to figure out what happened but with no results. Try contacting Allan Routh (rhymes with "south") who is the brains behind SunRich, which is mainly a marketing group. Allan is on the board of the Soyfoods Association, and has an ad in the 1995 Soya Bluebook Plus (p. 59, 134). Paul is almost certain that SunRich gets its spray-drying done by Zumbro. Paul does not know who makes SunRich's soymilk.

Agronico (run by Mike Vincent) is basically out of business. Paul has heard (within the last week) that Agronico is being taken over by Honeymead, and they plan to make TVP. Address: Natural Products, Inc., 798 Hwy 6, Grinnell, Iowa 50112. Phone: 515-236-0852.

7070. Routh, Allan. 1996. SunRich, soymilk, Davisco, St. Peter Creamery, Prosource, and Northern Milk Products in Alexandria, Minnesota (Interview). *SoyaScan Notes.* May 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Allan (whose surname rhymes with "south") is CEO and one of the owners of SunRich. His company manufactures both liquid and spray-dried soymilk at a plant in Alexandria, Minnesota. They own this plant as part of a joint venture with Northern Milk Products. The company in Alexandria is named Northern Milk Products, but in the '95-'96 Soya Bluebook Plus the company name is given as Prosource, Inc. (P.O. Box 1058, 601 Third Ave. West, Alexandria, MN 56308. Phone: 612-763-2470). Sales are handled through SunRich.

Question: What happened to St. Peter Creamery, of St. Peter, Minnesota?; they introduced Soy Supreme Spray-Dried Soymilk Powder in Dec. 1984 and Soy Supreme Spray-Dried Tofu Powder in July 1985. Answer: Allan used to be part of the soy process with St. Peter Creamery (located in St. Peter, Minnesota), which was owned by the Davis family and which is no longer in business. The Davis family also owned LeSeur Cheese and Lake Norden Creamery; all these companies (including St. Peter Creamery) are now named Davisco. Stan Davis, the main man, is now retired,

but his sons and grandsons are involved. The soy part of the business (the Oberg Division of St. Peter Creamery) was a joint venture between St. Peter and Ed Oberg, and Lou Osterbur. Dr. E.B. Oberg had some patents when he was at Carnation. These patents were only part of the complex, which included "know-how" and process subtleties that made the product taste so good. Like every spray-drier and custom spray-dried in Minnesota and the Midwest, St. Peter was an old dairy plant and a custom processor. This sort of plant used to belong to coops, then individuals would buy them. St. Peter installed its own soymilk. They made soymilk from whole soybeans, then spray-dried it. Soymilk ceased being made at St. Peter in about 1989 because St. Peter decided they wanted to go a different direction and soymilk sales weren't really taking off. The soymilk equipment was partially moved to Northern Milk Products in Alexandria, Minnesota–located about 150 miles northwest of St. Peter. More precisely, they reconstructed a soymilk line in Alexandria that they thought was a little better than what they had at St. Peter. Allan has been with Minnesota Waxy (which started as a corn company) from the early days. Minnesota Waxy purchased the process from Oberg and Osterbur, and Northern Milk owned the physical plant.

Now Allan's joint venture company makes Soy Supreme, which used to be St. Peter Creamery's main soymilk product, made at their plant. But when the general manager at St. Peter, Dennis Anderson, decided to go into business for himself, he bought 3-4 plants–one of which was in Alexandria. So they moved the process to his plant in Alexandria. Basically the same technology that was used to make Soy Supreme (a dry product) is now also being used to make a liquid product, but Allan thinks his company has made significant improvements compared to E.B. Oberg's product.

SunRich is not really company with its own retail products. They sell foods to food manufacturers. They supply Westbrae with soymilk. They have made most of Westbrae's soymilk for a while–a number of tankers each week. They also have other soymilk clients. Most of their spray drying of soymilk is done in the neighboring town of Bertha, but they also have two spray driers in Alexandria. Northern also processes some milk products in Alexandria, and they do some specific separations on oats for customers like Quaker Oats. Zumbro, which is a similar company to Northern Milk in Alexandria, does not spray dry the milk made in Alexandria. Dennis Anderson is still in Alexandria.

Minnesota Waxy (recently renamed SunRich) has always been a specialty grain company. Initially their main product was waxy starch corn, which contains an all amylopectin starch; it has a much larger starch molecule than regular amylose starch or common corn starch. Waxy starch is used in many food applications, such as those that must be freeze-thaw stable, or products that must hold more flavor that is more available. It has many desired functional properties, and can be used to strip cholesterol from eggs. They also grow about 800,000 bushels of specialty, identity preserved soybeans per year, representing about 30% of their total specialty grain business. The soybeans are sold to soyfood manufacturers in both Japan and the USA. All of their corn and soybean production is contracted with farmers. SunRich is a corporation that has about 200 farmer shareholders; it is not a co-op. They have been in business for almost 20 years, and now they contract with a lot of non-shareholder farmers as well all over the Midwest. About 5% of SunRich's business is in organically grown crops, especially soybeans, and they are emphasizing it more and more.

Talk with Allan Routh of SunRich. 1997. April 18. He used to work with Davisco (St. Peter Creamery) making soymilk solids, but that was years ago. They have been out of that business for 5 years or more. Northern Milk Products is now named Northern Food and Dairy; it is owned by Dennis Anderson in Alexandria, Minnesota. Allan now jointly processes a lot of soy solids products with them. Prosource is one individual who works out of Northern Foods and Dairy; he does processing up there too. Allan's products are doing well. "Our biggest struggle is just to get big enough to support them." Address: CEO, SunRich Inc., P.O. Box 128, Hope, Minnesota 56046. Phone: 1-800-342-6976 or 507-451-3316.

7071. *SoyaScan Notes.* 1996. Who is making Westbrae's soymilk (Overview). May 3. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Until recently, Westbrae's soymilk (not including its Malteds) was being made by several different companies in different parts of the USA: (1) Most of it was made by Pacific Foods of Oregon, in Tualatin, Oregon. (2) Some of it was made by Nutricia at the old Loma Linda Foods plant in Mt. Vernon, Ohio. (3) Not long after that plant was taken over by Carnation / Nestle, Westbrae's production was shifted to Bill Bolduc in Ohio. In mid-1993 he purchased a small soymilk plant at which he made plain, unpasteurized/unsterilized soymilk, then sent it northward to Parmalat Foods (5252 Clay Ave., Wyoming, Michigan 49548. Phone: 616-538-3822). Parmalat is a huge and very significant Italian food company that is the biggest user of Tetra Pak Aseptic packaging in the world. Parmalat packaged the soymilk for Westbrae. As of May 1996, none of the above 3 companies make soymilk for Westbrae any longer.

Then in mid-1995 Bolduc was forced to declare bankruptcy, and apparently the relationship between Westbrae and Pacific Foods was not satisfactory for Westbrae. So Westbrae approached Raj Gupta at ProSoya Inc. in Ontario, Canada. In late April 1996 ProSoya started to make Westbrae's soymilk, apparently using their full capacity of 1-2 tankers a week, which is about 45,000 pounds or 20,000 liters a week. The product is probably

shipped to Farmland Dairies, a packer in New Jersey, where it is packed in Westbrae's new 2-liter Combibloc cartons. ProSoya in Ottawa is also obligated to do quite a bit of R&D work for the Canadian government. It is not clear why or what kind of compensation they receive for this.

The rest of Westbrae's soymilk is made by Northern Milk Products (related to SunRich) in Alexandria, Minnesota. Several tankers a week are shipped to Parmalat in Michigan.

ProSoya would like to set up a soymilk plant with Westbrae (probably in the USA) on a joint venture basis.

7072. Gupta, Rajendra ("Raj") P. 1996. Update on ProSoya Inc., International ProSoya Corporation (IPC), and Pacific ProSoya Inc. (Interview). *SoyaScan Notes.* May 9. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** There are three closely related companies that use the word "ProSoya" in their name. They all exist to develop partnerships with companies which may be interested in exploiting patented soymilk technologies. (1) ProSoya Inc., which was the original company, designs, develops, and manufactures soymilk equipment. Raj owns 55% of the shares in this company, Lorne Broten owns 10-12%, and the remainder is owned by others. (2) IPC (International ProSoya Inc.) is a company that licenses soymilk equipment and technology. ProSoya Inc. has licensed to Lorne Broten and IPC the rights to license (not sell) SoyaCow soymilk technology, through joint ventures, in North America. IPC sells equipment only outside of North America where it has no patent protection. Raj owns about 5% of the stock in IPC, and Lorne holds the controlling interest. (3) Pacific ProSoya Inc. makes soymilk in British Columbia. Raj and Lorne are good friends and on good terms with one another. Address: 5350 Canotek Road, #7, Gloucester, Ottawa, ONT, K1J 9C9, Canada. Phone: 613-745-9115.

7073. Roller, Ron. 1996. How American Soy Products (ASP) disposes of the okara resulting from making Edensoy (Interview). *SoyaScan Notes.* May 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** ASP is the largest manufacturer of soymilk in North America. Located in the rural city of Saline, Michigan (population 6,500; about 9 miles south of Ann Arbor), they are bounded on the south and west by diversified agricultural land. The ASP plant produces about 1,000 lb/hour of okara, which contains on average 80% water (range 78-82%) and 6.7% protein. The okara comes out of a high-speed decanter. 100 lb of dry soybeans yields 75-100 lb of okara. Ron has an arrangement with one farmer, who owns two large trucks, who comes to the plant each night in one of the trucks, leaves it under the okara spout, and drives the full truck away. These two trucks are used only for hauling okara. ASP pays this man a significant amount of money (which is confidential) each year to haul the okara; in fact Ron estimates that the money may be of more value to the farmer than the okara itself. Ron estimates that this farmer composts about 90% of the okara and adds the remaining 10% to feed for his milk cattle. Cattle are pretty sensitive to a change in their diet, and the wet okara is hard to mix. Ron believes it would be much more difficult and expensive to dispose of okara from a city plant than from his in the countryside.

All of the okara must be hauled away regularly every day. This is the most important thing! The operation must be organized and the person doing the hauling must be reliable. If he missed even one day, it would a nightmare! The okara piles up so fast and Ron would have no idea of what to do with it. The local dump wouldn't take it. The okara freezes in the winter and ferments (putrefies) in the summer.

The amount of okara that ASP produces each year is steadily growing, so Ron is now doing research and planning for the future. The best option appears to be drying the okara then selling it as an ingredient in organic livestock or pet feeds–but they have not yet found a dependable outlet, and dependability is–again–the key. With a dependable outlet, Ron believes they could pay for the drier and make money on it. They have also looked at pelletizing. Drying requires both a large initial investment in a continuous process operation (ideally made with stainless steel so the dried okara would be food grade) and use of a large amount of energy to remove all that water. On a moisture free basis, okara contains 34% protein (of very high quality) and 49% carbohydrates. Okara with 10% moisture (a realistic figure after drying) contains 32% protein and 37% carbohydrates. Outlets for dried okara in food might include use in a burger, in breads and muffins, etc. Worthington Foods has made their Natural Touch Okara Patties since March 1984; okara is the 4th ingredient in order of predominance. Northern Soy has made Soyboy Okara Courage Burger since April 1995; okara is the 3rd ingredient. Many companies make Soysage. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

7074. Storup, Bernard. 1996. Re: New developments with soyfoods in France. Letter to William Shurtleff at Soyfoods Center, May 13. 2 p. Typed, with signature on letterhead. [Eng]

• ***Summary:*** On 22 April 1996 Alpro (Belgium) bought Sojinal (France) [from B & H Holdings].

Bernard recently met with Steve Demos (founder and CEO of White Wave) in Revel, France. They shared experiences, ideas for the future, and dreams. Bernard plans to visit him in Boulder next month for a few days.

The soymilk made by Nutrition & Soja is now packaged in about 12 different package designs [SKUs], including the brands BioSoy, Céreal, Gerblé, l'Abbé Bisson (Barcelona, Spain), and Union Nature. Address: B.P. 33, Z.I. de la

Pomme, 31250 Revel (near Toulouse), France. Phone: +33 62 18 72 50.

7075. Sheehan, Daniel M. 1996. More about phytoestrogens and isoflavones from soybeans (Interview). *SoyaScan Notes.* May 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Dr. Sheehan heard from a colleague in Canada that the soy protein isolates used in infant formulas in Canada have most of the phytoestrogens removed. The source of that information was Mr. Marshall Marcus of Protein Technologies International.

People use terms such as phytoestrogens or isoflavones differently depending on their background and orientation. For example, people interested mostly in biological activity tend to use the term "phytoestrogens," whereas those interested mostly in chemical structure tend to use the term "isoflavones." Additional terms include "flavonoids" (pronounced FLAY-vuh-noids, which refers to a large class of chemicals), and "isoflavonoids" (which are isomers of the flavonoids). "Genistein" and "daidzein" are what chemists call "trivial names." Real chemists provide the actual name of the chemical structure. Note: The first isoflavone found in tempeh was 6,7,4'-trihydroxyisoflavone.

Not all isoflavones are phytoestrogens; only some have biological activity as estrogens, and most of them are inactive. Genistin is just a conjugated genistein. The conjugated forms such as genistin and daidzin are not biologically active, as such; the glucoside linkage must be cleaved by intestinal bacteria before they become biologically active. Biologists usually use the term "prohormones" to refer chemical substances such as daidzin or genistin; they are precursors of hormones that require metabolic action before they become active. So when we eat a soyfood such as tofu, the biologically inactive prohormones are converted to active hormones in our digestive system. On the other hand, equol has estrogenic activity, but it is a metabolite of genistein. Of the three major conjugated forms in soybeans, daidzin, genistin, and equal, all of the digested forms have biological activity. Address: Dep. of Health and Human Services, Food and Drug Administration, National Center for Toxicological Research, Div. of Reproductive and Developmental Toxicology, Jefferson, Arkansas 72079-9502, and Dep. of Biochemistry, Univ. of Arkansas for Medical Sciences, Little Rock, AR 72205. Phone: 501-543-7561.

7076. D'Aguilar, Marlon. 1996. New developments at Country Farmhouse Soya Products (Interview). *SoyaScan Notes.* May 20. Conducted by William Shurtleff of Soyfoods Center. [Eng]

• ***Summary:*** Marlon started making and selling tofu in 1985. He started teaching himself the processes in 1983-84. He believes that Country Farmhouse Soya Products was the first company to make tofu commercially in Jamaica. *Tofu and Soymilk Production* and *The Book of Tofu* by Shurtleff and Aoyagi helped him out somewhat over the years. In the beginning he gave away a lot of tofu "to get our people to know it. Our people have always liked it. Our Soy Scream Ice Cream, launched in about 1985, is our favorite product. It was made using hand-cranked wooden buckets. It is still sold in both soft serve and hard packs." Marlon has launched about 10 soy products since 1985–Tofu, Soy Scream Ice Cream, Mayonnaise (based on soymilk and sold to the foodservice), soy ice cream sandwich, soy flour, soy burgers (launched in about 1987 and renamed Veg Middles in about 1994), soymilk (made to order only).

Right now he is working on expanding the company, but it is difficult because of limited finances and resources. The vision is still high and open. Country Farmhouse Lifeline is the parent association and a community operation; Country Farmhouse Soya Products is an offshoot, and a limited liability company. "We went into soyfoods as part of a whole social program named Country Farmhouse Lifeline, which is a local community program whereby local people get together to shape their lives and bring about sustainable life. It was not started just as a business. Our wider program involves alternative sources of energy and more sustainable living." Marlon has worked with Plenty USA and they have helped him mostly with contacts, plus some technical advice–Not much help with product development. There are no other companies now making soyfoods in Jamaica. One company named Nature Treats started in about 1993, but they went out of business about 2 years later; she is trying to sell him her equipment. He is a Rastafarian, and the Lifeline was spun out of that concept–not so much from the religious perspective but from a social and cultural perspective. Most Rastafarians are vegetarians and his interest in tofu and soyfoods grows in part out of his interest in vegetarianism. They have used the okara and whey from their company to generate energy (methane) that is run back into the plant–though it is not established now.

Talk with Annie Liu from Miami, Florida. 1999. Feb. 16. The tofu made by Country Farmhouse is very hard. In Jamaica, there is a dish named Solomonogondi, that is traditionally made with pickled mackerel; Country Farmhouse makes a vegetarian version with tofu–that is delicious. Their ice cream is also delicious. Address: Affiliate of the Country Farmhouse Lifeline, 12 Faulkner Ave., Duhaney Park, Kingston 20, Jamaica. Phone: 809-933-4617.

7077. Roberts, Rosemary. 1996. Soy formula campaign wins praise. *Northern Advocate* (*Whangarei, New Zealand*). May 24. p. 2.

• ***Summary:*** "Work being done by Whangarei couple Dick and Valerie James to have soy infant formula withdrawn from sale and tested for toxins, particularly soy oestrogens, has won the admiration of Professor Reg Morgan of Perth.

"Mr Morgan, who visited Mr and Mrs James last week,

heads the department of physiology at the University of Western Australia.

"For the past 20 years he has been investigating the chemicals in raw soy flour, called trypsin inhibitors, which have been shown to cause pancreatic cancer in rats."

Note: The date of this article may be Sept. 25–instead of May 24.

7078. Heenan, Cathy. 1996. Talk on soy infant formulas. *Otago Daily Times* (*Dunedin, New Zealand*). May 31.
• ***Summary:*** This article also appeared in *Gisborne Herald* 1 Jun 1996.

7079. Attwood, Charles R. 1996. The great American milk myth. *New Century Nutrition* (*Ithaca, New York*) 2(5):6. May.

7080. DeAngelis, Lissa; Siple, Molly. 1996. Recipes for change: Gourmet wholefood cooking for health and vitality at menopause. New York, NY: Dutton Signet. A Div. of Penguin Books USA Inc. xvi + 400 p. May. Index. 25 cm. [34* ref]
• ***Summary:*** In the upper right corner of the front cover we read: "Feel great without hormone replacement therapy!" This is a book, with a natural foods and macrobiotic slant, about using foods in place of hormone therapy to help deal with nine problems that occur around the time menopause: Premenstrual syndrome, hot flashes, fatigue, heart palpitations, memory lapses, mood swings, irritability and depression, weight gain, waning interest in sexuality, hypothyroidism. All menu suggestions are divided into two choices: Vegetarian and non-vegetarian (but with many vegetarian dishes). Pages 4-5 note that science has found active ingredients in foods that promote good health during menopause. Soybeans and soy products are "rich in phytohormones... sometimes called phytoestrogens." Four types of food are "off the menu" = should not be consumed: Refined sugars, caffeine and coffee, processed oils, and refined white flour and refined grains. The subsection titled "Phytohormones" (p. 16) lists ten foods, including tofu and brown rice, as good sources. The benefits of phytohormones and soyfoods are also discussed in the section on "Breast cancer" (p. 55-56).

Soy-related recipes include: Miso soup (p. 90). Bean basics (p. 120-23). Tofu teriyaki with vegetables (p. 123-24). Tempeh, green beans, and carrots with mustard sauce (p. 132-33). Tempeh slices for sandwiches (p. 148-49). Tofu alfredo sauce (p. 303).

The recipes also call for: Adzuki beans, almond butter and tahini, almond milk, kudzu, and plums (umeboshi). The last page is titled "About the authors." Photos of Lissa DeAngelis and Molly Siple appear on the inside rear dust jacket. Address: 1. Private nutrition consultant, North Edison, New Jersey; former Assoc. Director of the Natural Gourmet Cookery School in New York City for 10 years; 2. Registered Dietitian, Los Angeles, California.

7081. **Product Name:** Solait (Powdered Soy Beverage) [Chocolate flavor].
Manufacturer's Name: Devansoy, Inc. Renamed Devansoy Farms by July 1994.
Manufacturer's Address: P.O. Box 885, Carroll, IA 51401. Phone: 1-800-747-8605.
Date of Introduction: 1996. May.
Ingredients: (March 1997): Soybeans, brown rice syrup, sunflower oil, calcium carbonate, sea salt, natural flavor, lecithin.
Wt/Vol., Packaging, Price: 27 gm foil packet, 10 oz can, and 21.6 oz can.
How Stored: Shelf stable.
New Product–Documentation: Spot in NFM's New Product Review. 1996. Summer (May). Product with Label sent by Patricia Smith from Natural Products Expo West, Anaheim, California. 1997. March. Label: 4 inch square foil packet. Blue, orange, brown, and back on white. "Milk of the Sun–Instant soy beverage." Soyfoods Center taste test. Too sweet to drink.

7082. Kuhn, Mary Ellen. 1996. Soy in the spotlight: Disease-fighting benefits may change the image of the once-lowly bean. *Food Processing* (*Chicago*). May. p. 52-53, 55, 58.
• ***Summary:*** This is a cover story; on the cover is written: "Unlocking the secrets of soy," with four large color photos. The article begins: "What a difference a couple of decades make." Twenty or 30 years ago, most foodservice operators and consumers used soy with hesitation, sometimes scornful comments. "Today, however, the once-maligned soy protein has a much better image, thanks to a fast-mounting stack of research data suggesting it may help prevent and treat high blood cholesterol, cancer, osteoporosis, and symptoms of menopause." And this good news has begun to reach health and nutrition professionals. With better products on the market, "soyfoods marketers may soon be dealing with a new generation of mainstream consumers who–far from spurning soy-based products–actively seek them out.

"Much of the current soy research is focused on isoflavones, a unique class of phytoestrogens or plant hormones found primarily in soy protein." The main soy isoflavone is genistein. Now soyfoods manufacturers are starting to take isoflavone content into consideration when they formulate, label, and promote their products. The isoflavone content of unprocessed soybeans can vary considerably among varieties, years, and place of harvest. Heat treatment does not appear to significantly reduce isoflavone content, but an alcohol wash (used with most soy protein concentrates and isolated soy proteins) removes most isoflavones in the product. The well-known Supro brand of isolated soy proteins are not subject to an alcohol wash,

which helps preserve their isoflavone content.

Rick McKelvey, president of the Soyfoods Association of America, has attended the American Dietetic Association show for the past two years. Last year, most of the questions he heard were: "What is this soy stuff that I'm hearing about?" This year's questions concerned the level of isoflavones in specific products. "This shows how far we've come in the bast year," he observes.

ADM, which could easily extract isoflavones from soybeans and sell them has decided not to do so. Jerry Weigel, PhD, who is ADM's vice president of corporate nutrition and regulatory affairs thinks it is probably not legal to sell isoflavones because they do not have GRAS (Generally Recognized as Safe) status or food additive status. Few soyfoods marketers are presently publicizing the isoflavone or genistein content of their products or making specific health or disease-prevention claims.

William Helferich, PhD, an associate professor at Michigan State University's Department of Food Science and Human Nutrition, has been studying dietary phytoestrogens in laboratory animals for 3 years. He has found that "genistein can stimulate estrogen-responsive breast cancer-cell growth in cultured cells and in animals implanted with these cells. He believes that women at risk for estrogen-dependent forms of breast cancer should not consume high levels of phytoestrogens." Most researchers are concerned about consumers taking isoflavone supplements or pills. Yet such products are now on the market and they acknowledge that some consumers will be attracted to them, instead of simply increasing the level of soyfoods in their diet, eating a healthful, balanced diet, and living and healthy lifestyle. Photos show: A jar of Morningstar Farms Roasted Soy Butter (soynut butter) which will be introduced this spring. Jan Remak, president of marketing for Vitasoy U.S.A.

One sidebar, titled "Probing the soy/health connection," discusses the research of Dr. James Anderson and Mark Messina, PhD. "Scientists theorize that phytoestrogens in soy might help compensate for the loss of hormonal estrogen women experience at menopause."

Another sidebar, "Boom times for the bean," notes that starting soon after the research study by Dr. James Anderson was published in August 1995, many soyfoods companies experienced a substantial increase in sales. Peter Golbitz notes that "After years of steady 10% to 15% annual growth, soyfood sales have soared by about 30% in the past year... Many marketers of meat and dairy analogs are reporting sales increases of more than 100%." A 1995 study by the Soyfoods Association of America found that 75% of Americans have heard of tofu, 55% of soymilk, and 50% of soy burgers. Golbitz adds that in Australia, where soymilk based on soy protein isolates is widely available, per capita soymilk consumption is at least three times what it is in the USA. Vitasoy has adopted a niche-market approach to selling its soymilk; it adjusts the amount beany taste according to the taste preferences of each market. Address: Senior Editor.

7083. Messina, Mark; Messina, Virginia. 1996. The dietitian's guide to vegetarian diets: Issues and applications. Gaithersberg, Maryland: Aspen Publishers, Inc. xi + 511 p. Index. 24 cm. [1939 ref]

• ***Summary:*** Contents: Preface. Acknowledgments. Part I: An overview of vegetarian diet. 1. Demographics and definitions: History of vegetarianism, profile of vegetarians, types of vegetarian diets. 2. Health consequences of vegetarian diets: Differences in dietary components of vegetarian and nonvegetarian diets, cardiovascular disease, hypertension, cancer, diabetes, obesity, kidney disease, renal stones, gallstones, diverticular disease, other conditions, the dairy connection, phytochemicals, conclusion.

Part II: Vegetarian nutrition. 3. Protein: A historical perspective on protein, protein requirements, vegetarian diets and protein digestibility, assessing protein quality, plant proteins and nitrogen balance, protein complementarity, conclusion. 4. Calcium: Osteoporosis, calcium and osteoporosis, calcium absorption and the RDA, calcium excretion, bone health of vegetarians, meeting the calcium RDA on plant-based diets, plant sources of calcium, other factors that affect bone health/fracture rate, conclusion. 5. Minerals: Iron, zinc, selenium, copper, magnesium, phosphorus, manganese, iodine, sodium, chloride, potassium, fluoride, chromium, molybdenum. 6. Vitamins: Vitamin B_{12} (cobalamin), riboflavin, vitamin D, vitamin B_6, vitamin B_1 (thiamin), niacin, folate, biotin, pantothenic acid, vitamin C (ascorbic acid), vitamin A, vitamin E, vitamin K. 7. Food guides for vegetarians: A history of food guides, developing food guides for vegetarians, vegetarian food guides, appendix 7-A–food guides for vegetarians (food guide for lacto-ovo vegetarians and vegans, the 1-2-3-4-5 vegetarian food guide, American Dietetic Association's vegetarian food guide, the vegetarian food pyramid, the vegetarian food pyramid, macrobiotic food guide).

Part III: Vegetarian diets throughout the life cycle. 8. Pregnancy and lactation: Weight gain and calorie needs in pregnancy, weight gain in pregnant vegetarians, meeting nutrient needs of pregnancy on a vegetarian diet, meal-planning guidelines, adolescent pregnancy, potential complications of pregnancy, common conditions of pregnancy, vegetarians and lactation, appendix 8-A–food guides for pregnant and breast feeding vegetarians (food guide I, food guide II). 9. Vegetarian diets in infancy: Growth in vegetarian infants, vegetarian diets during the first six months of infancy, solid foods for vegetarian infants, comparison of sample menu plans for 9-month old vegan and omnivore infants, potential concerns in infant feeding, macrobiotic diets in infancy, fatty acids in the diet of vegetarian infants, conclusion. 10. Preschool and school-age children: Growth of vegetarian children, diets of vegetarian children, protein, fat, calcium, vitamin D, vitamin B_{12}, iron,

zinc, guidelines for meal planning for vegetarian children, milk in the diets of vegetarian children, counseling parents of vegetarian children, vegetarian diets for school-age children, school lunch, bag lunch, appendix 10-A–meal-planning guidelines for children (other food guides). 11. Vegetarian diets for adolescents: Growth of vegetarian adolescents, nutrient needs of vegetarian adolescents, meal-planning guidelines for vegetarian adolescents, eating disorders. 12. Vegetarian diets for older people: Dietary status of older vegetarians, nutrient needs of older vegetarians, meal planning for older people.

Part IV: Practical applications for counseling vegetarians. 13. Counseling vegetarian clients: Dietary assessment, counseling clients to plan menus based on vegetarian food guides, vegetarian diets as dietary therapy, reducing fat in vegetarian diets, reducing food costs on vegetarian diets. 14. Diabetes: Diet therapy for diabetes, vegetarians and diabetes, the diabetic exchange lists, appendix 14-A–exchange lists for meal planning. 15. Vegetarian diets for athletes: Vegetarian diets and athletic performance, nutrition needs of athletes, risks of amenorrhea in female vegetarians and female vegetarian athletes. 16. Vegetarian food preparation: Preparing grains, preparing beans, using tofu, using textured vegetable protein, using egg substitutes, cooking with sweeteners.

Glossary of vegetarian foods. Resources on vegetarian diet: Vegetarian resources for dietitians, resources for vegetarian clients, on-line services, mail-order vegetarian foods.

Appendixes. A. Fiber, cholesterol, and macronutrient intakes of adult vegetarians and nonvegetarians. B. Lipid levels in adult vegetarians and nonvegetarians. C. Blood pressure of adult vegetarians and nonvegetarians. D. Anthropometric data of female adult vegetarians and nonvegetarians. E. Anthropometric data of male adult vegetarians and nonvegetarians. F. Intake ratios of N-6 to N-3 fatty acids on vegetarian and non-vegetarian diets. G. Protein, calcium, phosphorus, sodium and potassium intakes of adult vegetarians and nonvegetarians. H. Iron intake and status of vegetarians and nonvegetarians. I. Mineral intake of adult vegetarians and nonvegetarians. J. Water soluble vitamin intake of adult vegetarians and nonvegetarians. K. Fat soluble vitamin intake of adult vegetarians and nonvegetarians. L. Fiber, cholesterol, and macronutrient intakes of vegetarian and nonvegetarian school-age children and teenagers. M. Water soluble vitamin intakes of vegetarian and nonvegetarian school-aged children and teenagers. N. Fat soluble vitamin intake of vegetarian and nonvegetarian school-aged children and teenagers. O. Mineral intake of vegetarian and nonvegetarian school-aged children and teenagers. P. Fiber, cholesterol, and macronutrient intakes of elderly vegetarians and nonvegetarians. Q. Water soluble vitamin intake of elderly vegetarians and nonvegetarians. R. Mineral intake of elderly vegetarians and nonvegetarians.

The information on vitamin K is excellent and extensive (despite one small error): Table 6-12 (p. 197) gives the vitamin K content of selected foods. The content of soybean oil is 77 micrograms per tablespoon (not milligrams as stated). Other rich sources are (per ½ cup cooked): Lentils (261 mcg), kale (179 mcg), spinach (141), broccoli (119). The source of these statistics is: USDA Provisional table on vitamin K content of foods. 1994. Hyattsville, Maryland: USDA.

Index listings for individual soyfoods: Tofu: p. 38-82, 392. Tempeh: p. 391. Soymilk: p. 214-15, 284-85, 391. Miso: p. 389. Soy cheese, soy flour, soy yogurt, soybeans, soynuts, Take Care (fortified soy protein beverage sold in powdered form), tamari: p. 391 (Glossary of vegetarian foods). Address: 1. PhD; 2. MPH, RD. Both: Nutrition Matters, Inc., 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

7084. Ohio Soybean Council / Soy Ohio. 1996. Creative cooking with soy. Columbus, Ohio. 20 p. May. 24 cm. • ***Summary:*** This attractive cookbooklet contains many large color photos on thick glossy paper. The recipes are: Heartland burgers (with TVP). Golden baked beans (with 2 cups cooked soybeans). Creamy tomato soup (with soy milk, silken tofu, and soy oil). Chicken raspberry salad (with silken tofu in the sauce, and reduced sodium soy sauce). Easy day vegetable lasagna (with silken tofu). All-American twice-baked potatoes (with silken tofu). Primo veggie pasta (with silken tofu in the sauce). Oatmeal bread (with soy milk and soy flour). Better bran muffin (with soy milk and soy flour). Super crunchy caramel corn (with soy margarine). Fruit smoothie (with silken tofu). Sweetheart cinnamon rolls (with silken tofu and lite soy margarine). Chocolate silk dessert (with silken tofu and soy margarine). Buckeye surprise (with silken tofu and soy margarine). The last two pages are "Working with soyfoods" (soy flour, soy oil, tofu), and "Soyfoods resources" (a directory of organizations, books, and web sites providing information about soyfoods and nutrition).

Talk with Kelly Ollwine, executive secretary for the Ohio Soybean Council. 1996. June 7. This booklet, published in May 1996, was developed by Jim Kapp of Yoder, Sullivan & Kapp, a consulting firm in Columbus, Ohio. He also developed another such book titled "Cooking American Favorites with Soy," published in 1994.

Talk with Jim Kapp. 1996. June 7. The recipes in both these books were developed by two Ohio home economists, Connie Cahill and Melody Leidheiser. Address: P.O. Box 479, Columbus, Ohio 43216-0479.

7085. Raymond, Jennifer. 1996. The peaceful palate: Fine vegetarian cuisine. Revised ed. Calistoga, California: Heart & Soul Publications. 159 p. Illust. Index. 28 cm. [5 ref]

• ***Summary:*** A vegan cookbook, with a substantial section on vegan nutrition. Contains 11 tofu recipes and 1 recipe for tempeh sandwich.

Contents: Acknowledgements. Introduction (most Americans eat too much protein and far to much fat). Choosing food for optimum health. Protein. Calcium. Protein myths and facts. Putting fat in its place. Cutting the fat. Dairy products and eggs (why each is cruel to animals; soy and rice milks are excellent alternatives to cow's milk; tofu can be scrambled in place of eggs. Five good books about factory farming. Contact information for three organizations "working to end the horrors of factory farming"). A note about sweeteners. Coking dried beans. Equipping your kitchen. Stocking your pantry for healthful eating. What to eat when you don't eat meat. Foods which may be new to you [glossary] (includes aseptically packaged tofu, barley malt, low-sodium soy sauce, mirin, miso, Nayonaise {eggless, dairyless, cholesterol-free mayonnaise}, non-dairy frozen dessert, non-dairy yogurt, reduced-fat tofu, rice milk, rice syrup, seitan, silken tofu, soy milk, Spectrum Natural Spread {similar to soft margarine but made without hydrogenated fats}, tempeh, textured vegetable protein {TVP}).

"Until he extends the circle of his compassion to all living things, man will not himself find peace"–Albert Schweitzer.

Recipes: Breakfasts. Breads. Sandwiches. Salads & salad dressings, etc. A portrait photo (p. 159) shows Jennifer Raymond. "She works as a chef and nutrition specialist with Dean Ornish, M.D. in his 'Open your heart program,' teaching patients how a delicious, easily prepared vegetarian diet can reverse heart disease." "Her first cookbook, *The Best of Jenny's Kitchen,* was published by Avon books in 1981 and was followed closely by her television series *Cooking Naturally!* Jennifer lives in Calistoga, California, with her husband Stephen Avis and their five dogs."

The tofu and tempeh recipes are: Scrambled tofu (p. 27). Missing egg sandwich (p. 42). Tempeh salad sandwich (p. 44). Tofu, lettuce & tomato sandwich (TLT, p. 45). Broiled tofu (p. 48). Pasta with creamy tofu (p. 109). Lasagna (with tofu, p. 113). Tofu burgers (p. 125). Tofu croquettes (p. 126). Tofu pot pie (p. 127). Tofu cream frosting (p. 148). Tofu cheesecake (p. 150).

Talk with Jennifer Raymond. 1996. May 30. The new enlarged edition was available on 2 May 1996. There are new recipes and with each recipe is a nutritional analysis. The book is still available from the author, as well as nationwide because it is distributed by The Book Publishing Company in Summertown, Tennessee. She is now working closely with Dr. Dean Ornish, and adds: "He is at the center of where things are happening related to vegetarianism, diet, and health. His work has had a more profound impact on the way that the medical profession and people in general view vegetarianism than that of almost any other person. It has allowed vegetarianism to turn a really big corner." Address: 1418 Cedar St., Calistoga, California 94515. Phone: 707-942-2180.

7086. Demos, Steve. 1996. Recent trip to Europe. What is vegetarianism? Cause marketing (Interview). *SoyaScan Notes.* June 5. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Steve greatly enjoyed meeting Bernard Storup of *Nutrition et Soja* in France, and discussing soyfoods. Steve was especially impressed with his soymilk production and packaging line. Bernard is making some interesting soy/dairy blends. Bernard's long term plan is not to stay with Sandoz. Now Bernard gets a bonus of $100,000 a year in addition to his salary just to stay with Sandoz.

In the UK, Steve met with Graham Keene, head of marketing and sales for the Haldane Group. Haldane makes yogurt under 3 brands, and one of them was the best soy yogurt Steve has ever tasted anywhere. Their yogurt has a pH of 3.8 to 4.0 which gives it a shelf life of 3-4 weeks; there appeared to be no special tricks involved. Steve would soon like to travel to East Asia to take a closer look at Okinawan fermented tofu (*Tofuyo*). Steve spent $100,000 to find out what people mean when they say "I am a vegetarian." They mean: "I avoid red meat."

Cause marketing is where a company puts its advertising dollars into a cause, such as saving the rain forests or promoting vegetarianism.

The largest investor in White Wave has the surname "Demos," and it is not Steve. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

7087. Connor, Steve. 1996. The poison risk in 'healthy' eating: Natural toxins in food pose a greater potential danger than man-made chemicals. *Sunday Star-Times* (*Auckland, New Zealand*). June 9.

• ***Summary:*** Pulses and beans, which are the epitome of healthy eating, contain the widest variety of biological toxins. "Included in this list of poisons–most of which are destroyed by cooking–are substances known as phytoestrogens, plant chemicals that can mimic female hormones." They "cannot be ignored in the search to find the cause of falling sperm counts." They are present in soya beans, which are used to make soy infant formulas. "Scientists are therefore seriously questioning whether soya milk products, given at a critical moment in the development of the male reproductive system, could be responsible for lower sperm counts." Address: London.

7088. Guy, Camille. 1996. Soybean campaigner turns up the heat: A visiting professor tells about his concern over the sale of food containing soybean. *New Zealand Herald–Weekend Magazine.* June 15. Section 7. p. 10. Saturday.

• ***Summary:*** Reg Morgan is a physiology professor at the

University of Western Australia. During a trip to New Zealand, he compared the promotion of soy products as health foods with "cigarette advertising at the turn of the century." He also joined with New Zealand scientists to "warn parents that using soy infant formula may put their babies' health at risk. The Ministry of Health has issued no such warning but a dramatic decline in supermarket sales of soy formula suggests that many parents are avoiding the product. Prof. Morgan said: "In my lectures I warn young people they may be drinking a cocktail of oestrogens and other nasties. But the babies are the ones I am scared about–the newborns who take soy formula from birth."

"At Auckland University's chemistry department Dr Mike Fitzpatrick has 25kg of soy flakes awaiting study. In 1994 Fitzpatrick was one of four New Zealand scientists who asked the Ministry of Health to warn the public of possible health risks from soy products.

"Then working as an analytical chemist for a private company, Fitzpatrick did a commissioned analysis of soy foods and a survey of the scientific literature on soy toxins.

"After reviewing Fitzpatrick's work in 1994, Auckland Medical School senior toxicologist Dr Iain Robertson recommended that the use of soy in infant formula be discontinued pending future research."

"Figures from the international marketing research group A.C. Nelson for supermarket sales of soy infant formula show that New Zealanders spent $1.6 million on these products over the past year–a 30 per cent decline on the previous year.

"Soy formula used to claim a 16 per cent share of the infant formula market. That share has shrunk to less than 9 per cent."

A photo shows Prof. Morgan with the caption "soy toxins are very active and scary stuff."

7089. *SoyaScan FactSheet.* 1996. Non-dairy products (alternatives to dairy products), which are good tasting and widely available (Overview). June 22. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** About 30 million Americans are lactose intolerant. Between 4% and 6% of infants develop allergies to the proteins in one or more foods, with cow's milk being the most allergenic. And many other people have moral or philosophical objections to drinking milk (e.g. widespread use of antibiotics, use of genetically engineered Bovine Growth Hormone [rBGH, made by Monsanto], the suffering of calves when forcefully removed from their mother, etc.). Until quite recently, these people had to live without dairy products, but now that has all changed–thanks to soyfoods, which are widely available and usually quite delicious.

Foods marked with one asterisk (*) are sold at most natural food stores and some health food stores and supermarkets (look in your Yellow Pages at "Health & Diet Food Products–Retail"). Foods marked with two asterisks are also sold at most supermarkets.

If you use dairy alternatives regularly, you can save money by making them yourself: See the index of *The Book of Tofu* by Shurtleff & Aoyagi (Ballantine Books edition) for carefully tested, home-scale recipes for soymilk, soy ice cream, soy yogurt (from soymilk or from tofu), tofu, cream cheese, sour cream, whipped cream (from tofu or soymilk), tangy tofu cottage cheese, tofu icing, frozen-banana tofu shake, soymilk kefir, soy mayonnaise (from tofu or soymilk),

Soymilk* is the most popular type of dairy alternative. It is sold in many flavors, often fortified with calcium, vitamin D, antioxidants, etc. in quarts and half gallons. It costs about 1.7 times as much as milk (so if a quart cow's milk costs $1.00, a quart of soymilk will cost about $1.70). Popular brands: Edensoy, Westbrae, Westsoy, Vitasoy, So-Yum, Silk, and Pacific Foods. For a tasty soymilk shake, try Westbrae Malteds. Rice Dream is a delicious non-dairy rice milk and also an ice cream; both products are made by Imagine Foods. Many other brands of rice beverage (some of whose quality we think is not as good) are also available.

Soy ice cream* is sold in an outrageous variety of flavors and forms. Hard-pack pints are the most popular, followed by soft-serve, ice cream sandwiches, etc. Popular brands: Tofutti, Living Rightly, Sweet Nothings (fat free), and Ice Bean. Rice Dream is a delicious rice-based non-dairy ice cream.

Soy yogurt* is sold in typical small yogurt cups, in a wide variety of flavors. The most popular brand is White Wave Dairyless. Try their Lemon-Kiwi flavor! Most soy yogurts are fermented/cultured with live cultures, but some are like a parfait (not fermented) made by blending silken tofu, fruits, and a sweetener.

Tofu**, the world's most popular soyfood, is now sold at very reasonable prices in most supermarkets across America. It makes an excellent replacement for cheese in many dishes where the cheese is not required to melt: Salads, sandwiches, in Lasagna for the ricotta cheese, etc. You can also use tofu to make your own soy yogurts and ice creams at home.

Soy cream cheese*. These products, based on tofu, are delicious and moderately priced. Our favorite brand is Tofutti Better than Cream Cheese, which comes in flavors such as Garlic & Herb, French Onion, Herbs & Chives, Plain, Wildberry, or Smoked Salmon. Some bagel shops (such as Noah's Bagels in Northern California) sell this product. VeganRella Cream Cheese (in plain & onion & dill flavors) uses more natural ingredients (no hydrogenated oils, or mono- or diglycerides).

Soy sour cream*. Again, this product is based on tofu. Our favorite brand is Tofutti Sour Supreme–Better than Sour Cream.

Soy cheese* is our least favorite dairy alternative. Most brands contain *casein* (the protein from cow's milk), which allows them to melt, but which also (technically) disqualifies

them from being a truly non-dairy product. A few brands are truly non-dairy but they melt in a sort of thick puddle. Top brands with casein: Soya Kaas, TofuRella, Zero-FatRella, HempRella (soy free), and AlmondRella (soy free). Top brands without casein: VeganRella (2 flavors), Soymage.

Soy-based infant formula. Available at most pharmacies and many supermarkets, this is a carefully formulated and regulated product designed to meet the critical needs of infants when served as the sole source of nutrition. It is widely fed to infants who are allergic to cow's milk. But note that 15% to 50% of infants with cow's milk allergy will also develop allergies to soy protein. Soy protein was recently ranked 11th among foods in terms of allergenicity; animal proteins such as milk and eggs remain the most allergenic foods.

Whip Topping**. Sold as "non-dairy whip topping" at most supermarkets, as far as we know, these all contain casein or sodium caseinate from cow's milk. Leading brands: CoolWhip.

For more information on non-dairy products on the World Wide Web, go to http://www.rella.com. This website is produced by Sharon's Finest in California.

7090. Roller, Ron. 1996. New developments at American Soy Products (ASP) (Interview). *SoyaScan Notes.* June 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Seikensha is no longer one of the five partners that own ASP; they are still in business but they decided to sell their shares back to the remaining 4 partners–perhaps because they felt they could use the money in more productive ways.

The ASP plant at Saline is now running at full capacity–3 shifts, 24 hours a day. A smaller expansion at the plant has just been completed; they added building space and equipment that was more closely related to packaging than to soymilk. They added some tank capacity, utility chillers, etc. that helped to increase the current capacity and went a long ways toward helping to utilize additional capacity in the future. Packaging capacity, sterilizing capacity, and *Jun* (soymilk base) capacity are all separate but they all need to work together. They now have more packaging capacity than they have production capacity; they could package more product if they could make it.

ASP has a new Tetra Brik Aseptic packaging machine, a TBA-8 filler that puts a pull-tab over the hole. A separate piece of packaging line equipment puts on the plastic cap after the package comes out of the filling room. The cap is stuck on over the pull-tab. The package looks exactly the same but it now has a reclosable cap; you can't retrofit the old machine to give it capping capability.

Soon ASP plans to make a big expansion in the plant. Michael Potter recently sent a letter to Eden distributors to address that issue.

Bill Bolduc is now in Los Angeles, California. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

7091. **Product Name:** Harmony Farms Non-Dairy Rice Drink (Fat Free, Aseptic Pack) [Original, or Vanilla].
Manufacturer's Name: American Natural Snacks (Marketer-Distributor).
Manufacturer's Address: P.O. Box 1067, St. Augustine, FL 32085. Phone: 904-824-8181.
Date of Introduction: 1996. June.
Wt/Vol., Packaging, Price: 1 quart (32 oz) Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad (full-page, color) in Natural Foods Merchandiser. 1996. June. p. 31. "The girls are not happy... Mooooove over, Milk." Color photos show: The package and label for both flavors of product. Three cows standing in a field.

7092. Hattersley, Joseph G. 1996. Sudden infant death–Linked to soy products, processed milk & milk formulas. *Australasian Health and Healing* 15(3):46-48.
• ***Summary:*** Much of his information is based on an article by Sally W. Fallon and Mary G. Enig published in *Health Freedom News* (Oct. 1995, by National Health Federation, Monrovia, California).

7093. House Foods America Corporation. 1996. Report 1996. Tokyo, Japan. 14 p. 28 cm. [Eng]
• ***Summary:*** A colorful English-language annual report. Contents: Corporate philosophy. Financial highlights. To our shareholders, from Kunihiko Otsuka, President (June 1996). Product information. Overseas activities (with world map). Domestic company facilities (with map). Balance sheet. Income statement / appropriation. Of retained earnings. Board of directors. Company history.

For the ear ended March 31, 1996, the following are in U.S. dollars: Sales: $1,713 million (down from the peak in 1994). Net income (profit): $75.12 million (down from 1994 and 1995). Net income per share: $0.659 (down from the peak in 1994). Company history: 1913 Nov. 13–Company founded by Seisuke Urakami, the first president, who started Urakami Shoten as an enterprise dealing in herbal medicine supplies in Osaka, Japan. 1926–Production and sales of curry began. 1947–The business was incorporated under the name Urakami Ryoshoku Kogyosho, Ltd., with an initial capital of ¥197,500. 1949–Firm name was changed to House Curry Urakami Shoten Ltd. 1954–Tokyo office opened. 1960–Firm name was changed to House Food Industrial Co., Ltd. (*House Shokuhin Kogyo*). Indian curry introduced. 1963–Vermont curry introduced. 1971–Stock first listed on both Tokyo and Osaka Stock Exchanges. 1973–Introduced House Hontofu, an instant tofu to be made at home by adding GDL to powdered soymilk. 1981–Los Angeles office established.

1983–Curry House restaurant specializing in curry opened in Los Angeles. 1983–Purchased a share of a tofu company in Los Angeles, renamed House Foods & Yamauchi, Inc. 1993–Firm name was changed to House Foods Corporation.

Note: On 2 April 1997 House Foods Corporation was selling for about $12 per share; the minimum purchase was 1,000 shares. Address: 5-11, Nihonbashi Honcho 2-chome, Chuo-ku, Tokyo 103, Japan. Phone: (03) 3243-1231.

7094. Jacobi, Dana. 1996. The soy of cooking: Throw out your old ideas about soy–These innovative recipes bring out the delicate, sophisticated flavor of soy. *Natural Health.* May/June. p. 76-81, 138-44.
• ***Summary:*** Contents: Introduction (incl. health benefits and isoflavones). Soy, the next generation. Soymilk: Cooking tips, how to buy. Tempeh: Cooking tips, how to buy. Fresh green soybeans: Cooking tips, how to buy. Soy meats: Cooking tips, how to buy. Newfangled tofu: Cooking tips, how to buy. Recipes include: Soymilk smoothie. Thai salad with savory tofu. Garlic tempeh croutons. Green soybeans with pickled cabbage and ginger. Barbecued beans and tempeh bacon or tofu franks. Chili with black soybeans. Chocolate pote de crème.

A sidebar discusses: Powdered soymilk, soycheeses, soy sour cream, soy yogurt, soy-based cream cheese, margarine substitute (Spectrum Spread containing canola oil and soy isolate). Address: Food writer, New York, NY.

7095. Lambrecht, Hillary S.; Nielsen, S.S.; Liska, B.J.; Nielsen, N.C. 1996. Effect of soybean storage on tofu and soymilk production. *J. of Food Quality* 19(3):189-202. June. [22 ref]
• ***Summary:*** Century 84 and Century -L2L3 (lacking lipoxygenase isozymes 2 and 3), near isogenic soybean varieties, were stored at five temperatures and relative humidities for up to 3 months. Soybean storage above 25ºC and 50% relative humidity adversely affected the quality of the resulting soymilk (reduced pH and solids content) and tofu (decreased yield and moisture content, gave a darker color). Century -L2L3 soybeans were more resistant to changes during adverse storage than were Century 84 soybeans. Address: 1-3. Dep. of Food Science, 1160 Smith Hall, Purdue Univ., West Lafayette, Indiana 47907. Phone: (317) 494-8328.

7096. *SoyaCow Newsletter* (*Ottawa, Canada*). 1996. SSP of Indian manufactures SoyaCow SC20 for the world. 5(2):1. April/June.
• ***Summary:*** "The successful technology transfer of the SoyaCow SC20 to SSP (Private) Ltd. of Faridabad, India, means that ProSoya can now discontinue manufacturing these units in Canada. This is a positive development for all concerned because it means an all stainless-steel system available at a lower price than the aluminium-stainless hybrid systems previously in Canada."

"An additional benefit is that Child Haven International, which introduced the SoyaCow to India and placed the first 12 Canadian made systems there in 1992-1994, will receive a royalty on the sale of these systems. This is a direct result of the grant of the Indian patent rights to the SC20 by ProSoya to Child Haven for the humanitarian work.

A large photo, with a black background, shows the SoyaCow SC20 manufactured by SSP.

7097. *SoyaCow Newsletter* (*Ottawa, Canada*). 1996. High Commissioner of India visits ProSoya. 5(2):2. April/June.
• ***Summary:*** "His Excellency Mr. Prem Budhwar and his wife Kusum Budhwar, visited ProSoya [in Ottawa, Ontario, Canada] on June 11. The occasion was the arrival and unveiling of the first satisfactory "Made in India" SoyaCow SC20. Among those who welcomed them at ProSoya were Fred and Bonnie Cappuccino of Child Haven International [which they founded in 1985; http://www.childhaven.ca/ourstory.htm] who are recent recipients of the Order of Canada Award for their humanitarian work."

A photo shows the whole group together with an Indian SoyaCow SC20; also in the photo are Rashmi Gupta, Rajendra Gupta, and Frank Daller.

7098. Vitasoy (U.S.A.) Inc. 1996. We've moved (Card). 400 Oyster Point Blvd., Suite 201, South San Francisco, CA 94080. 1 p.
• ***Summary:*** This 4½ by 6-inch card, printed red on white, mailed June 11, announces that Vitasoy has moved its corporate headquarters to 400 Oyster Point Blvd., Suite 201, South San Francisco, California 94080. Phone: (415) 583-9888 or 1-800-VITASOY. Fax: (415) 583-8881. The old address was: P.O. Box 552, Brisbane, California 94005. Address: South San Francisco, California. Phone: (415) 583-9888.

7099. Washam, Cynthia. 1996. The incredible, edible soybean: Soy, doctors, say, can help prevent cancer and heart disease, and even lower blood cholesterol. *E: The Environmental Magazine.* June. [4 ref]
• ***Summary:*** "Step aside, beta carotene. Take a back seat, complex carbos. The hottest new nutrients are 'isoflavones,' natural compounds credited with preventing everything from heart disease and cancer to osteoporosis and hot flashes. The principal source of isoflavones? Foods made with soybeans, such as soy milk, soy burgers, and tofu." Address: 2425 N.E. Gardner Lane, Jensen Beach, Florida 34957.

7100. **Product Name:** Westbrae Natural Rice Beverage (Half Gallon, Non Dairy) [Vanilla].
Manufacturer's Name: Westbrae Natural Foods (Product Developer-Distributor).
Manufacturer's Address: Gardena, CA 90746.

Date of Introduction: 1996. June.
Ingredients: Plain: Rice base (filtered water, brown rice syrup, rice starch), expeller pressed canola oil, tricalcium phosphate, pea protein, natural flavors, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, riboflavin.
Wt/Vol., Packaging, Price: Half gallon Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad (1/3 page, color) in Vegetarian Times. 1996. June. p. 64. "Only Westbrae–First in half gallons. The best just got bigger." A photo shows the front of the package. The text reads: "New. Pour 'n Seal. Enriched with vitamins A, B and D and calcium. Only 1% fat."

7101. Kobold, Christy. 1996. How to get statistics on exports from and imports to the USA using PIERS (Port Import Export Reporting Service) (Interview). *SoyaScan Notes.* July 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** PIERS is a computerized database with detailed records on all import and export transactions through U.S. ports. It is produced by *The Journal of Commerce,* which started in San Francisco in 1827. The PIERS division started in 1972-73. They have 125 reporters at all U.S. ports (including Alaska, Hawaii, and Puerto Rico) who enter information into their database information from bills of lading and vessel manifests. Import data is now 100% electronic. Reports are produced on a weekly, monthly, or quarterly basis by port, by destination, product type, etc. There are five formats/media: Printed report (hard copy), tape, diskette, CD-ROM, and on-line access. One report costs $450. The 3 big ports on the west coast of the USA are Oakland and Long Beach (California), and Vancouver (BC, Canada); few imports come into San Francisco any more. The information available from PIERS is found in the following import and export data fields: Product description (as shown on bill of lading or manifest). PIERS product code. Harmonized Tariff Code and Description (assigned by PIERS, not copied from ship documents). Overseas country name. U.S. port name. Overseas port name. Container size, container quantity, TEU count and cubic feet. Steamship line and vessel name. Manifest number. Cargo quantity and unit of measure. Cargo weight. Voyage number. Shipment value. Payment type. Shipment direction. Bank name. Address: 425 California St., Suite 2450, San Francisco, CA 94104. Phone: 1-800-824-7537.

7102. Fletcher, David. 1996. Mothers urged to seek advice over babies' soya milk. *Daily Telegraph* (*London*). July 18 or 19.
• ***Summary:*** Mothers who feed their babies on soya milk formulae in preference to those made from cows' milk should seek their doctors' advice on whether to continue doing so, the Department of Health said yesterday.

"It follows research showing that naturally-occurring chemicals similar to those contained in soya can cause infertility and sexual abnormalities in animals.

"The department stressed that there was no evidence suggesting a similar effect in humans and it was not recommending that mothers should stop feeding soya-based milk to their babies.

"But it announced that it is giving 'high priority' to research investigating whether soya milk formulae carry any risk to the future development of babies' reproductive organs.

"Sir Kenneth Calman, the Chief Medical Officer, said: 'Mothers who have been advised on medical grounds to give their babies soya-based formulae should continue to do so.'

"However, parents who had chosen soya milk in preference to cow's milk–such as vegans and those opposed to eating animal products–should seek their doctor's advice, he added.

"He activated the department's 'urgent cascade system' to send out more than 60,000 letters to alert all general practitioners, practice nurses and community pharmacists to the warning.

"Concern centres over naturally occurring chemicals present in soya called phytoestrogens." Address: Health Correspondent.

7103. Laurence, Jeremy. 1996. Parents warned over soya milk. *Times* (*London*). July 19.
• ***Summary:*** "Parents who choose to give their babies soya-based infant formula milk should seek medical advice about the risks, the Government said yesterday.

"A committee of independent scientists appointed by the Health Department has said that phytoestrogens found in soya-based infant formulae can, in certain situations, behave like a very weak form of oestrogen, the female hormone. In animals this has caused fertility problems.

"The Committee on Toxicity of Chemicals in Food. Consumer Products and the Environment says there is no evidence of damaging effects in humans."

7104. New Zealand Ministry of Health. 1996. Soy based infant formula a useful alternative (News release). New Zealand. 2 p. July 19.
• ***Summary:*** "Breast milk is best for infants. Dairy based substitute formulas can be used if needed however, and under the advice of a health specialist soy based infant formulas are a useful alternative for babies who cannot tolerate dairy based formulas, says Dr. John Eastwood, Ministry of Health Paediatrician.

"A recent statement from the Chief Medical Officer of the United Kingdom Department of Health that if your doctor or health professional has recommended that you feed your baby soy based infant formula, you should continue to do so. This is in line with the advice that the Ministry has

been providing in New Zealand since August 1995."

Note: Letter from Richard James of New Zealand. 1998. This was issued to all media by the Ministry of Health (NZ) to counteract the report of the British Expert Committee on Toxicity, which the New Zealand government wished to suppress. A more thoughtful release titled "Soy infant formula: Soy formula risk?" was issued the same day by the Soy Information Network.

7105. Roberts, Rosemary. 1996. Soy milk move elates North pair. *Northern Advocate* (*Whangarei, New Zealand*). July 19.
• ***Summary:*** "An acknowledgement by British health authorities yesterday of a potential health risk to infants from phytoestrogens in soy milk has elated Whangarei couple Richard and Valerie James.

"Representatives of the soy industry and consumer groups were summoned to an urgent meeting in London yesterday.

"Britain's Chief Medical Officer, Sir Kenneth Calman, announced that the government's Committee On Toxicity (COT) had recommended that research be undertaken "as a matter of high priority" to determine whether soybased infant formula affected infant reproductive development."

"In the wake of the announcement, the British Department of Health's Food Advisory Committee has said manufacturers should investigate means of reducing the levels of phytoestrogens in soy-based infants formulas as a precautionary measure.

"Mr and Mrs James have been campaigning for about three years to have soy infant formula removed from the market."

7106. Soy Information Network. 1996. Soy infant formula: 'Soy formula risk?' (News release). New Zealand. 2 p. July 19.
• ***Summary:*** "The United Kingdom Department of Health yesterday recommended that research should be undertaken 'as a matter of high priority' to determine whether soya-based infant formulae create risks to the normal reproductive development of infants.

"The recommendation follows reports of a Department of Health committee of independent experts on the effects of phytoestrogens on animals and humans. The report found that phytoestrogens, or plant oestrogens, were a cause of infertility in animals, and influenced the menstrual cycle in women. It had also been shown to cause androgenisation of females and feminisation [feminization] of males in certain species. Soy beans contain high levels of phytoestrogens.

"The Committee said it did not have any data 'specifically relating to the potential effects of soy phytoestrogens in human infants.'"

"The Committee has stopped short of recommending the removal of soy formulae from the market, but recommends that it should be used only when prescribed by a doctor or other health professional. Manufacturers of infant formulae have been urged to investigate means of reducing the levels of phytoestrogens in soya-based formulae as a precautionary measure." Address: P.O. Box 100 212, North Shore Mall Centre, New Zealand.

7107. *United Press International Financial Wire.* 1996. Product recall pounds Vitasoy profits. July 23.
• ***Summary:*** Profits of Vitasoy International dropped 75% last year, largely because of a massive product recall in January which the company said cost it US$10 million (80 million Hong Kong dollars). The recall affected about 30 million cartons of soya milk, lemon tea, and fruit juices sold mostly in Hong Kong, Macau, and southern China, but also in 23 other countries in Europe, the Americas, Africa, and Asia. Despite the setback, Vitasoy promised to pay investors a dividend of 1.2 cents (9.6 Hong Kong cents) per share, the same as the dividend last year. Vitasoy's performance was not all bad: turnover actually increased by 4% to $169 million.

7108. Chisholm, Donna. 1996. Soya-based baby formulas warning. *Sunday Star-Times* (*Auckland, New Zealand*). July 28.
• ***Summary:*** Soya-based infant formulas only on the advice of a physician, following a UK Health Department report recommending urgent research into the safety of such products, say New Zealand researchers.

"The chief medical officer of the British Health Department wants the research done 'as a high priority' to determine whether the formulas affect infant reproductive development because they contain phytooestrogens (plant oestrogens). The chemicals influence women's menstrual cycles and have been shown to cause infertility to animals."

7109. Chambers, Norm. 1996. Growing and selling low-lipoxygenase soybeans in Iowa for making improved tofu and soymilk (Interview). *SoyaScan Notes.* July 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Please begin by reading the July 1996 interview on this subject with Dr. Walt Fehr of Iowa State University. Norman and John Chambers, a father and son team, refer to the soybeans that they grow under license from Iowa State University in various ways: "low lipoxygenase soybeans," "low lipo (pronounced LAI-po) beans," "Laura beans," and 2001 beans. They grow these mostly under contract with end users, so each company or person who wants some places a firm order in the spring before planting time and receives the special soybeans in about September. Last year they grew about 50 acres of these special soybeans, with a yield of about 50 metric tons cleaned. Since 1 metric ton = 2,204.6 lb and a bushel of soybeans weighs 60 lb, there are 36.74 bushels in a metric ton, and 50 acres would yield about 1,837 bushels. The price last year was $13.00 per bushel FOB

Iowa. They are sold in 30 kg (66 lb) bags. Fairview Farms always grows somewhat more than the amount contracted for; they presently have 107 bags and about 425 bushels unbagged in the bins available for sale.

All of their customers for these special soybeans are overseas. From last year's crop they sent one container to Slovakia (to Alfa Bio), one to Singapore, and one to Japan (*Taishi Shokuhin*). They did not sell any in the USA. Address: Fairview Farms, 2304 150th St., Corwith, Iowa 50430. Phone: 515-583-2198. Fax: 515-583-2192.

7110. Fehr, Walter R. 1996. Commercial sources of and information on soybeans specially bred to be low in lipoxygenase and to give tofu and soymilk with little or no "beany" flavor (Interview). *SoyaScan Notes.* July 29. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** There are 3 lipoxygenase enzymes in soybeans that cause beany flavors. Iowa State has developed several soybean varieties that lack lipoxygenase-2 (L-2), the most active lipoxygenase enzyme. These are now commercially available; Dr. Fehr thinks that the best and most widely tested of these is IA2011. Varieties that lack two, or all three lipoxygenase enzymes are also under development. Dr. Fehr has made tofu and soymilk using the soybean lacking L-2 and found that these products have no detectable beany flavor. To order these varieties, contact any of the suppliers, such as Norman and John Chambers (father & son team), Fairview Farms, 2304 150th St., Corwith, Iowa 50430. Phone: 515-583-2198 (office) or 515-583-2330 (home). Fax: 515-583-2192. They grow these varieties themselves and subcontract the rest out to farmers in the area. Fairview Farms has many Japanese customers; Dr. Fehr does not know if they have any U.S. customers. For a complete list of licensees for the lipoxygenase-free soybean varieties, contact Julie Gustafson at Iowa State University, phone 515-294-9442. This fall Iowa State will be releasing seed of a "triple null" variety with L-1, L-2, and L-3 all missing.

Roughly 6-10 studies have been published (mainly by Nielsen at Purdue Univ. (Indiana), Hymowitz at Univ. of Illinois, and Dr. Kitamura at Tsukuba, Japan) where these soybeans have been used on a laboratory scale to make tofu and soymilk, and the flavor of those products were compared with similar products made from typical soybeans. Japanese consumers do not particularly favor the absence of the lipoxygenase enzyme; they like tofu and soymilk with some (but not a lot of) so-called "beany" flavor. As far as Dr. Fehr knows, no one has ever tested these soybeans lacking lipoxygenase on American consumers–but the information system is very closed and confidential. Dr. Fehr's group has not published anything on lipoxygenase, although they have research underway.

A world leader in this area Dr. Kitamura at the National Agricultural Research Center, 3-1 Kannondai, Tsukuba, Ibaraki 305, Japan. His group developed the genotype (named something like Kyushu) which is absent of any of the 3 known lipoxygenase enzymes, then he shared this variety with U.S. soybean breeders working on this problem. Dr. Kitamura has a series of excellent of papers on this subject, but he has "not found a home for his special soybean in terms of the consumer market." Nor has anyone found any customers for the soybean from Iowa State missing L-2 enzyme. Address: Dep. of Agronomy, Iowa State Univ., Ames, Iowa. Phone: 515-294-6865.

7111. Harrigan, Brian. 1996. Update on ProSoya in Russia. Current prices of equipment (Interview). *SoyaScan Notes.* July 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Russia has been ProSoya's single best source of income. To date ProSoya has sold 60-70 SC-20s, and one SC-100. By the end of August, ProSoya will also have sold eight SC-2000s (which produce 2,000 liters/hour of soymilk). Most of the latter large soymilk machines are being sold to a former dairy factory in Korenovsk, located about 35 miles northeast of Krasnodar in southern Russia, just northeast of the Black Sea. It was purchased by ASSOY–the Russian Soybean Association (Alexander Podobedov, director), which shut down the dairy operations completely and converted the plant to 100% soymilk production. Most of this soymilk is spray dried (powdered), and sold for half the price of dairy milk. ASSOY has conducted a very ingenious marketing effort on behalf of soymilk in southern Russia and is winning many converts.

The current prices (in U.S. dollars) of ProSoya's three basic types of soymilk equipment are as follows: SC-20–$6,900 (now made in India); SC-100–$65,000 to 100,000; lower prince models do not include boiler or chiller; SC-2000–$200,000 to $300,000. Address: Executive Vice President, ProSoya Inc., 5350 Canotek Road, #7, Gloucester, Ottawa, ONT, K1J 9C9, Canada. Phone: 613-745-9115.

7112. Harrigan, Brian. 1996. Actini, Actimonde, and the Agrolactor (Interview). *SoyaScan Notes.* July 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Actini is an active French company (located in eastern France on the southern shore of Lake Geneva) that makes the Agrolactor. The company president is Jean de Stoutz. ProSoya is now working closely with Jean de Voisin of Actimonde (the soy division of Actini), who has had a a great deal of experience for many years in Africa and Asia. He is a UHT and packaging specialist, who now lives in southern France and works as a consultant. Actini has sold about 100 of these machines, mostly in Third World countries, especially in Africa (to former French colonies). One puts dry soybeans (without soaking) into the machine and out comes formulated soymilk. The yield of soymilk is relatively low, with mostly suspended (rather than dissolved) solids since the soybeans are not soaked. The machine is very compact and can make about 200

liters/hour of soymilk using a continuous process. The base model (all you need to make soymilk) costs about $80,000 to $90,000. The yield from 1 kg of dry soybeans is 5½ to 6 liters of soymilk containing 7% dissolved solids. ProSoya's equivalent machine gets 7½ liters of soymilk, if you rewash the okara. Address: Executive Vice President, ProSoya Inc., 5350 Canotek Road, #7, Gloucester, Ottawa, ONT, K1J 9C9, Canada. Phone: 613-745-9115.

7113. American Natural Snacks. 1996. The girls are not happy (Ad). *Natural Foods Merchandiser.* July. p. 35.
• ***Summary:*** This is an ad for Harmony Farms Fat-Free Non-Dairy Rice Drink. A large color photo shows 3 cows standing in a field. The product "is priced *every day* lower than other rice and soy beverages... You might say the whole package–taste, look, price, promotion–is udderly irresistible. And while the girls may try and try–till the cows come home, as it were, they'll never be able to do vanilla!" Address: P.O. Box 1067, St. Augustine, Florida 32085-0410. Phone: 904-825-2057.

7114. Bertani, Elizabeth. 1996. Make room for oat milk: Meet an intriguing new nondairy beverage, born out of high-tech innovation and marketing savvy. *Natural Foods Merchandiser.* July. p. 72.
• ***Summary:*** "History of oat milk: Development of oat milk began more than seven years ago when Swedish farmers, scientists, food producers and packaging companies formed a cooperative venture that provided university professors with data substantiating the demand for oat-based products to serve consumers with lactose intolerance, vegetarian or vegan diets, and cholesterol concerns."

Oat milk was introduced into the USA in March 1996 at Natural Products Expo West by a sales and distribution company based in Salt Lake City, Utah. Address: Free-lance writer, Boulder, Colorado.

7115. **Product Name:** Granose Non-Dairy Custard.
Manufacturer's Name: Haldane Foods Group.
Manufacturer's Address: Howard Way, Newport Pagnell, Buckinghamshire MK16 9PY, England. Phone: +44 1908 211311.
Date of Introduction: 1996. July.
Ingredients: Soymilk.
Wt/Vol., Packaging, Price: 70 gm sachet. Retails for £0.49 (7/96, England).
New Product–Documentation: Spot in Soyafoods (ASA, Europe). 1996. Summer. p. 4. "Six new products from Haldane Foods." This is a vegan product, containing no dairy products. A black-and-white photo shows the package.

7116. Natural lifestyle magazine and mail-order market: Spring-summer '96. 1996. Asheville, North Carolina: Natural Lifestyle Supplies. 63 p. Catalog. 28 cm.
• ***Summary:*** A macrobiotic mail-order catalog with several nice articles, it sells many types of soyfoods and related products, including the full line of Kushi Cuisine, organic soybeans (yellow and black), azuki beans, amazake, Rice Dream, soymilk, Westbrae Malteds, Nasoya Vegi-Dressings, Nayonaise, Farmhouse Tekka [miso], organic soy sauce, fresh tofu, snow-dried tofu, kuzu, and miso. Publisher: Tom Athos. Editor and graphic design: Debbie Athos. Address: 16 Lookout Drive, Asheville, North Carolina 28804-3330. Phone: 1-800-752-2775.

7117. Ono, Tomotada; Takeda, Motoyoshi; Guo, Shuntang. 1996. Interaction of protein particles with lipids in soybean milk. *Bioscience, Biotechnology, and Biochemistry* 60(7):1165-69. July. [14 ref]*
Address: 1. Dep. of Agro-Bioscience, Faculty of Agriculture, Iwate Univ. Ueda 3-18-8, Morioka, Japan.

7118. *Pravda* (*Slovakia*). 1996. [Dangerous milk]. [Slk]*
• ***Summary:*** "London–Parents who give their children milk made from soy expose their descendants to health risk. A group of independent scientists working on human health declared that phytoestrogens in soymilk behave in some situations like a weak form of estrogen, the female hormone. The animal experiments showed that phytoestrogens in soy milk could cause problems with human fertility."

Letter (fax) from Dominik Belco, commercial manager of Alfa Bio s r.o. in Slovakia. 1996. Aug. 1. This article, which was published in the Slovak newspaper Pravda, caused quite a big reaction among consumers of soy milk and other soy products. After this article was published, another person who is head of a science institute, said that soy milk is dangerous only for children under 3 years of age.

7119. Roudybush, Tom. 1996. Misconceptions about soy. *Australian Birdkeeper* 9(3):141-43. June/July.
• ***Summary:*** For the past 3-4 years the author has had conflict with Mr. Richard James of New Zealand "about the death of some of his birds and the possibility that their deaths were due to the use of soy products in the feeds I make." Mr. James is the only person who has ever complained about this matter to the author, who subsequently did extensive research into the complaint. After attending the Third International Conference on Phytoestrogens (3-6 Dec. 1995), organized by the National Center for Toxicological Research, a part of the United States Food & Drug Administration, "I can now say with confidence that my feed had nothing to do with the deaths of the birds in New Zealand or elsewhere and that there is no evidence that soy infant formulas cause any harm to infants."

The author's company has a standard policy when such problems arise. "It states, in essence, that I will have my veterinarian contact the customer's veterinarian and allow them to work up the problem to their mutual satisfaction.

No matter what the outcome, I will pay all the expenses incurred by my veterinarian. If there is a problem with the feed, I will also pay for the customer's veterinary bills and for any damages. If we are unable to solve the problem, but find no problem with the feed, we drop out of the process. In my mind this is a fair and generous policy which allows the customer to undertake relatively extensive diagnostic procedures at no cost. When I offered this policy to the couple in New Zealand, he declined and eventually cut me off from any further information on the issue. He did, however, continue to seek a public forum for his unsupported views."

The soy products in the bird feeds in question were obtained from Roudybush in California. Many other birds were fed this feed and none experienced any problems. "Soy simply wouldn't have killed one set of birds and left others in good condition. Toxins don't work that way.

"Death at his own hands: I believe we have found the cause of death of the birds. They died from a virus variously called polyoma virus, papova virus or budgie fledgling disease. This disease is consistent with all we know about the situation."

Note: See the rebuttal to this article by Valerie James in this magazine, Vol. 9, issue 5, p. 249-50, Oct/Nov. 1996. In the same issue see her letter to the editor (p. 214).

7120. *Soyafoods* (*ASA, Europe*). 1996. UK government approves alternative name for 'soya milk.' 7(2):2. Summer.
• ***Summary:*** The newly approved name is "Soya–Non-dairy alternative to milk." All British soya milks must be re-labelled using this name because of a June 1994 ruling of the EC Management Committee for Milk and Milk Products.

7121. *Soyafoods* (*ASA, Europe*). 1996. Compact soyamilk processing machine. 7(2):3. Summer.
• ***Summary:*** This soymilk machine, the size of a washing machine, is made by: Tantraco Enterprise Pte. Ltd., P.O. Box 72, Jalan Kayu Post Office, Singapore 91 8003. Phone: +65 482 3575.

7122. *Soyafoods* (*ASA, Europe*). 1996. An interview with Mark Messina. 7(2):6-7. Summer.
• ***Summary:*** This September, Mark will chair the Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease in Brussels. He is a leading expert on soy nutrition. All of the presentation at this conference will discuss new research. Whereas the First International Symposium in 1994 focused almost exclusively on cancer and heart disease, at this one there will be separate sessions on kidney disease, bone health, and hormonal effects (dealing to a large extent with menopausal symptoms). "Also there will be a satellite symposium comprising two sessions. One will focus on some of the controversies surrounding phytoestrogens (such as the safety of soya infant formulas) and the other will focus on isoflavone absorption and metabolism."

Question: "For you, what are the most exciting areas of research into soya at the present time? Messina: The effects of soya on heart disease unrelated to cholesterol reduction and the effects of soya on menopausal symptoms. But I got my start in this field by studying the relationship between soya consumption and cancer risk. Although this relationship is very speculative, it is exciting because of the numbers of studies suggesting the consumption of just one serving of a soya product per day may reduce the risk of several different types of cancers." Many "people have heart attacks with normal cholesterol levels. The effects of soya on cholesterol oxidation, vasodilation, smooth muscle cell proliferation, etc. may be at least as important as the hypocholesterolemic effects of soya."

Question: "What do you hope will be the conclusions of this symposium? Messina: From an academic perspective, I hope we can reach some conclusions about the mechanism(s) responsible for the hypocholesterolemic effects of soya. In my opinion, this is a very important question that has tremendous practical implications. I also hope some conclusions are reached about the safety issues. Finally, in addition to generally increasing awareness, I would like to see the meeting stimulate the kinds of research that are most needed to ascertain the public health significance of soyafood consumption."

Question: "What specific areas of research require greater effort? Messina: The anticancer effects are potentially most important, but it is extremely difficult to prove relationships between diet and cancer risk. Therefore, I would like to see more work done on the effects of soya on heart disease unrelated to cholesterol reductions, and finally on the effects of soya on bone health, and menopause symptoms."

An excellent, detailed summary of Dr. Messina's research and publications follows. His doctorate research involved the effects of cruciferous vegetables on colon cancer.

7123. *Soybean Quarterly* (*Nebraska Soybean Board, Lincoln, Nebraska*). 1996. Soy reduces effects of osteoporosis. 2(3):2.
• ***Summary:*** Research indicates that consuming soy as part of a healthful diet may be one way to low risk of osteoporosis. This disease affects 15 to 20 million Americans, especially women. "High protein diets are associated with an increased loss of calcium in the urine. When it comes to protecting bone health, decreasing loss of calcium from the bones may be more important than consuming more calcium. Soy protein offers excellent quality protein, with less calcium loss compared to the same amounts of animal protein.

"Estrogen replacement therapy may reduce the risk of bone fractures by 50 percent." Soybeans and most soyfoods are a unique source of isoflavones, which mimic estrogens

and may help promote bone health. In animal studies, isoflavones have been found to inhibit bone fracture and stimulate bone formation.

Many soyfoods, especially calcium-set tofu and calcium-fortified soymilk, but also soybeans, textured vegetable protein, and tempeh are good sources of calcium that are well absorbed by the body.

7124. Takai Tofu & Soymilk Equipment Company. 1996. Catalog of small and medium-scale equipment. 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 8 p. 30 cm.
• ***Summary:*** This is a new edition of this catalog, printed with brown ink on glossy white paper. Across the top of the first page is written "The world's leading supplier of tofu & soymilk equipment."

Page 1 states: "During the 1960s and 1970s Takai gained a great deal of experience exporting our equipment to large and small Japanese- and Chinese-run manufacturers of tofu and soymilk in the United States, Europe and Southeast Asia. Then in early 1977, with the rapid growth of interest in soyfood products in the West, we began to work closely with William Shurtleff, author of *The Book of Tofu* and *Tofu & Soymilk Production,* to develop our first- and the world's first–English-language catalog, which appeared in August 1977. Since that time we have become the world's leading supplier of tofu and soymilk equipment. We have sold our equipment to hundreds of new and established companies worldwide, and we are constantly upgrading our equipment materials and quality (as with stainless steel) to meet the highest standards. To give you the widest possible choice of the best equipment available, we also include a number of items produced by other well-known Japanese manufacturers." Address: Ishikawa-ken, Japan. Phone: +81 76 294 1712.

7125. Vitasoy International Holdings Ltd. 1996. Annual report 1995/96. New Territories, Hong Kong. 104 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** For the fiscal year ended 31 March 1996, group turnover (sales) was HK$1,301 million, up 4% over the previous year. Of these sales, 70% came from Hong Kong, 19.6% from North America, and 10.5% from the rest of the world. Operating profit was down dramatically due to a big recall crisis which cost HK$79.9 million. Earnings per share were 6.0 cents, down 75%. Dividends for the year were 9.6 cents, the same as the previous year.

Chairman's statement: A crisis contained: Because of the "sour-taste" crisis, the Group decided to suspend temporarily operations at its plants in Hong Kong and China and to recall all Tetra Pak products from the markets in Hong Kong and Macau. These actions were in line with our policy of always putting our consumers' interests first" (p. 6).

"In North America, the Group continued the trend set in the first half and turnover grew by 10% for the year. The overall consumption of tofu has significantly increased due to newly published medical evidence–and public awareness–of the health benefits of soya protein and its effect on cholesterol reduction" (p. 7).

In the section on "Markets" (p. 8) is more detail on the North American market, where "the Group achieved sales of HK$25 million, representing an increase of 10% over the previous year. Despite unexpected sales shortfalls in beverage, the net operating profit of the Group in North America jumped 14%.

"Tofu products were the largest contributor, accounting for 40% of turnover. Tofu also realized the healthiest growth of over 17%. This was followed by beverages which made up about 39% of the region's total sales. Owing to order backlogs, sales were hardest hit in the Canadian traditional markets, resulting in reduced sales of almost 25%. The Hong Kong recall had little impact on the North American Vitasoy soyamilk sales in terms of consumer confidence.

"Secondary line products made up 11% of the region's turnover, representing a 16% increase. The dressings line comprised about 5% of total revenues, representing a 12% growth, while two new product lines under the Newmenu brand, Tofu Mate seasoning and Meat Analog, contributed an additional few percent to sales." Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

7126. Wells, Jeff. 1996. Genetic ID: A new technique for determining which plants or foods contain genetically altered material (Interview). *SoyaScan Notes.* Aug. 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Genetically altered Roundup-Ready soybeans, developed by Monsanto, have now passed FDA and USDA approval and are on the market. At the moment, Genetic ID is focusing on soybeans, because the impact and scale of soybeans is very considerable, in part because a large amount ends up in a great variety of processed foods. To the best of Jeff's knowledge, the Roundup-Ready soybean is the only genetically altered variety of soybean now on the market. If anyone sends Genetic ID a sample of a plant (any part, the seed, the leaf, the root, etc.) or a food, and asks "Has this been genetically altered?" they can determine the answer by a very sensitive, proprietary test. If even a fragment of some altered gene is present, this test will detect it. The company does not have a patent on the process, but they are considering applying for one.

They find out what genetically altered plants have been approved by USDA and FDA, go to the Web site http://www.Aphis.usda.gov/bbep/bp/ and read the list. This list, which deals with Biotechnology Permits (BP) is up to date and an important part of the public disclosure process. Companies must apply for permits at each stage of the development of a new plant–for example at the field testing stage.

The main issue in this area worldwide is concerned

with labeling genetically altered foods. Monsanto and the others are saying, "There is no need to label such foods because there are no health risks and no significant difference compared to other foods or seeds." Jeff believes that Europe has a more intelligent understanding of this controversial process than the USA. Europe appears to be moving toward requiring labeling of all plants and foods containing genetically modified organisms (GMOs). Some Scandinavian countries have outlawed GMOs and genetically altered food within their borders; they feel there are environmental risks and too little is known about the consequences.

Monsanto sells a bag labeled "Roundup-Ready Soybeans to farmers, but the farmer is not required to notify food processors that the soybeans are genetically altered. Monsanto is saying, there is no way to distinguish a genetically altered soybean from one that is not altered. But Genetic ID has the technique that can tell the difference. They have a fine scientific staff with 20 years of experience. They have raised capital by approaching private investors; they are not a corporation but a limited liability company (LC).

Concerning milk made with Monsanto's Bovine Growth Hormone (rBGH), a bacterium is first genetically altered in the laboratory. This altered bacterium produces a hormone (that is very slightly different from natural hormone), which is injected into the cow to make the cow produce more milk. Only a very small quantity of the hormone ends up in the milk, and it is very difficult to tell which milk contains this unnatural hormone. Genetic ID does not have immediate plans to test milk for rBGH. Address: Genetic ID, 500 North 3rd St. Suite 208, Fairfield, Iowa 52566. Phone: 515-472-9979.

7127. Gupta, Rajendra P.; Wood, Grant W. 1996. Energy efficient centrifugal grinder. *U.S. Patent* 5,544,821. Aug. 13. 8 p. Application filed 22 June 1995. 5 drawings. [1 ref] Address: 1. 9 Veery Lane, Ottawa, ONT, K1J 8X4 Canada; 2. 836 Vinette Crescent, Orleans, ONT, K1E 1W9, Canada. Phone: 613-745-9115 or 613-744-4401.

7128. Sheridan, Margaret. 1996. The recall of Vitasoy soymilk in Hong Kong (Interview). *SoyaScan Notes.* Aug. 18.
• ***Summary:*** Margaret lived in Hong Kong for seven years, and was a features writer and food editor for the *South China Morning Post.* In late 1995 and early 1996 (to the best her memory) people started complaining about a sour taste in Vitasoy soymilk products. Fortunately, no one got sick. Initially there was a sort of public panic because Vitasoy is such an important part of Hong Kong life. The government got involved and there was the initial suspicion that someone might be tampering with the product. Vitasoy voluntarily shut down their factory until they could find the cause of the problem and recalled a huge amount of their soymilk (more than 30 million cartons). The company handled the recall very well, being extremely apologetic and forthright about the incident, concealing nothing and vowing to determine the cause at all costs as fast as possible. It was excellent crisis management. This became a big news story in Hong Kong, receiving widespread media coverage. Vitasoy took out advertisements in newspapers and went on TV inviting people to call a toll-free number or return any Vitasoy soymilk for a full refund. After several weeks, the cause was found to be bacterial contamination in one piece of soymilk equipment.

But the shutdown and recall apparently dealt a serious financial blow to the company, and it may have even prevented them from shipping soymilk to their sister company in the United States. Address: Food writer, Los Angeles Times, Los Angeles, California.

7129. *SoyaScan Notes.* 1996. The market for puddings in America (Overview). Aug. 28. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The retail market for dairy puddings in America is valued at about $400 million a year. 98% of the products are aseptically packaged, usually in multi-packs. The market probably would have been bigger if yogurt makers hadn't copied the idea using yogurt, and marketing it to kids.

7130. Galaxy Foods Company. 1996. Annual report 1996. Orlando, Florida.
• ***Summary:*** Sales in 1996 were $3,950,455–down 16.8% from 1995. Net loss was $3,282,58–not as bad as the $5,013,578 loss in 1995.

At the top of the cover is written: "In 1972, Angelo Morini, Galaxy founder and president, became the first in the world to market healthy cheese (formägg)." An attached mission statement reads: "Galaxy invented healthy cheese products free from cholesterol, saturated fat and lactose and introduced them to the world in 1972."

Galaxy now has five rice-based cheese alternatives: Rice Chunk in Cheddar and Mozzarella flavors. Rice Slice in Mozzarella and American flavors. And Rice Parmesan (grated, in a jar). All five are "Soy free."

Page 5 states: "Galaxy's numerous accomplishments in innovation include: 1. The first dairy free individually wrapped cheese slices. 2. The first rice based line of cheese products. 3. The largest line of pareve kosher cheese products. 4. The first meat free line of meat flavored deli cuts. 5. The first individually wrapped cheese slices made with organic tofu. 6. The largest line of lactose free cheese and cheese related products. 7. The first complete line of salad bar cheddar products. 8. The first complete 'Lite Bakery' product line." Photos (p. 3-5) shows all of the company's products. Address: 2441 Viscount Row, Orlando, Florida 32809. Phone: 800-441-9419 or 407-855-5500.

7131. McCord, Holly; Yeykal, Teresa A. 1996. Menopause naturally: Got hot flashes? get soy! *Prevention* (*Emmaus, Pennsylvania*). Aug. p. 65-70. [1 ref]
• ***Summary:*** About 75% of American post-menopausal women experience hot flashes and night sweats, along with sleep disturbances and mood swings. Until now, the only antidote for these unpleasant symptoms has been hormone-replacement therapy (HRT), a prescription medicine the replace the estrogen that women's bodies start making less of. But recently researchers have found that the foods made from the soybean may offer a practical alternative.

"The trail of evidence linking soy with a hot-flash-free menopause starts in Asia." There isn't even a word for hot flash in Japanese. Sherwood Gorbach, M.D., at Tufts University School of Medicine, in Boston, Massachusetts, was one of the first to suggest that the reason for this may lie in the Asian diet, which is rich in soyfoods that contain isoflavones–a natural plant form of estrogen. In one day, a typical Asian woman–who eats about a quarter pound of soyfoods–may be getting 30 to 50 milligrams of isoflavones from her food.

Three clinical studies are now under way to see if and how soy isoflavones work to relieve menopausal symptoms. At Bowman Gray School of Medicine of Wake Forest University (Winston-Salem, North Carolina), Gregory Burke, MD, heads a study of 240 women over age 45 experiencing hot flashes or night sweats. Every day for 2 years the women will drink an 8-ounce soy beverage containing either 1 mg, 34 mg, or 50 mg of isoflavones without knowing which level of isoflavones they're receiving. Researchers will see if more isoflavones relieve their menopausal symptoms or anxiety or mood swings.

Two studies at Tufts University, in Dr. Gorbach's department, are following 60 women with hot flashes. For 3 months, these women will eat either two specially designed almond- or chocolate-flavored soy breakfast bars that each contain 20 mg isoflavones (for a daily total of 40 mg isoflavones) or two placebo bars without isoflavones. Researchers will track the women's reports of hot flashes and night sweats, and their levels of estrogen and other hormones. Though these studies have not been completed, preliminary data look promising says Dr. Gorbach.

A table (p. 67) shows the amount of isoflavones (in mg) in a typical serving of various soyfoods. In descending order: Nutlettes breakfast cereal* (½ cup): 122 mg isoflavones + 140 calories. Beef(Not) textured soy protein granules* (¼ cup dry): 62 mg + 70 calories. Roasted soy nuts (¼ cup): 60 mg + 195 calories. Tempeh (½ cup): 35 mg + 165 calories. Low-fat tofu (½ cup): 35 mg + 54-75 calories. Regular tofu (½ cup): 35 mg + 105-120 calories. Take Care High Protein beverage powder (Protein Technologies International; 2 scoops): 35 mg + 100-130 calories. Regular soymilk (1 cup): 30 mg + 130-150 calories. * = Available from Dixie USA, 1-800-347-3494.

Even if this research doesn't show positive results, other studies show that soy lowers cholesterol and may prevent breast cancer and osteoporosis. "A serving of soy every day could turn out to be a good bet," says Dr. Gorbach. Researchers recommend consuming in the range of 30-50 mg/day of isoflavones. More than 100 mg/day could be harmful, so its is best to get your isoflavones from food instead of pills. Contains two recipes: Creamsicle Cooler (shake with soft tofu; 35 mg of isoflavones). Southwestern Skillet (with Beef(Not); 62 mg of isoflavones).

Address: Research & Development Div. of Kikkoman Corp., 399 Noda, Noda City, Chiba prefecture 278, Japan.

7133. *Ontario Soybean Growers' Marketing Board Newsletter.* 1996. Profile: Harcan Kingsoya Co. Ltd. Aug. p. 7.
• ***Summary:*** Harcan Kingsoya began operations Canada in 1991, in Scarborough. The company was formed by Bernard Leung, Michael Cheung, and a Chinese soyfoods manufacturer in the People's Republic of China. The company's first and main product is soya sauce. They also produce tofu, soymilk, and "dried soybean curd." In the future they also plan to produce "veggie-food" products such as burgers, sausage, and ham. Harcan products are marketed under the Veg-A-King and VAK brand names. The company's market was originally Europe, but now they are shipping to local supermarket chains and wholesalers in Ontario. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

7134. Wang, Huei-Ju; Murphy, Patricia A. 1996. Mass balance study of isoflavones during soybean processing. *J. of Agricultural and Food Chemistry* 44(8):2377-83. Aug. [45 ref]
• ***Summary:*** Discusses: Soybeans (Vinton 81, 1992), soybeans, (Vinton 81, 1993), soybean flour, products made in the lab–Tempeh, soymilk, okara, tofu (momen or cotton, $CaSo_4$ coagulant), whey, soy protein isolate, defatted soy flour, daidzein, genistein, glycitein. Address: Food Science and Human Nutrition, 2312 Food Sciences Building, Iowa State Univ., Ames, IA 50011.

7135. Gerner, Bob. 1996. Update on Vitasoy soymilk and Silk (made by White Wave), seen from a natural food retailer's perspective (Interview). *SoyaScan Notes.* Sept. 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bob still sells Vitasoy soymilk products if he can get them. For the last 4-6 weeks Vitasoy products have

been unavailable and off the market. Vitasoy was Bob's best-selling brand of soymilk, but the shelf has recently been empty. They are just starting to come in now, in small amounts–but no discounts are yet available and Bob cannot get the small sizes yet, only the liters. Starting about 3 months ago, distributors stopped discounting Vitasoy products, no matter how many cases a retailer ordered. Apparently they knew the supply was going to dry up.

Bob was never notified of a recall of Vitasoy products and he does not recall ever having returned any products to them. Bob uses Vanilla Vitasoy regularly to make French toast at his home; he likes it's dessert-like taste and has not noticed any problems with sour taste. Note: According to a Vitasoy employee, Vitasoy USA was unable to get any soymilk from Hong Kong for 3 months. They ran out and were unable to fill orders for a long time. They re-allocated (rationed) a lot of product to minimize the problem. Many people at Vitasoy USA now think (with the benefit of hindsight) that the decision to recall was made too quickly; if they had waited 12-24 hours, they would have realized that a huge recall was not necessary.

White Wave's refrigerated soymilk, Silk, is selling fairly well–but nothing spectacular. He tends to run out of the half-gallon sizes, which he prices below his ordinary markup. The quarts move more slowly than the half gallons. There are several reasons that Silk does not sell well: (1) The price is too high; (2) It is a new product with new packaging (gable-top carton like dairy milk); many people have not seen it or tried it; (3) Many people are not used to going to the refrigerator for their soymilk; they buy unrefrigerated aseptic cartons off the grocery shelves. Bob puts Silk in the refrigerator next to his other fresh soymilks (like Yo-Soy from Wildwood Natural Foods); this is four doors away from the dairy milk section. For pouring over cereal or as a beverage, Bob prefers the taste of Silk to Vitasoy–which is more thick and sweet. Address: Owner, Berkeley Natural Grocery Co., 1336 Gilman St., Berkeley, California 94706. Phone: 415-526-2456.

7136. Messina, Mark J. 1996. How safe are soy-based infant formulas? A preview of abstracts from papers to be presented in Brussels (Interview). *SoyaScan Notes.* Sept. 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Samuel Fomon, a world authority on infant formulas, told Mark recently that "If soy-based infant formula was coming before the FDA for approval and it had not yet been on the market, it wouldn't be approved." Mark agrees, has said so before, and thinks it is a fairly obvious statement. The key problem is the relatively high level of phytoestrogens in soy formula. The only thing that balances out all this concern is the fact that it has been used for 40 years.

This whole question of the safety of soy-based infant formulas has been handled very poorly by the Infant Formula Council. Mark thinks has the soy formula manufacturers may end up taking the phytoestrogens out of the soy formulas. The new formula would then probably have to be tested as a new product, and go through all the necessary toxicological tests, which would require huge expenses. It is possible that the phytoestrogens were doing something beneficial for the infants, and that would presumably come out in the tests.

Mark now has 120 abstracts from the 80 speakers and 40 poster sessions in Brussels. Two areas look especially promising, one abstract in the area of bone health and two indicating that soy increases high-density lipoproteins. The latter could be very big news, probably even bigger than soy lowering blood cholesterol. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

7137. Rozing, George. 1996. Amazake and rice beverages in Europe (Interview). *SoyaScan Notes.* Sept. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Orido is the only company in Europe that makes amazake in the traditional way from koji. His product is much more expensive than the many enzyme hydrolyzed beverages. The market leader of these modern products is Imagine Foods' Rice Dream, followed by a Lima Foods' rice beverage. Address: Owner, Orido Koji Products, P.O. Box 109, NL-7200 AC Zutphen, The Netherlands. Phone: +31 575-518546.

7138. Daller, Frank. 1996. Re: New developments at ProSoya Inc. Letter to William Shurtleff at Soyfoods Center, Sept. 16. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Several months ago Frank resigned his position as president of ProSoya Inc. "During almost four years with the company, I had the pleasure of helping our team grow from a purely R&D operation, into a systems developer and manufacturer with over $3 Million in sales this year. Of particular personal satisfaction, was the introduction of the cottage industry size 'SoyaCow' to humanitarian applications in developing countries, and the technology transfers to India and Russia which are providing for locally produced models at lower prices." Address: ProSoya Inc., 5350 Canotek Road, #7, Gloucester, ONT K1J 9C9, Canada. Phone: 613-745-9115.

7139. Guy, Camille. 1996. Frankenfood on menu: Compliments to the prof–Are we the unwitting guinea pigs for genetically re-designed food? *New Zealand Herald.* Sept. 24.
• ***Summary:*** "New Zealand consumers will be eating genetically modified food by Christmas... As the first shipments of a Roundup-resistant soybean crop leave America, food campaigners warn that the beans will go into so many foodstuffs that few will avoid eating them. They say the beans carry health and environmental risks.

"Our Ministry for the Environment, attempting to

discover just who will be bringing Roundup Ready beans into the country, says there is no New Zealand precedent for monitoring what as been dubbed 'Frankenfood.'"

To date, no New Zealand company has sought or obtained permission to import genetically engineered soybeans, yet American agricultural authorities say that these soybeans comprise up to 5% of this season's harvest and cannot be separated from traditional unmodified soybeans."

The soybeans have been genetically engineered by Monsanto so that farmers can spray Roundup weed killer (also made and sold by Monsanto) on the soybean crop without damaging–selectively killing only the weeds.

Last year over 350,000 kg of soybeans and 49 million kg of soyflour were imported to New Zealand. Some of these soybeans go into self-proclaimed soy foods like tofu and soy milk.

7140. Kashama, Johnny. 1996. Re: Teaching Rwandan refugees how to make soyfoods. Letter to William Shurtleff at Soyfoods Center, Sept. 26. 3 p. Handwritten, with signature. [1 ref. Eng]

• ***Summary:*** His thesis on soymilk was accepted in Zaire on 9 Dec. 1994. After the Rwandan civil war, Johnny conceived of a soy processing project. He was promised financial support, but it never arrived. Even if it had arrived, they wouldn't have been able to get soybeans easily, as all the nearby production areas were beset by ethnic conflicts. On August 3rd, he began to work in a feeding center for the children of refugees in the camp of Kahindo in Zaire (55 km from Goma). He left that center for Caritas Internationale, a Christian NGO relief organization in Zaire.

With Caritas he held the same job, probationer, but now in the camp it was very interesting because he had to teach a group of 70 refugees (girls, wives, widows) how to process soy; to make soymilk, fritters, and "boulettes." He could not find nigari or lemon juice, so he could not make tofu. The little project, financed by Caritas, is still continuing, but it is getting harder and harder to obtain soybeans.

Note: Letter of March 31. The soybeans were purchased by the coordinator of the social service in the market in Goma; they had been grown in the neighboring areas. To make boulettes, boil whole soybeans until they are soft. Drain, then pound the soybeans to obtain a homogeneous mash. Blend in spices, salt, pepper, and concentrated canned tomato. Shape into spheres about 4 cm in diameter, then deep fry in oil.

Johnny left Caritas because of several problems and is now working for the United Nations High Commissioner for Refugees (UNHCR), supervising the stock and distribution of fuel wood for 112,000 refugees. Yvonne Katabana is also working for UNHCR. He was married a year ago and now has a daughter.

Update. 1997 Jan. 17. Johnny is now in Kigali, Rwanda. At the company Tofu-Rwanda in Kigali they are trying to re-commence their activities. Address: c/o Mr. Justin Kouarou, UNHCR–Goma/Zaire, Via UNHCR-Nairobi/Kenya, P.O. Box 43801, Nairobi, Kenya.

7141. Sheridan, Margaret. 1996. Is tofu ready for the big leagues? *Los Angeles Times.* Sept. 26. p. H8, H10, H11.

• ***Summary:*** The article begins: "Tofu, the spongy off-white soybean cake that spells B-O-R-I-N-G for so many people, is about to get a marketing makeover. Slick packaging, toll-free consumer hotlines, new products, and a blitz of cookbooks created by chefs rather than earnest vegetarian activists are some of the strategies tofu companies plan to use to bring tofu into the mainstream." A number of second generation tofu products found in supermarkets, and forthcoming cookbooks are listed.

"But some advertising and marketing professionals say that's not enough." The author talks with many such people who dislike tofu for various reasons: "Tofu is a joke... Tofu is a sissy. Bland, white, boring. It needs to take a stand. Become something. And that name! Its terrible." "Tofu goes against the American palate... Very little in American food, except baby food or gelatin, has that texture. Even buying tofu is alien. What else do you buy floating in water? And Americans love convenience. Bean curd is anything but. It's not an open-and-eat product." "I buy tofu but it just sits there, floating in my refrigerator. It makes me feel stupid and guilty. What do you do with it? I end up tossing it out." Hinoichi is America's largest tofu manufacturer. In March 1997 the company plans to move from its present 50,000 square foot plant in Los Angeles to a facility three times that size in Garden Grove. Harry Tanikawa, Hinoichi sales manager, notes that tofu and soy have been helped by good research and press from the medical community. He adds: "When you see fast-food places such as Panda Express in the shopping malls adding more tofu items to the menu, when you can buy a tofu hot dog at Dodger Stadium, you know tofu has arrived." Note: Dodger Stadium is a major league baseball park in Los Angeles.

Worthington Foods has experienced a sales rush in meat alternatives; the category went from nothing four years ago to $150 million a year. The company's best-selling items, sold under the Morningstar Farms brand, are breakfast patties, sausage links, garden burgers, and spicy black bean burgers–according to Don Burke, executive vice president of sales and marketing. The people who buy Worthington products are "the masses, people who want to cut down a little on meat and saturated fat. Most are aging baby boomers who want taste, convenience, and a health benefit."

Tofu "recipes for the mainstream" include: Red flannel hash. Mushroom scrambler. Tofu-stuffed French toast. Tofu slaw. Tofu citrus shake. Tofu cheesecake (p. H11).

The article ends with two sidebars: 16 "Tofu do's and don'ts." Soy food: Its many looks (p. H11)–Defines different soyfoods: Tempeh, miso, textured vegetable protein (TVP),

soy milk, soy flour, soy cheese, soy sauce, tamari. Address: Times staff/food writer.

7142. Skiff, James. 1996. Negotiations with ProSoya of Canada (Interview). *SoyaScan Notes.* Sept. 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jim is working for a man named Howard Weiner (pronounced WEE-ner), who owns a company named Shared Ventures, which is a venture capital company that invests in food processing operations. Howard is now especially interested in soymilk and related products. Howard, whose family made their money originally (many years ago) by developing the dried egg business, is skilled at putting together new companies and joint ventures. Jim (often with Howard) has been negotiating all summer with ProSoya of Vancouver, BC, Canada, in the hope of starting a soymilk company in Minnesota using ProSoya technology. Jim and Howard (who flew to Vancouver twice) were hoping to get exclusive rights to use the ProSoya technology in the USA, to establish an initial plant in Marshall, Minnesota, and then to develop regional plants round the USA. About 3 weeks ago Jim and Howard pulled out of the negotiations, very frustrated.

When Jim first talked with Lorne Broten in Vancouver, they discussed that ProSoya's contribution might be valued at $500,000 or a little more. They next time Jim talked with him, ProSoya's contribution was being valued at roughly $1 million. Then Jim and Howard went to Vancouver; they met Lorne, then were soon negotiating with Jerry Duncan of ProSoya; he is a newcomer to the company who is trying to put together business deals for ProSoya. He was apparently formerly in dairy sales and marketing for a company such as DairyFresh or some other company in that part of Canada; he is said to own part of ProSoya.

ProSoya has taken the position that they will not sell or license their equipment; they are only willing to participate as an equal partner in joint ventures. They offer to provide the soymilk equipment and know-how; the partner must provide the land, capital, personnel, and any additional equipment (as for packaging tofu). At the time Jim withdrew from the negotiations, he calculated that his side was expected to contribute about $3.5 million. The catch is that ProSoya retained the right to take back the equipment and withdraw from the joint venture at any time. Jim was frustrated at not being able to talk with Raj Gupta; he was told that Raj Gupta is no longer involved in the joint-ventures company but he has signed agreements whereby they control the company and equipment, and now he receives a royalty on the equipment he invented. The proposed joint venture would have paid a royalty to Gupta based on the production volume of the plant.

Jim has seen ProSoya's equipment operating in Vancouver several times and he thinks that he can improve a little on the equipment and a lot on the product. See comments on White Wave's Silk in a separate interview. In Vancouver, Jim tasted ProSoya's soymilk, yogurt, and tofu. He was very impressed with each of these products. The soymilk products made by ProSoya in Vancouver were very bland, with almost no beany taste. Address: Cornbelt Foods, Inc., P.O. Box 218, Marshall, Minnesota 56258. Phone: 507-537-1406.

7143. Skiff, James. 1996. Questions about White Wave's Silk soymilk (Interview). *SoyaScan Notes.* Sept. 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jim is aware that Silk is made by ProSoya in Vancouver, BC, Canada, but then it is further processed and packaged somewhere in California. Jim is quite sure that additional ingredients are added in California, for two reasons. (1) He has read the ingredients listing on the label and it contains ingredients that he has been told by the manufacturer are not in the product when it leaves Vancouver. (2) He has tasted the product both here and in Vancouver. The taste is quite different. In addition, the product's taste within the USA is not consistent; each batch tastes different–sometimes quite different. Jim thinks that sweeteners, and perhaps other types of soymilk, are added in California. The product in California is much sweeter and (up until last week) more beany than it is in Vancouver. The Vancouver soymilk was very bland, with almost no beany taste. That was not true with the Silk sold in America. Address: Cornbelt Foods, Inc., P.O. Box 218, Marshall, Minnesota 56258. Phone: 507-537-1406.

7144. American Soybean Assoc. 1996. Soya in dairy products: Manual [Soya in dairy products: Manual]. Mexico City, Mexico: Asociación Americana de Soya. 36 p. Illust. 28 cm. [Spa]
• ***Summary:*** Contains ten chapters by various authors on different aspects of the subject. Focuses on: Soymilk, soy beverages rich in protein, soy yogurt, soy ice cream. Address: Rio Sena 26, Col. [Colonia] Cuahutémoc, Mexico City, Mexico 06500. Phone: +52 705 1633/0139.

7145. Archer Daniels Midland Co. 1996. Annual report. P.O. Box 1470, Decatur, IL 62525. 44 p. Sept.
• ***Summary:*** Net sales and other operating income for 1996 (year ended June 30) were $13,314 million, up 5.1% from 1995. Net earnings for 1996 were $695.9 million, down 12.6% from 1995. Shareholders' equity (net worth) is $6,145 million, up 5.0% from 1995. Net earnings per common share: $1.27, down 9.3% from 1995. Number of shareholders: 35,431.

On the cover of the report is color illustration of a stylized family farm. ADM now has a Web site at http://www.admworld.com. The American farmer is the most efficient and most productive in the world. "One American farmers feeds 212 people... In 1996, the U.S. will export $65

billion worth of agricultural products, approximately 10% of which are exported by ADM and its affiliates, helping to generate over $100 billion in economic activity and about one million jobs. The productivity of the farmer can help ensure world peace... Thanks to the 1996 farm bill, U.S. farmers will be able to respond to market conditions instead of government orders" (p. 4-5).

Soy protein is a fast growing are for ADM. Currently ADM is building plants in Decatur, Illinois, and Europoort, Netherlands, to make improved soy protein isolates. "Isoflavones are another exciting area. Isoflavones are trace components in plants (particularly soybeans) that are believed to have positive health effects. This is a promising new area, so this research group is seeing its share of exciting developments. Programs are in place to purify these components for future production" (p. 6).

"Natural-source vitamin E: ADM produces this antioxidant from soybeans and other oilseeds. Research shows that natural-source vitamin E is 36% more potent than synthetic vitamin E" (p. 6).

"ADM value-added products from soybeans: (1) Derived from soy protein: Concentrates, isolates, isoflavones, TVP*, flour/grits, soy milk, Harvest Burgers*, Harvest Burgers for Recipes*, NutriBev*; (2) Derived from soybean oil: Vitamin E, lecithin, distilled monoglycerides, mono- and diglycerides, sterols." * = Registered trademark (p. 7). Note: Each of these products is discussed in detail on pages 13-14.

"Isoflavones: Soybeans contain isoflavones, powerful phytochemicals that appear to be able to block the multiple processes that lead to cancer, heart disease, and other chronic degenerative diseases" (p. 12).

"Value-added products from soybeans:... Vegetarians have long been using soy as a protein source, but in light of the mounting evidence that soy foods have significant health benefits, Americans from all walks of life are trying to incorporate soy into their diets... Every day, ADM plants worldwide process over 2.6 million bushels of oilseeds, and with value-added soy products gaining in popularity in a number of industries, these products will continue to be in demand" (p. 13).

These soy products include: (1) "Distilled monoglycerides, derived from soybeans or other oilseeds, are used primarily as emulsifiers or as starch complexing agents in a variety of food applications. ADM monoglycerides are often used in baked goods, confections, extruded products and margarines to bring about or enhance desired characteristics" (p. 13).

(2) "Isoflavones: A relatively new area of interest is isoflavones (part of a group of substances called phytochemicals). The two predominant isoflavones found in soybeans are genistein and daidzein. Researchers at ADM and around the world are conducting studies that strongly suggest that isoflavones have significant health benefits. ADM is scaling up research and processing for the future production of this product" (p. 13).

(3) Lecithin: "Interest in lecithin has escalated worldwide due to recent research investigating its health benefits. Lecithin is most recently being touted as a nutraceutical, since the linoleic acid in lecithin is believed to possess health benefits. Expansions have been completed in both the Windsor (Ontario, Canada) and Europoort (Holland) facilities. Improvements are scheduled for the Hamburg, Germany plant and construction is progressing on the new deoiled lecithin plant in Decatur, Illinois. As the leading producer of lecithin, ADM is positioned to meet the world's growing demand."

(4) Natural-source vitamin E: "An antioxidant, vitamin E is reported to help protect cells from free radical damage, the type of damage that can lead to an array of degenerative diseases. A study in the *Lancet* [a prestigious British medical journal]... concluded that a dime's worth of natural-source vitamin E could reduce heart attacks by 75% when taken daily by those with bad hearts. The *New England Journal of Medicine* reported that postmenopausal women who ate a moderate amount of foods rich in vitamin E cut their chance of heart disease by almost two thirds." In order to keep up with the rising demand, ADM is increasing its natural-source vitamin E plant capacity by fifty percent. ADM is one of the world's largest producers of natural-source vitamin E and also processes products that are good sources of vitamin E, including corn, canola, soy, sunflower, and peanut oils... By 1997, we will have the capacity to supply 300 million people with the current recommended daily allowance of vitamin E."

(5) "Soy protein: One of ADM's most important and versatile value-added products is soy protein. With increasing evidence of health evidence associated with soy foods, an increasing demand for soy protein products seems likely. To meet this rising demand, ADM is expanding its soy concentrate and isolate plants in Decatur, Illinois, and Europoort, Holland... Soy protein is finding success abroad in the consumer marketplace. In Canada, soy frozen desserts are being sold at Safeway grocery stores under the Lucerne Dairy label. In the U.K., a new soy milk plant is under construction to met demand for a good tasting nutritious non-dairy beverage [probably made from isolated soy protein]. In Europe, VegeMince, VegeBites and VegeSteaks are being introduced by Haldane Foods, an ADM subsidiary. German consumers will be introduced to Frosta Medallions, soy protein and vegetable frozen patties available in four varieties." A large color photo shows a package of Green Giant Harvest Burgers for Recipes (p. 15).

"ADM European Overview: ADM owns the three largest tidewater oilseed plants in the world. They are located in Erith [on the River Thames just east of London], England; Rotterdam, Holland; and Hamburg, Germany."

Page 37 discusses "Antitrust investigation and related litigation." Address: Decatur, Illinois.

7146. Clofine Dairy & Food Products. 1996. Classified ad: Specialty ingredients: Taking tofu to its next level! *Bluebook Update* (*Bar Harbor, Maine*) 3(3):7. July/Sept.
• ***Summary:*** Using a fresh soymilk base and a proprietary process, Clofine has developed "Spray Dried Soymilk & Tofu Powders to perform and offer high isoflavone content. Available in lowfat, kosher-parve, and organic. Contact Richard Eluk..." Address: 1407 New Road, Linwood, New Jersey 08221. Phone: 609-653-1000.

7147. Hastings, Carl. 1996. Soybean products in human foods. Paper presented at Regional Workshop on Soybean Processing and Utilization for Central America and the Caribbean. 4 p. Held Sept. 15-18 in Jamaica.
• ***Summary:*** Contents: Introduction. Soy sprouts. Whole soybeans: Cooked green beans, cooked soybeans, roasted or deep fat cooked soybeans (soy nuts–salted, flavored, etc., candy coated, salad topping, bakery ingredient or topping, soynut butter, soy coffee) fermented soybeans (tempeh–*Rhizopus,* natto–*Bacillus,* hamanatto–*Aspergillus*). Cereal blends: CSM (Corn-Soy-Milk), WSB (Wheat-Soy-Blend), other (bulgur, oat, sorghum grits).

Refined soy oil: Solvent extracted, physically extracted, uses, lecithin. Soy protein: Soy flour (full fat, defatted), concentrates, isolates, textured, uses. Hulls. Soy fiber. Soy milk: Liquid, powder, uses (plain, flavored, fortified, blends, instant formula, nutritional beverages, tofu, soy cheese, frozen desserts, yogurt, soymilk film {yuba}). Soy sauce. Soy paste (miso). Soy pulp (okara). Address: Reliv, Inc., Chesterfield, Missouri.

7148. **Product Name:** Firm Tofu, Mushroom Tofu, Soymilk.
Manufacturer's Name: Hung Vuong Tofu #2.
Manufacturer's Address: 4138 Monterey Road, San Jose, CA 95111. Phone: 408-229-9255.
Date of Introduction: 1996. September.
New Product–Documentation: Talk with Lieu Ta of San Jose, California. 1997. Aug. 19. This company is run by a Vietnamese-American family, with which she is associated. They started making tofu and soymilk on 10 Sept. 1996. The manager, Scott Truong, is the only one at the factory who speaks English. They also make vegetarian foods.

7149. NIDC. 1996. Classified ad: Business opportunity: Soya milk plant for sale. *Bluebook Update* (*Bar Harbor, Maine*) 3(3):7. July/Sept.
• ***Summary:*** Located in Kathmandu, Nepal, this plant was designed and supplied by the Alfa-Laval Group of Sweden. It is in excellent condition and has a production capacity of 14,000 liters per 8-hour shift. The price (FOB Kathmandu) is negotiable. Contact NIDC, P.O. Box 10, Kathmandu.

Note: This plant, sold by Alfa-Laval to Indreni Soybean Industries Ltd., began operation in Kathmandu in 1988. Address: P.O. Box 10, Kathmandu, Nepal.

7150. Nutrisoya Inc. 1996. Classified ad: Bulk soymilk. *Bluebook Update* (*Bar Harbor, Maine*) 3(3):7. July/Sept.
• ***Summary:*** "Nutrisoya Inc. is Canada's leading soymilk and tofu manufacturer." In January 1996 the company launched its new line of aseptic packaged soymilk, "Nutrisoy Premium Lite." Recently they have upgraded their production facility and can now supply up to 3,000 liters/hour of organic soymilk. Contact Nick Feldman. Address: 4050 Pinard, St.-Hyacinthe, QUE J2S 8K4, Canada. Phone: 514-796-4261.

7151. **Product Name:** Pacific Fat Free: Non Dairy Soy Beverage [Plain, or Vanilla].
Manufacturer's Name: Pacific Foods of Oregon, Inc.
Manufacturer's Address: 19480 S.W. 97th Ave., Tualatin, OR 97062. Phone: 503-692-9666.
Date of Introduction: 1996. September.
Ingredients: Vanilla: Filtered water, brown rice, organic soybeans*, natural vanilla flavor, soy protein [isolate], tricalcium phosphate, natural flavor, sea salt, guar gum, xanthan gum, carrageenan, vitamin A palmitate, vitamin D-2.
* = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 1 quart Tetra Brik Aseptic carton. Retails for $1.19 (1996/11, Concord, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 8 fl. oz. (240 ml): Calories 90, calories from fat 0, total fat 0 gm (0% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 75 mg (5%), total carbohydrates 17 gm (dietary fiber 0 gm, sugars 12 gm), protein 3 gm. Vitamin A 10%, vitamin D 30%, calcium 20%, vitamin C 0%, iron 8%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label (plain and vanilla) purchased at Trader Joe's in Concord, California. 1996. Dec. This is the earliest known U.S. soymilk that claims to be "fat free." Note that brown rice is the second ingredient, ahead of soybeans. Label for vanilla. Purple, green, pink, and yellow on white. A color illustration shows a glass of soymilk surrounded by pastel colors. Reclosable spout. "Shake before opening. A refreshing non dairy alternative. No cholesterol. No lactose. Calcium and vitamin A&D added."

Talk with Pat Carey of Pacific Foods of Oregon. 1997. May 5. This product was introduced in about Sept. 1996. It is made from whole organic soybeans; no defatted soybeans are used except for the soy protein isolate. The product does contain some fat from the whole soybeans, but less than 0.5 gm/cup, which appears as zero grams on the label according to labeling regulations. The first fat-free soymilk was Soy Moo, introduced by Hain Pure Foods about 5 years ago; the second was Westbrae's Non-Fat introduced in about Jan. 1996.

Leaflet (glossy color, 4 panels, each panel 28 cm) sent by Patricia Smith from Natural Products Expo West at Anaheim. 1999. March. (but leaflet is dated "2/98"). "There's only one way to improve on Pacific's great tasting soymilk drinks–New packaging." A wide color photo (2-page spread) shows the following ten products (from left to right): Pacific Original Soymilk, Pacific Select Soy Drink (in Plain or Vanilla), Pacific Fat Free Soy Drink (in Plain or Vanilla), Pacific Enriched Soy Drink (in Plain or Vanilla), Pacific Ultra Soy Drink (in Plain or Vanilla).

All these non-dairy drinks are made with organic soybeans–although the soy protein isolate is not organic. A large pull-quote states: "'soy contains several naturally-occurring compounds–phytochemicals like isoflavones, protease inhibitors and saponins which seem to protect against breast cancer'–American Institute for Cancer Research." On the last panel are given the nutrition facts, ingredients, UPC numbers, and case/pallet information.

7152. *Soybean Digest.* 1996. Soy milk program for rural Chinese children. Sept.
• ***Summary:*** "A 'soy action' program, designed to improve nutrition for more than 300 million rural children, was recently launched in China.

"The program will provide soybean milk or other soybean products every day for children below age 15 as a replacement for the protein they are lacking.

"According to a recent story in the *China Daily,* the only national English-language newspaper in China, many children in rural areas suffer from malnutrition-related health problems.

"The report noted that poor nutrition, because sufficient high-protein foods like cow milk and meat products are in short supply, has affected the physical development of children in rural areas."

Last year, for the first time in recent history, China, long a major soybean producer, was forced to import soybeans to meet the demands of its exploding livestock industry.

7153. The Mail Order Catalog. Fall-winter 1996. Catalog of books and food. 1996. P.O. Box 180, Summertown, TN 38483. 24 p.
• ***Summary:*** The book section of this mail order catalog contains listings for an excellent selection of vegetarian and vegan cookbooks, plus books on food nutrition & health, alternative healthcare, women's healthcare, native Americans and their cultures, and animal rights.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), Harvest Direct vegetarian broth, and Protean, instant gluten flour (regular or flavored), seitan "chicken" or "sausage" mix, Mori-Nu silken tofu, Soja instant soy beverage, organic low-fat soymilk powder, Red Star nutritional yeast, Beano, and tempeh starter. Address: Summertown, Tennessee. Phone: 800-695-2241.

7154. Spence, Paddy. 1996. SPINS (Spence Information Services) is a new company providing information about the natural products industry to manufacturers (Interview). *SoyaScan Notes.* Oct. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** SPINS started providing information in Jan. 1996. Their sources of this information are: (1) Natural product distributors, including United Naturals but not including Tree of Life (the biggest such distributor). These distributors account for about 20-30% of all U.S. natural product sales. (2) A.C. Neilson's HomeScan Panel, with a population designed to mirror the U.S. census.

They provide information only to manufacturers. It is provided on a bi-monthly basis–every two months, down to the UPC level = the individual product or item level. This information, aggregated for the USA costs $1,500 per category. One such category is non-dairy beverages (soymilk, rice milk, almond milk). Others include meat substitutes, and cheese alternatives. One of their clients is Vitasoy (USA) Inc.

Talk with Richard Rose of Sharon's Finest. 1997. March 16. The 6-7 distributors from which they now receive information represent well over half of the natural foods market. Richard uses the bar-chart information to say to retail buyers: "Sharon's Finest is No. 1 in unit sales, but you carry only one of our 17 SKUs. Tofu-Rella is now the best-selling cheese alternative in terms of unit sales (but Soya Kaas is No. 1 in dollar sales). This product is in the top ten and you don't even carry it." Address: President, SPINS, San Francisco, California. Phone: 415-284-0546.

7155. Corson, Betty. 1996. Lactaid and Beano (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** AkPharma was founded in 1990 by its president and CEO Alan Kligerman, as a split-off from Lactaid Incorporated, which was also founded by Mr. Kligerman in 1977. The Lactaid brand was licensed to Johnson & Johnson for a while, then sold to Johnson & Johnson in 1996; Lactaid is the world's leader in lactase enzyme modification of milk products and lactose-containing foods and drugs. Lactaid Inc. was renamed to AkPharma Inc. Lactaid is not a milk product; it is an enzyme that is used with milk products. Lactaid and Beano are no longer owned by the same company. Mr. Kligerman owns the company that owns Beano.

A study showing that Beano is effective was published in the *Journal of Family Practice* in Nov. 1994.

If you would like a free sample of Beano, call 1-800-257-8650.

A new product, Prelief, is a calcium supplement that neutralizes acid indigestion. It's a pill–that works very well

on coffee, orange juice, tomato sauce, wine–all acidy/acidic foods that cause problems. If you put Prelief in a cup of coffee, it will neutralize the acid in that cup of coffee. And it ads calcium to the diet.

Betty sends a portfolio of documents about Beano, Alan Kligerman, and related subjects. Address: Public Relations, AkPharma Inc., 6840 Old Egg Harbor Road, P.O. Box 111, Pleasantville, New Jersey 08232. Phone: Fax: 609-645-0767.

7156. Tuchy, Pat. 1996. Re: Safety of soy-based infant formula. Letter to Professor J. Mann, Chairman, Food and Nutrition Committee, Ministry of Health, Box 5013, Wellington, New Zealand, Oct. 15. 1 p. Typed, with signature. [1 ref]

• ***Summary:*** "Dear Prof. Mann: I am writing on behalf of the Royal New Zealand Plunket Society to request that the Food and Nutrition Committee review its current position on soy infant formula in the light of the recent United Kingdom on Toxicology report, and concurrent advice to UK Health Practitioners."

"The Plunket Society believes that there is no conclusive evidence that soy infant formula is harmful to infants, but there is no doubt that a number of regulatory agencies, including the NZ Ministry of Health is aware that there are endogenous estrogenic agents in soy formula which have unknown but real potential to cause harm. If the formula was know to be contaminated exogenous estrogens at this level would the Ministry act any differently?" Address: Royal New Zealand Plunket Society (Inc.), New Zealand.

7157. Johnston, Cathy. 1996. Health-food maker seeks to buy former shrimp plant. *Sun* (*Lowell, Massachusetts*). Oct. 24. p. 7, 9.

• ***Summary:*** Nasoya Foods Inc. of Leominster, Massachusetts, "a producer of soy-based health food products, is working to buy the former New England Shrimp Co. building in Ayer, Massachusetts, located about 7 miles northeast of Leominster, and a slightly smaller town than Leominster. According to Nasoya president Fred Eaton, the 125,000 square foot building (located at One New England Way off Westford Road) would serve as a new, expanded headquarters and manufacturing plant, and will bring 77 jobs to Ayer. The company expects to add another 175 new positions during the next 3-5 years. The shrimp company was foreclosed upon by lenders after the federal government shut it down in 1992 for selling tainted shrimp. The FDIC, which now owns the building, auctioned it off in a sealed bid process on 25 Sept. 1996. Nasoya, the top bidder, has until Nov. 25 to complete the deal.

Nasoya was founded in 1978, as a tofu manufacturer located in a barn in Leominster. In 1984, 6 years later, as tofu production topped 25,000 lb/week, Nasoya outgrew the barn and moved into its current 30,000 square foot processing facility on Jytek Drive in Leominster. By 1987 Nasoya was producing more than 60,000 lb/week of tofu. In 1990 Nasoya was acquired by Vitasoy (USA) Inc. The former shrimp plant, with about 4.2 times the square footage of Nasoya's present plant, would give Nasoya the space to expand its current operations as well as to install a new line for making Vitasoy soymilk.

Nasoya's revenues grew 16% and 22% during the last two years respectively. The company is projecting a 24% sales growth this year.

Note 1. Nasoya's fiscal year runs from April 1 to March 31. So "this year" will end on 31 March 1997.

Note 2. Talk with Nasoya representative. 1997. Jan. 13. Nasoya purchased the plant in Ayer on 18 December 1996 and expects to be making tofu in the plant by about June of this year. They will operate two plants for a while, and hope to have finished phasing out the present plant in Leominster by the end of 1997. Nasoya uses only organic soybeans so they do not anticipate any problems in answering questions about using genetically modified soybeans. They have not yet prepared any documents to answer consumer questions on this subject.

Note 3. Talk with Nasoya representative. 1997. Oct. 1. The first Vitasoy soymilk started to be shipped from the plant in Ayer in mid-September 1997. The offices have now been moved to Ayer from Leominster. All tofu is still being made at the plant in Leominster.

Note 4. A label from the Azumaya tofu made in South San Francisco, California, shows that "glucono delta lactone" is now being used, with calcium sulfate, as a coagulant. Address: Sun Correspondent.

7158. *Better Homes and Gardens.* 1996. The benevolent bean: Cancer fighter, cholesterol cutter, and more–There's a whole lot of nutrition in this unassuming little soybean. 74(10):76, 78. Oct.

• ***Summary:*** This article is in the "Good food / Good health" section. Contents: Introduction. How much soy? ("Just a few ounces of soyfoods every day allow you to reap any of its health benefits"). Food for a healthy heart. Fight cancer, too. Stronger bones, cooler hot flashes. Adding soy to your diet: Tofu–from firm to silky, soy milk–plain or flavored, soy flour–for baking, whole soybeans fresh and dry.

"With Mary Hubbard, Registered Dietitian and PhD in education, She teaches at Grossmont College in California..." Color photos show: (1) A pod containing 3 dry soybeans, held in a person's fingers. (2) Dry soybeans, tofu cubes, soy flour, soy oil in a cruet, and a stick of soy margarine.

7159. **Product Name:** Fearn Soyness: Powdered Soy Beverage [Original, Vanilla, Chocolate].
Manufacturer's Name: Fearn Natural Foods (a Div. of Modern Products Inc., Marketer-Distributor).
Manufacturer's Address: P.O. Box 09398, 3015 West Vera Ave., Milwaukee, WI 53209. Phone: 414-352-3209.

Date of Introduction: 1996. October.
Wt/Vol., Packaging, Price: 150 mg (5.3 oz powder) or 750 mg (90 caplets). Wholesale: $14.00 and $10.00. Suggested retail: $28.00 and $20.00.
How Stored: Shelf stable.
New Product–Documentation: Leaflet (8½ by 11 inch, black on white photocopy) sent by Patricia Smith from Natural Products Expo East (Baltimore, Maryland) 1996. Oct. "Fearn Soyness and Riceness. Makes ½ gallon. 2 quart packs inside." Another leaflet (8½ by 11 inch, black on blue) sent by Patricia Smith from Natural Products Expo. 1999. Oct. The address is now 6425 West Executive Drive, Mequon, Wisconsin 53092. Phone: 414-242-2751.

7160. Jacobi, Dana. 1996. The natural kitchen: Soy! 75 delicious ways to enjoy nature's miracle food. Rocklin, California: Prima Publishing. xii + 244 p. Oct. Index. 22 cm. Series: The natural kitchen. [16 ref]
• ***Summary:*** Contents: Preface. Acknowledgments. Introduction: Soy and health. All about soyfoods: Traditional soyfoods (tofu, miso, tempeh, soy sauce, soymilk), other Asian soyfoods (okara, yuba, kinako, natto), second-generation soyfoods (soy dairy products, soy deli foods, textured vegetable protein {TVP}, textured soy protein {TSP}, soy isolate (isolated soy protein)), more soy choices (fresh soybeans, dried black soybeans, soy flour, soy grits, soy flakes, soy nuts), cooking with soyfoods (tofu {pressing, freezing, marinating, sautéing and pan-crisping, frying, braising, pureeing, parboiling, storing and handling tofu}, miso, tempeh, soymilk, other soy dairy foods), cook's notes (herbs, spices and flavorings, nuts, oils, produce, stock, sweeteners).

Soups, appetizers, and first courses. Main dishes. Pasta and light dishes. Side dishes and sauces. Salads, burgers, and kebabs. Desserts. Breakfast and beverages. Mail order sources.

The Preface states: "If you are new to soy, you will find descriptions of soyfoods, from tofu to soymilk... If you already cook with soyfoods, the approximately 75 recipes in this book and their variations will expand your repertoire. These recipes will take you across lines that people who cook with soy rarely approach. The dishes bring familiar and satisfying textures along with flavors that are full and deep. Whether ethnic or classic, they are dishes with verve and elegance." The author first tasted tofu, with her parents, in 1953, "at the precocious age of eight," at The Great Shanghai on 125th St. in Manhattan, New York City. Address: Food writer, New York, NY.

7161. *Natural Foods Merchandiser.* 1996. Vermont rGBH labeling law struck down. Oct. p. 6.
• ***Summary:*** Vermont's law, which took effect on Sept. 12, 1995 and is due to sunset on June 30, 1997, was struck down in a panel for the New York Federal Appeals Court in August. The law "requires retailers to post signs warning consumers of products that might contain rBGH... Currently, rBGH is being administered to only 10% of U.S. dairy cows, according to a recent USDA survey."

7162. Oser, Marie. 1996. Soy of cooking: Easy-to-make vegetarian, low-fat, fat-free, and antioxidant-rich gourmet recipes. Minneapolis, Minnesota: Chronimed Publishing. xviii + 264 p. Illust. Index. 23 cm. [55 ref]
• ***Summary:*** This is a very nice gourmet vegan cookbook with 16 full-page color photos. Contents: Dedication. Notice: Consult a health care professional. Grateful acknowledgment to. Foreword, by Neal D. Barnard, M.D. Preface, by Marie Oser. Introduction, by Suzanne Havala. Soyfood for thought. A healthy kitchen. The soyfoods pantry (short definitions of generic and brand-name soy products). A quick guide to ingredients. Substitutions. Spices: The variety of kitchen life. Techniques.

Recipes: Sensational starters. Soups, stews, and salads. Bountiful breads. Exceptional Entrées. Soyful sides. Pizza and pasta. Delectable desserts.

Resource guide (Names and addresses of 23 companies selling soy and soy-related ingredients). Recommended reading (15 books). Bibliography (40 journal articles). Address: Agoura Hills, California 91391. Phone: 818-707-7353.

7163. SunRich. 1996. Soya food ingredients. Soybeans for: (Leaflet). Hope, Minnesota. 3 p. 28 cm.
• ***Summary:*** These two closely related leaflets are in black ink on a red letterhead. The first leaflet states that SunRich offers "specialty soybeans... for specific soyafood uses: Consistency. Quality. Identity preserved." "Our extensive grower base enables us to contract produce soybeans for your special needs. Specific varieties with reduced antinutritional factors (lipoxygenases, trypsin inhibitor enzymes and oligosaccharides, stachyose and raffinose) available."

"Soyamilk powders: For ingredient or beverage use." A table describes soya beverage powders, spray-dried soymilk, spray-dried tofu powder, soy/dairy milk replacers.

"Sweet Beans–Frozen green soybeans–Podded [in the pods] (Edamame) or peeled (Mukimame). Certified organic soybeans and products available."

The second leaflet states: "Tofu varieties–Vinton, Beeson. Soymilk–Yellow or white hila. Sized over 6.7 mm round. Natto–Sized through a 5.5 mm round. Miso–Yellow hila. High soluble sugars. Boiling soybeans–Edamame varieties, yellow or black seed coats, high soluble sugar. Sized over 7.5 mm round screen. Frozen green soybeans. Edamame, mukimame. New varieties and types–High soluble sugars, high protein content, specific fatty acids. Grower base of 500 growers in Minnesota, Iowa, Wisconsin, South Dakota. Produce specific varieties for customers–Container lots, bagged, bulk. Bulk barge. Organic or

conventional." Address: P.O. Box 128, Hope, Minnesota 56046-0128. Phone: (507) 451-3316.

7164. **Product Name:** Trader Joe's Low Fat Fresh Non-Dairy Soy Beverage (½-gallon Pure-Pak carton) [Original Flavor].
Manufacturer's Name: Trader Joe's (Marketer-Distributor). Made in Chico, California, by Healthy Harvest Foods.
Manufacturer's Address: P.O. Box 3270, South Pasadena, CA 91031-6270. Phone: 818-441-1177.
Date of Introduction: 1996. October.
Ingredients: Filtered water, organic whole soybeans*, brown rice syrup, calcium carbonate, sea salt, carrageenan, vitamin A palmitate, vitamin D-2. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: Net 64 fl oz (½ gallon) 1.89 liters. Gable-top Pure Pak carton. Retails for $2.69 (California 1997/01).
How Stored: Refrigerated.
Nutrition: Per 8 fl oz (240 ml): Calories 130, calories from fat 25, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 80 mg (3%), total carbohydrate 22 gm (dietary fiber 0 gm, sugars 11 gm), protein 9 gm. Vitamin A 10%, calcium 30%, vitamin D 25%, vitamin C 0%, iron 6%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Concord, California. 1997. Jan. 16. 3.75 by 3.75 by 9 inches. Rainbow colors in a woven fabric. "Lactose free. Good source of protein. Fortified with vitamins A&D and calcium."

Talk with Steve Demos, president of White Wave. 1997. Jan. 27. This product is made for Trader Joe's by Healthy Harvest Foods, owned by Nancy Knudsen of Chico, California. Nancy's maiden name was Nancy Potter; she ran Eden Foods (developer of Edensoy soymilk) while her brother, Michael, was in jail.

Talk with Patricia Smith, an employee of Trader Joe's. 1997. Feb. 10. She called the buyer who told her that this product was introduced on 20 Oct. 1996. Update: Nov. 1998. The price is still $2.69 per half gallon.

7165. United Soybean Board. 1996. National report on consumer attitudes about nutrition. Seattle, Washington. 8 p. Oct. 28 cm.
• ***Summary:*** This report, commissioned by USB, was conducted by a an independent research firm. It included telephone interviews with 1,000 consumers and primary household shoppers of all ages throughout the USA. They were asked a series of up to 23 questions. The standard margin of error for the study is ±3.2%.

Popularity of soy products: A bar chart shows the following, listed in descending order of popularity. The first number indicates the percentage of the population who are familiar with each product; the second number indicates the percentage of those who are familiar with the product that have tried it. Tofu–76% of Americans are familiar with tofu, and 53% of these have tried tofu. Veggie burger–69% /53%. Soybean oil–65% / 28%. Soy milk–58%–35%. Infant formula [soy-based]–53% / 36%. Soy protein–42% / 32%. Soy flour–41% / 30%. Miso–17% / 58%. Tempeh 14%–45%.

"How healthy are soy products? 40% of the population acknowledge that soy has positive health attributes. Half of those believe soy is a high protein source. 13% of the respondents cited soy as an option for lactose intolerance, 13% as a low fat food and 11% as a cholesterol reducer."

Consumer concern and confusion about nutrition terms: Trans fatty acids–37% of the population are familiar with the term; 38% of those who are familiar are concerned about trans fatty acids; 51% of those who are familiar are confused about trans fatty acids. Hydrogenation: 36% are familiar, 39% of those are concerned, and 46% of those are confused. Address: 190 Quuen Anne North, Seattle, Washington 98109. Phone: 1-800-TALK-SOY.

7166. *Vegetarian Times.* 1996. Litigation over BGH labeling: Food safety. Oct. p. 22-23.
• ***Summary:*** Bovine growth hormone (BGH) is a synthetic hormone that makes cows produce more milk. It was first approved for use in 1993. "Its manufacturer acknowledges that it can cause health problems in cows; some physicians also believe it increases the risk of cancer in humans who drink milk from BGH-treated cows." Now several food companies, frustrated that four states (Illinois, Oklahoma, Nevada, and Hawaii) refuse to allow product labeling for BGH-free milk, have begun suing for the right to tell their customers that their dairy products don't contain BGH.

Last May Ben & Jerry's (an ice cream manufacturer) and three other companies filed suit against the state of Illinois and the city of Chicago, arguing that the labeling prohibition violates their right to free speech. But he state of Illinois says that BGH does not come through in the milk, and that no laboratory test currently available can distinguish treated from untreated milk.

7167. White Wave, Inc. 1996. No cow. No cow, now brown (Ad). *Vegetarian Times.* Oct. p. 26.
• ***Summary:*** This attractive half-page color ad shows two cartons of White Wave Silk. On the left is unflavored Silk and on the right is chocolate. The text continues: "How? Simple addition. Take pure, delicious White Wave Silk. Add real chocolate. Result: Dairy-free, lactose-free chocolate fun. Class dismissed." At the bottom is the company logo "White Wave Vegetarian Cuisine," and the American Heart Association seal of approval. Address: Boulder, Colorado.

7168. Himelstein, Vicky. 1996. Amazing tofu diet to beat hot flashes: And here's how to make 'tasteless' health food really delicious. *Star.* Nov. 26. p. 1, 33.
• ***Summary:*** *Star* is a popular tabloid newspaper, sold at supermarket checkout stands, featuring sensational stories and celebrities. On the cover is a color photo of TV star Roseanne in a large rectangle. The text reads: "Roseanne's holiday diet: Eat what you want and lose weight, plus Tofu diet to beat hot flashes."

This article, based on an Associated Press story, begins: "If you're in the throes of menopause and suffer from uncomfortable hot flashes, take heart. You may be able to beat the heat by simply adding tofu to your diet. Startling new research reveals that tofu, a soybean-rich food, can cool the miseries of menopause fast, which may be the reason Asian women–whose diets are rich in soy–suffer fewer, less severe hot flashes and night sweating than American Women."

The article then summarizes a study by Dr. Gregory Burke, of Bowman Gray School of Medicine in Winston-Salem, North Carolina. Investigating the effects of soy on menopause, his 6-week study involved 43 women, ages 45-55. Tofu contains "phytoestrogen–the plant form of the female hormone estrogen." The Star adds: "Doctors are recommending that women eat tofu–a custard-like extract from soybeans–and drink soy milk. The challenge is now for cooks to make tofu taste good. 'Tofu is a white spongy cube that's very bland when you eat it raw,' says Star nutritionist Ann Newswanger. 'But it's cholesterol free, and absorbs flavor from other ingredients. The possibilities are endless–have it for meals and in desserts." Three recipes are given: Tofu raspberry mousse. Poppy seed dressing. Spicy tofu stir-fry with vegetables.

7169. Essex, Charles. 1996. Questions remain over soy milk infant formula. *New Zealand Doctor.* Nov. 27.
• ***Summary:*** "The adverse publicity surrounding soy-based formulas has had a significant effect on their sales in some countries. Soy formulas in New Zealand have fallen from about 13 per cent of the formula market in 1994-95 to around 5 per cent, although soy follow-on formula has risen from 0.8 per cent of the market to 1.3 per cent. This is because use of infant formula has risen in infants over six months of age as parents have delayed the introduction of whole cow's milk.

"Sales of other soy products, for the adult health food market, have also fallen recently in New Zealand because of the concerns which have arisen without satisfactory scientific evidence about the effects of soy in the human diet."

7170. Berkoff, Nancy. 1996. Turkeyless Tetrazzini: With our feather-free version of this post-Thanksgiving classic, vegetarians needn't feel left out when it comes to leftovers. *Vegetarian Times.* Nov. p. 30-32.
• ***Summary:*** Main ingredients in this dish include extra-firm tofu or smoked tofu and cooked spaghetti. Soymilk is used in the sauce. The vegetarian version contains only 79% as many calories, 65% as much fat, 10% as much cholesterol, 27% as much sodium, and 50% more fiber.

7171. Gerstner, Patsy. 1996. The temple of health: A pictorial history of the Battle Creek Sanitarium. *Caduceus* (*Southern Illinois University School of Medicine*) 12(2):1-99. Autumn. Special issue. [101* endnotes]
• ***Summary:*** This special issue, a nicely bound book with a color illustration on the cover, offers a remarkable look at the Battle Creek Sanitarium, including 115 photos, illustrations and other graphics, and a well-written text and balanced appraisal.

Contents: Acknowledgments. 1. From gentle obscurity to worldly fame, 1866-1902. 2. The temple rises from the ashes. 3. The treatment. 4. Never enough space. 5. A moment of glory, 1928 and after. 6. The Battle Creek Sanitarium: An appraisal. 7. Further reading and notes. Picture credits. About the author (and Garth "Duff" Stoltz's remarkable collection of Sanitarium memorabilia). "Certainly the Sanitarium was one of the grandest experiments in health care in the nineteenth and twentieth centuries" (p. 99).

Soy acidophilus milk contained a bacillus similar to the one in yogurt that created lactic acid. Intended "to suppress the putrefactive bacteria in the colon and replace them with 'good' bacteria," this soy-based milk "became a standard item on the Sanitarium menu after 1915" (p. 43).

"Among his [Dr. Kellogg's] most successful efforts were Sanitarium exhibits at the World's Columbian Exposition, the great fair held in Chicago [Illinois] in 1893, and the Louisiana Purchase Exposition, the 1904 world's fair held in St. Louis [Missouri]... Kellogg and others began to refer to the Sanitarium as a 'University of Health'" (p. 81).

"Kellogg recognized the importance of endorsements from well-known personalities... Henry Ford was not only a frequent visitor but the first guest in the 1928 Towers addition. Other famous visitors were presidents William Howard Taft and Warren G. Harding,... arctic explorer Roald Amundsen, industrialist John D. Rockefeller, grape juice manufacturer Edgar Welch, author Upton Sinclair, educator Booker T. Washington, aviatrix Amelia Earhart, and merchandisers J.C. Penney, Montgomery Ward,... First Lady Eleanor Roosevelt was among the noted visitors, but not as a patient" (p. 81).

Figures (Photos unless otherwise stated): (1) People in the grand parlor, Battle Creek Sanitarium (the San), 1880s. (2) Ad for the Health Reform Institute in Battle Creek (1870s), forerunner of the San. (3) Illustration of John Harvey Kellogg, in his early 20s, shortly after he became superintendent of the Western Health Reform Institute. (4) Illust. Dansville, New York, water-cure facility. (5) Exterior of the Western Health Reform Inst. in 1866. (8) Illust.

"Women and men share a workout in the gymnasium, 1888." (9) Woman at the punching bag, 1910. (10) The Sewing Department, ca. 1915. (11) Exterior of the 1878 building–5 stories. (12) Diagram of the first floor. (13) Audience in Grand Parlor awaits a lecture; inset illust. shows a doctor interviewing a patient. (14) Illust. Typical San guest room, 1888. (15) Rate card from 1888, showing all basic costs / expenses. (16) The Sanitarium Hospital, completed in 1888. (17) By 1895, the San had been enlarged by a 5th story plus two additions. (18) Menu for dinner, July 15, 1888. (19) Leaflet promoting Sanitarium Training School of Nurses. It opened in 1883 with a six-month program. It grew to a full two-year course. (20). The front of an urban vegetarian restaurant and "Battle Creek Sanitarium Treatment Rooms," location unknown. (21) The dispensary of the Chicago Mission. The sign reads: "American Medical Missionary College: Dispensary." Constructed 1887. (22) Dr. John Harvey Kellogg poses ca. 1895 seated outdoors with some members of the medical and nursing staff. (23) The fire of 18-19 Feb. 1902; it burned the main San building and the hospital to the ground. Only one patient died in the fire. San losses were valued as high as $400,000 and the loss of guests' personal property as high as $500,000. (24) A group of San employees by the ruins. (25). Laying of the cornerstone for the new San on 4 May 1902. (26) Aerial view of the huge new San from the rear, showing the gymnasium and two treatment wings. (27) Entrance to the San. (28) The loggia. (29) A patient wearing the blanket / robe designed by Dr. Kellogg. (30) A Porte-air directing fresh air to the head of a patient in bed. (31) The Grand Lobby, with a "Ladies Corner" at center back. San. (115) Two people in a horse-drawn sleigh in front of the San in winter's snow. Address: Chief Curator, Dittrick Medical History Center.

7172. Holin, Fae. 1996. Roundup Ready beans stir environmental boycott. *Soybean Digest.* Nov. p. 5.
• ***Summary:*** Jeremy Rifkin, president of the Foundation on Economic Trends, is leading this boycott in the USA and Europe of Monsanto's genetically engineered (transgenic) Roundup Ready soybeans by asking consumers to boycott foods in which these soybeans appear unlabeled–such as Green Giant Harvest Burgers, Similac infant formula, and McDonald's french fries (which may be fried in soybean oil).

Both the European Union and Japan recently approved the use of Roundup Ready soybeans in feed and food. "And one of Europe's largest soybean processors, Oelmuhle Hamburg AG [in Germany], says it will begin importing and processing genetically modified U.S. beans this fall, despite Greenpeace protests."

"Roundup Ready soybeans are being harvested for the first time this year from nearly 1 million acres. That's predicted to increase tenfold next year."

7173. Imagine Foods, Inc. 1996. The Rice Dream cookbook. Palo Alto, California: Imagine Foods. 15 p. 22 cm.
• ***Summary:*** This is a booklet of natural, vegan recipes for using three types of Rice Dream brand rice milk. On the front cover is a pastel illustration of a spoon over a bowl of soup; on the rear cover, a stack of pancakes. Contents: Breakfast ideas. Savory soups. Sauces & gravies. Salad dressings. Hearty vegetarian entrees. Dreamy desserts. Dream drinks. A list of 9 of the company's products is shown on the inside rear cover. Address: Palo Alto, California.

7174. James, Valerie A. 1996. Experience and reason together. *Australian Birdkeeper* 9(5):249-50. Oct/Nov.
• ***Summary:*** This article is a rebuttal to a previous article in this magazine (June/July 1996, p. 141) by Tom Roudybush, whose company manufactures bird feed. She argues that the article by Roudybush was almost completely false and summarizs many studies from around the world, from the 1930s to the present, showing that soybeans contain toxins that are harmful or potentially harmful. Address: Whangarei, New Zealand.

7175. **Product Name:** Neilson's Soy Delight (Refrigerated in Gable-Top Carton).
Manufacturer's Name: Neilson Dairy. Div. of Weston Food Group.
Manufacturer's Address: Halton Hills, ONT, Canada. Phone: (905) 702-7200.
Date of Introduction: 1996. November.
How Stored: Refrigerated.
New Product–Documentation: Ontario Soybean Growers' Marketing Board Newsletter. 1997. Feb. p. 2. "Soy Delight soymilk." Neilson's Soy Delight is "the first fresh soymilk to be available in grocery stores." It comes in two flavors: Original and Vanilla. With its trilingual labeling (English, French, and Chinese) it is "targeted at the Asian-Canadian market, but it's a high-quality product that everyone will enjoy." One litre milk-style (gable-top) cartons are "currently being sold at Zehrs, Loblaws, Fortinos and Mr. Grocer supermarkets throughout Ontario."

Talk with Ian Walker. 1997. May 26. Neilson Dairy, a big Canadian dairy company, has a fresh soymilk on the market, sold in a gable-top carton like milk. They introduced it in about Nov. 1996. This is a new trend in Canada. Note: This soymilk is made by Nutrisoya, Inc. in Quebec and packaged near Quebec City.

7176. **Product Name:** [Tofu, Tempeh, Soymilk, Soyshakes / Smoothies, Soysages].
Foreign Name: Tofu, Tempeh, Soymilk, Soyshakes / Smoothies, Soychicha.
Manufacturer's Name: Organica-ecotienda.
Manufacturer's Address: Xicotencatl 653-18, Col. Centro, Veracruz, VER 91700, Mexico. Phone: 29-31-30-83.
Date of Introduction: 1996. November.
New Product–Documentation: Letter and form filled out by Pat Hayward. 2000. Aug. 25. This company, managed by Pat Hayward and Claudia Gutierrez, makes and sells the above five soyfood products, which they introduced in Nov. 1997. Production of each in kg/month is as follows: Tofu 50. Tempeh 2. Soymilk 40. Soyshakes/Smoothies 40. Soychicha 10.

7177. **Product Name:** ProSoya SoNice (Soymilk in Tetra Brik aseptic cartons) [Natural, Original, Vanilla, Chocolate].
Manufacturer's Name: Pacific ProSoya Foods Inc.
Manufacturer's Address: 312–19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: (604) 532-8030.
Date of Introduction: 1996. November.
Wt/Vol., Packaging, Price: 1 liter and 250 ml aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Raj Gupta of ProSoya in Ottawa, Ontario, Canada. 1996. Dec. 16. This product was introduced in November 1995 (1996?) in three flavors: Natural (nothing added), original, and vanilla. A fourth flavor, chocolate, is now in test market. The product is presently sold only in Canada. The soymilk is made in two of ProSoya's plants–in British Columbia and in Ottawa, Ontario. The place where it is packaged is confidential. Note: It may be packaged at a Beatrice Foods plant near Toronto.

Talk with Fred Webster, head of International ProSoya Corp. office in New Hope, Pennsylvania. 1997. Sept. 31. This product, made in British Columbia, Canada, and packaged in New Jersey, will be introduced to the U.S.

market in mid-October, 1997, in aseptic cartons (1 liter, and 250 ml x 3), in 6 flavors (vanilla, chocolate, natural {soybeans and water only}, original {sweetened, and balanced, with a balance of sodium and carbohydrate}, strawberry, and cappuccino); expected retail price is $1.99/liter.

Talk with Lorne Broten, President and CEO, International ProSoya Corp. 1997. Oct. 29. This product was launched in the late fall of 1996. It is now available in 1 liter and 250 ml UHT cartons. A new flavor (chocolate) has been introduced, and two new flavors (strawberry and cappuccino) will be available very soon.

7178. **Product Name:** Trader Joe's 100% Non-Dairy Vanilla Soy Milk (Plastic Bottle).
Manufacturer's Name: Trader Joe's (Marketer-Distributor).
Manufacturer's Address: P.O. Box 3270, South Pasadena, CA 91031-6270. Phone: 818-441-1177.
Date of Introduction: 1996. November.
Ingredients: Soybeans, filtered water, honey, vanilla.
Wt/Vol., Packaging, Price: 16 oz (1 pint) plastic bottle. Retails for $0.89 (1997/02, San Rafael, California).
How Stored: Refrigerated.
Nutrition: Per 8 fl oz (240 ml): Calories 130, calories from fat 25, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 80 mg (3%), total carbohydrate 22 gm (dietary fiber 0 gm, sugars 11 gm), protein 9 gm. Vitamin A 10%, calcium 30%, vitamin D 25%, vitamin C 0%, iron 6%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Talk with Patricia Smith, an employee of Trader Joe's. 1997. Feb. 10. She called the buyer who told her that this product was introduced on 15 Nov. 1996.

7179. *SoyaScan Notes.* 1996. Soymilk and cow's milk prices in California, December 1996 (Overview). Dec. 10. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Since Dec. 1983, approximately every other year, Soyfoods Center has conducted a survey of the prices of soymilk and cow's milk in California. In Dec. 1996 at Trader Joe's, a gourmet and natural foods chain in Concord, California, soymilk made from organically grown soybeans, sold in an aseptic package with reclosable spout, retails for the following prices: Pacific Select (lowfat plain) retails for $0.99. Westsoy Lite (1% fat) Combibloc half gallon with reclosable spout (plain, or vanilla) retails for $1.99 (equivalent of $0.995/quart). Pacific fat free (vanilla, or plain) retails for $1.19. Trader Joe's Soy-Um quart (original, vanilla, or lowfat chocolate) retails for $1.39. By comparison, Rice Dream Vanilla (a rice-based beverage) retails for $1.39/quart.

The average price of the quart equivalents of these four soymilk brands is $1.14. This is $0.32 per quart lower or 22% lower that the $1.46 in Dec. 1996 and $0.78 per quart lower or 41% lower the $1.92 in Dec. 1992.

The major factors leading to the falling price of soymilk are: (1) The growing popularity of "lite" soymilks since 1990; they contain more water and less fat–but also less protein and other nutrients; (2) The increase in carton size to 2 quarts; and (3) The economies of larger-scale production due to increasing demand. This increased demand is due to the growing awareness of the many nutritional benefits of soymilk (especially from isoflavones such as genistein), the falling price, and the dislike of growth hormones (rBGH, made by Monsanto) used in producing cow's milk.

Cow's milk (fortified with vitamins A and D) sells for the following prices at the Safeway supermarket in Lafayette, California: (1) Nonfat: $0.95/quart or $1.69/half gallon or $3.35/gallon; (2) Extra light (1% fat; protein fortified): $0.95/quart or $1.82/half gallon or $3.39/gallon; (3) Low-fat (2% fat; protein fortified): $1.01/quart or $1.82/half gallon; (4) Whole (homogenized): $1.01/quart or $1.82/half gallon. The best-seller among these is non-fat in half gallons.

Thus, during the past two years, the price of soymilk has continued to decrease while the price of cow's milk has continued to rise. In Dec. 1996 soymilk in quart cartons is, on average, 1.20 times as expensive per unit volume as nonfat dairy milk purchased in quarts, 1.35 times as expensive as in half gallons, and 1.40 times as expensive as in gallons. In Dec. 1994 a quart of soymilk was 1.71 times as expensive as a quart of the best-selling cow's milk. So in the last 2 years the price of soymilk has fallen significantly relative to that of cow's milk.

During the last 13 years, the price of soymilk on a per-quart basis has fallen dramatically–from $2.48/quart in Dec. 1983 to $1.14/quart in Dec. 1996; thus, soymilk is less than half as expensive per quart today as it was 13 years ago. The price of soymilk has fallen even more dramatically relative to the price of cow's milk, which has increased from $0.43/quart to 0.95/quart during this same period. In 1983, a quart of soymilk was 5.76 times as expensive as a quart of cow's milk; today it is only 20% more expensive.

7180. *SoyaScan Notes.* 1996. Chronology of major soy-related events and trends during 1996 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 15–Silk, America's first soymilk sold refrigerated in a typical milk carton (gable-top, Pure-Pak) is introduced by White Wave of Boulder, Colorado. It is made in Canada, formulated in California, then shipped to White Wave in tanker trucks.

Sept.–Monsanto's Roundup Ready transgenic (genetically engineered) soybeans are harvested from an estimated 1.2 million acres of U.S. farmland. They begin to enter into the food supply–unlabeled. There is a great outcry in Europe (especially in England and Germany) by consumers over loss of freedom of choice concerning food–

but hardly a peep from the USA.

1996 Sept. 15-18–The Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease, is held in Brussels, Belgium, and organized by Mark Messina, PhD.

1996 Oct. 30–Odwalla, a fresh juice manufacturer and distributor, is informed that their unpasteurized apple juice may be contaminated with an especially virulent strain of *E. coli* strain O157:H7 (pronounced Oh-157-H7). Odwalla immediately initiated a recall, but one baby died and 66 people in 3 states got sick. Three years earlier, in January 1993, a similar but more severe outbreak had occurred at Jack-in-the-Box in Seattle, Washington; 4 children died (from kidney failure) and 700 people became ill–from eating undercooked hamburgers. These two incidents may have major implications for the soyfoods industry–since unpasteurized tofu is a prime target for *E. coli* contamination. The first big consequence was seen when Kroger, a major supermarket chain in the Midwest, announced in late 1996, that it would no longer sell unpasteurized tofu.

There is growing interest in the health benefits of the phytochemicals in soybeans–especially genistein. Four areas of potential benefits have been identified, and they are in a "horse race" as scientists investigate more deeply: 1. Relief of risk of cardiovascular disease, especially heart disease. 2. Relief of menopausal symptoms. 3. Improvement of bone health and relief of risk of osteoporosis. 4. Relief of cancer risk of some sites–especially prostate cancer. But most media have tended to hype these health benefits, far beyond what the science justifies.

During the past year or two, Soyfoods Center has been receiving a growing number of calls from people who ask "How can I get more soy into my diet?" Never before have we heard people ask a question like this. These people have heard about the many health benefits of consuming soyfoods regularly but they don't know what foods would suit their tastes and diet.

This year, for the first time, the state soybean associations and boards take the lead (passing the Soyfoods Association of America) in promoting soyfoods in America. The leading states are Illinois, Indiana, Michigan, Minnesota, and Missouri.

This year (1996), the Chemopreventive Branch of the National Cancer Institute concluded that genistein (the primary isoflavone in soybeans) was one of four plant compounds with superior anticancer activity.

Also this year there was a rapid rise of interest in and sales of meat alternatives.

7181. *Bluebook Update* (*Bar Harbor, Maine*). 1996. ProSoya receives new patent. 3(4):3. Oct/Dec.
• ***Summary:*** On 13 Aug. 1996 ProSoya Inc. of Ottawa, Ontario, Canada, was awarded a U.S. patent for their Energy Efficient Centrifugal Grinder. Invented by Raj P. Gupta and Grant W. Woods, it grinds solids or solids in liquids in multiple stages. For more information phone: 613-745-9115.

7182. Golbitz, Peter. 1996. Soyfoods take root in the Caribbean: Basic food needs spur growth of a new industry. *Bluebook Update* (*Bar Harbor, Maine*) 3(4):4-5. Oct/Dec.
• ***Summary:*** Dominican Republic: In August, the Mexico City office of the American Soybean Association sponsored a conference in the Dominican Republic titled "The Importance of Using Soy Protein in the Treatment of Chronic Disease." Two companies are now making soyfoods in the Dominican Republic and working to increase awareness of their value. Engela Estévez, founder of Saluvid S.A., makes a variety of meat alternatives from textured soy protein.; she presents seminars, has written a book titled "112 Recipes with Soya, The Vegetable of a Thousand Uses," and has helped to establish a foundation named FundaSoya to educate consumers. Mr. L.R. Ubiera, founder of Nutrisoya in 1996, makes fresh soymilk and tofu as well as several meat alternatives; he has written and published a book titled "Tofu y Leche de Soya, a Practical Guide for Home Preparation."

Cuba: A summary of the history of soyfoods in Cuba, including recent developments, was extracted from a report by William Shurtleff after his visit to Cuba in Jan. 1996.

A photo shows a soybean harvester in Cuba, donated by Global Exchange. It arrived in the spring, just in time to help with this year's soybean harvest. From left to right: The harvester's mechanic. The director of the INIFAT station where the soybeans will be grown. Segundo Panas of ECAP (A Friends-of-Cuba organization). Pam Montanaro of Global Exchange in San Francisco, California. Tomas Guzman of INIFAT, director of the Cuban soybean production project.

7183. Hager, Stacy. 1996. What the heck are tofu and tempeh? Here's a dictionary of healthy soyfoods. *Soybean Digest.* Dec. p. 14-15. In "Soyfoods Special Report" section.
• ***Summary:*** Gives a brief description of tofu, tempeh, textured soy protein (TSP), isolated soy protein, soy milk, soy flour, green vegetable soybeans, and roasted soy nuts. The article begins: "No, tofu's not a martial arts method, tempeh's not an Arizona city, and TSP isn't an abbreviation for teaspoon."

7184. Hansen, Asger Sommer. 1996. Re: Finally our soymilk business is taking off (Card). Letter to William and Akiko Shurtleff of Soyfoods Center, Dec. 1 p. Handwritten, with signature.
• ***Summary:*** Handwritten on an APV UNICEF Christmas card: "Finally our soymilk business is taking off. Plants sold in 1996: 3 for China. 1 for England. 1 for Japan.

"Kind regards, Asger S. Hansen." Address: APV Soya Sector, Europaplads 2, 8000 Aarhus C, Denmark. Phone: +45 86 12 41 55.

7185. Holin, Fae. 1996. Start with soy flour, milk: Slowly infiltrate your family's diet. *Soybean Digest.* Dec. p. 16-17. In "Soyfoods Special Report" section.
• ***Summary:*** Contains recipes for: Spicy chicken stir-fry. Cook soybeans to soy nuts. A color photo shows Barb Overlie, farmer and soy spokesperson, who says that "soyfoods are easy to add to her recipes."

7186. Holin, Fae. 1996. Getting sneaky with soy: How to use tofu without a family strike. *Soybean Digest.* Dec. p. 23, 27. In "Soyfoods Special Report" section.
• ***Summary:*** Describes how registered dietitian Anne Patterson slowly introduced tofu to her family, starting with desserts. She and her husband, Jim, own corn and soybean acreage in Illinois. Jim "doesn't really like to see white tofu," so Anne always disguises it–as by putting it in lasagna in place of ricotta cheese, or in other baked or main dishes to reduce the amount of oil or eggs used. She notes that the new lite or low-fat tofus are excellent. Also describes how to use tempeh, soy flour, soy beverage (soy milk) and TSP (TVP). Her family also likes the commercial soy burgers now widely sold in mainstream grocery stores.

Contains recipes for: Strawberry tofu fruit dip. Tofu basil pasta sauce on fettuccine.

7187. Iderabdullah, Bisi. 1996. Imani House International (IHI), Liberia: Update and report. *Plenty Bulletin* (*Summertown, Tennessee*) 12(4):3-4. Winter.
• ***Summary:*** Bisi is now in New York trying to raise funds to continue Imani House programs in Liberia. Renewed hostilities in that country have destroyed much of the organization's infrastructure. However staff and volunteers have reactivated eight programs, including the Soybean Multiplication and Utilization Program–Duazon Village, Jahtondo Town, with outreach and extension to farming groups.

"The Soybean Project which is the heart of our Health, Nutrition and Agricultural Improvement Program continues on a limited basis due to the lack of sufficient tools and farming implements. The World Food Program and the UN/FAO had agreed to bring in enough soybeans for the growth and utilization campaign which was due to kick off this year. After four years of soybean introduction to the Liberian public we felt that the time was ripe for a full fledged program across the entire country. IHI had embarked on a campaign to include 10 NGOs who would receive training from IHI in soy growth and utilization. These NGOs in turn were committed to training farming groups with whom they worked, and participating in spreading the soy program nationwide. It is hoped that IHI will reactivate this part of the soybean program as soon as some level of security returns to Liberia.

"In the meantime we would like to request that Plenty continue collaboration with IHI in Liberia."

"Plenty has been more than a friend to IHI. If the war in Liberia could end we know that Liberia will be absolutely 'soy literate...' (In November we brought Bisi to Plenty's offices on the Farm in Tennessee where we spent 3 days working on plans for Imani House to expand its work in Liberia and extend its soyfoods development program to other parts of Africa.–Ed)"

A photo shows Bisi, in traditional dress and smiling, passing a glass of soymilk as she leads a soyfoods demonstration in Duazon Village, in Liberia.

7188. **Product Name:** Trader Joe's Soy-Um: Dairy-Free Soy Drink [Low Fat Chocolate, Original, or Vanilla].
Manufacturer's Name: J&G Inc. (Distributor). Made in Oregon by Pacific Foods.
Manufacturer's Address: 60 East Elm, Chicago, IL 60611. Phone: 312-787-5157.
Date of Introduction: 1996. December.
Ingredients: Low Fat Chocolate: Filtered water, whole organic soybeans*, brown rice syrup (brown rice, water), natural vanilla flavor with other natural flavors, cocoa powder, tricalcium phosphate, sodium citrate, sea salt, carrageenan, vitamin A palmitate, vitamin D-2. * = Organically grown and processed in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 32 fluid oz. (1 quart) 946 ml Tetra Brik Aseptic carton. Retails for $1.39 (1996/12, Concord, California).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per cup (8 fl. oz): Calories 160, calories from fat 25, total fat 3 gm (4% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 260 mg (11%), total carbohydrate 27 gm (9%; dietary fiber 2 gm = 7%), protein 6 gm, vitamin A 10%, vitamin C 0%, calcium 30%, vitamin D 30%, iron 20%. Percent daily values are based on a 2,000 calorie diet.
New Product–Documentation: Product with Label purchased at Trader Joe's in Concord, California. 1996. Dec. This product, first introduced in Jan. 1994, was launched under the Trader Joe's brand, with a very similar label, in about Dec. 1996. The formulation has been changed to reduce the fat and add more calcium and vitamins. Reclosable spout." Copyright 1996. Distributed and sold exclusively by Trader Joe's, South Pasadena, California 91031." Soyfoods Center taste test. 1997. March. Delicious. Excellent package design, great price, and great value. Talk with Patricia Smith of Trader Joe's, San Francisco. 1997. May 5. This product was launched in late 1996. It comes in the three flavors shown above.

Product (vanilla) with Label purchased at Trader Joe's in Lafayette, California. 2000. March 24. The front of the vanilla carton (copyright 1999) has been redesigned. A bold banner with a yellow blending to orange background reads: "Contains natural isoflavones." Below that are four checked boxes: "Calcium enriched. No saturated fat. No cholesterol.

Isoflavones–35 mg per [1 cup] serving." The product is now made with certified "whole organic soybeans." The headline on the back panel reads: "Supporting our future through organic agriculture." The retail price is $1.39 for 1 quart.

Product (original) with Label purchased at Trader Joe's in Lafayette, California. The retail prices is now $1.49/quart.

7189. Mergentime, Ken. 1996. Biotech soybeans enter the food supply: Unlabeled genetically engineered, pesticide resistant soybeans and other crops will impact natural products marketplace. *Natural Foods Merchandiser.* Dec. p. 43-44, 48.

• ***Summary:*** The article begins: "The hornet's nest of controversy over genetically modified foodstuffs continues to intensify as new products come into the marketplace. The latest–a new soybean modified to be resistant to the effects of a powerful herbicide–has stirred international clamors of protest, threatened boycotts and much publicity." Yet there isn't much evidence that the product is unsafe.

"Many are up in arms because federal regulations require no labeling to indicate that such products have been altered in any way, a fact consumer advocates say removes a person's right to choose whether or not to consume foodstuffs that have been genetically altered."

Roundup Ready soybeans were developed by Monsanto, the same company that in 1993 introduced the "highly controversial" genetically engineered recombinant bovine growth hormone (rBGH) intended to stimulate milk production in cows. The new soybeans were genetically modified to resist the effects of Monsanto's broad-spectrum herbicide named Roundup.

Roundup's active ingredient is glyphosate, which the EPA has given an "E" rating, indicating "evidence of noncarcinogenicity for humans based on EPA's review of toxicological studies." Yet in a review of glyphosate toxicity published in the *Journal of Pesticide Reform* (vol. 15, no. 3, Fall 1995), the journal's editor, Caroline Cox, states that "Glyphosate-containing products are acutely toxic to animals, including humans." She states that such products have caused genetic damage in human blood cells, reduced sperm counts in male rats, and lengthened estrous cycles and increased fetal loss in female rats. Moreover two serious cases of fraud have occurred in laboratories testing the toxicity of glyphosate.

7190. *Soybean Digest.* 1996. Soyfoods special report: Working the miracle crop into your family's diet (Section of articles). Dec. p. 13-17, 20, 23, 26-27.

• ***Summary:*** On page 4, editor Syl Marking, introduces this special section of articles and cover story by noting: "Cooking with Soy: *Soybean Digest* is plowing new ground again. It's our first-ever special report on cooking with soy (see p. 13). Take some time to not only read it but have the cook in your family try some of the recipes. Its another way to utilize the crop you grow. Let us hear from you–whether you like it or not. If you like it, we'll do it again next December.

On the cover, a full-page color photo shows a mother (Karen Johnson of Minnesota in Christmas colors) with two kids in the kitchen cutting rolled-out gingerbread dough with a cookie cutter. The caption (p. 3) states that she "slipped a little soy flour into the gingerbread dough." At the front of the table are packages of Westsoy Low Fat Soy Drink and Arrowhead Mills Soy Flour, plus an unlabeled 1-pound plastic bag full of yellow soybeans.

This special section begins with a 1-page introduction to six articles which follow; each of these is cited separately. The introduction asks: "But why should healthy, meat- or pasta-and-cheese loving people want to the spoil the flavor of their favorite foods? You shouldn't–and won't–have to. Foods containing soy are tasty as well as healthful.

"Say you want to reduce your fat intake. Or need to increase the amount of fiber your consuming. Studies in Japan, China and the U.S. show that eating as little as one serving of soyfoods a day cuts the risk of some types of cancer by 40-50%.

"You're already eating soy–just look at the product labels of the foods you eat daily... You may want to replace regular milk with some soy milk in the next batch of cookies you make. As you become more adventurous, cut out some of the ricotta or cottage cheese in next week's lasagna and sneak in a little tofu." A color photo shows a little boy and girl about to eat gingerbread cookies fortified with soy flour.

7191. *Soybean Digest.* 1996. More on soyfoods. Dec. p. 20. In "Soyfoods Special Report" section.

• ***Summary:*** "Looking for more soy recipes or health information? Start with your state's soybean association. Most offer free soy information, cookbooks or recipes. Publishing companies offering books on soyfoods include:" The Book Publishing Co. (Summertown, Tennessee), Avery Publishing Group (Garden City Park, New Jersey), Prima Publishing (Rocklin, California).

A sidebar (developed by the Minnesota Soybean Association) titled "Guide to modifying recipes" shows eleven substitutions that "can reduce calories, total fat, saturated fat and cholesterol." For example: For 1 cup milk substitute 1 cup fortified soy milk. For 1 cup fruit yogurt substitute 1 cup soft silken tofu + fruit, blended. For 1 egg substitute 1 tablespoon soy flour + 1 tablespoon water or one 2-inch square of tofu. For 1 cup ricotta cheese substitute 1 cup firm tofu, mashed. You can replace up to ¼ of the flour in baked goods with soy flour.

7192. **Product Name:** Fat Not! Crème It (Soy Powder).
Manufacturer's Name: Dixie USA, Inc. (Marketer-Distributor).
Manufacturer's Address: P.O. Box 55549, Houston, TX

77255. Phone: 1-800-347-3494.
Date of Introduction: 1996.
Wt/Vol., Packaging, Price: 8 oz package or 2 lb cannister.
How Stored: Shelf stable.
New Product–Documentation: Dixie Diner's Club Official Newsletter and Catalog. 1996. Jan. Vol. 2, issue 1, p. 3. Add water to make soy milk without a blender. Or use like cream in hot chocolate. The 8 oz package (equal to 8½ boxes of tofu) sells for $3.99 plus at least $4.99 postage. The 2-lb canister (equal to 34 boxes of tofu) sells for $12.49 plus at least $4.99 postage. A color photo shows the 2-lb canister. Many recipes using the product are given. The name of the manufacturer is not given.

Talk Robert A. Beeley, chairman of Dixie USA. 1996. July 31. Fat Not! Crème It (Soy Powder) is a tofu powder made by Clofine. Brenda developed a great recipe for using it and now it is one of the company's best sellers.

7193. **Product Name:** Sobe (Soymilk in Pure-Pak Carton).
Manufacturer's Name: Fortune Food Manufacturing Pte. Ltd. (Affiliate of Provisions Supplies Corp.).
Manufacturer's Address: 348 Jalan Boon Lay, Singapore 2261, Singapore. Phone: +65 266 4188.
Date of Introduction: 1996.
How Stored: Refrigerated.
New Product–Documentation: Letter (fax) from Wataru Takai in Singapore. 1996. April 22. In Singapore, Fortune Foods Manufacturing Ltd. started making "Sobe" soymilk in a Pure-Pak carton. Sales are now booming. Company listing in '95-96 Soya Bluebook Plus. p. 116. But soymilk is not mentioned. Natalie Yap, factory manager.

7194. Fukutake, M.; Takahashi, M.; Ishida, K.; Kawamura, H.; Sugimura, T.; Wakabayashi, K. 1996. Quantification of genistein and genistin in soybeans and soybean products. *Food and Chemical Toxicology* 34(5):457-461.
• ***Summary:*** Discusses: Soybeans, soy nuts, soy powder, soymilk, tofu, miso, natto, soy sauce, genistein. Address: 1-3,5-6. Biochemistry Div., National Cancer Center Research Inst., 1-1 Tsukiji, 5-chome, Chuo-ku, Tokyo 104; 1,4. Tsumura & Co., 3586 Yoshiwara, Ami-cho, Inashiki-gun, Ibaraki 300-11. All: Japan.

7195. **Product Name:** [Soy Wonder Soymilk Machine].
Foreign Name: Soywonder Sojamilch Maschine.
Manufacturer's Name: InnoMach, Inc.
Manufacturer's Address: Germany.
Date of Introduction: 1996.
New Product–Documentation: Color leaflet (photocopy, front and back, 28 cm) sent by Patricia Smith from Natural Products Expo West. 2003. East. On the front panel: "Make it fresh with Soy Wonder Soymilk Machine and get maximum nutrients for just pennies a quart with no additives or preservatives. New improved 2002 Model 720. Easy! Inexpensive! Versatile (The 2002 model Soy Wonder makes great-tasting Rice Milk, Almond Milk, Coconut Milk, Sesame Milk and Tofu too! Its instruction booklet contains great recipes for these and other okara-based baked treats... Buy direct from the manufacturer and save. InnoMach, Inc.)."

On the rear: "To get the most pure nutrients from soy... Soy is rich! Soy is healthy! Soy is versatile!"

According the company website, www.soywonder.de (July 2013). "You can easily make 2 quarts of fresh soymilk in 23 minutes with the Soy Wonder soymilk machine... To make 2 quarts you will only need 150 grams (1 cup) of dry soybeans; therefore two quarts of soymilk will cost US$0.50. This is an amazing savings compared to the packaged milk that you buy at the store."

The Soywonder has been sold worldwide since 1996. Two year guarantee, no cost, no waiting. The dealer in the USA is Tobe Products, USA, Johnston, Rhode Island.

Letter from Bernhard Feix in reply to inquiry. 2013. July 16. "The first Soy Wonders were sold in the US probably early 1997 through Miracle Exclusives; we were first in the market to the best of my knowledge our company. Tobe Products situated in Bavaria, Germany, has been doing business in Asia since the early 1970s. My father, owner of Tobe, was first introduced to a soymilk maker in Hongkong in 1996; bringing it to a standard accepted in the USA and Europe took a year. A lot of work was involved; we got advice from Soyatech in Maine and Iowa university. Tobe Products Hongkong in cooperation with LTL company–also Hongkong–was responsible for production of the machine in mainland China. Tobe Hong Kong was at Salisbury Road, Kowloon, Hong Kong at that time."

[Fre]*

7197. **Product Name:** Soymilk Beverage.
Manufacturer's Name: Unicurd Food Company (Pte) Ltd.
Manufacturer's Address: Singapore. Phone: +65 759-2855.
Date of Introduction: 1996.
New Product–Documentation: Soya Bluebook Plus. 1997. p. 163. This company makes soymilk beverages. Contact: Francis N.K. Goh, Managing Director.

7198. Chen, J.D.; Xu, Hong. 1996. Historical development of Chinese dietary patterns and nutrition from the ancient to the modern society. *World Review of Nutrition and Dietetics* 79:133-53. [23 ref]
• ***Summary:*** During the Han and Tang dynasties (206 BC

to 907 AD) people in China started to pay attention to vegetarian food and to use vegetable oil. "Bean products, such as bean curd, were already used in recipes" (p. 136).

A famous saying has been handed down from ancient times: "Breakfast should be eaten well, lunch must be in one's fill, and food for dinner should be little."

Generally people eat porridge or millet gruel as the main food for breakfast; with it they eat soybean milk, salted vegetables, eggs (boiled or fried), and deep-fried twisted dough sticks. For lunch and dinner, salt or soy sauce were often added during cooking.

The soybean is mentioned on page 148. Address: 1. Research Div. of Sports Nutrition and Biochemistry, Inst. of Sports Medicine, Beijing Medical Univ.; 2. Dep. of Sports Medicine, Beijing Univ. of Physical Education. Both: Beijing, China.

7199. El-Hai, Jack. 1996. Celebrating tradition, building the future: Seventy-five years of Land O'Lakes. Minneapolis, Minnesota: Land O'Lakes, Inc. 132 p. Illust. No index. 26 x 26 cm.

• ***Summary:*** Land O'Lakes is a cooperative, created by cooperative creameries in 1921 in order to solve 3 specific problems concerning butter: (1) its high transport costs, especially to New York City; (2), its erratic, often poor quality when made from soured milk; and (3) the lack of a marketing plan and vision for the future.

The cooperative first became widely known as a pioneer in making America's best sweet-cream butter, and for its colorful package featuring a kneeling Indian maiden holding a carton of the organization's butter. The cooperative was based in Minnesota, "the land of 10,000 lakes."

This is a beautiful book, artistically designed, filled with superb old photos and illustrations (many in color), printed on glossy paper with a hardcover binding. The chronology of milestones is well done and very helpful. By the 1890s, dairying had become firmly established in the upper Midwest.

1891–Minnesota governor John Pillsbury attracts Theophilus Levi Haecker, an expert in the science of buttermaking, to the Univ. of Minnesota. Haecker tours Minnesota's dairy plants and encourages the formation of co-op creameries. 1896–The Minnesota Dairy and Food Department reports that the unsanitary methods used to produce butter often result in a product that "smells bad, tastes worse and does not keep at all." 1899–Less than a decade after his arrival in Minnesota, Haecker's efforts paid off. The number of co-op creameries in the state skyrocketed from two in 1891 to 438 by the end of the decade.

1901–The invention of the hand-operated cream separator enables dairy farmers to more easily skim the butterfat from their own milk, but also attracts large-scale butter makers (or "centralizers") to the Midwest. 1920–John Brandt, a dairy farmer from Litchfield, Minnesota, is elected president of the Meeker County Creamery Association, a federation of co-op creameries interested in reducing shipping costs and improving the quality of their butter. 1921 June 7–"Representatives of 320 of the state's co-op creameries meet in St. Paul to form the Minnesota Cooperative Creameries Association. John Brandt is elected to the board of directors. 1924 March–The association–in need of a catchy trade name to use in marketing the members' butter–holds a contest to name the brand. The judges select 'Land O'Lakes' from among nearly 100,000 entries... 1926–Positive response to the Land O'Lakes butter name prompts the membership to change the name of the Minnesota Cooperative Creameries Association to Land O'Lakes Creameries, Inc."

"1929–Land O'Lakes opens a feed department to sell feeds for cattle, hogs, and poultry. Using higher-grade feeds, farmers are able to produce higher-quality milk, eggs and poultry that bear the Land O'Lakes label."

In the mid-1930s Land O'Lakes is a pioneer in introducing sophisticated, automated equipment for packing, labeling, and boxing sticks of butter in its "butter print room."

1951–Land O'Lakes introduces Calf Milk Replacer, a revolutionary feed that substitutes for (and is better than) the increasingly valuable skim milk that dairy farmers had formerly fed to their calves. A scientific formula (non-soy), it was developed by Dr. Frank Crane of the Land O'Lakes Feed Department.

"1969–This is a peak year acquisitions and mergers, with 37 organizations becoming part of the Land O'Lakes family.

"1970–In a step that begins a tremendous growth in Ag Services, Land O'Lakes merges with Farmers Regional Cooperative (Felco) of Fort Dodge, Iowa."

"1981–Land O'Lakes moves to a new corporate headquarters building in Arden Hills, Minnesota."

"1982–Land O'Lakes merges with Midland Cooperatives, a Minneapolis-based ag supply co-op that markets feed, seed, agronomy products and petroleum."

"1987–An innovative joint venture with Cenex results in shared ownership of the Cenex / Land O'Lakes Agronomy Co. and a marketing effort that unifies the Feed and Seed operations owned by Land O'Lakes with the petroleum operations owned by Cenex."

"1996–The 75th Annual Meeting celebrates Land O'Lakes best year ever, with earnings in each core business exceeding plan." Address: Minneapolis, Minnesota.

7200. Gelles, Carol. 1996. 1,000 vegetarian recipes. New York, NY: MacMillan. [vii] + 598 p. Index. 24 cm.

• ***Summary:*** In the Introduction, a section titled "Soy products" (p. 17-18) includes brief definitions of soybeans, bean curd (tofu), miso, seitan, soy flour, soy milk, soy nuts, soy sauce and tamari, soy sprouts, tempeh, and textured

vegetable protein (TVP).

In the chapter on "Entrees" is a section (p. 217-27) is titled: "Tofu, tempeh, seitan, and textured vegetable protein (TVP)."

The index contains 20 entries for tofu, 5 each for tempeh and soybeans, 4 for textured vegetable protein (TVP), 3 for seitan, and 1 for miso.

A table (p. 14) gives the time to cook various types of beans (that have been soaked overnight, the soak water discarded, and fresh water added) in a pot or saucepan (not in a pressure cooker); the adzuki bean takes the shortest time (45 to 90 minutes) while the soybean takes by far the longest time (2½ to 3½ hours [which is not nearly long enough]). Herein lies one key reason that Asians strongly prefer soyfoods to whole soybeans. Address: Author, food stylist and recipe tester, New York City.

7201. Gonzalez-Pando, Miguel. ed. 1996. Greater Miami: The spirit of Cuban enterprise. Fort Lauderdale, Florida: Copperfield Publications, Inc. See p. 168. [Eng]

• ***Summary:*** On page 168 is the story of Fully, Inc. run by Manny Wong, whose biography is also given. This company was started in Cuba in 1947 by Cesar Wong; that's when he and his family began making sprouts in Havana's produce market. In 1960 they came to Miami and soon established themselves in the restaurant field. His son, Manny Wong, attended college in New York and majored in business. After graduation he married Silvia Cok, also a Cuban-Chinese whose father had been a Chinese businessman in Havana, in the grocery business. "Upon arriving in New York in 1960, Silvia's father joined his relatives in a tofu (bean curd) [manufacturing] business which had been established back in 1933."

In 1978 Manny and his bride moved back to Miami, where he launched Fully, Inc. with his brother-in-law Dennis Marr. In Chinese "Fully" is composed of the two characters *ful* meaning "rich" and *ly* [*lei*] meaning "profit." They started as an Oriental food wholesale company, handling most of the items used in Chinese cooking.

In 1981, with demand for sprouts growing dramatically, Manny and Dennis founded Fully Bean Sprouts Farm Company. They grow mainly [mung] beans sprouts and soy sprouts.

During the 1980s, as "demand for more healthful foods grew, Fully opened another subsidiary, Fon-On for Florida. This is a spin-off of Manny's father-in-law's tofu business in New York. Fon-On of Florida manufactures 'soy products'–mainly soy milk and currently five kinds of tofu: Oriental, Soft, Firm, Silk, and Pudding." Photos show: Manny Wong with his wife and three children in late 1994. Various packaged soy products made by Fully including soy sprouts, soy milk, pudding, tofu. Address: Florida.

7202. Hasse, Geraldo; Bueno, Fernando. 1996. O Brasil da Soja: Abrindo fronteiras, semeando cidades [The Brazil of soy: Opening frontiers, sowing cities]. Porto Alegre, Brazil: L&PM Editores S.A. 256 p. Illust. (some color). 32 x 28 cm. [Por; Eng]

• ***Summary:*** This spectacular and original book contains the best history of the soybean in Brazil seen to date. It was published to celebrate the 25th anniversary of Ceval Alimentos S.A. (best known as "Ceval"), a soybean crushing and processing company in Brazil. Founded on 4 April 1972 as *Cerais do Vale Ltda.* ("Valley Cereals") by the Hering Co. to benefit from tax incentives offered by the government of Santa Catarina, it began regular operations in Oct. 1972–but quickly transcended its origin and original name. In 1996 the company had nine soybean crushing plants throughout Brazil; three of these also contained soy oil refining capabilities.

The first half of this book is written in Portuguese, the second half in English. Issued in a case, it contains almost 100 pages of full-color photos plus 24 historical black-and-white photos (from the early 1900s to the present, each with a detailed caption) and excellent illustrations. Hasse, an expert in rural matters, conducted more than 150 interviews in the process of writing this book.

Contents: A Brazilian saga (how the book was created), by the publishers. The soy revolution (introduction), by Ivo Hering and Vilmar Schürmann of Ceval Alimentos. Before the fields, the school: Introduction, in the baggage of the Japanese, the reflection of North America, whole grain bread, the role of World War II, local industry. The foreign thrust (p. 202): Introduction, Communist help, the pool of exporters, "Zé Sojinha" (nickname of agronomist José Gomes da Silva, who continues the research of pioneer Neme Abdo Neme at the IAC), frost in coffee plantations (1955 in Parana), the weight of industry (Samrig in 1953, Bunge & Born, Antonio Mafuz, first Samrig crushing plant in 1956 at Porto Alegre, Institute for Soy Development of Rio Grande do Sul once had 42 members), planting news (Samrig, Nestle), butter vs. margarine (Primor soy oil and margarine), table showing soybean production in Brazil and four states, every five years from 1950 to 1970. The wheat lever: Introduction, a civic mission, the import addiction, the circle of mold, the technological package, paper wheat, the powerful CTRIN, swapping roles. The cooperative branch (p. 212): Introduction, the original sin (*Fecotrigo,* Oct. 1958), in the shadow of Banco do Brasil, victims of a giant, grass roots education, a summit decision, big shot, the charter flight to Chicago, the crisis of 1982, loss of credibility, the lessons of soy. The Chicago fever: Introduction, "It was impossible to compare," "Exceptional," kings and beggars (the price fever of 1973), the export model, state incentive, the theory of plenty. The conquest of the West (p. 222): Introduction, expanding frontiers, under the weight of the ax, from the other bank of the river, family subsistence, chronological duality, the march to the west, sowing cities,

family memories, once upon a time, the transportation bottle-neck (building the Madeira river waterway). The agribusiness axis: Introduction, the role of the government, plenty of credit, the oil industry, the "poking" method, the boom of Santa Catarina, the dynamism of the Central-West region, the new paradigm, the revolution in transportation, the effect of the strike, grain trucks, machinery industry, the progressive Carazinho, Lodgemann–the land surveyor, Streich–the carpenter. A tropical adventure (p. 236): Introduction, a multinational legion, the metamorphosis, technical leadership, Santa Rosa, in the Mogiana region, the Campinas-Pelotas pioneers, Santa Maria, trailing behind producers, the queen of the cerrados, technical polarization, no frontiers, stories from the hinterland, Londrina–technical capital, the Nobel Prize, the retirement of the plow, farewell to one-crop farming, poor man's food (ITAL). A symbol of health: Introduction, the paradox of Esteio, forced diet, for the pigs and the poor, food and medicine, nutritious soft drink (soymilk, *leite de soja*), a secondary ingredient, flavor barrier (Ital {a public organization}, Vital soymilk {1977}, Sojal soymilk, Gestal soymilk, Roberto Moretti from 1977), the Mechanical Cow (Moretti's "cow" was awarded the "greatest Brazilian invention" prize by the governor of Sao Paulo; this started the cow on an outstanding public career), drops in the ocean, a standing taboo, in search of health, Oriental wisdom, anti-nutritional factors, therapeutic powers. The lessons of a revolution (p. 255): Conclusion. Chronology of the history of soy in Brazil.

On the two pages after the table of contents are full-page color maps which show: (1) Satellite photo of the Planalto Central (High Central Plains) region of Brazil. The city of Brasilia is at the center, and concentrated on the right are areas of soy plantations. The small circles between the plantations are "pivot" planted areas. (2) Map of Brazil showing the historical growth of the soybean crop, places of historical interest, and important cities and ports. There are five special symbols: (a) A brown soybean pod = Introduction of soybean cultivation, e.g., 1882 Bahia, 1980 Barreiras, 1989 Balsas. (b) A blue ship by an elevator = Ports that are outlets for soybean production. (c) Three silver elevators = Centers of cooperative wheat growing. (d) A red retort and a white book = Centers of education, training, and research. (e) A yellow factory with smokestack = Crushing or processing plants. Generally, the soybean has expanded into the northern and northwest parts of Brazil. The captions explain: 1882–Bahia–First cultivation of soybeans in Brazil. 1908–Japanese immigrants import soybeans to Brazil in their personal baggage. 1920–Santa Rosa, Rio Grande do Sul–Soybean seeds distributed to European colonists. They become the first regular cultivators of soy in the southern Brazil. 1923–Sao Simao, Sao Paulo–Henrique Lobbe starts to test American soybean varieties. 1938–Porto Alegre–The first exportation of soybeans from Brazil to Germany. 1958–Esteio–Brazil's first soy oil plant, started by Samrig. 1971–Rio Grande–Grain terminal starts operating. 1972–Gaspar, Santa Catararina–Ceval Alimentos begins operations. Dourados–Bridge of entry of soybeans into Mato Grosso do Sul. Territory of Brasiguaios–Planters of soya and wheat. Port cities (from south to north): Rio Grande, Sao Francisco, Paranagua, Santos, Vitoria, Ilheus, Ponta de Madeira: They play an important role in the exports of seeds and industrialized products.

Talk with Ted Hymowitz, Prof. of Plant Genetics, Univ. of Illinois. 2000. July 3. From 1964 through 1966, Dr. Hymowitz was employed as an agronomist by the IRI Research Institute, Campinas, Brazil–working with soybeans–as part of the Alliance for Progress. He was also a technical advisor to the Brazilian National Soybean Commission. When he read this book, he was struck by the fact that it did not mention the important U.S. role in the development of the soybean industry in Brazil in the 1960s. Address: 1. Journalist; 2. Photographer. Both: Brazil.

7203. Main, Jan. 1996. The lactose-free family cookbook. Canada: Macmillan Canada. *
• ***Summary:*** This book combines information on lactose intolerance, dietary calcium, and a collection of recipes, including many dishes based on soyfoods. Address: Professional home economist, Scarborough, Ontario, Canada.

7204. Melina, Vesanto; Forest, Joseph. 1996. Cooking vegetarian. Toronto, Canada: Macmillan Canada. xi+ 212 p. + 8 unnumbered pages of color plates. Illust (some color). Index. 25 cm. [9 ref]
• ***Summary:*** The index contains 14 entries for tofu, 2 each for tempeh, for textured vegetable protein (TVP), and for miso soup, and 1 each for soy milk and for teriyaki sauce.

On page 3 is a "Vegetarian food guide" in the form of a series of four arcs. The largest, outside arc is for grain products, the next largest is for vegetables & fruits, the third largest is milk and alternatives which includes tofu, dairy products (milk, yogurt, and cheese), and beverages [such as soy milk] fortified with 150 mg of calcium per serving, the fourth and smallest arc is beans & alternatives, which includes legumes, tofu, meat substitutes, tempeh, nuts and seeds, and soy milk.

On the rear cover is a brief biography and portrait photo of each author. This book generally advocates a plant-based (vegan) diet but does include milk, milk products and eggs as alternatives. Melina Vesanto, whose "way of eating has now become totally plant-based (vegan)" was born in 1942. Address: 1. Dietitian, university and college teacher, and government consultant; 2. Chef and food consultant based in Vancouver.

7205. Mendelson, Anne. 1996. Stand facing the stove: The story of the women who gave America *The Joy of Cooking*.

New York, NY: Henry Holt and Co., Inc. xviii + 474 p. Illust. Index. 24 cm. [86 + 774 endnotes]

• ***Summary:*** An excellent biography of Irma Starkloff Rombauer and her daughter Marion Rombauer Becker and a richly detailed piece of American social history. Irma Louise Starkloff was born on 30 Oct. 1877 in St. Louis, Missouri, the daughter of Max von Starkloff (M.D.) and Emma Kuhlmann. She grew up in comfort at Carondelet (a part of St. Louis) in a family of strong German ancestry and liberal political convictions. Irma lived almost all her life in St. Louis. In 1930, during the Great Depression, Irma Rombauer's husband committed suicide. To help pay the bills, she decided to write a cookbook. *The Joy of Cooking: A Compilation of Reliable Recipes with a Casual Culinary Chat* was initially self-published in 1931 as a vanity book (the author pays the publisher, not vice versa); Irma was age 54, a complete amateur with no known qualifications for writing or publishing a cookbook.

But *Joy* went on to sell 14 million copies over 60 years, and to become the most influential American cook book of all time. While it has no claim to be the best-selling cookbook in American history, it is probably the best-selling trade cookbook–one published by an ordinary publisher and sold through retail bookstores. But in terms of total sales it falls well behind *The Better Homes and Gardens Cookbook,* which gets wide distribution through its parent magazine, and *The Betty Crocker Cookbook,* which benefits from the research and marketing prowess of General Mills. The latter two are, of course, the work of committees.

The crucial factor in *Joy's* unexpected success was Rombauer's lively voice as an unpretentious beginner. She treated her readers as close friends, as "an amateur addressing amateurs." America's home cooks were desperate to learn the basics in simple English they could understand. Yet they also enjoyed Rombauer's firm opinions and strong personality.

The information on *Joy's* copyright page is of little help in understanding the major stages in the book's history. Seven editions mark genuine stages in the book's development: The original privately published (1931). The first Bobbs-Merrill edition (1936). The popular wartime edition (1943). The first Rombauer-Becker edition (1951). The unauthorized edition (1962). The first authorized prepared by Marion Becker (1963–sometimes mistakenly called the 1964 ed.). And Marion's last revision (1975). Note: A supposed 1942 edition is a pure phantom.

The mother and daughter who wrote this superb book were very different people, and each put her own stamp on the book. Irma, the mother who began the work, "loved stardom as much as Marion Rombauer Becker, her eventual collaborator and successor, loved privacy" (p. 1). Marion developed a deep and abiding interest in natural foods and organic gardening, in compost and manure. She also grew up during the era when scientists discovered that micronutrients or trace elements (such as all vitamins and many new minerals) played an essential role in human health. This led many (including Marion, starting in 1939 or 1940) to criticize refined and overly processed foods–such as white flour, white rice, etc.–and to advocate a return to natural, whole foods, including raw foods such as fresh fruits and some fresh vegetables. This awareness began during the 1920s and 1930s, when canned fruits, vegetables, and juices were seen as a triumph of modern food science. It was most widespread in California, "a hotbed of health-food cults." On several trips to the West Coast during the 1930s, Irma visited California, where she saw juice bars and restaurants that were replacing sugar with honey and vinegar (p. 260-61).

By 1948, when Marion agreed to work seriously with her mother on *Joy,* it was understood that the "culinary priorities laid down in earlier editions would be drastically arranged. *Let's Cook it Right* [by Adelle Davis] was a concrete influence."

Marion, with her zeal and love of learning, became deeply interested in nutrition, health, and the relationship between diet and health.

The first Rombauer-Becker edition, which appeared in 1951, gave much more attention to grains, cereals, and flours, while lamenting the ills of "modern processing." Brown rice was preferred to white as "richer in taste and a far better buy nutritionally." Marion also "contributed one of the earliest recipes for bean curd ("soybean cheese") in any American cookbook" (on p. 192). The 1951 edition introduced mainstream readers to ideas generally "seen as the sole territory of health cranks" (p. 268).

Irma died in 1962. Marion suffered increasingly from allergies and sometimes had difficulty breathing. Knowing that that the 1975 edition of *Joy* would be her last, she approached it with special care. It was a heady time, for parts of radical / counterculture ideas about natural foods and health had been adopted into mainstream American culture. Young visionaries, who rejected the offerings of supermarkets, were starting natural food stores nationwide. Ralph Nader (one of Marion's heroes) was denouncing harmful food additives and corporate junk foods. By 1975 Marion realized that "beliefs like hers on the relationship between food and health, land use, and good citizenship looked like very sensible ideas to a large spectrum of the American public. She was emboldened to direct *Joy* more emphatically to issues she had first noticed decades before" (p. 395). She commented on "chickens fed in batteries, pigs an cattle concentrated in feed lots," the fact that "many of our lakes and estuaries have become nearly incapable of supporting life," the "galaxy of pollutants such as viruses, nitrates, heavy metals, pesticides, and asbestos and other carcinogens" in our drinking water.

The new 1975 edition became an immediate best-seller, with 236,000 copies sold in 1975 and 334,000 in 1976. She was eager to make the text as accurate as possible. If

someone pointed out an error, "she was not insulted but appreciative. When the soybean-product experts Akiko Aoyagi and William Shurtleff wrote to explain that the directions for homemade soy milk and bean curd were seriously muddled, Marion, grateful for this sign of the seriousness with which her work was taken, conscientiously sent in the necessary changes in time for the printing of August 1976." There are 8 glossy pages of photos, mostly of the two authors, their spouses and children. Address: Freelance journalist, New Jersey.

7206. South Dakota Soybean Research & Promotion Council. 1996. Soyfoods: A healthy profile. Sioux Falls, South Dakota. 33 p. Illust. No index. 23 cm. [1 ref]
• ***Summary:*** This is an original and colorful soyfoods cookbook, with many full-page color photos of prepared recipes. Near the bottom of the front cover: "As technology advances, science is discovering that unique compounds found in soyfoods help prevent or even treat some of society's most serious diseases." Contents: Health benefits of soyfoods: Heart disease, cancer prevention, osteoporosis, diabetes, kidney health, menopause. Incorporating soy into your diet. Nutritional benefits of soyfoods: Phytochemicals, phytoestrogens, protein, fiber. Guide to modifying recipes: A one-to-one substitution of soyfoods for animal products and white flour. The diabetic exchange list. Recipes (p. 4-31). Introducing soy into your diet: Buying and storing tofu, types of tofu, tips on using tofu, textured soy protein (TSP), isolated soy protein, soy flour, soy milk, tempeh.

Talk with Betty Hansen at South Dakota Soybean Board. 2000. May 15. This cookbook (which is undated) was first published in 1996. It was later reprinted by the Nebraska Soybean Board, with their Nebraska logo on the back. Address: 3801 S. Western Ave., Suite #105, Sioux Falls, South Dakota 57105. Phone: (605) 330-9942.

7207. Soya World Inc. 1996. So Good–Dairy free beverage: 5 easy to make, nutritious recipes. Product information guide (Leaflet). Vancouver, British Columbia, Canada. 6 panels each side. Each panel: 15 x 10 cm.
• ***Summary:*** This attractive, full-color, glossy leaflet is folded into 12 panels. On the front panel is a photo of a carton of "So Good: Dairy-Free Beverage." It is "Very high in calcium. Enriched with vitamins and minerals. Soy protein rich. Lactose free. Cholesterol free." Contents: The story of So Good. Five recipes and color photos. The So Good family of soy beverages. Tips for using So Good. The ingredients in So Good: Filtered water, soy protein, vegetable oil, maltodextrin, rice extract, fructose, cane sugar, mineral salts (calcium phosphate, potassium phosphate), food acid (potassium citrate), flavours.

Why choose so good? (Nine reasons, incl. contains up to 9.3 gm of protein per 250 ml serving). Nutritional information for each of the five flavors: Original, Fat Free, Absolutely Vanilla, Utterly Chocolate, and Seriously Strawberry.

Note: These products are made by Soya World Inc. under license from the Sanitarium Health Food Company, New South Wales, Australia. Address: P.O. Box 3018, Vancouver, BC V6B 3X5, Canada. Phone: (604) 420-3240.

7208. Spahn, Mark; Hadamitzky, Wolfgang; Fujie-Winter, Kimiko. 1996. Kanji jukugo jiten The Kanji dictionary. Rutland, Vermont; Tokyo, Japan: Charles E. Tuttle. xviii + 1748 p. See p. 666, 667, 787, 1391. 24 cm. [Eng; Jap]
• ***Summary:*** On page 666, under the character *tô* or *zu,* meaning bean or pea or (as prefix) miniature, are the following (with diacritics) related to soybeans: tônyû–soybean milk.

"mame(no)ko–soybean flour [*kinako* or "roasted soy flour"].

"tôfu–tofu, bean curd.

"mamema(ki)–bean-scattering ceremony [using soybeans].

"daizu–soybean.

"kôridôfu–frozen tofu.

"yakkodôfu–tofu cut into cubes.

"edamame–green soybeans.

"i(ri)mame–parched / popped beans.

"nattô–fermented soybeans.

"kuromame–black soybean.

"yudôfu–boiled tofu.

"ya(ki)dôfu–broiled tofu.

"nimame–boiled beans [usually soybeans].

"i(ri)dôfu–bean curd boiled dry and seasoned.

"shiomame–salted beans.

"mitsumame–boiled beans with molasses.

kôyadôfu–frozen tofu.

Also: "amanattô–adzuki-bean candy.

"nankinmame–peanuts.

On page 667, under the character *mi* or *aji,* meaning taste or flavor, are miso–miso (fermented soybean paste).

miso shiru–miso soup.

On page 787, under the character *kô, ô, ki* or *ko,* meaning yellow is: ki(na)ko–soybean flour.

On page 1391, under the character for *fun, kona,* or *ko* meaning flour or powder are: "mame(no)ko–soybean flour.

"ki(na)ko–soybean flour.

On the cover: "Over 47,000 Japanese character compounds." "Find any compound using any of its component characters."

A brief biography of the three authors, with photos of Spahn and Hadamitzky, appears on [unnumbered] p. 1750.

7209. Van Dolson, Bobbie Jane; Van Dolson, Leo R. eds. 1996. Seventh-day Adventist encyclopedia, 2nd rev. ed. 2 vols.: Harry Willis Miller (1879-1977). Hagerstown, Maryland: Review and Herald Publishing Assoc. See vol. 2,

p. 71-72.
• ***Summary:*** A good, detailed biography of Dr. Miller. "In later years Harry Miller worked seriously with the soybean. He made products that were tasty and practical. These included "vegeburgers," "wieners," and soy cheese [tofu]. His crowning accomplishment, however, was a tasty, affordable, nutritious soy milk, which literally saved the lives of many Chinese babies. Before his death Miller saw his grain-and-soybean-based foods adopted as alternatives to meat all over the world.

"In his 90s Harry Miller continued as a consultant to the World Health Organization and the Food and Agriculture Organization of the United Nations, and still made frequent trips to eastern Asia." Address: Washington, DC.

7210. Winter, Ruth. 1996. Super soy: The miracle bean. New York, NY: Crown Publishers Inc. 192 p. Index. 21 cm. [106 ref]
• ***Summary:*** On the cover is written: "This wonder bean can help fight cholesterol, high blood pressure, blood sugar, cancer, ease menstrual and menopause symptoms, and keep a colon healthy. Includes a cookbook of 50 soy recipes from New York's Natural Gourmet Cookery School."

Contents: Introduction: The Cinderella bean. 1. How soy protects the heart and blood vessels: Full of fiber, the Eskimo secret omega-3 fatty acids, lecithin and vitamin E, preventing strokes, magnificent magnesium, soy and the Mediterranean diet, foam to wash out cholesterol?, cholesterol competitors–phytosterols, is it thyroid hormone [when thyroxine levels rise, cholesterol falls]?, amino acid at work?, could it be the B's?, is it the flavonoids?, the bean and obesity, high blood pressure and the bean, could it be just avoiding meat and dairy products?, summing it up. 2. How soy protects against cancer: Protease inhibitors, trypsin inhibitors, plant estrogens, polyphenols, terpenes–antioxidants, fighting phytates, maybe it's due to low-count amino acid, saponins, inositol–the cancer-fighting phytic acid, which soy products have the most anticancer potential?, potential adverse effects of soybeans. 3. How soy helps ease digestive problems: Promoting regularity, calcium and soybeans. 4. How soy is beneficial in diabetic diets. 5. How soy is proving beneficial to women: The soy and the cycle, other hormonal benefits, magnesium, PMS and pregnancy, contraceptive or fertility inducer?, so "B" it, the bones need it, magnesium and bones, boron and bones, it could be the phytates. 6. Soy and men: Soy and sex, protein power. 7. Soy products and their nutritional value: Soybeans, edamame, soybean sprouts, tofu (also known as bean curd and dou fu-tofu), tempeh, soy milk, yuba, soy cheese, okara, soy yogurt, soy sauce, soy oil, soybean lecithin, soy nuts, miso, natto, soy flour, soy powder, soy protein isolates, concentrates and grits, texturized soy protein, convenience of soy foods. 8. Easy ways to add soy to your diet: Some other easy ways to add soy to your diet, sensible soybean use. 9. Recipes: Appetizers, soups, salads, main dishes/entrées, side dishes/breakfast, sauces/dips, desserts. Glossary. Where to get more information. References. Address: M.S., Health and science writer, Short Hills, New Jersey.

7211. Crane, Milton G. 1996? Does "every body" need milk? Weimar, California. 8 p. Undated. Unpublished manuscript. [23 ref]
• ***Summary:*** An excellent introduction to the subject. Introduction: Breast milk is the perfect food for baby mammals. However let us try "to formulate an intelligent conclusion about the wisdom of the use of milk from other mammals for human food."

The hazards of milk protein. Hazards from lactase deficiency. Hazards from infections (especially cancer viruses). Hazards from the type of lipids present ("Human milk contains 47% of calories from fat and 6% of calories from protein. The corresponding values for whole cow's milk are 48% and 22%"). Hazard from homogenization. What to guard in the diet when giving up milk (calcium, vitamin D, vitamin B-12, etc.). Address: M.D., Preventive Endocrinologist, Weimar Inst., Box 486, Weimar, California 95736. Phone: 916-637-4111.

7212. Morales, Isabel. 1997. Functionará en Mexico empresa mixta con Cuba: Se trata de BIOTEK, elaborada de productos derivados de la soya [A joint venture with Cuba will operate in Mexico: Biotek will make soyfood products]. *Gramma* (*Cuba*). Jan. 3. p. 2. [Spa]
• ***Summary:*** Biotek, a joint venture with some Cuban capital, began operating in Cuba. It is dedicated to the production of soymilk and its products, using modern technology developed at the *Instituto de Investigaciones de la Industria Alimenticia* (IIIA) in Cuba. Antonio González, director of the Dairy Association (*Unión Láctea*) said that the deal was negotiated, using the good offices of CORALSA S.A., the deal-making arm of the Ministry of Food Industry. The plant has a capacity of 4,000 liters/day of soymilk. It is the first such plant exported by Cuba. From soymilk, many nutritious and tasty products can be made, including nondairy ice cream, yogurt, and cheeses.

7213. Pearce, Jean. 1997. Getting things done: Starting out on soy. *Japan Times* (*Tokyo*). Jan. 12. p. 17. Wednesday. [Eng]
• ***Summary:*** "Last week's columns reported on recent research pointing to the dietary benefits of soybean products in relieving complaints associated with menopause." Discusses isoflavones and the isoflavone content (in micrograms per gram) of kinako (roasted soy flour, 2,589), roasted soybeans (1,625), edamame (1,354), natto (1,273), regular tofu (509), fried tofu (695), soy milk (357), miso (373), shoyu (16).

Gives several tofu recipes and recommends *The Book of*

Tofu by Shurtleff & Aoyagi.

"And finally, kudos to Japan Airlines for creating natto in a palatable form, freeze-dried and flavored... It has been tremendously successful. In two years, total sales amounted to ¥56 million. Just think of all those isoflavones." A photo shows Jean Pearce.

Note: This article may have been published on 12 Feb. 1997 rather than 12 Jan. 1997. Address: Columnist.

7214. Roller, Ron. 1997. New developments with rice beverages (Interview). *SoyaScan Notes.* Jan. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron does not know how Pacific Foods of Oregon, which began making rice beverage in Jan. 1995, got around the Imagine Foods' patent. He does not know if Pacific Foods private labels rice beverage for anyone, and he does not know where Westbrae, or where American Natural Snacks, gets their rice beverage products. A Minnesota company [Note: IFP = Innovative Food Processors, Inc. of Faribault, Minnesota (Phone 1-800-997-4437)] was making Rice Trend, which is rice syrup solids; it's a line of different DEs of rice syrups. Ron talked with them and he thought they were supplying Westbrae. They spent a lot of money battling Imagine Foods on the patent issue.

It was not Jim Morano of Innovative Sweeteners. Jim also works for Krompton Knowles (a big company), probably for their Sweetener Division. As far as Ron knows, Jim hasn't made any rice beverage but he, too, was battling Imagine Foods on patent issues. Jim's wife runs Suzanne's Specialties, which makes koji-based rice syrup.

Ron's feeling is that rice beverage as a category has continued to grow, but its percentage share of the non-dairy beverage market has probably stabilized. It was zooming [growing very rapidly] several years ago, but is no longer growing at such a fast rate. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

7215. Roller, Ron. 1997. New developments with organically grown soybeans in America (Interview). *SoyaScan Notes.* Jan. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The demand for organic soybeans in America is rising rapidly. Ron thinks this has nothing to do with concerns over genetically engineered (transgenic) soybeans such as Monsanto's Roundup Ready soybeans. "Soybeans have become, hands down, the main cash crop (the one that makes the most money) for organic farmers, at least those in the Midwest. Organic growers in the Dakotas and Montana still rely on wheat as their main cash crop, but the corn, wheat, and soybean growers everywhere else rely on soybeans." The demand for organic soybeans is growing faster than the supply–even though the supply is rising. Increasing prices have attracted more and more farmers to growing soybeans organically. The biggest demand is still from Japan, as it has been for the past 4-5 years. As interest in organic foods has grown in Japan, bigger food manufacturers (primarily of tofu and natto) have started to use organic soybeans. The American food companies that use organic soybeans are still relatively small and few. Ron's company (if you add the organic soybeans Ron exports) may be the single biggest.

The demand for organic natto soybeans from Japan appeared suddenly and is now very large. Acreage that was used to grow organic soybeans for tofu or soymilk suddenly got switched to growing small-seeded organic natto soybeans. Because of that, the acreage used to grow organic soybeans for tofu and soymilk has decreased. Last year the organic soybean crop in the Midwest (especially Michigan and Ohio) was smaller than expected. So the combination of the export demand (mainly to Japan but also to Europe), the loss of acreage to natto beans, the bad crop, and the lack of new growers, has made the price of organic soybeans rise–by about 10%. But remember that the price of organic soybeans were already more than double, very often triple, that of non-organic beans. The highest prices are paid for Vintons and natto beans. It is these premium prices that are so attractive to the organic farmers. "This trend is of great concern to me, and especially the effect it could have on the price of soyfoods. In a free market economy, with lots of farmers looking for value-added crops, you would think that many more of them would start growing organic soybeans. But it is a difficult chasm to cross. A farmer must learn a whole new way of farming, and, he must wait for 3 years before that land can grow organic crops. That 3-year lead time is the big stumbling block; many farmers actually lose money on that land during those 3 years. Some big farmers are now starting to grow organic soybeans, but they getting involved on a gradual basis, adding 50 to 100 acres a year. Those large commercial growers, who have recently switched to growing soybeans organically, are sitting in the catbird seat, and doing extremely well."

In Ron's market, there have been very few questions from consumers about genetically engineered (transgenic) soybeans. "It hasn't become a problem at all for ASP; I think it will be an asset for us–because we don't use them and we can prove that we don't. However a lot of growers want to grow transgenic soybeans." Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

7216. Duchatel, Bernard. 1997. The work of Actimonde with dairylike soyfoods in Africa (Interview). *SoyaScan Notes.* Jan. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Day after tomorrow Mr. Duchatel will travel to Douala, Cameroon, where Actimonde is installing a complete plant for Laiterie Auguste, the biggest dairy company in Cameroon, to make UHT soymilk that will be sold mainly as soy yogurt. The plant capacity will be 1,000 liters/hour of

long-life (aseptic) products. Mr. Duchatel thinks this plant will be successful, because the company is strong and it has conducted extensive consumer research before launching the product. The plant is expected to be in full operation by August 1997. Of the various soy products introduced to Africa by Actimonde, fermented soy yogurt seems to have the greatest potential, because its flavor and consistency are very close to those of the traditional sour milk consumed by many African people.

Concerning soy in Cape Verde (*Cabo Verde*)*:* First a little background. Cape Verde is one of the few nations in the world in which Soyfoods Center has never been able to find a record of soybean cultivation. It is a small nation, a former Portuguese colony that gained independence on 5 July 1975, consisting of ten volcanic islands and 5 islets off the west coast of Africa, in the Atlantic Ocean, west of Senegal. The capital city is Praia, on the island of Sao Tiago. The population is about 450,000. Actimonde installed an Agrolactor (their turnkey soymilk plant) in Praia, Cape Verde in 1994 for a company named Benali Cabo Verde. The soybeans used in the plant were initially imported from France in October 1994; after that, the had planned to import the soybeans either from Zimbabwe or Mozambique. Mr. Duchatel has never heard of soybeans being cultivated in Cape Verde, and he is quite sure that they have not been cultivated there in recent years–that is why the company had to import them. His company did not study the matter, but he thinks it would not be possible to grow soybeans on the island because most of it is like a desert; in the few places that are green, more important food crops are grown. Note: This document contains the earliest date seen for soybeans in Cape Verde (Oct. 1994) (one of two documents). The source of these soybeans was France.

Actimonde was founded in 1977 to develop and supply turnkey dairy plants; their main competitors are Alfa-Laval and DTD, both of which are now bigger than Actimonde. The Agrolactor was invented by Actini and developed by Actimonde, starting in 1986, based on their experience in Brazil. They hoped to sell the first Agrolactors to Brazil, but actually the first one was sold to the Congo Republic and installed at Brazzaville in 1988; Agricongo used it for research and development only. The experience of Mr. J.L. Voisin in Nigeria in 1987 (where he saw many dairies shut down because of the high price of imported powdered milk) was another early reason that the Agrolactor was developed. Actimonde sold Agrolactors to Nigeria (in 1990) and Ivory Coast (1990) because locally-grown soybeans were readily available. Mr. Voisin retired in November 1995; he no longer works for Actimonde. Mr. Duchatel is now in charge of selling turnkey dairy plants, but the company is increasingly involved in sell small and medium-sized fruit juice plants made from local fruits.

Concerning the present status of companies in Africa using the Agrolactor: (1) The unit sold in 1988-89 to the Congo will soon start again in Brazzaville; a private investor will make soy yogurt. (2) Cebon's plant in the Ivory Coast is no longer making soymilk, because local consumers do not like the flavor of that soymilk. Also, there are very big dairies in Abidjan. (3) In Burundi the soymilk plant is still in operation; the product has a Swahili name. (4) In Cape Verde the product was named Fresal; the generic term for soymilk is *bebida de soya.* But the plant is no longer in operation. The market is very small and there is no demand for soymilk. But there is a demand for soy yogurt. (5) In Cairo, Egypt, the plant is still operating, making a refrigerated, stirred soy yogurt named Soyo. The company makes its own Polystyrene cups (non-aseptic) with very nice printing. (6) In Suleja, Nigeria, the plant is probably still making soymilk–but now it is dangerous to go to that area. Address: Director and former technical manager, Actimonde, International Business Park, Batiment Athena, 74160 Archamps, France. Phone: +33 450 31 5640.

7217. **Product Name:** Sensational Soy (Soymilk) [Original, or Vanilla].
Manufacturer's Name: Beatrice.
Manufacturer's Address: 295 The West Mall, Suite 600, Toronto, ONT, M9C 4Z4 Canada. Phone: (416) 626-5500.
Date of Introduction: 1997. January.
How Stored: Refrigerated.
New Product–Documentation: Ontario Soybean Growers' Marketing Board (OSGMB). 1997. *Canadian Soyfoods Directory.* Chatham, Ontario, Canada: OSGMB. 27 p. See p. 15. Contact Greg Wild or Surendra Patel.

Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. April 21. This soymilk was introduced in Jan. 1997 in a blue ½-gallon Pure-Pak carton. It was made for Beatrice by a small Chinese-Canadian soyfoods company named Pak Fok Food Products Inc., in Scarborough, Ontario. Owned by Simon Kwan, they make soymilk, tofu, and tofu products. Beatrice formulated, flavored, and packaged the soymilk at their plant at #6 Shastaberry Lane, Brampton, Ontario, and distributed and sold it across Canada in the dairy case of supermarkets. It was a Chinese-style soymilk with a fairly strong beany flavor. Beatrice started to package aseptic soymilk for IPC in 1996. The informally agreed to also package fresh soymilk in a gable-top carton for IPC–but they kept stalling. Jerry Duncan failed to get a written agreement and a non-compete clause from Beatrice. This stalling forced IPC to have their fresh soymilk packaged by Farmland Dairies in New Jersey. Soon after IPC's fresh soymilk was launched, Beatrice came out with a competing product.

7218. **Product Name:** ProSoya SoNice: Fresh Soy Beverage (in 1 Quart ESL Gable-Top Cartons) [Natural, Chocolate, Vanilla Lite].
Manufacturer's Name: ProSoya Foods Inc.

Manufacturer's Address: Surrey (Vancouver), BC, V3S BE7 Canada. Phone: (604) 532-8030.
Date of Introduction: 1997. January.
Wt/Vol., Packaging, Price: 1.89 liter ESL gable-top carton. Retails for $2.99.
How Stored: Refrigerated, 85 day shelf life.
New Product–Documentation: Talk with Fred Webster, head of International ProSoya Corp. office in New Hope, Pennsylvania. 1997. Sept. 31. This product, made in British Columbia, Canada, and packaged in New Jersey, will be introduced to the U.S. market in mid-October, 1997, in quarts and half gallons. Refrigerated (45 day shelf life); expected retail price is $0.99/cup.

Talk with Lorne Broten, President and CEO, International ProSoya Corp. 1997. Oct. 29. This product was launched in Canada in Jan. 1997. It is available in 1 liter and 2 liter gable-top ESL cartons.

Talk with Steve Demos, president of White Wave. 1998. Aug. 10. He heard about 10-14 days ago that the SoNice brand, both aseptic and gable top, is no longer being shipped to market. The company's first comment was "Packaging problems," and then it was "money problems."

7219. Stevens & Associates, Inc. ed. and comp. 1997. U.S. 1997 soyfoods directory. Lebanon, Indiana: Indiana Soybean Development Council. 47 p. 28 cm. [29 ref]
• ***Summary:*** This second, expanded edition of the directory contains more than 270 company listings. Contents: Foreword. How to use the Soyfoods Directory (incl. Internet access). Daily soyfood guide pyramid (color). Soyfood descriptions (alphabetical): Introduction, green vegetable soybeans (edamamé), hydrolyzed vegetable protein (HVP), infant formulas–soy based, lecithin, meat alternatives (meat analogs), miso, natto, nondairy soy frozen dessert, okara (see soy fiber), soy cheese, soy fiber (okara, soy bran, soy isolate fiber), soy flour, soy grits, soy protein concentrate, soy protein isolate, soy protein–textured, soy sauce (tamari, shoyu, teriyaki), soy yogurt, soybeans, soymilk (soy beverages), soynut butter, soynuts, soyoil & products, sprouts–soy, tempeh, tofu & tofu products, whipped toppings (soy based–"similar to other nondairy whipped toppings, except that hydrogenated soyoil is used instead of other vegetable oils"), yuba. Soybean products chart: From whole soybeans, from soybean meal, from soyoil and lecithin. Soyfood companies by product (products listed alphabetically).

Composition and nutrient content of soyfoods (large table, p. 14). Soyfood companies (alphabetical by company name; Each listing contains address, contact, phone, soy products, product names, distribution, to locate product, classification). Mail-order soyfoods: Soyfood mail order companies (listed alphabetically by company). Soyfood companies by state (alphabetical by state; California has by far the most). Soybean promotion & research organizations (national, and state). Professional associations and industry information resources. Soy cookbooks (19). Soy resource books (10). Soyfood fact sheets and recipes: 1-2 pages each for meat alternatives, miso, soyoil, soy flour, soymilk, tofu, textured soy protein, whole soybeans. Soyfoods directory survey.

This directory is on the Internet's World Wide Web at http://www. soyfoods.com. For more information or suggestions, call 1-800-301-3153. The Internet version of the Directory continues to improve. "The first year saw hits to our site increase from 1,000 the first month to more than 8,000 per month now. We have added a new search engine that makes it easier to find information and a new monthly e-mail newsletter, *Soyfoods USA,* designed to inform media sources, dietitians and consumers about the latest soyfoods information. To subscribe to this popular newsletter, just send an e-mail message to soyfoods@ind.com with the words 'Subscribe Soyfoods USA' in the body or subject field."

Talk with Roger Stevens. 1997. March 10. The 1997 directory was first available in January 1997. About 100,000 copies of this directory were printed, and all but 7,000 have already been sent out free of charge. About 77,000 copies were sent to registered dietitians nationwide; all are members of the American Dietetic Association. Another 10,000 copies were sent to the American Association of Family and Consumer Sciences–basically extension personnel at the Cooperative Extension Service in each county; these people provide a lot of consumer information about foods and agriculture. About 500 copies were sent to each of the 20 state soybean development councils. The remaining 6,000 copies were sent to callers who left their name and address at a toll-free answering service. The next step is to do a media tour in Indiana. Traveling with a registered dietitian, they expect to generate a lot of requests from citizens of Indiana. One of the goals is to show other states that if you promote soyfoods in this manner, you will get a lot of interest. Roger hopes to encourage other states to take a more active role in promoting soyfoods. The directory has generated a tremendous amount of information on the part of dietitians who call the toll-free number and have many questions about soyfoods; Roger tries to refer them to people who have the answers–such as 1-800-Talk-Soy. The Indiana Soybean Council has had to hire a new person just to handle the requests for this directory.

Next Roger plans to do a survey of registered dietitians to learn more about their responses to the 1997 directory. He might ask: Did you receive the book? Do you use it? If so, in what way and how often? How many people do you influence with regards to soyfoods as a result of this book? So if each of the 77,000 dietitians influences, on average, 10 people a year, the directory has reached more than 750,000 people. One major goal of this book is to help dietitians include more soyfoods in their own diets and in the diets of

their clients. How can we better help you do this? Do you want a cookbook? A starter kit? Shall we include coupons?

From the focus groups he has already conducted, Roger thinks that future editions of the directory will be presented more like a cookbook or recipe book, with the directory in the back. "People really like the recipes. They just hand them out to their clients. We get requests for 100 books at a time from dietitians, who give the entire book to their clients at classes, in their offices, etc." Roger has the funds to do the research to find out exactly what dietitians want in the way of soyfoods recipes and how they want them organized.

Other possible questions: Which part or parts of the book do you find most valuable? Which do you find least valuable. Is there any information which is not in the book that you wish were included?

Roger would also like to develop for the next edition of this book a graphic presentation of the inside of a typical supermarket showing all the different products which contain soy.

Note: The word "soyoil" is used instead of "soy oil" throughout this directory. Address: Stevens & Associates, 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

7220. Sullivan, Cheryl; Rhodes, Kathy. 1997. Simply soy: A variety of choices. Williamsburg, Virginia: Virginia Soybean Association. 118 p. Undated. Illust. Recipe index. 26 cm.
• ***Summary:*** Contents: Introducing soyfoods into your diet. The healthful soybean. Exploring soyfoods: Dried soybeans, fresh green soybeans, soy milk, tofu, textured soy protein, soy flour, soy grits, tempeh, miso, soy meat analogs. Where to find soy products. Nutrient information. Recipes: Breakfast, beverages, breads, appetizers & snacks, salads, soups, sandwiches, side dishes, main dishes, desserts.

Talk with Susan Haller of the Virginia Soybean Assoc. 2000. Nov. 9. This undated book was published about 3-4 years ago.

Talk with Cheryl Sullivan. 2002. Aug. 12. She wrote this booklet for the Michigan Soybean Promotion Committee; it was published in about Jan. 1997. It was never sold and is now available online at www.soyfoods.com/SimplySoy. Address: 1. M.A., R.D., Sullivan Nutrition Inc.; 2. PhD, R.D., Preventive Cardiology Program, Univ. of Michigan; c/o 151 Kristiansand Drive, Suite 115 E & F, Williamsburg, Virginia 23188. Phone: (757) 564-0153.

7221. Roller, Ron. 1997. Growth of soymilk sales in U.S. supermarkets (Interview). *SoyaScan Notes.* Feb. 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron would estimate that sales of soymilk in U.S. supermarkets now account for about 25% of all soymilk sales in America. It has grown lot during the past 18 months; this is now the area of most rapid growth. East Coast supermarkets (especially certain chains) tend to sell more soymilk than West Coast supermarkets.

American Soy Products does not subscribe to SPINS (SPence INformation Service) run by Paddy Spence out of San Francisco, California. Ron thinks he could do as good a job of gathering market information as SPINS does. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

7222. Dominguez de Diez Gutiérrez, Blanca. 1997. Re: Update on her life, and past and upcoming work with soya. Letter to William Shurtleff at Soyfoods Center, Feb. 11. 4 p. Handwritten, with signature. [Eng]
• ***Summary:*** In 1987 Blanca went to Ecuador to teach soyfoods to housewives. She was active with soya until 1989, when her health began to decline. She had to close her Fundacion Mariposa. In 1993 she finally had a heart attack; she underwent surgery and had 3 coronary bi-passes. She had low cholesterol levels; the heart failure is hereditary. All her family on the father's side died of heart attacks at about age 50 to 60. Blanca is now age 77, so she has outlived them all.

She came to the USA 3 years ago to live with her son (who is single) in Houston. She also has a daughter in Houston, and another son and daughter in Mexico, plus 7 grandchildren. She must live at sea level because she needs the oxygen. She had to leave everything and start over again. She is still not allowed to drive an automobile. But she is now feeling stronger and better.

She has accepted an invitation to go to Los Mochis, Sinaloa, Mexico, in mid-April for 2-3 weeks to teach women about soyfoods. Los Mochis is on the Sea of Cortés [Gulf of California].

In Mexico she used to make delicious dishes with okara to replace eggs (*Huevos a la Mexicana*) with plenty of onion, garlic, tomato, cilantro, and chili. You scramble it like eggs.

Blanca keeps in touch with some of the people to whom she taught soyfoods during the 1980s. This work is still alive in the following places: (1) Tepozlan, Mortelos. The women named Coti who was the most Indian of all her group was the one who caught on; her native language is Nahuatl, but she learned to speak a little Spanish. She has a little vegetarian shop where she makes soya milk, tofu, and okara dishes. Coti and Blanca's niece are very close friends, so Blanca's niece tells her about this work. (2) In Durango, a lot of work has been going on for years. Lots of information about soya is taught to all the social workers and teachers in the college for teachers (*La Normal de Maestros*). Blanca's book is used like a textbook. A friend of Blanca's who is a teacher here keeps the work going and keeps Blanca informed. (3) In both Veracruz and Huauchinango also Blanca's work is continuing. She keeps in touch with friends there. (4) In the state of Tlaxcala, at a little teaching center, Prof. Alfonso is teaching about soya.

After her heart attack, she just had to let everything go–but it is now going on its own "I had a death experience.

I feel like I'm alive, but I'm dead. I let everything go. She closed her *Fundacion Mariposa* (Butterfly Foundation) in 1994. There she taught nutrition, and tried to take culture to the children, from grades 1 to 6, in this poor, rural area. They put on plays such as the *Iliad* [an epic by Homer that recounts the story of the Trojan War] and the *Odyssey*–and they loved it. She called these poor little peasant children kings and queens. She also lectured on ecology to high school kids and teachers in the town nearby, and taught Indian philosophy (such as the *Bhagavad Gita*), which has helped them a lot with their emotional problems. She tried to help them to develop character and to love their work. She also tried to return the dignity of cooking to the women and the sacredness of food. Blanca has been a professional painter, and she was an art teacher. She married when she was young and had 4 children; she was happily married to Jose Diez Gutierrez for 48 years until her husband died 7 years ago. Her husband didn't understand a thing about her work with spiritual teachings and soya, but he never let her down.

NAFTA has been a disaster for Mexican-owned business. Only the multinational have really come out ahead; they now employ more Mexicans than ever before. Blanca believes that the multinationals are also into drug trafficking. Address: c/o Mr. Jose Diez Gutierrez, 3231 Meadway Dr., Houston, Texas 77082. Phone: 281-870-1850.

7223. **Product Name:** Personal Edge (Nutritional Beverage Powder) [Plain, Strawberry, Chocolate].
Manufacturer's Name: Nutritious Foods, Inc. (Distributor).
Manufacturer's Address: St. Louis, Missouri.
Date of Introduction: 1997. February.
Ingredients: Incl. Supro brand isolated soy protein.
How Stored: Shelf stable.
New Product–Documentation: Ann Behling. 1997. *Soybean Digest.* Feb. p. 90. "Soy-based beverage provides an edge." Personal Edge, a sports nutritional beverage made from Supro brand isolated soy protein, helps speed the repair and recovery of muscle tissue after training or competition, according to its manufacturer. It can be mixed with milk, water, or orange juice. It is being promoted by the Nebraska Soybean Board at various farm shows and related events.

7224. *Ontario Soybean Growers' Marketing Board Newsletter.* 1997. Soy Delight soymilk. Feb. p. 2.
• ***Summary:*** Neilson's Soy Delight is "the first fresh soymilk to be available in grocery stores." It comes in two flavors: Original and Vanilla. With its trilingual labeling (English, French, and Chinese) it is "targeted at the Asian-Canadian market, but it's a high-quality product that everyone will enjoy." One litre milk-style (gable-top) cartons are "currently being sold at Zehrs, Loblaws, Fortinos and Mr. Grocer supermarkets throughout Ontario." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

7225. Santell, Ross C.; Chang, Y-C; Nair, M.G.; Helferich, W.G. 1997. Dietary genistein exerts estrogenic effects upon the uterus, mammary gland and the hypothalamic / pituitary axis in rats. *J. of Nutrition* 127(2):263-269. Feb. [30 ref]
